As Watkins points out (Dragon, p. 208), although this form of the intens. of \sqrt{han} has a singular object (somewhat unusually), it is “serially plural,” in that the *vrtrám* is located in one cardinal direction after another; see also Schaeffer 204–5.

III.53.12: The first hemistich, couched in the 1st ps., consists only of a rel. clause, which breaks off. The “I” is clearly Viśvāmitra, whose name opens the hemistich and whose protective *brāhman-* is mentioned there -- making it very likely that pādas ab constitute this *brāhman-*, though it’s not quite clear what is protective about this truncated utterance.

The plupf. *ātuṣṭavam* should not exist, at least in my opinion, since the two forms of the indicative pf. *tuṣṭuvūḥ* (VIII.6.12, 18) also appear to have preterital value. However, the contexts in VIII.6 do not guarantee that value -- it is possible that they are presential “they praise” (see comm. ad VIII.6.12). The existence of a pf. subj. *tuṣṭávat* at VIII.98.16 also suggests that the indicative pf. is, or originally was, presential. The only other pf. forms in the RV, the act. part. *tuṣṭuvāms-* (3x) and mid. part. *tuṣṭuvānā-* (1x) are generally tr. as preterital, but again context does not dictate this rendering.

III.53.13: The tr. of the last pāda might better begin “Just he will make ...” to reflect the *íd*.

III.53.15–16: As indicated in the publ. intro., the subject of these two vss. is the mysterious feminine *sasarparī-*, which has been interpr. as differently as “Kriegstrompete” (BR, fld. by Gr), “Sangesgeweise” of the Viśvāmitras (Ge), and Vāc (Anukramaṇī, Sāy.). The interpr. of these vss. has been further complicated by the later tradition that sees them as concerning the supposed rivalry between Viśvāmitra and Vasiṣṭha, for which I see no evidence at all in the RV.

Although I do not think all the puzzles are ultimately solvable, some clues can get us some distance. First, *sasarparī-* is a *vrkī*-type fem., and as Debrunner points out (AiG II.2.369), the major use of this inflectional type is for female beings (human and animal). This lends some credence to the opinion that the *sasarparī-* is a cow of some sort (e.g., Re “La (vache) Sasarparī”). That vs. 14 concerns the ritually worthless cows of the Kīkaṭas would also support a contrast with an eminently worthy cow found among us. Second, these two vss. sound rather like a *dānastuti* (see *jamādagnidatta-* in 15b and *yām me palastijamadagnāyo dadūḥ* in 16d), and since the next part of the hymn goes off in a completely different direction, this could serve as a hymn-capping *dānastuti* for what precedes. Cf. I.126.2, a *dānastuti* hymn, where, after Kakṣīvant is given cows, he stretches the king’s unaging fame to heaven: *divī śrávo ‘jāram ā tatāna*, highly reminiscent of our 2nd hemistich ... *tatāna, śrávo devésv amṛtam ajuryām*.

Even if this sketch of the function of the vss. and of Sasarparī is accepted (a big if), it remains to analyze the word. I consider it a portmanteau pun. On the one hand it is a kind of anagram for the intensive of \sqrt{srp} ‘creep’, found in the RV only as the hapax adj. *sarīsrpā-* (X.162.3), which I tr. ‘squirming’. On the other hand, it is also phonologically reminiscent of *sabar-dúgha-*, *-duh-* ‘sap-yielding’, of milk cows -- two occurrences of which are found in nearby III.55 (vss. 12, 16) qualifying Night and Dawn, one of whom bellows (*mimāya* as here) in vs. 13. (Acdg. to Griffith, Gr associates Sasarparī with Sabardughā, though this is not registered in the dictionary.) Just as the Sasarparī brings fame in 16, so does a *sabardúh-* in VI.48.12–13 “milk out immortal fame” (*śrávo ‘mṛtyu*

dhūkṣata). Another possible association is *sarpís-* ‘melted butter’, adduced by Mayrhofer as a possible relative of *sasarparī-* (EWA s.v. *sarpís-*). My tr. “squirming, sappy (cow called) Sasarparī” reflects my sense that all of these words have contributed to the designation *sasarparī-* and these contributions are positive: *sabardúgha-* and *sarpís-* reflect the fecundity and richness associated with juice and fat, *sarīṣpa-* the uncontrollable vitality of a squirming young animal. Needless to say, this is highly speculative and does not rest on properly chaste etymological principles, but it is difficult to see what could with regard to this maddening but phonologically delectable word.

The next question to ask is why Sasarparī “banishes neglect” (*ámatim bādhamānā*). Again this phrase supports the notion that the referent of *sasarparī-* is a cow. In I.53.4 and X.42.10 *ámati-* is overcome by cows; the word is paired with hunger (*kṣúdh-*) in VIII.66.14, X.42.10, and X.43.3. Hunger and neglect can be combatted with cows and their nourishing products, and one of the combatants is Sasarparī.

III.53.16: Besides the continuing problem of *sasarparī-*, the other difficulty is the hapax *pakṣyā* in c. Gr takes it as ‘aus Monatshälften bestehend’ (flg. BR), Ge (/WG) ‘auf meiner Seite stehend’, Re as ‘ailée’ or ‘prenant parti (pour moi)’. The publ. tr. strikes out on its own (though closest to Re’s first alternative). It involves reading *sāpakṣyā* against the Pp (but involving no change in the Saṃhitā text), to be divided *sā apakṣyā*. The latter would be the instr. of a nominal abstract in *-īyā-* (see AiG II.2.840), a rare but attested type built primarily to *-a-*stems. Here potentially to *apakṣá-* ‘wingless’ (cf. AV XI.5.21), hence ‘winglessness’. What might this bizarre confection have to do with the passage? The rather flimsy connection is via the daughter of the Sun (*sūryasya duhitā* in 15c) and a possible reference to Dawn in 16c: the same phrase *nāvyam āyur dādhanā* is used of Dawn in VII.80.2). (Like) the former, Sasarparī has stretched the Kuśikas’ fame to the gods; (like) the latter, she has brought fame to all the five peoples. These feats might be expected to require special forms of transport, such as wings, if the agent is not a supernatural traveler like Dawn or the Sun’s Daughter. But Sasarparī is a cow, hence wingless.

I realize how fragile -- and potentially ludicrous -- this suggestion is, however, and it might be better to play it safe with something like ‘on my side’.

III.53.17: As noted in the publ. intro., this verse and the rest of this little section are reminiscent of the final vs. of III.33.13, against disaster on a journey, specifically there a river crossing.

The hapax *pātalyè* is entirely unclear, besides being a dual referring to some part of the chariot.

On the thematic medial stem *dāda-* in the sense ‘hold, keep safe’, see Gotō (1st Class, 171–72, flg. Wackernagel).

III.53.19: On *abhī vyayasva* see comm. ad VII.33.4. I assume ‘engird’ refers to the ends of the axle being embedded in the wheel hub.

The loc. *spandané* is generally taken as a third type of wood (besides *khadirá-* and *śimśápā-*), but while the other two words are standard designations of trees, *spandaná-* is ordinarily not, but rather refers to a type of motion -- jerking or kicking. I take it to refer

here to the elasticity or flexibility of *Dalbergia sissoo* (*śimsapā-*), a quality it has (at least acdg. to the internet).

III.53.20: On the problematic *āvasā ā* (Saṃhitā) / *ā ava'saī ā* (Pp.), see detailed disc. by Scar (576–77), who lays out the various phonological and morphological possibilities. As he points out, the reading of Holland van Nooten, *ā āvasā ā*, with accent on the first *a* (possible on the basis of the Saṃhitā text) and deaccentuation of the final *ā* of the noun (contra both Saṃhitā and Pp), makes no sense (and does not conform to the transmitted text). The nominal form between the two *ā*'s is by most accounts a root noun cmpd of $\sqrt{sā} + āva$. The question is what the case form is. I follow Whitney (§971a) and Old in reading *-ās*, contra the Pp., interpreting it (with Whitney and Old) as an irregular abl. sg. to this root noun cmpd. (expect **avasās*) in infinitival usage. The parallelism in the hemistich supports this interpr., but see the other possibilities offered by Scar.

III.53.21–24: As noted in the publ. intro., these vss. are traditionally taken as depicting the rivalry between Viśvāmitra and Vasiṣṭha, but I see no sign of this here; certainly Vasiṣṭha is not mentioned. The verbal link is supposed to be VII.104.16 *adhamās padīṣṭa* “let him fall lowest,” a curse uttered in a Vasiṣṭha hymn that echoes our 21c *ādharah sās padīṣṭa*. But in neither case is the opponent named, and there is no reason to assume that Vasiṣṭha directs this at Viśvāmitra or vice versa.

The first vs. of this sequence (21) is quite straightforward; vs. 22 is more complex, but I feel fairly confident in its interpr. But vss. 23–24 are very difficult, and my interpr. is correspondingly quite provisional.

III.53.22: With Old, I reject the interpr. of *cīd* in abc as a simile particle (contra Sāy and Ge); in all three cases the *cīd* can be interpreted in its usual ‘even, even though, just’ sense. However, I differ from Old on the purport of the vs. He thinks it describes concrete events, possibly as a “Beschreibung von Zauberverhandlungen,” while I think it contains two figurative descriptions of the impotence of the enemy -- in this I am closer to Ge’s notion of similes than to Old. I also find myself in the odd position of being in general agreement with Griffith’s interpr. (based on Ludwig’s). Each hemistich describes an action involving great effort and drama that produces trivial and insubstantial results. In ab an ax is thoroughly heated, but this formidable weapon only cuts off the blossom of a silk cotton tree. (That silk cotton tree flowers are a vivid red might remind the audience of the real blood that might have been shed by a blazing hot ax.) In cd a pot, also heated, is boiling (*yéṣantī*), indeed has boiled over (*prāyastā*), but all it produces is foam.

III.53.23: In my opinion, at least the first half of this vs. continues the sentiment of vs. 22: the enemy is powerless, despite bluff and bluster. In pāda a older translations supply an unidentified subject (“he”) for *cikite*, but the medial perfect of \sqrt{cit} is always pass.-intrans. and with Kü (176) I take the verb as an impersonal passive with an oblique subj. in the genitive; cf. I.51.7 *tāva vājraś cikite* with the subject in the more normal nom. The point here is that the opponent’s missile (*sāyaka-*) is so inconsequential as not to attract or deserve notice.

In b the first problem is the hapax *lodhā-*, which is universally taken as a red animal of some sort, a horse (Ge, Re), fox (Gr), or goat (Old, tentatively EWA), as an *l-*

form related to *rudhirá-*, etc. My quite different tr. ‘clod’ assumes (again, very tentatively) an association with a loose set of words for lump, clod, etc.: *lot̥ṭha* (Pkt., etc. = Vedic *loṣṭá-*, perhaps by hypersanskritization) (Turner 11157), **lot̥ṭha* / **loddā* / **loddha* (Tu. 11137), **luṭṭa* (Tu 11077). The point would then be that “they” (whoever they are) lead (to sacrifice?) a lump of earth or the like, thinking that it’s an actual (sacrificial?) beast. This situation reminds us of the chariot race of Mudgala and Mudgalānī (X.102) in which a block of wood is yoked with a bull, and the oddly assorted pair still wins the race (X.102.8–9). It might also remind us of X.28.9 in which an earth clod (*logá-*, not too distant phonologically) splits a stone. The other morphological fact of note in this pāda is that *pásu* is neut. and initially accented (versus the ubiquitous masc. *paśú-*). This may be a deep archaism, matching Lat. *pecu*, Goth. *faihu* (cf. AiG II.1.20, II.2.474), or it may be a nonce attempt to de-animatize the word in this peculiar context.

Like vs. 22 and 23a, 23b describes an undesirable situation exactly contrary to what was aimed at: having mistaken a lump for a sacrificial animal, the actors will surely not get the results they wanted -- although X.102.8–9 and X.28.9 may point to success in unlikely circumstances. But the second hemistich depicts situations in which, though a mistake was possible, it was not made: they don’t set a bad horse (*ávājīn-*) to race with a good one; they don’t put a donkey before the horses. The question is whether the subjects of the three 3rd pl. verbs (*nayanti* b, *hāsayanti* c, *nayanti* again d) are the same, or are the deluded weaklings of ab being contrasted with more clear-headed and successful actors in cd? Common sense suggests the latter, but the morphologically identical sequence of verbs with no overt subject or change of subject the former (as Old points out). I cannot make up my mind, esp. because the following vs. muddies the waters even further.

Given the interpretational difficulties, the grammatical identity of *ásvān* is a minor problem. In the publ. tr. I take it as acc. pl. *ásvān*, but the Pp. interprets it as abl. *ásvāt*, with the final *-n* in sandhi before the nasal of *nayanti*. Either is possible (“lead before the horses” / “lead before the horse”), and given the uncertainty of meaning, there is no obvious way to choose. The abl. is supposed to be construed with *puráh*, but in fact ABL. + *puráh* is not a robust construction.

III.53.24: The good sense / bad sense problem continues, or returns, here. The sons of Bharata are ceremonially presented to us, with the here-and-now deictic *imé*. And we know from vs. 12 that the Bharata people (*bhārata-jāna-*) are our people. But here they (or the subjects of the three 3rd pl. verbs: *cikituḥ* b, *hinvānti* c, *pāriṇayanti* d) seem to make the same bad choices that were visible in vss. 22–23, esp. 23b. The continuation of the 3rd pl. verbs invites us to make the Bharatas subjects also in vs. 22. Is this a jokey anti-dānastuti? Are the “bad choices” I just mentioned meant to show that even if they do stupid things, they will still beat the incompetents depicted in vs. 22? Or that bad choices can still sometimes unaccountably lead to good? I am baffled.

The mealtime *prapitvā-* is well attested in the RV, but *apapitvā-* is found only here. Both Ge and Re take the words in some kind of figurative sense (e.g., Re *apapitvā-* ‘la retraite’, *prapitvā-* ‘l’élán-en-avant’), but since the *-pitvā-* compounds are otherwise only used of meals and the times of day associated with them, it seems best to maintain that sense here; so WG ‘die Nachessenzeit’, ‘die Voressenzeit’. In its contrast with *pra* here, I take *apa* as meaning ‘leaving the meal, post-prandial’ and therefore ‘non-meal’.

My interpr. is influenced by my sense that the lesser choice is the one being made in each case in this vs.

In c the standard tr. take *ná* as a simile marker: “they incite their own horse like an alien one.” But given the paired negative clauses in 23cd and the undoubted negative (or at least undoubted by the standard tr.) in the immediately preceding pāda (24b), where the *ná* takes the same position as in c, the pattern seems to impose another negative here. Under either interpr. the action is not a very smart one: spurring your own horse like an alien one should presumably mean that you don’t spur it at all.

The accentuation of *jyā-* in the bahuvrīhi *jyā-vāja-*, against simplex *jyā-*, is attributed to the shift to initial accent in some other bahuvrīhis: AiG II.1.293 with Nachtr. 81. The standard tr. avoid the problem of the sense of this cmpd by attributing to *-vāja-* a sense it doesn’t otherwise have: Ge (WG; cf. Gr) Schnelligkeit, Re la force. But *vāja-* means ‘prize’ and bahuvrīhis with it as 2nd member ‘having X as prize’. I here assume that winning only a bowstring (minus the bow) would not be a glorious outcome.

III.54 All Gods

III.54.1: All four pādas contain a distracted *-iya-* form immediately after an early caesura.

The expression “listen with his ... faces” is somewhat comic, though clearly domestic and heavenly “faces” refer to Agni’s aspects in those two places. As Bl points out (RR ad III.1.15, which also contains the phrase ... *no dāmyebhīr ānīkaiḥ*), “with his faces belonging to the house” is unexceptionable in III.1.15, where it is construed with the verb *rākṣā*, but “a bolder poet” has adopted it to this less congenial (and therefore more interesting) environment.

III.54.2: With Ge (/WG) I supply “to those two” in b, to provide both a goal for *ichāñ carati* and an antecedent for *yāyoḥ* in c.

III.54.3-4: The co-occurrence of *ṛtā-* and *satyā-* in these two vss. (3a, 4b) is striking. In keeping with my estimation of the difference in meaning between the two, I tr. the first as ‘truth’ and the latter as ‘real(ity)’. In both cases here the sense of *satyā-* is close to the English idiom “come true,” that is, “become real.” In 3a the poet is asking that the cosmic truth(s) associated with Heaven and Earth be realized in our own sphere, that H+E put themselves out, as it were, for our benefit. 4ab also concerns the truth(s) associated with H+E -- hence the adj. *ṛtāvarī* ‘truthful’ -- and the older poets, in finding these two entities that possess their own truth(s), spoke words (presumably about and in praise of H+E) that both reflected the reality of those truths and that also came true (*satyavācaḥ*). This vs. esp. emphasizes the poets’ process of discovery of the truths about H+E.

As Re points out, the vs. contrasts the priests or poets in ab with the warriors in cd.

III.54.5: The first pāda is also found in the famous cosmogonic (or anti-cosmogonic) hymn X.129, as 6a. The final pāda of that hymn, X.129.7d, ends with an incomplete sentence “or if he does not know ...?” (*yādī vā ná véda*). Though all the standard tr. of this vs. here find a way to incorporate our 5d into the syntax of the verse, I by contrast think the same trailing off into uncertainty is found here as in X.129.7. The lower seats of

the gods in heaven can be seen, but not the ones in the higher realms. We can only discover so much. As for grammar, I take the *yā* of d as a neut. pl. referring to *sādāṃsi* in c (so also Re, though with a slightly different interpr. of the rest). Ge (/WG) instead take it as a fem. nom. sg. referring to the *pathyā* in b, with c as parenthetical. I do not entirely understand the *vratéṣu* in d. The hidden commandments may be the laws that govern the further reaches of the cosmos.

III.54.6: On the somewhat anomalous use of *nṛcāksas*- here see comm. ad III.53.9.

The first pāda of this vs. seems to imply that, though the higher seats of the gods are not generally visible (5d), a *kavī*-, despite having only a man's sight, has been able to see (*abhī ... acaṣṭa*) Heaven and Earth whole, and that he is cognizant of the crucial paradox about them --- that they are joined but still distinct -- a paradox treated in the rest of the vs. and the following one (7).

The interpr. of b is hampered by the hapax *vīghṛte*. On the surface it appears to belong to the root $\sqrt{ghṛ}$ 'sprinkle', but it is difficult to make this yield immediate sense. It appears to serve the same function as *vīyute* 'separated' in the next vs. (7a), and it has therefore been suggested that *-ghṛta-* actually belong to the root \sqrt{hr} 'take' or is a byform thereof (see, e.g., KEWA III.578). My publ. tr. reflects a tacit acceptance of such a view (or at least a willingness not to probe it too deeply), but I now wonder (without full conviction) whether in the context of *mādanī* 'becoming exhilarated' a sense that connects *vīghṛte* to $\sqrt{ghṛ}$ 'sprinkle' might be possible: "sprinkled separately but becoming exhilarated (together)." In any event I take it as a dual fem. acc. (with Ge [/WG]), not, with Re, a loc. sg. with *yónā*.

My tr. also depends on assuming that the exhilarating is happening jointly, in contrast to whatever type of separation is indicated by the *vī*-prefixed ppl. -- the same contrast between unity and separation found in cd. The place where this is happening in b, "the womb of truth" (*ṛtāsya yónā*), may refer to two different places, the ritual ground (as so often) and, perhaps, the distant invisible seats referred to in 5d.

The publ. tr. takes *vēḥ* as a nom. sg., parallel to H+E as subject of 'make' -- referring to the bird's nest-building activity. But it could be the more usual genitive: "have made a seat like (that) of a bird."

III.54.7: The *-ūka*-stem *jāgarūka*- in b is found only here in Vedic. I wonder if it owes its *-ka*-suffix to the femininized context of c, where H+E are identified as "sisters and young women" (*svāsārā yuvatī*) despite their oppositely gendered names. On *-ka-* in women's language, see my "Women's Language in the Rig Veda?" (Gd. Elizarenkova, 2008) and "Sociolinguistic Remarks on the Indo-Iranian *-ka-Suffix: A Marker of Colloquial Register" (IJ 53 [2009]).

Note the virtual mirror image of *vīyute* (a) and *yuvatī* (c).

I do not understand the use of *ād u* here. Ordinarily this old ablative has a fairly strong temporal ("just after that") or logical ("because of that") sense, but since c has a concessive force ("although being ..."), it is difficult to get *ād* to have logical force, and the fact of being sisters but called different names does not seem to have a temporal dimension. It reminds of the *ca ... ād* in 11cd, but there *ād* easily expresses a standard temporal sense. It is possible, but extremely speculative, that the *ād* does reflect some sort of cosmic temporality: H+E, originally joined together, had a single identity and gender,

but after the cosmogonic separation they received different, and genderedly oppositional, names. The monism of the next vs. (8cd) might (barely) support such an idea; note that “the One” there is neut. (*ékam*).

The standard interpr. (see Ge, etc.) of *mithunāni nāma* is that their names are of different genders when they are given separate names, with *dyaúh* generally masc. and *pr̥thivī* fem. But they are also paired sisters, with the fem. du. designation *ródasī*. This seems correct, and the publ. tr. should probably have reflected this sense of *mithuná-* better. I am somewhat puzzled by why the names are in the plural, however.

III.54.8: The notion of the pair of H+E, separate but unified, is, in the 2nd hemistich, replaced by an even starker contrast, the One (*ékam*, neut. as noted in comm. to previous vs.), which controls the Many, with the Many first configured as oppositional pairs in the neuter: the moving and the fixed (*éjad dhruvám*), the walking/roaming and the flying (*cárad patatrī*). *ékam* is found at the end of its pāda, just as it is in the refrain to the next hymn (III.55).

III.54.9: On the meaning of this vs. see publ. intro. It is the final vs. of the hymn-within-the hymn, vss. 2–9 dedicated to Heaven and Earth. The 1st ps. poet reappears here; he is first found in vs. 2, the beginning of this self-contained portion, and has been absent since, though he may be related to the 3rd ps. *kavī-* in vs. 6.

As indicated in the publ. intro., I think this vs. has a double meaning, aided by the double readings of two items in it: *ádhi √i*, which means both ‘go upon’ (literally) and ‘study’ (‘go over’, figuratively), and the unnamed *dyaúh*, present both as the divinity Heaven alluded to in the phrase in b “great father, begetter” (gen. *maháh pitúr janitúh*; for this as a designation of *dyaúh* cf., e.g., I.164.33 *dyaúr me pitā janitā*) and as heaven the place, suggested by the locational adv. *yātra* ‘where’ in c, introducing the place where the gods take their stand. The poet is both studying the ancient cosmic mysteries he has been attempting to understand in the previous vss. (esp. 5–6) and is embarking on the path that leads to the place where the gods are established, beyond the ken of mortals. Recall the question in 5b “What is the pathway that leads to the gods?” (*devāṁ áchā pathyā ká sám eti*), a question followed by the statement that only the lower seats of the gods are visible. Here *purāṇám* in pāda a can qualify ‘path’ -- not the fem. *pathyā* in 5b but the more familiar masc. *pánthā-*, qualified as *purāṇá-* in IV.18.1 (cf. also *purāṇám ókah* ‘ancient home’ in nearby III.58.6, referring to the Aśvins’ dwelling, presumably also heaven). The gods are themselves on a separate path (*pathí vyūte d*) in the same place, at least by my interpr. Despite their different representations in the (written) Saṃhitā text and in the Pp., *vyūta-* here and *vīyuta-* in 7a must be the same form, ppl. to *ví√yu*; in recitation they would be identical. The verb *unoti* to the supposed root *√u* to which *vyūta-* is sometimes referred (see, e.g., Ge n. 9d) is actually also a form of *√yu*, in the sequence *vyūnoti* in V.31.1, also meaning ‘separates’. Cf. EWA II.503.

III.54.10: This vs. forms a sort of ring with vs. 1, enclosing the Heaven and Earth hymnlet of vss. 2–9. Like vs. 1 it begins with *ímám* followed by a word for hymn (1a *ímám ... sūśám*, 10a *ímám stómam*), and with 1cd it contains a verb form of *√śru* ‘hear’ with god(s) as subject (10b).

On *rdūdāra*- see EWA s.v. *ARD*, though he is somewhat cagey about its formation. I assume the 2nd member is *udāra*- ‘belly’, with the literal sense ‘moist-bellied’ being equivalent to our ‘tender-hearted’. This assumes a bahuvrīhi with an adjectival first member of the form *rdu*-, a shape (disyllabic adj. ending in *-i*- or *-u*-) that often triggers (or is at least associated with) 2nd member accent in bahuvrīhis (see AiG II.1.296ff.).

III.54.11: The first hemistich is either a syntactic fragment -- a long NP in the nominative establishing the topic -- or *pātyamānaḥ* is a predicated pres. part. (The publ. tr. takes it as the former.)

In c *ca* appears to be subordinating, given the accent on the verb *ásreḥ*. I would now be inclined to delete the “and” in the publ. tr. and remove the parens. from “when.”

III.54.14: I am not entirely certain why “victorious Bhaga” is brought in here in a simile in this Viṣṇu vs. I suppose that our praises are making a triumphal procession to Viṣṇu, and the mention of Bhaga may suggest our hope that these praises will be met with a satisfactory portion of goods in return. See 21c below.

In cd it is tempting (see, e.g., Old) to make *mardhanti* the verb of the rel. cl. beginning with *yásya*, which otherwise lacks a verb and appears truncated. But *mardhanti* is stubbornly unaccented. Construing *yásya pūrvīḥ* as a relativized expression of possession, we can assume that it asserts that Viṣṇu has a large female entourage; these females are further characterized in the independent clause in d as “genetresses” (*jānitrīḥ*), for which “mothers-to-be” seemed a more acceptable English rendering, who attend on him and do not neglect him. What this is all about escapes me, though Viṣṇu is associated with the wives of the gods in I.156.2.

III.54.15: The standard tr. construe the instr. *vísuvair vīryaiḥ* as the object of *pātyamānaḥ* (“being master of all *vīryá*”), but when *pātya*- takes an object, it is in the acc., including once in this hymn: 8c *patyate vísvam*. In the only other passage in which Gr identifies the verb stem as taking an instr., VI.13.4, I take the instr. as here, as expressing the means by which the subject displays his mastery.

III.54.16: The first half-vs. treats the kinship we share with the Ásvins, a theme occasionally touched on elsewhere (e.g., VIII.73.12 adduced by Ge). The grammatical problem in the hemistich is the (pseudo-)root noun compd. *bandhupīch*-, which has been interpr. both actively (“asking about [their] kinship”: Gr, Ge [WG], Lü 526, Scar 328–29) and passively (“asked about [their] kinship”: Re). I have followed the Re path, on the assumption that it is more likely that humans are asking the Ásvins about it than that the Ásvins are wondering about it themselves. But in general I prefer root noun compounds to have active meaning, and it is possible that the majority position is the correct one. It does not seem to have too much effect on the interpr. of the rest. Another hapax compd, with the same elements in opposite order, is found in this maṇḍala: III.20.3 *prṣṭa-bandhu*-(voc., not accented) ‘whose kinship is asked about’. Names are also at issue in that passage.

III.54.17: There is phraseological connection between the first pāda of this vs. and the previous vs.: *cāru nāma* “dear name” repeats verbatim the end of 16b, and though they are etymologically unrelated, *kavayaḥ* in 17a echoes *ākavaiḥ* in 16d.

The first half of the verse most likely refers to the Ṛbhus, though they are not named until c. The “dear name” of these unnamed subjects is probably “gods,” the predicative voc. *devā(h)* in b. The Ṛbhus were not originally divine, but achieved the status of gods because of their wondrous acts in the sacrifice. So to be addressed as “gods” by Indra is precious to them indeed.

The second half-vs. consists of a pāda (c) with a sg. nom. (*sákhā*) referring to Indra, accompanied by a pl. instr. (*ṛbhúbhiḥ*) and no verb, followed by one (d) with a 2nd pl. impv. (*takṣatā*). It is tempting to construe the two pādas together, with a mixture of constructions: the sg. nom. + instr. serving as the equivalent of a pl. subj. to the verb in d, but I have kept strictly to the grammar, as do the standard tr.

III.54.18: Ge (/WG) takes pl. *yajñíyāsaḥ* as predicated of *aryamā ... áditiḥ* with pāda a simply a nominal clause; this is strictly impossible, since the predicate adj. should be dual. Ge explains the plural on the grounds that the poet is thinking of the other Ādityas. This is possible, but I prefer to take *yajñíyāsaḥ* as a third term referring to an unspecified set of other gods (quite possibly the rest of the Ādityas), and all three terms as the subj. of pl. *yuyóta* in c. (So also Re.) The *naḥ* in pāda a then simply anticipates the same form in c, and b is parenthetical.

III.54.19–20: The call to the gods to hear us, found first in vs. 1, returns here at almost the end of the hymn (19c, 20a, 20c). Note that in 19c the verb is sg. (*śṛṇótu*) with a series of sg. subjects (and one pl., *āpaḥ*, in the middle), while in 20a it is pl. (*śṛṇvantu*) with a grammatically pl. subj. In 20c a sg. nom. with an instr. pl. of accompaniment (rather like the construction I suggested in 17c) takes a sg. verb, which suggests that my suggestion for 17c is incorrect.

III.54.21: The standard tr. take *bhágaḥ* as the subj. of *mṛdhyā(h)* in c; e.g., Ge “Bhaga [das Glück] möge in meiner Freundschaft nicht fehlen, o Agni.” With such a 3rd ps. subj., this requires *mṛdhyāḥ* to be a precative (Re calls it a “pseudo-précatif” for some reason) rather than a straight 2nd sg. opt. This is, of course, not impossible. But the desire expressed here, that Agni make sure that Bhaga does the right thing, does not seem the usual type of prayer addressed to gods in the RV. I take pāda c as consisting of two clauses, the first nominal, the 2nd, addressed to Agni, consisting only of a negative and a verb (cf. for this construction with this verb, *ná mardhanti* in 14d above), with Agni the subj. I take *bhágaḥ* as a common noun in the publ. tr.; alternatively it might mean “(May) Bhaga (be) in partnership with me.”

The final word of the vs., the gen. *purukṣóḥ* ‘consisting in much livestock’, is a bahuvrīhi variant of the phrase *bhūri pasvāḥ* ‘abundance of livestock’, likewise ending its vs. in 15d.

III.54.22: Old is disturbed by *tām* in c and suggests emending *pr̥sú tām* to *pr̥sutā*, loc. sg. of *pr̥sutí*-. Because of the peculiar mid-pāda position of *tān*, I favor this suggestion though it requires erasing one accent.

III.55 All Gods

As noted in the published introduction, this hymn is notable for its refrain, “great is the one and only lordship of the gods” (*mahád devānām asuratvám ékam*), with its juxtaposition of *devá-* and *ásura-*. For a riff on this refrain, see X.55.4.

III.55.1: The perfect in b, *ví jajñe*, is entirely ambiguous between \sqrt{jan} and $\sqrt{jñā}$, and I think it likely that both are meant. In this context there is not too much difference between a syllable being born and being discerned. The “track of the cow” is presumably here the ritual ground, and the reference is to the ritual speech of the dawn sacrifice.

Re astutely notes the juxtaposition of *akṣára-* and *padá-*, reinforcing the speech theme, even though *padá-* has the sense of ‘track, footprint’ here. See *padá-* in the next vs. (2b) for a possible reference to speech.

The standard tr. all supply a first-person subject in c, with a verb like “I proclaim.” No one but Old attempts to justify this addition, and his attempt is half-hearted. I instead take c as continuing b and take the underlying form of *prabhūṣan* to be *prabhūṣat*, neut. nom./acc. sg., before a following nasal, against the Pp. The participle modifies *akṣáram* in b. In my interpr. the “syllable” (that is, the essence of speech) attends to the gods’ commandments, perhaps by giving them imperishable verbal form. I also suggest that the “great syllable” is actually the refrain found in d; note that *mahát* in b takes the same position as it does in the refrain. The refrain may also be the most important of the gods’ vratas; see also 6c.

III.55.2: For *juhuranta* see comm. ad I.43.8; I take the form to \sqrt{hvr} ‘go crookedly’, not \sqrt{hr} ‘anger, be angry’. The point here is that the gods and the ancestors, who themselves know the path/word, should not keep us from following this same ritual cursus. There is no question of anger that I can see.

The standard interpr., that c refers to the beacon of the kindled ritual fire visible between heaven and earth, is surely correct. This kindled fire is referred to more straightforwardly in the next vs., 3c *sámidhe agnau*.

III.55.3: The flying, scattered desires of the poet here and his (re)turn, in a ritual context, to the old ways of doing things reminds us of the opening of III.38, a hymn about the development of a poetic vocation within the age-old tradition, esp. III.38.1cd. In this connection it’s worth noting that our refrain, *mahád devānām asuratvám ékam*, finds an echo in III.38.4c *mahát tát vṛṣṇo ásurasya nāma* “Great is that name of the bull, the lord.” Ge also appositely adduces VI.9.6, also about a poet’s training and his self-conscious assumption of the mantle of tradition, with his inspiration deriving from the ritual fire.

The *ṛtá-* that we wish to speak may again be the refrain that follows immediately.

III.55.4: The *ví ... purutrā* of the preceding vs. (3a) returns here, though with the preverb bound to a ppl. (*víbhṛtaḥ*); the phrase is contrasted with *samānā-* to express the theme of unity and diversity in balance. The “common king” is of course Agni, and the image is both of this single god being found on many different ritual grounds and of the ritual fire on any particular ritual ground being divided into three.

With Ge, I assume that the pair in c is the kindling sticks. Cf. III.31.2d and X.27.14b, esp. *tasthaú māṭā* “the mother stands still,” comparable to our *kṣéti māṭā* “the mother rests peacefully.” The epithet ‘having two mothers’ (*dvimātár-*) used of Agni in 6a and 7a is a reference to the paired kindling sticks.

III.55.5: As is generally acknowledged, the feminine plurals in the first hemistich refer to plants; the idea is the common paradox that fire is covertly present in all plants because overt fire is produced from wood. Here the three types of plants must be 1) ‘older’ (*pūrvā-*) = woody and easily burned, 2) ‘later’ (*āparā-*) = still green and obviously growing and fire grows up with them, 3) tender (*táruṇī-*) = sprouting ones, which are hard to burn, but he’s in them already anyway. Most tr. take *sadyáḥ* with Agni, not the new-born plants -- e.g., Re “est d’un coup au dedans des (plantes) nouvelle(-ment) nées” -- but *sadyáḥ* is strongly associated with forms of \sqrt{jan} , esp. in III (e.g., III.5.8 *sadyó jāṭāḥ*, sim. III.32.9, 10; 48.1), in the sense of “just born.”

The covert presence of fire is the topic of the paradox in c: he is always within the plants (*antárvatīḥ*), which are therefore pregnant in some sense, even though they have not been impregnated (*āpravītāḥ*) sexually. See X.91.6 for a similar passage, though it lacks the paradox found here.

III.55.6: There seems to be a consensus that the phrase *śayúḥ parástāt* in pāda a refers to a form of Agni in the other world, that is, to the sun in some manifestation (see esp. Ge n. 6ab). This seems to me entirely unnecessary and a cosmic intrusion in a sustained description that is otherwise entirely focused on the ritual fire (vss. 1–9). Instead the hemistich seems to contrast the fire that was immanent and motionless (*śayúḥ*) in the plants, as described in vs. 5, released after birth and roaming restlessly, as a newly kindled fire does. The depiction of his resting place as ‘far away’ (*parástāt*) may seem exaggerated if only plants are involved, but conceptually, and to a certain extent physically (since the kindling wood has to have been gathered from somewhere), it seems to me appropriate.

We should also factor in the possible interpr. of *śayú-* as ‘fatherless’; see disc. ad IV.18.12. I consider the word a pun here; on the one hand the fire resting in the plants (as above), on the other, the fatherless fire who yet has two mothers. I would now alter the tr. to “He who was lying down far away / fatherless -- now he who has two mothers ...” For a similarly phrased passage see I.31.2.

III.55.7: Pāda b is an elaboration on and corrective of 6b. It is not the whole fire that wanders untethered, only the top of it (*ágram*), while the base stays put on the hearth. Most tr. take *ágram* as an acc. with *ánu*; I follow Re (who in turn follows Bergaigne) in taking it as the neut. nom. subj.

The accent on *cáratī* is contrastive with the immediately following *kṣéti*, which opens a new clause.

III.55.8: This verse contains quite oblique phraseology. The first half-verse appears to describe the increasingly aggressive ritual fire after it has been kindled. I take *āyāt* as the neut. pres. part. to $\sqrt{i} + \tilde{a}$ ‘come’, substantivized to mean ‘approach, advent’, and I supply a gen. ‘of him’, which is parallel to the gen. simile in pāda a. The growing fire is

compared to a fighter involved in close combat. I have rendered *pratīcīnam*, lit. ‘turned outward, opposite, face to face’, as the slangy ‘right in your face’ to convey the belligerent nearness of the fire’s approach.

The c pāda is likewise hard to interpret. As Ge notes, the lexeme *antár√car* is generally used for the journey between earth and heaven undertaken by Agni, the messenger or “go-between” for the earthly and heavenly realms. This usage is found in fact in the very next vs., 9b, where Agni is clearly the subject and is journeying through the space between heaven and earth -- as well as in numerous other passages (see esp. X.4.2, as well as nearby III.58.1). As Ge also points out, in I.173.3 it is ‘Speech’ (*vā́k*) who plays this role. Similarly, in our passage ‘thought’ (*matí-*) -- i.e., as often, thought that has taken shape as ritual speech -- is the subject and undertakes the role of messenger. As for the tribute of the cow (*niṣṣídham góḥ*), with Ge I take this as referring to the bovine product that serves as oblation, namely ghee. Thus, ritual speech makes the swift journey to the gods in heaven from the ritual ground, bringing the news of the oblation or serving as its envoy. On *niṣṣíd-* see comm. ad III.51.5.

III.55.9: In pāda a the “gray messenger” is Agni, gray because of his ash; I take the fem. pl. *āsu* as referring to the plants (see vs. 5) that provide the fuel that feeds Agni’s flames. The fire “bears down on them” (/ “keeps pursuing them”; *ní vevetí*) as it spreads over the firewood. (A reference to his hearths is also possible, but I think less likely.)

In contrast to the earthly spread of the fire depicted in pāda a, b shows it rising towards heaven in its messenger role. I take *rocanéna* as an instr. of extent of space, rather than referring to Agni’s own luminosity with the standard tr. However, taking it in the latter way would not appreciably alter the sense of the pāda.

The publ. tr. is somewhat misleading, in having ‘bearing’ for both *ní vevetí* in a and *bíbhṛat* in c, though of course English ‘bear’ has entirely different senses in the two idioms.

III.55.10: This verse continues the theme of vss. 8–9, Agni’s role as go-between. Its point is to show us that Agni as messenger reaches to the highest places in heaven, those defined by the endpoint of Viṣṇu’s famous striding. But the introduction of Viṣṇu also initiates the transition from the exclusive focus on Agni and his kindling.

Note the alliteration: (*go*)*pāḥ paramaṃ pāti pāthaḥ, priyā ...*

III.55.11: The *yád* in pāda c has no obvious function. JSK (I.136) interprets the pāda as containing an “X and which Y” construction (“the dusky one and [the one] who is ruddy”), with *yád* instead of *yā* by attraction to the *anyád* of b. Although this is a tempting way to account for the *yád*, in addition to the wrong gender the rel. is wrongly positioned: we should expect **yád/yā ca áruṣī*. Ge’s suggestion, that this contains the izafe-like [not Ge’s term] *yád* that attaches appositives in Vedic prose, is attractive, but not only would this be a reverse example (the *yád* clause always follows in prose), and it would be entirely isolated in the Saṃhitā language. See my forthcoming “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian.”

It’s also worth noting that the structure of c is identical to 12a *mātā ca yātra duhitā ca dhenū*, with two nom. singulars conjoined by double *ca*, a *yá*-subordinator between

them, and a dual nom. at the end of the pāda referring jointly to the two singulars. So it is possible that the *yād* of 11c comes from the model of 12a, where *yātra* has function.

III.55.12: With Ge I interpret this fem. pairing to be Night and Dawn, who in the previous vs. were identified as sisters. They jointly nurse the infant fire at the early morning sacrifice; the reference is probably to twilight, the transition between Night and Dawn. Re prefers to identify them as Heaven and Earth, but this requires him to interpret Heaven as a female (which of course is not unheard of), and it also makes less ritual sense. On the other hand, the same fem. dual *samīcī* is used in vs. 20 of Heaven and Earth.

III.55.13: The pāda-initial position of *anyāsyā(h)* strongly suggests that it is indefinite (‘another’, not ‘the other’), contra the standard tr. Since definite *anyā-* ... *anyā-* (‘the one ... the other’) is correctly positioned in 11b, 15b, and 17ab, I think we should take the contrastive positioning seriously and connect this phraseology with 4c, which also contains initial *anyā-* (*anyā vatsām bhārati kṣēti mātā* ‘Another bears the calf; the mother rests peacefully.’). In that passage the “mother” of the fire, the lower kindling stick, rested, while the upper kindling stick, identified as “another,” carried the infant fire. Here the situation is reversed: the *anyā-* form refers to the mother of the calf/fire, which is now being licked by a different feminine entity -- in this case, in my opinion, the ghee oblation. A second pairing also imposes itself, however: in vs. 12 we had a different feminine duo: Night and Dawn. Their proximity in 12 invites an alternative reading of 13a, underscoring the temporal transition, with Night functioning as the mother of the fire, but Dawn taking over, tending it and bellowing over it. This latter interpr. seems to be continued in the next vs. (14ab).

I confess that I do not entirely understand the purport of pāda b (nor, as far as I can see, does anyone else). The hemistich is found identically also in X.27.14cd, though given the virtual impenetrability of that hymn, this doesn’t help much. Contra Ge (/Gr, etc.), I do not think *bhū-* here is ‘world’, nor that the instr. expression *kāyā bhuvā* means “in welcher Welt” (see Old for objection to this tr.). Instead I take *bhū-* as ‘form’ or (with Old, etc.) ‘existence-form’, with the phrase meaning “in what shape or guise.” I suspect that the pāda asks how the surrogate mother/cow, who took over from the fire’s mother in pāda a, will deliver nourishment (symbolized by her udder) to the infant fire. The answer may be given in pāda c: it is “the milk of truth” (*ṛtāsya ... pāyas-*), which we might further translate into “the milk of correct ritual speech.”

III.55.14: Ge (/WG) takes *pādyā* as merely a locational ‘unten’, contrasting with *ūrdhvā* at the beginning of the next pāda. It seems unlikely that a formation with so much lexical content would be used in so colorless a manner, esp. given the deployment of *padā*-forms elsewhere in the hymn (*padé iva nīhite* beginning the next vs. [15a], *padé góḥ* 1b, *padajñāḥ* 2b). The “feet” of Dawn are presumably, in naturalistic terms, the light of dawn nearest to the horizon; shining through morning mists it will take on various shapes and colors. (Lü [617 n. 3] suggests that the various shapes and forms are vegetation on the earth, which is also worth considering.) But in mytho-ritual terms, if Dawn is the cow nurturing the young fire in 13b (as well as pāda b in this vs.), the “wondrous forms” (*vāpūṃṣi*) she clothes herself in and the “many shapes” she possesses (*pururūpā*) are the forms and colors of the fire over which she stands. That the scene is set on the ritual

ground is suggested by pāda c, where “I” roam across “the seat of truth” (*ṛtāsya sādma*), which I take as a reference to seat of the ritual. Ge (/WG), however, interpret the pāda as simply meaning “I wander ‘im Geiste’” -- I *think* because of the *vidvān* ‘knowing’, though that word usually refers to knowledge of the ritual or to cosmic knowledge related to the religio-ritual system.

With Ge (/WG) I take *pururūpā* as fem. nom. sg.; however, it can equally be neut. acc. pl. (with Gr and Re) modifying *vápūṃṣi*. The choice actually has almost no effect on the sense of the pāda.

III.55.14–15: The publ. tr. is somewhat misleading, in that *vápūṃṣi* in 14a is tr. as “wondrous forms” and *dasmé* in 15a as “the wondrous one.” I might substitute “marvellous forms” for the first, to avoid the impression of an etymological connection.

III.55.15: This vs. seems to continue the theme of Night and Dawn. The *anyád ... anyád* construction of pāda b echoes that in 11b, where Night and Dawn were first introduced, and in fact our pāda b, with one hidden and one visible, paraphrases 11b, with one shining and the other black, and forms a small ring.

Moreover, the two “set down within the wondrous one” echoes 12c *ṛtāsya té sādasy īle antāḥ* “I reverently invoke the two within the seat of truth.” I take *dasmá-* to refer to the ritual fire/ritual ground, and one of the marvels is that two such large entities (Night and Dawn) can fit into something so small.

The vs. also recycles various thematically significant lexical items: *padá-* (see comm. ad 14); *nihité* echoing *ní dadhe* (13b); *antár* (12c and passim: 2c, 5b, 5c, 8c, 9b, 12c; *antár* is in a sense the signature word of this hymn); *anyád ... anyád* 11b. The ‘pathway’ (*pathyā*) takes us back to III.54.5 where a question about “the pathway leading to the gods” (*devāṃś áchā pathyā*) initiated the mysteries that have dogged us ever since.

III.55.16: The miraculous milkers in this vs. are taken by all standard tr. as rain clouds, flg. one of Sāy.’s suggestions (the other being the heavenly regions). In context this interpr. seems perverse. The verse forms part of a tight little section (beginning with vs. 11) concerning Night and Dawn and their nourishing of the infant ritual fire. Our vs. esp. echoes vs. 12: *dhenávaḥ ... sabardúghāḥ ... ápradugdhāḥ* “milk-cows, sap-yielding, not milked out” is the equivalent in the plural of 12ab *dhenū, sabardúghe dhāpayete* “the two milk-cows, sap-yielding, give suck” in the dual. I find it highly unlikely that the vocabulary here repeated from 12 would refer to entirely different entities (clouds), which, moreover, have no connection with the dawn ritual depicted here. Instead, in the course of this section the joint nurturing activity of Night and Dawn (11–12) has given way to the dominance of Dawn over Night (13ab, 14ab), and though both Night and Dawn are present in vs. 15, one of them (Night) is hidden (15b). This trend accords with the natural phenomenon: at dawn, light dissipates darkness. In our vs. 16 the plural cows either represent the Dawns in general -- the plural of Dawn being often interchangeable with the singular -- or the beams of light, the “dawn cows,” of a single Dawn. The expression “becoming new ever again” (pāda c *návyā-navyā yuvatāyo bhāvantiḥ*) might favor the former possibility, since it reminds us of the daily parade of ever-new youthful Dawns. My identification of the cows with the dawns here admittedly leaves the noisiness (“let them be noisy,” *ā ... dhunayantām*) unexplained. I would suggest either

that there is also a reference to the crackling of the fire wood as the ritual fire is kindled at dawn, or that it refers to the general noise attendant on dawn as the various creatures awake, including real cows mooing to be milked. Note that already in vs. 13a Dawn (in my interpr.) ‘lows’ (*mimāya*) over the infant fire. I think we can safely banish the putative rain clouds.

III.55.17: As indicated in the publ. intro. I consider this vs. to be transitional between the fire-kindling vss. and the arrival of Indra at the sacrifice. I therefore think that the reference is ambiguous. In the publ. intro. I suggested a trio of possible referents: Agni, Soma, and Indra. I now think it is only Agni and Indra and that Agni is the sole referent in ab, with transition from Agni to Indra in c.

This opinion is very different from the standard, which takes Parjanya as the subject here (flg. on the supposed rain cloud vs.). The issue is further complicated by the fact that in the next hymn (III.56.3) yet another being, possibly Tvaṣṭar or Tvaṣṭar’s son, is described as *retodhā vṛṣabhāḥ* “a bull, depositor of semen,” which matches our *vṛṣabhāḥ ... ní dadhāti rétaḥ*. Although I must concede that Parjanya is described with the same phrase as III.56.3 in VII.101.6 and is said to deposit semen also in V.83.1, such designations are not exclusive to Parjanya. In I.128.3 it is Agni who is ... *réto vṛṣabhāḥ kánikradad, dádhad rétaḥ kánikradat* “a bull ever-roaring, depositing his semen’ (with $\sqrt{k}rand$, rather than $\sqrt{r}u$, ‘roar’), and I think Agni is the referent here as well. I do not entirely understand the two herds of cows, but suggest that it may have to do with the embryonic doctrine of the cycle of waters that is later developed in the Upaniṣads, whereby rain falls from heaven and causes plants to grow; the plants, as fuel, produce/give birth to the fire, whose smoke goes to heaven and becomes clouds from which the rain falls, and the cycle begins again. Our passage may have an abbreviated form of this: the bull Agni is roaring (that is, crackling as fire) among one set of cows (plants as firewood); the smoke goes to heaven and the rain (his semen) falls to earth and produces plants (the other herd). Note vs. 5 much earlier in the hymn, where it is said of the plants “Having (him) within, (though) unimpregnated they give birth to (him).”

The transition from Agni to Indra occurs in pāda c, in my interpr. Both Agni and Indra can be called *kṣāpāvant-* (*Ikṣapāvant-*) ‘earth-protector’, indeed simultaneously. (See X.29.1 and my “Śleṣa in the Rig Veda?” [Fs. Gerow], 163–64.) Indeed this epithet is even more flexible: as I discussed in the Gerow Fs., the first element may be either *kṣā(m)* ‘earth’ or *kṣāp-* ‘night’. (For the possible morphological analyses, see the loc. cit.) Under the latter analysis, the epithet would be appropriate only for Agni, but under the former to both Agni and Indra, so the first word in c may slip from clear reference to Agni to double reference. The following two words, *bhāga-* and *rājan-*, are also used in the RV of both Agni and Indra, though ‘king’ is more common for Indra than Agni. The transition is complete.

III.55.18: In my interpr. this vs. announces the arrival of Indra with a splendid team of horses. This new topic is signaled by *prā nú vocāma* beginning pāda b. The exact arrangement of the six and five isn’t clear to me. Re suggests that the double *nú* indicates that there are two separate clauses here. He may be right (“now there is an abundance of horses of the hero; we will proclaim (it) now”), though the difference in sense is slight.

III.55.19–21: I’m not sure why Tvaṣṭar appears here. The previous vs., with the arrival of Indra at the sacrifice, may mark the end of the ritualistic vss. that dominated the hymn up till now. The few remaining vss. then celebrate the prosperity and abundance that our good relationship with the gods, via the sacrifice, will produce: teeming life provided by Tvaṣṭar (19), goods filling the two worlds provided by Indra (20), peace provided by Agni (21), and the inanimate earthly supports for all this prosperity, which provide their gifts to Indra (22).

III.55.19: It is striking that pāda a is reused in the famous Yama-Yamī dialogue hymn (X.10.5b), where Yamī claims that Tvaṣṭar made them a married couple in the womb. I do not think there is an echo of that story here; the point of intersection is simply the association of Tvaṣṭar with conception, pregnancy, and birth (cf., e.g., X.184).

Acdg. to the standard interpr. (Ge [/WG], Re; cf. Klein DGRV I.218, Kü 314), *prajāḥ* is to be construed with *pupóṣa*, on the basis of X.170.1 *prajāḥ pupoṣa purudhā* ... This is not impossible, but it seems unnecessary, esp. as the latter hymn is quite late. It also implies that *purudhā* should also be construed with *pupóṣa*, but this is impossible because *jajāna* is unaccented. It is also unlikely that *prajāḥ* and *purudhā* should be separated, given *purudhā prajāvān* in the next hymn (III.56.3b). At best we can take *prajāḥ purudhā* with both verbs: “thrives with regard to offspring in great quantity and has begotten them [=offspring in great quantity]” or perhaps “thrives with regard to offspring and has begotten them [=offspring] in great quantity.” Such an interpr., with an acc. of respect and a fundamentally intransitive verb, follows that of Kü (314). I do not believe that *pupóṣa* here can have the transitive/causative sense that the other tr. ascribe to it (e.g., Re “a fait fleurir les créatures”).

III.55.20: I assume that the subject of this vs. is Indra. One of his standard cosmogonic deeds involves the creation and separation of the two worlds (“the two great bowls” here), the separation here implied by the material crammed between them. Indra is of course commonly identified as a *vīrā-*; he also “finds goods” (e.g., II.13.11, VIII.61.5), though so do other gods as well as mortals.

III.55.21: The first three pādas here are almost identical to I.73.3abc, where Agni is definitely the referent. For disc. of some of the detail, see comm. there.

III.56 All Gods

I will not attempt to further identify the referents in these enigmatic vss. beyond the sketchy suggestions given in the publ. intr. Ample disc. can be found in the standard tr. As in many such mystical hymns, the grammar is mostly quite straightforward; it’s the purport that remains cloaked in obscurity.

III.56.1: The standard tr. take b as obj. of *minanti* in a, which is certainly possible, while I take it as a separate nominal clause. The choice has no real implications.

In c I take *ródasī* as subj. of the infin. *nināme* in d, along with *párvatā(h)*, but the standard tr. (also Thieme, ZDMG 95: 90) supply a different infinitive in c, generated from *minanti* in a. So, e.g., Ge “Weder die Zauberkundigen noch die Weisen schmälern ... / Nicht sind Himmel und Erde ... (zu schmälern) ...” I do not see the need for

supplying additional material. The only possible semantic arguments might be 1) that the two worlds would not be subject to being bowed down (but I don't see why), or 2) that *vedyā-* wouldn't be capable of performing something physical (like bowing down) but only mental/moral (like transgressing), but such an action seems well within normal limits for the Vedic conceptual universe. Another possible way to construe pāda c is to take *ródasī* as another subject of *minantī*: “nor do the two worlds transgress the commandments.” This has the merit of not supplying anything, but makes *vedyābhiḥ* harder to incorporate. Old suggests this possibility as well as supplying *nināme*; he does not suggest supplying a different infinitive in c.

The word *vedyā-* can be either positive or negative depending on context. Here it must be the latter; cf. also VII.21.5.

III.56.2: WG suggest that *átyā(h)* is a hapax related to *ánta-* ‘border, edge’, *ántya-*, tr. ‘Begrenzungen’. Since no other forms show such a putative zero-grade, since *ántya-* is not found in the RV, since the stem *átya-* is well attested, and since there is no metrical advantage to reducing an **antyā(h)* here to *átyā(h)*, this suggestion doesn't merit adopting. In a hymn of this nature, the females might as well be steeds as boundaries. For other attempts to reinterpret *átyā(h)* see those rejected by Old and another given by Ge (n. 2c).

III.56.3: On the basis of *tváṣṭā ... viśvārūpaḥ* in the preceding hymn (III.55.19) I take the subj. here to be Tvaṣṭar. Since Tvaṣṭar has a large role in the shaping and begetting of offspring, the identification makes sense in this context.

As Ge (et al.) points out, the deriv. *pājasyà-* at the beginning of the Bṛhad Āraṇyaka Up. (ŚBM X.6.4.1) in the list of the body parts of the sacrificial horse seems to refer to the underbelly: *dyaúṣ prṣṭhām antárikṣam udáram prthivī pājasyām díśaḥ pārsvé ...* “heaven its back, midspace its belly, earth the underbelly, directions its flanks ...,” which accounts for the standard tr. here ‘having three bellies’. However, here in this passage with polarized gender and a sexual tone, I think it should also contrast explicitly with *tryudhā* (better **tryūdhā*; see Old, who explains the shortening on the basis of following *purudhā*) ‘having three udders’. On a four-legged animal the underbelly would be the part that sags behind the ribcage, where on a female paśu the udder would be. The corresponding male body part located there would be the groin, hence my tr. The image is the common one of the ur-creator as androgynous. See III.38.4–7, a deeply enigmatic hymn in this same maṇḍala, where the creator is also both a bull and *viśvārūpa-*.

In c I suggest that *patyate* may be ambiguous between ‘be master’ and ‘be husband’ (on the basis of *pāti-*, which of course means both) because of the sexual activity in d.

III.56.4: I have no suggestions for the identity of the singular referent of a, cd (though the waters call to mind Indra), nor for the reason of what seems the intrusive b.

Here and sometimes elsewhere the loc. *abhīke* seems to have a temporal sense (“in an instant, in a flash”) rather than a locational one (“in close quarters” vel sim.). See for this passage Ge's “im entscheidenden Augenblick”, Re's “tout d'un coup.” The semantic dev. isn't too hard to see: as quick as a collision.

III.56.5: On this vs. see Thieme, *Untersuchung* 43–44 and 47–48. He is responsible for the second interpr. of *vidátheṣu* in b. See also *vidátha-* in III.38.5–6, a passage already adduced above ad vs. 3, and comm. thereon: ‘cosmic division’ seems the most likely interpr. of the stem there.

The three watery maidens in c may be evaluated in conjunction with II.5.5, also with the three (apparently watery) women who nourish Apām Napāt in II.35.5, and perhaps with the three goddesses of the Āprī hymns (Sarasvatī, Idā, and Bharatī). Who they are here and what they are doing are unclear to me.

In d *pátyamānāḥ* ‘acting the master’ may be a sly joke, since it has females as its subj. and it was just used (3c) for the hyper-virile inseminator.

III.56.6: The emphasis on the day here is striking. Two different ‘day’ words get used: *#trír ā divaḥ ..., divé-dive ... trír no áhnaḥ#*, with the two parallel expressions polarized at the beg. and end of the hemistich. For another poss. passage with both words, cf. IX.86.19 and comm. thereon, where the possible semantic difference between the two words is explored.

III.56.7: Schaefer (196–97) nicely points out that the “intensive” (i.e., frequentative) *soṣavīti* is the verbal equivalent of the āmreḍitas in 6cd (see comm. above) with the simple verb *suva*.

I am not certain what to do with pāda b. The standard tr. take Mitra-Varuṇa as parallel subjects with those in c, with the main verb in d. This is certainly possible, but conceptually it seems a bit odd. Do Mitra and Varuṇa want things from other gods? would they beg for such a gift? Also Savitar is regularly *híraṇyapāṇi-* (as in III.54.11), so the *-pāṇi-* adj. here (*supāṇī*) would associate M+V with him.

III.57 All Gods

III.57.1: The plural agent noun *panitāraḥ* predicated of just two gods, Indra and Agni, assumes other gods are covertly present; cf. III.54.9 in the same VD series, with *devāsaḥ ... panitāraḥ*, after which the expression here may be modeled.

III.57.2: The standard tr. all take Indra and Pūṣan in pāda a as the subj. of *duduhre* in b and as modified by *prītāḥ* in that pāda. There are several difficulties with this interpr. First, pāda a has entirely dual reference: the two divine names *índraḥ* and *pūṣā*, followed by two dual descriptors, *vṛṣaṇā suhástā*, but both the adj. *prītāḥ* and the pf. *duduhre* in b are plural. Although Old suggests that this dual/plural disharmony is similar to (and therefore presumably no more problematic than) the pl. *panitāraḥ* in 1d, I think the cases are different: Indra and Agni have no dual descriptors in 1d and there is a plausible source nearby for the pl. *panitāraḥ*.

Moreover, in 2ab Old and Ge (/WG) take Indra and Pūṣan as agentive milkers, supplying what produces the milk (namely in this case the udder) as the object of *duduhre*. But medial forms of \sqrt{duh} ordinarily take the milk-producer (cow or, by synecdoche here, the supplied udder) as subject; if there is an object it is the milk, either actual or metaphorical. This is exactly the use of the med. 3rd sg. pf. *duduhe* (that is, the identical form to *duduhre* save for number) in 1c. It seems highly unlikely that these two

nearly superimposable forms would be used with entirely different syntax/semantics in near adjacency. The construction that would be reflected by the tr. of Old et al. is generally in the active; cf., e.g., I.64.5 *duhánti ūdhaḥ* “(The Maruts) milk the udder.” (Re bypasses the syntacto-semantic difficulty by taking Indra and Pūṣan as the milk-producers -- “Indra donc, Pūṣan ... ont donné un lait inépuisable” -- but the number disagreement remains.)

To avoid these two problems, I propose taking 2a as a variant pairing continuing 1d -- Indra and Pūṣan are often found together, as are Indra and Agni, and could equally admire the cow. In fact, if 2a continues 1d, the pl. *panitāraḥ* could be accounted for by the addition of Pūṣan in 2a. (Alternatively 2a can be a nominal clause with *suhástā* as predicate: “Indra and Pūṣan, the two bulls, have dexterous hands” or sim.) I then take 2b as a separate clause, with *prītāḥ* a fem. nom. pl. referring to cows, who are “pleased” because they are well-treated and produce milk accordingly; they are the subj. of *duduhre*, and *śaśayām* refers to the milk they produce. In this interpr. the unnamed cows in b stand for the inspired thoughts, the poems, of “me” -- the poet who called his *manīṣā* a milk-cow (*dhenú*-) in 1ab. The productive result of these poems in the sacrificial exchange, their “milk,” is compared to the “(milk) of heaven,” namely, rain. This theme is further developed in cd: when/if the gods take pleasure in her, i.e., the poet’s inspired thought offered at the sacrifice, he hopes to get the reciprocal benefit of the gods’ benevolence. (Note the echo of *asyām* in c and *aśyām* in d, though unfortunately they are in different metrical positions.)

It might be objected that the cow in vss. 1–2 is otherwise singular (*dhenúm* 1b, *yā duduhe* 1c, *asyāḥ* 1d, *asyām* 2c), but the feminine plural dominates vs. 3 (*jāmāyaḥ* 3a, *dhenāvaḥ* 3c), and this may simply anticipate the number shift.

III.57.3: Ge takes *śaktīm* as an infinitive, governing a dat. *vṛṣṇe* (flg. the Pp.): “... dem Bullen einen Dienst zu leisten wünschen.” This somewhat wayward interpr. is not followed by the other standard tr., where *śakti*- receives its usual abstract sense -- though WG do preserve the dative interpr. of the ambig. Saṃhitā *vṛṣṇa* (“die dem Stier das Kraftvermögen wünschen”). The more natural interpr. is Re’s, with underlying gen. *vṛṣṇaḥ*: “qui recherchent la force-active du taureau,” and my tr. reflects that.

As Ge suggests, the “sisters” in ab are the fingers of the officiant that produced the ritual fire with the kindling sticks; the cows in cd may be the ghee-oblations or (supported by vss. 1–2) the hymns accompanying the production of the fire, or both.

III.57.4: The first hemistich faintly echoes 1a, with *manīṣā* (4b) corresponding to *manīṣām* and *vīvakmi* (4a) reminiscent of *vīvikvān*, though they belong to two different roots (\sqrt{vac} and \sqrt{vic} respectively).

Various referents have been proposed for the feminine pl. in cd: dawns (Old), tongues, flames (Ge), flame-tongues (WG). Though Re favors flames in his tr., his comment in his notes is more illuminating: “Type d’ellipse d’un nom fém. pl., notamment dans le cycle d’Agni; plusieurs possibilités concurrentes.” This remark seems esp. apt to this hymn, with its focus on feminine entities. Note also that *ūrdhvā bhavanti* is found in the next hymn, III.58.2, where the subjects are either ritual offerings or wise thoughts (or both).

III.57.5: The two descriptors of Agni's tongue, *mádhumatī* 'possessing honey' and *sumedhā(h)* 'very wise', seem almost to clash in their juxtaposition, but they were probably chosen to reflect two different aspects of the tongue. On the one hand, Agni's tongues of flame flare up when the libations are poured upon them; 'honey' presumably here refers to these libations (rather than to soma, despite the common identification of soma with honey; soma would put the flames out if poured on them). But *real* tongues, the kind that produce speech, can be qualified as 'very wise' because of that speech, and the crackling of the ritual fire often stands for ritual speech.

[III.58–60 JPB]

III.58 Aśvins [SJ on JPB]

III.58.1: Although *pratná-* has a variety of referents in the RV including, often, Agni, supplying "semen" here is supported by a very similar phrase in this same maṇḍala: III.31.10 *páyah pratnásya rétaso dúghānāḥ* "milking out the milk of the age-old semen", as well as VIII.6.30 *ād ít pratnásya rétaso jyótiṣ paśyanti vāsarām* "just after that they see the dawning light of the age-old semen"; in addition, I.100.3 *rétaso dúghānāḥ* "milking out (the milk) of their semen" (see comm. ad locc.). For the possible referents of both the milk and the semen, see publ. intro.

One way or the other, the first three pādas with their unclear referents and actions, apparently all connected with the early morning, are setting the stage for the quite straightforward statement in pāda d.

III.58.2: The vs. is very difficult and lends itself to a range of unsatisfactory syntactic analyses. I'm afraid that I find quite unlikely the publ. tr.'s interpr. of ab, with a parenthetic *ūrdhvā bhavanti* breaking up a single clause that occupies the rest of the hemistich. (Even though this is one of the possibilities that Old entertains.) Although I'm not in principle against explanations via parenthetic interjections – I use this tactic from time to time – this one doesn't reward us with better sense. The interrupted clause especially – "... carry you two like parents back here" – contains a puzzling simile: why would the parents need carrying back? I am also disturbed by the position of *prāti vām*, which by rights should begin a clause – putting it after the verb with which the words are supposedly construed, with the rest of the clause dribbling in towards the end of the next pāda, seem uncharacteristic of RVic syntax. Such an analysis should only be considered if it yields superior sense (which it does not). Ge's interpr. is slightly better, in that he takes a and b as separate clauses, and his deployment of the simile with the parents makes more sense. But he still takes *prāti vām* with the preceding verb. I prefer to take *suyúḡ vahanti* as the minimalist 1st clause with unspecified subject (which may, in the end, be the *medhāḥ* at the end of the hemistich, but does not have to be) and unspecified object (but surely the Aśvins): "In good harness they convey (you two)." A new clause begins (as it should) with *prāti vām*: "by truth the *medhāḥ* stand erect in response to you two, as if (in response to) their parents." The image is of dutiful children standing up to show respect. I don't quite know what to do with *rténa*, but it doesn't work very well in anyone's interpr. Here perhaps it indicates that the gesture of respect is made according to proper procedure, or else it could be a reference to the Kultlied (as Lü often interpr.

ṛtá-, though in this case [p. 453] he thinks *ṛténa* should be construed with *suyúk.*) In any event I think my new interpr. better accounts both for the syntax and the sense.

As for *médhāḥ*, see Old on whether this is the proper reading (to m. *médha-* ‘ritual offering’) or whether, per BR, it should be emended to **medhāḥ* (to f. *medhā-* ‘wisdom, wise thoughts’ (as in I.88.3, which also has *ūrdhvā-*). In fact either (or both) will do: the ritual offerings become erect by being raised up by the flames and smoke after having been offered; the wise thoughts of the poet-ritualists respond to the presence of the Aśvins by standing at attention, as it were. For *ūrdhvā bhavanti* in a sacrificial context, see the immed. preceding hymn, III.57.4; note also that Agni’s tongue [=flame] is described in that hymn as *sumedhā* ‘very wise’ (III.57.5).

Pace Ge and JPB, I very much doubt that *asmát* should be construed with *járethām* as a pseudo-agent: “awaken because of us”; “von uns sollt ihr wachgerufen werden.” Nor, with Old, do I think that *manīṣām* is the obj. of *járethām* ... *ví* in a construction meaning “wake away X” (i.e., cause X to go away by waking). What then to do with *manīṣām*? Perhaps JPB’s interpr. will work – with *manīṣām* the first object of *cakṛma*, here construed with *ví*, meaning ‘put aside, make go away’. In that case I would only alter his tr. by incorporating *asmát*: “Awake! We have put the inspired thought of the miser away from us; we have brought here (*cakṛma* + *ā*) your help.” However, the Ge (/WG) solution of supplying a verb with *ví* – “drive” or sim. – is also possible.

I am somewhat disturbed that a *manīṣā-* would be credited to a *paṇí-*, since *manīṣā-* is ordinarily a very positively presented thought, but I don’t see any way out of that.

III.58.3: The stem *ávartí-* is found 4x in the RV, 3 of them in this same syntagm, I.118.3=III.58.3 *práty ávartim gámiṣṭhā*, V.76.2 *āgamiṣṭhā práty ávartim*, always of the Aśvins. The fourth is found in the famous hymn about Indra’s birth, IV.18, in its final vs. 13, where Indra says of himself *ávartyā súna āṇṛāṇi pece* “because of need I cooked the entrails of a dog.” This brief expression of *āpad* dharma supports the usual interpr. of *ávartí-* as ‘need, want, distress’ rather than JPB’s ‘trouble’. I would slightly emend the tr. to “you are the first to come in response to need.”

III.58.4: The parenthetical remark in b is an implicit explanation of the impvs. in pāda a, with their insistent *ā* ‘here’: everyone everywhere is summoning the Aśvins, but they should think about and come only to us.

It’s not clear to me why the priests giving honey are compared to allies (*mitrāso nā*). Note that the next hymn, X.59, is dedicated to Mitra.

III.58.6: “Your home is old” sounds more like criticism than praise; I would slightly emend the tr. of pāda a to “Ancient is your home, benevolent your companionship.”

III.58.7: The caesura most likely breaks at the compound seam of *tiró-ahnīyam*.

III.58.8: The root-noun compd *madhu-śút-* (3x, one a rep.) has the expected act. sense ‘honey-pressing’ and modifies the pressing stone, but this splv. *madhu-śút-tama-*, modifying soma, appears to have passive value, “best of the honeyed pressings,” per JPB. See Scar (615).

Note the fairly unusual syncopated syntax, with *pāda* a continuing through the first word of b, *sómaḥ*, followed by an abrupt clause break and initial *tām* picking up *sómaḥ* in a different case. The clause break does not coincide with a metrical break.

On *kárikra*t with sg. obj. that is modified by implicitly pl. *bhūri* see Schaef (105).

III.59 Mitra [SJ on JPB]

The hymn is divided into two by meter: vss. 1–5 Triṣṭubh, 6–9 Gāyatrī. The ring composition between vss. 1 and 5 (see below) also supports the view that these were originally separate hymns.

III.59.4: Thieme (M+A 49–50) argues that in this vs. Mitra is identified with the ritual fire, signaled in part by the initial *ayám*. Whether or not this identification is correct, the annuncatory *ayám* should be rendered. I’m slightly emend to “This Mitra here, worthy of reverence ... has been born ...”

III.59.5: This vs. closes the Triṣṭubh portion of the hymn and exhibits ring comp. with vs. 1: 1d: *mitrāya havyám ghṛtāvaj juhota* / 5d *agnau mitrāya havír ā juhota*.

III.59.7–8: The verb *abhí ... babhūva*, which is the scaffold of vs. 7, returns as the nominalized first cmpd member *abhíṣṭi-*, though built to *abhí√as*, not *√bhū*. This connection should have been signaled: I’d alter vs. 7 to “who dominates heaven ...”

III.60 Ṛbhus [SJ on JPB]

On the various deeds of the Ṛbhus, detailed esp. in vs. 2, see Brereton “Gods’ Work: The Ṛbhus in the *Ṛgveda*.” In *Indologica: T. Ya. Elizarenkova Memorial Volume*, Book II, ed. L. Kulikov (2012). Pp. 111–34.

III.60.1: The publ. tr. fails to tr. *vaḥ* in *pāda* a, and its absence makes the tr. harder to interpr. As the publ. intro. says of this hemistich, “the present priests [= *uśíjaḥ* sj] have recovered the skills of the Ṛbhus ...,” but a too hasty reading of the publ. tr. gives the impression that the Ṛbhus are being identified with the Uśij-priests. To make it clearer, I would alter the tr. to “these things of yours.”

The neut. pl. *tāni* is a neutralized placeholder for the various skills, expressed in relative clauses with abstract nouns of different genders and numbers, set out in the next verse and a half: 1c *yābhir māyābhiḥ*, 2a *yābhiḥ śácībhiḥ*, 2b *yáyā dhiyā*, 2c *yéna ... mánasā* -- all summed up by *téna* beginning 2d.

Maṇḍala III contains a surprisingly large proportion of the occurrences of *uśíj-*: about a third, 9 of the 29 (not counting two repeated *pādas*); no other maṇḍala comes close. Most of the occurrences are sg. and refer to Agni, though some refer to legendary priests of one sort or another, as here.

The instr. *védasā* must mean ‘through knowledge’ here, against the standard sense of the homonymous *s*-stem ‘property, possessions’; this is the only passage in the RV that imposes ‘knowledge’. (On VIII.87.2, so interpr. by Gr. and Ge., see comm. ad loc.) Given its isolation, it is likely that an *s*-stem *védas-* ‘knowledge’ was created here to match *mánasā* in the 1st *pāda*. Although it is generally thought that the cmpds *viśvá-vedas-* and *jātá-vedas-* provide support for a simplex *védas-* ‘knowledge’, it is likely that

the 2nd cmpd member in both forms actually belongs with ‘possession, property’. See comm. ad I.44.7.

The bahuvrīhi *prátijūti-varpas-* is opaque; it is not even clear whether its internal structure is *prátijūti-varpas-* or *prāti-jūti-varpas-*. The former is the view of those who make their analysis explicit (Gr, Scar 177), but the lack of a noun **prátijūti-* or of a lexeme *prāti√jū* as well as the existence of a bahuvrīhi *prāti-rūpa-* ‘having a form corresponding (to every form)’ (VI.47.18) at least complicates the matter. Before going further, we should consider whether the *-varpas-* attributed to the Ṛbhus is inherently singular or plural (either being possible in the bv). The publ. tr. opts for singular: “... a (different) form,” suggesting in the publ. intro. that this refers to their new divine form; the other standard tr. (Ge, Re, WG) instead interpr. it as inherently plural: a new form for every occasion (signaled by the *prāti*). Because of the *prāti*, which JPB’s tr. “rapidly adopting a (different) form,” fails to render, I think the shape-shifting, inherently plural, interpr. has to be correct, despite the appeal of taking it to refer to the change from human to divine form. Whatever piece of Ṛbhu mythology this refers to, I would render the compd as “having/acquiring a (different) form in response to (every) spur,” essentially identical to the standard tr. cited above—e.g., Re’s very full “(assumant) une forme-changée à chaque incitation (nouvelle).” As for the structure of the compd, the first analysis, *prátijūti-varpas-*, is the correct one – however, with *prāti-* not as a preverb with *√jū*, but in the function it has in *prāti-rūpa-* cited above.

I would tr. both verbs in this vs., *jagmur abhí* and *ānaśá*, as simple preterites: “they arrived at,” “you attained,” since they both, esp. *ānaśá*, refer to the mythological past. In particular, after the recital of the Ṛbhu’s deeds in vs. 2, the summary ends with *sám ānaśá*, the same verb that ends vs. 1 (and see *sám ānaśur* in 3a) – but rendered differently in the publ. tr.

III.60.3: I would supply *indrasya sakhyám* of pāda a also as the goal of *dadhanvire* in b: “they raced (for it).”

III.60.5: Although Ge and WG supply “your” [=Indra] with *gābhastyoḥ*, in fact in the passages cited by Ge (n. 5b) where *gābhastyoḥ* is associated with soma preparation, the hands belong to the priests, with Re (implicitly) and the publ. tr. I would, however, slightly rearrange the tr. to “sprinkled soma, pressed in the hands (of the priests).”

III.60.6: The instr. *śácyā* is somewhat puzzling, if, as in the publ. tr., it means “along with your [=Indra’s] ability,” which presents “ability” almost as a fellow drinker. Even if it is an instr. of means (simply “with/by your ability”), not accompaniment, it’s odd: no one doubts Indra’s ability to drink soma, an action that requires no special skill. A possible solution is provided by the association of the instrumentals of this stem with the Ṛbhus. In this very hymn, in 2a, they carved the cups “by their ability (/ies)”: *śácībhiḥ*, and in the Ṛbhu hymn IV.35, the first three pādas of verse 5, each one detailing a different feat of the Ṛbhus, all begin with *śácyā* “by (your=Ṛbhus’) ability/skill.” Although *śácī-* is more often associated with Indra, of course, in this localized context the association with the Ṛbhus would come to the fore, and I suggest that this instr. refers to them: either as a functional equivalent of the *-m/vánt-* stems in pāda a: *ṛbhumān vājavān* “along with the Ṛbhus bringing the Prize of Victory [=Vāja]” and therefore an instr. of accompaniment

“along with their ability / skill,” or as the means by which the Ṛbhus accomplished the pressing, “by their ability/ skill.”

The VP *yemire* + DAT is found in the immed. preceding hymn, III.59.8, where the five peoples “submit” to Mitra; cf. also VIII.12.28–30, IX.86.30, etc. I would prefer “submit” or “submit themselves” here as well. Since the idiom is generally *vísṣvā bhúvanāni yemire* “all the worlds submitted (to X)” (VIII.3.6, 12.28–30; IX.86.30; cf. X.56.5), I suggest that “pastures” is a metaphor for “worlds,” rather than referring to the soma rites, per JPB, sim. Ge, Re, HPS (*Vrata*, 91). The “five peoples” (*pāñca ... jánāḥ*) in III.59.8 is a similar totalizing expression for the whole population of the world.

There are several different ways of construing pāda d, which has been much discussed. (In addition to the standard tr. and comm., see HPS *Vrata*, 91, JSK DGRV I.96–97.) Either *vratā* is instr. sg. and parallel to *dhārmabhiḥ* or it is nom. pl. The former view is represented in Ge’s tr., though in n. 6d he acknowledges the possibility of a nom. pl., as well as by WG and JSK, while Old championed the latter view and is fld. by Re and HPS. However we interpr. *vratā*, there is the independent question of the disposition of the genitives, *devānām mānuṣaś ca*. The two genitive can be depend on different nouns: *devānām* on *vratā*, *mānuṣaḥ* on *dhārmabhiḥ*; the *ca* then conjoins those two complex NPs, appearing, appropriately, after the first word of the 2nd NP—but only if both head nouns are in the same case. Hence, with the publ. tr. “according to the commandment of the gods and the (ritual) foundations of Manu.” Or the *ca* can conjoin only the two genitives (“of gods and Manu”) and the resulting phrase can depend either on *vratā* or on *dhārmabhiḥ*. For the former see Re, for the latter HPS. Thus there are several possible deployments:

- [*vratā* (instr. sg.) *devānām*] AND [*dhārmabhir* (instr.) *mānuṣaḥ*]
- [*vratā* (instr. sg. or nom. pl.) *devānām* AND *mānuṣaḥ*] [*dhārmabhiḥ* (instr.)]
- [*vratā* (instr. sg. or nom. pl.)] [*dhārmabhiḥ devānām* AND *mānuṣaḥ*]

And one impossible one (though favored by Old):

- [*vratā* (nom. pl.) *devānām*] AND [*dhārmabhir* (instr.) *mānuṣaḥ*]

Impossible because *ca* should not conjoin two head nouns in separate cases with different syntactic functions in the clause. (Old notes the problem but is undisturbed.)

A nom. pl. interpr. of *vratā* is tempting: the phrase *vratā devānām* with NA pl. *vratā* is found twice in nearby hymns (III.55.1, 56.1; cf. also III.7.7), and in V.63.7 acc. pl. *vratā* is found in a syntagm containing instr. *dhārmanā*, the syntactic configuration we would have here. My concerns are twofold: on the one hand, as was just charted, *devānām* cannot depends on nom. pl. *vratā* if *mānuṣaḥ* depends on instr. pl. *dhārmabhiḥ*; yet the phrase *vratā- devānām*, with only the first gen., is the nearby phrase we are comparing. In addition, the structure the nom. pl. phrase would fit into is uncertain. If is taken with the pl. verb in pāda c, *yemire*, it should mean “the commandments of gods and men submit to you (=Indra).” This is not impossible, given Indra’s hegemony even in the divine world, but it is a bit startling in context – with *dhārmabhiḥ* still to be added: “the commandments of G+M submit to you according to the ordinances/principles” (?). Or, less likely, “the commandments submit to you (=Indra) according to the ordinances/principles of gods and men.” If the verb is not to be borrowed from c, another one has to be supplied (/invented): Re “(ont lieu),” HPS “(werden) ... (erfüllt).” For these reasons, the instr. interpr. of *vratā* seems the better choice, with the submission of the “pastures” to Indra in harmony both with divine vratas and human dharmans.

III.60.7: As noted ad VIII.63.4, *hóman-* can mean either ‘pouring, offering’ (to \sqrt{hu}) or ‘invocation’ (to $\sqrt{hū}$, though **hávīman-* would be better; cf. *hávīman-*). Here, *pace* JPB, I think “at the offering/pouring of the rite” would be slightly better (so WG and seemingly Ge and Re).

III.61 Dawn

III.61.1: In the publ. tr. “with a rich prize” is slightly misleading, since it represents only *vājēna*, but “prize-giver with a prize” sounded flat.

“Young woman from of old” (*purāṇī ... yuvatīḥ*) reflects the usual paradox that Dawn is both new every day and the same every day from the beginning of time. She is “Plenitude” (*púramdhiḥ*) because she distributes the priestly gifts at the dawn sacrifice.

III.61.3: The hapax *caranīyāmāna-* seems an elaborate way to express what might as easily have been simply *cárant-*. Re tr. ‘traçant la marche’ and comments that it has “valeur durative-technique par rapport au simple *cárantī*.” My ‘making progress’ also attempts to differentiate it from the simple pres. to \sqrt{car} and to indicate its denominative origins.

III.61.4: The puzzle in this vs. is the image in pāda a, *áva syūmeva cinvatī*. Some factors that contribute to this puzzle: 1) *áva* \sqrt{ci} is not otherwise found in Vedic. (In epic/classical Skt. it means ‘gather’.) 2) *áva* need not be construed with *cinvatī*, but could go with *yātī* in the next pāda, esp. since tmesis in participles is considerably rarer than in finite verbs. 3) There are several roots \sqrt{ci} . 4) The referent of *syūman-* isn’t clear.

To begin with the last, most interpr. locate *syūman-* in the realm of sewing and garments. Ge tr. “die die Naht auszieht” (“who undoes/rips out a seam”), sim. Old “... die Naht auftrennend,” Re “défaisant le fil.” Old suggest that it is the seam that holds the darkness(es) together. Sāy. goes further, in suggesting that it refers to a garment (*vastram*), which Dawn takes off. WG’s “Wie eine (Frau) den Gurt ablegend” may also reflect this image, though their n. vacillates between sewing and equestrian interpr. The problem with all of these attempts is that, in its few occurrences, *syūman-* is otherwise used of horse tackle, esp. of reins; cf. the PN *syūma-raśmi-* (“*Band-Bridle” Mayrhofer, PersNam s.v.) and the cmpds *syūma-gabhastī-* (I.122.15 ‘with hands as its guiding rope’), *syūma-gṛbh-* (VI.36.2 ‘pulling at the reins’), as well as instr. *syūmanā* (I.113.17), all in horse/chariot contexts. Despite its derivation from $\sqrt{sīv}$ ‘sew’, it therefore seems unlikely that only here in the RV would it refer to garment construction. And, although Dawn as a female might in principle be connected with sewing (if that was Vedic women’s work), in fact she is usually not, whereas her travels are a standard theme; note, e.g., her chariot in 2b, her horses in 2c, and her driving (*yātī*) in this vs.

We must then turn to the verb. If we use the later ‘gather’ sense for *áva* \sqrt{ci} , the simile might mean “gathering up the reins (preparatory to setting out on a journey).” A similar idea, though not related to horses, seems to be reflected in Ge’s alternative given in n. 4a: “Wie (die Hausfrau), die das Halfterband (den Tieren) abnimmt (um sie auf die Weide zu treiben),” relating it thematically to *svásarasya pātnī* “mistress of good pasture” in the next pāda. I prefer to compare the lexeme *áva* \sqrt{tan} ‘unstring, slacken’ of

bowstrings (e.g., AV VI.42.1 *áva jyām iva dhánvano manyúm tanomi te hṛdāḥ* “Like a bowstring from a bow, I make slack the fury from your heart”; RVic exx. similar but without an explicit bowstring). The image is of Dawn letting the reins go slack to give the horses their head. Curiously, Griffith’s tr. is similar, “letting her reins drop downward,” though he thinks it refers to her sending down rays of light. If this interpr. is correct, I assume that it belongs to the root \sqrt{ci} ‘pile’, with a highly developed idiomatic sense. In fact, combinations of \sqrt{ci} + PREVERB tend to show fairly extreme idiomaticity.

Arnold (Ved. Met., 300) suggests reading *uṣā ā yāti* for simple *uṣā yāti*, which would yield an 11-syl. line. Old is tempted but seems to favor the transmitted reading; Re, however, is convinced. HvN reject it without explan. (“a rest at the 5th place seems preferable”). I would follow Arnold and Re, and therefore the publ. tr. should be emended to “drives here.”

Pāda d is taken by Ge and Re (and me) as containing one of the relatively rare RVic occurrences of \tilde{a} + following abl. in the meaning ‘all the way to’. The source of this counterintuitive use of the abl. can be seen in passages like this, where ‘all the way to’ and ‘all the way from’ are essentially identical in sense: the light of dawn stretches throughout the midspace, and the directionality (from/to heaven/earth) is irrelevant.

III.61.5: The standard tr. supply a form of \sqrt{vac} (Ge specifically *vivakmi*, invoking *áchā vivakmi* in nearby III.57.4a) in pāda a, which is then taken as a separate clause: “I (call) to Dawn for you ...” Although I resisted this in the publ. tr., I now see its merits, in accounting for the preverb *áchā*, the double *vaḥ* (pādas a and b), and the acc. case of Dawn. I would therefore emend the tr. to “(I invite) for you the goddess Dawn, radiating widely; proffer your well-twisted (hymn) (to her) with reverence.”

The phrase *pājo aśret* is found in a number of passages; see III.14.1 for details.

The standard tr. (also Lü 73, Kü 430) take *rocanā* as a fem. nom. sg., in order, as Ge says (n. 5d), to allow *prā ... ruruce* to have its expected intrans. sense. But well-attested *rocanā-* is otherwise only neut. (X.189.2 adduced by Ge, etc., as another ex. of a fem. is also a neut. pl.), and in the pl. it regularly refers to the luminous realms. I would prefer not to create a separate stem to apply to a single example, esp. because the default interpr. of the form would be neut. pl. There is a simple solution that allows the neut. pl. analysis to be preserved without imperiling the intransitivity of *ruruce* -- to interpr. the neut. pl. as an acc. of extent, as often. The publ. tr. reflects this.

III.61.6: The phrase *arkaír abodhi* has double sense, since *arká-* can mean both ‘chant’ and ‘ray’ and *abodhi* both ‘has (been) awakened’ and ‘has been perceived’. The ambiguity nicely captures the ritual situation: we ritualists (wish to) believe that the natural world is set in motion and controlled by our ritual activity (in this case chanting that makes Dawn awaken and dawn), but the ritual is itself set in motion by phenomena in the natural world, in this case the appearance of the first light of dawn.

III.61.7: This vs. offers a surprising number of small puzzles. The first is how to construe *uśāsām iṣanyān*. Most take gen. pl. *uśāsām* as the obj. of the participle, despite its unexpected case. (Others, like Pischel and Lü [for details see Lü 596–97], simply label *uśāsām* an acc. -- convenient but unconvincing.) I supply ‘cows’ (*gās*) as obj. on the basis of III.50.3 (in this maṇḍala) *sām ... gā iṣanya* and IX.96.8. That the bull (*vṛṣā*) in the next

pāda is the subject of ‘drive’ invites a bovine object. The cows, as often, can be the rays of the Dawn (the “dawn cows”). They are driven “on the foundation of truth” (*ṛtāsya budhné*), that is, the earth and more specifically the ritual ground.

The bull doing the driving is, in my view, the sun, which follows dawn and could therefore be conceived as driving the rays of dawn before him. His “entering the two world halves” is, of course, his rising above the horizon.

The standard tr. take *candrēva* in d to mean “like gold,” but if the reference is to the precious metal, it should be *candrām iva*, as they all acknowledge. With Gr and Old I instead take it as the fem. nom. sg. it appears to be, referring to Dawn. But who/what is the subj. of the frame? Most tr. take it to be the sun, who spreads his radiance (*bhānūm*) far and wide. This is certainly possible, but it leaves the *māyā* of Mitra and Varuṇa announced in c rather orphaned. I therefore prefer to take *māyā* as the subject of *vī dadhe*, in intransitive usage (“the magic power spreads/is spread”); the syntax of this frame is contrasted with the transitive but self-involved *vī dadhe* in the simile: “as shimmering (Dawn) has spread her own radiance,” with *bhānūm* belonging to the simile. This kind of syntactic disharmony is commonly exploited in similes, as I have discussed at length elsewhere (“Case disharmony in RVic similes”, *III* 24 [1982] 251-71).

III.62 Various gods

III.62.1: For the sense of this complex vs. and its relation to the rest of the hymn, see publ. intro. The point of the verse appears be that our hymns, however frenetic (a), are no longer effective (b), and therefore the activity of Indra and Varuṇa on behalf of their partners [=us] is in abeyance (cd).

With the standard tr. I supply ‘hymns’ with the opening *imā(h)*: the NP *imā girāḥ* is pretty common.

The praise hymns to Indra and Varuṇa appear to be whirlwinds (*bhṛmāyaḥ*) to us, but they cannot be ‘thrust/brandished’ (*nā tūjyā(h)*) by the devotees of the gods -- that is, they have lost their oomph, their energy, and therefore their effectiveness. For the connection between *bhṛmī-* and *√tuj*, cf. IV.32.2 *bhṛmīś cid ghāsi tūtujih* “You are a whirlwind, constantly lunging” of Indra. For the connection of hymns with *√tuj*, cf. V.17.3 *tujā girā*. Despite its position, *nā* in b should be the negative, not the simile marker. See Old.

MLW suggests an alternative interpr.: These hymns have become not to be pushed (away) for the one who has you two? I.e., they can’t be rejected because they are so insistent. So why aren’t you fulfilling them?

On *sīna-* see comm. ad II.30.2.

I take *sma* as indicating habitual action.

III.62.2: In ab the combination of an intensive (*johavīti*) and two superlatives (*purutāmaḥ* and *śaśvattamām*) gets its point across!

III.62.3: The “Shielding Goddesses” (pl.) appear here and in VII.34.22. In both cases they are associated with *śaraṇā-* ‘shelter’. A singular *vārūtrī* also occurs 4x, once (I.22.10) in association with *hótrā bhāratī* as here. Beyond their/her protective role, the *vārūtrī*

appear(s) to be featureless. The corresponding masc. stem *varūtár-* appears 5x as a common noun ‘defender, guardian’.

III.62.5: Ge (/WG) take *ā cake* as 3rd sg. (Ge: “Er liebt unbeugsame Kraft”). This is certainly possible, but Schmidt (B+I, 131) makes good arguments for flg. Sāy and Gr in taking it as 1st sg.; see also Re (EVP XVI, ad loc.).

III.62.5–6: Vs. 6 is entirely couched in the acc. and picks up from 5ab, where the acc. phrase is obj. of *namasyata*; 5c is a parenthetical intrusion.

III.62.7: Ge suggests in his notes that this vs. could be a single clause, essentially “This praise-hymn is recited to you by us,” with *te* (a) and *túbhyam* (c) tautological. This is possible, but it seems rhetorically unlikely.

On the expressed instr. agent with the finite passive, see my 1979 “Expression of Agency with the Passive ...” and “Case of Agent ...”

III.62.8: This vs. is more complex than it first appears, at least in my interpr. The dominant reading is the one given by Ge: the simile in c matches the frame in a, with b parenthetic. Nearby III.52.3bc [=IV.32.16bc] is nearly identical with minor morphological variation in the frame: *joṣáyāse gíráś ca naḥ / vadhūyúr iva yóṣaṇām*. This interpr. is undeniable. However, I think the intervening b pāda can also be seen as a target of the simile, but in a syntactically twisted way. The object of the verb *avā* ‘help’ is the NOUN + PARTICIPLE phrase (in reverse order) *vāyayántam ... dhíyam* “the insight seeking the prize,” which, extracted from its role as object and presented as a simple clause, would represent “the insight (nom.) seeks the prize (acc.),” with subject/object syntactic relations. Thus reconfigured, the phrase in b would match the simile in c: “our insight seeks the prize, as a bride-seeking man (seeks) a maiden.” The syntactic transformation of one of the parts of the structural pair from clause into acc. participial phrase does not disrupt their functional and semantic matching -- it rather shows again the pleasure that RVic poets get from off-kilter correspondences. (See, e.g., the simile/frame pair at the end of the previous hymn, III.61.7d with comm. above.)

This secondary reading presents another twist. In the dominant reading the subj. of the impv. *juṣasva* is a (male) god, the obj. a hymn (*gír-*), a word feminine in gender. These genders match those of the simile: the subj. a bride-seeking male, the obj. a maiden. But when we consider the underlying clause in b, the genders are reversed: the insight (*dhī-*) is feminine; she is the seeker, not the sought, while the prize (*vāja-*) she seeks is a masc. noun.

III.62.9: The usual sharp polarity between the preverbs *ví* and *sám* is emphasized by keeping the verb constant (*páśyati*) and explicitly conjoining the two verb complexes with *ca*. My “looks at all creatures separately and sees them whole” is meant to capture the contrast of the two preverbs in idiomatic Engl.

III.62.10–12: All three vss. in this *ṛca* contain *déva-* (...) *savitár-* (or vice versa).

III.62.10: And here, buried in this not particularly noteworthy hymn, is the Gāyatrī mantra, which is itself not particularly noteworthy on its own terms.

Note the play on *dhīmahi* / *dhíyah* juxtaposed across the hemistich boundary, belonging to different roots.

III.62.11: I take *púramdhyā* as an instr. of accompaniment, not (with Ge [/WG]) an instr. of means.

III.62.17: The sense of the splv. instr. pl. *drāghīsthābhiḥ* is unclear. This is the only occurrence of the superlative in the RV, and neither *dīrghá-* nor the cmpv. *drāghīyas-* occurs in the instr. pl. The standard interpr., that the splv. here is temporal (Gr ‘in längster Dauer’), seems reasonable, but not assured.

Commentary IV

IV.1 Agni

I do not understand the emphasis on Varuṇa in the early parts of the hymn (vss. 2–5; see also 18d), since the Vala myth and the unnamed Aṅgirasas in the later parts of the hymn have no obvious conceptual connection with Varuṇa and the Ādityas (see also Aditi in 20a).

IV.1.1: Hymn-introductory *hí* is difficult to render. It does not have its normal causal sense, though perhaps in this position *hí* is meant to explain why the hymn is recited following a particular ritual action. It is noteworthy that the first hymn of Maṇḍala VI (also, of course, to Agni) opens in exactly the same way: *tvám hí agne*.

With Ge (/WG) I take pādas def as the direct address of the gods to mortals, with the speech introduced by *íti krátvā* in c. (This idea goes back to Bergaigne; see Old SBE ad loc.) Rejecting this interpr., Old labors mightily to explain away the apparent 2nd pl. actives *yajata* and *janata* as voc. and 3rd pl. middle respectively. (In this he follows Sāy.) Re tries in addition to make *yajata* also a 3rd pl. mid. (see also Gonda [*Vedic Literature*, 228], whose tr. renders both forms as 3rd plurals). Although *yajata* could actually be a voc., 3rd pl. middles in *-ata* to thematic stems are morphologically impossible, no matter how metrically unfavorable *-anta* would be. Ge's direct speech interpr. solves these grammatical problems and also makes sense of the *íti* in c.

The poet plays with *ā/a* and the oppositional pair *mártya-* / *devá-* in de, with chiasitic #*ámartyam ... mártyeṣv ā#* in d, and *devám ādevam* opening e. (See also *devāso devám* opening 1b.)

IV.1.2: As Arnold (VedMetre, 300) suggests (so also Old, HvN), deleting *agne* in pāda a and reading *vavṛts"va* (as in 3a) yields a fine Jagatī line.

IV.1.3: The injunc. *vidaḥ* is functionally multivalent, but usually interpr. as an impv. (so Ge, Re, though not WG). On this form see comm. ad I.42.7–9 and IX.20.3. I would now allow an alternative translation as impv.: “find grace ...”

The final pāda (g) is a combination of the opening of c (*asmábhyam dasma*) and the ending of f (*sám kṛdhi*).

IV.1.4: My “may you please placate” is meant to capture the precative (*áva*) *yāsisīṣthāḥ* of the *sīṣ*-aorist to *√yā*. Note the dissimilation (if that's what it is) of the middle sibilant from expected rukified *ṣ* to plain *s*.

Note the phonetic figure straddling the hemistich boundary: b *yāsisīṣthāḥ* / c *yájiṣthāḥ*.

In 4c, likewise 6b, HvN note the caesura after three (4c *yájiṣtho váhñitamaḥ*, 6b *devásya citrátamā*). I wonder if the splv. suffix *-tama-* here is semi-detachable for metrical purposes, yielding an opening of 5 in both cases.

IV.1.5: The idiom *áva √yā* ‘placate, appease’ found in 4b finds a close variant in 5c *áva yakṣva* ‘placate through sacrifice’ to *áva √yaj*. Though belonging to different roots, they are phonologically and semantically similar. Another such variant is found in d *vīhí*

mṛṭkām “pursue his grace,” which echoes 3d *mṛṭkām ... vidah* “you (will) find grace” -- again two different roots (*vī* and *vid*) but phonologically and semantically similar.

IV.1.6: Because of the position of *ná* (*ghṛtām ná taptām*) I follow Ge in taking *súci* as the shared quality between simile and frame and therefore “attracted” to the neut. of the simile, though we would expect a fem. modifying the gapped *samḍś-*.

The distracted reading *ághnī* (*yāyāh*) ‘inviolable [cow]’ at the end of pāda c echoes *agnī-*, the divinity of the hymn.

IV.1.7: I take *santi satyā* here as an etym. figure, a phrasal verb meaning “come into existence” (“come [to be] true”), rather than taking *santi* as copula and *satyā* as a simple adj. with most tr. For one thing, pres. tense forms of *√as* in main clauses are usually existentials, not copulas; for another *trīs* should mean ‘three times’, not ‘three’ or ‘threefold’ as a copular reading seems to require (e.g., Ge “Dreifach sind diese seine höchsten wahren (Geburten) ...”). See also *satyām astu* in 18d. I am not sure which three occasions are being referred to, but possibly to the production of the three ritual fires -- though esp. given the word *paramā-* ‘highest’, it could be a cosmic reference.

I do not know what “enveloped within the limitless” (*ananté antāh párivītaḥ*) refers to. It may be the dense swirling smoke, lacking clear boundaries, that surrounds a fire, or it may be the unborn Agni’s concealment in the kindling sticks -- though it’s hard to see how they would be *anantā-*. It is also possible that this is a reference to the paridhi sticks that surround the ritual fire (see comm. ad IV.3.2 below); they would be “endless” because a circle has no end. Note the phonological play of (*an*)*anté antāh*, despite their different etymological affiliations.

In d the standard tr. take *arīyāḥ* as nom. sg. to the thematic stem *aryá-* (e.g., Ge ‘Herr’). I follow Thieme (Fremdling, 77–78) in interpr. it as gen. sg. to *arī-*. Among other things, as Gr points out, this would be the only ex. of *aryá-* with distraction, while *arī-* does have a few other distracted forms. There is no compelling formulaic evidence either way, but V.34.9 *ketúm aryāḥ* “the beacon for the stranger,” adduced by Thieme, resembles our passage thematically.

IV.1.8: In b the caesura appears to coincide with a compound seam (*#hótā hīraṇyā/ratho ...*), as HvN also note. This is reminiscent of the proposed caesuras in 4c and 6b, before the splv. suffix *-tama*. See also 19b.

The first cmpd member *rāmsu-* is taken by Schindler (Rt Nns, 40) as the loc. pl. to a root noun *rān-* ‘Freude’, an analysis accepted by Mayrhofer (EWA s.v. *RAṆ*).

IV.1.9: I follow Ge (n. 9a) in giving *mānuṣaḥ* a double reading, acc. pl. obj. of *cetayan* and gen. sg. dependent on *yajñābandhuḥ*. Note that it is neatly positioned between those two words.

I think *yajñābandhuḥ* has a more specific sense than simply ‘Opfergenosse’. Rather, Agni is literally our ‘tie’ (*bāndhu-*) to the primal sacrifice instituted by Manu because he has always been present, always the same, at every sacrifice since then.

The referent of *asya* in c is taken as the mortal (*márta-*) in d by Ge (implicitly also Re), as Agni by WG. Either is possible, both grammatically and contextually. There is no requirement that a possessive coreferential with the subject be expressed by a reflexive

(*svásya* in this case), and though, technically speaking, an unaccented oblique form of *ayám* should have an *antecedent*, the close proximity of *mártasya* and the fact that the subject of the preceding verb (*nayanti*), though pl., is clearly mortal would make *asya* = mortal unproblematic. And given the ritual intimacy of Agni and his worshipper(s), the house belongs to both.

Note the phonological echo in *sāḍhan* (c) and *sadhanitvám* (d), even though they are semantically unconnected. As for the latter, I now favor the alternative deriv. proposed by Scar (291), from a base **sadhaní-* ‘Teilhaber am gemeinsam Schatz, Teilhaber, Genosse’ in turn built to *sa-dhāna-* (ŚB) ‘gemeinsamer Schatz’ -- rather than as a derivative of the [a] root-noun cmpd *sadha-nī-*, with shortening of the root vowel before *-tvā-* (so AiG II.2.715). See *sadhanyām* in X.50.3. In fact some or all of the three forms assigned to the root-noun cmpd by Gr (IV.4.14, VI.51.3, X.93.5) may also belong rather to Gr’s stem *sadhanyā-*. (Both Lub and Scar assign all four forms [that is, incl. X.50.3] to the *sadhanī-* stem, though, as just noted, Scar considers the alternative analysis.) The problem with the root-noun analysis is that the semantic connection between *√nī* ‘lead’ and the apparent sense of the derivative is quite attenuated. It is, however, the case here that two finite forms of *√nī* (*nayanti* 9b, *nayatu* 10a) flank *sadhanitvám*, so there may be at least a secondary connection perceived.

IV.1.10–18: Hoffmann tr. and comments on these vss. in Injunktiv (pp. 175-78).

IV.1.10: In b I follow Hoffmann (Injunkt., 175) in taking the rel. clause as *devābhaktam yád asya*, rather than just *yád asya* with the standard tr. The sense doesn’t differ markedly.

More difficult is the configuration of cd. All the standard interpr. (incl. Hoffmann), save for Old (both SBE and Noten), take final *ukṣan* as the voc. sg. of *ukṣān-* ‘ox’, referring to Agni. I prefer, with Old, to take *ukṣan* as a 3rd pl. injunc. main-clause verb (*√ukṣ* ‘sprinkle’), with the subj. the immortals of c. The image is of the gods first creating the treasure and then bringing it to life like a watered plant. In favor of the majority interpr, I must concede, is the common idiom *satyām √kr* ‘make real’, which would in fact complement my interpr. of *santi satyā* in 7a, but I find a voc. address to Agni in the middle of 3rd ps. reff. to him (10ab, 11, not to mention vss. 6-9) awkward. Re refers to “l’étrangeté d’un tel Voc.,” despite explicitly rejecting Old’s finite verb interpr.

And what is the treasure? A slightly different phrase *rātnam ... dyúbhaktam* (rather than *devābhaktam* as here) returns in vs. 18, where it seems to refer to the light of Dawn in the form of the cows released from the Vala cave; here I think it may be the light of the newly kindled ritual fire -- and of course the lights of Dawn and the fire of the dawn ritual can be superimposed upon and identified with each other. If the light of the new fire is the primary referent in this vs., *ukṣan* ‘sprinkled’ may refer to sprinkling ghee on the fire, which action would cause it to blaze up. The next vs. (11), which describes the birth of Agni, fits this interpr.

IV.1.11: The vs. treats the birth of the ritual fire on earth, with the second hemistich describing the amorphous shape and constant motion of physical fire. That it has neither foot nor head (*apād asīrṣā*) presumably refers to the lack of consistent vertical definition of a flickering fire; “concealing its two ends” (*guhāmāno āntā*) is reminiscent of 7c

“enveloped within the limitless” (*ananté antáh párivītaḥ*), and the explanations suggested there may apply here. In addition, the “two ends” may be the non-existent foot and head just referred to.

IV.1.11–12: The repeated phrase “in the nest of the bull” (*vr̥ṣabhāsya nīlē*, 11d, 12b) is somewhat opaque, but I think Ge is basically right, that the *vr̥ṣabhā-* is Agni (not, with Hoffmann, heaven). His nest is, in my opinion, the ritual ground; its designation also as the “womb of truth” (*ṛtāsya yóni-*, 12b) supports this identification. I find WG’s n. on this phrase incomprehensible, though it seems to follow Hoffmann in part.

IV.1.12: I am in agreement with most of the standard interpr. that the referent of the subj. of ab is the troop of Aṅgirasas, expressed by the neut. *s-*stem *śārdhaḥ* (*pace* Gr, who takes it as a thematic masc. nom. sg., referring to Agni, sim. Schmidt [B+I, 43 n. 21]), though this word generally refers to the Marut troop.

I part company with these interpr. with regard to the referent of c, however. Most take this string of nom. sg. masc. adj. as further descriptors of the Aṅgiras troop, while I think they refer to Agni. Agni and his births are referred to as *spārhā-* earlier in the hymn (6d, 7b); in 8c he is described as *vapuṣyò vibhāvā* exactly as here. The recycling of this characterizing vocabulary seems to me a clue that the subject has changed here from the first half of the vs: it would be perverse to repeat this phraseology with a referent other than the original Agni. Note also that *yúvan-* ‘young’ is regularly used of Agni, and in the context of his birth the word is esp. apt. I take this nominal clause (/subclause) as annunciatory of the gapped object of d.

Ge, Re, and Old (SBE) take *janayanta* in d as intrans. ‘be born’ (e.g., Ge “Dem Bullen wurden die sieben Freunde geboren”), but this medial form is a standard ex. of *-anta* replacement of the undercharacterized act. *-an* and is therefore transitive. See my “Voice fluctuation in the Rig Veda: Medial 3rd plural *-anta* in active paradigms,” *IIIJ* 21 (1979) 146–69. It is correctly interpr. by Hoffmann (Injunk., 176) and WG. The form is an injunctive, contra the Pp.; so already Gr; see Old (Noten), Hoffmann.

The “seven dear ones” (*saptá priyāsaḥ*) are most likely the Aṅgirasas, here referred to in the plural rather than the collective neut. sg. in pāda a. III.31.5 contains “seven inspired poets” (*saptá víprāḥ*) in a clear Aṅgiras/Vala context. It is also possible that the phrase refers to the Aṅgirasas’ music, since *saptá vāñīḥ* ‘seven voices’ is a common phrase. The adj. *priyāsaḥ* could be either masc. or fem.

IV.1.13: This is the first of the Vala myth vss. As noted in the publ. intro., the actors throughout must be the Aṅgirasas, but they are never named.

The curious phrase *ṛtām āśuṣānāḥ* “panting over the truth” occurs three times in IV.1–2 (also 2.14, 16). It expresses the energy and effort of the Aṅgirasas in singing the true song that opened the Vala cave and freed the cows. See Lü (514–15).

The med. part. *huvānā-* is ordinarily passive in value; *pace* Gr, only VII.30.3 is clearly trans. I therefore take *huvānāḥ* here as fem. acc. pl. modifying *uśasaḥ* in passive sense. The standard interpr. is masc. nom. pl. in trans. value, ‘calling to’. This would of course make just as much sense; my choice is based on the usage of the preponderance of occurrences of the stem.

IV.1.14: Med. *marmṛjata* is most likely reflexive, as I and most other interpr. take it, though Sāy. and Re supply Agni as object. Although the reflex. interpr. seems a little thin -- splitting stone is dirty work, so they had to clean themselves up -- Agni is out of place in this Vala context and there is no other obvious candidate to be object. Moreover, the middle voice suggests a reflexive sense.

The referent of *anyé* in b is not clear to me. By my placement rules (see “Vedic anyá- ‘another, the other’: syntactic disambiguation,” *Sound law and analogy*, Fs. Beekes [ed. A. Lubotsky], 1997, pp. 111-18), it must be definite (“the others”). Most tr. take it as indefinite, though Hoffmann tr. it as definite and implicitly contrastive with the unspecified subject of pāda a: “Die (einen) ... Die anderen von ihnen ...” I think this approach is the correct one, though I don’t think we need or want the group of Aṅgirasas to be split into moieties. Instead, in my view, the contrastive groups are the primordial singers, the Aṅgirasas, and their modern counterparts, the poets and singers of the current ritual. The injunctive *ví vocan* would allow a presential interpr. (“they proclaim ...”) with current singers as subj. instead of or in addition to the preterital one in the publ. tr.

In c we return to the Aṅgirasas, whose singing opens the Vala cave -- hence “they sang the decisive act.” Most tr. take *kārā-* as a victory *song* of some sort (the exception is WG: “... singen sie auf das Schaffen,” where *kārā-* is the topic of the song). But I think the expression is more radical: as so often in the RV, our poet wants to emphasize the power of words to make things happen, the connection between song (the cause) and the act, the splitting of the rock (effect).

The hapax cmpd. *paśváyantra-* is puzzling in formation and sense, although the parts it is based on are relatively clear. The 1st member is *paśu-* ‘livestock’ or a derivative thereof, the 2nd is or contains *yantrá-* ‘binding rope’. The interpr. comes down to deciding which is the lesser of two evils: positing an otherwise unattested extended stem *paśvá-* beside *paśú-* but a relatively conventional bahuvrīhi ‘having binding ropes for the livestock’ or rejecting the extended stem but ending up with an anomalously formed and accented bahuvrīhi. Old argues strenuously for the former, with the rather cumbersome tr. “in ihren Vorrichtungen zum Festhalten ... das Vieh haltend,” and some version of this analysis is followed by Hoffmann and WG. Ge and Re (the latter with some hesitation) opt for the latter, with Ge suggesting a reverse bahuvrīhi (for *ayantra-paśu-*). (He cagily fails to accent it.) In the end I swallow some version of the second analysis, primarily because I find it unlikely that such a common word as *paśú-* would display an unnecessary extended stem in just this place in all of Sanskrit, particularly because there’s little metrical advantage to it here. However, I do not follow Ge’s reverse bahuvrīhi interpr. (roughly, “having livestock loosed from the binding ropes”), but assume that it is the Aṅgirasas who lack *yantra*-s to bind the cattle and do so with song instead. (This interpr. goes back to Bergaigne; see Old SBE ad loc.) That some form of verbal expression could serve as a *yantrá-* is shown by the cmpd. *ślóka-yantra-* (IX.73.6) ‘having *śloka*s as binding ropes’. Unfortunately I do not see how to make this explanation work formally, particularly with regard to accent, esp. as there exists a differently accented privative cmpd. *ayantrá-* in X.46.6. I leave it at this, unsatisfactorily.

In terms of the structure of the vs., I now think the odd pādas (a, c) refer to the Aṅgirasas and the even ones (b, d) to the current singers. I would therefore slightly modify the published tr., which presents pāda d as if it were the direct speech -- the song - of the Aṅgirasas described in c. I now think d is what the other, current poets were said

to proclaim in b.

IV.1.15: The hapax *ḍṛdhṛá-* is plausibly explained by Hoffmann (reported in EWA s.v.) as a crossing of a redupl. nominal **dadhrá-* (\sqrt{dhr}) and the ppl. *ḍṛdha* ($\sqrt{dṛh}$), the latter found in the second hemistich (15c).

IV.1.16: In the publ. tr. *prathamám* in the phrase *té manvata prathamám nāma* is rendered as an adj. with *nāma* (“the first name”). On the basis of VI.1.a *tvám ... prathamó manótā* “you (were) the first minder” I think it possible (but not certain) that *prathamám* here is an adverb: “they first brought to mind the name ...” The agent noun *manótar-* is built to the verb stem *manu-* found in our passage, and *prathamám* may qualify the action of ‘bringing to mind’ rather than the name brought to mind.

A comma should be inserted in the publ. tr. after “(The cows)” in pāda c.

On *vrā-* see comm. ad VIII.2.16 and Jamison 2003 (= “Vedic vrā: evidence for the svayamvara in the Rig Veda?” in *Paitimāna: Essays in Iranian, Indo-European, and Indian Studies in Honor of Hanns-Peter Schmidt*, vols. 1-2 [ed. Siamak Adhami], 2003, pp. 39-56).

Because of its accentuation *yaśásā* should be adjectival; the question is what head noun to supply. Flg. Lü (Varuṇa, 521, also fld. by Hoffmann, WG), I supply ‘name’, which appears in pāda a and appears to be the topic of the rest of the vs. Ge and Old prefer ‘milk’, but this is contextually less likely.

IV.1.17: On *néśat* as a replacement for an original thematic redupl. aor. with radical zero-grade (expected **na-nś-a-*), with the vocalism of the first syllable replaced by that of the weak perfect, see KH, Injunk. 64–65.

On *dúdhita-*, a qualifier of darkness, see EWA s.v., with ref. to Schindler (1967), who separates it from *dudhrá-*, etc., and adduces possible Germanic and Toch. color-term cognates.

IV.1.18: I interpr. the “treasure apportioned by heaven” (*rátnam ... dyúbhaktam*) to be in the first instance cows (as in I.73.6), those released from the Vala cave, but the cows conceived of as dawns and therefore as light, including the light of the newly kindled ritual fire. See vs. 10 above, with *rátnam ... devábhaktam*. This buried “light” motif works well with the houses in pāda c, where the ritual fire is at home (see vss. 9, 11 above), and provides an easy transition to the invocation of Agni in the next vs.

The subj. of *dhārayanta* in b I take as the gods in c (with Old, SBE, Hoffmann, WG), rather than taking c as a separate nominal cl. (Ge, Re). Note the chiasmic morphological figure in c, allowing alliteration between the nom./loc. pairs: *vísve vísvāsu dúryāsu devā(h)*.

In d I supply the treasure (in the form of light) as the subj. of *satyám astu* (so also Hoffmann). This VP should be interpr. in the context of *santi satyā* in 7a. See comm. there.

IV.1.19: In b HvN note a caesura after 3; I wonder instead whether the caesura comes at the compd seam (*#hótāraṃ víśvá/bharasaṃ ...*), a solution they themselves suggest for 8b, where the caesura would otherwise come after 2. See also 4c, 6b.

On the cmpd *viśvā-bharas-* see comm. ad V.54.10.

The general opinion is surely correct, that the “gleaming udder of the cows” (*śúcy ūdhaḥ ... gāvām*) stands for the cows’ milk, which is compared to the soma stalk, itself standing for soma. But I think that the udder also stands for the Vala cave, which contained the cows. The root $\sqrt{tṛd}$ ‘drill’ is used for breaching the Vala cave in VI.17.1, 3, X.74.4. Ge finds the subj. of *atr̥nat* unclear, but surely Agni makes the most sense (not the sacrificer, per Sāy.). In his ritual role, Agni causes the dawn to dawn and therefore opens up the Vala cave on a daily basis. And at the same time he brings the outpouring of ghee (in the sacrifice) and the morning dakṣiṇā and other products of the cow.

The two soma-related terms *aṃśú-* and *ándhas-* are difficult to define and to distinguish from each other, esp. since both can be used in place of soma itself. However, insofar as it’s possible to tell, they seem to refer to (parts of) the physical plant soma, rather than its product, the juice also called soma. This is one of the only passages in which the two terms occur together (see also X.94.8), with gen. *aṃśóḥ* dependent on acc. *ándhaḥ*, which suggests that *ándhas-* is a part of the *aṃśú-*. This surmise supports the interpr. given by EWA s.vv. (with lit.) that the *aṃśú-* is the plant and *ándhas-* is the plant’s stalk. The use of both terms to refer loosely to the soma drink is similar to the use of ‘grape’ or ‘vine’ to refer to wine.

I do not understand the position of *ná*. With the other standard interpr. I tr. it as if it qualifies the verb it immediately follows (“he drilled, seemingly ...”; Ge “er zapfte gleichsam ...,” etc.), but this is simply not a regular RVic usage: similes are always nominal. I would like to connect it with the double usage of *ūdhaḥ* just discussed, but I’m not sure how. I wonder if the 2nd reading of *ūdhaḥ* as equivalent to the Vala cave hints at a simile like *vrajám ... gāvām iva* “like a pen of cows” (I.130.3; cf. I.10.7, IV.20.8, etc.). This would allow us to tr. the phrase “He drilled the gleaming udder of the cows [=milk] like the ‘udder’ [=pen/Vala] of the cows,” which would restore *ná* to its normal function of marking nominal similes. Although the *ná* is not positioned after the *ūdhaḥ* or the cows, this would be the result of the avoidance of pāda-final simile-marking *ná*, which flips with the noun it is marking (see comm. ad VIII.76.1, X.21.1, 111.7). Thus *ūdhaḥ ... ná gāvām #* in this vs. would be essentially equivalent to I.130.3 *vrajám ... gāvām iva #*.

IV.1.20: Within the balanced phrases of the first hemistich -- *viśveṣām áditir yajñíyānām*, *viśveṣām átithir mānuṣānām* -- the nearly identical nominatives *áditir* and *átithir* make rhetorical sense. But why Agni is called, or identified as, Aditi (or boundlessness or innocence, if it is used as a common noun) is unclear. Since Aditi is the archetypal divine mother, perhaps Agni is being credited with a maternal relation to the gods, as a deliberate paradoxical foil to vs. 1, where the gods install Agni and are his de facto parents, and to the other accounts of his birth in this hymn. It is also the case that Agni is closely associated with Varuṇa, a son of Aditi, early in the hymn (vss. 2, 3, 4, 5, also 18), though in vs. 2 it is explicitly stated that Agni is Varuṇa’s younger brother, certainly not his mother. For a different wordplay involving *áditir*- see IV.2.11 in the next hymn. (JPB [Ādityas 226 and n. 44] suggests Agni is called Aditi “because he brings the gods into harmony and kinship with men, but I’m somewhat dubious.)

IV.2 Agni

IV.2.1: There seem to be deliberate echoes in this vs. of the 1st vs. of the preceding hymn (IV.1.1) -- esp. pāda b *devó devēṣu aratír nidhāyi* corresponding to IV.1.1b *devāso devām aratīm nyeriré*; also IV.2.1a ... *mártyeṣv amṛtaḥ* and IV.1.1f *ámartyam ... mártyeṣv ā*. The first pāda is identical to I.77.1c, which continues (I.77.1d) with *hótā yájiṣṭhaḥ* ... as in our pāda c.

On trisyllabic *mahnā* (restored as **mahinā* by HvN, though as **mahanā* by Gr; see also Old Noten), see comm. ad I.123.4.

With Old (Noten, not SBE; also Re; Keydana, *Infinitive im Rgveda*, 54), I take *īrayádhyai* as a causative inf. in passive construction, “to be roused,” rather than Ge’s intransitive “um ... zu fahren” or WG’s transitive reflexive “um sich ... in Bewegung zu setzen.” Note 7b *átithim udīrat* “will raise (you) up (as) guest.”

IV.2.3: The two rhyme words *vr̥dhasnū* and *ghṛtásnū* clearly form a rhetorical pair, though they have different origins and grammatical analyses, as their different accents show. *ghṛtásnu-* is generally taken as a bahuvrīhi with the reduced form of *sānu-* ‘back’ as 2nd member. See Old ad loc. and ad I.16.2, and cf., with a different designation of the same body part, *ghṛtā-pr̥ṣṭha-*. However, this cmpd. has a complex relationship with the differently accented *ghṛtasnū-* as well as *ghṛta-snā-* ‘bathed in ghee’. See Scar (661–62).

As for *vr̥dhasnū-*, Gr takes it as a root-noun cmpd, with *snū-* for *snā*, and glosses ‘Segen triefend’; Scar (662) more or less follows this analysis, though he proposes several different morphological pathways. Debrunner (AiG II.2.930), a bit confusingly, takes it as a “Nachbildung” to *ghṛtásnu-* though containing a suffix *-asnu-* (sim. Old SBE). (Debrunner does not gloss it; Old ‘mighty’.) WG seem to take it as containing the same ‘back’ as *ghṛtā-snu-*, tr. ‘von hochgewachsenem Rücken’. I agree with the general sense that *vr̥dhasnū-* has to have been influenced by *ghṛtásnu-*, hence my parenthetic ‘strong(-backed)’, but it cannot have been formed in direct parallel because of the accent. I think it should be evaluated in the context of another nearby form belonging to √*vr̥dh*, viz. the irregular (pseudo-)participle *vr̥dhasānā-* in IV.3.6, a stem that occurs 3x in the RV. Since that stem was part of our poet’s repertoire, I think it possible that he could create a reduced form of the “suffix” *-sānā-* (intermediately *-*snā-*, just as *-snu-* is reduced from *sānu-*) with further adjustment of the final vowel to match *ghṛtásnu-*.

The instr. *mānasā* must go with *jáviṣṭhā* given the close relationship between the root √*jū* and *mānas-* (cmpds *māno-javas-*, etc.) throughout the RV; the question is only how to construe the instr. with the splv. I take it as an instr. of quality, rather like Re’s “les plus rapides par rapport à la pensée (même).” Flg. Sāy., Ge tr. the phrase as if it were a comparative with an abl.: “... schneller als den Gedanken,” which certainly makes sense but airbrushes the grammar. WG seem to take *mānasā* as a dual acc. (“die beiden schnellsten Denkorgane des R̥ta”), which is grammatically impossible for neut. *mānas-* (expect **mānasī*). Masc. du. *-as-* stems do have the ending *-ā*, but if the word here is meant to be masc., it should either be in a cmpd. (type *su-mānas-*) or show accent shift to a derived poss. adj. **manás-* ‘having mind’, which is not attested. Others (Lü 454, Scar 662) simply detach *mānasā* from *jáviṣṭhā* and tr. it elsewhere in the clause, but the formulaics speak strongly against that.

In the second hemistich the 2nd sg. verb *īyase* and the 2nd pl. acc. prn. *yusmān* comes awkwardly into English (“you [sg.] speed between you [pl.] and ...”), but neatly signals Agni’s natal affiliation with one of the two sides for which he acts as go-between.

See also 1a *mártyeṣv amṛtaḥ*, 10b *devó mártasya*, where Agni's divinity is juxtaposed with his mortal worshiper(s).

Contra Old (SBE and Noten) and Ge, I see no reason to take *mártān* (or, as Old wants to read, **mártām*) here as gen. pl. It is perfectly interpretable as an acc. pl. appositive to *vísah*. However, the same form in 11b is a somewhat harder case; see comm. there, as well as *nṛ̥n* in vs. 15.

IV.2.4: Unaccented gen. pl. *eṣām* must refer back to *yusmán ... devān* “you gods” in 3d; evidently the poet only wants a selection of them to be brought to the sacrifice.

IV.2.5: The qualifier ‘long’ (*dīrgháḥ*) of wealth in d means, of course, ‘long-lasting’ (just as *dīrghám támaḥ* [I.32.10, etc.] refers to “long(-lasting) darkness”). However, since it is implicitly contrasted here with ‘broad’ (*pṛthu-budhná-* ‘having a broad base’), it is clear that the image is one of physical dimensions, not merely temporal ones. And, at least for me, “long darkness” is a more striking verbal formulation than “long-lasting darkness.”

IV.2.6: Having described in the previous vs. what a (properly performed) sacrifice can get us, the poet now tells us what we have to do to perform this sacrifice properly.

On the pf. subjunctives here, see my 2016 “The Vedic Perfect Subjunctive and the Value of Modal Forms to Tense/Aspect Stems” (Fs. J L. García Ramón], with disc. of the pf. subjunctives in this verse as well as the pres. and aor. subjunctives in vss. 7–9. There I specifically dispute Kü's interpr. (340, also 212, 595) of the pf. subj. as functioning “zur Bezeichnung der vollendeten Handlung für den generellen Fall” (i.e., “... gebracht hat,” etc.).

IV.2.7: As he often does, Ge takes *cid* as a simile marker, but I do not think that is a possible function of *cid*, and certainly in this case there is no need to interpret *ánniyate* as a simile: Agni is regularly depicted as a greedy eater.

Contra Gr, all standard modern tr. and comm. take *níśíṣat* (so Pp.; *níśíṣan* is also phonologically possible, though morphologically unlikely) as belonging to $\sqrt{sā}$ ‘sharpen’ (common with *nī*), not $\sqrt{sās}$ ‘instruct’ (not found with *nī*). There are formulaic parallels with clear forms of *nī* $\sqrt{sā}$, see Ge's n. 7b and esp. VII.3.5c. With Old it seems best to emend to **níśíṣat*. He takes it as a short-vowel subj. to the redupl. pres. *śíśāti*. So also Hoffmann (Aufs. II, 445–46 n. 14). This is certainly possible, but it could also be a masc. nom. sg. act. part. to this same redupl. pres. Both a finite 3rd sg. in a rel. cl. and a part. would be accented on the stem (not the preverb) as here, and either form is contextually possible. It can simply belong to the string of subjunctives in this passage that express ritual service. But note pāda a of the previous vs. (6a), which has a subj. and a part. (*jabhārat siṣvidānāḥ*); one could argue that in this sequence of vss. there is no more than one finite verb per pāda, though that is not a particular telling argument.

IV.2.8: Because the loc. phrase *své dáma ā* “in his own house” in c does not seem to fit the equine simile there, in the publ. tr. I took it implicitly with ab. However, cf. I.143.4 *agnīm tám gṛbhír hinuhi svá ā dáme* “urge Agni on with songs here in his own home,” with a form of \sqrt{hi} and the same loc. phrase. If the hapax *hemyā-vant-* is derived from \sqrt{hi} (so Old, SBE and Noten, generally now accepted) and means something like

‘possessing/receiving impulsion, much impelled’, the spurring or impulsion may refer to hymns and be happening in Agni’s own home. So an alternative tr. might be “receiving the spurring (of hymns) in your own house, like a horse you will carry ...” The separation of *hemyāṁvān* from the simile *ásvo ná* invites but does not require reading *hemyāṁvān* primarily with the frame, not the simile.

IV.2.9: *rāyā ... víyoṣat* shows the well-known instr. of separation.

IV.2.10: *rārāṇaḥ* in b is clearly the middle part. to $\sqrt{rā}$ ‘give’. This form appears frequently in this metrical position with just that meaning (e.g., in the preceding hymn IV.1.5c). However, given the 2nd sg. subj. *jújoṣaḥ* ‘you will enjoy’ at the end of the preceding pāda, I think it likely that there is a secondary association with the near synonym \sqrt{ran} ‘enjoy, take pleasure’ and that *rārāṇaḥ* could be loosely interpr. also as a 2nd sg. pf. subj. with irregularly strengthened root syllable and wrong accent (contrasting with the properly formed pf. subj. *rārāṇas*, -at, etc.).

Ge unaccountably interprets *hótrā* in c as the Goddess of the Offering found in the Āprī hymns rather than as a common noun meaning ‘offering’, an interpr. that severs c from the rest of the verse.

Pāda d is a clear relative clause (*yásya*), though both Ge and Re render it as an independent clause. Their tactic is understandable because pāda c, the only main cl. in the vs., has no overt antecedent for the rel. prn. in d. We must supply a ‘his’ with *hótrā* to produce the connection between c and d.

The identity of “we strengtheners” is a bit puzzling. The stem $\sqrt{rdhā}$ - generally refers to a god or gods who strengthen their worshipers. In X.147.3 it is used of *sūrī*-s, human ‘patrons’, but patrons should not be the 1st ps. speakers in Rigvedic discourse -- rather it should be those who receive their patronage, i.e., the poets. I assume here it must refer to the group of ritual officiants, including the poet himself, and the person they are strengthening is the Yajamāna (or what will become the Yajamāna in later Vedic ritual).

IV.2.11: Note the phonetic figure in a, with the repetition of *cí*, followed by *ví*, which is then doubled by *ví(dvān)*: *cíttim ácittim cinavad ví vidvān*.

On *vītá*- see comm. ad IX.97.17.

It is tempting here to take *mártān* here as a short genitive plural (see 3d above), as Ge and Re do. However, in X.89.3 *ví yāḥ pr̥sthéva jánimāni aryá, índraś cikāya* ... “who has distinguished the races of the stranger, like the (straight and crooked) backs (of horses),” the clear acc. pl. *jānimāni* ‘races, peoples’ suggests that semantically similar *mártān* here can be the obj. of *ví√ci*. For Th’s interpr. of *pr̥sthá*- here and in X.89.3 as “Rätselfrage” (to \sqrt{pras} ‘ask’) see disc. ad X.89.3.

I see no reason to supply a verb in c (like Ge); it can be easily construed with d.

The pair *dítim ... áditim* in d recalls the *cíttim ácittim* that opens the vs. The standard interpr. take *dítim áditim* as a positive/negated pair, understandably. But this requires one of the words to be positively valued and one negatively valued (not necessarily corresponding to the privative form). The problem is that each of the verbs that govern these accusatives ($\sqrt{rā}$ ‘give’, *uruṣyá*- ‘make wide space, deliver’) ordinarily takes positively valued objects. Attempts to give *uruṣyá*- a negative sense (e.g., Old SBE “keep off Aditi”) founder on the large number of positive cases. I therefore think that

dítim áditim are not in an etymological relationship but are actually a pun. *díti-* is the ‘giving’ goddess and derived from $\sqrt{dā}$ ‘give’. For this etymological relationship see VII.15.12 *dítis ca dāti vāryam* “And Diti gives a thing of value.” *áditī-* by contrast is both the familiar goddess Aditi and the common noun ‘boundlessness’ (derived from $\sqrt{dā}$ ‘bind’). Each of these is the object of an appropriate verb: a different root meaning ‘give’ for *díti-* ‘giving’, a verb meaning ‘make space’ for *áditī-* ‘boundlessness’. For a different wordplay with *áditī-* see previous hymn, IV.1.20.

IV.2.12: I take *paḍbhīḥ* in this vs. as belonging to a root noun *pás-*, meaning ‘with the eyes’, flg. Oldenberg (SBE [1897]) and Schindler (Wurzelnomen, 31). (However, Oldenberg silently retracted this view in his short piece on *paḍbhīḥ* some ten years later [ZDMG 63 (1909): 300-302 = KISch 316–18].) As Schindler points out, other hapaxes occur in etymological figures like our *paḍbhīḥ paśyeḥ*. All other exx. of *paḍbhīḥ* belong to *pád-* ‘foot’ (not ‘fetter’, as has often been claimed; see Schindler, also EWA s.v. *pāḍbīśa-*), including the one two vss. later (IV.2.14). Although such close proximity of identical forms might appear to weigh against assigning them to two different stems, esp. since one of the stems would be a hapax, their contexts seem designed to disambiguate: vs. 12 contains the etym. fig., while 14 juxtaposes the word with another body part frequently paired with it: *paḍbhír hástebhīḥ* “with feet (and) hands.”

IV.2.14: The vs. modulates from the 1st pl. of the subordinate clause in the first hemistich (*yád vayám ... cakṛmā*) to the 3rd pl. of the main clause of d (*yemuḥ sudhyàḥ*) via the simile in c (*rátham ná krántaḥ*). The simile could belong either to the subord. cl. or the main cl. and is grammatically and semantically appropriate to either the 1st or the 3rd ps. subject of either.

On *ṛtām āśuṣānāḥ* see comm. ad IV.1.13.

IV.2.15: For the third time in this hymn a pāda-final acc. pl. might more comfortably be interpreted as a gen. pl. -- here *nṛṇ*. In the cases of *mártān* in 3d and 11b we saw that the acc. pl. reading was easily possible and an abbreviated (or re-formed) gen. pl. interpr. was unnecessary. Here an acc. pl. interpr. seems more difficult, though perhaps not impossible. If it is a gen. pl. the tr. would be “as the foremost ritual adepts of/among men,” and most interpr. implicitly or explicitly accept this analysis. (See also disc. in AiG III.119 and Old, ZDMG 55: 285–89 [=KISch 744–78], though Old in the Noten favors a *nominative* pl. analysis, also by preference ZDMG 55: 287 [=KISch 746].) Certainly *nṛṇ* appears to be more multivalent in the RV than other acc. pl., and, though reluctant, I cannot entirely rule out a gen. pl. However, I think it is possible that *nṛṇ* is a rough acc. of goal (“born to men”) or respect (“ritual adepts with respect to men”).

Interestingly, here “we” aspire to a complete set of parents: Mother Dawn, Father Heaven. Generally in the RV a single parent will do in any particular rhetorical situation.

IV.2.16: On *ṛtām āśuṣānāḥ* see comm. ad IV.1.13.

This vs. has double temporal reference, to the Aṅgirasas of long ago using sacred speech to split the Vala cave and release the cows and to the current priests, who imitate the speech of the Aṅgirasas in order to release the dawns from darkness. The failure to

realize the double reference to both the opening of Vala and the beginning of the current dawn sacrifice has caused interpretational difficulties.

To begin with, *súci* in c has been puzzled over. Old (SBE) attempted to make it a fem. adj. modifying *ḍḍhitim*, but in the Noten opts rather for an adverbial neut. Most other tr. interpr. it as an abstract ‘Klarheit’ vel sim. (Ge, Re, Scar [530], sim. Schmidt [B+I 43-44]), while WG take it as the modifier of *ṛtām* in the preceding pāda. I do not know of other exx. of *súci*- in abstract value; I interpr. it rather in conjunction with the phrase *súcy ūdhaḥ ... gāvām* “the gleaming/blazing udder of cows” in the preceding hymn (IV.1.19). As noted in the comm. there, I take this as a ref. to the Vala cave. But this “blazing (udder)” can also refer to the current sacrifice, with the newly kindled fire at its focus. The priests approach this with their sacred speech to set the ritual in motion and achieve *ḍḍhitim* ‘visionary power’.

I think pāda c is appropriate for both the ancient Aṅgirasas and the present-day ritualists, and so I would modify the publ. tr. somewhat. The verb *ayan* is a subjunctive to the root present of \sqrt{i} and therefore primarily applicable to the ritualists and the actions they will now perform. But I also think that it’s possible to interpr. it as a backformed injunctive to the same root present. Since augmented imperfects to stems beginning with a vowel always have lengthened augment (here, well-attested 3rd pl. *āyan* ‘they went’), it would be possible to form an injunctive by “subtracting” the augment *a-*, producing *ayan*, rather than the more proper *yan* (found only in III.4.5). By such an interpr. the Aṅgirasas could also be subjects of the verb: they *came* (inj.) to the gleaming/blazing Vala cave (represented by *súci*), and the priests *will come* (subj.) to the gleaming/blazing place of sacrifice.

The Pp. reads *kṣāmā* in d as *kṣāma*, and most interpr. (save for WG) follow the Pp. and take this form as a singular, tr. “splitting the earth” -- as a reference only to the Vala myth (even though it is not the earth that gets split in that myth). But I think we should take the Saṃhitā form seriously, as the elliptical dual it appears to be, extracted from the dual dvandva *dyāvā-kṣāmā*. The phrase “splitting (heaven and) earth” would refer to the visual experience of dawn, when the appearance of the dawn light at the horizon seems to split sky from earth, allowing the light to flood in through the resulting slit.

IV.2.17: And yet again we have a form that would be best interpr. as a genitive pl., but formally is not -- *devā* or *devāḥ* [so Pp.] in *devā jānimā* (cf. *devānām ... jānima* [or *jānimā*] in the next vs., 18b). It would be possible to interpr. *devāḥ* as nominative subj. in the simile (“as the gods do metal”); on the other hand, reading *devā*, some have taken it as a neut. pl. adj. with *jānimā*. Here, however, I think a gen. pl. interpr. is the correct one, but the poet is playing a little trick: the sequence *nā devā* is to be flipped to **devāna* → *devānā(m)*. The occurrence of the expected phrase in the next vs. would be an example of immediate poetic repair (see my 2003 “Poetic ‘Repair’ in the Rig Veda”).

The standard tr. take *sucāntaḥ* as transitive, with *agnīm* as obj., but as most comment, verb forms to this root are otherwise intransitive; see esp. identical *sucāntaḥ* in nearby 15d. It seems better to interpr. *agnīm* as the obj. of *vavṛdhántaḥ* along with *índram*; there is no obstacle to such an interpr.

On the secondary present stem seen in the participle *vavṛdhánt-* here, cf. Kü (471).

IV.2.18: This vs. closes the mythological section of the hymn and is so positioned to seem as if it ought to be the denouement of the Vala myth. But it seems, at least to me, to have no connection with that myth or, indeed, with anything else in this hymn. I remain baffled by it, and my comments here will be only on matters of detail.

Ge (/WG) take the subj. of ab to be the leader of the Aṅgirasas, possibly Br̥haspati. I follow Old (Noten) and Re in taking Agni as 3rd ps. subj., though he is also addressed with the voc. *ugra*. In this vs. the discrepancy in person is the least of our problems. My rather weak reason for preferring Agni as subj. is the fact that the hymn, dedicated to Agni, is drawing to a close, and the final two vss. (19–20) are explicitly Agni vss. I see nothing in the vs. to suggest that any Aṅgiras is involved, save for the herds of livestock that remind us of the Vala myth -- but they are in a simile.

Ge takes *ā* √ *khyā* as meaning ‘count’, but as Re points out, this sense is not found earlier than the ŚB. A parallel passage shows a clear word for ‘watch over, look at’: VII.60.3 *sām yó yūthēva jānimāni cāṣṭe*, which supports ‘watch over’ for the verb here. That passage also suggests that the *jānima* in b is the obj. of *ā* ... *akhyat* and corresponds to *yūthā* in the simile (similar Old, Noten). I therefore take the *yād* in b to be a neut. sg. referring to *jānima* rather than the subordinating conj. (‘when, since’) of the standard tr. - - and I also follow the Pp in taking sg. *jānima* as the underlying form in the sandhi conglomeration *jānimānti*, rather than pl. *jānimā* as assumed by others. (The *jānimā* of 17b does give me pause, however.) With Old I supply ‘pasture’ with *kṣumāti* in pāda, rather than taking it as a personal designation (Viehbesitzer, maître du bétail), though not much depends on it. In my (/Old’s) reading, it would refer to the ritual ground. Old’s paraphrase of the first hemistich in the Noten is “... dass Agni ... vor sich die Götterscharen erblickte wie Viehherden auf der Weides des Opfers.” His interpr. of the passage informed mine.

As to what the “nearby” race of gods consists of, I have no idea -- perhaps the gods that come to the sacrifice. Recall that in vss. 3–4 the poet asked Agni to bring (only) a selection of gods to the sacrifice.

The second half-vs. is even more puzzling than the first, because there seems no reason to introduce Urvaśī and her retinue (pl. *urvaśīḥ*) and her son Āyu. I supply *jānima* with *mārtānām* rather than construing this gen. independently as most others do; the parallelism of the passage supports this.

IV.2.19: The augmented 3rd pl. *avasran* is listed as an aor. to √ *vas* ‘shine’ by Whitney (Rts) and Gr and so tr. by Old (SBE), Re, and (somewhat attenuated) Ge. I take it rather as an impf. to the root pres. of √ *vas* ‘wear’ (so listed by Lub., so interpr., more or less, by Kü, *Stativ*, 97–98); WG take it also to ‘wear’, but as an ingressive aorist. Since the root already has a root *present* and there are no other forms to a root aorist, this seems to multiply entities unnecessarily. What does it mean for the dawns to wear/clothe themselves in truth? Perhaps either that they are greeted by a (truly formulated) hymn that serves as their garment or that by dawning they display the truth of the orderly functioning cosmos as their clothing. Although I think that *avasran* belongs properly to √ *vas* ‘wear’, this of course does not mean that there is not a pun on √ *vas* ‘dawn, shine’.

IV.3 Agni

IV.3.1: I render vs.-final *kṛṇudhvam* twice -- once with vs.-initial *ā* in the meaning ‘make = kindle’, rather than with most tr. ‘bring here’, and once with the quasi-infinitival dat. *āvase*.

It is not entirely clear why Agni is identified as Rudra here. The word is most likely to be construed with the gen. *adhvarasya* as “the Rudra of the/your ceremony,” on the basis of I.114.4 *rudrām yajñasādhām* “Rudra bringing the sacrifice to success” and III.2.5 (also of Agni) *rudrām yajñānām sādhadīṣṭim* “the Rudra of the sacrifices, bringing success to the offerings.” Perhaps the point of comparison is Rudra’s healing powers and, esp. here, his ability to ward off threats of all sorts, in this case the “unexpected thundering” (*tanayitnór acítāt*) of pāda c.

ródasyoḥ can be either gen. (with most tr.) or loc. (so publ. tr.). There is little riding on the choice.

As most interpr. take it, “unexpected thundering” is probably a reference to all sorts of unforeseen dangers, rather than specifically of a sudden storm.

IV.3.2: All the standard tr. take the rel. cl. of pāda a (*caḥmā yām vayām te* “[the womb] which we have made for you”) as the frame for the simile in b, with “we” matching the eager wife (*jāyā ... uśatī*) and “you” (Agni) matching the husband. Old (SBE) goes so far as to supply “marriage-bed” as the match for the womb: “... as a well-dressed loving wife (prepares the marriage-bed) for her husband.” This is one possible reading, but I don’t think it is the only (or even the dominant) one; in fact, I think the simile can be matched to four different entities in the verse.

Let us begin by noting that pāda b, the self-contained simile, is found three times elsewhere (I.124.7 of Dawn, X.71.4 of Vāc, and X.91.13 of praise [*susūtī*]- seeking Agni), in all cases of females or of entities conceived as female. An obvious “entity conceived as female” is found in the nominal main clause of pāda a, *ayām yónih* “here is the womb”: the womb, though grammatically masc., is a female accoutrement and can be matched with the wife in the simile in b. This “womb” (=fireplace) is well prepared (“richly dressed” *suvāsāḥ*) and ready to receive Agni as her husband. For womb = wife, cf. III.53.4 *jāyéd ... sēd u yónih* “The wife -- just she is the womb.”

But *suvāsāḥ* elsewhere occurs in the same pāda with *pārivītaḥ* (found in our pāda c): III.8.4a *yúvā suvāsāḥ pārivīta āgāt* “As a youth, richly dressed, engirded, he has come here.” Although the referent there is the sacrificial post, the vocabulary is also appropriate to Agni. Therefore it could be the Agni of c who is like a wife, eager for her husband identified with the womb in pāda a -- a gender reversal that would appeal to the Rigvedic poets. (Note that the standard reading, where “we” the ritualists match the wife, also requires some gender reversal.)

Finally let us consider pāda d. The subj. of d is fem., expressed by *imā u te ... pratīcīḥ* “these facing you.” Ge (/WG) supply “Frauen,” but in n. 2d Ge suggests *gīraḥ* (inter alia); Re supplies “louanges.” I think *gīraḥ* must be correct: there are a number of *imā u tvāte ... gīraḥ* passages (e.g. VI.45.25, 28, VII.18.3, VIII.3.3), and Ge/Re adduce V.12.1 for *gīr-* as well: *gīram bhare vṛṣabhāya pratīcīm*. As was noted above, in 2 of its 4 occurrences the “eager wife” simile has speech/praise as its comparandum, so in fact that simile in our b works best with the hymns in d: these hymns face towards you, like an eager wife to(wards) her husband.

Bloomfield discusses the simile at length ad I.124.7. He is rather sour about our passage: the construction is “very loose indeed”; “the metaphor limps decidedly.” Contra Bl I consider the deployment of the simile here as an example of the poet’s extreme cleverness, with the simile applicable to every single entity in the vs. To reflect the polyvalent status of the simile, the publ. tr. should probably be changed to “(It is / we are / you are / they are) like ...,” though this would be very clumsy.

As for *párivīta*- ‘enveloped’ in c, the question is what Agni is enveloped in. It could be the paridhi sticks that surround the ritual fire (see, e.g., Ge ad I.128.1, endorsed for that passage by Thieme [Unters. 19]); WG suggest dawn’s light or hymns; Old (SBE) offerings and prayers. It’s useful to note that *párivīta*- occurs twice with the loc. of *yóni*:- once in an Agni hymn X.46.6 *párivīto yónau sīdad antáh* (note \sqrt{sad} here as well) and once in the riddle hymn I.164.32 *sá mātúr yónā párivīto antáh*, so that the two concepts seem to be connected (“enveloped within the womb”). This could fit the paridhi sticks forming a border of the fireplace conceived as a womb. It might also refer to the kindling sticks, within which fire is hidden until he is ignited (/born), hence also his womb. There is another important parallel in nearby IV.1.7 *ananté antáh párivīta āgāt* “enveloped within the limitless, he has come here”; see comm. there. On the multiple meanings of *párivīta*- in Agni context, see Thieme (Unters., 19–20).

Modern tr. (almost) universally take the voc. *svapāka*- as ‘having a lovely backside’ vel sim., related to *āpāñc*- ‘turned backwards’ and here implicitly contrasting with *pratīcīh* ‘turned towards, facing’. The one exception is Old, who in SBE (1897) tr. “O most skilful one,” an interpr. that he swiftly disavowed (ZDMG 55 [1901]: 301 [=KlSch. 760]) as “nicht zu denken” -- without admitting he had in fact thought it previously. Nonetheless, I think this is a more appealing interpr. than the current standard. I take it as built to a negated *á-pāka*- ‘not naïve, not callow’ to *pāka*- ‘naïve, callow, simple’ -- like *ámūra*- ‘not stupid’: *mūrā*- ‘stupid’. *ámūra*- is found three times in the Agni hymns of this maṇḍala (IV.4.12, 6.2, 11.5), always of Agni. The semantically similar *ādīpita*- ‘undistracted’ in the next pāda (3a) supports this interpr. There are two other occurrences of *svapāka*- (VI.11.4, 12.2), both analyzed by the Pp as *sú āpāka*- (both adduced by Old, SBE), both modifying Agni. In neither case does a “having a lovely backside” impose (or even suggest) itself, and I propose to include them under this stem.

IV.3.3: Ge takes the voc. *vedhah* as the poet’s self-address, which is certainly possible; he is commanding himself to recite (*śaṃsa*). This does not solve the question of the person of the verb *īlé* in d. Although this form is universally rendered (incl. in the publ. tr) as a 3rd sg. (and analyzed, because of its accent, as the only perfect form to this root, against root pres. *īle*, *ītte*; see Kü 122), it could of course also be a 1st sg. pf., with *sótā* an appositive to the underlying 1st ps. subj. (“I the presser”). Since the surrounding vss. (2 and 4) have explicit 1st persons (though pl.), I would be inclined to emend the publ. tr. to “whom I, the presser, invoke ...”

Pāda d plays on the standard Rigvedic notion that the soma-pressing stones are very noisy and that their noise is like that of the priestly recitation and singing happening at the same time. The question here is which of the three terms in the phrase *grāveva sôtā madhuśút* belongs to the simile and which to the frame. On the basis of X.64.15 *grāvēvā yātra madhuśúd ucyāte bṛhāt*, I take *grāvā ... madhuśút* “the honey-pressing (pressing) stone” as a discontinuous simile, with the frame represented by *sótā* in between. Ge, Re,

WG, Kü (122), and Scar (615) take the simile to be *grāveva sôtā* and the frame *madhuṣút*; Old (SBE) confines the simile to *grāvā* with the frame *sôtā madhuṣút*. Either of these configurations avoids a discontinuous simile, but such similes are not rare and the phraseology of X.64.15 supports my analysis. Little rests on it, however.

IV.3.4: My “at least” for *cid* follows Ge (“wenigstens”). This somewhat testy note seems to introduce the next part of the hymn, with its anxious or annoyed questions to Agni about his relationship to the sacrificers and how he will represent it to the other gods.

The *śāmī*- and the *rtā*- here presumably refer to the complementary physical and verbal aspects of the sacrifice. On *rtā*- as “Kultlied” in this and similar passages, see Lü (esp. 442–43).

IV.3.5–8: The list of gods to whom Agni will tattle on us follows a certain pattern. Vs. 5 contains the standard great trio of Ādityas, Varuṇa, Mitra, and Aryaman, as well as a minor Āditya, Bhaga ‘Fortune’, who is, however, important for our welfare. Although we might have expected the Sun here, because he serves as the Ādityas’ eye, observing our offenses, we have instead Heaven and Earth, which frame the cosmos. In vs. 6 the nearer gods of the midspace, particularly Vāta ‘wind’ and the Aśvins, are featured. Rudra appears in both 6 and 7; I don’t quite understand why, but recall first that Agni was identified as Rudra in vs. 1 and may be also in 10d (see also 14b). Moreover, in 6 the punishing aspect of Rudra is emphasized (‘man-smiting’, *nṛhān*-), while in 7 he is paired and/or contrasted with the benevolent Pūṣan under the ambiguous epithet *sūmakha*-, which means both ‘good combatant’ and ‘very generous’, so his effects on human life are emphasized and he counts as a nearer god, who in fact is the giver of the oblation (*havirdā*-). In the 2nd half of 7 Viṣṇu and his three strides return us to the contemplation of the whole cosmos, and vs. 8 functions ring-compositionally with vs. 5: we have the Sun we expected (and didn’t get) in 5, with Aditi standing in for the Ādityas in 5, and heaven (though probably the place, not the deity) is the final goal.

IV.3.5: The last pāda would be more accurately rendered “What to Aryaman, what to Fortune?”

IV.3.6: Note that all four pādas rhyme: *agne*# (a), *śubhāmye*# (b), *kṣe*# (c), *nṛghné* (d); also 7ab *pūṣṇe*# ... *havirdā*#, an unusual effect in RVic verse.

The so-called “double stem” *vṛdhasānā*- is morphologically anomalous, but belongs to a fairly large group of stems with apparent middle part. in *-asānā*-. See AiG II.2.236–37 on the type. This is not the place to treat the origin of these stems at length, but, with Insler (KZ 82 [1968]), I think the starting point is *sahasānā*- (5x, 4x of Agni) ‘displaying might’, which he takes as a metathesized form of a pf. mid. part. **sasahānā*-, beside *sāsahānā*- (1x) and the younger type *sehānā*- (3x). This metathesis was reinforced by the very common *s*-stem *sāhas*-, and several other *-asānā*-stems have *s*-stems alongside (*śavasānā*:- *śāvas*-, *rabhasānā*:- *rābhas*-, *jrayasānā*:- *jrāyas*-) and fall into the same general semantic field of strength, power, or violent action (though not one of the best attested, *mandasānā*- ‘becoming exhilarated’ nor, e.g., *dhiyasānā*- [2x]). There is unfortunately no neut. *s*-stem **vṛdhas*-, though there is a single attestation of an

infinitival dat. *vr̥dhāse* with suffixal accent. See also disc. of *vr̥dhasnū-* ad IV.2.3 and *arśasānā-* ad X.99.7.

Pāda c is problematic, both metrically (it lacks a syllable) and grammatically: this is the only place in the RV where *nāsatya-* appears in the sg., not the du., and the identity of pāda-final *kṣé* is disputed. The metrical problem and the *kṣé* problem can be easily solved together if we adopt the suggestion of Hoffmann registered in Schindler (Root nouns, s.v. *kṣā-*) that *kṣé* is a haplologized form of dative inf. **yakṣé* ‘to appear’ in the environment (*nāsat*’)*yāya* [*ya*]*kṣé*. (Note that *yakṣám* ‘apparition’ appears in 13a.) This interpr. is also reflected in WG’s rendering, and one way or other it goes back to Ludwig; see Old (SBE, Noten). The publ. tr. should have an asterisk before “to appear.”

As for sg. *nāsatyāya*, although this analysis is emphatically rejected by both Old (Noten) and Debrunner (AiG II.2.136), I have adopted Henry’s old suggestion that the form is a *vr̥ddhi* adj. of appurtenance whose *vr̥ddhi* is invisible because the base already has initial-syllable *vr̥ddhi*. We would of course expect the accent to shift to the final syllable (AiG II.2.133ff.), hence **nāsatyā-*, but the dominance of the initially accented noun could have altered the accent, possibly redactionally. I supply ‘chariot’ in this dat. expression, since the Aśvins’ chariot is esp. prominent and *párijman-* modifies their chariot elsewhere (I.20.3, X.41.1). Cf. esp. I.20.3 *tákṣan nāsatyābhyām párijmanam sukhám rátham* “They fashioned the earth-circling well-naved chariot for the Nāsatyas.”

IV.3.7: On the benevolent Rudra see comm. ad vss. 5–8. It is not clear why or how Rudra is the giver of the oblation. Old (see also WG’s n.) suggests that it is in his capacity as *paśupati-*: he provides the beast for sacrifice. This is possible: though he is not so called in the RV (where the word is not found), this epithet is applied to him in AV (e.g., XI.2.28) and VS (e.g., XXVI.28).

In c *rétaḥ* ‘semen’ is somewhat surprising, esp. if it is to be construed as the object of *brávaḥ* -- so much so that Gr (tr., not Wö.) suggested emendation to *répaḥ* ‘stain’, an emendation accepted by Old (SBE, Noten) and Lü (622) and maintained tentatively by Scar (214). Re keeps the transmitted form but interprets it as a way of referring to negative speech: “Quelle semence (de blâme dirais-tu) ...?” But in a culture so fixated on fertility, semen is basically always a positive concept. Important is the fact noted by Ge (n. 7c) that Viṣṇu is elsewhere the protector of semen (cf., e.g., VII.36.9 *viṣṇum niṣiktapām* “Viṣṇu, protector of the poured-out [semen]”). In his n. (and contra his tr.) Re suggests an alternative interpr. of *rétaḥ* here as a truncated **retodhe* (cf. *retodhā-* 5x) or **retode* (Re does not accent either proposed form). This seems the correct solution, with the *-de* extracted from *havirdé*, which ended the preceding pāda.

In d Re suggests that *śárove bṛhatyái* is the “état pré-compositionnel” of a *bahuvrīhi* **bṛhatśarave* (no accent provided and no application of sandhi), whose referent is Rudra. Although the arrow is surely Rudra’s as all standard interpr. recognize, there is no reason to substitute the god for his symbolic accoutrement. Just as Agni can speak to the chariot of the Aśvins (6c, by my interpr.), he can also speak to Rudra’s arrow.

Ge (n. 7d) points out the contrast between Viṣṇu as creator (c) and Rudra as destroyer (d).

IV.3.8: Although it is tempting to take *ṛtāya* as an adj. modifying *śárdhāya* (so, e.g., Ge “der rechtwandelnden Schar,” sim. WG, Old SBE), the stem *ṛtā-* is overwhelmingly a

neut. noun. It is possible, with Re, to take it as an appositive with the Marut troop: “Ordre (incarné)” or, with Lü (623), as a separate entity to whom Agni’s speech is directed, but I think it more likely that it is a dative of purpose, like (*ya*)*kṣé* in 6d, *havirdé* in 7b: “for truth,” that is, for the Maruts to attain or ascertain the truth.

The masc. (/neut.) *turāya* cannot modify fem. *āditaye* (pace Old SBE). Ge supplies “heaven”; WG suggest the sun. With Re I opt tentatively for Indra, who is frequently modified by this adj. and who is otherwise absent from this fairly comprehensive list of important gods (see Ge n. 8c). Brereton (*Ādityas*, 205–6) instead thinks *turāya* represents an Āditya, probably Varuṇa, and takes *āditaye* not as the name of the goddess but as a common noun ‘innocence’, with the dative phrase meaning “for the mighty one (=Varuṇa) to (ascertain our) innocence.” This assertion of innocence at the end of a series of questions about potential blame would set the stage for the request that Agni make our sacrifice succeed (pāda d). This suggestion is appealing, but I am not convinced that *āditi-* ever means ‘innocence’, and further in this sequence the purpose datives are only pāda-final, which *āditaye* is not.

Pāda d poses some syntactic challenges. The first is that *sādhā*, by all accounts a 2nd sg. act. impv. to √*sādh*, has no expressed obj., though act. forms of this root are fundamentally tr. (but sometimes, esp. in the participle, used in absolute sense “assuring success”; cf. nearby IV.1.9). I supply *dhīyam* ‘thought’ vel sim. as the object, since forms of *dhī-* or other words for thought/prayer are regularly construed with √*sādh*. The other problem is what to construe gen./abl. *divāḥ* with. (It cannot be acc. pl. because of the accent.) The standard solution has been to take it with *cikītvān* (e.g., Ge “der du den Himmel kennst”), but as Re points out, *cikītvān* is never otherwise construed with a gen. His solution is to supply an obj. for *sādhā* on which *divāḥ* is dependent: “Mène droit au but (les affaires) du ciel.” My interpr. requires a slight emendation, from *sādhā divāḥ* to **sādhā divāḥ* -- that is, *sādhā ā divāḥ*, with *ā* + ABL in the meaning “all the way to.” Cf. I.92.17 *yaú ... ślókam ā divāḥ ... cakráthuḥ* “you two who made your signal-call (reach) all the way to heaven”; sim. III.61.4. See comm. ad locc. An asterisk should be inserted before “all the way.”

IV.3.9–12: Each of these vss. begins with the resonant and charged instr. *ṛténa* ‘by truth’, the usual introduction to a truth formulation. Each of the vss. does seem to express a mystical truth about the ritual or its mythic background. There is no obvious connection to the group of vss. that precede (the question vss. of 4cd–8), but if I am correct that we should supply ‘thought’ or ‘thoughts’ in 8cd, where we ask Agni to send them all the way to heaven, it may not be fanciful to think that vss. 9–12 are these very thoughts.

IV.3.9: This vs. expresses the beloved paradox about cows and milk, that the cow is “raw” but her milk “cooked” (that is, ready to consume), and further that a black cow can still give white milk. These paradoxes describe in the first instance the production of the ritual offering, the milk that will produce the ghee to be poured into the ritual fire. But it may also (esp. the 2nd hemistich) characterize the transition from the night (black cow) to dawn (the gleaming milk) at the dawn sacrifice; see Janert (Dhāsi, 29ff.).

The standard interpr. (save for WG) take *ṛténa* as the agent with the ppl. *nīyatam* (e.g., Re “L’Ordre a été fixé par l’Ordre (même)”). Because the flg. 3 vss. also begin with

ṛténa, interpreting the first one outside of the pattern established by the rest seems misguided, esp. given the usual function of initial *ṛténa* (see comm. above on vss. 9–12).

I take the *ṛtām* that I reverently invoke (*īde*) to represent the paradoxes just discussed -- the mystical truth of the cow's nature -- and I interpr. *ā góḥ* as an ablative phrase, referring to the source of this truth. Most take *góḥ* as a gen., but this makes *ā* hard to construe. (The phrase *ā góḥ* occurs 3x elsewhere, always pāda final, twice in this maṇḍala [IV.22.4, 23.6] and once in X [X.100.12]; nowhere is it clear.) At least acdg. to Old (SBE) and Ge, the *ṛtām* is actually a reference to the milk. I am skeptical.

On *dhāśi-* see comm. ad I.62.3, 140.1.

The hapax *jāmarya-* is opaque; see EWA s.v. My tr. follows Janert's analysis (Dhāsi, 33ff.), that it is a secondary derivative to *jām-ara-* "die die Nachkommen Nährende." Ge's suggestion (n. 9d) that it is related to YAvs. *zəmar* 'on/in the earth' (in *zəmar-gūz-*), hence 'earthly' (versus heavenly milk = rain), fits the passage less well.

IV.3.10: This 2nd vs. in the truth-formulation sequence both continues the mystical description of the dawn sacrifice and presents another paradox. With regard to the sacrifice, the milk produced in vs. 9 becomes the butter oblation poured on the sacrificial fire, as Ge discusses. Ge's explanation of the phrase *páyasā pṛṣthyēna* lit. "the milk belonging to the back" is ingenious and (to me) convincing: it is the milk on the top (the image is of a four-legged animal), i.e., the cream, which is made into butter. With the offering of the butter, the fire flames up -- allowing it to go about "conferring vigor" (*vayodhā-*) in c.

Pāda c also inaugurates the paradox that is most clearly expressed in d. Agni is characterized as *āspandamāna-* in c. As Ge points out (n. 10c), *√spand* 'kick, lunge, jerk' is only used in Vedic of cows when they are being milked, so Agni is both bull (*vṛṣabhā-* [a], *vṛṣan-* [d]) and cow. This paradoxical double identity is sharpened in d, where Agni is identified not only as a bull but as Pṛṣni, the cow who is the mother of the Maruts, and he is the subj. of the quintessential "cow" verb *√duh* 'milk' and acts on the quintessential cow body part *ūdhar-* 'udder'. The substance s/he produces from this udder is *śukrām*, a word that can refer not only to 'gleaming' milk, but is also used to refer to semen. A similar gender-bending milking scenario involving Pṛṣni and Rudra, the Maruts' father, is found in II.34.2; see that passage and the comm. thereon. Here Agni may be being identified with Rudra; see the Agni-Rudra equation in vs. 1 and also the focus on Rudra in the "question" vss. (6d, 7b, 7d). There are a number of passages in the Agni hymns of IV that should be brought into the conversation, though unfortunately what they have to say is obscure: see the "gleaming udder" (*śúcy ūdhaḥ*) in IV.1.19 and a neut. entity (quite possibly her udder) belonging to Pṛṣni in IV.5.7, 10.

What -- if anything -- this refers to naturalistically is unclear. The tendency among interpr. has been to take it as a reference to rain (see Ge n. 10d) or to some other celestial phenomenon (Lü 390), but I find Bloomfield's suggestion (RR 213) more appropriate to the passage, that the fire, blazing up, "shoots out his flames from his bright udder; he, a bull, is thereby -- mirabile dictu -- also a pṛṣni, the heavenly, yielding cow, *par excellence*." Bl also suggests that *śukrá-* here mean 'semen', with a zeugma of *duduhe*: "As a bull he hath spurted semen, as a Pṛṣni cow he hath milked his udder."

IV.3.11: The third truth-formulation vs. sets up the Vala myth as the model for the coming of dawn: just as the Aṅgirasas breached the Vala cave and let loose the cows, so the human sacrificers break Dawn out of her confinement by kindling the ritual fire. This is the third step in the depiction of the morning ritual. As noted elsewhere (see esp. the publ. intro to Maṇḍala IV and to IV.1), the Vala myth and the Aṅgirasas play an outsize role in the Agni cycle of IV.

Despite the injunctives of pāda a (*vy āsan*) and c (*pāri śadan*), I am tempted, with Gr, to read *anavanta* in b, to produce 11 syllables. (Consider the augmented impf. in d, *abhavat*.) Old (Noten) considers this restoration possible but not necessary. Hoffmann (Injunk., 209) gives a typical treatment of the vs. in his interpretational system, assuming an injunc. *navanta* in b.

IV.3.12: The ritual application of this final *rténa* vs. is less clear than for the first three. It may simply refer to the waters used at the first soma pressing. Or the ritual aspect may be muted, and the point is to make room for the Vṛtra myth next to the Vala myth in vs. 11. However, the opt. *dadhanyuḥ* seems to reflect a movement from what has happened (the injunctives and preterite indicative of the last few vss.) to what should now happen, which suggests that there *should* be a ritual application.

The athem. mid. part. *-stubbhāná-* is isolated, beside the act. them. 1st cl. pres. *stóbhati*, and it is therefore impossible to determine its exact value -- including whether it is passive (so, e.g., Old [SBE], Ge, Re) or not. Gotō (1st cl., 332 and n. 808) argues against such a value, on the basis of the intrans. sense of the root, and I have followed him in the non-passive assessment. My tr. “beat a tattoo” reflects my sense that *√stubbh* is associated esp. with rhythm. As for *sārga-*, lit. ‘surge, gush’, it can refer to the instant when the surge is released, hence here the start of a race.

IV.3.13: This vs. is very difficult. As I see it, the point of the vs. is to demand that Agni not track down and punish the speaker for the transgressions of others, esp. others who are close to the speaker and could be mistaken for him. In the first hemistich this notion is expressed by GEN *yakṣá-* “the specter/apparition of X,” where *yakṣá-* could perhaps best be rendered as Doppelgänger.

The first problem one encounters is *kásya* and the puzzle of how an interrogative would interact with the prohibitive *mā́*. The standard solution is to treat *kásya* as an indefinite, without the usual particle (*cid*, *canā́*) to mark this value -- e.g., Re “... de qui (que ce soit).” But when the negative *ná* is used, the indefinite ‘no one, nothing’ always has the particle. I propose instead to read **akásya* ‘of (a) nobody’. With an accent like that of *akútra* ‘nowhere’, this interpr. does not require emending the Saṃhitā text (which would read *mākásya*), only the Pp., and the same stem is found three times elsewhere in the same context, at least by my interpr.: V.70.4 *mā́ kásya* (in a passage very similar to this one), *mā́ kásya* in VII.94.8, and I.120.8 *mā́ kásmai*, parallel to *mākútrā* where the Pp. analyzes the first as *mā́ kásmai* but the 2nd as *mā́ akútra*. The apparent presence of *mā́-akútra* in this last passage reinforces my interpr. of *mā́ kásya* / *kásmai* as also containing a privative *a-*. It might be argued that *nákis*, *nákīm* (the former of which is very common) and *mākis*, *mākīm* lack the indefinitizing particle, but all these forms show univerbation and loss of the accent on the 2nd element.

The form *huráh* has been variously analyzed. Old (etc) takes it as an adv., and Ge (etc.) as the gen. of a root noun. (For detailed disc. see Scar [123], who vacillates.) I follow the latter view, but see it not as an abstract but as a personal gen. referring to one of the transgressors. (This seems to be the WG interpr., too.)

On *veśá-* see comm. ad X.49.5.

In d Old suggests emending *dákṣam* to *yakṣám* (matching the same form in pāda a and found elsewhere with *bhujema*), but it is hard to see how this error could have arisen. I think rather that *dákṣa-* is used here ironically or sarcastically.

On *mā* with the apparent opt. *bhujema*, see Hoffmann (Injunk., 95-97), who explains this grammatical anomaly (found several times) as a misinterpr. of expressions with the dat. inf. *bhujé*.

IV.3.14: Once again in this hymn Agni seems to be indirectly identified with Rudra, here by the use of the adj. *súmakha-*, used explicitly of Rudra in 7b. The ambiguity of this word works well here also.

IV.3.15: Vs. 3 also contains forms of both *mánman-* and *śastí-*.

On *sām* √*jṛ* see Gotō (1st cl., 154–55), who considers the two instances of this lexeme (also in the next hymn, IV.4.8) an individual use of this poet, in the meaning ‘be welcome’ [willkommen sein]. In both cases it has a verbal product of the poet as subj. (*śastí-* here, *gír-* IV.4.8). My ‘bring harmony’ is meant to capture the ‘sing’ feature of the root √*jṛ*. Perhaps ‘be harmonious’ would have been better. For further disc. see ad IV.4.8 below.

IV.3.16: On this vs., see publ. intro.

IV.4 Agni the Demon-Smasher

IV.4.1: The repetition of the same word, *prásitim*, in a and c without any obvious difference in usage or sense (Re says they are “légèrement” distinct) seems uncharacteristically clumsy for a Vedic poet, which in turn makes it tempting to identify something that does distinguish them. Although he does not tr. them differently (nor does anyone else), Ge suggests in his n. 1a that *prásiti-* represents the coalescence of two words, one derived from √*sā*, *sí* ‘bind’ (‘Fanggarn’, a hunting net) and the other ‘Laut, Ansturm’, related to *prásita-* (IV.27.4, X.77.5) ‘shot forth’. The latter provides the usual meaning of *prásiti-* ‘onslaught’ vel sim., and the word is now usually considered to belong to PIE **seh₁(j)* ‘loslassen’ (cf. LIV² 1.**seh₁(j)* n. 2; EWA s.v.) and to be related to *sāyaka-* ‘missile’. For disc. of some of the occurrences of *prásiti-* see Hoffmann (Aufs. 417–18 [=MSS 10, 1957]); curiously Hoffmann only notes the second occurrence of the word in this vs., not the first. Ge’s suggestion that the word has two sources opens the possibility of accounting for the poet’s seemingly awkward repetition here, if in fact he’s using two different words *prásiti-* (or, to him, possibly two different senses of one word; for this cf. *sumatí* in 6a, 8a below). That the *prásiti-* in pāda a is ‘broad’ (*pr̥thvī-*), while the *ānu* ‘along’ in c suggests that it is long and thin there might be a clue. I tentatively suggest that the first occurrence refers to a deployed hunting net -- broad so as to trap as many animals as possible (or to make it difficult for any animal to avoid it) and

comparable to an advancing sheet or wall of flame. The second one would then have the usual sense of ‘onslaught, forward dash’. Unfortunately altering the tr. to allow for these two separate meanings would lose the identity of the forms in this suggested pun.

Pace Ge, *ībha-* means ‘entourage, retinue’ not ‘elephant’ in Vedic, a meaning reinforced by the Middle Indic derivatives. See EWA s.v.

On *drūṇāṇá-* as belonging to $\sqrt{drū}$ ‘cut down, mow’ see Hoffmann (Aufs. 414–21) and EWA s.v. *DRAV*.

Pāda c seems to go more naturally with b than with d, as most take it.

IV.4.2: Since $\sqrt{sprś}$ does not otherwise occur with *ānu* in the RV or, per Monier-Williams, in all of Skt., I supply an object with this preposition -- either the flames of pāda a or, perhaps preferably, the *prāsītīm* construed with *ānu* in 1c.

Most interpr. take *patamgān* as an unmarked simile, e.g. Ge “(gleich) Vögeln.” My interpr. requires supplying an unparalleled noun but avoids the need for a simile particle.

IV.4.2–4: Note the preverb chaining: 2d *vī srja*, 3a *prāti ... vī srja*, 4b *prāti*.

IV.4.3: The splv. *tūrṇitama-* is better rendered ‘best at advancing’ vel sim., rather than ‘swiftest’; see comm. ad III.11.5. Such an understanding of *tūrṇi-* may be reflected in the WG tr. “als am besten Durchsetzender,” against the standard “swiftest” tr.

Ge. renders d “keiner soll es wagen, dich irrezuführen,” but *vyáthiḥ* ‘veering course’ is simply a description of the usual behavior of fire, amply described in vss. 1–2.

IV.4.4: As Ge suggests in his n. 4a, *ā tanuṣva* could reflect the common idiom \sqrt{tan} ‘draw/stretch (the bow [*dhānus-*, *dhānvan-*])’. Given that Agni is identified as a ‘shooter’ (*āstā*) in 1c and that bows are the presumed object of a different form of \sqrt{tan} in the next vs. (5c, see there), this seems quite possible, though I think the primary reading is simply the reflexive ‘stretch yourself out’; cf. 1a for Agni’s making himself broad.

IV.4.5: The standard tr. supply ‘powers’ with *daívyāni*, and this certainly could make sense. However, no word meaning ‘power’ occurs with pl. *daívyā-* (I must admit that *sáhas-* occurs several times with the sg.) nor as obj. of *āvíṣ* $\sqrt{kṛ}$ ‘make manifest’. Since we expect something visual as the obj. of such a verb and since the hymn so far has concerned the shape-shifting of Agni, I tentatively supply ‘forms’ -- though ‘powers’ is not excluded contextually.

The adj. *sthirá-* ‘taut, firm’, esp. when obj. of *āva* \sqrt{tan} , presupposes ‘bows’ as its head noun; cf. the bahuvrīhi *sthirá-dhanvan-* (VII.46.1) and phrases like VIII.20.12 *sthirá dhānvāni*.

The more usual interpr. of cmpds with final root noun is OBJ + TRANS. VERB, and this seems to be the sense of many of the fairly numerous cmpds in *-jū-* (e.g., *vasū-jū-* ‘speeding goods’), though Scar (166–77) hesitates in several cases. However, in *yātu-jū-* the final member must be read passively with agentive 1st member: ‘incited by sorcerers’, as VII.21.5, adduced by both Ge and Scar (173), definitively shows: *ná yātáva indra jūjuvur naḥ* “Sorcerers do not incite us, Indra.”

On the number disharmony in the obj. phrase in d, *jāmīm ājāmim ... śātrūn*, see comm. ad VI.44.17.

IV.4.6: The 2nd hemistich has been variously interpr. Most recently WG take the neut. pls. *viśvāni ... sudīnāni ... dyumnāni* as subjs. of the sg. verb *dyaut*, in the well-known, inherited, but relatively rare constr. of neut. pl. + sg. verb (“Zu ihm strahlen alle ...”). Re takes all of the half-verse through *aryāḥ* as nominal sentences: “que tous (les jours) soient de beaux jours pour lui ...,” and the rest of d as an abrupt command. Ge has Agni shining the various good things through the doors to the fortunate *asmai*. My interpr. is closest to Old (Noten, not SBE) and Ge’s alternative in his n. 6cd. I take *ví dūrah* as referring to the usual opening of the doors, an expression that usually contains a form of the verb \sqrt{vr} ‘(un)cover’ (e.g., IX.45.1 *ví ... dūro vṛdhi*). Here the more dramatic verb *dyaut* has been substituted, blending the lexeme *ví ... dyaut* ‘flashed forth (like lightning)’ with the straightforward *ví√vr* ‘open’ -- hence my “flashed open the doors.” I am not sure why all the standard tr. (except for WG) render the injunctive *dyaut* as a modal (e.g., Ge “... sollst du ... scheinen”).

I supply ‘days’ with *sudīnāni* on the basis of passages like VII.11.2 *āhāny asmai sudīnā bhavanti*.

rāyāḥ can be either acc. pl. (so Old, Ge, Re) or gen. sg. dependent on *viśvāni ... sudīnāni* (so Th [Fremdl. 61] “All die Sonnentage des Reichtums,” WG). In the publ. tr. I took it as acc. pl. but, to my mind, nothing rides on it either way.

IV.4.7: It is not clear whether *nītya*- in this context has already developed its later technical sense of regular, obligatory ritual offering, as opposed to those performed irregularly for special purposes. Or whether it simply means, as Re takes the phrase *nītyena havīṣā*, “une offrande personnelle.”

I have pushed the last phrase *sāśad iṣṭīḥ* to “this desire will be” -- that is, “will come true” -- rather than simply “this will be his desire” (so Ge [WG]), since I otherwise find it difficult to interpr. the subjunctive.

IV.4.8: The word *sumatī*-, found in 6a, is repeated here. There it clearly referred to the benevolence or good will of Agni, which the successful priest/poet comes to know. Here I think it has double meaning. On the one hand, it still refers to Agni’s good will, which the poet praises, but it also refers to the good thought, i.e., the poem, that the poet has produced for Agni. This double reading is enabled not only by the usual double meaning of *sumatī*- and the grammatical ambiguity of the enclitic *te* (gen. in the first interpr., dat. in the 2nd), but also by the double meaning of \sqrt{rc} ‘chant, recite’, which can take as object either the topic/goal of the praise (e.g., V.29.1 *ārcanti tvā marútaḥ* ... “The Maruts chant to/praise you”) or the verbal contents of the recitation (V.30.6 *tubhyéd eté marútaḥ ... ārcanti arkām* “Just for/to you do these Maruts chant the chant”).

ghóṣi (also VI.5.6) is a controversial form. The grammars/lexica generally take it as a 3rd sg. passive aor. to $\sqrt{ghuṣ}$ ‘hear’; it would take a putative *sumatīḥ* as subj. and mean “(the good thought) was/is/will be heard” (Old SBE “it resounded here,” sim. WG). The other instance (in VI.5.6) is taken as a neut. adj. ‘laut ertönend’ by Gr, also Old (Noten, contra SBE). Most tr., however, render it as a 2nd sg. act. impv. “hear!” Though a passive aor. would also be possible in VI.5.6 (*ghóṣi mánma* “the thought is heard”) and

though the pass. aor. interpr. is morphologically impeccable, I think the 2nd sg. act. impv. is the correct interpr., though the morphology is a little troubled. It appears to be a *-śi* imperative, though not built as usual (at least in my view) to an *s*-aor. subjunctive, but rather to, or alongside, the 1st class thematic pres. *ghóṣati*; this analysis also requires that a putative **ghoṣ-śi* has simplified the double sibilant. One of the arguments in favor of a 2nd sg. impv. in VI.6.5 is the relative density of *-śi* impvs. in that context, with two (*śróśi*, *párśi*) in the preceding hymn (VI.4.7, 8) in that tightly knit Agni cycle. The interpr. of the form as a *-śi* impv. is accepted and argued for by Gotō (1st cl., 131–32 and n. 160, with lit.); it is curious that in WG[otō] this interpr. has been abandoned without comment. The form is disc., in typically indecisive fashion, by Baum (Impv., 46 and 27 [where he seems to accept the *-śi* impv. analysis]).

The Vāvātā or ‘Favorite’ wife in later śrauta ritual is one of the wives of the king who has a series of set functions in the various royal rituals (see, e.g., my *Sacrificed Wife* passim). The presence of this figure, or of her prototype, may suggest that the lexeme *sām √jṛ*, found also in the preceding hymn (IV.3.15), may have deeper resonance than simply ‘be welcome, bring harmony’, perhaps something like ‘be in tune with (s.o.)’, referring to perfect harmonious agreement between two people, esp. two people in love. In both IV.3.15 and our passage the feminine song (*gír-*) / chant (*śastí-*) would put herself in tune with the masc. god, as a Favorite wife would to her kingly husband. Note that in IV.3.15 the chant is modified by *devāvātā* ‘favored by the gods’, with the same *-vātā* as here (save for accent). In fact, as Ge points out (for different purposes) our *te vāvātā* is phonologically very close to IV.3.15 *devāvātā*. It might also be that *jara(tām)* would be reminiscent of *jārā-* ‘lover’, to add to the erotic mood.

As Re’s tr. makes clear (“Nous souhaitons t’orner, (dans l’espoir d’obtenir) de bons chevaux, de bons chars”), the two adj. *svásvāḥ ... suráthāḥ* are most likely proleptic: we want to tend the ritual fire in order to get possession of good horses and chariots. This contrasts with the use of *svásva-* in 10a.

IV.4.9: *sumānas-* here recalls the two occurrences of *sumatí-* in 6a and 8a (see disc. there); this word too may have dual value: both ‘benevolent, well-disposed’ and ‘having a good mind’, that is, one capable of producing good thoughts in the form of hymns.

The *dyumnāni* of the *arí-* “the brilliant things of the stranger” that Agni opened up for us in 6d we seem to have thoroughly taken possession of here. The gen. *jánānām* here corresponds to *aryāḥ* in 6d.

IV.4.10: Unlike 8c, where I took *svásva- surátha-* as proleptic with the priestly subject “we,” here the man who is *svásva- suhiranyá-* appears to be already rich, with a chariot full of goods -- and therefore most likely the patron of the sacrifice, who (we hope) will redistribute this wealth to us performers via the sacrifice. This may be the purport of *sákhā* ‘partner’ here. Ge suggests (n. 10ab) that the figure in question is a ruler returning from battle with booty.

IV.4.11: This vs. concerning the poet’s poetic gifts and his lineage, spoken in the 1st ps. sg., seems out of place in this hymn and anticipates the enigmatic hymn IV.5 that follows immediately, which focuses on the mysterious sources of poetic power. Of course, given

the mechanical arrangement of the RVic hymn collections, we cannot assume that the hymns had anything to do with each other originally.

Old (SBE), Re think that the poet's lineage (*bandhūtā*) is with Agni: Old "through my kinship (with thee)." But the next pāda, where the line of descent is traced from his father Gotama, makes that unlikely.

The next question is what to do with *mahāḥ*. Old (SBE) takes it as acc. pl. object of *rujāmi*; Ge (/WG) as gen. sg. with *vācobhiḥ*, referring to the poet's great (father). With Re I prefer to take *mahāḥ* as adverbial. Although this leaves *rujāmi* without an object, an object is easily supplied: the root \sqrt{ruj} is typed for the breaking of the Vala cave, particularly in this group of hymns so dominated by that myth. Cf. IV.2.15 ... *āṅgirasobhavema, ādriṃ rujema* ... "Might we become Aṅgirasas; might we break the rock." On grounds of sense I don't think *mahāḥ* is gen. with *vācobhiḥ* because I think the poet is asserting the power of his own poetic gift: he acquired this gift from his father (pāda b), but he is not using his father's words but his own -- or so I take his proud boast. By casting himself as the subject of the Vala-breaking verb, he is also implicitly asserting his identification with the Aṅgirasas, who broke into Vala with *their* words. Like the speaker(s) of IV.2.15 he seems to be saying "might I become an Aṅgiras."

IV.4.13: Since the *yé* of the rel. clause in ab has no obvious referent in the main clause of cd, it is tempting to connect ab with the preceding verse (12), and start a new sentence with 13cd -- esp. because 13a *yé pāyāvaḥ* matches 12c *té pāyavaḥ* so exactly. But vs. 13 is a repeated vs. (= I.147.3), and so must be interpreted as self-contained. It is also likely, because of the reference to Māmateya, i.e., Dīrghatamas, that I.147, a Dīrghatamas hymn, is its source, and the vs. has been inserted here secondarily because of the match between the two *pāyāvaḥ* phrases (so Bloomfield, RR ad I.147.3). On the relationship between the relative and main clauses in this vs. see comm. ad I.147.3.

IV.5 Agni Vaiśvānara

IV.5.1: Note that the first word of the hymn is *vaiśvānarā-*.

Old (SBE), Ge, and WG all take *bṛhád bhāḥ* as the obj. of *dāśema* with the dat. *agnáye* phrase the indirect obj. (e.g., Old "How may we ... offer mighty light to ... Agni"). I am dubious about this for two reasons, one practical and one grammatical. First, why would we need to confer light on Agni -- does he not already have it? I suppose "lofty light" might refer to the sun and our ability to make the sun rise by kindling the ritual fire, but the phrase refers to Agni's own light elsewhere (e.g., VIII.23.5, X.3.1). Or conferring such light upon him might simply mean kindling him. More telling is the grammatical argument: although there are a few other $\sqrt{dāś}$ passages with acc. of something conferred (though normally a ritual offering of some sort; cf. I.71.6 [*nāmaḥ*], I.93.3 [*havīṣkṛtim*]), the overwhelming number of passages have simply a dative of the honoree sometimes with *instrumental* of what is conferred. Alternatively and considerably less often, the verb can take an acc. of the honoree; cf. the very similar V.41.16 *kathā dāśema nāmasā sudānūn ... marútaḥ* "How might we serve the Maruts of good drops with reverence?" I therefore think $\sqrt{dāś}$ is participating in two syntactic frames here, 1st with dat. *agnáye*, then with acc. *bṛhád bhāḥ*, both as the object of honor and service. Re in his n. suggests that *bṛhád bhāḥ* is a "pré-bahuvrīhi," but in his tr. treats

it as an appositive “Haut éclat” going with the 2nd hemistich and modifying the underlying subj. Agni there.

The usual obj. of \sqrt{stambh} is *dyām* ‘heaven’, which is the obj. expected (and supplied) in the frame. The obj. in the simile, *ródhas-* ‘bulwark’, may have been chosen because it is phonologically reminiscent of *ródasī* ‘two world-halves’, another way to refer to the cosmic masses. This word serves as obj. to \sqrt{stambh} a number of times with the preverb *ví* (‘prop apart’), e.g. VI.8.3 (another Vaiśvānara hymn) with Agni as subj.: *vy āstabhnād ródasī*.

IV.5.3: In the publ. tr. I take *dvibárhāḥ* as the masc. nom. sg. it appears to be, modifying the subj. However, this particular form several times has to be taken as neut. (I.114.2, VII.8.6, 24.2; see comm. ad VII.24.2), and its position here may make it more likely a modifier of neut. *sāma*, as Old (SBE), Ge, and Re take it. Hence, possibly “a great doubly lofty melody ...”

I tr. *padām* twice, as ‘word’ and ‘track’, to bring out the pervasive pun in this hymn.

IV.5.5: As indicated in the publ. intro., this vs. characterizes rival poets as capable of producing a “deep word” (*padām ... gabhīrām*) despite their bad characters. Sāy’s interpr. of this phrase as a deep *place*, namely hell, fld. by Old in SBE (but decisively rejected by him in Noten) and in part by Doniger, has little to recommend it, esp. because *padā-* is the signature word of this hymn and has very specific values in the hymn. It would be a very slender basis on which to found Vedic views of the afterlife.

The form of the verb *ajanatā* causes interpretational difficulties. It appears to be the 2nd pl. act. impf. to the 1st cl. pres. stem *jānati* ‘begets’, and so I take it, as do WG (see also Gotō, 1st class, 145 n. 203) and, as a plausible alternative, Old (Noten). See also Narten (Sig. Aor., 117–18 n. 317). But most interpr. want the verb to be 3rd ps., and if possible, 3rd plural. Since the ending *-ata* (*/-atā*) can only be 3rd pl. to an athematic stem, an otherwise unattested root pres. was invented by Gr.; Ge takes it as an 3rd pl. aor.; Re tr. as 3rd pl. but does not comment. As Old points out, lengthening of *-ta* to *-tā* is far more common in the 2nd pl. act. than in 3rd ps. middle forms -- another argument in favor of the 2nd pl. Since unsigned switch between persons is common in RVic discourse, there seems no contextual reason to reject the obvious morphological analysis of *ajanatā*.

It is striking that the two damning similes compare the badly behaved poets to two types of contemptible females.

IV.5.6: This vs. is difficult both to construe and to render into English, and different interpretations of how to construe it lead to very different views of the meaning of the hymn as a whole. In my view, the poet claims that because of his upright behavior, in contrast to that of the likewise skilled but wicked poets in vs. 5, Agni takes some of the burden of the poetic labor upon himself. Other interpr. believe that the poet is complaining that Agni is imposing a further burden on him, the poet, despite his good behavior.

I take the first two words of the vs., *idām me*, as a separate clause, with the referent of *idām* the same as that in the last pāda of the preceding vs., *idām padām ...*

gabhīrām “this profound word.” With *idám me* the poet lays claim to the poetic skill that seems also to characterize the wicked poets.

My view that *kíyate* starts a new clause is supported by the fact that all other exx. of *kíyant-* are pāda-initial. In attempting to render the rest of the vs. into parsable English I have scuttled the interrogative feature of the dat. *kíyate* ‘for how great/small a one?’ An interrogative rendering would be something like “For what such small one (like me) ... have you placed ...?”

With the dat. negated part. *áminate* I supply as obj. *dhāma* (or *dhāmā[ni]*) (with most tr.), in a phrase contrasting with 4c *prá yé minánti várūṇasya dhāma* “those who confound the ordinances of Varuṇa,” which described his rivals and the targets of Agni’s flame.

Given the position of the simile part. *ná*, the simile should consist only of *bhārām* ‘burden’, with *gurúm* ‘heavy’ the quality held in common. But since *mánma* is neut., *gurúm* can only modify m. *bhārām*. This seems to me a minor problem.

The problems of interpr. are esp. acute in the 2nd hemistich and involve esp. the assessment of the referent and meaning of the accusatives in the d pāda. Some tr. (I confess I don’t entirely understand Ge’s) take them as an appositive to *mánma* ‘thought’ in b, referring to the burden that Agni is laying on the poet, with the possibility floated (see Old [SBE], WG n.) that it refers to the later *Prṣṭha* Stotra. But in this type of context the ‘back’ (*prṣṭhá-*) is ordinarily Agni’s (also in cmpds like *ghṛtá-prṣṭha-* ‘ghee-backed’) and the adj. *yahvā-* modifying it is almost entirely limited to Agni. I therefore think that the *prṣṭhám* phrase refers to Agni’s back (so Ge n. 6d) and that it is a second acc. with *dadhātha* ‘you have placed’: $\sqrt{dhā}$ ‘place sthg (ACC.) on sthg (ACC.)’ (so, possibly, Ge n. 6d). This is, admittedly and unfortunately, not a standard construction with $\sqrt{dhā}$, but, then, the usual case expression with $\sqrt{dhā}$ for the location of what has been placed is the locative, while most tr. take the dative phrase in ab to be that location. I do, again, have to admit that $\sqrt{dhā}$ + DAT. ‘establish sthg (ACC) for s.o. (DAT.)’ is common, and this is doubtless what the other tr. are thinking of. However, the strong likelihood that pāda d refers to Agni’s back and Agni’s back can’t be placed on the poet emboldens me to hold to my interpr. I take the dat. phrase as a dative of benefit.

IV.5.7: The first half of the vs. is fairly straightforward. The poet expresses his hope that his *dhītī-* ‘conception, thought’ will reach *tám* (most likely Agni, though ‘sacrifice’ is also possible). I take the etym. phrase *samanā samānām* as I do in similar phrases in IV.51.8–9 (Dawn), esp. 9ab ... *samanā samanīh ... uṣāśaś caranti* “The Dawns proceed, the same ones in the same way,” referring to the regular repetition of sunrise. Here I think the phrase refers to the repetition of the sacrifice and the ever-renewed Agni; similar is VI.4.1 addressed to Agni *evā no adyā samanā samānān ... yakṣi devān* “even so for us today sacrifice in the same way to the same gods.”

The second hemistich is close to impenetrable; Old (Noten) remarks “Die Dunkelheiten dieses Verses ... sind ein Noli me tangere.” As I indicated in the publ. intro., I think the impossible hapax *jābāru* that ends the vs. is not *meant* to be understood but is “a sort of abracadabra, a mystical expression, and the half verse in which it appears encapsulates the profound and transformative secret of the sacrifice.” The meaning “solar disc” first suggested by Sāy. and followed, for want of anything better, by most since (though not by Old or WG), is, in my opinion, worse than useless, in that such a tr.

obscures the enigmatic intent. Note first that the word rhymes with *cāru* in the preceding pāda and echoes the important word *bhārām* in 6b; it also has unusual phonology -- with internal plain *b* and the impression of slightly skewed reduplication: *jābaru* like *jabhāra*. (Note that this latter pf. shows up several times nearby: IV.7.4 *ā jabhruḥ*, *jabhārat* IV.2.6, 12.2; in fact a surprising percentage of the RVic forms of this pf. are found in IV: *jabhartha* 19.9, *jabhāra* 18.4, 13; 27.2, 4.) It also appears to contain the mysterious suffix *-āru-* mostly found in nonce formations, on which see comm. ad III.30.8. And perhaps most important it's encoded into a repeated phonetic pattern involving *rup*: ... *cāru pṛśner* / *āgre rūpā ā rūpitaṃ jābāru* // *pra* ...

With Gr (s.v. *cārman-*) I interpr. *sasāsya cārman* “on the hide of the grain” as a ref. to the barhis, establishing the ritual ground as the locus of the mystery. See further ad IV.7.7.

As often the mention of *Prśni* brings obscurity in its train. Here one question is what noun to supply in the phrase *cāru pṛśneḥ*, which recurs in 10b *gúhyam cāru pṛśneḥ*. There are two good candidates, ‘name’ and ‘udder’, as Ge also points out. The adj. *gúhya-* in the latter passages suggests ‘name’, since it regularly modifies *nāman-*; cf. also vs. 3c *padām ná gór āpagūḍham* “the word hidden like the track of the cow,” with a form of *√guh* ‘hide’ and a verbal referent, as well as III.5.6 (see below) *cāru nāma*. But nearby IV.3.10 connects *Prśni* with an udder, and IV.7.7 with similar phraseology also has an udder. I do not think an informed choice can be made, and I’m also not sure it matters -- though I weakly favor ‘name’. See comm. ad vs. 10 below.

With most others I take *ārupita-* as a back formation to the *-p*-causative of *√ruh* ‘ascend’ found 1st in the Brāh. See also Schindler (Wurzelnom., s.v. *rúp-*), EWA s.vv. *RODH*, *ROP*.

The root noun *rúp-* is likewise obscure (see, e.g., Schindler, s.v.). I tr. ‘mount’ (sim., e.g., Bloomfield, RR ad III.5.5), deriving it from the same secondary causative formation as gave rise to *-rupita-*. However, this is the merest guess (though coinciding with Bl [see RR ad III.5.5, with ref. to JAOS 27]), and the existence of a parallel phrase *ripó ágram* in III.5.5 with different vocalism (*rip-* vs. *rup-*) adds to the uncertainty. The sequence III.5.5–6 resembles our passage in other ways, esp. in III.5.6c *sasāsya cārma*, identical to the phrase in our 7c, as well as the *cāru nāma* mentioned above. Most important is the fact that III.5.5a is identical to pāda d of our next vs., save for *ripáḥ* vs. *rupáḥ*. The root noun *rúp-* is also found in X.13.3, in an obscure context in an omphalos vs., where it is found, as here, with a form of the root *√ruh* (though without the secondary *-p-*), *aroham*. Further, the variant *ripáḥ* is found in X.79.3, along with a form of *sasá-*.

IV.5.8: Opinion is divided as to whether *pravācyam ... me* means “to be proclaimed to me” or “... by me,” and the dat. enclitic makes either interpr. possible (dative agents being found with gerundives). I take it as the former: the vs. (or at least bc) seems to concern the esoteric education of the poet. The unidentified “they,” subjects of *vadanti* (b) and (*āpa* ...) *vrán* (c), convey these secret teachings. I doubt that we are supposed to know who “they” are, and Re’s impersonal “on” (“On parle ...”) may capture the intent better than a literal tr.

The hapax *nīṇīk* ‘privately, secretly’ is apparently derived from *nīnyá-* ‘secret, private’, though the details are disputed. See EWA s.v. *nīnyá-*.

Both Ge and Re in different ways make heavy weather of *vā̃r* (ein Tor and une ouverture respectively), but there seems no reason not to take it as ‘water’ (as elsewhere), as Old rather scornfully observes (“Warum nicht *vā̃r* ‘Wasser’? ‘Wasser der Kuh’ ist die Milch”). The reference is of course to the Vala myth: they uncover secret teachings as they do the light (here light = water = milk) of the cows enclosed in the Vala cave.

As noted ad vs. 7, pāda d is identical to III.5.5a. Exactly what is meant here is not clear (what a surprise!), but if, as I suggest, “the tip of the mount” (*agrē rupāḥ*) in 7c refers to the ritual ground, perhaps the ritual earthly fire or the top of that fire, it may be that “the track of the bird” (*padām vēḥ*) is the track of the sun, the heavenly fire. See publ. intro. to III.5. If it is a reference to the sun, it would provide a good transition to the next vs.

IV.5.9: This vs. brings us to the familiar ritual situation: dawn and the rising of the sun at the moment of the dawn sacrifice. After the obscurities of recent vss. it comes as a relief.

Flg. Sāy, all the standard tr. (save for Old SBE) take *viveda* as 1st ps. This is certainly possible, but there is nothing in the context that imposes it. Old supplies “he” without identification; I think Dawn is the possible discoverer.

IV.5.10: With Old (Noten, explicitly contra SBE) I take the whole vs. as a single sentence, with the final word *jihvā* an instr. parallel to *āsā* ending pāda a, both referring to Agni’s flame. The other standard tr. take cd as a separate clause, with *jihvā* the nom. subj.

The vs. continues the focus on the kindling of the ritual fire at the dawn sacrifice. The parents in pāda a are the kindling sticks, at least in my opinion (also explicitly Re). For the phrase *gūhyam cāru pṛśneḥ* cf. *cāru pṛśneḥ* in 7c and disc. there. In both cases the phrase seems to encapsulate the mystery of the ritual. The verb *āmanuta* ‘pondered’ or ‘brought to mind’ somewhat favors supplying ‘name’ as the referent of the phrase. Cf. in this Agni cycle IV.1.16a *té manvata prathamām nāma dhenóḥ* “They brought to mind the first name of the milk-cow,” also X.68.7 *bṛhaspátir āmata hí tyád āsām, nāma svarīṇām sādane gūhā yāt* “For Bṛhaspati brought to mind this very name of these who were resounding (with)in the seat -- (the name) which was hidden.” The two locations identified in c, “the furthest track of the mother cow” (*mātúṣ padé paramé ... góḥ*) and “nearby” (*ánti*) suggest that the mysterious hidden substance is both on the ritual ground and in heaven or the equivalent. (See 11cd and 12cd.)

IV.5.11: I tr. injunc. aor. *voce* as an immediate past, because I think the poet is referring to his own poetic production in this very hymn. (The middle voice strengthens the sense of self-reference.) However, the verb could of course express a neutral present, as the standard tr. take it (e.g., Ge “Ich spreche”), or even a future/modal (“I shall proclaim”). I take the referent of *idám* at the end of b to be *ṛtā-*, which begins the vs.: the poet has hope for Agni’s largesse in just the case that his speech is/contains truth. He phrases this as a conditional (“if”), but, with the confidence he has gained in the course of the hymn, one assumes he is certain that his speech is the truth that was revealed to him in the preceding vss.

My suggestion that the locations in 10c are heaven and the ritual ground is supported by the straightforward assertion here that Agni has power over wealth both on earth and in heaven.

IV.5.11-12: The accented demonstr. *asyá* in 11c and in the repeated phrase *no asyá* (12a, c) causes minor interpretational difficulty because on the basis of its accent it should be adjectival. In 11c it anticipates *víśvam* in the izafe-like rel. cl. *yád dha víśvam*, as well as *dráviṇam* in its expansion in d. In 12a the two neut. interrogatives in a row (*kím ... kád*) invite a differential tr., hence my rendering of the first as a question marker rather than a neut. pronominal. But the case disharmony of the phrase *asyá dráviṇam* is curious; it is generally interpr. as an attempt at a partitive expression, which I think is correct -- though I'm not entirely happy with Ge's notion that *dráviṇam* has been "attracted" out of the genitive by *kím*. If *kím* is taken as a neut. prn., the phrase could be tr. "what [=how much] wealth of this (wealth) is ours." For *no asyá* in 12c, see next comm.

IV.5.12: It is difficult to render the construction in 12cd literally without losing its sense, and the publ. tr. has rearranged the structure of the subordinate cl. in favor of parsability. In my view, all of cd is a relative cl. with neut. *yád* as the subordinator. It forms an acc. phrase *paramám yád ... padám* "which highest track/footstep" (see *padé paramé* in 10c). This acc. is limited by the gen. phrase *ádhvanaḥ ... no asyá* "of this road of ours." The acc. phrase is construed as an acc. of (extent of) space with *áganma*: "on/along which track we have gone." So the frame of bcd would read literally "... you have announced to us in secret what highest track of this road of ours we have gone on." ("In secret" [*guhā*] could instead be construed within the rel. clause "the track we have gone on in secret," without damaging the interpr.)

The rel. clause also contains a simile, *réku padám ná nidānāḥ* "like the spurned/scorned on an empty track," with nom./acc. matching the subj. ("we") and acc. goal ("track") of the frame. Because simile and frame share the acc. *padám* it appears only once, displaced to the simile from where we might expect to find it in the frame (and in fact to the wrong part of the simile with *ná* in the wrong place; we should expect **réku ná padám*).

The simile raises another question: why is our progress subject to this negative comparison? The standard response to this is that Agni is supposed to tell us whether we're on the wrong road or not, since the end of it is hidden from us. I think the point is more subtle: the wealth and treasure that we want (and have obtained) from Agni are not material, but rather the secret teachings and poetic enigmas we have learned in the course of the hymn. But to the vulgar and uninitiated, it looks as if we are going down a blind alley, heading to a dry hole with no material goods to show for it. As vs. 14 shows, those who scorn us for the path we have chosen will themselves be scorned for lacking the true poetic gift.

IV.5.13: The theme of the journey in vs. 12 morphs slightly into the image of a race or similar contest.

IV.5.14: With Old and Re I supply *vácasā* (from pāda a) with *āsatā*, rather than taking the latter as 'non-being' vel sim., because that stem is regularly associated with speech.

IV.6 Agni

IV.6.3: The subject must change between pādas a and b, since the subj. of a is fem. and b contains a masc. nom. sg. (*urāṇāḥ*). I supply Agni as the subj. of b, as he clearly is of the repeated pāda III.19.2c. So also Old (SBE); others are less explicit.

The standard tr. take *urāṇāḥ* as transitive, with *devātātim* as obj. (e.g., Ge “die Götterschar sich erwählend”) (also in the identical pāda III.19.2c). But in all clear cases *urāṇā-* is passive (as opposed to trans. *vr̥ṇāná-*), and it seems esp. unlikely that the occurrence here would be transitive when the next vs. (4d) contains the same form in the same metrical position (verse-final) in clear passive usage (cf. also the next hymn IV.7.8c). Moreover it is not entirely clear to me what “choosing” the divine assembly would mean, whereas Agni’s being chosen as a priest is a standard trope. The occurrences of *devātāti-* in vss. 1b and 9d show that the divine assemblage was present at the ritual and that Agni was acting on their behalf. Taking *urāṇāḥ* as the passive it ordinarily leaves the acc. *devātātim* ungoverned grammatically, but in the publ. tr. I construe it loosely with *pradakṣiṇít*. It is possible that it could instead be loosely construed with *urāṇāḥ* “being chosen as priest for the divine assemblage”).

On *akrá-* see comm. ad I.189.7.

It may seem odd that the wooden post “anoints” the sacrificial animal tied to it, and in fact WG dissociate pādas c and d and make Agni the subject of d. But this striking turn of phrase can be explained both as a metaphor and by the principle of ritual transfer. Metaphorically “anoint” can simply mean “make ritually fit for sacrifice,” and this may be in play here: tying the animal to the post is a regular step in the animal sacrifice. But more interesting is the ritual transfer. In the one hymn in the RV devoted to the post (III.8), the post itself is anointed by the priests (III.8.1a *añjānti tvām ... vānaspate*), and later in that hymn the mechanism for that anointing is made clear: the offering ladles have been stretched over the posts (III.8.7b *yatásrucaḥ*). Thus the posts dripping with ghee presumably transfer the ghee to the attached animals, anointing them in their turn. Note that in our vs. the first pāda concerns the outstretched ghee-filled ladle (*yatā ... ghr̥tācī*), and we can assume that the same ritual sequence obtains here: ladle anoints post, which anoints animals.

IV.6.4: The standard tr. take the two loc. phrases in pāda a as real locationals, but I consider it unlikely that the Adhvaryu (who is Agni himself) would stand *on* the barhis, which would unhelpfully go up in smoke. Rather these should be loc. absolutes, as Old (SBE) takes them. In this particular case the loc. absolutes seem to be used, in conjunction with the aor. indic. *ūrdhvāḥ ... asthāt*, to indicate two layers of prior action before the present indicatives indicating the current ongoing ritual action, namely the circumambulation associated with the animal sacrifice (see publ. intro.), here expressed by *eti* in *pāri ... eti* in cd. The two loc. absolutes express the first layer of action: the barhis must be strewn and the fire kindled. Once the fire has been kindled, there comes the second layer of action, resulting directly from the first: the fire stands upright -- that is, catches and flames up. Only then can the firebrand be taken out and the circumambulation (*pāri ... eti*) begun. Thus, the aor. does express its usual sense of immediate past action, but English “has stood upright” does not capture this sense here. It might be better “Once the ritual grass *had* been strewn and the fire kindled, the Adhvaryu *stood* upright ... (Now) Agni circles ...” I thank IH for causing me to think this through more thoroughly.

IV.6.5: The stem *mitá-dru-* (5x) makes formal difficulties. If its 2nd member is a root noun belonging to \sqrt{dru} ‘run’, it should of course have the shape **-drut-*; root-noun cmpds also typically have accent on the root noun. Because of the former problem, Scar (243–44) interprets *-drú-* in *raghu-drú-* as a *-u*-stem deriv. of $\sqrt{drā}$ ‘run’. The context here, however, suggests at least a folk-etymological connection with \sqrt{dru} ‘run’, since pāda c opens with a finite form of that root: *drávanty asya vājīno ná sókāḥ* “His flames run like prize-winners,” which seems like a parallel expression to pāda a *mitádrur eti* “*mitádru* he goes.” (Note that in two of the five *mitádru-* passages the adj. modifies *vājīnaḥ* [VII.38.7, X.64.6].) Several factors may contribute to the anomalous shape of the compound. First, the rhyming *mitá-jñu-* ‘having fixed/firm knees’, where *-jñu-* is not a root noun but the reduced form of *jānu-* ‘knee’. Second, there is of course a noun parallel in formation to *jānu-/jñú-*, namely *dāru-/drú-* ‘wood’. The reduced form is found as 2nd member in at least one cmpd., *su-drú-* ‘(having) good wood’. It is possible that the existence of this homonymous form might have overridden the rule that added *-t-* to root nouns ending in short resonants. It is even possible that *mitá-dru-* actually contains the ‘wood’ word -- or at least that such a pun could be actualized: the cmpd could mean ‘having wood fixed (in it)’ referring to the fire. At least the three singular occurrences of the stem all refer to Agni (at least in my view), though the two plurals do not. Assuming that at least one reading of the cmpd contains a (pseudo-)root noun to \sqrt{dru} , the question then remains what the first member *mitá-* belongs to. The default assumption is \sqrt{mi} ‘fix’ as in *mitájñu-*, but my tr. reflects a deriv. from $\sqrt{mā}$ ‘measure’.

IV.6.6: A rare example of a non-nominative concessive use of the pres. part. of \sqrt{as} ‘be’.

IV.6.7: The first pāda contains three words not otherwise found in the RV: *sātur jānitor āvāri*. Only the first is troublesome: though only occurring here, *āvāri* is clearly the passive aor. to $\sqrt{vṛ}$ ‘obstruct’ (see *vāranta* in 6c), and the abl. inf. *jānitoḥ* is structurally transparent and is also found post-RV. The hapax *sātuḥ* is a different matter, however. Neither its root affiliation nor its grammatical identity is clear. Gr takes it as a *-tu*-stem to \sqrt{san} ‘win, gain’, with the meaning ‘der empfangende Mutterleib’, but the semantic extension envisioned is quite fantastic, and we should in any event expect a full-grade **sānitu-* (note immed. following *jānitu-* to the rhyming *seṭ* root). Ge tr. “Natur” (with ?) and suggests, rather wildly, that it’s derived from a root $\sqrt{sā} = as$, an idea that must underlie Re’s “l’être,” though he cannily does not comment. Old (SBE) tr. “mother,” but does not venture an etymology. Mayrhofer (KEWA s.v. *sātuḥ*) summarizes the speculation but does not adjudicate. WG have proposed a different solution, that it’s a *-tu*-stem to $\sqrt{sā}$ ‘bind’, and tr. “Von dessen Erzeugung das Anfesseln nicht abgehalten worden ist,” noting that Agni must be controlled after he is born. Although the morphology works better than the other suggestions, the meaning proposed seems rather contorted.

I have a more radical proposal -- that the phonological complex should be divided into *sā + ā/ātur*. The former is the feminine pronoun, picking up fem. *tanū-* found in the loc. *tanvī* in the preceding pāda (6d). Although the pronoun would not be in its standard init. position, it’s worth noting that the position of fem. *sā* is more variable than that of *sā* and also that both the neg. *nā* and the rel. prn. *yāsya* might be expected to be fronted. As

for the proposed second part, there are several possibilities. In my opinion the most likely is that it is the gen. sg. of a *-tar*-stem built to \sqrt{ad} ‘eat’, $*\acute{ad}-tar-$ > $*\acute{at}-tar-$, showing the same reduction of the internal cluster as in ($\acute{at}ri-$) $atrín-$ ‘devouring’ (at least by the etym. I favor). (The reduction would most probably take place in weak forms with the suffixal shape *-tr-* [e.g., instr. $*\acute{ad}-tr-\bar{a}$ > $*\acute{at}-tr-\bar{a}$ > $*\acute{atr}\bar{a}$] and spread to the gen./abl.) For textual support cf. X.79.4 *jāyamāno mātārā gárbho atti* “while being born, the embryo eats his two mothers [=kindling sticks],” a description of Agni’s birth, as here. Less likely, but not completely impossible, is an analysis as the gen. sg. of the Indo-Iranian $*\acute{at}ar-$ ‘fire’ (Aves. *ātar-*) treated as a *-tar*-stem. (By Stanley Insler’s very attractive, and unfortunately unpublished, etymology, the same word is also preserved in *mātaríśvan-*, whose initial *m* is owing to missegmentation.)

I am not entirely sure what pāda b contributes to the meaning -- perhaps the point is that the kindling sticks have kept *seeking* to produce fire and therefore his birth, depicted in pāda a, has taken place without a hitch. Note that this is the only occurrence in the RV of the full dual dvandva *mātārā-pitārā*.

IV.6.8: The part. *saṃvāsānāḥ* is generally ascribed to \sqrt{vas} ‘dwell’, and the standard tr. ‘dwelling together’ makes good sense as a descriptor of fingers. However, forms unambiguously belonging to this root are active, and there is no root pres. or aor. Gotō (1st Class, 295 n. 698) therefore assigns the participle to \sqrt{vas} ‘wear’, which of course has a well-attested medial root pres., and tr. ‘gleichgekleidet’, an interpr. maintained in WG. I find the morphological arg. persuasive, but the meaning somewhat elusive: what do fingers wear when making fire? (I do not think we should assume gloves.) I take it as a pun. In support of ‘dwell’, consider *saṃvāsana-* ‘joint dwelling’ (IX.86.17).

Pāda c contains another hapax, *atharyāḥ*. This is generally taken as the gen. sg. of a fem. *atharī-*, often interpr. as a female animal, whose tooth is the object of comparison with Agni’s flame. See, e.g., Old’s extensive disc. ad VII.1.1 (Noten II, p. 2), where he tentatively opts for a mare. Hoffmann suggests rather (registered in EWA I.805) that it belongs with *atharvī-* ‘following the way’ (*athar-vī*) (I.112.10), with the loss of *v* on metrical grounds, while WG take it simply as a fem. *-ī*-stem to *áthar-*, which they take as a root noun cmpd $*h_2at-h_2ar-ih_2$, and tr. ‘Wegzieherin’. The publ. tr. ‘enveloped in flame’ starts from Hoffmann’s preform with *-vī-*, but deviates in two regards. First it takes *athar-* with *atharyú-* with the meaning ‘flame, flaming’, and second it analyses the 2nd member as the root noun to $\sqrt{vyā}$ ‘envelop’ (cf. *hiranya-vī-* ‘enveloped in gold’, Scar 502). The phrase *atharyò ná dāntam* would then be semantically parallel to the bahuvrīhi *súci-dant-* (2x, of Agni) ‘having blazing teeth’. I am not at all happy with my analysis, however -- primarily because I am dubious about the existence of an *athar-* ‘flame’ and because the loss of *v* suggested by Hoffmann seems difficult to motivate. I would therefore tentatively withdraw the publ. tr., though I have nothing better to substitute. I wonder if the word is not implicated in the same interpretational difficulty as *sātuḥ* discussed above (7a). I doubt that a female animal is at issue.

IV.6.9: These variously colored horses of Agni’s are, of course, his flames. The verb in d, *ah(u)vanta* ‘called’, can refer to the crackling of the flames: actual horses don’t ordinarily ‘call’ anyone. However, I think we’re also dealing with a pun, with \acute{a} ... *ah(u)vanta* a

phonological scrambling of **ā* ... *avahanta* ‘conveyed’. Cf. III.19.4 *sá ā vaha devātātim* ..., VII.1.18 *vakṣi devātātim ācha*, with the same obj.

IV.6.10: This vs. contains yet another hapax, *duvasanāso* in a, but in this case the form seems to have been generated to form a pair with its phonological near match *tuviṣvaṇāso* in b (with its last two syllables also matching preceding *śyenāso*, which it modifies). It is generally connected (see Re ad loc., EWA s.v. *dūrā-*) with *dūrā-* ‘distant’, *dāvīyas-* / *daviṣṭha* ‘further, furthest’, but the exact morphology is unclear. On semantic grounds it seems unlikely to be related to *dúvas-* ‘friendship’. For a similar deformation of this lexical complex, see *duvanyasāt* in IV.40.2, which also owes some of its phonological shape to its formulaic partner.

IV.6.11: Ge and Re interpret pāda b as having three finite verbs: *śáṃsāti*, *yájate*, and *ví ... dhāḥ*, subjunctive, pres. indicative, and injunctive respectively. The first and third go well together (esp. if the injunctive is imperatival, as *dhāḥ* so often is), but the indicative does not sit well between them. By contrast Gr interprets *yájate* as the dat. sg. of the act. pres. part., rather than as a middle 3rd sg. With Old (SBE) and WG, I follow Gr in the morphological analysis, but both Old and WG construe the part. with *vy ū dhāḥ*. I think it belongs rather with *śáṃsati*, both because of the position of the *ū* and because of a nearby parallel passage also in an Agni hymn, IV.16.2 *śáṃsāti ukthám ... cikitúṣe ...* “He will recite his solemn speech to the one who attends to it,” with a dat. participle in this formula. The referent of *yájate* is Agni; note that he is called the superior sacrificer (*yájīyān*) in 1b, so *yájate* forms a ring with that first mention.

It is not clear what obj. to supply with *ví ... dhāḥ* ‘apportion’. It generally takes goods or the like elsewhere, hence my ‘treasures’, though I am tempted by Re’s “tu répartis (les rôles)” -- that is, Agni distributing ritual roles and ritual speech to the various participants.

“Laud of Āyu” (*śáṃsam āyóḥ*; also V.3.4) must refer to Agni, however odd the expression seems to be -- rather like referring to someone as “the toast of the town.” Of course, one of Agni’s standing epithets is the cmpd. *nārā-śáṃsa-*, of which *śáṃsa- āyóḥ* is simply an analytic variant. For further disc. see comm. ad VI.24.2 and II.34.6.

IV.7 Agni

Intro.: The publ. intro. states that Agni’s role as messenger is first mentioned in vs. 3; this should be corrected to vs. 4.

IV.7.1: Aṇavāna appears with the Bhṛguś also in VIII.102.4, but nothing more is known of him (cf. Mayr., Personennamen s.v.). Scar (366–67), though without disc., renders it not as a sg. PN, but as a nom. pl. adj. modifying the Bhṛguś (“die reichen (?) Bhṛguś”), presumably to a stem **āṇavan-*, roughly parallel to *āṇasvant-*. However, the usage in VIII.102.4 makes it clear that at least in that passage it is a PN.

In c *virurucūḥ* gives a bad cadence, and by meaning it could easily belong to the redupl. aor. *arūruca-*. The same pāda-final sequence (save for accent) ... *bhṛgavo ví rurucūḥ* is also found at X.122.5. It is therefore tempting (see Old [Noten], Arnold [Ved. Metre 128] for the temptation) to lengthen the reduplicating vowel. However, the undeniable 3rd pl. pf. ending (aor. should be **rūrucan*) and the existence of other

transitive exx. of *rurucuḥ* in other metrical positions (see Kü 431) temper the temptation. Still, I'd be inclined to read **virūrucuḥ* and assume that the stem has been secondarily incorporated into the pf. For further disc. see comm. ad IV.16.4.

IV.7.2: The point of the abrupt question opening this vs. must be that mortals have established Agni in his ritual role (vs. 1, 2cd), but Agni is not reliably fulfilling this role by manifesting himself at the proper times.

IV.7.3: This vs. continues the syntactic frame of vs. 2, with the nom. pl. subj. ("mortals" of 2d) modified by the pres. part. *páśyantaḥ* and Agni in the acc. sg.

vícetasam in pāda a is a pun, playing on the standard ambiguity of the root \sqrt{cit} , which means both 'perceive' and 'appear'. Referring to Agni's mental qualities, adjacent to *ṛtāvānam* 'truthful', it means 'discriminating', but the simile in b, "like heaven with its stars," actualizes the 'appear' sense.

The "laughter" of Agni is the merry crackling of the fire.

IV.7.4: This vs. also appears to continue the syntax of vs. 3, with another acc. phrase referring to Agni (pāda a), though given the 3rd pl. verb in c (*ājabhruḥ*) that could govern the acc., the vs. can be syntactically self-contained.

IV.7.4cd–5: Together these vss. reprise the first vs. (and the beginning of the 2nd). Agni's association with the Bhrgus of 1c is tightened by the adj. of appurtenance *bhṛgavan-* in 4d, and *viśé-viśé* returns from 1d. In 5a we find *ānuśák* as in 2a. The verb *ní sedire* 'have set down' (5b), though etym. unrelated, is the transitive equivalent in ritual discourse of *dhāyi* (1a) 'has been installed', and its object Agni is identified as *hótāram ... yájiṣṭham*, the words used of him as subject of *dhāyi* in vs. 1 (1b *hótā yájiṣṭhaḥ*). The root $\sqrt{dhā}$, insistent in 1a *dhāyi dhātṛbhiḥ*, is not absent here: see *dhāmabhiḥ* in 5d. Meanwhile the signature root of this section of the hymn is \sqrt{cit} , which appears once in each of the first 5 vss., except for 4: 1d *citrām*, 2b *cétanam*, 3a *vícetasam*, 5b *cikitvāmsam*.

IV.7.6–7: Though vs. 6 belongs metrically and syntactically with what precedes -- it is in Anuṣṭubh like vss. 2–5 and the accusative descriptive phrases hang off vs. 5 -- it belongs thematically with vs. 7, as noted in the publ. intro. Both vss. treat the mystery of the ritual fire, and being at the center of the hymn, they form a sort of omphalos.

IV.7.6: This vs. is structured as a series of paradoxes, one per pāda. The least clear is in pāda a, since there is only one qualifier, the loc. *śáśvatīṣu mātṛṣu* "in ever new mothers," which must be construed with *vītám* 'enveloped' in b. The paradox there is that ordinarily one has only one mother and that mother is not self-renewing. The physical reference must be to the pieces of wood (his mothers) in which fire inheres and from which he flashes out one by one. This physical image is developed in b: the fire is within wood -- therefore apparently in a fixed place -- but is unfixed, in that it is in constant motion in and over the sticks of wood. In c the fire inherent in the wood, therefore hidden, is also bright when it catches. Note another instance of the root \sqrt{cit} , *citrām* (matching the same word in 1d). And finally in d, when the fire catches it's easy to see and therefore to find, but its movements are unpredictable.

IV.7.7: This vs., particularly the first pāda, has been subjected to a variety of interpretations, which I will not pursue in detail here. The vs. is reminiscent of, though far less difficult than, IV.5.7, and in both cases I think it concerns the ritual and the layout of the ritual ground. The loc. phrase *sasāsya ... víyutā* “at the separation of the grain” I take as a reference to the spreading of the barhis, the ritual grass; it seems to correspond to the loc. phrase in IV.5.7c *sasāsya cárman* “on the hide of the grain.” See also V.21.4, where Agni is urged to sit “on the womb of grain” (*sasāsya yónim*). “At the same udder” (*sásminn ūdhan*) is also found in nearby IV.10.8, also with apparent reference to the sacrifice or the ritual ground.

IV.7.7–8: On 3rd sg. *veḥ* (√ *vī*) in 7d, see comm. ad II.5.3. Here the form serves as a pivot, *veḥ* in 8a having the more morphologically orthodox 2nd ps. reference. The near identity of the two adjacent phrases, 7d # *vér adhvarāya* and 8a # *vér adhvarāya (dūtyāni)*, requires us to consider them together. The first is clearly 3rd sg. (with nom. *agnīḥ* in the preceding pāda, nom. *ṛtāvā* in the same pāda). The 2nd ps. ref. of the second only emerges in pāda 8c, with 2nd sg. verb *īyase*. The poet seems to want first to enforce the 3rd ps. reference of the verb (even in 8ab the nom. pf. participles *vidvān* and *cikivān* appear to continue the 3rd ps.) and then require us to construct a paradigm: 2nd sg. *vés* [sandhi *vér*], 3rd sg. *vés* [sandhi *vér*], like 2nd sg. (*ā*)*var*, 3rd sg. (*ā*)*var*, which I invoked ad II.5.3 to explain the anomalous 3rd sg. *vés*. We can see this sequence as a variant on poetic repair.

The near repetition of the VP in 8a also clarifies the construction of the verb in 7d, with gapped object. I take dat. *adhvarāya* (7d) and gen. *adhvarāya* (8a) as filling essentially the same functional role.

IV.7.8: The VP √ *vid āródhanam divāḥ* (a variant of our *vidúṣṭaro divā āródhanāni*) occurs in the next hymn, IV.8.2, 4, assuring that the acc. here is governed by the comparative to the pf. part. *vidúṣṭara-*. With most (though not Gr, WG) I take *āródhana-* as belonging with √ *ruh* ‘climb’ (√ *rudh* ‘grow’), not √ *rudh* ‘obstruct’. On the difficulties in sorting out these roots, see EWA s.v. *RODH*².

IV.7.9: My interpr. of this vs. differs from the standard ones in several ways. First, in b most tr. take *vāpuṣām íd ékam* as a nominal sentence: “(this is) one of the wonders.” In contrast, I take b as describing the moment of the birth of the ritual fire: a single physical flame rising from the wood, though it is well known that Agni has many forms (*vápūṃṣi* e.g., III.1.8, 18.5, 55.9). Thus, *ékam* modifies *arcīḥ*, and the pāda is a single clause.

Pādas bc then sketch a double paradox: the beam of the just-born Agni is single, though he has many forms *and* though a number of mothers conceive him as an embryo (*dádhate ha gárbham*). Pāda c also contains another paradox: his mothers conceive him though they are unimpregnated (*ápravītāḥ*). My interpr. depends on reading pl. *ápravītāḥ* contra the Pp, which has singular *-ā* -- followed by Gr. and by all the standard tr., which also then must take *dádhate* as a thematic 3rd sg. (or perhaps a short-vowel subjunctive). With Old (Noten), I take *dádhate* as the expected indic. 3rd plural mid. to the redupl. pres. to √ *dhā* and *ápravītā* as representing *ápravītāḥ* in sandhi. The same form, in the pl., is found in the very similar passage III.55.5 *antárvatīḥ suvate ápravītā(ḥ)*, which

also describes Agni's "virgin birth": "Having (him) within, (though) unimpregnated they give birth to (him)." Agni's multiple mothers also figure earlier in our own hymn, 6a.

The publ. tr. takes pāda d as a subordinate clause, still under the control of *yád* beginning pāda c, primarily because of the accent on *bhāvasi*. However, it is quite possible that d is a separate main clause ("immediately at birth, you become a messenger") with the verbal accent owing to the immediately following *íd*. Many of the exx. given by Gr (no. 5, s.v. *íd*) of accented verbs followed by *íd* are pāda-initial and therefore non-probative (since they would be accented anyway), but there is a sturdy residue of non-initial apparent main clause verbs with accent.

IV.7.10: An undeniable ex. of a predicated perfect part., *dādṛśānam*.

On the supposed separate root \sqrt{di} 'destroy', see comm. ad III.34.1.

IV.7.11: Rather than supplying a verb to govern *ānnā* (e.g., Ge "die Speisen (verzehrend)"), I allow *trṣúṇā* 'thirsting (for)' to govern the acc.

In b the standard tr. supply 'wind': "he makes the thirsty (wind) his messenger." I resist this because it is Agni who is always the messenger (e.g., in this hymn 4a, 8a, 8c, 9d), and so I think it more likely that in this case Agni is making some part of himself (flame) into that messenger. A small problem is the masc. gender of *trṣúm*: the words for 'flame, blaze' in this hymn are neut. (*arcís*- 9b, *śocís*- 5c, 10b). However, a word like m. *śóka*- is always available, or we could attribute the masc. of *trṣúm* to attraction to *dūtám* or even take it as the modifier of *dūtám* ("he makes [his flame] into a thirsty messenger").

IV.8 Agni

As noted in the publ. intro., this hymn shares much phraseology with the immediately preceding IV.7.

IV.8.1: The cmpd *viśvá-vedas*- is always at least potentially ambiguous. In general most other tr. interpr. it as 'all-knowing' (lit. 'having all knowledge'); certainly in this passage that is the dominant rendering. However, as an independent noun, *védas*- only means 'possession, property', and I think that in most (maybe all) of its occurrences *viśvá-vedas*- has that value -- though the 'knowledge' interpr. may be a secondary one. In this case Agni's having all property to distribute to us may well be of more practical importance to us than his omniscience. The larger context cuts both ways: the next three vss. all have verbal forms of \sqrt{vid} 'know' (2a *véda*, 3a *veda*, 4c *vidvān*), which might favor the "all knowledge" interpr., but the obj. of 'knows' in the next vs. is the depository of goods (*vásu-dhiti*-), which might favor the "possessions" interpr.; note also his giving of goods in 3c (*dāti ... vásu*).

The anomalous 1st sg. *ṛñjase* (also V.13.6, VI.15.1, 4, X.76.1; possibly VIII.4.17) belongs with other -se 1st sg. forms like *stuṣe* 'I (will) praise'. As the context here shows, despite its likely meaning 'aim/stretch out straight', *ṛñjase* patterns with those other verbs semantically, in expressing an act of praise or reverence -- however they came into being. There is of course abundant literature on the subject; see recently Jasanoff 2016.

IV.8.2: It is quite possible that *vásudhiti*- here is a bahuvrīhi 'having the deposit(ing) of goods' vel sim., as it can be elsewhere. It could then refer to the earth (later, of course,

called *vasudhā*) in contrast to heaven, which is found in the next pāda; the two pādas share the verb *véda*.

IV.8.3: With Lub. I take *dāti* as a contracted root-aor. subjunctive. Unfortunately the root syllable never requires a disyllabic reading. On the formulaic use of a number of the forms of *dāti* / *dāti* (incl. this one), see comm. ad V.58.2 and my forthcoming art. “Vedic Evidence for the Verbal-Governing *dāti-vāra*-Compound ‘Type’: A Critical Reassessment.”

IV.8.5: In the publ. tr. I tr. the first rel. cl. (in ab) as descriptive, while the 2nd one (in c) is predicative. In part the decision depends on what the temporal value of *dadāśúḥ* in the first clause is -- presential or preterital. Kü (242–45) allows both and in fact tr. other examples of this pf. ambiguously, with awkward parentheses, e.g., II.27.12 “Wer ... auf(ge)wartet (hat).” (He does not tr. this passage.) The publ. tr. takes *dadāśúḥ* as preterital, expressing the past actions that should allow us to thrive now. However, it is possible that the actions of the verbs in the two rel. cl. (*dadāśúḥ* ... *indhaté*) are sequential and both presential and should both be taken as predicated: hence “May we be those who do pious service to Agni ... and, thriving, kindle him.”

Most tr. take *puṣyāntaḥ* as transitive: “cause him to thrive,” but *puṣyāti* only takes Inhaltsakk. or accusatives of respect. Moreover, the point of the *té syāma yé* ... clauses is surely that our pious actions should lead *us* to thrive.

IV.8.8: With Old (Noten) I take the gen. pl. *carṣanīnām* and *mānuṣānām* as dependent on *vīprah*, rather than making them dependent on a supplied object as most tr. do. Either way, some object needs to be supplied with *āti* ... *vidhyati*; I’ve added ‘obstacles’ as a place-holder. The only other occurrence of *āti* √ *vyadh* in the RV has “the backs of the mountains” as obj. (VIII.96.2, the Emuṣa myth), which certainly doesn’t fit here. However, in that passage the backs of the mountains were pierced by an archer, and archery is surely at issue here as well: *kṣiprá-* ‘quick, snapping’ is construed twice with *dhánvan-* ‘bow’ (II.24.8 *kṣipréṇa dhánvanā*, IX.90.3 *kṣiprá-dhanvan-*), once with *iṣu-* ‘arrow’ (VII.46.1 *kṣipréṣu-*).

IV.9 Agni

IV.9.1: For obvious real-world reasons Agni [=fire] would not sit on the ritual grass, because it would go up in flames (cf. comm. ad IV.6.4). But Agni regularly brings the other gods to sit on this grass, and so the mention of his coming here and of the “god-seeking” (*devayú-*) people may have made the action seem appropriate.

IV.9.2: On *prāṇī-* see comm. ad I.34.4.

IV.9.5: On pāda a see comm. ad VI.2.10, which contains the identical pāda.

IV.9.8: The diction in this vs. is somewhat difficult to apply to the chariot that is its subject. What does it mean for a chariot to be “difficult to deceive/trick” (*dūlābha-*, reprised from 2a)? Perhaps it always follows the right route? And the lexeme *pári* √ (*n*)*aś*,

which barely exists (an infinitive in I.54.1), in conjunction with *viśvátaḥ* should mean “reach around/encircle on all sides,” again an odd action to ascribe to a chariot. Given the paint-by-numbers style of the hymn, I attribute these lapses to an inattentive or unskilled poet. Note the careless combustion in vs. 1.

IV.10 Agni

On the unusual meter of this hymn and its interaction with the syntactic and semantic organization, see publ. intro.

IV.10.1: With most interpr., I supply ‘sacrifice’ with *tám* in pāda a, as the object of the verb *ṛdhyāma* in d.

The accent on *ṛdhyāma* is anomalous within Oldenberg’s persuasive characterization of the meter of this hymn, since by this analysis *ṛdhyāma* is the main verb and interior to its Triṣṭubh pāda. I assume it acquired this accent redactionally after the meter was misanalyzed, with a pāda break inserted just before the verb. So also WG.

IV.10.3: Because it begins the second 5-syllable pāda, *bhāvā* is correctly accented.

svār nā jyótiḥ could be taken as a quasi-compound in the Re mode, or it is possible that *svār* indirectly continues an old gen. sg. See comm. ad II.35.6. Or *svār* and *jyótiḥ* can be taken not as a single expression but syntactically separate, as Old (SBE) and WG do in different ways. I weakly favor the gen. interpr.

IV.10.5: Again, the accentuation of voc. *agne* supports the division into 5-syllable pādas.

The etym. figure *rukṃó ná rocate* is difficult to render in tr.

On the double *cīd* see comm. ad II.27.11.

IV.10.6: The referent of *tát* in d is unclear. It cannot be ‘body’, since *tanū-* is feminine. I’ve supplied ‘flame’, but any bright neuter entity would do. Most tr. simply leave the referent blank.

IV.10.7: Contra HvN, *mārtāt* should be read as the first word of pāda d.

IV.10.8: The second pāda should read *sāntu bhrātrāgne*, with coalescence of the *a-* vowels. This also entails reading, out of sandhi, unaccented *agne*, contra Pp and HvN. The impv. *sāntu* is accented because it’s initial in the pāda.

The expression *śivā naḥ sakhyā sāntu ... devēsu yuṣmé* is very similar to VI.18.5 *tán naḥ pratnām sakhyām astu yuṣmé*, which I take as existential. On the basis of that passage and of VII.22.9 (=X.23.7) *asmé te santu sakhyā śivāni*, I think this passage should be harmonized with the others and interpreted as existential: “Let there be a propitious partnership for us among [or, with] you, the gods.” For further disc., incl. of the loc. pronoun, cf. comm. ad VI.18.5.

IV.11 Agni

IV.11.1: The second hemistich is full of phonological and etymological figures: *drśé dadṛśe ... drśé* (the last as *drśá* in sandhi) and (beg. in pāda b) *ā rocate ... rūśad ... ārūkṣitam ... ā rūpé*.

As Ge points out, Agni's 'not coarse' (*ārūkṣita*-) food must be ghee.

IV.11.2: This vs. contains a faint phonological figure: #*ví ś(āhi)* ... #*vís(vebhir)*.

With most interpr. I take *khám* 'opening, aperture' with pāda a. However, I do not think it is equivalent to or compared with *manīṣām* 'inspiration, inspired thought' (as, e.g., Ge "Schliesse ... den ... Gedanken (wie) einen Kanal auf"), but rather it is the opening through which (*vī*) the thought is supposed to be directed. As we all know, sending a stream of liquid (to which the *manīṣā*- is implicitly compared) through a small opening increases its force, and I think that is the image meant.

Both hemistichs express a fine economical formulation of the tight, closed loop of reciprocity envisioned in the RV. Agni and the rest of the gods desire praise *from* men, but they must provide *to* men the inspiration and the thought that takes shape as praise. So in ab Agni is asked to release the *manīṣā* to us even as he is being praised (*stāvānaḥ*), and in cd we ask him to grant us ample thought (*bhūri mánma*), which is exactly what he and the other gods crave (*vāvānaḥ*).

IV.11.3: The sense of the preceding vs., that Agni provides the very thoughts with which we create his praises, is continued in 3ab. In cd and vs. 4 the material rewards that come to the poet who produces these praises are detailed.

The phrase *dráviṇam vīrápeśā(h)* also appears, also pāda-final, at X.80.4, and therefore the apparent nom. sg. masc. *vīrápeśāḥ* must modify the neut. sg. *dráviṇam*. This is a case like *dvibárhas*- (see comm. ad VII.24.2), where an *s*-stem ending in *-āḥ* at the end of the pāda must be interpr. as a neut. See AiG III.288 and comm. ad II.31.5.

IV.11.5: The juxtaposition of complementary opposites -- *devayánto devám* and *mártā amṛta* -- is deft though not particularly noteworthy.

Likewise note the pair *dámūnasam gṛhāpatim*, both referring to Agni's role in domestic arrangements, derivatives of the older and newer words for 'house'.

IV.11.6: I supply a form of the root *√yu* 'keep away' with the accusatives in ab, extracted from the root-noun cmpd in 5c *dveṣoyút*- 'keeping away hatred'.

I am not entirely sure what to do with *cíd* in d. Perhaps the idea is that though you are a god, you are also our companion right here.

IV.12 Agni

IV.12.1: The form *prasákṣat* is implicitly taken as a finite form by Scar (602–3) and WG, presumably as an *s*-aor. subj. In Scar's tr. it is parallel to the impv. *abhy āstu* ("so sei es, an Herrlichkeit(en) überlegen sein [und] vorherrschen"), but the verbal accent makes trouble for this main clause interpr. (It could, I suppose, bear a "contrastive" accent.) WG make it a subordinate cl. without overt marking ("indem er vorwärts siegt"), which would account for the accent. Nonetheless it seems best to take the form as a participle. Gr. identifies it as a neut.; if this is so, it would have to be an example of the neut. used

adverbially. This seems the analysis presupposed by Old's (SBE) tr. 'victoriously'. However, the simplest solution is given in AiG II.2.162 (fld. by Narten, *Sig.Aor.*, 265): it is a *masc. nom. sg.* with the weak participial suffix appropriate to verbal stems that have weak 3rd pl. endings.

The last word of the verse, the perf. part. *cikitvān*, is characteristically used elsewhere of Agni, in absolute value. Indeed, the same pāda ending *jātavedas cikitvān* qualifies Agni in nearby IV.3.8 and IV.5.12 (see also *cikitvān* of Agni in IV.8.4). However, in our vs. grammatically this nom. sg. must modify the worshiper, not Agni (*pace* Re, who manages to attach it to the preceding voc.: "ô Jātavedas, (dieu) qui comprends"). I think rather that the application of this standard epithet of Agni to Agni's devotee shows the same closed loop discussed with regard to the immediately preceding hymn (see comm. ad IV.11.2), where the worshiper shares qualities of the god, which he receives from the god. There may also be a slight pun: 'observant' means one thing for Agni -- he watches over everything -- but another for the mortal who attends on him: 'observant' in English can refer to someone who 'observes', that is, 'faithfully carries out', the prescribed rites.

In the publ. tr. I construe *tāva krátvā* with the preceding pāda: may the man succeed "in accordance with your purpose," but I now wonder if it is not another indication of the closed loop of reciprocity: the mortal worshiper is observant like Agni because it is Agni's will or purpose that he should be. Of course it can be applicable to both pādas.

IV.12.1–2: On the parallel pres. and pf. subjunctives in these vss. see comm. ad IV.2.6 and my 2016 treatment of the pf. subj. referred to there.

IV.12.2: The overlapping identities of Agni and his worshiper are indirectly signaled in this vs. Although the *sá* of c must be correlative with *yāḥ* in a and refer to the human, some of the phraseology used of him in cd matches that used of Agni elsewhere. The common med. part. *idhāná-* is almost always intrans./pass. modifying Agni ('[being] kindled'), but here it must be transitive with the worshiper as subject. (There are a few other undoubted transitive occurrences: I.143.7, VII.9.6.) The combination of this participle and a form of *púṣya-* as here, with Agni as subj., is found in V.26.6 *samidhānāḥ sahasrajid āgne dhārmāṇi puṣyasi*. Similarly *sacate* in d seems to match *sácase* at the end of the last hymn (IV.11.6), but Agni was the subject of that verb. The point here is that, though the second hemistich must in fact refer to the mortal worshiper, some of the phraseology invites a superimposition of Agni.

IV.12.3: Assuming (as I do) that Thieme and Hoffmann are correct in their assessment of \sqrt{vidh} 'honor, serve' as a secondary root derived from $\sqrt{vī}\sqrt{dhā}$ 'apportion' (for reff. see EWA s.v. *VIDH*), the second half-vs. encapsulates an etymological pun: *#dád dhāti ... vidhaté ...*, *#vī ...* This casts considerable doubt on Bloomfield's (RR, ad loc.) characteristically acerbic judgment "The preposition *vī* which limps, with sharp tmesis, behind its verb *dád dhāti ...* impresses me as secondary." Furthermore, the positioning of *vī* directly before *ānuśák* 'in due order' is found elsewhere (cf. I.72.7, VI.5.3). In such phrases the *vī* presumably emphasizes that goods are apportioned to each deserving recipient *separately* and *in order*.

IV.12.4: Though, as indicated in the publ. intro., the 2nd half of this hymn (vss. 4–6) has a very different tone from the first, nonetheless the two halves are bound together. Note, first, that voc. *yaviṣṭha* in 4a matches nom. *yáviṣṭhaḥ* in the same metrical position in 3c. Moreover, the worshiper who was identified as *cikivān* ‘observant’ in 1d is contrasted with humans who have caused offense to Agni by their *ácitti-* ‘lack of observance, heedlessness’ in 4b.

Although *puruṣatrā* has the locational suffix *-trá/ -trā*, it seems less a locational ‘among men’ than an abstract ‘manhood, human nature’. Cf. similar expressions with the abstract suffix *-tā-*: VII.57.4 = X.15.6 *yád va āgaḥ puruṣátā kārāma*.

The use of *áditeḥ* in pāda c is clarified by the more expansive expression in d. On the one hand, *áditi-* is, of course, the name of the goddess and mother of the Ādityas, and the mention of her here ushers in the 2nd half of the hymn, which, as was indicated in the publ. intro., has a distinctly Ādityan tone. On the other, *á-diti-* means literally ‘unbinding’ (< *√dā* ‘bind’), and the lexeme *ví ... √śrath* ‘let loose’ in the VP *vy énāṃsi śísraṭhaḥ* ‘let loose our transgressions’ is synonymous with ‘unbind’.

IV.12.5: Some verb must be supplied with the ablative phrases in ab. I have pulled *√muc* ‘release’ from its occurrences in vs. 6.

Ge takes *ūrvā-* in b as a proper noun referring to the Vala myth, but the word generally just means an ‘enclosure’, here an imprisoning one.

IV.12.6: As noted in the publ. intro., the plural addressees in this vs. are almost surely the Ādityas; the vs. is repeated in X.126.8, where the referents are clearly the Ādityas.

The comparison “just as you released the buffalo-cow bound by the foot” is probably a reference to a well-known myth or legend, but unfortunately it is not known to us. It is reminiscent of X.28.10, a hymn full of untraceable references to animal stories, *niruddhás cin mahiśás tarṣyāvān* “The buffalo also got trapped, when it was thirsty,” but the animal in question there is a *mahiśá-* not a *gaurá-* and is masc. not fem. Other RVic occurrences of *gaurī-* are not helpful.

IV.13–14: As is generally recognized, these two hymns form a pair, and though nominally dedicated to Agni, they are really dawn hymns, with mention of the various divinities appropriate to the dawn sacrifice: Agni, Uṣas, Ásvins, Savitar, Sūrya. The patterning between the hymns gives us one of our rare opportunities to observe how Rigvedic variation-on-a-theme worked in practice, similar to the first few pairs of Vāḷakhilya hymns. See the brief remarks in Bloomfield, RR, p. 13. For a more detailed account of the parallelisms see publ. intro. to IV.14 and comments on individual vss. in 14 below. The hymns are most alike at the beginning and end with the middle a fairly free zone. This pattern is similar to what is found in the paired Vāḷakhilya hymns. See comm. thereon and esp. on VIII.50.

IV.13: Agni or various deities

IV.13.2: In c the other Ādityas, or at least Aryaman, should be supplied, since the verb (*yanti*) is plural and there are only two expressed subjects (*váruṇaḥ ... mitráḥ*).

IV.13.3: I take the Ādityas as the subj. of *ākṛṇvan*, since the Sun is their spy (see pāda d). It could also be, more generally, the gods, as Old (SBE), Ge, and Re take it. In any case it is certainly not the other pl. entity mentioned in cd, the seven golden mares.

IV.13.4: This vs. contains images drawn from the techniques of everyday life: tanning (cd) and sewing (ab). The lexeme *ví√hr* in pāda a with its object *tāntu-* ‘thread, web’ has been differently interpreted, nor surprisingly since we don’t have good evidence for such technical vocabularies. I interpr. it as ‘take apart, unravel’, in part because of *vīpīce* ‘pull apart’ in the previous vs. (Sim. Thieme, Unters., 17.) Others, using different values for *vī*, interpr. the idiom as ‘spread out’ (Old, SBE) or ‘alternate (threads [=the dark threads of night and the bright ones of day])’ (Ge, WG).

IV.13.5: The first hemistich ends with one of the only (perhaps *the* only) pāda-final negative *ná* in the RV: *ánāyato ánibaddhaḥ kathāyām nyàññi uttānó ’va padyate ná*. For disc. see comm. ad X.111.7. Its appearance can be explained by rhetorical patterning within the hemistich: the final *ná* echoes the two negated adjectives that open the hemistich, creating a chiasmic *#án ... án ... ná* (note also *níyāñ* opening the 2nd pāda). Moreover, *ná* poses a negative question and this may also have influenced its positioning.

The question “how does the sun not fall?” is implicitly answered by pāda d: he’s really a fixed pillar, not an unmoored orb in the sky. But this ignores the presupposition to the question in c: “with what power does he journey?” -- since a pillar doesn’t journey. So, despite the apparent reassurance of d, the issues remain unresolved.

IV.14 Agni or various divinities

IV.14.1: The opening of the verse, *práty agnír uśásah*, matches that of 13.1 *práty agnír uśásām*, though the difference in case of the dawn words signals that the verses will veer in slightly different directions. Both also share the verb *akhyat*, but in 13.1 it ends the first pāda, while in 14.1 it opens the 2nd pāda (accented *ákhyat*).

The 2nd half vss. of the two hymns deviate more, though both concern the Aśvins and contain the verb *yātam* (accented *yātám* in 13.1c). Sūrya (13.2d) is absent from 14.1.

IV.14.2: The first pādas of these two vss. are identical, save for the near synonyms *bhānúm* (13.2) and *ketúm* (14.2), which take 2nd position. The rest of the verses go their own ways, though Sūrya appears in the final pādas of both.

IV.14.3: Though both 13.3 and 14.3 contain horse imagery and the verb *√vah* ‘convey’, they are otherwise quite distinct, with Dawn the topic of 14.3.

IV.14.4: The splv. *váhiṣṭha-* in the pl. is found in both 13.4 and 14.4; the verb of motion is *yāsi* in 13.4 and *vahantu* in 14.4.

The referent of the 2nd du. must be the Aśvins (so also Old [SBE], WG, *pace* Re, who supplies Agni and Dawn). Though they are unnamed, the near identity of pāda b with IV.45.2b in an Aśvin hymn makes this identification most likely, esp. since soma and honey are the drinks of choice of the Aśvins.

IV.14.5: Identical to 13.5.

IV.15 Agni

IV.15.1: The usual concessive force of the nom. of the pres. part. to \sqrt{as} ‘be’ is absent here, as far as I can see. Ge suggests that it is marking the phrase as a simile (Re’s tr. suggests that he agrees). Since the vs. seems to concern the *paryagnikaraṇa*, the leading of the sacrificial animal around the fire, the *sán* may signal that Agni is acting in the guise of a horse, “*being* a horse.”

IV.15.4: Ge’s tr. “vor Sṛñjaya Daivavāta” assumes that *puráh* can act as a preposition with a locative. Since there is no other evidence for this, and since the *puráh* is better taken as a reference to Agni’s location on the ritual ground, as regularly seen in the epithet *puróhita*- ‘placed in front’, I take the loc. of the PN as an unmarked loc. abs. (“SD [being there]”) or with Re and WG as a simple locational, which is far easier to convey with French chez or German bei than in English.

IV.15.5: The standard tr. take this vs. to mean “a mortal hero should have mastery over such a fire” vel sim., but given the previous mention of Sṛñjaya Daivavāta, I think the point is that not every mortal deserves a fire like this -- only a *vīrá*- like SD.

IV.15.6: Agni here is compared with soma, though without mention of that word. The comparison is esp. obvious in the verb *marmrjyānte* ‘they keep grooming’, since \sqrt{mrj} is a signature word for soma, and in the descriptive phrase in b. As Old (SBE) points out, soma is often called *aruṣá*- ‘red’ (though it must be admitted that Agni is too), and ‘child of heaven’ (*diváh śísu*-) is also a somyan epithet (IX.33.5, 38.5, though cf. VI.49.2 where it modifies Agni). As discussed in the publ. intro., this covert reference to soma ushers in the Dānastuti for Prince Sāhadevya, whose nickname is Somaka (9c).

IV.15.7: I interpr the apparent injunc. *bódhat* as a modal, rather than in the preterital value favored by most tr. -- and in fact follow Hoffmann (Injunk., 232) in taking it as a root-aor. subjunctive, not a pres. injunc. The poet is playfully reminding his patron that he’s owed a gift, and he couches this as a bit of a joke, using the ‘awaken’ value of \sqrt{budh} : “wake me up with a nice surprise and I’ll come and sing.”

IV.15.8: This next vs. indicates that the reminder had its effect. The grammatical identity of *ādade* is ambiguous: it could be pres. indic. or pf. indic. In fact in my interpr. of this two-verse sequence 7–8 it doesn’t really matter: 8c could be tr. “I take as soon as they are offered” without disturbing the rhetorical sequence. However, I follow most (incl. Kü, 241) in taking it as a preterital pf. rather than as a pres. with Hoffmann (Injunk, 232; so also WG).

IV.15.10: In one way this vs. is simply a more active variant of vs. 9. In 9 it is implied that Sāhadevya will be long-lived because of the Aśvins (somehow or other); in 10 they are ordered to make him so. But there’s a grammatical twist at the end: the impv.

kṛnotana is plural not dual, and so the Ásvins may have helper(s). The shift to the pl. is probably yet another example of the tendency to open out to the larger divine world in final vss., by including unspecified others -- so here “you (two and other gods).” But it’s worth pointing out that no du. impv. of $\sqrt{kṛ}$ would fit this metrical slot. (On the other hand, no RVic poet with even middling skills would have been unable to throw in a particle or the like to make the meter work.)

IV.16 Indra

IV.16.1: As often, *satyá-* ‘real’ seems here to have the sense ‘really present’, expressing the standard hope of every Vedic ritual, that the gods, esp. Indra, should be physically present at the sacrifice, providing a technical epiphany.

IV.16.2: Rather than interpr. *vedhāḥ* as part of the simile (e.g., WG “wie die mündige Uśanā”), I take it as referring to Agni, the officiating Hotar-priest, as often. See further support for this identification in the next vs.

IV.16.3: I take the first hemistich as a continuation of 2cd. Phraseology suggests this connection: the simile *uśāneva* in 2c is matched by the simile beginning 3a *kavír ná*; together they add up to the full name of the mythic figure Uśanā Kāvya. (*kaví-* stands in for his patronymic elsewhere: cf. nearby IV.26.1 *ahám kavír uśānā*.) The participial phrase *vidáthāni sādhan* “bringing the rites to realization” has Agni as its subj. elsewhere (e.g., III.1.18 and the other passages adduced by Ge n. 3a). Agni is also often called a *kaví-*, and I take this word here as referring both to Uśanā Kāvya to whom Agni is compared and to Agni himself.

The subj. of pāda b must be different from that in a; I follow Ge (/WG) in taking it as the pressing stone. The idiom $\sqrt{pā}$ ‘extract/separate by drinking’ favors this identification; see comm. ad VII.22.4, which passage also contains a form of \sqrt{arc} as here as well as an overt occurrence of the ‘stone’ (*ádri-*).

Unlike Ge (/WG) I do not take pāda c as the main clause with b, nor do I think they have the same subject. Rather with Schmidt (B+I, 48–49) I tentatively take Indra as subj. in c (though not, with Schmidt, a and b as well). The Vala myth is quietly introduced in this second half-vs., with Indra’s creation of the poets and then their singing into existence the ritual patterns. With Ge (etc.) it is likely that the seven bards are the Aṅgirases.

There may be a very backgrounded pun in cd: c opens with *divá(h)* ‘of heaven’, to be construed with *saptá kārūn* “seven bards” at the end of the pāda, while d opens with *áhnā* ‘by day’. Despite the different accent and different case form, it might be possible to take *divá* (in sandhi) as a variant of *dívā* ‘by day’, anticipating the instr. *ahnā* in the same position in the next pāda. But I am very uncertain about this.

Note the resposion of verse-final act. transitive *gr̥nāntaḥ* to vs.-final med. passive *gr̥nānāḥ* in 1d.

IV.16.4: The Vala myth takes full hold in this vs.

Instr. *arkaīḥ* is a pun, referring not only to the chants of the singers but also to the rays of the sun itself.

The 3rd pl. *rurucur* has trans./caus. sense here and generally in its other occurrences (see Kü 431), though not VIII.3.20. In several of those passages it's in the cadence and would be better read **rūrucur* (IV.7.1, X.122.5), and here and in the other case (VI.62.2, but not the trans./caus. opt. *rurucyāḥ* VI.35.4) a heavy initial syl. is possible (though not metrically good in VI.62.2). The 3rd sg. act. pf. *ruroca* (1x: IV.5.15) and act. pf. part. (1x: I.149.3) are intransitive by contrast, as are the medial forms. The anomalous trans. *rurucuḥ* forms also have the ending characteristic of the perfect 3rd pl. act., not the *-an* expected for a redupl. aor. (e.g., (á)*jījanan*). Nonetheless I am inclined to believe that these forms originally belonged to a proper redupl. aor. paradigm (á)*rūruca-*, found in *árūrucat* (3x), with the heavy redupl. proper to a redupl. aor., and that the 3rd pl. forms first adopted the *-ur* ending of the pf. and then, quite possibly redactionally, shortened the reduplicating vowel. It should be noted, however, that Old (ZDMG 60: 163) rejects this, an idea originating with Gaedicke.

Because *rurucuḥ* is unaccented, the first part of pāda b must be the main cl., with the following *yād* introducing a nominal cl. -- *pace* Ge, who simply declares it an unaccented subordinate cl. verb (n. 4b).

Note the periphrastic caus. *vicākṣe ... cakāra*, on which see Zehnder (*Periphras. Kausativ*, passim, esp. 51). He suggests that it is parallel to the perfect *rurucuḥ* in b. If agreement in tense stem is really at issue, this would be another arg. against my assumption that *rurucuḥ* is an old redupl. aor.

The opening of 4c *andhā tāmāṃsi* is reminiscent of that of 1c *tāsmā id āndhaḥ*, though they have nothing in common lexically or thematically and they do not seem to demarcate a section. The repetition of *ṛjīṣṭ* in the next vs. (end of pāda a), matching the end of 1a, suggests, however, that some demarcation is happening.

IV.16.5: On *ṛjīṣṭ* see immed. preceding comment.

āmitam must be adverbial, as is recognized by all standard treatments.

I do not see a semantic diff. between the abstracts *mahitvā-* and *mahimān-*; what distinguishes them is their metrical shape. The nom. sg. *mahimā* is obviously excluded from the cadence, but well suited for the break after a 5-syl. opening; instr. sg. *mahitvā-* works nicely in a Triṣṭubh cadence. Curiously enough English does not seem to have two different abstract formations to 'great' (*greatitude, *greatery, *greathood, etc.) despite the usual flexibility of our language, and so I have tr. both Skt. words with 'greatness'.

IV.16.6: See Ge's long note (6b) on the mixture of Vṛtra and Vala themes in this vs.

Ge (/WG) supplies 'deeds' with *nāryāṇi* ("Mannestaten") without indicating what Sanskrit word he is thinking of. It should surely be *āpāṃsi* 'labors', which regularly shows up with some form of *nṛ-* or a derivative thereof (on *nāri āpāṃsi* see comm. ad VIII.96.19). Assuming this is the correct underlying noun, we can identify a buried pun: *apāḥ* (*apó* in sandhi) 'waters' opens the 2nd pāda; it is phonologically reminiscent of *āpaḥ* 'labor'.

IV.16.7: Ge tr. *pārāhan* as a 3rd sg., continuing the 3rd persons of vs. 6, but the rest of vs. 7 has 2nd ps. reference. The verb *ahan*, ambiguous between 2nd and 3rd sg., serves as a modulation form, as often (cf. I.32.3d, 4a, for ex.).

IV.16.7–8: As noted in the publ. intro., these two vss. tease apart the Vala and Vṛtra myths that have been intertwined in the previous vss., with the Vṛtra myth allotted to vs. 7 and the Vala myth to vs. 8. But even with the clear mention of Vṛtra in 7a and Saramā in 8b, there is some ambiguity, centered on the *apó* beginning 8a. See comm. on vs. 8.

IV.16.8: As was just mentioned, verse-initial *apó* causes some problem. This form matches the two occurrences of *apó* opening 6b and 7a and grammatically should be, with them, the acc. pl. of *áp-* ‘water(s)’. But the problem is that ‘waters’ do not figure in the Vala myth: it is cows/dawns that are freed from the rock. For this reason Old suggests reading **ápo = ápa + u*, with *ápa* a preverb with *dárdar*, and this conjecture is followed by Ge. However, *ápa* is only marginally attested with $\sqrt{dṛ}$ (only RV VI.17.5 and nowhere else in Skt., at least acdg. to MWms). I therefore accept the transmitted *apó* and assume 1) syntactically, that $\sqrt{dṛ}$ takes a double obj. here (“tear open the rock ACC (for) the waters ACC”), and 2) thematically, that because of the interpenetration of the Vala and Vṛtra myths just mentioned the cows/dawns in the Vala myth get assimilated to the waters of the Vṛtra myth. My ‘tore open’ actually assumes that Old’s *ápa-u* is secondarily present, with my ‘open’ representing **ápa*. It is worth noting that forms of the root $\sqrt{dṛ}$ are fairly rare without preverb. Schmidt (B+I 162), Hoffmann (Injunk. 270), and WG also all accept the ‘waters’ reading. Note that the waters here would correspond to the acc. with $\sqrt{dṛ}$ in pāda c: *vājam* ‘prize’. That is, the prize in c is what gets torn out of the rock (waters), while the rock in pāda a is what gets torn apart to get to the prize.

Acgd. to Schaeffer (136), the intens. to $\sqrt{dṛ}$ has become lexicalized and no longer has any discernible frequentative value. However, most forms of this intens. take plural objects, so it could be object-distributive. In our case the pl. *apáh* ‘waters’ might fit this model, though the pl. tantum ‘waters’ really functions as a mass noun, not a set of countable hunks of water. See also *vī dardah* in 13d below.

I take adverbial neut. *pūrvyām* in b as meaning ‘previously, before’, and in conjunction with the injunc. *āvīr bhuvat*, as a somewhat awkward attempt to express anteriority: Saramā appeared to you previously (b), ordering you to $\sqrt{dṛ}$ (*ā darṣi*, c), and then you did so (*dárdar*, a). Schmidt (B+I 162) avoids the anteriority reading by tr. ‘zuerst’, and Hoffmann (Injunk. 270) and WG render it “als erstes,” an interpr. that would seem to me to require an adj. modifying nom. sg. fem. *sarāmā*, not an adverbial neut.

Ge takes the 2nd hemistich as the words of Saramā, an interpr. I accept both because of the *sí-impv.* *ā darṣi* in c and because of the pseudo-anterior construction in b just discussed.

Verse-final *grṇānāḥ* has an exact match at the end of vs. 1, and this bit of ring composition signals that this section of the hymn is finished. In the next section we move on to the Kutsa / Uśanā Kāvya story.

IV.16.9: Although, as noted ad vs. 3, the word *kaví-* often signals a mention of Uśanā Kāvya -- and this personage figures in the myth being recounted here -- in the publ. tr. I was tentatively inclined to follow Ge in taking *kavīm* as a reference to Kutsa, since Kutsa could plausibly be qualified as *nāḍhamāna-* ‘in need’ in this myth and Uśanā Kāvya is unlikely to be. However, since the myth in question involves a trip to UK’s place to seek advice (see next vs., 10a), the phrase *āchā kavīm ... gāḥ* “you came to the *kaví*” in pāda a probably refers to UK, and the *nāḍhamānam*, found only at the end of b, may conceal a

different goal, namely Kutsa. Hence I would emend the publ. tr. to “you came to the poet (=UK) (and) to the one in need (=Kutsa) at the winning of the sun.” In 11d *kavīḥ* also most likely refers to UK.

The phrase *nṛmano ... abhīṣtau* is reminiscent of 4d *nṛtamo abhīṣtau*.

The apparent thematic verbal stem *iṣaṇa-* is almost confined to this group of Indra hymns (in addition to this vs., IV.17.14, 22.10, 23.9, as well as a single outlier I.134.5, for which see comm. ad loc.). Narten’s interpr. of this stem as an aorist generated to the pres. *iṣanyāti* seems reasonable, though it does not account for the limited distribution of our stem: no forms of *iṣanyā-* are even found in the IVth Maṇḍala. (Narten, MSS 1982, cited after Kl. Schr., 266-67; cf. Gotō, 1st class, n. 243.)

In its other two occurrences (I.129.7, VI.26.8) *dyumnāhūti-* ‘invocation to heavenly brilliance’ is a call that we sacrificers make to attract the god(s). I do not understand what it is expressing here. It does not seem to have anything to do with *dyumnaiḥ* in 19c below.

IV.16.10: Pāda b *bhuvát te kútsaḥ sakhyé níkāmaḥ* echoes 6b ... *sákhibhir níkāmaiḥ*. In 6 Indra performs manly deeds “with his eager companions” (either the Maruts of the Vṛtra myth or the Aṅgirasas of the Vala myth); here Kutsa must be transformed into such a sidekick by his association with Indra: “In companionship with you, Kutsa will become eager.”

On the enigmatic theme of the woman trying to tell Indra and Kutsa apart, see the publ. intro. As argued there, it is likely that the Jaiminīya Brāh. version (JB III.199-202), with sexual mischief between Kutsa and Indra’s wife, facilitated by the identical appearance of Indra and Kutsa, is only a secondary attempt to make sense of this tantalizing snippet and no such story underlies our passage. Certainly the woman (*nārī*) in our passage seems entirely upright and eager to distinguish between the two males.

IV.16.11: Although we don’t ordinarily think of Indra as ‘seeking help’ (*avasyú-*) but giving it, in this myth Indra goes to the house of Uśanā Kāvya to receive the mace from him. I therefore think that the ‘help’ Indra is seeking is concretized as the mace. See below on pāda d.

Note that *īśānaḥ* in b echoes *iṣaṇo* in 9c.

In d the two words *áhan pāryāya* have provoked a certain amount of discussion (see Old, Ge n. 11d, Kuiper, IJ 5: 169ff., who is followed by Hoffmann, Injunkt. 189 n. 151, and WG) because of its similarity to the expression *diví pārye* “on the decisive day” (VI.17.14, etc.). The dat. *pāryāya* here is therefore taken by some as a temporal expression with a word for ‘day’ or the like to be supplied (e.g., Old *pāryāya *áhne*). However, the dative expression nearby in IV.25.1 *mahé ‘vase pāryāya* “for great, decisive help” (though see alternative tr. of Ge [WG]) seems the more compelling comparandum, esp. since Indra has come to UK’s seeking help (*avasyúḥ* 1a). By following *áhan* with the stem *pārya-*, the poet may be tricking us into expecting a temporal expression (cf. VI.26.1 *pārye áhan*; also III.32.14), but the case mismatch should alert the audience that our expectation has been thwarted. As indicated in the comm. ad pāda a, I think the “decisive help” that UK gives Indra is the mace he fashioned; it’s important to note that in another telling of this myth in I.121.12 the mace itself is called *pārya-*: I.121.12cd *yám te kāvyá*

uśānā ... dāt, ... pāryam tatakṣa vājram “UK fashioned the decisive mace which he gave to you.” For UK giving Indra the mace, see also V.34.2.

IV.16.12: Note the phonological play in *śúṣṇam aśúṣam* “insatiable Śuṣṇa,” which is found also elsewhere (I.101.2, II.14.5, 19.6, VI.20.4).

With Old (flg. Ge, Ved. St.; see also Hoffmann (Injunk. 189) I interpret the hapax *kutsyá-* ‘Kutsian’ in light of the phrase *vadhām kútsam* (I.175.4) “Kutsa (as) deadly weapon.”

The “future imperative” *vrhatāt* in d follows nicely on the normal impv. *prá mṛṇa* in c.

IV.16.13: Here the intensive of \sqrt{dr} , *ví dardah*, takes a plural obj. *púrah* ‘fortresses’. See disc. above ad 8a.

The simile and frame in d are curiously intermingled, with the object in the frame, *púrah* ‘fortresses’, dropped into the middle of the simile *átkaṃ ná ... jarimā* “like old age a cloak.” I also don’t quite understand the content of the simile. It’s presumably the age of the garment, not of its wearer, that causes the garment to fall apart. WG seem to take *jarimā* not with the simile but the frame: “Wie einen Reisemantel spaltet das Alter die Palisaden auseinander.” This would solve the intermingling problem identified above, but it otherwise doesn’t fit the mythic context. Surely it would be ignominious for Indra if, instead of Indra’s heroically tearing apart these mighty fortresses, they just fell apart from decrepitude and deferred maintenance. The WG n. on the passage calls the simile a Sprichwort and it is not clear to me what function they see *jarimā* as playing.

IV.16.14: As noted in the publ. intro., pāda b seems to resolve the problem of distinguishing between Indra and Kutsa that arose in 10cd. The same lexeme *ví√cit* ‘distinguish’ found in 10d recurs here.

The athematic middle participle *uśāná-* ‘wearing’ here is a hapax stem and is, of course, morphologically anomalous: the full-grade medial root pres. *váste* is matched by a very well-attested full-grade athem. med. part. *vásāna-*. We do not expect a zero-grade formation to this root pres. However, our hapax calls to mind the unnamed hero of this portion of the hymn Uśanā (Kāvya), and the nonce creation of participle *uśāná-* here (as an echo of *uśānā*) seems to me a text-book example of morphological aberrancies arising out of contextual pressures -- all the more striking because the word *uśānā* does not occur in this section of the hymn (but cf. 2c), so the participial echo is echoing something beneath the surface. WG’s characterization of this form as “eine individuelle Fehlbildung des Dichters” itself fails to see the poetic purpose and clever creativity of this form. It is true, however, that it should probably also be evaluated in the context of several other such anomalous participles in this group of Indra hymns, *uśāmāna-* (IV.19.4), *uṣāmāna-* (IV.22.2), and *uśāná-* (IV.23.1).

IV.16.15: The simile in b, *svārmīlhe ná* “as if at (a contest) with the sun as its prize,” provides a transition from the sun-winning myth of Indra and Kutsa, which occupied the previous few vss., and this more general final section of the hymn.

The desires (*kāṃmāḥ*) that are the grammatical subject of this vs. -- namely our desires for Indra’s largesse -- take part in actions that might appear to be more

appropriate to other subjects. On the one hand, they “take pleasure in the pressing” (*sāṁvane cakānāḥ*); we would rather expect the god Indra to do so. On the other, they “perform ritual labor with hymns” (*śaśamānāśa ukthāḥ*), a priestly activity. The desires thus mediate between the two poles of ritual participation.

Pace Oldenberg, *ōkaḥ* in d is most likely not an acc. goal to be construed with *agman* in a (though this might be a possible secondary reading), but a nominative -- on the basis of a web of formulaic associations with *raṇvā-* ‘delightful’. Cf. I.66.3 *ōko nā raṇvāḥ* “(Agni) delightful like a home”; also I.69.4-5 *raṇvó duroṇé* “a joy in the house,” X.64.11 [=I.144.7] *raṇvāḥ ... iva kṣāyāḥ* “delightful ... like a dwelling,” X.33.6 *kṣétram nā raṇvām* “delightful like a dwelling place.” The problem in our passage is that *raṇvā* (the only possible underlying form given its sandhi context) cannot technically modify neut. *ōkaḥ*, despite the formulaics just discussed. The solution, as Ge saw (n. 15d), is that nom. sg. fem. *raṇvā* also participates in the second simile in this pāda, *sudṛṣṭīva puṣṭīḥ* “like prosperity beautiful to see” -- with which *raṇvā-* also has formulaic associations. Cf. I.65.5 *puṣṭīr nā raṇvā* “like thriving that brings delight” (immediately followed by *kṣitīḥ* ‘dwelling place’) and II.4.4 *raṇvā ... iva puṣṭīḥ* ‘id.’. Of course, both similes provide comparisons to the desires that are the ultimate subject, with *raṇvā* as the pivotal tert. comp. in both -- though it does not match *kāmāḥ* in gender or number.

IV.16.16: I take *cid* with the dat. *māṁvate jaritré* since I do not see how to construe it sensibly with *gádhyam*. I cannot explain its displacement to pāda end, however.

On the *gádhyam vājam* see 11c.

IV.16.17: Pāda b is difficult. Ge (/WG) construe the two locatives in b, *kāsmiñ cid* and *muhuké*, together, which would of course be the default interpr. However, this leads Ge to render *muhuká-* as ‘Schlachtgeschrei’, a tr. for which there is no support: its closest etymological relative, adverbial *múhur*, only means ‘suddenly, in an instant’. (WG’s “in irgendeinem plötzlichen Vorfall” at least imposes less content and sticks closer semantically to *múhur* and company.) In the publ. tr. I separate the two locatives, taking *muhuké* as a simple temporal and construing the indefinite *kāsmiñ cid* with the gen. pl. *jānānām*. This interpr. was in part prompted by the need to have something for *antár* to govern: *antár* does not take the genitive, so a direct connection with *jānānām* (“among the peoples”) is out, but it regularly takes the locative. Hence my “among some one of the peoples”: since *jāna-* can refer to a group of persons who make up a people, it doesn’t have to be a single individual, hence my “some one” rather than “someone.” (Cf. also V.74.2 *kāsmiñ ... jāne*.) However, I recognize that this interpr. is both artificial and awkward, and (somewhat in the spirit of WG) I have cast about for an interpr. of *muhuké*, which should literally mean ‘instantaneous’, that both reflects its etymology and yet allows it to refer to a conflict and be plausibly construed with *jānānām*. The Engl. word ‘skirmish’ (“an episode of irregular or unpremeditated conflict”) comes close. I would thus revise my tr. of ab to “If a sharp missile will fly within some sudden skirmish of the peoples, o champion, ...”

IV.16.18: The morphological ambiguity of *bhúvāḥ* (injunctive or subjunctive) allows for several possible interpretations of the first half-vs. Ge takes *bhúvāḥ* as imperatival “sei,” though this is unlikely given the morphology. Hoffmann (Injunk. 262) takes it as a

“generell oder resolutiv konstatierend” injunctive and tr. “du bist” (so also WG). By contrast, I think these two fronted *bhúvaḥ* are subjunctives and questions. There is of course no way to tell. However, the purpose clause with subjunctive in 20cd ... *yáthā ... ásan naḥ ... avitā* “so that he will be our helper,” matching our pāda a *bhúvo ‘vitā*, suggests that *bhúvaḥ* is indeed a subjunctive and that further we are not at this point certain that Indra *will* become what we want him to -- hence a question rather than a statement is more appropriate. As for how *bhúvas*, -at came to be aor. injunctives homonymous with the morphologically more transparent root aor. subjunctives, I find KH’s scenario (56) plausible, that they were secondarily generated to 1st sg. *bhuvam* (e.g., X.48.1; 49.1, 4; 86.5), which is the properly built injunctive to the root aor. (though cf. TS II.5.1.1 *bhūvam*). However, I do not follow KH in taking the motivation for this formation the avoidance of monosyllabic forms, since injunc. *bhūs*, *bhūt* are quite common. (A more likely explan. in the Hoffmannian mode would be that, since *bhūs*, *bhūt* can do double duty as imperative substitutes, *bhuvam*, -at make the injunctive value clearer.) I’d rather suggest a different reason why injunctive *bhúvas*, -at took hold and could exist simultaneously with the subjunctives of the same shape, while putative injunctives *káras*, -at, secondarily built in the same way as *bhúvas*, -at to 1st sg. *karam*, are essentially only subjunctives. Because of the lack of ablaut of $\sqrt{bhū}$, the zero-grade of the root syllable of the subjunctive *bhúvas*, -at doesn’t accord with standard subjunctive formations and must have seemed at best equivocal, whereas *káras*, -at is a perfect specimen of a subjunctive and does not invite other morphological interpretations.

IV.16.19: The standard tr. supply a verb in ab: Ge “rufe ich,” WG “bitten ... wir.” This seems unnecessary: the instr. phrases in ab can be parallel to *dyumnaiḥ* in the simile in c, all controlled by the participial phrase *abhí sántaḥ* “(we) dominating” in c. One of the factors that might support supplying a verb in ab is the otherwise apparently orphaned acc. encl. *tvā* at the end of pāda a, but even as Ge advances this reason for supplying a verb (n. 19a), he also suggests that *tvā* could be dependent on immediately preceding *tvāyúbhiḥ*, an explanation that the close sandhi of the two words (*tvāyúbhiḥ tvā*) might favor.

In b *vísve*, in the phrase *vísva ājaú*, must be a loc., although we might expect the pronominal form *vísvasmin*. It is, however, worth noting that *vísvasmin* is found only twice in the RV, in the same phrase (*vísvasmin bháre*) in adjacent hymns in the Xth Maṇḍala (X.49.1, X.50.4). A nominal-type loc. *vísve* here would also be facilitated by the plural version *vísveṣu ... ājīṣu* in I.130.8 with simple truncation of the -ṣu.

Although Ge construes *dyumnaiḥ* not in the simile but as an attribute of the subject (“we”), the almost identical X.115.7 *dyāvo ná dyumnaír abhí sánti mānuṣān* may (but need not) support keeping it with the simile; Ge separates the two in his tr. of that passage as well.

IV.16.20–21: These two vss. provide a double ending to this hymn. The first (20) begins, as summary vss. often do, with *evā* ‘just in this way’. It announces self-referentially, with the root aor. *akarma* “we have just made,” that the hymn being completed is the *bráhmaṇ*-we have created for Indra. And, as noted above ad vs. 18, the purpose clauses with subjunctive provide reassurance for the worried questions in 18ab. Vs. 21 is repeated as the final verse of the seven hymns IV.17, 19–24, so it serves as a refrain vs. for (some of)

the Vāmadeva Indra hymns. It also announces, with a root aor. (though aor. passive), that the formulation has just been made (*ākāri ... bráhma*). Despite the apparent duplication, we should not necessarily assume that this refrain was tacked onto an already complete hymn, because *gr̥ṇānāḥ* at the end of 21a may form a ring with the same word at the end of vs. 1.

IV.16.20: The standard tr. (Ge [WG]) take *viyóṣat* as intransitive, a view argued for by Narten (Sig. aor. 214), with a neut. pl. subj. (*sakhyā*) of a sg. verb. For my argument for a trans. interpr. of this *s*-aorist, see comm. ad II.32.2. As at II.32.2 I take *sakhyā* here as an instr. sg. of separation, though an acc. pl. obj. (“he will not keep our partnerships far away”) is also possible.

Note that *tanūpāḥ* picks up 7d *tanvò bodhi gopāḥ*.

IV.16.21: The standard tr. (Ge [WG]) as also Kü (300) interpr. *pīpeḥ* as hortative. This is certainly possible (and is reflected in the publ. tr.), but context would also allow “you (have) made swell” or “you make swell” just as easily.

IV.17 Indra

IV.17.1–4: Hoffmann (Injunk. 178–180) treats these four vss. They express the cosmic disruptions attendant on Indra’s birth and the further disruptions caused by his smashing of Vṛtra. On the ring composition that demarcates this section, see comm. on vs. 4 below.

IV.17.1: The pair “earth / heaven” occupy the final slots of the first two pādas: ... *kṣā(h)ḥ* ... *dyaúḥ*ḥ, with a shared 3rd singular verb *ānu ... manyata*. Note that there also exists a dual dvandva containing these stems: *dyāvā-kṣāmā*.

The 2nd hemistich contains two pf. participles expressing action anterior to the main verb (*sr̥jāḥ*): *jaghanvān* ‘having smashed’ and *jagrasānān* ‘having been swallowed’.

IV.17.2: As in vs. 1, the pair heaven and earth are expressed by two singulars (*dyaúḥ*, *bhūmih*), even though, again, there is a dual dvandva available: *dyāvā-bhūmī*.

BR suggest reading *dyaúr éjad* for Pp. *dyaúḥ / réjat*. Although rejected by Old, this reading (which does not require changing the Saṃhitā text) is accepted by Ge, Hoffmann (Injunk. 179, 181), and Gotō (1st class, 271–72), as well as by me. The stem *réja-* is almost entirely medial (see *rejata* in pāda a), while *éja-* is act. It is easy to see how the misparsing could have arisen, due to the presence of immediately preceding *rejata*.

With Ge, I take *tviṣāḥ* as a gen. dependent on *bhiyāsā* in b, thus parallel to *manyóḥ*. It would also be possible to take *tviṣāḥ* as an abl. of cause (so Hoffmann 179, WG).

Note the phonetic figure *táva tviṣāḥ*. Note also that the reflex. adj. *svásya* must reference *táva* and therefore have 2nd ps. value (as well as not referring to the grammatical subj., as is sometimes claimed for reflexives).

IV.17.2–3: *saráyanta āpaḥ* (*sarayánte* out of sandhi) in 2d is reprised by *sárann āpaḥ* in 3d. The two verbs seem semantically identical; the intransitive *-áya*-formation takes the post-(late-)caesura position also favored by metrically identical *janáyanta*. Its medial

ending is an example of *-anta* replacement of the usual type (cf. Jamison 1979: IIIJ 21), though somewhat complicated by the fact that the form out of sandhi is actually primary *-ante*.

IV.17.3: Almost the full panoply of power terms is on display in the first hemistich: *śávas-*, *sáhas-* (in the pseudo-part., on which see comm. ad IV.3.6), and *ójas-*.

The “bull” of the waters is of course Vṛtra.

IV.17.4: This vs. shows a clever twist on ring composition. Like vss. 1 and 2 it contains occurrences of both heaven and earth (here *dyaúḥ* a, *bhūma* d), and in fact pāda a ends exactly as 1b does: *manyata dyaúḥ*. But the two phrases mean very different things: in vs. 1 *manyata* is construed with *ānu* in the lexeme meaning ‘concede’, whereas here there is no preverb and the verb means ‘be considered as’. Moreover, although in the 1st two vss. heaven and earth functioned as a pair, though expressed as two singulars, here they have nothing to do with each other, and indeed earth is found only in a negative simile (*sádaso ná bhūma*, which in Engl. has to be awkwardly rendered by “any more than ...”).

On the tangled paternity here, see publ. intro.

IV.17.5: The break from the themes of the first 4 vss. is signalled by pres. tense forms (*cyāváyati*, *madanti*), after the relentless march of injunctives (and one pf.) in 1–4. (Technically speaking *saráyanta* in 2d is a present out of sandhi [-*ante*], but it patterns like other *-anta* forms of this shape. See disc. ad 2d.) But vs. 5 is also verbally linked to what went before: *bhūma* ending the first pāda matches the same word ending the last pāda of vs. 4, and *ānu ... madanti* in c phonologically recalls *ānu ... manyata* in 1b.

The vs. is thematically structured by one / many. Indra alone (*ékaḥ*) is invoked by many (*puruhūtāḥ*), as (single) king of the separate peoples (*kr̥ṣṭīnām*), whom all (*vísve*) celebrate.

The *satyám* beginning the 2nd hemistich may signal Indra’s real presence on the ritual ground, as I argue it does in IV.16.1. The rest of the half vs. clearly takes place at the sacrifice. So the tr. might be emended to “All celebrate him (who is) really here ...”

The construction of the last pāda is unclear, esp. the morphological identity and referents of *devásya gr̥nató maghónaḥ*. Old takes *rātīm* as the obj. of *gr̥natáḥ* (“singing the gift”) and sees *gr̥natáḥ* and *maghónaḥ* as parallel acc. pl. (“the singers and patrons”). But this phrase is supposed to be coreferential with *nominative vísve* in c: “Alle: die (Priester), welche des Gottes Gabe besingen, und die freigebigen Herren.” This syntactic slippage seems unacceptable to me (and uncharacteristic of Old). Ge takes *gr̥natáḥ* as a gen. sg. dep. on gen. sg. *maghónaḥ*, which is in apposition to *devásya*: “the gift of the god, who is the generous patron of the singer.” This makes good sense, but I have not been able to find other passages with a genitive dependent on *maghávān-*. WG take all three as gen. sg. with the same referent, namely Indra, all dependent on *rātīm*. But since this is not a Vala passage, Indra should not be singing, but receiving the singing of others. My tr. starts from passages like VII.12.2 *asmān gr̥natá utá no maghónaḥ* (cf. also X.22.15), where *gr̥natáḥ* and *maghónaḥ* are overtly conjoined (by *utá*) and refer to humans: “us (who are) singing and our patrons.” In that passage the forms are acc. pl.; in ours here I take them as gen. sg. in dative usage (as often).

IV.17.6: In pāda a the word *visve* was omitted in the publ. tr., which should be emended to “Entirely his were all the soma-drinks.”

The three initial *satrā* (a, b, c) are echoed by *dātre* beginning d. Although there is some dissension on the root etym. of *dātra*- (cf., e.g., Old, who cites Neisser derivation from *dāyate* ‘apportion’ -- an analysis apparently followed by both Ge and WG, judging from their tr. ‘Anteil’), the correct analysis was already sketched by Gr s.v.: it is a -*tra*-deriv. built to the weak stem of the redupl. pres. to *√dā* ‘give’ (*dad-*), hence **dātra*, with simplification of the geminate before *r*, as often. See AiG II.2.703 and the important (if lapidary) correction in the Nachtr. to AiG I: Nachtr. p. 3, to I.5 ll. 30–31.

IV.17.6–7: I take the idiom found in 6d and 7b, LOC. ACC. *adhithāḥ*, as meaning ‘put s.o. in the path/way of s.th. The middle voice of *adhithāḥ* signals that the entity in the loc. belongs to the subject, namely Indra -- in the first case his generosity (just celebrated in 5d), in the second his power of attack. Although Ge recognizes the similarity of these constructions, with identical subjects and objects (see his n. 6d), he renders them quite differently. For *āme* *√dhā* in 7b, see also I.63.1, 67.3.

IV.17.8: The first half of this vs., describing Indra, is couched in the accusative, on which the rel. cl. of *cd* depends. Since both the preceding and following vss. refer to Indra in the nominative, this vs. is syntactically untethered. It seems best to supply an anodyne verb like “I call upon,” even though this cannot be generated from the immediate context.

Note that the *satrā* of vs. 6 has returned, though in a *cmpd.*

IV.17.9–10: This sequence of vss. is marked by initial *ayām* ‘this one here’ (9a, 9c, 10a, 10b; cf. also *asyā* 9d). This near-deictic pronoun may indicate that Indra is currently present at the sacrifice. These vss. are also marked by present tense verbs describing Indra’s characteristic and habitual activities -- in contrast to vs. 11, which opens with an imperfect (*sām ... ajayaṭ*).

IV.17.10: The sense of *ādha* here is somewhat unclear and its position anomalous, as it is generally, though not invariably, clause-initial. Klein (DGRM II.97) notes its medial position but considers it to have the usual sense he assigns to *ādha*, namely ‘therefore’. This passage is reminiscent of VII.34.2 *śṛṇvānty āpo ādha kṣārantīḥ*, where *ādha* likewise appears mid-clause and before a pres. participle (as well as after a form of *√śru*, though act., not pass. as here). My sense is that *ādha* in both passages introduces a participial addition that clarifies or modifies the sense of the main verb, hence a sort of mini-clause.

In pāda b the lexeme *prā kṛṇute* with its middle voice in my opinion encodes a complex thought: in battle Indra brings the (enemies’) cows forward in such a way as to make them his own, that is, to capture them. Med. *kṛṇuté* recurs in the next pāda, where its object is Indra’s own battle-fury (*manyúm*).

IV.17.11: The stem *aśv’yā-* with suffixal accent is ordinarily a PN; the adj. ‘equine’ is regularly *áśv’ya-*. However, as noted by AiG II.2.816 the accent of -*ya*-derivatives is variable, often within the same stem. The initial-accented *áśvya-* in the plural generally modifies *maghā(ni)* or *rādhāṃsi*. Here I am inclined to supply *maghāni* ‘bounties’

suggested by adjacent *maghāvā*; cf. ... *maghāni maghāvā* in 8d and the repeated forms of *maghāvan-* in this portion of the hymn (7d, 8d, 9b, 13b, 13d).

The referent of *pūrvīḥ* isn't clear. Ge (/WG) supplies 'fortresses', which in turn requires supplying a transitive verb: Ge "der viele (Burgen erobert hat)"; WG "der ja viele (Palisaden besiegte)." I would prefer not to supply so much material. Moreover, in this group of hymns *pūrvīḥ* is used in temporal expressions: IV.16.19 *kṣapāḥ ... śarādaś ca pūrvīḥ* "through many nights and autumns," IV.18.4 *sahāsram māsaḥ ... śarādaś ca pūrvīḥ* "for a thousand months and many autumns," IV.19.8 *pūrvīr uśasaḥ śarādaś ca* "through many dawns and autumns." I therefore take it that way here, as a temporal expression in a nominal rel. cl. with *maghāvā* as the predicate.

IV.17.12: The exact sense of *ādhy eti* is not entirely clear. It generally means 'study' from the literal meaning 'go over' (matching the English idiom exactly), but shows various semantic developments: 'give thought to, take cognizance of, be mindful of, trouble oneself with', etc. In all cases, the lexeme *ādhi* √ *i* has a mental sense (though III.54.9 has a secondary literal reading): I.71.10, 80.15; III.54.9; V.44.13; VII.56.15; VIII.83.7, 91.3; IX.67.31, 32; X.32.3, 33.7, 100.4. Here I think we should read the expression in the light of vs. 4, with its apparent uncertainty about Indra's parentage -- esp. given 4a *janitā* and 4c *yāḥ ... jajāna*, matched here by *janitúr yó jajāna*.

I take the rel. cl. of cd with the following vs. The two share the verb *íyarti*, and 12cd can serve as the cause of 13a: when Indra raises a tempest, he destroys the man's peace.

I take *muhukāḥ* as a temporal adverbial instr., expressing how suddenly Indra can erupt -- even though I have revised my view on *muhuké* in the preceding hymn (IV.16.17 -- see comm. there). I do not think "raises his tempest with/by sudden skirmishes" is what is meant here.

IV.17.13: *samóham* is derived by Gr (/MonWms) from *sám* √ *ūh* 'push together'. But √ *ūh* does not have a full-grade *oh* in Vedic and is plausibly related to √ *vah* (see EWA s.v., with lit.). Better to analyze as *sa-móham* and derive it from √ *muh* 'be confused'. The same analysis should probably be applied to the differently accented *samohé* in I.8.6.

IV.17.14: As noted in the publ. intro., this vs. and its pendant, the single pāda of vs. 15, are quite unclear, though at least 14ab concerns the Etaśa myth. There are also some formal issues.

The med. part. *sasṛmāṇá-* must belong to the pf. stem, despite its *-māṇá-* suffix appropriate to a thematic stem. This is the only such form, beside conventionally formed pf. part. *sasṛāṇá-* (2x). Narten (1969: 81–82 = KISch 128) explains the aberrancy as a quirk of the poet, who in this and adjacent hymns shows a penchant for *-māna-* participles. Another question is what is its value. Most pf. participles have anterior sense, but the publ. tr. renders it as "as he ran" -- in other words as an action simultaneous with the main verb. And I might be inclined to make this simultaneity more overt by tr. "as he was running." Kü's interpretation (552) as what he calls "resultativ" and I would call anterior is more in line with the perfect form: "wenn er seinen Lauf gemacht hat." But contextually that would be puzzling: what is the point of bringing the horse to a halt if it's already finished running. And on p. 602 he provides a diff. tr., closer to mine: "der sich

im Lauf befindet.” WG seem to take it almost as an inchoative -- “der sich in Lauf gesetzt hat” -- but cite alternative translations in their n. I would suggest that the aberrant shape and the aberrant sense are connected and that the poet created a nonce present-like pf. part. to convey the simultaneous and progressive value he was seeking to express, since regular pf. participles often express anteriority. (This, however, does not explain why the poet didn’t just use a pres. part. built to the redupl. pres. *sísarti*, here **sísratam*; this act. part. is attested once.)

The second hemistich is quite obscure. Old suggests reading *kṛṣṇé* against the Pp. *kṛṣṇáh*, and this has met general acceptance. The apparently parallel loc. *ásikhyām* ‘on the dark (FEM.)’ in 15a supports this reading, and it goes naturally with the locatives in 14d.

Who is the referent? Ge gives no hint of what he might think, but Kü and WG both think the subj. is Indra, who is acting on/against Etaśa. Judging from Kü’s tr. (“er ‘träufelt’ ihn [den Vajra] wütend auf das schwarze (Pferd)”; 602), he thinks the verb ‘sprinkle’ (*jigharti*) is a euphemism for violent action; its unexpressed obj. is Indra’s *vájra*, which Indra ‘sprinkles’ onto the black (horse, namely Etaśa), while WG understand Etaśa himself as the object. For both, the part. *juhurāṇáh* belongs with $\sqrt{hṛ}$ ‘be angry’ (flg. Insler 1968; see EWA s.v. *HAR*), which can capture Indra’s mood in this encounter. (Note that the poet was not tempted here to give the redupl. part. a thematic suffix, *pace* Narten.) By contrast, I accept the traditional association of the part. with $\sqrt{hṛ}$ ‘go crookedly’. I take the referent here to be Agni. Although the Kü / WG view that it is Indra would be the default interpr. in this Indra hymn, the phraseology of pāda d is almost identical to a pāda in an Agni hymn in this maṇḍala: IV.1.11ab *sá jāyata prathamāḥ pastyāsu, mahó budhné rájaso asyá yónau* “He was born first in the dwelling places, at the base of this great realm, (as) his womb....” And ‘moving crookedly’ qualifies Agni very well. The simile comparing the subject here to a Hotar in vs. 15 also supports Agni as referent -- though I suppose it could be argued that since Agni is often identified as a Hotar he need not be compared to one. The part. *juhurāṇáh* ‘going crookedly’ is also appropriate to Agni, describing the unpredictable movements of fire and the flickering movement of its flames.

But what is it that Agni (if he is indeed the subj.) is doing? This may be illuminated (however faintly) by two other verbal forms to $\sqrt{ghṛ}$ in the RV (the adj. *āghṛṇi-* ‘glowing, ardent (?)’ belongs to the etymologically separate root $\sqrt{ghṛ}$ ‘be warm, hot’ found in *gharmá-* ‘heat’, etc. See comm. ad VI.53.3). In X.6.4 Agni sprinkles the gods (*ā jigharti devān*) as Hotar; in V.48.3 Agni (by my interpr.) sprinkles a *vájra*. Although in both passages most interpr. attempt to make the verb mean something other than ‘sprinkle’ (see comm. ad locc.), in fact a naturalistic explanation is not hard to construct using the literal meaning of the verb: Agni “sprinkles” the objects in question with sparks, a literal “baptism by fire.” That Agni is elsewhere the object of $\sqrt{ghṛ}$, being sprinkled with ghee (see II.10.4), makes this the kind of paradoxical reversal that RVic poets so much like. Here notice that Agni performs this action “like a Hotar performing sacrifice” (vs. 15 *yājamāno ná hótā*), as in X.6.4. The image is both of a properly sacrificing priest performing the ritual action of sprinkling (the fire with ghee) and of the ritual fire sending out a stream of sparks, like sprinkled drops, which would be quite visible on the dark background insistently mentioned in this vs. What the object is that he is sprinkling remains obscure to me – but in addition to the possibilities I suggest in the

publ. tr. and those of others mentioned above, it might be Indra's *vájra*, as suggested by Kü (see above), though with a different sense of the verb than Kü suggests. Recall that in V.48.3 Agni sprinkles Indra's *vájra*-with sparks as a sort of ritual sanctification before Indra employs it.

IV.17.15: I supply 'hide' with *ásiknyām* on the basis of *tvácam ásiknīm* in IX.73.5 (so also Ge), though WG supply 'night' instead.

IV.17.16: Ge supplies a verb ("we call") in ab; WG take *ā cyāvayāmaḥ* in d as the verb of both hemistichs, not just the 2nd. My interpr. is similar to WG's, but with a further twist. I take *vājáyantaḥ* in b as a pun. The sense 'seeking prizes' is supported by parallel *gavyántaḥ ... aśvāyántaḥ ... janīyántaḥ* "seeking cows, seeking horses, seeking wives," even though the denom. 'seeking prizes' is ordinarily accented on the denom. suffix as *vājáyá-*. By contrast *vājáyā-* is usually transitive in the meaning 'incite, rouse', and it can be so here, with *índram* as object. On trans. *vājáyā-* see my *-áya*-Formations, p. 89.

IV.17.17: Ge (/WG) take the pf. part. *dádṛṣānaḥ* as a mere attributive adj. with *āpíḥ* ("visible friend"), while I give it a more verbal sense. If my reflexive 'showing yourself' seems too strong, I would still prefer a participial 'being seen as / becoming visible' to a straight adjective. Once again, we are hoping for Indra's epiphany on the ritual ground.

In d in the publ. tr. I take *kártā* independently and construe *ulókam* as obj. of the part. *usaté* ("longing for wide space") against Ge (/WG). I now see that this is wrong, as the parallel expressions with *kártā ... ulókam* show (VI.23.3, VII.20.2). Both of those passages also have a dat. of benefit, *vīráya* and *sudāse* respectively, but neither of those datives is capable of governing an acc. I would therefore emend my tr. to "maker of wide space for the man who longs (for it), conferring vitality." As this emended tr. shows, I still think *ulókam* can be secondarily taken as the obj. of *usaté*. This same part. *usaté* can also serve as dat. of benefit with *vayodhāḥ*. Note the dat. *stuvaté* with *váyo dhāḥ* in the next vs. (18b).

IV.17.18: Though I am in agreement with Ge (/WG) that *cakṛmā* 'we have acted' refers to ritual action, I see no reason to supply an obj. (e.g., Ge "das Opfer").

IV.17.19: Ge's rendering of ab is not grammatically possible: he takes the subordinate clause as beginning with *yád* and continuing till the end of b ("weil er ja allein die vielen Feinde erschlägt"), but *hanti* is unaccented and must therefore belong to the main clause - despite his rather casual dismissal of the problem (n. 19b). My tr. takes *yád dha vṛtrā* as a self-contained subord. clause, with a verb ('smashes') to be supplied. Perhaps better is WG's interpr. of the same sequence as a nominal clause with *vṛtrā* as nominative subj.: "wenn es ja Widerstände gibt." I might emend my tr. to "Indra is praised as the bounteous one; when there are obstacles, he alone smashes (them, though they are) many and unopposable."

IV.18 Indra

For general discussion of my interpr. of this hymn, see publ. intro.

IV.18.1: With Ge and others, I assign this vs. to Indra's mother, not to the poet or a narrator.

Note the precative *janīṣīṣṭa*, on which see Narten (Sig.Aor., 118). Though this is the only prec. form to this stem in the RV, others are found in other Vedic texts.

The periphrastic caus. *pāttave kaḥ* (on which see Zehnder, Periphr.Kaus. 23 and passim) is generally taken as a euphemism for 'cause to die', but the root \sqrt{pad} 'fall' is regularly used of miscarriage (cf. my Hyenas [1991], 202-4), which fits this context well. Of course a miscarriage in ancient India could well also have meant death for the mother.

The root aor. injunc. *kaḥ* is perfectly ambig. between 2nd and 3rd sg. The latter fits the previous pāda, where the fetus Indra is spoken of in the 3rd ps., but 2nd sg. would anticipate the upcoming dialogic context, with Indra speaking of himself in the 1st ps. in vs. 2. Since English forces us to make a choice, I have chosen 2nd sg., contra Ge and most other tr.

IV.18.2: Most tr. render *durgāhā* merely as 'bad passage' vel sim. (Ge "eine übler Durchgang"), but the word is associated with words meaning 'deep' (of water, inter alia, whether it should be derived from \sqrt{gabh} or \sqrt{gah} [on which see EWA s.v. *gāhana*, *GĀH*]). And given that Indra is rejecting vaginal birth, that is, a downward trajectory, in favor of coming out sideways, a more precise tr. seems desirable: a "plunge" down through the birth canal and out is what he seems to want to avoid.

Note the otherwise identical 1st sg. subjunctives *nīr ayā* and *nīr gamāni*, built to root pres. (\sqrt{i}) and root aor. (\sqrt{gam}) respectively. Surely some nuance of tense/aspect is being conveyed here; I wish I knew what. (An English rendering with a pres. progressive versus a straight eventive, "I will not be coming out from there; I will come out crosswise ...," might capture something of the sense, with the progressive expressing deliberative possibilities and the eventive the ultimate choice.)

Although here and in VIII.101.4 and X.69.9 I tr. *sām* \sqrt{prch} with 'negotiate', I now think something less technical and precise is called for, and I would change the tr. to "I will consult with."

IV.18.3: It is generally agreed that pāda b contains another snatch of Indra's speech. The question is how to interpr. the double *nā nā* that opens the pāda. The first *nā* can be taken as an independent assertion -- "No!" -- followed by an amplification of that assertion, *nānu gāni* "I will not follow." In that case the positive statement *ānu nū gamāni* "I will now follow" represents a contradiction of the first and is an indication of the new-born Indra's wavering mind. Such seems the interpr. of WG, for example. However, as Old points out, a double negative can instead express an emphatic positive. Such is the interpr. of Ge, and I follow it here, in part because I think the point is that Indra was decisive from the moment of conception.

Like 2ab, this pāda contains two parallel 1st sg. subjunctives, *ānu gāni* and *ānu .. gamāni*, though in this case they are both built to root aorists, but to two different roots. Again, I don't know what differential semantic nuance is being expressed (if any). Here the poet may simply be striving for euphony: note the pleasing phonological patterning in *nā nānu gāni ānu nū gamāni*.

IV.18.4: As Old discusses, the sequence *sá řdhak* must contain underlying *sā*, not, with Pp., *sāh*.

On *řdhak* √ *kṛ* see VIII.18.11 and comm. ad X.49.7.

IV.18.5: The standard tr. all construe *svayám* with what follows, *átkaṃ vāsāna(h)* -- e.g., Ge “selbst sein Gewand umlegen” -- on the basis of *svayám átkaiḥ* in II.35.14 (which I render differently). But surely what is most remarkable here is that a new-born stood up by himself; the self-swaddling would also be surprising but would simply follow from the first feat.

IV.18.5–6: Though Gr assigns (*ny*)*ṛṣta-* (5b) and *arṣanti* (6a) to different roots, √ *ṛṣ* ‘stossen, stechen’ and √ *arṣ* ‘strömen’ respectively (see also EWA I.123 more cautiously), at least in this context I think they are meant to respond to each other – hence my ‘who overflowed’ for *nyṛṣtam*.

IV.18.6–9: For my interpr. of the speakers in these vss. and the role of the waters in the myth, see publ. intro. Most tr. take the vss. as all spoken by Indra’s mother (Ge [WG], Doniger), whereas I distribute them to a variety of voices: 6 Indra, 7 Indra’s mother, 8 waters, 9 Indra’s mother. As I see it, in 6 Indra prompts his mother to ask the waters questions; in 7 she rather sarcastically and belittlingly asks questions about them, whom she seems to accuse of trying to lay claim to her son. They respond directly to him in 8, reminding him of his mother’s dereliction of maternal duty and suggesting that they are better at mothering him than she is. So that she rather defiantly points out in 9 that subsequent negative things that happened to him were not her fault.

IV.18.6: As suggested in the publ. intro., the (real) waters in the amniotic sac that “break” right before birth and the (mythological) waters confined by Vṛtra and released by Indra are conflated here. Indra may be speaking from within the womb about the waters there battering the womb itself for release, though the waters in the Vṛtra myth would not be far from the audience’s mind. If Indra the fetus is immersed in these amniotic fluids, their sloshing sounds would surround him -- and it would be appropriate to ask his mother what they are saying.

The simile in b, *ṛtāvarī iva saṃkrósamānāḥ* “like truthful women together shouting their witness” may have a quasi-legal resonance. The root √ *kruś* is later used for raising a hue and cry on witnessing a crime (vel sim.), such as a Rākṣasa abduction (see my Sacr.Wife 233). Configuring the waters as truthful and articulate witnesses in this pāda leads directly to the suggestion in the next pāda that they should be asked what they are saying.

Note *vī pṛcha* contrasting with *sām ... pṛchai* in 2d.

IV.18.6–7: The responsive phrases *kīm ... bhananti* (6c) and *kīm ... bhananta* (7a) provide a textbook case of *-anta* replacement. See my 1979 IJ 21 article, *pace* Gotō’s (1st Kl., 222) characterization of *bhananta* as “reziprok.”

IV.18.7: As just noted, I think that this vs. expresses Indra’s mother’s suspicions about the waters’ alienation of Indra’s filial affection for her. In pāda a she interprets the

waters' speech, about which Indra asked her in vs. 6, as invitations to him (to join them and abandon her, presumably). In b the charged word *avadyá-* 'disgrace' recurs from 5a, where the mother considered Indra to be "like a disgrace / somehow a disgrace" and concealed him. Here she suggests that the waters are, in contrast, eager to assume his disgrace. In context this seems almost like an accusation that the waters are so perverse that in their pursuit of him they are willing to assume any evil that attaches to him. In fact, this is probably an allusion to the well-known concept that waters cleanse transgressors of their transgressions (cf., e.g., I.23.22–24). Indra would automatically acquire blood guilt from his killing of Vṛtra (on Indra's *kilbiṣāṇi* 'sins' and resulting impurity, see my Hyenas, 62–68, also vss. 12–13 below). (The interpr. of his 'disgrace' here as arising from his killing of Vṛtra goes back to Sāy. See Ge's n. 7b.)

In any case, in the 2nd hemistich Indra's mother goes on to assert the primacy of her relationship with Indra and thus her indirect role in his glorious deed, the slaying of Vṛtra. The fronted *māma* 'mine' makes this claim esp. strong.

IV.18.8: The waters throw this emphatically fronted *māma* back at her, with four fronted occurrences of *māmat*, which is, as Ge clearly argues, a nonce ablative sg. of the 1st sg. pronoun, a blend of gen. *māma* and abl. *māt*. To interpret it as an adv. (Gr "bald-bald" and see lit. cited by Old) is to ignore the rhetorical responsion in this section of the hymn. Acdg. to Pischel (Pkt Gram. §415–16), the Prakrit grammarians cite an ablative *mamatto* (i.e., *mamat-tas*), which is apparently not (yet?) found in texts.

In my interpr. of the verse each pāda is spoken by a different though undifferentiable representative of the waters. The first two pādas counter Indra's mother's boast in 7cd about her son's great deed with reminders that she, not any of them [=waters], is responsible for transgressing against this same son. Both pādas begin *māmac caná* "not because of *me*." In the second hemistich they take credit for the good treatment Indra received and the way he thrived under it, each beginning *māmac cid* "certainly because of *me*." Putting the vs. in the mouth of Indra's mother, as most interpr. do, creates grave difficulties. Not only do the claims in ab become incoherent, but it also requires that the young woman (*yuvatī*) in pāda a not be identical with Indra's mother (despite 4a, 5a). A way out of that difficulty is possible: pāda a could be in the 1st ps ("I, a young woman, cast you aside" -- the pf. form *parāsa* is compatible with a 1st sg.), but we then confront the problem that she both accepts responsibility for what seems a misdeed and disclaims any reason for or benefit from the action.

Although as disc. elsewhere in the comm. (esp. ad X.49.5) and esp. by Klein (DGRV I.285–92), though *caná* ordinarily appears in negative contexts, it is not itself negative (though see II.24.12). However, in this context, where *māmac caná* contrasts with *māmac cid*, the apparent negative in (*ca*)*ná* has a polarizing effect. For Klein's disc. of such passages see his pp. 289–92. The *caná* occurrences raise another problem: the verbs in 8a and b and 9ab are accented in the *caná* clauses, though *caná* doesn't ordinarily induce accent on its own; the verbs in the *cid* clauses (8c and d) are not accented. One could (loosely) attribute the accent in 8a and b to starkly contrastive statements, but 9ab doesn't contrast with anything. The problem is barely mentioned by Old; it is discussed at some length by Schnaus (Dialoglieder, 122), without a firm conclusion. Nor do I have one.

mamṛdyuh is the only pf. form attested to $\sqrt{mṛd}$ in all of Skt. (save for the grammarians). Because of its isolation, it is difficult to interpr. the optative. Kü (374) suggests it expresses the Potentialis der Vergangenheit. I might suggest rather that has the value of past habitual (like Engl. “would [regularly] X”), though this is not a normal use of the pf. opt in Vedic (on which see my “Where Are All the Optatives,” 2009). But I also think the transmitted form may be signaling something else entirely. The indic. 3rd pl. pf. would be **mamṛduḥ*. Its root syllable should scan long (like **mṛdā-* and **mṛdāya-*, transmitted as *mṛd*) because of compensatory lengthening from **mṛzḍ*. I wonder if the underlying form **mamṛdur* was remade as an optative in order to ensure the necessary heavy syllable in the cadence. (This possibility is summarily rejected by Old.) If it *is* a real optative, however, note that it is spoken by a woman and its subjects are females, demonstrating the association between the pf. opt. and women’s speech that I discussed in the 2009 article.

In d the marvel of Indra’s standing up (right after birth) is repeated from 5c. In 5 this was emphatically not his mother’s doing: she had hidden him away. A watery foster mother seems to be claiming credit, one of those who showed mercy and kindness to the child in the preceding pāda.

IV.18.9: If I am correct that Indra’s mother reclaims speech in this vs., she now indicates that a risky moment in the Vṛtra battle wasn’t her fault. The opening *māmac canā* “not because of me” returns from 8ab, and, so it seems to me, this indicates that she implicitly agrees to the accuracy of the accusations in 8ab -- that she did throw the baby aside and let evil birth swallow him.

In the VP *āpa hānū jaghāna* the jaws are universally taken to be Indra’s (e.g., WG “hat ... deine beide Kinnbähen abgeschlagen.” But I know of no account of the Indra-Vṛtra battle when Indra’s jaws are attacked, and in fact several times it is Vṛtra’s jaws: X.152.3 *vī vṛtrāsya hānū ruja* “break apart the jaws of Vṛtra”; I.52.6 *vṛtrāsya yād ... nijaghānthā hānvor indra tanyatūm* “when you, Indra, struck your thunder down upon the jaws of Vṛtra.” I therefore think that the *hānū* here have to be Vṛtra’s, but with a twist: this is not a proclamation of Indra’s triumphant blow, but rather a dicey moment when Vṛtra was counter-attacking. Vṛtra has ‘pierced down’ Indra (*nivividhvān*) and is presumably coming in for the kill. What kind of kill? The clue, in my view, is the preverb *āpa* ‘aside, away’. I suggest that Vṛtra is smashing his own jaws aside, that is, moving his jaws apart to be able to swallow large prey. Acdg. to various websites (e.g., <http://www.all-creatures.org/articles/ar-snake-myths.html>), snakes’ jaws are not fused together but merely held together by stretchy ligaments, an arrangement that allows them to open their jaws very wide. Just as “Evil Birth” swallowed the baby Indra in 8b, here the arch-snake threatens to do the same. But in the second half-vs. Indra reasserts his mastery and crushes his enemy.

IV.18.10: We return to the primal scene of Indra’s birth again, with a reiteration of his mother’s abandonment of the new-born babe (here expressed as the “unlicked calf” *ārīlham vātsam*, pāda c), forcing him out on his own -- though the description of Indra as a strapping bull in ab makes him seem considerably less vulnerable.

tavāgā- is a problematic form. It probably contains a form of $\sqrt{tū}$ ‘be strong’, but this is of course not the usual combining form. It is extensively disc. by Scarlatta (101–2).

His general conclusion, that the second member is the cow word, and the whole thing means ‘strong bovine’ (with *gām* the regular acc. of *gó-*) seems plausible, though his detour through a nominative syntagm **tavā gauḥ* seems a little farfetched to me.

The second hemistich lacks a main verb to govern the dat. pseudo-infinitive *carāthāya*. Most tr. supply ‘let’ vel sim. I suggest that *sasūva* in pāda a ‘gave birth’ ($\sqrt{sū}$ ‘give birth’) may carry over into cd, as a stand-in for the (non-existent, or at least unattested) pf. to the homonymous root $\sqrt{sū}$ ‘impel’.

IV.18.11: The plot gets a bit murky here. His mother, having sent him off alone in vs. 10, now follows him, with the fear that the gods are abandoning him. This seems to happen much later, just before the Vṛtra battle and long after the birth and her own abandonment of the baby. But, despite her fears about the other gods, Indra finds a companion on his own -- Viṣṇu, who is not usually a party to the Vṛtra battle.

IV.18.12–13: See the publ. intro. for uncertainties about the interpr. of these vss. In some sense they seem to enlarge on the theme of “Indra’s disgrace” (*índrasyāvadyám*) in 7b -- the blood guilt Indra incurs from even sanctioned killing, made far worse by the intra-family slaughter depicted in vs. 12. Which leads to Indra’s extreme loss of status, isolation, and shunning by the other gods in the final vs.

IV.18.12: On the plupf. *acakrat* see Kü (136–37). He takes it as built to the middle *cakre* (**cakra* + *ṭ*), though he doesn’t find the middle well motivated functionally. But Indra is doing this to his own mother!

On the basis of mostly Middle Iranian forms as well as more distant correspondents in Balto-Slavic, *śayú-* is now taken as meaning ‘orphan’ in some of its occurrences, incl. this one – beside homophonous *śayú-* ‘lying (there)’. See EWA II.615. Although the passages generally cited for a reinterpret. to ‘orphan’, the Ásvins catalogue passages I.116.22, 117.20, etc. (see EWA ref.), seem to me to contain only a personal name, there are a few occurrences of *śayú-*, incl. this one, that are amenable to the ‘orphan’ sense, mostly as a pun on ‘lying there’. In most of these cases we should interpret ‘orphan’ more narrowly as ‘fatherless’, since mothers are present: see comm. ad I.31.2 and the similar III.55.6, also X.40.8. In our passage a punning *śayúm* looks both backward and forward. On the one hand, *vidhāvām ... śayúm* makes a nice pair: “Who made your mother a widow and you an orphan?” But pāda-initial *śayú-* also makes a polarized pair with pāda-final *carāntam*: “as you (were) lying there, as you were wandering.” (For a similar configuration see III.55.6 *śayúḥ ... carati*.) And the regular use of \sqrt{si} ‘lie’ in the Vṛtra myth, generally of the vanquished Vṛtra (see esp. densely repeated occurrences in I.32), makes a ‘lie’ interpretation attractive here. I would now emend the tr. to “Who made your mother a widow and you an orphan? Who tried to smash you as you lay, as you wandered?” with separate readings of *śayú-* with the two pādas.

In light of d, which describes Indra’s killing his father, the question in a, “who made your mother a widow,” can only be answered “you did!”

Note *mārdiká-* picking up *mamṛdyuḥ* in 8c.

The final word of the vs. *pādagṛhya* ‘having grasped him by the foot’ is puzzling. It might seem to exclude Vṛtra as the victim (and as Indra’s father) since, as a snake, he

has no feet -- though it might be a way of indicating picking up a snake by its tail. The only other occurrence of this cmpd gerund is in the desperately difficult hymn X.27, vs. 4, where the context is similar and the referent does seem to be Vṛtra.

IV.18.13: Indra gets the last word in this hymn and, having described his situation in the direst of terms, ends with a note of hope and coming triumph: the falcon's arrival with the soma, to be treated (in even more enigmatic terms) in two nearby hymns, IV.26–27. Since in our hymn the new-born Indra drank soma in Tvaṣṭar's house (3c) and presumably had a good dose of it before the Vṛtra battle, the falcon's stolen soma cannot be the primal soma, though it sometimes mythologically seems to parallel the primal stealing of fire in the Prometheus myth.

A dog-cooker (*śvapaca-*) in later texts is a person living outside of societal norms (cf., e.g., MDŚ III.92), grouped with those who have fallen from caste and so forth.

Notice that Indra here finds no one to be merciful to him (*ná ... vivide marḍitāram*), in contrast to the merciful waters when he was a baby (8c). So the answer to the question in 12c "What god was merciful toward you" must have been "no one."

Most take the dishonored wife to be Indra's own, but no wife has intruded on the family drama we've been observing. I assume rather that this is another reference to his mother, who, now that she is a widow, receives slighting treatment.

IV.19. Indra

IV.19.1: As far as I can tell, this is the only ex. of *nír√vṛ* in the RV. In conjunction with *ékam* it must mean something like 'single out', 'pick out from a group'.

IV.19.2: The verb *ávāsrjanta* lacks an overt object. This may be because it is middle, in contrast to the generally transitive active to this stem; so most tr., incl. the publ. tr. ("let go"). However, the *-anta* may be an *-anta* replacement of the usual type (see my 1979 *III* article), and the verb form should be taken as a transitive equivalent to the active, with unexpressed obj. Indra. (This is how Kulikov [-ya-pres., p. 289] takes it, flg. a suggestion of Lubotsky's -- though *-anta* replacement is not mentioned: "The gods abandoned [Indra], like the feeble ones.") I am of two minds. The situation depicted is presumably the gods finking out on Indra when the Vṛtra battle looms; this might suggest that we should supply Indra as object: English "let Indra down" would be an almost exact match. But the simile *jívrayo ná* "like old/feeble (men)" does not fit this scenario as well; it implies that their powers simply failed them. They "let go" -- the stuffing just went out of them, as it were.

The usual problem with *bhúvaḥ* -- injunctive (so apparently Ge, also the publ. tr.) or subjunctive (so apparently WG). I assume that this verb refers to what happened after the event of pāda a: with the gods out of contention, Indra comes into his own as the universal monarch (*samrāj-*) and takes his true and proper place (*satyáyoni-*). The use of *yoni-* here is reminiscent of the passage in a nearby Indra hymn, IV.16.10, where Indra is urged to sit down on his own *yóni-* (*své yónau*) so that he can be recognized.

IV.19.3: The phrase *abudhyám ábudhyamānaṃ suṣupāṇám* "not to be awakened, unawakening, gone to sleep" must be proleptic, expressing the state the serpent will be in

after Indra has done his work on him: ‘put to sleep’ and similar idioms are standard euphemisms for death in Vedic, as in many languages (e.g., modern English). See my “‘Sleep’ in Vedic and Indo-European,” *Zeitschrift für vergl. Sprachforschung (KZ)* 96 (1982/83) 6-16. I do *not* think, *pace* most tr., that this depicts a drowsy Vṛtra whom Indra woke up to fight. For further disc. see I.103.7 and comm. thereon.

The hapax *aparván* at the end of d is picked up by *párvatānām* at the end of 4d. (They are, of course, synchronically unrelated.)

IV.19.4: As noted above ad IV.16.14 this group of Indra hymns contains a set of anomalously built medial participles to the roots \sqrt{vas} ‘desire’ and \sqrt{vas} ‘wear’. Here medial thematic *usāmāna-* is doubly unexpected: this root builds a root pres., with a weak grade *uś*, but it is only active (with an extremely well-attested act. part. *uśánt-*), save for three occurrences of athem. *uśānā-*. And there is no other trace of a 6th class thematic present to account for the *-māna-* suffix. Neither of these anomalies seems to me particularly serious or hard to account for. As for the middle voice, verbs of desiring seem to fall naturally into the semantic realm of the middle voice, so that a transfer of the participle would not be surprising. Moreover, if we take the redupl. part. *vāvasānā-* as belonging to a pf. of this root (contra Kü, who assigns all these forms to $\sqrt{vās}$ ‘bellow’), there is a parallel formation with the same voice and same meaning. As for the thematic suffix, Narten (MSS 16: 82 = KISch 128) suggests that this poet has a penchant for *-māna-*; if this explanation seems insufficient (and it does to me -- what about *uśānā-* in IV.23.1 as well as numerous well-behaved athem. middle participles in his oeuvre) -- one might point to the ambiguous 3rd pl. act. *uśānti* (3x), which is presumably the 3rd pl. of the root pres., but could belong also to a 6th class present. (However, I note that the three 3rd pl. forms are found only in I and X.)

I take *ójah* as an acc. of respect with the part.

Ge sees pāda d as reflecting the Winged Mountains story, but this doesn’t seem evident to me.

IV.19.5: Pāda a presents some interpretational difficulties that I think can be resolved by considering it an example of disharmony in a simile (see my 1982 IIJ article). I take the verb *abhī prá dadruḥ* as belonging to $\sqrt{dṛ}$ ‘split, burst’ (see below for another possibility). In the simile *jánayo ná gárbham* it has transitive value, with the object expressing the contents that has been burst out (not the container), hence “as women (burst out) their embryo.” In the frame I take the mountains that ended the previous pāda (4d) as the subject and the verb as intransitive: “they burst.” (This is also Ge’s and WG’s interpr., as well as Kü’s [230].) Old suggests as another alternative that the verb can be transitive, with mountains as subject and rivers as object, but I would prefer to supply as little as possible. Old suggests yet another possibility, that the verb actually belongs to the root $\sqrt{drā}$ ‘run’. Although this does not make sense for the simile (as Old notes), it could work for the frame -- though in that case ‘rivers’ might be a better subject. In that case we would have a pun separating the simile and frame (“[the rivers] ran [$\sqrt{drā}$], as women burst out [$\sqrt{dṛ}$] their embryo”), rather than a mismatch of usages of a single lexical item. I prefer the single-root solution.

The 2nd pāda also has a somewhat skewed expression. In this context we would expect the entities that “went/drove forth all at once” to be the released waters, who are

certainly the topic of the 2nd hemistich. But instead it is ‘stones’ (*ádrayaḥ*). Now this is probably, on the one hand, a particularly vivid image of the mountains suddenly bursting and sending forth an explosion of stones, a rockslide. But on the other hand, pāda-final *ádrayaḥ* produces a Jagatī cadence in a hymn that is otherwise entirely Triṣṭubh. Old suggests (without great enthusiasm, as far as I can see) an emendation to abl. **ádreḥ* ‘from the stone’, which would fix both the meter and the image. I wonder if *ádrayaḥ* is a poetic trick: we expect the subject **āpaḥ* ‘waters’ -- which would provide both the standard Vṛtra-myth denouement and a good Triṣṭubh cadence -- and instead get a twist of both sense and meter.

IV.19.7: This vs. celebrates the fructifying liquid that Indra released by destroying Vṛtra and depicts its effects on humans (specifically females) (ab), the landscape (c), and livestock (d). The first hemistich is a cleverly constructed echo chamber, because the females being made to swell (that is, get pregnant) there probably stand for the waters, but are also *compared* to waters. In other words the waters are being compared to waters, by way of the intermediate ‘unwed girls’ (*agrúvāḥ*). This is also something of a dig at Vṛtra, who hadn’t managed to make them pregnant though he is sometimes called their husband (cf., e.g., *dāsā-patnī-* ‘having a Dāsa as husband’ in I.32.11, etc.). Indra’s role as their real husband is embodied in the final word of the vs. *dāmsupatnīḥ* (however we interpret the rest of it; see below).

In the simile *nabhanvò ná vákva(h)*, *vákva-* belongs to the root *√vañc* ‘surge, undulate, billow’. The stem *nabhanú-* is found only here and in V.59.7 and is transparently a derivative of the root *√nabh* ‘burst, explode’. Old suggests the verbal meaning ‘sich spalten’ with nominal ‘Spalt’ (‘split, cleft’). However, in both passages I think the nominal form refers not to the aftermath of the verbal action but rather to the process -- the spurts sent forth by the explosion (rather like the stones in 5b). The image is visually arresting (at least to me).

The sense of *dhvasrá-* in b also requires some discussion. The root *√dhvam* is variously glossed (e.g., EWA s.v. ‘zerstieben, zerstäuben, zerbröcklen’), but in my view the ‘spray, scatter’ sense is far less prominent than ‘occlude’ (with smoke, dust, or other concealing substance), a sense also found in derivatives like *dhvasmán-* ‘miasma, (clouds of) smoke’. Thus to my mind the adj. *dhvas(i)rā-* means in the first instance ‘occluded, dusty’ (see X.40.3, VII.83.3); here I have pushed this slightly to ‘parched’, from something like ‘dry as dust’. Ge’s “die dahinschwindenden” (dwindling away) conveys something of the same sense of weakness and lack of fertility, but I don’t know how he arrived at it.

ṛtajñāḥ is identified as a nom. sg. m. modifying Indra by Gr, so also Scar (177). It can just as easily be an acc. pl. fem. modifying the young women / waters, as Ge, WG, and the publ. tr. take it. Given that the waters in the adjacent hymn, IV.18.6, are called *ṛtāvarīḥ*, the latter analysis seems preferable -- although it might be even better to read it with both referents.

The publ. tr. analyzes *dāmsupatnī-* as having a first member *dāmsu-*, an adjective ‘wondrous’ related to *dāmsas-* ‘wondrous power’ (so Gr). However, the prevailing interpr. is that it is either a compd *dām-supatnī-* or a two-word sequence *dām *supatnīḥ*, with, in either case, a form of *dām-* ‘house’ (cf. *dāmpati-*, *pátir dán*). The complex is then to be rendered ‘having a good husband in the house’ vel sim. Alternatively Ge (n. 7d)

suggests that it might be a metathesis of **su-dampatnīh* (given without accent), which seems quite unlikely. Although I think the form plays off *dāmpati-*, I am still inclined towards the ‘wondrous’ interpr., because of the deeds that have just been ascribed to Indra.

IV.19.8: The question in this vs. is what to do with *gūrtā(h)*. The standard tr. take it as modifying the temporal expression *pūrvīr uśasaḥ śarādaś ca* -- hence, e.g., Ge’s “[v]iele gelobte Morgen und Herbst.” This is grammatically fine and perhaps also supported by the fact that the adj. is in the same pāda as the temporal expression. Still, I am somewhat unsatisfied by this interpr. On the one hand, as Klein points out (DGRV I.74), this small group of Vāmadeva Indra hymns contains three similar temporal expressions (IV.16.19, 18.4, and here), and the only adjectives are quantitative ones, so ‘welcomed, besung, praised’ would be an intrusion in the formulaic language. Moreover, *svágūrta-* ‘self-greeted, i.e., gurgling’ is used twice of rivers (I.140.13 *sīndhavaḥ*, X.95.7 *nadyāḥ*), and something like that would fit semantically here. The problem of course is that *sīndhu-* is masc., and so *gūrtāh* cannot modify acc. pl. *sīndhūn* as the publ. tr. implies. It is possible that the expression *sīndhavaś ca svágūrtāh* in I.140.13 was transposed to our passage without adjusting the gender. More likely is that the acc. pl. of another, feminine word for rivers, streams, or waters should be supplied: *nadyāḥ* as in X.95.7, *sīrāḥ* as in pāda c of this vs., or *apāḥ*, the default watery referent in the Vṛtra myth. The tr. should be emended to better reflect this: “... he set loose the welcomed [gurgling] *(waters/streams and) the rivers.” Strikingly *svágūrta-*, which occurs only 4x total in the RV, appears two vss. later (10c) in the same metrical position with the same sandhi form. It there modifies *āpāmsi* ‘labors’. Is it too fanciful to suggest that that phrase, *svágūrtā, āpāmsi*, is meant to invoke *(*svá*)*gūrtā*, **apāḥ* here? For further disc. see also Old ad loc.

IV.19.9: As indicated in the publ. intro., the contents of this vs. and the reason for its inclusion in this hymn are both deeply obscure, though the occurrence of the rare stem *agrū-* ‘unwed girl’ in 7a may have prompted the inclusion of the bizarre anecdote in 9ab. As Ge’s reff. for ab show, the shunned son of a maiden, the blind man, and the lame man are mentioned together in II.13.12, 15.7, I.112.8; also IV.30.16, 19. So, however ill-assorted, this is a set. The unfortunate son of an *agrū* is also mentioned in nearby IV.30.16, though there he is only shunned, not eaten by ants.

On *ukhachíd-* see Scar (131).

Unfortunately I have nothing further to say about the sense of this vs. I have toyed with the possibility that there’s a ritual reference here, to the taking out of the offering fire from the householder’s fire and its removal to the east. But, though there might be rough correspondence -- very rough -- between the first and third parts, the middle part with the blind man and the snake doesn’t work at all, as far as I can see.

IV.19.10: Contra the standard tr. and interpr., I take *āha* as 1st sg. This is the summary vs. of the hymn (with vs. 11 simply the Vāmadeva Indra refrain), and in such vss. the poet often speaks in his own person or that of the group, referring to the hymn that has just been recited. This vs. entirely fits that pattern. I also interpr. the enclitic *te* not only as a

genitive with the deeds, but also as a dative with the part. *vidúṣe*, identifying Indra as the knowing audience. (And who better than Indra to know his own deeds?)

āvidvān is one of the few forms of $\sqrt{\text{vid}}$ ‘know’ cmpded with the preverb *ā* in the RV. It does not seem to have a clear special nuance.

On *svágūrta*- see comm. ad VI.68.4.

IV.20 Indra

The midsection of this hymn (vss. 5–8) has a surprising concentration of *-tar*-stem nominals, both root- and suffix-accented.

IV.20.1: Note the patterned phonological repetition *dūrād ... āsād ... yāsad*, with the 1st two morphologically parallel (ablative sg.) and the last not (subjunctive, 3rd sg.).

To make the tr. clearer, “our” should be inserted before “help.” Otherwise it sounds as if Indra needs to find help for himself.

IV.20.2: Again, “our” should be inserted before “help.”

IV.20.3: As Ge suggests, the imagery in the first hemistich seems to come from chariot racing. Pāda b is identical to V.31.11d (save for the ps. of the verb), a verse concerned with the chariot contest between Indra and the Sun. Putting smthg in front must simply refer to placing it in the lead, but in a ritual context like this one, there is interference between that sense and the ritual action of placing the offering fire to the east, also expressed by *purās* $\sqrt{\text{dhā}}$ and regularly represented by the epithet of Agni *puróhita*-. But since Indra is never the agent of that ritual action and since it is the fire, not the sacrifice, that is put in front ritually, the chariot race interpr. must be primary here. In saying this, I find myself in disagreement with Bloomfield, who says “The repeated pāda fits well in 4.20.3, is dubious in 5.31.11,” without commenting on either the fit or the dubiousness.

The Engl. phrase “gain our intention” is somewhat awk. What *sanīsyasi krátum naḥ* means, I think, is that Indra’s action of putting the sacrifice in front will cause him to win the race, which is what we want to happen. But objects of the root $\sqrt{\text{san}}$ are usually concrete (*vājam*, etc., as in *vājasātau* in 2d; cf. also *sanāye dhānānām* “to gain the stakes” in the next pāda) and also things that the grammatical subject desires to win, so my suggested indirect benefit is somewhat anomalous. So it is possible that “our *krātu*” that Indra will win is something he wants -- perhaps our intention or resolve to sacrifice to him, not to other gods.

IV.20.4: The verb *pā(h)* opening the 2nd half-vs. should also be read with (or supplied with) pāda b. Ge supplies “sei” for the first hemistich and construes the gen. phrase in b with *upāké*. This is possible but, given the parallelism of the two genitive phrases referring to soma in b and c, less likely.

Ge and WG take *pr̥ṣṭhyā*- lit. ‘related to the back’ as an adjective of (superior) quality in a spatial metaphor -- the sense of “top” in Cole Porter’s “You’re the top” or the adj. “tip-top.” Cf. WG’s “am erstklassigen Soma-Spross.” I think rather that the adj. is meant literally to refer to the soma plant’s well-known growing place, the back of the mountains (that is, the high slopes). Cf., e.g., V.36.2 *rúhat sómo ná párvatasya pr̥ṣṭhé* “as the soma-plant grows on the back of the mountain.”

IV.20.5: In my opinion, the first half-vs. consists of two separate similes, the second of which, *sṛṇyo ná jētā*, needs to be fleshed out. In the first one Indra with his abundant seers is like a tree with ripe fruit (*vrkṣó ná pakvāḥ*). In the second Indra the winner/conquerer is like a man who *harvests* the fruit with a sickle -- or more likely who harvests grain, the crop having subtly changed, with the *pakvā-* ‘ripened’ held constant. Cf. X.101.3 *nédīya ít sṛṇyāḥ pakvām éyāt* “the ripe (grain) should come even closer to our sickles.” For ripe grain see I.66.3 *yávo ná pakvó jētā jánānām* “Ripe like grain, a conquerer of peoples,” which also contains *jétar-*, though in my view in an independent syntagm.

The simile in the 2nd half-vs. is striking because it casts Indra as a maiden (*yóṣāṃ*), pursued by the poet as a dashing and virile young man (*márya-*, a word sometimes applied to Indra) -- a notable gender reversal.

This vs. contains one of the few finite forms of the secondary root $\sqrt{\text{rapś}}$ ‘teem, abound’, and 2c has an occurrence of the better-attested related possessive adj. *virapśín-*. In the currently favored etym. the “root” $\sqrt{\text{rapś}}$ was extracted ultimately from the nominal *virapśá-* ‘abundance’ (the basis for *virapśín-*), itself constructed from a dvandva of *vīrá-* ‘men’ and *paśú-* ‘beasts’ (see EWA s.v. *virapśá-*). It’s important to note, however, that this etym. is soundly rejected by Kü (417–18), though I still favor it. The two forms of the thematic pres. *rapśa-* (IV.45.1, X.113.2) are both immediately preceded by the preverb *ví*, which (by most lights) has been secondarily extracted from the cmpd. Our perfect form here, *rarapśé*, is also construed with *ví*, but with *yáḥ* intervening, and the other pf. form (VI.18.12) lacks *ví* but appears with *prá* in distant tmesis.

IV.20.6: The publ. tr. reflects the emendation of *vájraṃ* to **vrajám*, in concert with Gr, Ge, Schmidt (B+I, 137), Lub, and, after some resistance, Old. The resulting phrase *ādartā *vrajám* has a close parallel in VI.66.8 *vrajám dārtā*, as Ge points out. Ge takes **vrajám* as part of the simile and supplies Vala as the object in the frame: “... erbricht wie einen festen Pferch (den Vala) ...” But the position of the simile marker *ná* speaks against this. I instead take **vrajám* as a reference to Vala, with the simile portraying the attack of a wild beast (*bhīmáḥ*) on a real pen (thus effectively reading **vrajám* twice and separating *bhīmáḥ* from Indra). For *bhīmá-* as a wild beast see *mṛgó ná bhīmáḥ* (I.154.2, 190.3), *simhó ná bhīmáḥ* (IV.16.4 [nearby], IX.97.28), etc. In their tr. WG keep the transmitted text and tr. “Der Furchtbare ist der die Keule Stiebende (in den) ... prallen (Pferch) ...,” thus silently incorporating a **vrajám* in the final parenthesis (“Pferch”). I am also not certain what the VP “die Keule stieben” would mean nor how (*ā*) $\sqrt{\text{dṛ}}$ can mean ‘stieben’. They acknowledge the generally accepted emendation in their notes. Although I do not see an easy way to avoid this emendation, I do not know how the corruption could have arisen, esp. given *vrajám apavartāsi* in 8b. Still, *vájra-* is considerably more common than *vrajá-* and would always be lurking in an Indra context.

IV.20.7: The rel. prn. *yásya* of the first hemistich serves as a modulation pivot from the 3rd ps. of vs. 6 to the direct 2nd ps. address to Indra of 7cd.

On *udvāvrṣāṇāḥ* see comm. ad VIII.61.7, where I reject the Neisser / Gotō / Kü positing of a 2nd root $\sqrt{\text{varṣ}}$ ‘sich ermannen’, etc. and assign it to $\sqrt{\text{varṣ}}$ ‘rain’, with the specialized meaning ‘boil up and over’, as an expression of irrepressible energy. This

image would work nicely here with the pen “overflowing with goods” (*vásunā nyiṣṭam*) in the preceding vs. (6d).

IV.20.8: For brief and unilluminating remarks on *śikṣānarā-* see comm. ad I.53.2. Here I prefer to read the loc *samithēsu* with it rather than with what follows.

The root noun cmpd. *prahā-* is discussed with care and insight by Scar (698–700). The cmpd. is found in X.42.9 in a clear gambling context. Of the various proposals Scar makes, I find most satisfying the one in which *prahā-* is the stakes/pool/kitty ‘left out in front’. The possessive adj. here would then mean ‘having the jackpot’ and would fit with the gambling imagery in 3d *śvaghnīva ... sanāye dhānānām* “like (a gambler) with the best throw to gain the stakes.” (Scar, however, takes our particular passage in a different and, to me, unconvincing direction, p. 700.) The standard interpr. is ‘take the lead’ (e.g., Ge “den Vorsprung gewinnend”) in a race, but I’m not sure how this meaning would develop from ‘leave’ and ‘forth’.

IV.20.9: Pāda a is a definitional one, with the precise type of ability (*śacī-*) possessed by Indra giving him the designation ‘most able’ (*śaciṣṭha*).

Ge interprets *múhu ká cid* as haplogy for **muhuká ká cid* (so also EWA s.v. *múhur*, WG, and, somewhat differently, Old flg. Ludwig). Cf. nearby IV.16.17 *kásmiñ cid ... muhuké* (also *muhukāñ* IV.17.12). I have come, somewhat reluctantly, to the conclusion that this is correct. However, as noted in disc. ad IV.16.17, I do not accept Ge’s rendering of *muhuká-* as ‘Schlachtgeschrei’, which produces for this passage “... jedwedem Schlachtgeschrei hervorruft.” WG’s “... welches plötzlichen Vorfälle auch immer erledigt” is, however, more plausible. In IV.16.17 I suggest a sense ‘skirmish’, which works contextually there, but is here, I think, too specific. In fact, the published tr., “does everything instantly,” can stand, for a literal Engl. “does every instantaneous thing.”

The lexeme *ví√ci* means literally ‘pull apart’; an exactly parallel usage to this one appears in VI.67.8 *yuvám dāśúṣe ví cayiṣṭam āmhaḥ* (also cited by Ge), and the notion of pulling apart / opening up a narrow place (*āmhaḥ*) is very apposite. It should also be noted, however, that the same lexeme is used in gambling contexts, indeed in the very X.42.9 just cited for *prahāvant-* in 8c. In gambling it means ‘pile apart, pull out (a good hand)’. Although I don’t think that that idiomatic sense is reflected here, I do think that the gambling overtones would resonate with the other gambling vocabulary in this hymn.

IV.20.10: I do not understand the function of the initial *prá* in b. Gr indicates that it belongs with *dātave*, and Keydana (Infinitive, p. 255) explicitly says that it must belong with *dātave* and is therefore in tmesis. Though this is not impossible, I am somewhat reluctant to accept this explanation in part because *prá* is relatively rare with *√dā*. I wonder if it signals the lexeme *prá√as* ‘be present, be prominent’, with the copula gapped. Fortunately, the interpr. chosen has almost no effect on the sense of the pāda.

IV.21 Indra

IV.21.1: As indicated in the publ. tr., this vs. bears some resemblance to the first vs. of the preceding hymn: our first pāda *ā yātu índro ‘vasa úpa naḥ* more or less lexically matches IV.20.1ab *ā na índro ... ávase yāsat*. See also vs. 3 below.

The second hemistich is syntactically problematic; see Old’s extensive n. The problem is that both nom. sg. *vāvṛdhānāḥ* and the gen. sg. rel. prn. *yāsya* appear to refer to Indra. Ge interprets *yāsya* as a reflexive rel. (see n. 1c): “der erstarkt seine vielen Kräfte,” but not only am I not aware of other reflexive uses of the relative, but this tr. requires that the med. participle *vāvṛdhānā-* be transitive, which it is usually not (though, to be fair, a reflexive transitive would probably require middle voice). Although the publ. tr. is syntactically trickier (by cutting the pāda into two syntactic pieces), it avoids both problems by taking the participle as a separate clause (“when he has grown strong”) and the antecedent to *yāsya* in a rel. clause that begins with *táviṣīḥ*. In this interpr. *táviṣīḥ ... pūrvīḥ* is nom., not acc. The relative also has domain over the clause in d, with *yāsya* limiting *kṣatrām*, which is taken as a nom., not acc. as in most tr. Ge’s “wie der Himmel seine überlegene Herrschaft entfalten möge” also violates the standard construction of similes, by making the simile clausal, with the verb *púṣyāt* in the simile seeming to correspond to the participle *vāvṛdhānāḥ* in the frame. (WG’s tr. of d avoids this problem; their rendering is quite similar to the publ. tr.)

IV.21.2: The *nṛ̥n* in pāda b is problematic. It appears to be an acc. pl., and in fact is an acc. in the same phrase *tuvirādhaso nṛ̥n* in V.58.2 (referring to the Maruts). But here the undoubted gen. sg. *tuvidyumnásya* immediately preceding (and morphologically parallel to *tuvirādhasaḥ*) invites a gen. sg. reading also of ambiguous *tuvirādhasaḥ*. This in turn presents us with several choices: 1) to take *nṛ̥n* as a real gen. sg., 2) to assume that the last two words were borrowed from V.58.2 (or based on the formula found therein) and not adjusted morphologically, so that *nṛ̥n* is functionally a gen. sg. but formally an acc. pl., or 3) to detach *nṛ̥n* syntactically from what precedes it. Old opts for option 2 (see disc. in ZDMG 55 [1901]: 745–47 = KISch. 286–88). He assumes that since *tuvirādhasaḥ* can represent either acc. pl. or gen. sg., when the formula in V.58.2 was imported here, *nṛ̥n* could come along for the ride, functioning as a gen. sg. though adopted from an acc. pl. environment. The third tack is taken by Ge, who takes *nṛ̥n* as a complement of gen. sg. *tuvirādhasaḥ* (“des ... gegen die Männer Freigebigen”), and by WG, somewhat differently. The latter take *nṛ̥n* as a second obj. of *stavatha* (besides *vṛ̥ṣṇyāni*), with the two genitives preceding it hanging off it and modifying Indra: “... seine stierhaften (Kräfte) sollt ihr hier preisen, (und) die Männer des ...” (A fourth option, a variant of 3, would be possible: to take *tuvirādhaso nṛ̥n* as the 2nd acc. obj., with only *tuvidyumnásya* a gen.) Presumably the “men” WG have in mind are the Maruts, who do appear with Indra in the very next vs. (*marútvān* 3c) and as just noted are the referents of the undoubted acc. phrase in V.58.2. As for option 1, without endorsing this solution I would point out that a variant of this might be possible. The expected gen. sg. to the root noun **nṛ̥-*, based on comparison with Aves. *nəraš*, should be monosyllabic **núr* (like *pítúr*) (see AiG III.212), **nuḥ* in pausa. Clearly this brief and opaque form didn’t stand much of a chance of preservation as such; but I wonder if, esp. in formulaic phrases like *tuvirādhaso *núḥ*, it wasn’t substituted for by the acc. pl. *nṛ̥n*, the only other (surviving) monosyllabic form in the paradigm, whose affiliation to *nṛ̥-* was much clearer.

In d the verb *abhy ásti* ‘overwhelms’ picks up the nominal *abhíbhūti-* ‘overwhelming(ness)’ in 1d, with the substitution of \sqrt{as} for $\sqrt{bhū}$.

IV.21.3: As noted in the publ. intro., this vs. also recalls the opening vs. of the preceding hymn. There the verb *ā ... yāsat* ‘he will drive here’ is construed with two ablatives of place-from-which (near and far), plus *ávase* ‘for help’ + *naḥ*. Here *ā yātu*, also with *ávase naḥ*, is construed with no fewer than six ablatives of the same type, elaborating on the near/far contrast to provide a universe of choices.

On *pūrīṣa-* see comm. ad I.163.1.

Ge (/WG) take *svàṇṇara-* as a PN, but this interpr. does not fit the pattern of the vs., and moreover *svàṇṇara-* as PN seems to be confined to Maṇḍala VIII. See Mayrhofer (PN, s.v.), who also sees the name only in VIII.

IV.21.4: Ge takes *gómatīṣu* as referring to a particular river basin and WG to “cow-rich (rivers)” -- the latter apparently flg. Gr’s “rinderreicher Ort.” But the mention of Indra’s companion Vāyu here points to a ritual, not battlefield, victory, specifically the morning pressing when Indra and Vāyu receive the first oblations. There are two nouns that are regularly modified by *gómatī-* in the fem. pl.: ‘dawns’ (*uṣāsaḥ*) and ‘refreshments’ (*īśaḥ*). Either of them would work in this context. The publ. tr. supplies the latter, functioning as a loc. absol.: “when (refreshments) consisting of cows [that is, milk and butter] are at stake.” *īś-* does not have an attested loc. pl., and if it did, it would not be pretty or easily recognized: **īkṣū?* *īṭṣū?* It would therefore not be surprising if such a form were gapped, with the final of the adj. (*-īṣu*) gesturing towards it phonologically. However, it is also possible that “at the cow-rich dawns” is meant, given that the ritual in question happens at that time. *uṣās-* also lacks an attested loc. pl., though we should probably expect **uṣātsu* (see my 1991 “Ox, Cart,” 90–91). Again, gapping this awkward form would not be surprising.

IV.21.5: I take *ṛñjasānā-* to be built to the anomalous 1st sg. middle *ṛñjase* (for which see comm. ad IV.8.1), *pace* Jasanoff 2016 (etc.), based in part on the shared constr. *ṛñjas-* GOD (acc.) HYMN (instr.) exemplified, e.g., by IV.8.1 *yájiṣṭham ṛñjase girā* “I aim towards the best sacrificer with a song” (cf. VI.15.1) and our *ṛñjasānāḥ ... uktháih ... índram* “aiming straight at Indra with hymns.” (In fact I would now favor slightly changing the text of the publ. tr. to “aiming straight with his hymns” rather than translating *uktháih* with the following pāda as in the publ. tr.) The creation and maintenance of the stem *ṛñjasānā-* is supported by the other *-asānā-* secondary participles, on which see comm. ad IV.3.6.

IV.21.6–8: As discussed in the publ. intro., the next few vss. are very challenging; they have received multiple interpretations, which can’t be discussed in detail here. The vss. form a unity based on their shared vocab. (e.g., *góhe* 6b, 7c, 8c; *auśijásya* 6b, 7c), their shared syntactic formulae (*yád* *ī 6a, *yád īm* 7a, 7c, and *yád ī* 8d), and their shared metrical irregularity.

IV.21.6: As indicated in the intro., I think vs. 6 simultaneously depicts the gods’ approach to the ritual ground and the Aṅgirasas’ journey to the Vala cave. The rock

(*ádri-*) to which they hasten is the pressing stone in the case of the gods and the Vala cave in the case of the Aṅgirasas.

In pāda a I interpret *yádi* as *yád *ī*, parallel to *yád īm* in 7a and 7c and *yád(#)ī* in 8d. For this phenomenon, see my 2002 "RVic *sīm* and *īm*." With Ge I take *ádrim* as the goal of *saranyān* rather than construing it with *sádantaḥ*, allowing the latter participle to be construed with the loc. *góhe* (a stem found only here, in the three vss. 6–8).

For *dhiṣā* see comm. ad I.173.8 as well as I.3.2. The denom. *dhiṣanyá-* is found only here; I take it as 'seeking a holy place', derived from *dhiṣānā* 'holy place', on which see comm. ad I.3.2.

Note the phonetic echoes in *dhiṣā ya(di) dhiṣanyán(taḥ) (sar)anyān*.

As indicated in the publ. intro. I take *ausíjā-*, the vṛddhi deriv. of *usíj-* 'priest, fire priest', as referring to the collectivity of these priests (see also V.41.5). It seems to be parallel to / contrastive with the vṛddhi deriv. in the next pāda, *pāstyá-*, found only here, 'belonging to the dwelling place'. In my interpr. the *durósāḥ hótā* is Agni, and *pāstyá-* refers to the collectivity that he belongs to or represents, that of the household.

On the problematic *durósāḥ* (here apparently an *-s*-stem, as opposed to the thematic stem found in the two other occurrences), see comm. ad VIII.1.13.

IV.21.7: Another very opaque vs. The only thing we have to hold onto is structure: the *X-ā yád īm* of pādas a and c recalls *X-ā yád *ī* of 6a, and notice *X yád dhi(yé)* in pāda d. The whole vs. is a subordinate clause (or series of them), continued by 8ab, with the main clause in 8c -- and a final *yád(#)ī* clause rounding out the sequence in 8d.

As indicated in the publ. tr., I think vs. 7 depicts the bursting into flames of the ritual fire, whose difficult kindling was (possibly) treated in 6cd. This bursting into flames is expressed by *súṣmaḥ* 'explosive force' in 7b. The gen. *bhārvarásya víṣṇaḥ* 'devouring bull' refers to Agni, in this interpr.; the only two forms to the (pseudo-)root *√bharv* 'devour' have Agni as their subj. (I.143.5, VI.6.2). In the publ. tr. I also tentatively took Agni as the referent of *īm*, but I now think that the *īm* in pāda a refers to the praiser in b, while the *īm* in c refers to the Aṅgirasas. (Remember that number is neutralized in *īm*.) The point is that the *súṣma-* of the kindled fire accompanies each of these in order to allow the desired outcomes expressed in pāda b and d to occur -- the singer to receive his reward and the Aṅgirasas to cause the cows to come out of the Vala cave. (I am tempted to tr. a version of "may the force be with you.") So I would modify the tr. to "When ... the force ... accompanies him [=singer], for the singer to take his reward; when it accompanies them [=Aṅgirasas] to the secret place [=Vala cave], ... for (the cows) to go forth ..." In d I take the three datives (*prá*) *dhiyé* (*prá*) *áyase mādāya* not as triply parallel, but make the first and last further complements to *áyase* 'to go forth'. The two *prá*'s would in some sense structure these two parallel goal expressions: "to go <forth to insight>, <forth to exhilaration>."

Needless to say, it is impossible to be certain about this interpr., but at least it hangs together.

IV.21.8: Note the play in the pāda-initial sequences: *ví yád* (a), *vidád* (c), *yádī* v(...) (d).

As noted in the publ. intro., this last vs. of this obscure three-vs. group is the clearest indication of a Vala-myth subtext in the triad and thus serves as a species of poetic repair. As just noted ad vs. 7, the syntactic construction continues from vs. 7 and

therefore indicates that the verses should be interpreted within the same conceptual framework. The vs. contains clear Vala vocabulary (esp. *vidāt*) but leaves both subject and objects unexpressed, therefore allowing the double reading that I also suggested for vss. 6 and 7, namely that of the Vala myth and of the current ritual.

Although the reference is clearer in this vs., the grammar is another matter. The major problem lies in the two parallel verbs *vṛṇvé* and *jīnvé*. Both appear to be 1st sg. middle presents to the stems 5th cl. *vṛṇóti*, *vṛṇutē** and 1st cl. *jīnvati*, *-te* respectively (so Gr, e.g.). However, Whitney and Macdonell group *jīnvé* instead with the marginally attested 5th cl. pres. (RV 1x *jīnósi* ‘bring to life’ V.84.1), which would account better for the accent -- and a 5th cl. pres. must of course ultimately underlie thematized *jīnvati* (see Gotō, 1st Kl., 76). But 1st singulars do not fit the context at all, nor really do presents. Old tr. them both as 3rd sg. preterites (“er ... enthüllte ... belebte ...”) with, frustratingly, no comment. In this interpr. he seems to be following (or at least be in agreement with) Sāy., and the publ. tr. reflects the same analysis, though with a historical present interpr. because of the apparent primary ending *-é*. Ge and WG take them as reflexive (Ge) / passive (WG), with neut. pl. subjects *vārāṃsi* ... *jāvāṃsi* (e.g., Ge “Wenn sich die Breiten des Berges auftun,” etc.). Like Old, Ge keeps silent about the grammar, but WG identify the two verbs as 3rd sg. statives construed with the neut. pl. as subject. I am torn. On the one hand, it is difficult to wring a standard 3rd sg. of the type I want from the forms in the text. On the other, I am very dubious about the existence of the “stative” -- and even if this had been a separate grammatical category in the prehistory of Vedic, I doubt that it would have surfaced in just these two nonce forms in a single passage. Moreover, there is nothing semantically or functionally “stative” about either of these verbs, “open up” / “quicken,” either in isolation or in this passage; note that even in the passive the WG tr. are overtly eventive: “... aufgeschlossen *werden* ... belebt *werden*” (my italics). I also think that the mythic model found in the passage is against a reflexive or passive interpr. In the other standard depictions of the Vala myth, the opening of the mountain and the flowing out of cows/waters/dawns, are not events that happens spontaneously; the god Indra (/Bṛhaspati) or the Aṅgirasas cause these actions. The 3rd sg. *vidāt* ‘he found’ of 8c, a signature verb in the Vala myth, shows the typical pattern of expression in this myth. I therefore, uncomfortably, stand by the 3rd sg. transitive interpr. of these verbs, without being able to account for their form. They do belong to a little morphological pattern in 5th class presents, where 3rd sg. *-é* is not uncommon: cf. *śṛṇvé*, *sunvé*, *hinvé*. But unfortunately all three of the just cited forms are passive, and, in my reading, *vṛṇvé* and *jīnvé* are not.

The neut. pl. *vārāṃsi* in pāda a I take as a pun. The stem *vāras-* definitely means ‘wide space’ and is of course related to *urú*. However, as the object of *√vr* ‘enclose’ (+ *ví* = ‘unenclose, open’) and coming so soon after *saṃvāraṇeṣu* (6d) ‘in the enclosures’, it is not difficult to imagine that it could temporarily acquire a secondary association with *√vr* -- hence my double tr. “opens out the ... enclosures into wide spaces.”

I supply ‘cows’ as the first obj. of *vidāt* on the basis of the use of this verb with obj. *gāḥ* in the Vala myth elsewhere (e.g., I.62.3=X.68.1, II.19.3; note also the bovine vocab. *gaurāsya gavayāya* in the rest of the pāda), but in keeping with my double reading of this whole passage also supply ‘goods’ as the desired discovery in the ritual context.

The *sudhyāḥ* ‘those of good insight’ are probably, with WG, the Āṅgirasas in the Vala myth, but I would add that this word would also identify the poets/priests at the ritual, in the double reading of this triad of verses that I favor.

IV.21.9: It is with considerable relief that we return to Indra.

In c I tr. *kā te niṣattiḥ* -- lit. “What is this sitting down of yours?” -- more idiomatically, to convey the exasperation of the singer.

The sequence *kīm u nō ... kīm nód-ud u* ... is playful and, probably for that reason, somewhat difficult to parse. The *nō* in the first part of the phrase appears in the Pp. as *no iti*. Although normally a final *-o* of this type, generally found on the end of function words, represents *-ā/a* plus the particle *u* (see Klein, Part. *u*, 168–78), Klein specifically lists this passage (168 n. 3) as a case where the presence of *u* is unlikely because “the syntactic environments within which *u* is found do not appear.” It is easy to see why he came to that judgment, esp. because there’s an *u* almost immediately preceding it and the 2nd *u* would come very late in the syntactic complex. However, it is difficult to see what else to make of it, and the almost mirror image in the next pāda, where there’s a coalescence of *nā* + *úd* into *nód* and an even later *u* following the complex of *kīm* NEG PREV, suggests that the poet is having a bit of fun with *u*. Given the colloquial tone of this hemistich, we may also be seeing a looser deployment of particles and “little” words characteristic of ordinary speech. (And who can resist the lilt of *nód-ud u*?) The multiplication of *u*’s is completed by a form of the notorious *-tavā u* infinitive at the end of d.

IV.21.10: This last vs. before the refrain shows some ring-composition with the beginning of the hymn: *samrāt* (a) and *krátvā* (c) respond to *krātuḥ ... samrāt* in 2c.

In pāda a *satyāḥ* ‘real, really here’ may signal Indra’s epiphany at the sacrifice.

IV.22 Indra

Hoffmann treats and translates the first four vss. of this hymn (Injunk. 186–88) as an ex. of “die erwähnende Beschreibung eines präteritalen Tatbestandes” associated with the general description of a god. He notes the unclear boundaries between past and present in such contexts.

IV.22.1: This vs. propounds a novel version of divine-human interaction: it suggests that what a god wants from us -- the verbal and material offerings we make to him at the sacrifice -- he actually arranges to have available there. There seems no other way to read the *ā√kr* ‘make (to be) here, bring here’ in b (... *karat ... ā*). This model almost reduces the human role to being middlemen in a loop connecting the god with himself, in contrast to the usual reciprocal model in which each side (divine / human) makes its own contribution.

In d *éti* appears to be used as an auxiliary with the participle *bībhrat* (so also Hoffmann, with ref. to Delbrück, AiS 390), though Ge seems to take it as a full lexical verb (“... tragend auszieht”). Engl. “goes on X-ing” captures both the literal sense and the auxiliary function of the verb here.

IV.22.2: The hapax *vṛṣandhi-* has been variously explained. Old rejects the reading as “sinnlos” and suggests an emendation to **trīṣandhi-*, remarking that the vajra is so described in AV XI.10.3, 27. The influence of preceding *vṛṣā* would account for the change. Hoffmann (MSS 8 [1956]: 15 = Aufs. II.395–96) instead suggests it is a haplology of *vṛṣa-saṁdhi-* ‘mit starker Verbindung’, which in his view describes the binding of the head of the vajra, which he thinks was a hammer-like weapon, to the shaft. One of the unexamined assumptions of both Old’s and Hoffmann’s interpretations is that the weapon referred to here is the vajra and that this is identical to the stone (*ásman-*) in 1d. As I argue ad I.152.2 (see comm. thereon), there is no reason to assume here that the stone = vajra or that the unnamed weapon in 2a is identical to both. A form of *vájra-* is found in 3c, but it need not be the same as the weapon(s) referred to in 1d and 2a -- and in fact there is some reason to believe it is not, as the weapon here is being ‘hurled’ (*ásyan*), and to my knowledge the vajra is never thrown while stones regularly are (e.g., I.172.2). In my opinion the weapon in 2a is the stone of 1d and the qualifier *vṛṣandhi-* is a formation like *iṣu-dhí-* ‘repository of arrows, quiver’, *uda-dhí-* ‘repository of water, spring, basin’, *utsa-dhí-* ‘fountainhead’ — hence ‘repository of bullish(ness)’. The difference in accent can be attributed to the influence of immediately preceding *vṛṣā*. The combining form *vṛṣan-*, rather than more common *vṛṣa-*, is also found in *vṛṣaṇvant-* and *vṛṣaṇ-vasu-*.

The anomalous med. them. participle *uṣámāna-* ‘clothing oneself’, as if to an otherwise unattested 6th cl. pres. to *√vas* ‘wear’, belongs with the other unexpected med. participles (both them. and athem.) to *√vas* ‘be eager’ and *√vas* ‘wear’ found in this Indra cycle. See disc. ad IV.16.14 and IV.19.4 and cf. *uṣāná-* in the next hymn (IV.23.1).

The second hemistich is best interpreted in the context of V.52.9, a Marut hymn, where the Maruts *páruṣṇyām, ūṛṇā vasata* “clothe themselves in the wool [=foam] in the Paruṣṇī (River).” Note that in that passage *páruṣṇyām* and *ūṛṇā* are in different cases and numbers (fem. loc. sg. and fem. acc. pl. respectively) unlike here, where both are fem. acc. sg. Their grammatical difference in V.52.9, which imposes a semantic separation, makes it less likely here that *páruṣṇīm* is simply an adj. modifying *ūṛṇām*, as Hoffmann (/WG) take it: “in shaggy wool” (KH: “in zottige (?) Wolle”; WG “in struppige Wolle”). Since *páruṣṇī-* is simply the fem. to *paruṣá-*, which is otherwise a color term (‘gray’), the introduction of ‘shaggy’ would also be puzzling. I therefore essentially follow Ge’s interpr. He takes *páruṣṇīm ... ūṛṇām* as an unmarked simile: “in the Paruṣṇī (River) (like) wool”; I take it rather as a metaphor: “in the Paruṣṇī ‘wool’ [=foam].” The color gray enters this image in two ways. On the one hand, it’s quite possible that the Paruṣṇī River was so called because it appeared gray; on the other, river foam in general is gray-ish (and tufty, like wool), as google images of river foam show (unfortunately mostly of polluted rivers).

The unexpressed connection with the Maruts via the passage just cited is also expressed in pāda d through *sakhyāya* ‘for partnership’, where the partners must be the Maruts.

The word *párvan-* usually refers to a joint or segment; with Ge, I take it in this image to refer to tufts or articulated hunks of foam, like tufts of wool. With Ge I also think there’s a secondary word association between *páruṣṇī-* and *párvan-* (/ *páru(ṣ)-*).

IV.22.3: In the publ. tr. I take the whole vs. as a single sentence, with ab a relative clause to the main cl. in cd. Ge (Hoffmann/WG) take b as the main clause to the rel. cl. in a and take cd separately. This is entirely possible; there is no grammatical marking to determine the structure, since b lacks a finite verb. Since b is a repeated pāda (VI.32.4b), it might indeed be better to take it as an independent unit and follow the Ge interpr.

The distraction of #*dyām ... bhūma*# in d is paralleled by 4b #*dyaúr ... kṣāḥ*#.

IV.22.4: As just noted, polarized #*dyaúr ... kṣāḥ*# in b match the same (conceptual) pair in the same positions in 3d. Here in 4b the disjunction is emphasized by the fact that the two nominatives are subjects of a singular verb (*rejata*). The connection of the 3d and 4b is signaled by the fact that the same root provides the verb in both 3d and 4b: trans.-cause. *rejayat* and intrans. *rejata* respectively (both injunctives), and heaven and earth switch grammatical identity and function from object to subject.

Pāda a sits somewhat uncomfortably between these two complementary pādas. The river banks and beds seem rather paltry natural features next to heaven and earth, which flank them. But they may serve a grammatical purpose: both NPs (*vísṃā ródhāmsi* [neut. pl.] and *pravātaḥ ... pūrvīḥ* [fem. pl.]) are neutral as to case (nom. vs. acc.) and can thus serve as a pivot, available as both acc. objects for *rejayat* in 3d and nom. subjects for *rejata* in 4b. (Of course, although the neuter pl. could be the subject of a sg. verb, technically speaking a feminine pl. should not, but this does not seem a problem to me, as the neut. pl. leads the conjoined NP and would set the syntactic tone -- and they are pretty distant from the verb anyway.)

Pāda c produces problems on several fronts. Who are the mother and father (*mātārā*)? (Old flatly announces he has no intention of trying to find out.) Why is the verb (*bhāratī*) accented? Why are there two instances of *ā*? What is the cow (*gōḥ*) doing grammatically and/or conceptually? The only word that is not problematic (though see below) is *śuṣmī*, which must refer to Indra, as in 1b. I do not have entirely satisfactory answers to the puzzles. Probably the default referent for *mātārā* would be Heaven and Earth, and they have figured prominently just previously. But there is the problem that Heaven and Earth are not particularly mobile, so how is it that Indra “brings them here”?

As for the accent on *bhāratī*, Ge suggests that pāda c is dependent on either ab or c, without overt subordination. Old (ZDMG 60 [1906]: 725–26 = KISch 200–201) places it in the class of “priorischer Nebensatz” (to the main cl. in pāda d), but c doesn’t seem to provide sufficient grounding for d to justify the verbal accent. Hoffmann (Injunk. 187 n. 147) cites Old’s own citation of himself (given above), but also what is the more likely explanation, given by Old in the same art. (708–12, esp. 711 = KISch. 186): that it is implicitly antithetical, participating in two interlocked constructions, what Old (711 = 186) designates pavpα (that is, PREV [x-word] VERB PREV [corresponding x-word]) -- with, in our passage, *ā* as the PREV, *mātārā ... gōḥ* as x and *ā*, and *bhāratī* as accented VERB. In his exx. nothing intervenes between VERB and the repeated PREV, unlike *śuṣmī* here, but I consider this a minor variant in the model. Perhaps more problematic is that *mātārā* and *gōḥ* do not correspond grammatically, but again I would prefer to work with a more flexible model (and see below). In this model the accent on the verb and the doubled *ā* fit under the same explanatory rubric, a desirable situation, all things being equal. (Such an explanation is blocked for Ge, who thinks the two *ā*’s have different functions, the first preverb, the second preposition.)

But what about the cow? One might note that there's a similarly pāda-final *góḥ* in 8d as well as another quite baffling one in the next hymn, IV.23.6. I also wonder if this pile-up of pāda-final *góḥ* is not a sly reference to the impenetrable pāda-final *góhe* in the previous hymn (IV.21.6b, 7c, 8c), which caused so many interpretational difficulties there (though they are not etymologically related, at least by our current understanding of *góhe*). But this doesn't help us at all with the meaning or the function of *góḥ* here. The first thing to consider is what case it is -- gen. or abl. Ge opts for the latter: Indra brings the two mothers *from* the cow ("von dem Rinde"), though in n. 4c he also entertains the possibility of an ellipsis of a nominative with a dependent genitive *góḥ*, "(son) of the cow," namely the bull Indra. As far as I can tell, WG also take it as an abl., but construed with *ā* in the sense of "all the way to" (a marginal, but certainly attested, construction in the RV). There is nothing impossible about either of these interpr., but I do not see what they would mean in context, and neither Ge nor WG give much help in that regard. For me the most appealing attempt to wring sense from this is Hoffmann's (Injunk. 187). As in Ge's alternative, Hoffmann takes *góḥ* as a gen. in an elliptical expression, but with the gapped item a second object to *bhárati*: "Herbei bringt der Kraftschraubende (seine) Eltern, herbei (das) der Kuh." This makes good sense of the structure of the pāda (fitting better with Old's pavpα scheme, since α would now be grammatically parallel to a). So what is the "das" in Hoffmann's tr.? He suggests 'milk' or similar, though not with a great deal of conviction. The publ. tr. supplies 'milk' as a possible metaphor for 'rain', and given the roaring winds of pāda d, I think rain is quite likely the gapped object, since 'cow' can be used of rain-bearing clouds. It also now occurs to me that it might instead be the Maruts ("[those] of the cow"), since they are the sons of the cow Pr̥śni, as noted, e.g., in V.52.16, the same hymn that has the Paruṣṇī River foam passage cited above (vs. 2). The Maruts would also fit with the violent roaring of the wind in d.

IV.22.5–6: These vss. summarizing Indra's great deeds begin identically: *tā tū te* [*ta* in sandhi before vowel in 6]. The vss. appear at the exact center of the hymn and thus may count as an omphalos. Although both pādas have Indra's deeds as subject, neither has a word for 'deed'.

IV.22.6: The b pāda contains one of the RV's beloved gender-bending paradoxes, with the cows coming out "from the udder of a bull" (*vṛṣṇa ūdhnaḥ*). Ge (/WG) interprets this as rainwater coming from the sky (Parjanya or Heaven). I think it more likely that it concerns the Vala myth. Indra's other signature deed, the slaying of Vṛtra, was treated in the immediately preceding, paired verse (5d), and so we might expect mention of his other most prominent feat. In that case the "bull" would be the Vala cave. On the other hand, this might continue the treatment of the Vṛtra myth in 5d (as Ge also suggests, n. 6b), in which case the "bull" would be Vṛtra himself or the mountain in which the waters were confined. The more thorough treatment of the waters in the Vṛtra myth in the following vs. 7 might support this latter view.

IV.22.6–7: Another responsion: 6c *ádḥā ha* / 7a *átrāha*. Later in the pāda 7a *tā u* recalls the openings of 5a and 6a *tā tū*.

IV.22.7: Most tr. take *stavanta* as passive, and this seems the correct interpr. The sisters are likely the rivers or waters released after the killing of Vṛtra. The question is why they would be praised as well as Indra. Ge's suggestion (n. 7ab) is that it is essentially a spill-over effect (not that he uses that term), that Indra's praiseworthy deed that brought the waters release also brought them praise by association.

I don't understand the double *ānu* (pādas c and d), though my surmise is that the first one simply anticipates the second, which is in a semi-fixed expression *dīrghām ānu prāsitim* (cf. X.40.10). Gr takes it as part of a preverb complex with \sqrt{muc} : *ānu prá \sqrt{muc}* 'nacheinander loslassen', and its position might support that assumption. But surely one of points in the Vṛtra myth is that the rivers burst out dramatically all at once. Ge, by contrast, compares the identical sequence *yāt sīm ānu* in I.37.9, I.141.9, but those two passages seem unconnected with ours, with the *ānu* construed with preceding *sīm* 'following them.' (One can also compare IV.38.3 *yām sīm ānu*, but this has yet a different sense.)

IV.22.8: *asmadryāk* opening 8c ushers in the suite of pāda-initial emphatic forms of the 1st pl. pronoun that lasts and intensifies through the real end of the hymn, vs. 10 (vs. 11 being the Vāmadeva Indra refrain): 8c: *asmadryāk*, 9a *asmé*, 9c *asmábhyam*, 10a *asmākam*, 10b *asmábhyam*, 10c *asmábhyam*, 10d *asmākam*.

Kü (310) interpr. *pipīlē* as presential, but there is in fact no way to tell: this is not only the only perfect form to this root attested anywhere but the only verb form to it in the RV (*pīdayati* is added in the AV). I think it works better as an immediate past, although there is in practice little difference between my "has been squeezed" and Kü's "ausgepresst ist."

Ge, flg. Sāy., takes *mādyah* with *āmśúh* and explains the position of *ná* as "wie oft in Pādaausgang vor dem Vergleich." But there seems no reason to ignore the usual structure of the simile, since *mādyah* easily modifies *sindhuh*.

The syntax of bc is somewhat unusual, in that the subject / verb construction is split over the hemistich boundary (b ... *śaktīḥ* c ... *yamyāḥ*), while the object *tvā* is in Wackernagel's position in pāda b. Moreover, at least in the publ. tr. the genitive that limits the subj. *śaktīḥ* is only found in the next pāda: *śusucānāsyā*. Ge (/WG) take the gen. *śāsamānāsyā* in b as dependent on *śaktīḥ*, with *śāmī* an instr. adjunct to that participle: "the skill of the one laboring with labor" -- in contrast to the publ. tr., where *śāsamānāsyā* is dependent on *śāmī*. I now think that the Ge interpr. may be preferable and would emend the publ. tr. to "Might the skill of the one laboring with labor (and) of the bright-blazing one pull ..." The question is whether the two genitives are coreferential, with bright-blazing Agni identified as the one laboring with labor, or whether a (human) priest and Agni are both referred to. I do not think this can be determined, esp. since subjects of \sqrt{sam} elsewhere include both Agni and mortals.

The simile in d and the frame in bc have slightly different senses. In the simile the swift horse is pulling on the reins: it is so eager to reach its goal that it strains against the reins rather than being guided by them. In the frame the *śaktīḥ* of the priest/god is strong enough to pull Indra to us. The difference in the relation of the accusative to the verb results from exploiting different senses of the root \sqrt{yam} .

Despite Old's expressed disbelief, I think Gr and Ludwig are correct in taking *gōh* 'of the cow' to refer to reins made of leather. On pāda-final *gōh* see also disc. ad vs. 4c.

IV.22.9: Ge tr. *ṛmṇāni* as ‘Mannestaten’, which works well as an object of \sqrt{kr} (though parallel *sāhāmsi* ‘powers’ does not). But *ṛmṇā-* ordinarily refers not to deeds but to the abstract powers associated with manliness that allow such deeds to be performed. Hence my ‘activate’ for *kṛṇuhi*.

IV.23 Indra

Thieme tr. and comments on this hymn in *Gedichte* (pp. 30–33).

IV.23.1: Pāda a contains the only finite form of the thematic aor. to \sqrt{vrdh} in the RV, here *avṛdhat* – though the participle, both act. and mid., is reasonably well attested.

Ge (/WG) take pāda b as a complete clause, supplying a main verb (‘kommt’ Ge, ‘geht’ WG). They then take the 2nd hemistich as a syntactically independent declarative sentence. Given the density of questions in the first 6 vss. of this hymn, I think a declarative sentence would be intrusive and therefore take bcd as part of the question begun with *kāsya* in pāda a, with *vavakṣé* in d as the main verb for the whole.

On soma as an udder, see III.48.3 cited by both Old and Ge.

Note the close proximity of *juṣāṇāḥ* (b) and *juṣāmāṇaḥ* (c). The latter is the only occurrence of this participle stem, while *juṣāṇā-* is of course quite common. I don’t see any semantic nuance that would justify using two different stems here. I wonder if *juṣāmāṇa-* is a nonce to create a Behagel effect with the three near-rhyming and semantically similar stems: *juṣāṇó ... uśāṇó juṣāmāṇo*. It should also be evaluated in the context of the other anomalous and phonologically similar middle participles in this Indra cycle, including *uśāṇā-* (IV.16.14), *uśāmāṇa-* (IV.19.4), *uśāmāṇa-* (IV.22.2), and our own middle term *uśāṇāḥ*. (For disc. see esp. comm. ad IV.16.14.) Though *uśāṇā-* is attested twice elsewhere, it is still problematic: though there is a root pres. to \sqrt{vas} ‘be eager’ with a zero-grade *uś*, the stem is otherwise only act. and the act. part. *uśánt-* is extremely well attested (see., e.g., the next hymns, IV.24.6b, 25.1b).

Ge is adamant that the two verse-final datives *śucaté dhánāya* are not to be construed together. By contrast I think they belong together in principle. Of 6 occurrences of *dhánāya* (always pāda-final), 2 are preceded by *mahaté* (I.104.7, IX.97.4), which modifies it. I am just somewhat uncertain what it refers. Although $\sqrt{śuc}$ is generally an Agni root, and cf. *śuśucāṇā-* in the immediately preceding hymn, probably of Agni (IV.22.8), I think that referent is unlikely here. *dhána-* refers to the stakes in play or a prize or spoils, in this case presumably something Indra wants enough to exert himself for it. The verse has made abundantly clear what Indra wants most -- soma (*sómam* b, *āndhaḥ* c) -- and I think it likely that soma is the referent here as well. A deriv. of $\sqrt{śuc}$, the adj. *śúci-*, is regularly used of a type of soma (clear, as opposed to mixed), and the participle here may be expressing the same thing. I would therefore slightly emend the tr. to “for the gleaming stakes [=soma].”

IV.23.2: In b Ge (/WG) and Thieme (*Gedichte* 31) take the instr. *sumatībhiḥ* as the object of *sám ānaṃśa* (e.g., Ge “Wer wurde seiner Gnaden teilhaft?”), but this seems an unlikely use of the instr., even with the presence of the preverb *sám* -- esp. because the verb in b is essentially identical to the verb in a, *āpa*, which takes the acc. Although Gr allows both acc. and instr. with *sám* \sqrt{nas} in the sense ‘erlangen’, a careful perusal of the entry shows

that this is the only instance with a supposed instr.; the others have the acc. I therefore supply the same obj. found in pāda a (*sadhamādam*) and take *sumatībhiḥ* in normal instr. usage.

The second hemistich contains two occurrences of *kād*, the second is taken by all as simply a question marker, but Ge interprets the first one as a full neut. with *citrām*, “welches Wunder?” This is possible, but it seems rhetorically better to take it as parallel in function to the other *kād* (so Th and WG as well as me). I supply ‘course’ on the basis of II.34.10 *citrām tād vo maruto yāma cekite* “This bright course of yours, Maruts, appears ever more brightly,” also adduced by Ge. The notion of a journey is reinforced by the 2nd part of the hemistich. However, a tr. like WG “Ist sein Glanzzeichen bemerkt?” is certainly possible.

IV.23.3: Gr, Ge, et al. take *hūyāmānam* to refer to the call or summons to Indra (e.g., Ge “Wie hört Indra den Ruf?”). Kulikov (-*ya*-presents, 307–8) rejects this interpr., noting that this is the only instance of such a construction: normally the subject of the passive is the deity being invoked. Although he reluctantly admits that it might correspond to the rare transitive type in which what is spoken is the object of the verb (I.17.9), he prefers to derive this form from \sqrt{hu} ‘pour’ and translates “How does Indra hear the (libation) being offered?” -- that is, the sound of the pouring. A different reconsideration is found in WG, who interpr. *hūyāmāna-* in the standard way, as having the deity invoked as its subject -- but they think Indra is listening to the summons to a *different* deity than Indra. Although I recognize that the standard interpr. may have glided too swiftly over the problems with *hūyāmāna-*, the two revisionist versions both seem overelaborate and implausible to me. Since it is undeniable that forms of $\sqrt{hū}$ do sometimes take what is spoken as obj. (see the above-cited I.17.9, as well as juxtaposed occurrences of *hāvya-* in VI.21.1 with comm. there), I think we must allow this rare usage in the passive as well, a point made very economically by Old. My tr. follows that of Thieme (p. 31) “Wie hört Indra den [Ruf], der gerufen wird?”

In b *āvasām* is taken by all modern comm. and tr. as the gen. pl. of *āvas-* ‘help’ that it appears to be. Although this gen. pl. is not otherwise attested (the only pl. cases are nom./acc. and instr.), *āvasām* is what the gen. pl. of this stem would be. Moreover, it can easily be the complement of *veda*, which takes both acc. and gen. Nonetheless I favor Gr’s interpr., that it is the acc. sg. of a root noun cmpd from *āva* $\sqrt{sā}$ ‘unhitch’. There is a major obvious stumbling block: the accent. Root noun cmpds are invariably accented on the final, so we expect **avasām*. However, the other putative ex. of this cmpd at III.53.20 has been mangled in transmission (see disc. by Scar s.v. and comm. ad loc.), and I think it likely that the dominance of the ‘help’ stem, which is remarkably well attested, led to a redactional change in accent. One of the reasons I favor this solution has to do with the *asya*. In the ‘help’ interpr., the *asya* would refer to the mortal who will receive this help (see Ge n. 3b), but this hymn contains a lot of *asya*’s, and they all otherwise refer to Indra: 2a, 2b, 2c, 3c, 5c, 6c, plus *enam* 3d and *asmin* 5d. I very much doubt the poet would break this sequence with a pronoun referring to someone else. The only exception is *asyā(h)* 5a, which is both accented and feminine, and is playing a trick by its patterning with the *asya* in 5c.

For *ūpamāti-* from *ūpa* $\sqrt{mā}$ ‘mete out’, see comm. ad VIII.40.9.

IV.23.4: I take *dīdhyānaḥ* as parallel to *śaśamānāḥ*, referring to the verbal/mental work at the sacrifice as opposed to the physical -- hence my tr. ‘produced insights’. Other tr. seem to me to attenuate the semantics.

IV.23.5–6: The root $\sqrt{juṣ}$ encountered in two different forms in 1bc recurs here in the perfect, subjunctive (4d) and indicative (5b).

IV.23.5: As noted above, fem. *asyā(h)* patterns with the ubiquitous *asya* in this vs.: 5a *kathā kād asyā* / 5c *kathā kād asya*.

IV.23.6: *āḍ* is very rarely not in 1st position. Here the interrog. *kīm* may have displaced it. See *kīm āḍ* at IV.30.7, as Ge also notes, as well as ... *kuvīd āḍ* I.33.1.

Ge (/WG) take the referent of *te* to be Indra (Ge: “Wann dürfen wir wohl von deiner Bruderschaft öffentlich sprechen?”). I very much doubt that. As I noted in the publ. intro., Indra is always referred to in the 3rd ps. in this hymn, except in the final extra-hymnic Vāmadeva refrain (vs. 11), and the thwarting of the poet’s longing for intimacy by the distancing that the insistent 3rd ps. pattern imposes is in many ways the point of the hymn. I think it unlikely that the poet would introduce the intimate 2nd ps. reference through a single monosyllabic enclitic and then revert, in the next pāda, to the 3rd ps. *asya*. This leaves me with the problem of identifying an alternative referent for *te*. My assumption is that it is the poet speaking to himself, while the “we” represents the collectivity of the ritual officiants. Alternatively, it is possible that *te* does refer to Indra and that this pāda represents a wistful wishful thinking about an intimacy not otherwise achieved -- with its 1st ps. / 2nd ps. structure (the only place where a 1st ps. shows up in the hymn, save for the refrain -- though see comm. on pāda d) and the particularly intimate relationship ‘brotherhood’ (*bhrātrām*) that is aimed at

The second hemistich is problematic, primarily because of the form *iṣa* (Pp. *iṣe*) in d. (Ge characterizes it as “das zu den schwierigen Formen des RV. gehört”), a problem compounded by the fact that its first syllable should, ideally, be heavy in this Triṣṭubh cadence. Before tackling it, we should consider the structure of the two pādas. With Old and WG, but not Ge, I take c and d separately, with c a nominal clause equating *sārgāḥ* ‘surges’ with *vāpuḥ* ‘marvel’. In my view the surges consist of soma: *sārga-* is regularly used of soma in Maṇḍala IX. Again with Old and WG, but not Ge, I take *sudṛśaḥ* as nom. pl. with *sārgāḥ*, not gen. sg. -- with *śriyē* construed with this adj.; cf. V.44.2 *śriyē sudṛśīḥ*. As for d, Old interprets *iṣe* as a 1st sg. “setze ich ... in Bewegung,” with *svār nā citrātāmam*, standing for the surges in c, as its object. WG likewise take *iṣe* as a 1st sg. (aor. injunctive), but with the meaning ‘ich suche’, with the same obj. as Old. By contrast I take it as a 3rd sg. (so also Ge, it seems) and in fact would emend it (slightly) to **īṣe* (an asterisk should be inserted in the publ. tr.), belonging to the perfect to the root given as $\sqrt{eṣ}$ ‘suchen’ (etc.) by Kü (126–28). As was just noted, a heavy initial syllable would better fit the cadence; my one concern is that I do not understand why the short *i* was introduced. Though he does not include our form in his conspectus, Kü does list two other 3rd sg. med. occurrences of this shape (*īṣe* X.89.3 and, with unclear root syllable, *upeṣe* I.129.8). He considers the pf. as resultative, and it is possible that my ‘seeks’ should be changed to ‘has sought’. However, neither of his other examples (I.129.8, X.89.3) needs to be preterial, and so ‘seeks’ may as well stay. The same emendation and

semantic interpr. also work for *iṣe* in VI.22.5 and X.20.7; see disc. ad locc. What Indra is seeking here is, in my view, the milk to be mixed with the soma. It is characterized as “very bright like the sun,” and its source as ‘of/from the cow’ (*góḥ* or *ā góḥ*) (*ā* may go with either **iṣe* or *góḥ*). The slight disadvantage to my interpr. is that the two occurrences of *ā góḥ* here and in the preceding hymn (IV.22.3) are construed differently, but given the convoluted structure in IV.22.3, that is probably unavoidable.

IV.23.7-10: The contrast between the ‘lie’ (pāda-initial *drúh-* 7a) and *ṛtá-* (10 pāda-initial and 2 pāda-medial exx. in vss. 8–10) certainly underlines and cements the sense ‘truth’ for this word. Note also that *ṛṇā* ‘debts’, which opens the 2nd hemistich of vs 7, phonologically anticipates the *ṛtá*’s to come.

IV.23.7: The tr. of *tétikte*, ‘sharpens’, may not seem to express its intensive semantics, but plain ‘sharpen’ itself incorporates the iterative, repetitive motions of blade across stone that sharpening involves.

Ge notes the similarity of *ṛṇā cid* to the root noun cmpd *ṛṇa-cít-* ‘collector of debts’ found in the strikingly similar phrase II.23.17 *sá ṛṇacíd ṛṇayā(h)*. But there are no grounds to emend the phrase to a compound, though a deliberate echo seems possible. In fact changing the text here would have the disadvantage of eliminating the obvious object to *babādhé*.

IV.23.8: Ge (/WG) take the deaf ears to be those of Āyu -- with Āyu referring to the Ārya in general, WG suggest. Āyu always poses difficulties, but in this case I think gen. *āyóḥ* should be construed with *ślókaḥ*: the “signal call of Āyu,” referring to Agni and the sound of blazing fire. Elsewhere Agni is referred to as the “laud of Āyu” (*śáṃsa- āyóḥ*, IV.6.11, V.3.4), and this seems a similar expression referring to an audible product. The nom. participles *budhānāḥ śúcāmānāḥ* ‘awakening, blazing’ of course fit Agni very well. And it is not surprising, given his ritual role, that the sound of Agni should be considered to be identical to that of truth. As for the position of *āyóḥ*, at some distance from *ślókaḥ*, note that it rhymes with *ā góḥ* in 6d, likewise stationed at the end of the verse.

IV.23.9: The tr. of *dīrghám* as extent of space, rather than Ge’s extent of time (“lange Zeit”), follows Thieme (p. 32): the nourishments as oblations go from earth to heaven, as rain from heaven to earth.

On irregular full-grade 3rd pl. *viveśuḥ* see Kü (499-500).

IV.24 Indra

IV.24.3: Most depictions of battle in the RV do not frame the risks of entering into battle quite so starkly. Here both *rīrikvāṃsas tanvāḥ* “having given up their bodies” in b and *tyāgám ... āgman* “have come to the abandonment (of their bodies, presumably)” in c seem to refer to a sort of resignation in the face of death and a loss of the sense of self. (Note that this is the only occurrence of *tyāga-* in the RV.) It is esp. telling that they give up their own bodies to gain offspring and a long line of descendants. For the similarity between this passage and the Tānūnaptra ritual, see Proferes (58).

IV.24.4–5: The pile-up of pāda-initial *ā́d ī́d* ‘just then, just after that’, beginning with 4d and marking every pāda in 5, conveys the quick succession of events, but switches abruptly from battlefield to sacrifice. The *néme* constructions of 4d and 5a make it clear, however, that despite the change in venue the same antagonists are in play. Note also the similarity of the predicates of the two *néme* constructions: *indrayante ... indriyám yajante*. This is the only occurrence of the denom. *indrāya-* in the RV and it may have been created to serve as a foil for the second VP.

IV.24.4: The ‘winning of the flood’ (*árṇasātau*) presumably refers, as Ge etc., point out, to the battle to control water resources, esp. dwelling places near water.

Most tr. give a more neutral rendering of *āvavṛtranta*, but my “have rolled together” is meant to convey the deeply entwined, rough-and-tumble quality of pitched battle (and, perhaps, the actual rolling of chariots onto the battlefield).

IV.24.5: The bridge between 4d and 5a has already been noted, as well as the change of scene. However, I think the competition visible in vss. 3–4, as well as in vss. 6–7, continues here by other, sacrificial, means. To get Indra on their side in battle, the men must perform not only a correct sacrifice, but a better sacrifice. One puzzling feature of this vs. is the presence of pf. optatives in pādas b and c. As I have discussed elsewhere (2008 “Women’s Language in the RV” [Ged. Elizarenkova], 2009 “Where Are All the Optatives” [*East and West*]), the pf. opt. has a curious distribution and, to some extent, a particular sociolinguistic profile, and it is not clear what *riricyāt* (b) and *ví paprcyāt* (c) are doing sandwiched between a pres. (*yajante*, a) and a presential perfect (*jujoṣa*, d), esp. because the four pādas are otherwise unified by the opening *ā́d ī́d*. What sets bc off from a,d is the fact that the subjects in b and c are ritual offerings, *paktīḥ* ‘cooked food’ and *sómaḥ* respectively, as opposed to the personal subjects (at least in my interpr.) of a and d. What optative function do these verbs express (and do they express the same one): necessity (‘should’), potentiality -- more certain (‘would’) or less certain (‘might’) -- possibility (‘could’), or desire (also ‘would’)?

My surmise is that the vs. depicts the beginning and end points of the successful sacrifice that one of the groups of competitors mounts. Pāda a contains a general description of the sacrifice and implies its start. In d the unnamed subject, in my opinion Indra, shows that the sacrifice has been successful by enjoying the offered soma (the bull, *vṛṣabhám*). The pādas in between describe the qualities of the better sacrifice that our side performs, in contrast to our opponents, and I interpr. the optatives as expressing near-certain possibility. I therefore take *riricyāt* in b as meaning ‘would leave behind, succeed’ not in a temporal sense (the cooked food is the next course after the offering cake) but in an evaluative one: cooked food is just better than a *puroḷāś-*. (This seems a generally agreed upon interpr.; see esp. Ge’s n. 5b.) (Note however that the *puroḷāś-* was probably not eliminated but supplemented, since the successful sacrificer not only cooks cooked food for Indra in 7b but also roasts grains.)

Even more important is the mere presence of soma in c. The pāda implies that the other side consists of non-pressers (*ásuṣvīn*), who therefore cannot offer soma to Indra. Soma is our trump card and leaves our competitors out in the cold, as it were. (Notice that the non-pressers contrast with the *súṣvi-* in 2d. For *súṣvi-/ásuṣvi-* as well as *paktī*, see also the next hymn IV.25.6–7.)

My tr. of d differs in an important way from Ge (/WG). They take *yájadhyai* as an infinitive complement to *jujoṣa* with *vr̥ṣabhá-* as object, though with two different interpretations. Ge's "dann beliebt man einen Stier zu opfern" (so also Keydana, Inf., p. 289, with disc.) assumes that the *vr̥ṣabhá-* is a sacrificed animal. WG correctly point out that \sqrt{yaj} does not take an acc. of the offering but of the god who receives the offering and therefore take *vr̥ṣabhá-* as referring to Indra. The subj. in either case must be an unidentified priest or the like. In my view, by contrast, Indra is the unnamed subj., who receives pleasure from the 'bull' soma -- note that *vr̥ṣabhá-* is an epithet of soma, as well as of Indra and other gods. The *yájadhyai* is a purpose inf. without object, as it generally is (cf., nearby IV.21.5 *íyarti vācam janáyan yájadhyai* "(who) raises his speech, giving birth to it in order to carry out the sacrifice").

As Old notes, there are 3 forms of \sqrt{ric} in this hymn, all pf.: pf. part. *ririkvāṃsaḥ* (3b), pf. opt. *riricyāt* here, and a plupf. (probably) *arirecīt* (9c). They are all somewhat marked in form and have different contextual meanings. Old remarks "der Dichter liebte dies Verb." Certainly he seems to be making a point with it.

IV.24.6–7: The battle/sacrifice trajectory of vss. 4–5 is wrapped up in vss. 6–7, where it is made clear (esp. in 6d) that if you want Indra's help on the battlefield, you had better perform a good sacrifice, not stinting on the soma.

IV.24.6: The "wide space" theme returns from 2d. The laconic expression of the recipient of wide space in 2d (the dat. *súṣvaye* 'for the presser') is expanded into a dat. pronoun with rel. clause attached: *asmai ... yá itthéndrāya sómam uśaté sunóti*. Since the first part of this hymn ends with vs. 7, vss. 2 and 6 are symmetrical and this echo forms a small internal ring. But there are no other signs of ring composition.

The tradition (as well as modern ed. and tr.) is split on whether to read *ávivenam* (HvN, Müller ed., Sāy., Lub, and AiG I.1.333) or *ávivenan* (Auf. ed., Pp, Gr, Ol, and Ge); see Old's disc.

Quite apart from the actual form is its referent. Old, who accepts the *ávivenan* reading, takes c with d and identifies Indra as the referent of *ávivenan*. Although this fits better with the similar expression in the next hymn (IV.25.3) where gods are (or may be) the subject, here I think Ge is correct that c belongs grammatically with the rel. cl. in ab, and the referent of *ávivenan* is the soma-presser subject of that rel. cl. This nominative is resumed by the appropriate correlative prn. *tām* in the acc. in d.

IV.24.7: The *súṣma-* that Indra confers on the sacrificer is the 'explosive force' that will help him (both Indra and the mortal aided by him) prevail in battle.

IV.24.8–10: For my interpr. of these vss., see publ. intro.

IV.24.8: Both Ge and Old suggest that *íghāvā* should be read as neut. **íghāvad* on the basis of similar (but not identical) X.27.3 *yadāvákhyaṭ samáraṇam íghāvad*. This seems unnec., since nom. sg. *íghāvā* makes fine sense, and, as anyone who has tangled with it knows, X.27 is a very strange hymn. The only factor in favor of the emendation is the fact that *íghāvā* is the only representative of the -van-stem *íghāvan-*; otherwise we find the -vant-stem *íghāvant-* (3x). But -van- and -vant-stems coexist elsewhere -- cf.

maghāvan(t)- -- and eliminating the *-van*-stem here doesn't seem sufficient reason to make the emendation. (Note that WG do not follow Ge and Old, and Ge allows for the possibility of the nom. in his n. 8a.)

Ge suggests that the subjects of a and b might be Indra's wife. Scar (616 and n. 882) has her as the subj. of b but not a. After surveying the various possibilities in his n. he says, with remarkable understatement, "Das Dramolett lässt Raum für verschiedene Interpretationen." I think it likely that Indra is the subj. of the first two pādas both because the word *pātnī* is only introduced in the 3rd pāda and because one wonders whether a woman would be in a position to survey the battlefield.

In d "whetted sharp by the soma pressers" (*nīśitam somasúbhiḥ*) continues the theme of the previous vss., that getting Indra on one's side in battle requires plying him with soma at the sacrifice.

IV.24.9: As noted in the publ. intro., this vs. introduces the vocabulary of commerce, which is otherwise little represented in our texts (though see AVŚ III.15, called by Whitney "For success in trade") and therefore difficult to get a handle on. My interpr. differs on some important points from the standard (Old, Ge, WG, Kü [425]). In pāda a most interpr. take *kānīyaḥ* 'lesser' as referring to the price and *bhūyasā* 'greater' as what is being bought. But price is always in the instr.: see in the next vs. 10ab *daśábhiḥ ... dhenúbhiḥ*. Therefore, grammar requires us to conclude that, rather than complaining that the potential purchaser offered too little for that very valuable asset, Indra himself, Indra is protesting that the purchaser went for an inferior product (another god?) with too high an offer. In pādas b and c he further points out that the purchaser failed to take advantage of the chance to buy Indra (who therefore went away 'unsold' *ávikrītaḥ*) and to leave behind (/replace) the poor bargain he made in the first place.

As also indicated in the publ. intro., I take pāda d as an old saying encapsulating the wisdom of not wasting your money on a substandard item. The problem in this pāda is *vāṇām*, which ordinarily means 'voice, music' (see EWA s.v.). However, Ge tr. 'Handel' and suggests (n. 9d) that it is derived from *vaṇij-* 'merchant', which seems very plausible. That it is otherwise unknown in this meaning would not be surprising, given the specialized lexical level it inhabits.

IV.24.10: The big question about this vs. is the identity of the speaker. The standard view is that it is the poet Vāmadeva, who is putting Indra on sale temporarily, with the requirement that he be returned after his obstacle-smashing is done. I find this unlikely. How did Indra come to be possessed by Vāmadeva (*imám ... māméndram* "this Indra of mine")? Who is he hawking Indra to? Why has the scene changed from the domestic one of Indra and his wife to, presumably, the ritual ground? My own suggestion, albeit somewhat tentative, is that the speaker is Indra's wife. Who would have a better right to call him "this Indra of mine"? Moreover, there seems no good reason to introduce his wife as an emphatic actor in vs. 8 and then drop her out of the story. Since the three vss. seem unified in tone and theme, common sense suggests that they should take place in the same location with the same actors.

The standard tr. take c with d, e.g., Ge: "Wenn er die Feinde erschlagen hat, so soll er ihn mir zurückgeben." The problem with this is that it assumes an anterior, specifically future anterior, value "(will) have smashed" for the intensive subjunctive

jānghanat. For this reason I attach it to ab. However, it may make more sense to allow the future anterior and make the *yadā* clause the prior condition for the return in pāda d. In this case the tr. would be “Who buys this Indra of mine with ten cows? When he [=Indra] will have smashed the obstacles, then will he [=buyer] return him [=Indra] to me?”

IV.25 Indra

IV.25.1: On the phraseology of c, see comm. ad IV.16.11. Though Ge (/WG) supply ‘day’ with *pāryāya* there seems no reason not to take it with the two immediately preceding datives.

Pāda d contains two functionally parallel expressions in two formally different guises: the loc. absol. *sāmiddhe agnau* “when his fire has been kindled” and the nom. bahuvrīhi *sutāsomaḥ* “possessing pressed soma / he whose soma has been pressed.” A parallel bahuvrīhi to the first expression is also attested: *iddhāgni-* (2x).

IV.25.2: The last part of d, *kavāye ká ūtī*, is somewhat unclear. Ge, flg. Sāy., identifies the *kavī-* as Indra, but this seems unlikely. If *kāḥ* refers to the mortal worshiper (as seems likely, given the referents of the preceding *kāḥ*’s), he would not ordinarily be supplying help to Indra, and though Indra is sometimes called a *kavī-*, that is comparatively rare (though see the next hymn, IV.26.1) and not found in such a context. Other passages with *ūtī* and an overt or covert form of the copula (vel sim.) generally have the god as subject. Cf. nearby IV.23.2 ... *kād ūtī, vṛdhé bhuvac chaśamānasya* ... “Will he be here with help for the strengthening of the one who has labored” (sim. IV.29.1, 4; 31.1), but as was just noted, changing the referent of *kāḥ* in the middle of this insistent sequence (9 occurrences of *kāḥ* in 3 vss.) is undesirable. My ‘joins together’ is an awkward attempt to avoid that.

IV.25.3: On *āvivenam* / *āvivenan* see comm. ad IV.24.6. Assuming the *-am* form is correct here, it would be an absolutive in *-am*. In IV.24.6 the same expression *mānasāvivenan* / *m* qualified the mortal worshiper (acdg. to most -- see disc. there). Here it seems to qualify the gods. However, it is just possible that as an adverbial absolutive it could refer to the mortal worshiper, represented by *kāsya*: “the pressed soma plant of which (mortal), never losing track in his mind, do ...” The fact that until this sentence the mortal had appeared in the nom. *kāḥ* could contribute to the somewhat mixed construction.

IV.25.5–6: For *suprāvī-* / *duṣprāvī-* see comm. ad I.34.4.

IV.25.6: See Old’s disc. of *kévalā* as neut. pl., in agreement with Gr.

On *prāśu-* / *(śū-)* see comm ad VIII.31.6; 32.2, 16.

IV.25.7: On *sakhyám sám √ gṛ* see IX.86.16.

IV.26–27

These are the famous hymns devoted to the stealing of soma from heaven. Unfortunately they are very obscure in many details, esp. IV.27. The myth and these hymns are treated in detail by U. Schneider, *Der Somarab des Manu* (1971).

IV.26 Indra (1–3), Praise of the falcon (4–7) [=Soma-theft]

As indicated in the publ. intro., I believe the whole hymn is spoken by Indra, against the Anukramaṇī but with Ge (/WG).

IV.26.1: In this vs. Indra identifies himself with the three most resonant RVic words for poet: *īṣi-*, *vīpra-*, *kavi-*. I am not sure why. The named beings in the 2nd hemistich, Kutsa and Uśanā, belong in the same mythic complex, along with Indra; see in this Indra cycle IV.16.10–12. Kakṣīvant is one of the most accomplished RVic poets (I.116–26), and his collection immediately follows that attributed to Kutsa (I.101–15). But again I don't know why he claims identity with Kakṣīvant, esp. because only one hymn of Kakṣīvant's is even possibly dedicated to Indra (the maddening I.121). However, note the borrowing of phraseology from Kakṣīvant in IV.27.4 (see comm. ad loc.). His desire to claim both Manu (first man) and the sun (most prominent heavenly body) is more understandable.

In c I take *ny īṇje* not as a 1st sg. present but as the homophonous 1st sg. injunctive to the 6th cl. pres. *īṇjá-* and therefore as preterital.

IV.26.3: Atithigva is often associated with Kutsa, sometimes with both as enemies of Indra (I.53.10, VI.18.13, VIII.53.2), sometimes, as here, as his clients.

IV.26.4–7: The 3rd sg. act. impf./injunc. of *√bhr* is the “hero” of this, the mythological portion, of the hymn: *bhārat* (4d, 5a), *bharat* (6c), *abharat* (7a).

IV.26.4: The first hemistich sounds like a formal eulogistic opening, though I don't know of any parallels elsewhere (quite possibly for want of looking).

IV.26.5: My interpr. depends on reading (as sometimes elsewhere) *yádi* (‘if’) as *yád *ī* (‘when it’), despite the short *i* before a single consonant. It is possible that *yád *ī* was changed redactionally, to match *yádi* in IV.27.3. A heavy syllable in fourth place in an opening of four is standard (see Arnold 182, 188), and in particular the sequence of four shorts in *√(bhārad) yádi / vír á(to)* seems quite unusual, while a long vowel before the caesura and preceding a break of two shorts is metrically more favorable -- though given the many metrical departures in this hymn (see, e.g., the next vs.), this is not a strong argument.

IV.26.6: Three of the four cadences in this verse are bad (b, c, d).

ījīpín- (2x) must be closely related to better-attested *ījīpyá-* (6x), which also has Iranian cognates, e.g., Aves. *ərəzifīia-*. Werba bei EWA, s.v., suggests that it is a contamination with *ījīśín-*, which seems a promising suggestion.

Goto (1st Kl, 171–72, flg. Wackernagel) argues that the thematic middle *dádate* is synchronically distinct from *√dā* ‘give’ and means ‘keep safe’. My ‘hanging onto’ represents a compromise between such a rendering and ‘take’, the standard sense of medial (*ā*) *√dā* (see 7a *ādāya*).

IV.26.7: The obj. *mūrā(h)* is fem. and presumably matches the gender of the parallel object *ārātīḥ* ‘hostilities’ in the preceding pāda.

IV.27 (323) Falcon (1-4), Falcon or Indra (5) [=Soma theft]

Note the periodic punctuation by *ádha* (1d, 3a, 4d, 5a) -- and some play with that word: *ádhi* 4b, *adhva...* 5c, *ándhah* 5b, maybe *adīyam* 1d; also the preponderance of *a-* init. preverbs, *ánu* 1a, *ápa* 2a, *abhí* 2b, *áva* 3a, 3c.

The perfect *jabhāra* is found in vss. 2 and 4 (cf. the pres. stem forms to \sqrt{bhr} in the preceding hymn, vss. 4–7). It thus frames the central vs. 3, which could then be an omphalos. That vs. is certainly confused enough to qualify and captures the crucial moment of the grabbing of soma. But since vs. 3 consists of a series of subordinate clauses whose main clause is found in vs. 4, it cannot be syntactically isolated into a free-standing omphalos.

IV.27.1: The major problem with this vs. is pāda d, with a nom. *śyenāḥ* and the 1st sg. *nír adīyam*. At first glance this seems to require that the speaker be the falcon, not Soma. The problem, and various previous suggested solutions, are discussed at length by Old. He rejects an emendation to 3rd ps. **adīyat* (rightly in my view) and suggests instead that we must indeed take the speaker to be the falcon. In this he is followed by Ge (/WG). However, this makes problems with pāda c (“a hundred metal fortifications guarded me”), where the 1st ps. speaker should surely be Soma, whose release from captivity in heaven is the subject of the hymn, not the falcon, who flies freely around. Moreover, it seems unlikely that we would care about the long-standing knowledge that the falcon has (ab), whereas again Soma’s knowledge is relevant. A somewhat ad hoc, but still satisfying (to me anyway) solution was suggested by Thieme (Gedichte, 41), who takes *ádha śyenāḥ* as an abrupt nominal clause -- “Then the falcon!” -- expressing the surprise advent of the bird in Soma’s place of captivity. The 1st sg. verb can then have Soma, the speaker, as its subject.

IV.27.2: There is general agreement that Soma speaks this and the following vss.

I read *ápa* twice in pāda a -- first with *jabhāra* ‘he carried away’, but also with *jōṣam* ‘against (my) will’ (despite Old’s rejection of the latter). This phrase would be constructed on the model of *ánu jōṣam* ‘following my will’. That it was not against Soma’s will is explained by the next pāda, where he boasts that he is stronger and braver than the falcon, implying that without Soma’s agreement the falcon could not have borne him away. The standard tr. take *jōṣam* positively -- so that in conjunction with the neg. *ná* the whole is negative: “he did not willingly carry me away.” In this reading it is the falcon’s will or pleasure that is at issue (e.g., WG “Nicht hat der mich ja zu (seinem) Gefallen fortgebracht”). I don’t understand what this would convey: that the falcon was forced on this mission by someone else? that once the falcon saw Soma, he didn’t want to take him? Thieme (Ged.) by contrast takes it as the guard’s will (“mit Zustimmung [des Wächters]”), but we would surely need more signaling than the bare noun *jōṣam* to indicate that the *jōṣa-* belongs to a character we haven’t met yet (presumably Kṛṣānu of 3d). Moreover, it suggests, only to reject, a scenario involving a corrupt prison guard that seems to me out of place.

Pāda c is almost identical to 26.7, with the addition of the adv. *īrmā* ‘still, quiet’ (on which see comm. ad VIII.22.4). It qualifies the left-behind *ārātīḥ* ‘hostilities’; cf.

V.62.2 *īrmā tasthūṣīṭh* ‘standing still’, with the adv. limiting a fem. pl. participle. See Narten’s sim. tr. (Kl Sch. 69).

Since *puraṃdhi-* is fem., and the nom. sg. *śūśuvānaḥ* in d is masc., Puraṃdhi cannot be the subject there -- rather the falcon, as the standard interpr. agree.

IV.27.3: This is a difficult vs. to construe and to interpret. What we have to go on is the syntactic skeleton the poet has provided us: a triple *yád* construction, with *yád* in Wackernagel’s position in the first three pādas, and in the fourth a nominative NP that serves as the subject of the clause introduced in c. The main cl. is then provided by 4ab (so, generally, Old, Ge, WG, Schneider).

Within this structure pādas a and cd are relatively straightforward internally; it is b that causes further problems, esp. in the sequence ... *yád yádi vāta(h)*. First, note the mirror-image phonology of the opening: *ví yád yádi v(...)*. Ge takes *yádi vā* simply as a strengthened ‘or’, and similarly Schneider (16 n. 35) states that *yádi vā* is simply equivalent to *vā*. The tr. of Ge and WG reflect this stripped-down interpr. of the sequence *yád yádi vā*, reducing that complex just to “oder als ...” I find this exceedingly unlikely. The sequence is simply too tricky and too unprecedented to be a long-winded way of saying ‘or’, and anyway RVic poets do not resort to pleonastic expressions to fill out their pādas: 11 syllables is too tight a space as it is. I think we must give *yádi vā* its lexical weight “or if” and assume that the poet is introducing a bit of doubt about some details of the story. This doubt coincides with the switch from 3rd singular reference to the falcon to unidentified 3rd plural: “they carried” (*ūhūḥ*), and these are likely to be connected. The two almost identical statements about Puraṃdhi (26.7c and 27.2c) simply state that she “left behind” hostilities. Neither says she was carried away, much less by whom -- so how Puraṃdhi departed remains unclear, and pāda b seems to be reminding us of that.

The similarity of *vāta(h)* (Pp. *vā átaḥ*) to the word for ‘wind’, just met in *vātān* (2d), has been generally remarked on. Ge (n. 3b) tentatively suggests a haplology: *vāto vātā(h)*, that is, *vā átaḥ vātāḥ* ‘or the winds from there (carried off Puraṃdhi).’ I see the temptation, but I think *vāta(h)* is only a word play and does not conceal a form of ‘wind’. Among other things, the winds in 2d were not carrying anything away; they were overtaken by the falcon, who was.

IV.27.4: The adj. *ījipyá-* = Aves. *ərəzifiia-* (and other Iranian forms). I favor the old notion that it contains a Caland form of ‘straight’ (*ījú-*, etc.) + **pt-ya-*, with a zero-gr. of \sqrt{pat} ‘fly’. See EWA s.v., though Mayrhofer considers the etym. “unsicher.” (The lack of *-iya-* readings, indicating that the root-final laryngeal was lost without leaving a trace, might be problematic, but *-iya-* and *-ya-* adjectives tend to become confused.) Scar. (318) suggests rather a derivation from $\sqrt{pā}$ ‘go’, but the existence of such a root is in question. (On extra-Indo-Iranian cognates and the formulaic status of the word see Watkins, Dragon 170–72.)

If we accept the transmitted *indrāvataḥ*, it would most likely be an acc. pl. and refers to the companions of Indra who will ritually prepare the soma for him to drink. This interpr. is reflected in the publ. tr. However, the form has been much discussed and much emended (see Old’s detailed disc. and Ge’s n. 4a [“eine alte Crux”]). I understand the urge to emend -- which for me stems less from any problems construing the transmitted form within the frame of the passage than with the ill-formed simile, *ná*

bhujuúm, that ends the pāda. This clearly refers to the Aśvins' rescue of the hapless Bhujyu, whom they pull out of the sea and bring home (e.g., I.116.5 *yád aśvinā ūhāthur bhujuúm ástam*). As the simile is constructed in our vs., the simile particle *ná* precedes the only word in the simile, though ordinarily *ná* follows the first word of the simile. This is in fact less of a problem than I used to think: Ge (n. 4a) attributes this position to what he considers a common transposition of X *ná* to *ná* X at the end of a verse line, and he seems to be correct that the simile-marking *ná* is blocked from pāda-final position. See comm. ad VIII.76.1, X.21.1, 111..

If we were to read du. **índravantā* (note the short second vowel, found in this stem when the penultimate syllable is heavy), the adj. could identify the Aśvins (they are so called in I.116.21, the hymn just cited with Bhujyu), and we would have a fully formed simile: “as the two companions of Indra [=Aśvins] (did) Bhujyu.” Note that I.116 is a Kakṣīvant hymn, and the poet of these Soma-stealing hymns (IV.26–27) lays claim to the Kakṣīvant mantle in the very first vs. of this sequence (IV.26.1 *ahám kakṣīvām̐ íśir asmi vípraḥ*). The Bhujyu saga figures prominently in the Kakṣīvant cycle (I.116.3–5, 117.14, 119.4). As Old discusses, this emendation has been suggested previously, both as is and via **índra(/ā)vantā+u*. Besides sense and the structure of the simile, another strong factor favoring the emendation is meter: the transmitted text produces a highly irregular break (– – ~), but reading **índravantā* would yield a standard break – ~ –. I therefore am now inclined to alter the publ. tr. to “... brought him from the lofty back (of heaven), just as *the two companions of Indra (the Aśvins) (brought) Bhujyu” – although I remain somewhat uncertain because I don't know how the corruption would have happened. I do not think it was by way of the addition of *u* to the dual ending *-vantā*, since this would be an odd position for *u*. Perhaps it was clumsily altered to match *brható* in the next pāda; Sāy. at least analyses the form as an abl. modifying *brhatāḥ ... snóḥ*. It is also possible that it was modeled after *parāvataḥ* in the corresponding vs. in IV.26, namely 6, which also treats the bringing of the soma from heaven to earth, begins *ṛjīpī śyenāḥ* matching our *ṛjīpyāḥ ... śyenāḥ*, and contains a form of *√bhr̥* (*bharat*, like our *jabhāra*).

The expression *patatrí ... parṇám* “winged feather” strikes me as odd -- it is generally birds that are winged, not their feathers. I therefore propose to read **patatrí(y)asya* ‘of the winged one’ rather than *patatrí asya*. (This actually requires no change to the Saṃhitā text.) Grammatically this is not difficult: *-(i)ya-* adjectives are made regularly to *-a-*stems, including *-trya-* to *-tra-*, like *mitríya/mitrya-* to *mitrá-*, which also has *mitrín-* beside it. There's a *pátatra-* ‘wing’, beside *patatrín-*, so there's no reason why not to have a *patatríya-*. Gen. *patatríyasya* then modifies *véḥ*. It is worth noting that a number of occurrences of *patatrín-* modify *ví-*.

IV.27.5: The first occurrence of *mádāya-* was omitted in the publ. tr., which should read “... Indra will aim it for drinking to exhilaration.”

As noted in the publ. intro., *práti√dhā* is an idiom meaning ‘aim (an arrow)’, and the word play is surely meant here, given the immediately preceding vss. about Kṛṣānu and his arrowshot.

IV.28 Indra, or Indra and Soma

IV.28.1: The construction in b -- *apáh ... sasrútas kah*, lit. “made the waters flowing,” with an acc. pl. adjectival root-noun cmpd. modifying ‘waters’ -- is a little odd. In this type of periphrastic causative context with $\sqrt{kṛ}$, we expect a complement infinitive. In fact compare the completely parallel VII.21.3 *tvám indra srávitavā apás kah*, with an infinitive built to the same root \sqrt{sru} . There is no obvious reason for the different constructions. Perhaps it anticipates the *akṛnoḥ* NOUN-ACC ADJ-ACC constructions in 4cd, where there exist no alternative infinitive possibilities. (The publ. tr. “made the waters flow” rather than “... flowing” is meant to avoid an interpr. that Indra thawed or otherwise liquified something solid. It should, however, be “flow together,” to represent the *sa-*.)

IV.28.2: Ge plausibly suggests that the “great deceit” is Śuṣṇa. See his cited parallels.

IV.28.3: My “house of no exit” is a somewhat loose way of rendering *durgé duroṇé* “house of difficult going.” I think Ge is correct in interpreting this as the grave.

Note b #*purā* c #*purī*.

IV.28.4: On the construction with *akṛnoḥ* see disc. ad vs. 1.

There is a slight syntactic clash between ablative *vísvasmāt*, appropriate to a comparative (“lower than all”), and the superlative *adhamān*, which should have a genitive (“lowest of all”).

The dual verbs of cd (*ábādhethām ámṛṇatam ... ávindethām*) must have Indra and Soma as subjects, as the larger context (vss. 1-2) and the explicit Vāyav Indraś ca construction in 5b show. But the immediate context (vs. 3) falsely suggests Indra and *Agni* on the basis of 3a.

IV.28.5: Note #*indraś ca* here and #*indraś ca(krām)* in 2b. Also, presumably we get a reverse Vāyav Indraś ca construction here (*indraś ca soma* rather than standard *soma indraś ca*), so that Indra can be pāda-initial, as in 1b, 2b.

There is clear (and fairly unusual) enjambement over the hemistich boundary: ... *ūrvām ásvyam góḥ / ádardṛtam*, with the obj. of the verb in c found in b. There is disagreement about the disposition of the rest of the 2nd hemistich. The publ. tr. takes *ápihitāny ásnā* as obj. of *riricáthuḥ*, with *tatṛdānā* a dual pf. part. with acc. pl. *kṣāḥ* as its obj. As indicated in the publ. intr. I identify those things “covered over by the stone” to be the waters and cows that Indra released (in the Vṛtra and Vala myths respectively). This fits with the use of *ápihita-* in 1d. Ge also takes *ápihitāni* as obj. of *riricáthuḥ*, but the last three words, *kṣāś cit tatṛdānā* as a simile (marked by *cit*, which he considers a possible simile marker, and I don’t). For him *tatṛdānā* is passive and *kṣāḥ* is nom. sg. WG take *ápihitāni* as a second obj. of *ádardṛtam*. The obj. of *riricáthuḥ* is, for them, *kṣāḥ* (acc. pl.), which also serves as obj. of *tatṛdānā*, which they consider dual and transitive, as I do. Their interpr. of cd follows that of Kü (216, 424), and it is certainly grammatically possible. However, I do not understand what it would mean to release the dwelling places (Kü) or the parts of the earth (WG) (e.g., WG “Ihr habt die Erdteile freigelassen”), whereas the release of the pent-up waters after drilling through the earth fits the Indra mythology perfectly.

The cadence of b is bad and would be improved by reading **tāṭṛdānā*, as Arnold suggested and Old seems tentatively to accept.

IV.29 Indra

IV.29.1: I take *mandasānāḥ* in a prospective or purpose sense, like the caus. *mandayádhyai* in 3b, because Indra is surely not getting exhilarated while on his journey.

IV.29.2: The phrase *ābhīrur mānyamānaḥ* is troublesome. The other three occurrences of *ābhīru-* all mean ‘fearless’, but “thinking himself fearless” is an odd thing to say about Indra. For one thing, he’s such a mighty warrior that there seems no need to assert fearlessness about a creature for whom fear would be unthinkable (though recall his flight at the end of I.32, where he’s compared to a “frightened falcon” [*śyenó ná bhītāḥ* I.32.14]). For another, X *mānyate* (*/-yamāna-*) expressions almost always identify the content of the thought as being the wrong idea about oneself or someone else. But surely it’s not that Indra *thinks* he’s fearless but is actually terrified. For this reason I take this *bahuvrīhi* to mean ‘not having -- that is, not producing -- fear’ (in others). This is a sense that Gr allows (‘nicht furchterregend’), though for a different passage. The point here would be that Indra is coming to the sacrifice to have a jolly soma drink-up with the pressers, thinking he’s just a regular guy, not a terror-inspiring deity. Note that he “produces fearlessness” (*kárat ... ābhayam*) for us in the next vs.

IV.29.3: I take *vājayádhyai* not to the denom. *vājayá-* ‘seek prizes’, but the primary *-āya-* formation *vājāya-* ‘rouse’. It shows accent shift in the *-dhyai* infinitive, just as *mandayádhyai* does.

If we maintain the transmitted text, I do not know what to do with *prá* in b, apparently interrupting the expression *júṣṭām ánu ... díśam* (though this interruption is mitigated by its immediately flg. the caesura). *√mand* does appear with *prá*, though not terribly often, so it might go with the infinitive. Or one can supply a verb of motion: “(he goes / send him) forth to make him reach exhilaration.” Ge cites similar *pūrvam ánu prá díśam* in I.95.3 and also suggests that an impv. parallel to *śrāvāya* should be supplied. However, the most likely solution is that endorsed by Old: to read *pradíśam*, a reading already found in Gr.

IV.29.5: Ge (/WG) construe the part. *bhejānāsaḥ* one way or another with *syāma* (Ge: “... möchten wir ... deines himmlischen Reichtums teilhaftig werden”). This is certainly possible. However since this leaves *te* in b somewhat orphaned and since “may we be yours” is a frequent sentiment (e.g., II.11.13), I have separated the participle from *syāma*, respecting the hemistich boundary.

IV.30 Indra

IV.30.2: Ge takes *vísṣvā* with *kṛṣṭáyah*, but in this sandhi situation it would have to represent a corruption of *vísṣvāś*. See Old for disc. of this form. I take it as a neut. acc. pl.

IV.30.3: The neg. scope problem potentially posed by *viśve ... nā* -- “all did not” vs. “not all did” -- can be easily solved. See my 1997 “Vedic anyá- ‘another, the other’: syntactic disambiguation,” where I establish that the independent negative *nā* cooccurs with *viśva*-only with the corporate entity *viśve devāḥ*, enforcing a meaning “all did not.”

As disc. ad X.94.3–4, the sense/function of the rare adverbial instr. *anā* is difficult to pin down. In that disc. I suggest that it has come to mean ‘evidently, clearly’ from situations in which a previous action provides the evidential basis for the statement containing *anā*. In our passage I think *anā* shows a usage from which the later sense has developed: the previous action is here expressed by the *yád* clause in c. On the evidence of this power displayed by Indra in c, all the gods have the sense not to fight him. I will keep the publ. tr. “because of this” for *anā*, though, to bring it in line with the other occurrences of the adv., it could be altered to “Obviously not even all the gods (altogether) attacked you, Indra, since by night you passed over the days ...” (For ‘attacked’ rather than ‘fought’, see comm. ad vs. 5 below.)

Reading **yūyudhuḥ* would provide a better cadence. Old tentatively endorses this.

The sense of pāda c is not entirely clear, but there are several factors that allow us to close in on the meaning. First, it seems to provide the reason why the gods did not fight Indra. Further, *ātiraḥ* recurs in vs. 7, and it seems unlikely that the two identical verbs would have substantially different meanings. Finally, as far as I can tell, all occurrences of *nāktam* are temporal (‘by night’); when poets want to refer to night as an entity or entities they use *rātrī*-, *aktú*-, or *kṣāp*-. (On *uśāsā nāktam* in VIII.27.2, see comm. ad loc.) Therefore tr. like Ge (/WG) that take *āhā nāktam* as parallel objects (e.g., Ge “als du Tage und Nacht abgrenztest”) cannot be correct. As indicated in the publ. intro., I think that this pāda concerns Indra’s destabilization of time when he steals the Sun’s wheel -- a myth that will be glancingly related in the next ṛca. What exactly is going on I don’t know -- it sounds as if Indra fast-forwards or skips over days during the night, perhaps because the Sun can’t make his normal daily circuit and therefore daytime is significantly abbreviated and no longer lasts as long as night?

IV.30.4–6: All three vss. of this ṛca begin with *yātra*. I take them all as subordinated to vs. 3. Ge [/WG] and Klein (DGRV I.432) take the main clause for all three vss. to be 6c, but Indra’s help for Etaśa does not seem sufficiently significant to carry the whole ṛca. Ge (/WG) take all three *yātra* as ‘where’, not ‘when’, but what location they are thinking of I don’t know.

I do not know what to do with the *utā*’s in *yātrotā* in 4 and 6, but assume they are there to indicate the additive nature of the sequence of subordinate clauses. Sim. Klein (DGRV I.431–32). It would be better if the first one were in vs. 5, not vs. 4.

IV.30.4: *√muṣ* takes a double acc.

IV.30.5: It seems curious that in vs. 3 it is emphatically stated that the All Gods did not fight Indra, and yet here he is fighting them -- in what I consider the same circumstances, namely the theft of the Sun’s wheel. This problem clears up if we render both *yuyudhuḥ* in 3b and *āyudhyaḥ* in 5b as ‘attack’. The gods were reluctant to attack him after he showed his power over time and the Sun, but he did not hang back in attacking them though he was alone.

IV.30.6: The Pp reads *prá āvaḥ*, which would make it a main clause verb and pāda c the resolution of the subordinated *yātra* clauses. This reading is followed by Ge (/WG) and Klein. My reasons for rejecting this interpr. were given above, and with Old I interpr. the ambig. *prāvaḥ* as *pra-āvaḥ*, a subordinated verb.

I do not understand what is going on in ab. Who is the mortal who benefits from Indra's deed -- perhaps Kutsa? And what action does *āriṇā(h) ... sūryam* describe. The root $\sqrt{rī}$ means 'flow' (etc.), and the nasal pres. means 'let flow', but in certain contexts, often hostile, it can have the developed meaning 'dissolve' or 'let overflow'. I've tr. 'let slip' here, but without certainty. Does it mean 'let flow' -- that is, let the Sun continue on his way after the incident with the wheel? or is the sense more sinister: the Sun slips away from its usual path? The presence of the Sun's horse Etaśa doesn't help, as Indra gives aid to Etaśa even when he is attacking the sun.

IV.30.7–12: After a ṛca on stealing the Sun's wheel there follow two more on the related myth of Indra's crushing Dawn's cart. The myth is actually confined to vss. 8–11, with the two outer vss. semi-independent. WG (nn. to vss. 10, 11) suggest a radical interpr. of this sequence: that Uṣas here is the name of the female leader of a matriarchal tribe who opposed the territorial expansion of Vāmadeva's group. This seems reductive in the extreme, and since the Uṣas vss. immediately follow the treatment of the stealing of the Sun's wheel, a cosmic rather than local interpr. imposes itself. They must also explain why this local matron is called "daughter of Heaven" (*duhitāram divāḥ*) twice (8d, 9a): acdg. to them, it is her boast, which the poet jeers at. The only advantage of this unlikely interpr. is that it accounts for the localization of her crushed cart at the Vipāś river (acdg. to WG, where she lived), but this hardly seem sufficient.

IV.30.7: In c *ātra* seems to correspond to the three *yātra*'s in the preceding ṛca. The point seems to be that even after all the energy Indra expended in his fight with the sun (and the gods), he still has a lot of *manyú-* left to apply in the Uṣas incident.

The repetition of *ātiraḥ* here was already noted ad vs. 3. Note the similarity of the pādas: 3c (*yád*) *āhā ... ātiraḥ* / 7c (*ātr*) *āha ... ātiraḥ*, though *āhā* 'days' in 3 and the particle *āha* in 7 are unrelated, the echo is surely deliberate.

I supply "lying there" with Dānu, because in two of the four singular passages containing *dānu-* what the Dānu does is 'lie': I.32.9 *dānuḥ śaye*; II.12.11 *dānuḥ śáyānam*. So, although 'overcame' is probably part of the semantics of *ātiraḥ*, the lit. sense 'pass over' fits having the prostrate enemy as the object.

IV.30.8–21: These vss. are tr. by Hoffmann (Injunk., 184–86).

IV.30.8: The juxtaposition of *vīryām ... paúmsyam* "manly and masculine" with *stríyam* "woman" brings the gender polarization into sharp relief. There is certainly no sense that it's unseemly or unsporting to hit a girl!

IV.30.9: The voc. *indra* was omitted in the publ. tr., so "o Indra" should be inserted at the end.

IV.30.12: *vibālī-* is almost universally taken as the name of (another) river, though the name (and indeed the word) shows up nowhere else. By contrast, in the first ed. of the dictionary (1872) MonWms. takes it as an adj. *vibālya-* “passed beyond a state of youth, in full vigor; swollen (said of a river),” though in the 2nd ed. (1899) it is simply the fem. river name *vibālī-*. WG take it not as a toponym but with the sense ‘mit breiter Öffnung’. An attributive adjective would certainly be preferable to an unlocatable placename. Although WG give no explan. of their interpr., it rests on earlier discussions, whose details can be recovered in EWA (s.v.). EWA considers it the name of a river (produced from the confluence of the Vipās and the Śutudrī), but derived from a word with the same (or similar) sense as WG ascribe to it: ‘dessen Ufer weit auseinanderstehen’, an early MIA word with *-bāra-* representing *pārā-* ‘far shore’. See the lit. cited there.

IV.30.16: This son of the unwed maiden appears to be the same one who was being eaten by ants in IV.19.9 (in the same Indra cycle); see comm. there. These tantalizing snippets are all we know about the story.

IV.30.17: WG render *asnātārā* as “ohne dass sie untertauchen,” flg. Tichy (Nom.Ag. 107). It seems to me to be pushing the syntax to render a negated agent noun as the equivalent of negative purpose clause (though in her comment Tichy simply says that it’s “gleichzeitig,” presumably with the time of the main verb), though it is also the case that we don’t know much if anything about swimming in ancient India.

IV.30.19: The blind man and the lame one also figure in IV.19.9, along with the son of the unmarried woman; see vs. 16 above. The blind and the lame form a pair elsewhere in the RV, e.g., I.112.8; II.13.12, 15.7; VIII.79.3.

The infinitival phrase *nā ... āṣṭave* is rendered in the publ. tr. “not to be equalled,” though it lit. means “not to be reached/attained.” The lit. tr. implies that no one can actually receive Indra’s favor, but I think the point is rather that favor such as Indra’s cannot be deployed by anyone else (that is, any other deity) -- hence the adjustment in the English. On this interpr. see Hoffmann (185). Ge supplies “with words” (i.e., “not to be obtained [with words]”), presumably meaning that no poet can describe the extent of Indra’s favor.

IV.30.23: Note the rare future subjunctive *karīṣyā(h)*, otherwise found only in corrupted form in I.165.9; see comm. there, as well as Old on our passage.

IV.30.24: The voc. *ādure* is a hapax, and there is no agreement about whether it is a PN or an attributive adj. and whether it is addressed to a deity (possibly Indra) or a human (possibly a patron). Nor does it seem likely that any definitive answers can be obtained, given the stark paucity of evidence. I have therefore tr. it as a PN as the line of least resistance, and I think it quite unlikely that it is addressed to Indra: would relatively low-level gods be giving things to Indra, and do gods ever receive, rather than give, *vāmā-*? I tentatively assume that it is the name of the/a patron. Although this vs. is not technically a dānastuti, it occupies the position in the hymn where a dānastuti would be found, with mention of the human patron, and in opening out to a range of (mostly minor) gods, the mention of a mortal would not be amiss.

On the hapax *kārūlatī* see EWA s.v.

IV.31 Indra

According to Old the hymn is in *ṛcas*, but Ge asserts that it consists of 3 verse pairs and 3 *ṛcas*. Ge concedes that vss. 1–3 occur as a unit in SV, VS, and AV, but argues that the content and form of the verses speak for a different division: vss. 1–2 are questions, vss. 3–4 both begin with the same word, and vss. 5–6 concern the relation between Indra and Sūrya. After this verse, again on formal and thematic grounds, he considers the rest *ṛcas*. Despite these considerations, Old’s view seems correct. That both 3 and 4 begin with *abhī* (used in two different senses) is scarcely remarkable; note the verbal concatenation between *ṛcas* in the next hymn, IV.32.3–4. Moreover, vs. 3 fits more comfortably with the preceding vss.: The question “with what help?” (*kāyā ... ūtī*) posed in vs. 1 is answered in vs. 3 with the assertion that Indra will be our “helper with help” (*avitā ... ūtibhiḥ*), a satisfying finale to a *ṛca*. Vss. 5–6 do indeed involve Indra and Sūrya, but vs. 4 provides the lead-in to Indra’s journey continued in vs. 5.

IV.31.5: In b I read *āhā* not *ā hā* (a change only in the Pp. not the Saṃhitā text), and analyze this sequence as *ā + āhā*, the neut. pl. of ‘day’ (found also in IV.30.3 and 33.6; cf. also *viśvāhā* in 12a below). This is one of only two supposed exx. of the particle *ha* with long vowel; the other one (V.41.7) also follows *ā* and is susceptible to the same analysis. The *ā*-final version of *ha* is *ghā*, which shows Brugmann’s Law and velar outcome before original **o*, acdg. to Mark Hale. Note that *ha* only once elsewhere occurs after the preverb *ā* (VIII.9.18 *ā hāyām ...*). (In fact an analysis *āhāyām* “this one through the days here ...” is also possible in VIII.9.18, though I did not so analyze it there.) By contrast *ghā* is found fairly commonly after *ā* (I.30.8, I.48.5, etc.).

“Along the slope of your intentions” (*pravātā ... krātūnām*) means that the journey to our sacrifice is an easy one because it is in accord with Indra’s intentions. Why this should be like coming by foot (*padéva*) is not entirely clear: the journey is so easy that it can be undertaken on foot? pleasant pedestrian rambles generally involve taking an easy downward path? Neither of these seems particular applicable to Indra’s travels.

When *sácā* occurs with a loc., it generally lacks lexical value and simply signals a locative absolute -- as in the common expression *suté sácā* “when (the soma) is pressed.” I think that is the intention here, in the phrase *sūrye sácā*: it is a temporal expression, “when the sun (rises)”; cf. I.135.3 and comm. ad loc. I have here included a lexical tr. “in company with” because I think *sácā*, with lexical value, needs to be supplied or understood in the next vs., 6c, for which see disc. below. However, I would now be inclined simply to tr. here “I have taken my share at sun(rise).”

IV.31.6: The purport of this verse is something of a puzzle. I think the point is that the journey undertaken by Indra in vs. 4 has finally brought him here, with both his battle-lust and his equipment on full display, in order to drink soma with the ritualists (including the “I” of the speaker). Cf. nearby IV.29.2, where Indra presents himself in a non-intimidating way (or so he thinks) and “becomes exhilarated along with the heroes who have pressed the soma.” Here his arrival is at sunrise, and “I” have a share in the soma along with Indra at that time. In order to make sense of 6c, we need to understand/supply *ābhakṣi* from 5c (as Ge [WG] do also). Although Klein (DGRV II.129) thinks the two

ádha's in c have different functions, the pointed parallel structure of that short pāda -- *ádha* LOC *ádha* LOC -- makes that conclusion quite unlikely in its strong form -- though I think it is the case that the formal parallelism conceals a functional distinction (different from the one suggested by Klein). The question is how to construe the locatives, and it is here that the *sácā* in 5c comes into play. As I noted apropos of that pāda, the *sácā* there seems just to signal that the loc. *sūrye* is a functional loc. absol. In our pāda c there is no *sácā*, but I think it should be understood. On the one hand, it again (silently) marks *sūrye* as a loc. absol.; however, with *indre* I suggest it has lexical value (as it likely has in the two occurrences of *tvé sácā* in the next hymn [IV.32.3c, 4a]), indicating that "I" take my share in Indra's company. What I am suggesting is that a non-overt *sácā*, supplied on the basis of its occurrence in the previous vs., has two different functions in a single pāda, a pāda whose structure suggests that its parts should be rigidly parallel. This is not sufficiently conveyed by the published tr. -- I am not sure that English is up to conveying it -- which I would now emend to "(I have taken my share) now in (company with) you, now in (company with) the sun (i.e., at sunrise)."

IV.31.7–8: My interpr. of the structural relationship of these two vss. and of the internal structure of vs. 8 differs considerably from the standard. Because of the parallelism of the openings of these vss., both with *utá smā*, I think that there should be two parallel clauses. But vs. 7 is a *hí* clause with accented verb (*āhúh*), whereas the only verb in vs. 8 is *maṃhase* in pāda c. I am also puzzled by the *pári* in 8a, which is difficult to construe with the rest. There is no *pári* √ *maṃh* elsewhere, and *pári* is in any case not situated where we would expect a preverb in tmesis. WG tr. valiantly "du schenkst ... ringsum," which works in a pinch but I find it unsatisfying. I suggest instead that pāda a contains an abbreviated form of a common formula containing both *pári* and *sadyah* and a verb of motion (or equiv.). Cf. in IV: nearby IV.33.1 *pári dyām sadyó apáso babhūvuh*; IV.45.7 *yéna sadyáh pári rájāmsi yātháh*; IV.51.5 *pariprayāthá bhúvanāni sadyáh*. And elsewhere, e.g., I.115.3 *pári dyāvāprthivī yanti sadyáh*; I.123.8 *ékaikā krátum pári yanti sadyáh*; I.128.3 *évena sadyáh páry eti pāṛthivam*; III.58.8 *pári dyāvāprthivī yāti sadyáh*; V.47.4 *divás caranti pári sadyó ántān*; VII.5.7 *vāyúr ná pāthah pári pāsi sadyáh*; VII.75.4 *pāñca kṣitīh pári sadyó jigāti*. Given the remarkable number of such collocations, I find it difficult to believe that our poet is not evoking this formula. Since much of this hymn concerns Indra's journey, it would be contextually appropriate. That vs. 9 asserts that no hindrances can obstruct Indra supports the journey theme. Then, by my interpr., pādas bc constitute the main clause for vss. 7–8.

IV.31.10: The "hundred forms of help" found at the end of the first ṛca (3c) recurs here at the beginning of this ṛca, following the two more challenging ṛcas in between.

IV.31.11: The publ. tr. rather carelessly followed Ge's "zu grossem, glanzvollem Besitz," but *maháh* is of course not a dat. like *rāyē divítmate*. It should either be rendered as a gen./abl. of *māh-*, hence "for the heavenly wealth of/from a/the great one" (so, e.g., tentatively Scar 45), or as the adv. *maháh* (see esp. Old, Kl. Schr. 729–30 [=ZDMG (1901): 270–71] on *mahó rāyē*), hence "greatly for heavenly wealth." As Old points out, this phrase is very similar to V.79.1 *mahé ... rāyē divítmatī*, with a real dative *mahé*. The purport of the two expressions is probably the same. I would now follow Old's adverbial

interpr. Indeed this very phrase is found a number of times: IV.31.11, V.15.5, 43.1, VIII.23.16, X.61.22, 76.2, and in all cases the *mahāh* should be interpr. as adverbial, though the less punctilious “for great wealth” probably captures the intended sense just as well.

The tr. of *divítmate* also needs to be revised. I now tentatively accept the analysis of *divít-* and its deriv. *divítmant-* as *div-ít-*, a root noun cmpd containing the root *√i* ‘go, come’. The word is rendered inconsistently in the publ. tr., as ‘heaven-bound’ in I.26.2, ‘heavenly’ here and X.76.6 (though adjacent *divít-* is tr. ‘heaven-bound’), and ‘heaven-bright’ in V.79.1. This inconsistency reflects the weakness of both standard analyses of this formation, either as an *-ít-* stem with a marginal suffix or as a cmpd. Neither explan. is particularly compelling. For the former, see, e.g., AiG II.2.322, Re EVP 3.78–79 [ad V.79.1]; for the latter, e.g., Thieme (ZDMG 1961.100 = KISch 176), AiG II.2.935 (Nachtr.), EWA s.v. *dyáv-* (p. 750), and extensive disc. by Scar (44–46). The idea goes back at least to Wackernagel (Sb. Berl. 1918; see Re op cit.). In this particular case, since the wealth is presumably coming from heaven, not going there, a lit. tr. would be “greatly for wealth coming from heaven,” but “... for heaven-sent wealth” would be more idiomatic. The *-mant-* suffix seems pleonastic, as AiG II.2.877–78 points out, since the hapax *divít-* and *divítmant-* appear both to be adjectives in the same meaning and are found adjacent to each other in the same case in the one passage in which *divít-* is found (X.76.6). The reason for *-mant-* rather than *-vant-* is likewise unclear (see AiG II.2.882, 891).

IV.32 Indra

IV.32.2: The stem *citrín-* is a hapax, and it is not clear what the fem. pl. referents are. Ge suggests ‘battles’. On the basis of the fem. pl. phrase in 5, *citrābhiḥ ... ūtībhiḥ* I tentatively supply ‘means of help’; note that *ūtībhiḥ* appeared at the end of the previous vs., 1c.

IV.32.3: Ge takes *ójasā* as belonging to the enemy and providing the content of their boast: “der sich mit seiner Stärke grosstut.” But since *ójasā* is almost always pāda-final no matter what part of the vs. it belongs with and since Indra’s *ójas-* is usually what is referred to, I take it as Indra’s.

The comparative *śásīyas-* occurs only twice in the RV, once in a very slangy passages referring to a woman (V.61.6), in a usage that does not illuminate this one. Context in our passage favors the rendering ‘more numerous’ (so also Gr, Ge), given its contrast with *dabhrébhiś cid* “with only a few.” The question is how to get from the positive *śásvant-* ‘each and every, one after another, successive, recurrent, continual’ to a comparative ‘more numerous’. The English expression “they just keep coming, more and more” might be the clue. WG incorporate the literal sense of *śásvant-* but seem not to render the comparative: “die der Reihe nach erscheinenden.”

See disc. of *sacā* ad IV.31.5–6.

IV.32.10: The rel. prn. beginning pāda b, Samhitā *yā*, is ambiguous: it can stand for *yā* (neut. pl. and presumably picking up immed. preceding *vīryā* in the main cl.) or *yāḥ* (so Pp.) (fem. pl. and presumably anticipating *pūro dāsīḥ* in c). Neither is syntactically

satisfying: if it has *vīryā* as its antecedent, as normal syntactic practice would expect, it doesn't make sense in its clause: Indra didn't "break into" his manly deeds. If it refers to the fortresses, it works fine with the verb in its clause but has no direct connection to the main clause. I assume the ambiguity was meant and loose subordination was the reason. I render it as a general subordinator to avoid both bad choices.

IV.32.11: Pāda b is most likely an embedded relative -- a very rare syntactic phenomenon in the RV -- because the most likely reading of c is that the singers sing (a) "at the pressings" (*sutēṣu* c), not that Indra performed his deeds *sutēṣu*. However, it is just possible that *sutēṣu* could mean "in (the exhilaration of) the pressed soma drinks" and therefore continue the rel. cl. in b. In any case in this casually assembled Gāyatrī hymn, a syntactic violation does not seem too critical.

IV.32.13: The use of *śásvant-* here seems unconnected to the comparative *śásītyams-* in 3a. Since vs. 13 is found also in VIII.65.7, it may simply have been imported from elsewhere; the structure of this hymn is very loose and seems to have been cobbled together from standard tropes and formulae.

IV.32.15: The phrase *matīnām ... stómaḥ* "the praise-song of our thoughts" refers to the actual poetic composition that stems from our thoughts. In RVic discourse every step from 'mental inspiration' to 'thought' to 'song/poem' can be used to refer to the composed or formulated praise for a deity. Here we see the progression expressed.

IV.32.16: On the accent of *ghásah* see III.52.3.

IV.32.17: For *vyāti-* (RV 3x), despite Mayrhofer's apparent skepticism (EWA s.v.) I follow Re's deriv. (EVP 15: 37) from *vi√yam* with a presumed development 'hold separate/apart' → 'pair', though Re doesn't deign to indicate what the semantic channel might be.

khāṛī-, 'a measure of capacity', is found only here and much later in the sūtras and Classical Skt, but it appears to be widespread in MIA. See EWA s.v.

IV.32.20: *mā dabhrām* ("not a little!") is a prohibitive lacking a verb, though an aor. injunc. can easily be supplied of course: **dāḥ* matching the impv. *dehī* in the positive expression preceding it. Or alternatively s-aor. **bhāḥ* (i.e., **bhār*) to match flg. *bhara*.

IV.32.22: This very obscure dānastuti begins by presenting itself as an explicit formal praśasti (eulogistic praise), an important genre in later times and, in my opinion, the missing link between Rigvedic praise poetry and Classical kāvya (see Chap. IV in my *Rigveda between Two Worlds*), with the annunciatory verb *prā ... śaṃsāmi*. I think this high-style opening is meant as a deliberate contrast with the bawdy nature of the gift praised.

As noted in the publ. intro. I consider "the two brown ones" (*babhrū*) found in all three vss. of the dānastuti (22–24) to be the breasts of a woman given to the poet as a gift from his patron (a not-uncommon gift).

In c the poet playfully warns the patron not to stint on cows on the grounds that he's already given him something else. The expression is quite condensed. s

IV.32.23: This is the most difficult vs. of the sequence and has given rise to multiple contradictory, not to mention ludicrous, interpr. -- among which my own may be numbered (although I certainly think it's better than eyeballs). Note the two *-ká-* forms (*kanīnaké(va)*, *arbhaké*), indicating slangy, low-register speech and quite possibly associating it with women's language. (For disc. see my 2008 "Women's Language in the RV" and 2009 "Sociolinguistic Remarks on the Indo-Iranian *-ka-Suffix: A Marker of Colloquial Register.") If the gift is really a woman, then evoking women's language would make sense.

On *vidradhá-* 'undressed, without clothes' see EWA s.v. As for *drupadá-* 'post', AV VI.63.3 *ayasmáye drupadé* "on a metal post" shows that the post need no longer be wooden (despite *dru-*), just as "plastic glasses" does not strike an English speaker as odd or contradictory. As I said in the publ. intro., I think the post refers to the woman's slender body, with two very prominent breasts, an ideal of a woman's body also encountered in Classical Skt. lit. The breasts are personified ("little baby-dolls") and invested with some autonomy as they move about during sex. Crosscultural parallels in sexual slang could surely be found.

[IV.33–37 JPB]

IV.38 Dadhikrā

The middle vss. of this hymn are introduced by repeated *utá sma* (5, 6, 8, 9), varied by *utá syá* in 7. As noted in the publ. intro, this sequence of 'and's adds to the sense of speed.

IV.38.1: Although the Anukramaṇī takes Heaven and Earth to be the deity of this vs., the unidentified duals must rather refer to Mitra and Varuṇa, as also in vs. 2. This is clear from IV.39, where Mitra and Varuṇa give Dadhikrā to the Purus (2cd, 5cd).

The publ. tr. doesn't accurately reflect *sánti* in pāda a. The tr. should read "Since there are earlier gifts ..."

The form *nitośé* is much disputed. Gr identifies it as a 3rd sg. to the thematic pres. *tośate* (otherwise unaccented), but not only is there a perfectly fine *-te* 3rd sg. (*tośate* 4x) while a *t*-less 3rd sg. would be anomalous, but given the full-grade we would expect root accent (**nitośe*). Old vacillates but displays a weak preference for a 3rd sg. unreduplicated perfect, and Ge, who does not comment, appears to follow him ("... ausgeschüttet hat"). Despite this scholarly pedigree, this solution appears to me to have little to recommend it: non-reduplicated perfects are quite rare. Gotō (1st Kl, 167–68) also vacillates: if it's a verb it's a non-redupl. pf. Or it might be the loc. of a noun *nitośá-*; this appears to be the view represented in WG. There does exist a them. noun *tośá-*. Re also tentatively suggests a locative but "à nuance semi-infinitive," tr. "pour être déversées." I find Re's interpr. appealing, though, as often, somewhat cavalier about grammar. I would like to take the form directly as a dative root noun in infinitival usage, but we should probably expect **nituśé*. It may have been adjusted to match the grade of *tośá-*, or the loc. ending -*é* of the them. noun may have been reinterpr. as a purpose dative. One might expect the

hapax *naitośá-* to provide some help, but it is only found in the impenetrable Ásvin hymn X.106.6, which appears to be written in code. In any event, the point of the hemistich seems to be that Mitra and Varuṇa provided gifts to Trasadasyu, who then redistributed them to his subjects the Purus in an appropriately kingly way.

IV.38.2: On *-niṣṣídḥ-* see comm. ad III.51.5 and on *puru-niṣṣídḥ-* comm. ad I.10.5. It is possible here that *-niṣṣídḥ-* ‘tributes’ are owed to Dadhikrā rather than provided by him. Cf. Klein (DGRV I.420) “to whom many tributes are due”; this would fit better with *carkṣtyam aryáh*.

For *pruṣita-psu-* ‘frothing at the mouth’ (< ‘having spraying breath’), see EWA s.v. *psu-*.

IV.38.3: There is sharp difference of opinion about the sense of *medhayú-*: is it built to *medhā-* ‘wisdom’ or *médha-* ‘ritual offering, meal’? The former is the choice of Ge, Re, Mayr (tentatively, EWA, s.v. *medhā-*), while Gr, Scar (188), and I opt for ‘meal’. (WG’s rendering “wie ein Opfertier Verlangender” must also reflect this *médha-* stem.) The ‘meal’ interpr. fits well with *gr̥dhyantam* ‘greedy’, and it also makes more sense to me that a horse would want something to eat rather than wisdom. Moreover, if Dadhikrā represents the sacrificial horse in the Ásvamedha, there is a (sinister) echo of the name of this sacrifice: the horse is unwittingly seeking his own sacrifice. It can, of course, also be a pun.

IV.38.4: This vs. contains a number of puzzles, though the general purport -- the success of Dadhikrā in battles and raids -- is clear.

gádhya- elsewhere (3x) modifies *vāja-* ‘prize’, but that precise word can’t be supplied here, because it is masc. and *gádhyā* must be neut. pl. Nonetheless, battle spoils or the like must be meant. Ge’s rendering of *gádhya-* as “bis an die Wagendecke reichende (Beute)” must rest on the later (sūtra) *gadhā* ‘Verdeck des Lastwagens’ (see EWA s.v.), but given the chronological gap and the fact that EWA considers the etym. of *gadhā* unklar, this seems unnecessary. Ge is consistent: the other occurrences of *gádhya-* he tr. ‘deckenhohe’.

I take *cáratī ... gáchan* as a periphrasis, “keeps going,” though the standard tr. take the two verbal forms separately. There is no way to tell.

The problematic form in this pāda is *sánutaraḥ*, about which there is no consensus even on what part of speech it represents. The uncertainty can be seen acutely in Mayrhofer’s changing approach to it. In KEWA (s.v. *sanutāḥ*) he tentatively decides to follow AiG II.2.596, 608, 698 in taking it as a comparative built to the verb stem *sanóti*, meaning ‘mehr gewinnend’ (an interpr. that goes back, one way or the other, to Sāy.). But in EWA (s.v. *sanutár*) he has changed his mind, attaching it rather to the adv. *sanutár* ‘away’, attributing its aberrant form to reinterpretation by this late poet, and citing Tichy (Nom. agen. 58–59), who suggests it’s a comparative to the adv. Both Ge and Re derive it from √*san* ‘win’, though in different ways: Ge’s tr. (“als bester Gewinner”) seems to reflect the comparative interpr. favored by Sāy. and AiG (though transposed into the superlative); Re (“gagnant”) explicitly suggests that it stands for **sánutra-*, formed like *tárutra-*, an interpr. that Gr also gestures towards. Old favors a connection with the adv. *sanutár*, as do WG (flg. Tichy), tr. “immer ferner wandelt.” My tr. reflects an analysis as

comparative agent noun to \sqrt{san} (“as one better at winning”), but I do not feel strongly about it. In fact, I would probably now emend my tr. to “keeps going further in (the contests for) cows”: the contrast between his hemming in the booty in a and himself going further in b would be thematically nice, and if I am correct about the meaning of d, the expansion of the horse’s wanderings further and further would be appropriate to what is expressed in d. But I am not certain that this question can be decided.

My interpr. of *āvirjīkaḥ* rests on Thieme’s (Unt. p. 40, n. 2): ‘an dem der Schaum hervortritt’. This image responds to *pruṣitāpsum* in 2c.

vidāthā nicīkyat recurs in AV V.20.12.

The last pāda is the most baffling of all. The second part of it, *pāry āpa āyóḥ*, is also found at I.178.1 (q.v.). The major question is the identity of *āpaḥ*: is it a form of $\sqrt{āp}$ ‘reach, acquire’, whether verbal or nominal (so Ge, WG); is it a derivative of *āpas-* ‘work’ (so Gr, Re; dubious EWA s.v. *āpas-*); or is it the nom. pl. of *āp-* ‘water’, used as an acc. (Old, Thieme, WG possibly [in n.]? I follow Thieme’s interpr. (Unters. 40–41), which sees “the waters of Āyu” as an expression referring to land habitable because it is well watered. If this phrase is essentially locational, then one might expect the preceding *tiró aratīm* to be as well: “across the *aratī-*.” Unfortunately, though Thieme’s general interpr. of *aratī-* I find persuasive, his tr. of this phrase “schneller als die Räder [seines Wagens]” is problematic, because I do not see how *tiráḥ* can mean ‘faster’. It is always otherwise a preposition/adverb. I therefore think Dadhikrā is being depicted as crossing the *aratī* and racing around “the waters of Āyu.” These two locational phrases may refer to the ritual ground, as Old suggests: the horse runs across the fire on the ritual ground and around the water vessels used for the sacrifice. Or, my preference, it can refer to the territory of the Ārya, which the horse traverses and thus, as it were, claims for his owner (much as the Ásvamedha horse does in his year-long pre-sacrificial ramble). What *aratī-* would stand for in this scenario isn’t entirely clear to me -- but since *aratī-* can mean ‘spoked wheel, circlet, circle’, I would tentatively suggest that the horse runs *across* a notional circle of land belonging to / claimed by / aspired to by the Ārya and then *around* the periphery of this circle to enclose it as Ārya possession. I would therefore now emend my tr. to “across the circle (of Ārya land), around the waters of Āyu.”

IV.38.5: The lexeme *ānu* $\sqrt{kruś}$ is later a semi-technical term for raising the hue-and-cry, which would be appropriate in this context.

There is a phonological echo of 4c *nicīkyat* in 5c *nīcāyamānam*, although the latter is to be analyzed as *nīcā+āyamānam*. The latter belongs to the marginal thematized pres. *āyate* to \sqrt{i} (see Gotō, 1st Kl., 92–97). There is one other occurrence of this medial part. in the RV, otherwise a few finite forms, some of which are ambiguous between subjunctive to the root pres. and indicative to a them. pres.

IV.38.6: The referent and construction of *āsu* require discussion. Ge (/WG) construe it with *prathamāḥ* (“first among these”) and supply “cows.” But this doesn’t make sense if the meaning is “desiring to run first among these,” because that conjures up a picture of the horse leading a stampede of cattle in a race -- surely not an ancient Indian sporting event or battle array! If the *āsu* is to be construed with the rest of its pāda, it should refer to the ranks of chariots in b (*śréṇibhī ráthānām*): *śréṇi-* is fem. and the image appears to be of Dadhikrā leading a charge of chariots, a far more likely scenario. However, I think

unaccented *āsu* is simply taking (modified) Wackernagel's position in the clause and should be construed with *ní vevetī* in b: the horse is bearing down on the females. (Note that *ní vevetī ... āsu* is found also in III.55.9.) Even so, I would not supply 'cows': although we are (too) accustomed to having (notional) cows as the goal of a hypermasculine animal in the ever-repeated formulae in Maṇḍala IX, where Soma the bull seeks cows in the form of milk, in fact Dadhikrā should be seeking mares, not cows, if this is about his desire to mate. However, if he is not seeking mates, but merely prizes, cows will do. (And note *cáratī góṣu gáchan* in 4b, where the cows are explicit.)

The sexual reading I suggest for ab may be supported by pāda c, where I follow Gr, Re, and WG (in n.) in taking *jánya-* as a member of a wedding party, not merely a man 'belonging to (one's own) people, Landsmann'. For *jánya-* in a wedding context, see AV XI.8.1–2. Here the comparison is presumably between the garland of the winner of the race and that of a suitor or groomsman at a wedding.

Ge and Re (EVP 15.163) render *kirāṇam* as 'rein' (Ge Zügel, Re rêne), flg. Sāy. (*āsyagataṃ khalīnam*), though Re appears to recant in his n. Neither etymology nor the other occurrences of the word (*not* so tr. by Ge, e.g.) support this interpr., and context also favors a version of 'dust' (so WG 'Stäubchen'). Note *kirate reṇúm* "scatters dust" in 7d, where the verb *kirate* echoes *kirāṇa-*.

IV.38.7: On pāda b (=VII.19.2) see comm. on the latter passage. As discussed there, although the standard tr. (here Ge, Re, WG) take *śúśrūṣamāṇaḥ* as a form of $\sqrt{\text{śruṣ}}$ 'obey' and tr. accordingly, it is simply a well-formed desiderative to $\sqrt{\text{śru}}$ 'hear / be heard/famed' (so classified by Gr, Wh [Rts], Heenen), with the mid. meaning 'desiring fame (for oneself), desiring to be(come) famed'.

Pāda c contains another unidentified fem. loc. pl., the pres. part. *yaṭīṣu*. Old, Ge, and Re take the referent to be the ranks of chariots from 6b, WG cows. I again prefer mares (though the other two are possible, depending on how it is construed). I take the *túram*, the acc. sg. of a root noun (see Schindler s.v., though I do not follow his interpr. of this passage), as an adverb. It forms a phrasal verb with $\sqrt{\text{i}}$ 'go hastily' (so approx. Old). In context *túram ya(tīṣu)* is a close match to the immed. following *turáyan*. It would be an even better match if the 2nd participle were *turaṇyán* (two forms of this verbal stem are found in the Dadhikrā hymn IV.40: *turaṇyatáḥ* 3a, *turaṇyati* 4a, and cf. also *turaṇyasát* 2b), and I am tempted to think that the poet had this stem in mind, but opted for phonologically similar *turáyant-* because his preferred form would have produced a bad break. Like *turaṇyasát* in 40.2, our form would be a deliberate deformation of the expected one to fit metrical circumstances, though our *turáyan* makes no morphological difficulties, unlike *turaṇyasát*.

IV.38.9: As Old points out, the contrastive lexemes *sám* $\sqrt{\text{i}}$ and *ví* $\sqrt{\text{i}}$ are juxtaposed in *samithé viyántaḥ*.

IV.38.10: The first hemistich contains a three-termed simile / frame construction, in which all three terms are realized in both simile and frame. This is fairly unusual.

Re nicely points out that the product of d would be what is later called the *madhuparka*, the concoction offered to an honored guest.

IV.39 Dadhikrā

As was noted in the publ. intro., the middle hymn of the small Dadhikrā cycle differs in style and content from the hymns before and after, presenting a formal praśasti-type encomium.

IV.39.1: The hopes expressed for “my” improvement and safety in the 2nd hemistich are presumably in service of my producing a good praise-hymn.

IV.39.2: I take *kratu-prā-* as referring to the poet’s own *krātu-* ‘intention, conception’ -- that is, producing the praise-hymn he has envisioned. So also Re and (partly) WG. Others consider it the *krātu-* of others or of all, and Old suggests an emendation to **kratuprāḥ* (gen.) because he thinks it more applicable to Dadhikrā than the poet. This cmpd seems to play off *kṛṣṭi-prā-* in the last hymn (IV.38.9b) in structure and phonology, but since it is found once elsewhere, as is the derivative *kratu-prāvan-*, both in the same hymn (X.100.12 and 11 respectively), it was not simply created here for the occasion on that model. That both words in X.100 refer to a poet/singer as here undercuts Old’s justification for his emendation.

Maurer (324–25) renders *puruvāra-* as ‘richly tailed’ (*vāra-* ‘tail-hair’ beside *vāra-* ‘favor, choice thing’), an interpr. also given by Scar (332) as an alternative (‘mit den buschigen Schwanzhaaren’). I find this appealing (as a pun, not as the primary reading) -- but ultimately unlikely: unlike the other hymns in this sequence, no other physical attributes or characteristics of Dadhikrā, save his swiftness, are described in this hymn.

In the 2nd hemistich *pūrúbhyah ... táturim* was mistakenly tr. twice in the publ tr. Eliminate the last phrase “as one triumphant for the Pūrus.”

IV.39.3: The interpretive problem in this vs. is caused by the length of a single vowel: *sá* instead of **sā* in d. The most obvious contextual reading of the pāda is that Aditi should act in concert with Mitra and Varuṇa, but of course Aditi is feminine and the pronoun is masc. Sāy. makes Dadhikrā the referent and is followed by Ge, Re, Maurer, and (tentatively, see their n.) WG. (Maurer in fact takes Dadhikrā also as the subj. of *kṛṇotu* in c and interprets *áditiḥ* as a masc. adj. ‘free of bond’.) Old discusses at some length and comes to a solution (in agreement with Hillebrandt) somewhat like Maurer’s: that the subject of both c and d is Dadhikrā in the guise of / identified with Aditi. I find all this unlikely; despite the syntactic problem, I think the subject of d has to be Aditi, who has a close natural connection with her sons Mitra and Varuṇa (unlike Dadhikrā). Masc. *sá* may simply show attraction to the adj. *sajóṣāḥ*, which is ambig. between masc. and fem. Or, in my opinion more likely, the pāda may have been incompletely adapted from one in which the referent of *sá* was Aryaman, the standard third member of this trio. No exact parallel is found in the RV, but cf. passages like I.90.1, I.186.2=VII.60.4 and, with Aditi, VI.51.5 and V.31.5. Another possibility, that the *sá* refers to the mortal poet favored by Aditi in c, was essentially closed off by Old, who persuasively argues that *sajóṣa(s)-* refers almost without exception to the relationship of gods with gods or, less frequently, mortals with mortals -- but not interspecies relationships, as it were.

IV.39.4: There are several ways to configure the syntax of this vs. The first question is whether the genitives in pāda a should be construed with the verb of b. But since

ámanmahi takes an acc. (*nāma*) in b, this seems unlikely (though Maurer does it that way), and the standard tr. (including mine) supply in pāda a a form of $\sqrt{k\bar{r}}$ ‘pay tribute’, which has dominated the hymn so far (1ab, 2a, 3a) and consistently takes the gen. (The aor. *ákārit* in the preceding vs. [3a], or rather the 1st pl. equivalent, seems the obvious form to supply.) The question then arises what the relationship between pādas a and b is. Ge seems to take pāda a as the main cl. and b as dependent on it (“... da wir ...”), presumably subordinated by the *yád* ending pāda a. Re seems to follow this interpr., though with some French curlicues of his own. This type of structure, with one clause ending right before the final monosyllable of a pāda and the next beginning with that monosyllable and continuing through the next pāda, strikes me as an unprecedented, or at least exceedingly rare, clause configuration. If one of these clauses is subordinated to the other, it should be the other way around, with pāda-final *yád* marking what precedes as a subordinate clause and b as the main clause. (Note that although *yád* is preceded by a lot of material, it all belongs to a single NP.) In this account the accent on *ámanmahi* would be due to its pāda-initial position. This is the way WG take it. My interpr. differs from both of these in making both clauses in the first hemistich subordinate to cd, expressing a temporal progression: after we have celebrated (aor.?) and brought to mind (aor.), then we call upon (pres.).

The relationship between the genitives in a, which are simply strung together without internal structure (*dadhikrāvna iṣá ūrjó maháh*), is clarified in the next hymn (IV.40.2d), where it is said that Dadhikrā(van) gave birth to *iṣ-* and *ūrj-*.

IV.39.5: Dadhikrā as *sūdanam mārtyāya* “making sweetness for the mortal” provides a ring with 1c *mām uṣāsaḥ sūdayantu*, though there the sweetening was attributed to the dawns. Since vs. 6 is a summary vs. and in a different meter, the 1/5 ring defines the outer edges of the poem.

IV.40 Dadhikrā

See the publ. intro. for a disc. of the style. The poet likes repetitive figures: 2a *bhariṣó gaviṣó* (b *iṣá[h]*); 2ab *duvanyasác*, (*chravasyád*) ... *turanyasát* (3a *turanyatáh* ... 4a *turanyati*); 2c *dravó dravaráh* (3a *drávatas* ... 3c *dhrajato*); 5 *śuciśád* ... *antarikṣasád* ... *vediśád* ... *duroṇasát* / *nṛśád varasád rṭasád vyomasád*; 5d *abjā gojā rṭajā adriḥjā*; see others noted below. The means he uses to produce these patterns are not always strictly grammatical and there are a number of hapaxes. Orthodox Vedic linguists have not always responded to the exuberant linguistic invention on display and have produced some plodding by-the-book analyses.

IV.40.1: As noted in the publ. intro., vs. 1 stands apart from the rest of this hymn and is a simple variant on 39.1: our pāda a telescopes 39.1ab; our b corresponds to 39.1c; and cd are an afterthought list in the genitive, attached loosely to the first pāda.

IV.40.2: Note pāda-initial *sátvā* (a) and *satyó* (c).

The first hapax we encounter is an easy one to account for (almost as though the poet was breaking us in slowly): *bhariṣá-* ‘seeking plunder’ is modeled on immed. flg. *gaviṣá-*; so Old, flg. AiG II.1.65. I think that *iṣáh* in the next pāda is also felt as part of this series, although it has a different grammatical analysis and function.

The very puzzling rhyming pāda-final *duvanyasāt* (a) and *turanyasāt* (b), also both hapaxes, have to be considered together, and the latter needs first to be put in context with likewise pāda-final *turanyatāh* (gen. sg. part., 3a) and *turanyati* (3rd sg. pres., 4a), both of which also have Dadhikrā as subject. Clearly the poet wanted to position this signature word (see also 38.7c and comm. thereon) in the same place in all 3 pādas, but since our verse is couched in the nom. sg., the grammatical form of the part. would be *turanyān*, which would not fit (and a finite form would be out of place, since the pāda already has a finite verb). He needs another syllable -- a point also made by Scar (565). How exactly does he get it? Unfortunately I don't have an altogether satisfactory answer, but I am tolerably certain that the standard answer given -- that this is a root-noun cmpd with final member from \sqrt{sad} -- is dead wrong. It is true that vs. 5 has an impressive array of *-sād-* compounds, but their first members are actual places, and, in the phrases in which they're embedded, sitting makes sense (e.g., 5b "a Hotar sitting at the vedi"). (For the function of these cmpds in the hymn, see comm. ad vs. 5.) Here the horse is on a dizzying breakneck run -- "sitting" in or among anything is exactly opposite to the spirit of the vs., no matter how attenuated "sit" might have become in the cmpd. And the supposed first member, *turanya-*, is simply not a place to sit. So the various tr. offered -- Gr 'in Raschheit wohnend', Ge 'der unter den Spitzenführern sitzt', Re 'qui siège parmi ceux qui foncent-en-avant', Scar 'unter die Vordringenden, Eifrigen, Eilenden setzend', WG 'der unter den Durchsetzenden Sitzende' -- despite the worthiness of their attempts, simply sound silly *and* significantly slow the onrush of this wonderful verbal picture. My own suggestion begins with the class of *-asānā-* participles or pseudo-participles like *sahasānā-* (on which see comm. ad IV.3.6). I suggest that our poet was familiar with such forms (of which there are quite a few in IV; cf. nearby *mandasānāḥ* IV.34.10, IV.35.6, etc.) and that he created an active participle on the model of these apparent middles: *mandānā-* : *mandasānā-* :: *turanyānt-* → **turanyasānt-*. Note that the accent matches that of the *-asānā-* forms; note also that act. *turanyasāt* fits a Triṣṭubh cadence, while a med. **turanyasānā-* would not. (The *mandasānā-* forms just cited are pāda-final in Jagatī.) Why *-sāt*? I would argue that it is the neuter in adverbial usage; an original nom. sg. masc. in *-sān* may have been readjusted to match the *-sād-* cmpds in vs. 5, but I am certain its origin was verbal.

Now what about *duvanyasāt*? First, it is clear that the *-anyasāt* part is completely dependent on *turanyasāt*. As we just saw, the latter belongs to a tight-knit *turanyā-* set, but there is no **duvanyā-*. The form is almost universally taken as a *-sād-* cmpd. based on *dúvas-* 'friendship', similar to the denon. *duvasyāti* 'offers friendship, gives friendly reception to'. Scar (566) explicitly presents it as a crossing of *duvasyā-* with *turanyā-*, "was bei der Experimentierfreude des Dichters von 4.40 akzeptable scheint." The whole cmpd is then rendered 'der unter den Bevorzugten ... sitzt' (Ge), 'qui siège parmi les privilégiés' (Re), 'unter die, denen Ehrung zuteil wird, setzend' (?) (Scar), 'unter den Huldigenden Sitzende' (WG). Such an interpr. requires pushing the semantics of *dúvas-* and its relatives rather further than seems reasonable, while a more lit. 'sitting among friends/those who offer friendship' would be a somewhat comical description of a racehorse. Further it suffers from the "sit" problem identified also for *turanyasāt*: the horse is galloping at top speed, not sitting in the bleachers with the grandees. I therefore reject the connection with *dúvas-* and take my cue from Gr's (ignored) interpr. 'in der Ferne weilend', 'dessen Wesen es ist, in die Ferne zu dringen' -- in other words to

associate the first member with *dūrā-* ‘far’, with a thematized zero-grade *duv-a-* beside pre-consonantal *dū-rā-* (and pre-vocalic full-grades *dāvīyas-*, *daviṣṭha*). A similar derivation must account for *duvasanāsaḥ* ‘going the distance’, vel sim. (e.g., Re ‘fonçant-au-loin, WG ‘sich ... entfernen’), in IV.6.10 (note, also in Maṇḍala IV), whose connection with *dūrā-*, etc., is generally agreed upon, though its morphology is unclear and also owes something to nearby forms. See comm. ad loc. It should be noted that Re in EVP 13 (1964) in his comm. to IV.6.10 suggests that our *duvanyasāt* contains the ‘far’ word: ‘qui demeure loin (en arrière)’ and is oppositional to *turaṇyasāt* ‘qui (va) rapidement (en avant)’, but in EVP 15 (1966), which contains his tr. and comm. to IV.40, he has substituted the tr. given above.

Pāda c produces a new set of problems, though happily much less intractable than those just discussed. Though *dravā-* is found only here in the RV (but common later), its derivation and meaning are straightforward. The next word, *dravarā-*, is a hapax, but transparently generated to the preceding *dravā-*. It may simply have the suffix *-ara-* (so AiG II.2.215) like semantically similar *patarā-* ‘flying’ (RV 3x), but I wonder, given the missing syllable in this pāda, described by HvN as “a rest at the 5th place” (that is, directly before *dravarā-*), whether *dravarā-* is meant to remind us of an allegro form of a compative in *-tara-*, slurred in rapid speech (though the accent would be wrong). Finally, another hapax, *patamgarā-*, owes its *-rā-* to preceding *dravarā-*, added to the well-established stem *patamgā-* (the aforementioned *patarā-* may also have played a part).

IV.40.3–4: These two vss. revisit the *utā sma* opening that characterized the middle vss. of IV.38.

There is also a concentration of intensives: 3d *tāritrataḥ*, 4c *saṃtāvīt^u vat*, 4d *āpaniphanat* -- appropriate to the ever-increasing speed and the intense repetitive movements of the horse racing to the finish line.

IV.40.3: The imagery of this vs. picks up the ‘flying’ (*patamgarāḥ*) of 2c.

In pāda a *drāvataḥ* both looks back to *dravó dravarāḥ* in 2c (all derived from the same root and with *dravarāḥ* metrically identical to and in the same metrical position as *drāvataḥ*) and forward to *dhṛájataḥ* in 3c (same metrical shape and position, rhyming forms).

Most tr. give *ānu vāti* additive semantics, ‘blows after, blows following’, but elsewhere this lexeme means ‘fan (flames)’ (I.148.4, IV.7.10, VII.3.2, X.142.4). Here I think it’s used figuratively, of the wind ruffling up mane/feathers. The standard tr. (including mine) supply ‘wind’ as the subj.

As both Ge and Old point out, the *parṇām* ‘wing, feather(s)’ in the simile lacks an overt correspondent in the frame, where we’d expect a body part of the horse. Old suggests quick feet or (from Ludwig) the mane. I assume the latter, and in fact I think that *parṇām* can be read with both simile and frame. In the simile *parṇām* is used as a collective for the bird’s feathers, in the frame metaphorically for a horse’s mane. (A Google search of “feathery mane” produces respectable results, including a snatch of John Keats, “the eagle’s feathery mane” [“Hymn to Apollo”], which shows the metaphor going the opposite direction.)

pragardhín- ‘greedy’ is appropriate for both the bird and Dadhikrā, as Ge also points out: cf. IV.38.3 *paḍbhír gṛdhyantam*.

I follow Schaeffer (Intens. 131) in taking *añkasām* as referring to the curving racetrack rather than, with some, as a curvy part of a horse. Since *āñkāṃsi* in the next vs. clearly refers to the racetrack, it's unlikely that a related word would have an entirely different referent in such close proximity.

IV.40.4: *kṣipañí-* is yet another hapax. The standard rendering is 'lash' (Ge: Peitschenhieb, Re: coup-de-fouet), and the publ. tr. simply follows this. WG suggest rather 'in Beschleunigung' (acceleration). Acdg. to their n. they take it as an Inhaltsakk., flg. Gaedicke. This is possible, I suppose: 'rushes a rush' → 'rushes a flinging' ('flinging' → 'acceleration'). But since the similarly formed *kṣipañú-* (IV.58.6) appears to be a physical weapon, a physical object seems likely here. Moreover, this vs. abruptly confronts us with the harsh constraints imposed on the horse by his rider -- "bound" in three places and whipped to frenzied running. The lash is an important part of this picture. Until now Dadhikrā has been presented as an untrammelled autonomous agent, but now the audience must suddenly reassess who's the boss, as it were. For the relationship between *√kṣip* 'fling, hurl' and whips, see V.83.3 *rathīva kāsayaśvān abhikṣipān* "Like a charioteer lashing out at his horses with a whip."

The two pādas of the 2nd half-vs. are nicely balanced, each ending with an intensive participle preceded by a preposition phrase headed by *ānu* 'following' (in the same metrical position). The two *ānu* phrases are contrastive, however: in c what is being followed is mental (*krátum*), in d simply the physical course (*pathām āñkāṃsi*). Given the horse's portrayal in the first half of the vs., we must now wonder whose *krātu-* Dadhikrā is following. For most of this series we would have assumed he follows his own -- he's been shown as an irresistible force of nature -- but 4ab show him under human control, confined in horse tackle and whipped, so we might instead wonder if it is his rider's *krātu-* that he is subject to.

IV.40.5: After the increasingly furious speed and frenzied activity in the last vss., culminating in the three intensives (two in the preceding hemistich, 4c, d), this vs. brings it to a shockingly abrupt stop. Eight cmpds ending in 'sit' (*-śād-*), with a sense exactly opposite to the preceding verbs of motion, decisively halt the movement and impose a state of rest, even inertia. The horse is gone; I explicitly do not think this series of phrases are meant to serve as predicates to an unexpressed Dadhikrā, *pace* Old and WG. Instead I think these are images of tranquility, of beings in their proper places, a vision of cosmic balance that has no need for the frenetic agitation we have just witnessed. The lack of finite verbs and participles -- all verbal notions being expressed by root-nouns in compound -- models this stasis. The *-śād-* cmpds give way in the final pāda to 4 *-jā-* 'X-born' cmpds. I am not entirely sure of their purpose, but I think they sketch (however incomplete) the sources of the entities in the cosmos. And we end with the single word *ṛtām* 'truth', which, perhaps, incorporates it all, beyond which nothing more is needed and no motion required.

IV.41 Indra and Varuṇa

The patterning of the names of the two gods is mildly interesting. It is fairly strict for the first half of the hymn but varies considerably in the 2nd. The first 5 vss. have a discontinuous dual dvandva opening the first pāda, either as voc. *īndrā ... varuṇā* (1a, 4a,

5a) or nom./acc. *īndrā ... vāruṇā* (nom. 3a, acc. 4a). The next vss. break the pattern, but the variation starts slowly: vs. 6 (the central vs. of the hymn) does contain the pāda-initial nom. dual dvandva but postponed until the 2nd hemistich (6c). But then vs. 7 omits the names altogether. The names reappear in vs. 8, but in the final pāda and not as a dual dvandva but as a pāda-initial discontinuous individual sg. acc. phrase: 8d *īndram ... vāruṇam*. The same individual acc. phrase (now continuous but not pāda initial) is found in 9a. Vs. 10 again omits the names. The final vs. returns to a discontinuous pāda-initial voc. phrase, but only in the b pāda and with singulars not dual: *īndra ... varuṇa*. Thus the 2nd half of the hymn appears to treat the gods separately rather than as a unit, but I see no reflection of this separation in the content of the hymn: the two do not display their individual characteristics more in the 2nd half.

IV.41.1–2: Note *āpa* ending 1a matched with *āpī* ending 2a. Also the accumulation of *-vant/-mant-* forms in these 2 vss.: *haviṣmān* 1b, *krátumān* 1c, *námasvān* 1d, *práyasvān* 2b.

IV.41.1: I am unhappy with the preterital value (‘has obtained’) universally assigned (incl. Kü 115) to *āpa* in pāda a, because it ill-fits the subj. *paspárśat* ‘will touch’ in d. My ‘will obtain’ is a wishful thinking, however, at odds with the grammar. I would emend to ‘obtains’, with a presential value that Kü (116) allows for some passages.

IV.41.2: With Re (EVP 7: 75) I take *vā* in d not as the disjunctive ‘or’, but the enclitic dual 2nd ps. prn. (*vā(m)*) before *m-*, though Old rejects this view. AiG III.477 also takes *vā* in this passage as the dual enclitic pronoun, but considers the *-m-*less form historically correct.

IV.41.3: The orphaned *tā* at the end of b is a bit surprising, somewhat reminiscent of the pāda-filling mechanisms engaged in by the epic bards, but not usually resorted to or needed by Rigvedic poets. This hymn is, however, not particularly topnotch work; compare Re’s comment “Banalisation des hymnes joints.”

I am inclined to read *yādī* as **yād ī*, even though the *ī* would not double an object (unless it is the unexpressed reflexive ‘themselves’) but would be pleonastic. The reading would be to avoid *yādī* ‘if’. The standard tr. indeed all render as ‘when’, not ‘if’.

IV.41.4: Re makes the nice point that *vṛkāti-* ‘wolfishness’ and *dabhīti-* ‘deception’ are respectively Indraic and Varuṇian offenses.

IV.41.5: Note the middle opt. *duhīya+t* remarked as act., like the impf. *āduha+t*.

IV.41.6: The first hemistich consists of a series of loc. absol., all depending on *hité* ‘set (as stake)’.

IV.41.7: My tr. departs in two ways from the standard. I take *prābhūtī* as instr. sg. (as it is in IV.54.3), not acc. du., and *gavīṣaḥ* as gen. sg. with *svāpī* (also suggested by Ge in his n.), not nom. pl. The *pāri* is somewhat perplexing. Re construes it with *prābhūtī* (“ô vous

qui dominez tout autour,” wrongly as a voc.); my “pervasive preeminence” is a version of this.

IV.41.8: Vs.-initial *tā* is ambiguous: it can represent either masc. du. *tā* supporting the immed. flg. enclitic *vām* (as so often; see my “Vedic ‘sá figé’: An inherited sentence connective?” *Historische Sprachforschung* 105 [1992]) or fem. pl. *tāḥ* (so Pp.) modifying *dhíyaḥ*. Or, my preference, both.

Although, strictly speaking, fem. *vājayántīḥ* belongs in the frame, modifying *dhíyaḥ*, in sense it fits better with the simile, since contests are where prizes are won. Moreover, see the next vs. (9d) where fem. ‘fleet mares’ (*raghvīḥ*) seek fame -- so female racehorses would be possible in the simile here.

In c *śrīyé* has double sense, belonging both to *śrī* ‘glory, splendour’ and to *√śrī* ‘mix’, as Ge and Re point out. The latter is appropriate to the simile, the former to the frame.

Acdg. to WG, the *gíraḥ* go to Indra and the *manīṣāḥ* to Varuṇa. Although, as was noted above, this is the first place in the hymn where the two names are singular, not associated as a dual, I think it unlikely that the different vocal products have different divine goals. Note that in the first half of the vs. the *dhíyaḥ* are going to both, and the repeated *manīṣāḥ* in the next vs. go to both as well. That *gíraḥ* immediately follows *índram* in 8d is not significant; In all but one instance (9a) of the two names, something intervenes.

IV.41.9: I read *vásvaḥ* twice, once as the complement of *joṣṭāraḥ* in the simile (“those who enjoy a good thing”) and once in the frame with *bhíkṣamāṇāḥ* (“seeking a share of the goods”). Contra WG, I take *śrávasaḥ* only in the simile, since this part of the hymn seems all about our acquiring possessions, not fame.

IV.41.10: Pāda c has been variously dealt with -- as parenthetical (Ge), as a separate clause (Re, WG), as the obj. of the verb in d (Old). All of these take the two gods as the subj. of the part. *cakrāṇā* (flg. the du. reading of the Pp., *cakrāṇau*), and all of them fail to render the medial sense of the part. Since the med. pf. *cakré* in 2a has clear medial sense (“made X his own”), the voice of this participle should not be ignored. I therefore read it as nom. plural (contra Pp. but compatible with Saṃhitā), modifying the 1st pl. subj. of ab. Again, we want to make the gods our own; this forms a ring with the same usage in 2a.

[IV.42 JPB]

IV.43 Aśvins

IV.43.1: As disc. in the publ. intro., the two forms of *katamá-* ‘which of 3+’ and the pl. *amṛteṣu* make it clear that these questions are applicable to all the gods, not just the Aśvins.

IV.43.2: Again, two occurrences of *katamá-* and one of the pl. *devānām* keep the widest possible range of choices for the answer to these questions.

On “Sūryā chose the chariot” and sim. expressions as an indication of the svayamvara (self-choice) marriage in the RV, see my “The Rigvedic svayamvara? Formulaic evidence” (Fs. Parpola 2001). Although, as just mentioned, the first half-vs. keeps the options open, the mention of Sūryā and the chariot immediately narrows down the choice of answer to the Aśvins (to a contemporary audience).

IV.43.3: This vs. gives the answer to the questions in 1–2: the Aśvins. As was just indicated, this answer was adumbrated by 2cd, but indirectly, via a mention of a chariot that could only belong to the Aśvins. Now we finally have a verse couched in the dual, but note that the name Aśvin (or Nāsatya) is not found; the dual is enough.

Pāda a gives an implicit answer to 2a -- *katamā āgamiṣṭhaḥ* “Which one (will be) the first to come?” -- by asserting that they “come right away” (*makṣū ... gāchathaḥ*). I don’t quite understand *īvato dyūn* “during/through days such as these”; I assume it indicates that even in our time (not merely in the mythological past), they still rush right here.

In b *śaktīm* is a slightly odd goal. Ge takes it as an infinitive, a use of the acc. of the -*tī*-stem I’d rather avoid. I think it means “comes into his ability/power” -- i.e., is immediately able to wield it at the necessary, decisive moment.

Pāda d, with the two forms of $\sqrt{\text{śac}}$ (*śacīnām ... śaciṣṭhā*) echoing *śaktīm* in b, seems to allow the possibility that the Aśvins have comparable, but different, abilities from Indra’s.

IV.43.4: On *ūpamāti-* as belonging to $\sqrt{\text{mā}}$ not $\sqrt{\text{man}}$, see comm. ad VIII.40.9. Note that WG (‘Zumessung’) must also derive it from $\sqrt{\text{mā}}$. The Aśvins’ *ūpamāti-* might be an answer to the question in 3d: which one is their best ability? This stem is also the obvious one to supply with the instr. fem. *kāyā*, which immediately follows.

I construe cd very differently from the standard tr., which take c and d as separate clauses (though Ge and Re both supply a form of the verb of d, *uruṣyā-*, in c). I take *kó vām* as an independent nominal cl., with the next cl. beginning with *mahāḥ* and running to the end (cf. the structure of ab, which also has a clause break in the middle of pāda a, with the 2nd cl. continuing to the end of b). The reason for this choice is that it is difficult to render c as a unity if *abhīke* is taken in its usual sense (hence the attenuations in the other tr.). Moreover, *abhīke* regularly appears with *uruṣyā-* and similar ‘make wide space’ expressions: VII.85.1 *tā no yāmann uruṣyatām abhīke* “Let those two give us wide space in close quarters on our journey,” X.38.4 *yó abhīke varivovít* “who finds wide space in close quarters...,” X.133.1 *abhīke cid ulokakṛt* “a maker of wide space even in close quarters.” Earlier in IV an ablative phrase like our *mahás cit tyájasah* is found adjacent to *abhīke*: IV.12.5 *mahás cid agna énaso abhīke* “(Release us) from even a great offense in close quarters, o Agni.” All of these parallels lead to the conclusion that everything starting with *mahāḥ* should be read with *uruṣyátam* in the next pāda, since *abhīke* patterns with *uruṣyā-* and the abl. phrase is connected with *abhīke*. However, I realize that the phrase in the publ. tr. “even out of great neglect” seems unconnected to the rest and makes little sense. I now feel that we need to interpr. *uruṣyátam* in two different senses. With *abhīke* it has its physical literal meaning ‘make wide space’, but with the abl. *mahás cit tyájasah* it has the extended sense ‘release, free (from)’. I would therefore emend the tr. to “Make wide space for us in close quarters, free us even from

great neglect/abandonment.” WG take *tyājas-* as ‘Lebensopfer’, but this must rest on the later notion of sacrifice as *tyāga-*. This concept is not really a part of the RVic ritual universe -- though see the single occurrence of *tyāgá-* in the RV in IV.24.3, where it refers to the abandonment of one’s body in battle.

IV.43.5: I take pāda b with c rather than a, because I think those two middle pādas depict (somewhat playfully?) the Aśvins’ chariot on an independent journey, coming towards them from the sea and, with the journey originating in a wet place, splashing them. I do not see any other easy way to construe the unusual pāda-final *vām* in b but as the goal of the goal-oriented verb *abhí vārtate* (note similarly pāda-final acc. *vām* in the next hymn, 44.2). As Ge’s parallels (I.139.3, 180.1) suggest, the likely subject of *pruṣāyan* is the chariot’s ‘wheel-rims’ (*pavāyaḥ*).

The verb in d, *bhurájanta*, is a hapax and much disputed. Probably the current standard view is that it is an enlargement of \sqrt{bhr} (see the standard tr., as well as EWA s.v. with further lit.). This view is supported by an apparently parallel passage in V.73.8d *pakvāḥ pṛkṣo bharanta vām* “they bring cooked foods to you” (or “cooked foods are brought to you”), very close to our *yát sīm vām pṛkṣo bhurájanta pakvāḥ*. But it is easy to imagine that a poet, adapting Aśvin phraseology to the simpler dimeter meter and confronting a baffling word like *bhurájanta*, would substitute a word that sounded more or less similar and would work in the passage. Re suggests breezily that *bhuraj-* is the same type of formation as *bhiṣaj-* and *saraj-*, but this seems to me to undercut the explanation because these two formations are so outré; *-aj-* is a pretty salient piece of morphology and wouldn’t, I think, be lightly attached to a normal root (particularly one that should not be showing **bhur-* forms). I therefore favor the older (Gr, etc., incl. also Wackernagel, AiG I, passim) connection with \sqrt{bhrj} ‘roast’. Although this verbal root is found only once in the RV, it is widely attested in Middle and New Indo-Aryan (see Turner, \sqrt{BHRAJ} and, e.g., 9583–86), and there is an underlying nasal-infix pres. **bhr̥nak-ti*, which acdg. to Turner (9586) is presupposed by **bhr̥ñjati* ‘parches’. With some manipulation of MIA phonology, this might give us our form. The relative absence of \sqrt{bhrj} from the RV and other early Vedic texts is not surprising, since it would belong to kitchen vocabulary.

IV.43.6: More sprinkling and splashing. The instr. *rasáyā* is probably an instr. of accompaniment (both the Sindhu and Rasā sprinkle) rather than of means.

With most interpr. I read acc. pl. *ghṛṇā(h)* against Pp. instr. *ghṛṇā*.

yāna- is found only here in the RV. On the basis of the strong association between Sūryā and the chariot, I take it, with Gr, as a vehicle not, with most interpr., as abstract ‘journey’.

IV.43.7: The consensus is that *papr̥kṣé* is a 1st sg., which is certainly appropriate for a final summary vs. A 3rd sg. is not excluded, however; in that case a subj. would have to be identified and supplied.

The āmreḍita *ihéha* and *samanā* seem to be implicitly contrastive: wherever you are, I have nourished you in the same way.

IV.44 Aśvins

IV.44.1: The phrase *sāṃgatiṃ góḥ* “meeting with the cow” refers to a second period in the morning, when the cows are milked. See Ge’s n. 1b.

IV.44.2: There is much disc. in the lit. about what manner of horses *kakuhá-* refers to (see, e.g., WG n. ad loc.). I do not have an opinion, nor do I think it matters contextually.

IV.44.3: The standard tr. take the dative phrase in c, *ṛtásya ... vanúṣe pūrvyāya* as personal (e.g., Ge “für den, der schon früher des rechten Brauches beflissen war”). But since this phrase is parallel to two purpose-activity datives in b (*ūtāye ... sutapēyāya*) and is in fact conjoined with them by *vā*, I think they should be parallel in function. Old sees the problem and suggests that if we interpr. the passage as I do, we might need to read **vānuṣe* -- though he ultimately opts for the personal dative.

IV.44.4: The root noun cmpd. *purubhū-* can, of course, be interpreted in many ways, given its component parts. See disc. in Scar (362). Four of its five occurrences modify the Aśvins (and the fifth may not belong to this stem; see comm. ad IX.94.3); since one of the oft-noted characteristics of the Aśvins is their peripatetic nature, I interpr. it as ‘appearing in many places’. In our passage it strikes the same note as *ihéha* ‘here and there’ in vs. 7 (=43.7). There are two occurrences in VIII.22 (vss. 3, 12), and the Aśvins hymns in VIII often express concern about the many places the Aśvins could be besides here.

IV.44.5: By my rule (see “Vedic anyá- ‘another, the other’: syntactic disambiguation,” Fs. Beekes, 1997), because it is in (modified) 2nd position, *anyé* in c should be definite (‘the others’), not indefinite as Ge (/WG) take it. This makes perfect sense: we are well aware of the other sacrificers who are our rivals.

On *sám ... dadé* and the idiom it expresses see comm. ad I.139.1. Although *dadé* here is usually ascribed to $\sqrt{dā}$ ‘give’, the idiom *sám* $\sqrt{dā}$ belong to $\sqrt{dā}$ ‘cut’. See Kü 242 for the three forms *dadé* / *dade* that belong to ‘cut’.

IV.45 Aśvins

IV.45.1: Act. *úd iyarti*, esp. in contrast with its med. correspondent *úd īrate* in 2a, should be transitive. With Ge, the pub. tr. renders it as intransitive (‘arises’). WG take it as transitive and supply ‘sun’ as the object. I am now inclined to think that it is transitive (the contrastive verb in 2a has convinced me), but am uncertain what object to supply. The most common object of *iyarti* is ‘speech’ (vel sim.), but curiously for a RVic hymn, there is no mention of speech or praise-song in this hymn (until a cmpd. in the final vs., 7a *dhiyaṃdhā-* ‘setting my insight’). Since the subj. of intrans. *úd īrate* in 2 is chariots and horses, I think the object here should be the chariot whose hitching up is described in the rest of the hemistich. I would therefore emend the tr. to “Now this radiant beam impels (the chariot) upward.” The radiant beam is presumably the ritual fire, though it might be the beam of dawn, an identification that finds support in the mention of dawn in 2b. The chariot being impelled upward may not be the same as the Aśvins’ chariot in the rest of the hemistich, but the complementary “chariot” of the ritual.

For the mild paradox in c, the three who form a pair, see publ. intro. That this refers to the two Aśvins paired with Sūryā was already well recognized by Ge (see his n. 1c).

For *mādhuno ví rapśate* see X.113.2.

IV.45.4: *uhū-* is a hapax, and an onomatopoeic origin seems reasonable (see EWA s.v., citing AiG II.2.492). With sufficient goodwill, one can configure the bar-headed goose cries available for hearing on the internet as “uhu.”

Although Gr analyzes the rt noun cmpd as *mandi-nispīś-*, Scar (668) is surely right to resegment as *mandini* [LOC]-*spīś-*. This is therefore not a counterex. to the rule that rt noun cmpds with direct-object first members do not also use preverbs. See Scar (463) and comm. ad I.124.7.

IV.45.6: *ākenipāsaḥ*: see Old, EWA s.v. *āké*.

Very unusually, pāda b is a verbatim repetition of 2d. Except in refrains, repeated pādas are almost never found in the same hymn. In this particular case the repeated pādas are symmetrical, that is, found in vss. equidistant from the center, but there are no other signs of omphalos structure in this hymn, save for the faint ring-composition between vss. 1 and 7 (see below). Since horses and chariots are the referents in 2d, I supply horses as the subject here. That the sun then hitches up his horses in c may support this.

Although the intens. *dāvidhu-* (also *dódhu-*) ‘shalk’ generally takes an object, it is often an internal one (that is, a body part of the subj., e.g., lips, horns), and in this passage I think it is simply intransitive (though Schaeffer, Intens. 138, supplies lips). Ge (/WG) supply ‘darkness’ as obj. on the basis of IV.13.4 *dāvidhvataḥ ... tāmaḥ*, but if, as seems likely, horses are the subject, I have trouble envisioning them shaking anything with their hooves.

IV.45.7: This final vs. in part reprises vs. 1: *rāthaḥ* begins both b pādas, and *pārijmā* ‘earth-encircling’ of 1b is paraphrased by 7c *yéna sadyāḥ pári rájāmsi yātháḥ* “with which in a day you drive around the dusky realms” -- though *-jman-* and *rájas-* are of course unrelated, there is some phonological similarity. Given this ring-compositional effect between vss. 1 and 7, it is barely possible that we should supply *dhíyam* from cmpd *dhiyaṃdhā-* in 7b as obj. to *úd iyarti* in 1a (see disc. there).

IV.46 Vāyu and Indra

IV.46.1: Since Vāyu has the first drink of soma to himself, it is appropriate that only he is called on in this vs.

IV.46.2: This vs. provides the transition between Vāyu as sole drinker and Vāyu and Indra as joint drinkers. Because the nominatives in b, *niyútvāṃ índrasārathiḥ*, are singular, it seems best, with Ge, Re, to supply a sg. impv. ‘come’ (vel sim.) for ab. The dual verb *tṛmpatam* in c has of course Vāyu and Indra as its subjects; Indra can be extracted from the cmpd. *índrasārathiḥ* in b, and the voc. *vāyo* in c is in effect a truncated Vāyav Indraś ca construction. This construction is nonetheless avoided in the rest of the

hymn: vss. 3–7 all contain the dual dvandva voc. *īndravāyū*. Note that this stem never appears as the more “correct” **īndrā-vāyū* with dual first member. I have no idea why.

IV.46.4: Ge unaccountably tr. the apparent aor. subjunctive *sthāthaḥ* as an impv.; Re suggests that it may have a “nuance injonctive (malgré les désinences primaires).” Neither of these makeshifts seems necessary. Because of the *hī* I take this vs. as the foundation for the next, journey vs. -- first mount, then drive.

IV.47 Vāyu and Indra

As in the preceding hymn, vs. 1 is addressed only to Vāyu, with single voc., but the rest of the vss. address them jointly, in three different ways. In 2a we have a reverse Vāyav Indraś ca construction *īndraś ca vāyo*, in 3a the same construction in normal order, and in 4d the dual dvandva voc. *īndravāyū* found in 46.3-7.

IV.47.3: Of the two pāda-final qualifiers, *śuśmīnā* (a) and *śavasas patī* (b), the first is nom., the 2nd voc. It is not clear to me why, since, save for the accent, nom. and voc. would be identical.

IV.47.4: The qualifier of the teams, *puruspīhaḥ* ‘craved by many’, reprises 1d *spārhaḥ*, used of Vāyu, again a faint sign of ring composition. For the syntax see comm. ad VI.60.8.

IV.48 Vāyu

IV.48.1: The publ. tr. renders *hótrā(h)* as ‘invocations’. This is possible, but it may also (or in addition) refer to ‘ritual offerings’, perhaps better in a Vāyu context. The problem lies in the ambiguity of both the noun stem *hótrā-* and the VP *hotrá + √ vī*. The noun stem actually represents two homonymous nouns ‘oblation’ (√ *hu*) and ‘invocation’ (√ *hū*), which, needless to say, are often difficult to disambiguate in ritual context. There is also the deified Hotrā found with Bhāratī in the Āprī hymns. (For a fourth sense, developing in the late RV, see comm. ad X.17.11.) Verbal forms of the root √ *vī* ‘pursue’ are construed with unambiguous forms from both roots. The more common object is *hāvya-* ‘oblation’ (I.74.4, III.53.1, VI.60.15, VII.68.1, esp. common with the dative infin. *vītāye* I.74.6, 135.3-4, 142.13; II.2.6; VIII.20.10, 16, 101.7). but cf. II.24.5 *vēṣi me hāvam* “pursue my call,” sim. V.14.5. The clear skewing towards ‘oblation’ in this formula favors substituting ‘oblation’ here, but it is not required.

As noted in the publ. intro., the construction and meaning of the first half of this vs. are disputed. Ge and Re (in diff. ways) take *vīhī hótrā* as an independent clause and construe *āvītā(h)* with pāda b, while Old (ZDMG 54.171–72), WG, and I take *āvītā(h)* as qualifier of *hótrā(h)*, forming an etymological figure with *vīhī*. In pāda b the same verb (‘pursue’), though not imperatival, is to be supplied in the simile, with subj. and obj. ranged around it. The disagreement among Old, WG, and me has to do with the identity of subj. and obj. WG take *vīpaḥ* (“die Geisteserregten”) as subj. and *rāyo aryāḥ* (“die Reichtümer des Sippenherrn”) as obj. This seems quite reasonable, save for the fact that in all clear cases *vīp-* is non-animate ‘inspiration, inspired poems’ vel sim. Old also takes *vīpaḥ* as subj. though in its usual sense, but construes with *aryāḥ* and tr. “die Gebete des

Besitzlosen.” This would be, to say the least, an unusual sense of *aryáh*; moreover, *rāyo aryáh* is a common phrase (note in passing the phonological parallelism). As I said in the publ. intro., on the basis of VI.14.3 I believe that “the riches of the stranger” refers to the Ārya people in general and their poets in particular. In my reading of the simile here, this collectivity of poets is pursuing inspiration as avidly as Vāyu does invocations / libations.

IV.48.2: The poet’s playfulness continues. The qualifier *niyútvan-*, ‘possessing a team’, common in these Vāyu contexts (see in this hymn sequence III.46.2, 47.1, 47.3) opens pāda b; the preceding pāda opens with a near phonological match, *niryuvāpāh* -- a participle to the same verb with a preverb that is only minimally different from *ní*. (The lexeme *nír√yu* is found only here.) It should mean ‘disjoin, disband’. My ‘take out of harness’ is an attempt to convey the play on *niyútvan-*: Vāyu ‘unteams’ the *ásāstīh*, while himself coming with his team.

IV.48.3: The standard tr. assume that Night and Dawn are directing themselves towards Vāyu. I think rather that they are simply following each other in the normal daily succession. Since Vāyu comes at dawn, the transition between the two temporal halves is simultaneous with his journey.

On the “two black treasure chambers” (*kṛṣṇé vásudhītī*), see Bloomfield (RReps ad III.31.17): “The words *kṛṣṇé* and *vásudhītī* are both dvandva ekaśeṣa ‘black (Night) and (Uṣas)’ is a way of saying *náktośāsā*; conversely ‘treasure-giving (Morn) and black (Night)’ is *uṣāsānāktā*. Cf. Berg. i.250.” In other words, *kṛṣṇá-* is applicable to Night, *vásudhīti-* to Day, but the two are conflated into a single dual expression.

IV.49 Indra and Bṛhaspati

As disc. in the publ. intro., this hymn seems to be modeled on the Indra/Vāyu hymns just preceding, esp. since in standard śrauta ritual there is no joint offering of soma to Indra and Bṛhaspati. Like Indra and Vāyu in IV.46.3–7, Indra and Bṛhaspati are consistently addressed with a dual dvandva, *indrābṛhaspātī*, which is found only here. (Note the correct dual 1st member *indrā*, in contrast to *indra-vāyū* discussed ad IV.46.2.) This dvandva is found as an unaccented voc. in every vs., save for 5, where the fully accented form occurs as an acc. In addition, in 3b there is a headless Vāyav Indraś ca construction, *indraś ca*, lacking the voc. **bṛhaspate* -- though the preceding pāda does contain voc. *indrābṛhaspātī*. See further below.

IV.49.3: As noted above, *indraś ca* in b signals a headless Vāyav Indraś ca construction, and indeed the “Vāyav” is apter than might appear at first glance. Pāda b is identical to I.135.7c, which is an Indra and Vāyu hymn. The missing voc. is found there, in pāda a: *vāyo*. Clearly our b was adapted from I.135.7, with the non-conforming god lopped off in this expression. I have not attempted to render the voc. dvandva plus mutilated Vāyav Indraś ca, unlike the standard tr., which supply an extra verb in a and an extra voc. in b.

IV.50 Bṛhaspati

On the divisions of the hymn, see publ. intro. Old and H.-P. Schmidt (cf. esp. B+I 215) consider it to be three separate hymns; I instead see it as a unified composition with three parts. So also Gonda (Vedic Lit., 191) and, implicitly, Ge. The hymn has been

much tr.; besides the usual trio (Ge, Re [EVP 15.63–65], WG) also Macdonell (VRS), Maurer, Schmidt (B+I, vss. 1–6 216ff., 7–9 117, 10–11 96).

IV.50.1–6: As indicated in the publ. intro., this section concerns the unitary figure (Indra-)Bṛhaspati, here insistently identified as Bṛhaspati: there are 7 occurrences of the name in 6 vss., one in each save for two in vs. 2.

IV.50.1: The preverb *vī* is curiously positioned, neither adjacent to its verb nor to a metrical boundary. Perhaps its position is iconic, with ‘earth’ (*jmāh*) between its separated ends (*vī ... āntān*).

As noted in the publ. intro., the VP *purāḥ ... dadhire* “they set in front” marks the appointment of Bṛhaspati in what will be his later role, Purohita.

IV.50.2: The rel. clause of abc (by most interpr. -- c could also go with d) has no main clause correspondent in this vs. As most interpr. take it, the pl. *yé* seems rather to refer to the Ṛṣis in vs. 1 and continue that sentence, forming a transition to the explicit Vala myth.

The acc. *supraketām* in pāda a is taken by some (e.g., Old, Macdonell, Schmidt) as coreferential with the acc. in c, but I consider it too far from the verb and from the other accusatives to be an anticipatory object. Instead I prefer Ge’s solution, to construe it loosely with *mādantaḥ* (cf. IV.33.10 *ukthā mādantaḥ*, also cited by Ge): Ge “jublend unter guten Vorzeichen,” my “exulting at the good sign.” Since Agni is several times called *praketā-* as the sign of the day or the ceremony (e.g., VII.11.1 *mahām asy adhvarāsyā preketāḥ* “you are the great visible sign of the ceremony”), I wonder if this is a temporal reference: dawn when the ritual fire is kindled.

The acc. phrase in c refers to the Vala cave and is the obj. of *abhī ... tatasré* in b. The head-noun *ūrvā-* ‘container, enclosure’ refers to the cave itself, but the three adj. *pṛśantaṃ srprām ādabdhā* “dappled, glossy, uncheatable” are better applicable to its contents, the cows. Note the mirror-image phonetic figure beginning c: *pṛś(antaṃ) srp(rām)*, which contains partial anagrams of Bṛhaspati.

The “future impv.” *rākṣatāt* in d is somewhat surprising, in that it does not follow a previous impv., as is usual. I take it to imply that Bṛhaspati should do his guarding after the Aṅgirasas have breached the cave and released the cows. For another unexpected future impv. see nearby *suvatāt* in IV.54.3

IV.50.3: This vs. also contains phonetic echoes of Bṛhaspati: *ṛtasprś(o)* (b) and *(vi)rapś(ām)* (d). Another phonetic pattern worthy of note, though it doesn’t directly reference Bṛhaspati, is the unbroken sequence of short and long *a*, starting with *yā* in pāda a (right after initial *bṛhaspate*) and continuing into pāda b, till right before *ṛtasprśo*, the echo of the name: *ā a a ā a ā a, a a ā a*.

As Ge’s cited parallels make clear, pāda b concerns the Sattra that the Aṅgirasas performed.

IV.50.4: With Macdonell, I take *mahó jyótiṣaḥ* as a separate abl. phrase, rather than a gen. qualifying *paramé vyòman* with the standard interpr. Since we otherwise know little or nothing about Bṛhaspati’s birth, it is difficult to make an informed choice. I have gone

with the abl. interpr. because the common phrase *paramā- vyòman-* does not seem to be qualified by a gen. phrase elsewhere (though this is not decisive) and because the contrast in this vs. between light and the darkness that Bṛhaspati blows away would be stronger if he were directly born from light.

As usual, numerology is difficult to interpr. I think Ge is correct that the seven in *saptā́sya-* ‘having seven mouths’ must be the Aṅgirasas (see the same word in the next hymn, IV.51.4). What the seven reins (*saptáraśmi-*) are is more difficult. Ge suggests the seven reins of the sacrifice; I prefer the seven seers, who are, in my opinion, the referents of the phrase *saptá raśmáyaḥ* in the enigmatic I.105.9 (see comm. ad loc.). This would provide Bṛhaspati with two different connections to poetic speech, appropriately enough.

IV.50.6: As indicated in the publ. intro., this is the final vs. of the 1st section of the hymn and has the standard marks of a hymn-final summary vs. It is the best evidence that vss. 1–6 were a separate composition, only secondarily amalgamated with the following two sections. Nonetheless, I think it simply marks a pause and a transition to the thematically contrastive next section.

IV.50.7–8: These vss. are structured similarly: a main clause (or clauses) referring to the happy results for the king who (now a rel. cl.) properly treats a particular figure. The figure in vs. 6 is Bṛhaspati; filling the same slot in vs. 7 is the *brahmán-* ‘formulator’. We have thus moved from the divine to the human realm, and the identity of Bṛhaspati and *brahmán-* is signaled by their parallel roles in the vs. structure.

IV.50.7: Note the etymological figure in c: *súbhṛtam bibhárti*.

The sense of *pūrvabhāj-* is limited by *pū́rva eti* in 8d and for that reason is presumably not a ritual technical term. (Vāyu would be the god who “receives the first portion” by that measure.)

IV.50.9: The shift from divine to human just noted above in vss. 7–8 comes full circle in this vs. The human Formulator is, it seems, in need of aid from the king (*avasyáve ... brahmáṇe*), but if the king provides this aid he himself receives aid from the gods (*tám avanti devā́ḥ*).

IV.50.9–10: This last section consisting of two vss. introduces Indra by name for the first time in the hymn. The two divine figures are carefully balanced, as the address to them shows: vs. 10 opens with the name Indra in a reverse Vāyav Indraś ca construction, *índraś ca ... bṛhaspate*, while two independent vocatives open vs. 11, this time with Bṛhaspati first: *bṛhaspata indra*.

IV.50.11: Ge, Re, and Schmidt all attach *sácā* to the preceding pāda (e.g., Ge “Stärket uns gemeinsam”). Despite the position of *sá*, I think *sácā* belongs in the pāda in which it is found. So also WG.

IV.51 Dawn

It is worth noting that the nom. (and voc.) pl. of *uṣás-* is consistently *uṣásah* in this hymn (every vs. but 10), with short suffixal vowel -- the newer form replacing inherited *uṣásah*.

As disc. in the publ. intro., this is an omphalos hymn, with the middle verse 6 posing the central question. This omphalos is surrounded by concentric rings: *divó duhitáro vibhātīḥ* of 1c is answered by the same phrase (in the voc.) in 10a and 11a, while vss. 5 and 7 contain an inner ring with *ṛtá-* (*ṛtayúgbhiḥ* 5a, *ṛtājātasatyāḥ* 7b) and *sadyāḥ* (5b, 7d). There is also much lexical chaining between adjacent vss.

IV.51.1: As noted in the publ. intro., the dawns are so insistently in the plural in this hymn that when a single one is referred to, another word must be used -- in this case *jyótiḥ* ‘light’.

IV.51.2: Note absolute initial root aor. *ásthuḥ* contrasting with absolute final *asthāt* in 1b.

I have taken gen. *támasah* as dep. on gen. *vrajásya* (“of the enclosure of darkness”) with Ge, but *támasah* could be dep. instead on *dvārā*, parallel to *vrajásya* (so Re, WG).

IV.51.3: The multivalent stem *citáya-* is here used in transitive value (see my disc. in the *-áya-* book). The 3rd pl. *citayanta* is simply an *-anta* replacement of the expected active of the usual type (see my 1979 IIJ article).

IV.51.4: The opening of this vs. *kuvít sá* resonates with the opening of 6 *k^ava svid*.

With Ge I take the *yénā* clause of cd to be a third possible course, against the old and new ones offered as possibilities in ab. Since cd presumably refers to the Aṅgirasas’ involvement in the Vala myth, it *is* the case that the Dawns’ course in that instance was an unusual one: they came out of a rock!

IV.51.6: *katamā* ‘which one?’ echoes *purutámam* ‘the latest of many’ in 1a. Note that again when a singular dawn is referred to, the word *uṣás-* is not used.

I do not understand what the Ṛbhus are doing here, nor do I know the exact sense of *ví√dhā* in the etymological figure *vidhānā vidadhúḥ*. A similar etym. figure is found in nearby IV.55.2 *vidhātāro ví ... dadhuḥ*, where I tr. ‘distribute’, which I’ve imported here. However, I am now inclined to think that this has to do with the creative division of an undifferentiated mass (such as the Ṛbhus performed in I.161.2–3 also cited by Ge) and with the regulation of these divisions, possibly of divisions of time. Such “division” contrasts sharply with the lack of distinction among the dawns stated in cd. It is not surprising that a single (unnamed) dawn (pāda a) would be associated with division and distinction (pāda b), as opposed to the plural dawns in the rest of the hymn. For other interpr. of pāda b see the various tr. and comm.

IV.51.7: The opening *tā*, esp. in its emphatic form *tā ghā tā(h)* is echoed by the openings of 8 (*tā ā ...*) and 9 (*tā(h)*).

At the same time *sadyāḥ* makes an interior ring with 5b around the omphalos vs. What’s striking about this little ring is that, though the *sadyāḥ* in 5 and 7 match verbally, the word is in a different temporal setting in the two vss: present in 5 and remote past in

7, and in 6 those two temporal settings are dissolved or confused (as also in a different way in 4).

The cmpd. *ṛtājātasatya-* is unusual not only in having 3 members (quite rare in the RV) but also for containing both *ṛtā-* and *satya-*. Re suggests that *-satya-* functions as a sort of “particle intensive.” Given how charged both words are in the RV, I think this unlikely, although the rendering in the publ. tr. (“who were really born of truth”) is close to Re’s intensive particle interpr; cf. his own tr. (“véritablement nées de l’Ordre”). I think the cmpd requires a more literal and weighty rendering -- “whose reality was born from truth” (which I would substitute for what is found in the publ. tr.) -- meaning that the dawns we see and who come daily to our world and our sacrifice, who are *really* here, arose from the true cosmic patterns that govern the universe of time and space.

IV.51.8–9: The unbroken similarity of the dawns who just keep coming, day after day, is conveyed by the stasis of these two vss., where forms of ‘same’ (8ab *samanā ... sanānātaḥ samanyā*, 9a *samanā samānīḥ*) and the same verb *caranti* (8a, 9b) bring all movement to a halt, even though the dawns are constantly on the move.

IV.52 Dawn

IV.52.1: Although by the time of the composition of this hymn the word play may have long been buried, for Indo-Europeanists the juxtaposition of **-Hner* and **g^wenH* (man and woman) (*sūnārī jānī*) is very cute.

Note the distraction of the usual “daughter of heaven” phrase into a three-termed alliterative phrase *divó adarśi duhitā*.

IV.53 Savitar

IV.53.2: With *urú* we can supply *rājaḥ* from 3a, where *rājāmsi* occurs as the obj. of the same verb *ā √prā*, or *antārikṣam*, the most common noun found with this neut. adj. and found in this phrase at the end of the immediately preceding hymn, IV.52.7b *antārikṣam urú*.

IV.53.3: As Ge’s parallels show, this must be Savitar’s own *ślōka*.

The dat. *svāya dhārmaṇe* would be easier to parse as “for his own support.” Both Ge and Re are rather cavalier about the dat. here. Ge tr. ‘nach’; Re claims it’s no different from the instr., further stating “indecision des cases obliques dans ce type de noms,” which seems like a dangerous interpretive principle to me.

In cd I take *sāvīmāni* with the participles of d. In that pāda *aktúbhiḥ* ‘through the nights’ strictly speaking goes with *niveśāyan* ‘causing to settle down’.

IV.53.6: The participles *niveśāyan prasuvān* are reprised here as agentives *prasavitā niveśanaḥ*.

IV.54 Savitar

IV.54.3: This middle vs. (the final vs., 6, opens out to other gods and is essentially extrahymnic) expresses the particular intercession we want Savitar to make for us and also admits to possible offenses committed by us that make this intercession necessary. The vs. also has a few disharmonies, unlike the smooth vss. that make up most of the rest of the hymn.

The first question is how to interpr. *yád*. If it is taken as a neut. rel. prn. (‘what’), this leaves the main cl. of cd without a referent for this rel. If (with the standard tr.) it is taken as a general subordinating conjunction (‘when, if’), this leaves the verb *caṣṛmā* without an obj. Ge just barrels through, tr. the verb as “gesüdiget haben” without comm.; Re and WG supply parenthetical objects (“une faute,” “ein Vergehen”). Given *ánāgas-* in d and IV.12.3 *yád ... ácittibhiś caṣṛmā kác cid āgaḥ, āgaḥ* would be the appropriate obj. to supply if this syntactic path is chosen. I am therefore inclined now to emend the publ. tr. to “If we have committed an offense ...”

The other question has to do with the verb *suvaṭāt* in d. First, why a future impv.? There is no prior impv. whose action it follows. (For a similarly unsupported fut. impv. see nearby *rākṣatāt* IV.50.2.) Moreover, the VP doesn’t make sense: ... *naḥ ... suvaṭād ánāgasah* should mean (as I tr. it) “impel us to be without offense,” but how would Savitar’s impulsion render us offenseless? The standard tr. simply fudge the verb: Ge “so sollst du ... bestimmen, dass wir daran schuldlos sind”; Re “veuille ... nous en rendre innocents” (which he then further glosses “veuille nous susciter = nous faire sortir (de l’état de péché, en sorte d’apparaître) innocents” [one of Re’s finer parentheses]); WG “... sollst du ... uns daran für schuldlos erklären.” But none of these is a standard (or even non-standard) use of $\sqrt{sū}$, and since forms of this verb are found in vss. 2, 4–6 with its normal sense (at least in my opinion; see below), we can’t simply impose a new interpr. for contextual convenience.

I have two remarks on this. First, it is striking that in what is otherwise a pretty simple hymn, it is in the vs. most significant to the human audience that we encounter little issues in the words themselves. I think this is a sign that the poet wants his audience to slow down, to really pay attention, and the way he gets this accomplished is by tossing little obstacles in our path, requiring us to turn the phrases around in our heads until we get a satisfactory sense. We could generalize this observation to RVic poetry as a whole: one of the (many) reasons it is so difficult is that the poet assumes that an audience that has to do a lot of the work will really engage with the poetry, will get deeper into its meaning. The second remark has to do with what we get if we reflect further on why the poet use a form of $\sqrt{sū}$ here. In this hymn and the last (IV.53), not to mention most other Savitar hymns, Savitar’s control over all the parts of the cosmos and, especially, of the alternating movement and rest of living beings (cf. esp. IV.53.3, 6) is powerfully asserted and associated with the verb ($\sqrt{sū}$) that supplies his name. Impelling us to be without offense is simply a specialized version of this: his special power of $\sqrt{sū}$ enables him to push all the elements (including weak humans) back into cosmic balance.

IV.54.4: The standard tr. supply as subj. of *pramíye* and referent of *tád* the whole *yáthā* cl. of b. But one of the most common objects of (*prá*) $\sqrt{mī}$ is *vratá-*, and in the preceding Savitar hymn his *vratá*-s were much in evidence: 4a *vratāni deváh savitābhí rakṣate*, 4d *dhṛtāvratāḥ*, 5c *tríbhír vratāiḥ*. I therefore think *vratām* should be supplied here; among other things this follows directly on the vs. presenting the offenses we may have

committed against the gods, and it would be appropriate to reaffirm the importance of not offending Savitar in particular.

I then take the *yáthā* clause as a purpose clause. We shouldn't violate Savitar's commandment because we want him to (continue to) support the world. Although we generally expect the subjunctive in such clauses, the future is beginning to supercede the subjunctive in general and would make fine sense here. (Re states that this is the only ex. of *yáthā* with the future.)

IV.54.5: The standard tr. here impose a different sense on $\sqrt{sū}$ than in the previous vs. and one no more aligned with its usual semantics, i.e., 'assign, direct', with the interpr. that Savitar is assigning dwelling places to gods (the high mountains) and to men (*pastyāvataḥ*, interpr. by Ge and Re as watery places, WG just dwellings). Old, however, resists the easy contextual shift and attempts to find an interpr. compatible with lexicon and grammar. (Among other things, he points out that unaccented *ebhyaḥ* should not introduce a new referent, 'men', into the discourse.) He does not settle on an interpr., however. My own interpr. assumes first that *índrajyeṣṭhān* refers to the Maruts, rather than the gods in general. (This stem sometimes modifies one, sometimes the other.) I also take *párvatebhyaḥ* not as dat., but abl. The Maruts tend to haunt the high mountains, but Savitar can dislodge them. He can also impel the clouds on which they (fancifully) dwell -- this is, in my opinion, the referent of *kṣáyān ... pastyāvataḥ*, with *ebhyaḥ* here a dative referring to the previously mentioned Maruts, thus properly unaccented. The 2nd hemistich announces that the famously hyperactive Maruts can be controlled by Savitar: they can fly widely, but they can also be brought to a standstill.

Doubled *yáthā-yathā* occurs 5 times in the RV, but only here with doubled *evaívá*. Interestingly the latter has two accents, but *yáthā-yathā* only one. Doubly accented *evaívá* is also found in X.44.7, without *yáthā*.

IV.55 All Gods

For the structure of the hymn and its parts, see publ. intro. As indicated there, the first 7 vss. (in Triṣṭubh) are concentrically structured, with the agenda set by the questions posed in vs. 1. There are a number of difficulties, and much remains uncertain. The final three vss. (in Gāyatrī) appear to have originally been a separate hymn, as has long been recognized, and are quite straightforward.

IV.55.1: On the anomalous form *trāsīthām* see Old. Whatever its morphological status otherwise, it is clearly a dual, and therefore, strictly speaking, only *dyāvābhūmī* can be its subj., not the additional voc. *adīte*.

Since pāda b is a repetition (=VII.62.4), Ge interprets it as parenthetical, with pāda c continuing pāda a ("who is the protector and defender ... from the stronger mortal") (so also Bloomfield, RReps). This is not impossible, but since the abl. phrase in c can just as easily be construed with the verb in b, I see no reason why the repeated pāda can't have been stitched into the fabric of this vs. (Re and WG both take c with b, as I do.)

With Ge, I take *vaḥ* as a dat. of benefit: the wide space is made for the gods (see also Oberlies, Relig. des RV I.461). Re and WG construe *vaḥ* with *kāḥ* ("which among you?"), and WG specifically indicate that the wide space is made for us by one of the

gods. Although the identical phrase *kó vah* opening pāda a favors this latter interpr., I follow Ge, in part because I think whoever would be acting thus at the ceremony would be a human ritual officiant.

The verb *dhāti* is most likely a root-aor. subj. and is so tr. For such forms see comm. ad IV.8.3.

IV.55.2: My understanding of this difficult and disputed vs. is set forth in the publ. tr. I will not engage here in detail with the various alternative interpr. offered by others. I take the vs. in general as a response to the question posed in 1d (as I understand that question), “who will make wide space at the ceremony for you gods?” The answer is the unnamed priests acting at the dawn sacrifice. It is the priests who chant the ordinances in 2a, at the time when the dawns are “dawning widely” (*ví ... uchān*)(2b), with the notion of “wide space” implicit. The priests return in c, distributing the dakṣiṇās (or perhaps the dawns themselves perform the distribution). Pāda c contains two forms of *ví* (*vidhātāro ví ... dadhuḥ*), echoing the two in b (*ví ... uchān viyotārah*). Though the *ví* forms in c are not directly connected to “wide space,” they continue that theme verbally. Pāda d has the dawns as subject.

In my interpr. of b, with dawns as subj., one could expect a fem. agent noun **vīyotrī-*, but *-tār-* forms can serve for fem. as well, esp. as an attributive (so better tr. “they (the dawns) as discriminators ...”). As pointed out in the publ. tr., the dawns “discriminate” because they separate night and day. Old presents a clever, but I think ultimately incorrect, suggestion that instead of *uchān* we should read **yuchān* to *√yu* ‘separate’, providing an etymological figure *ví ... *yuchān viyotārah*, exactly parallel to *vidhātāro ví ... dadhuḥ* in the flg. pāda. (Old seems also to consider only to reject this idea.)

The grammatical identity of *rurucanta* is unclear. Lub calls it a pf. subjunctive, and Ge and Thieme (Plusq. 46) interpr. it as hortative. But the zero-grade root syllable would be anomalous for a subjunctive. Kü (430–31) takes it rather as an injunctive, although he does not see a clear injunctive context (though generell-erwährende Funktion seems possible). I also interpr. it as injunctive, in the publ. tr. with preterial sense, though presential “shine” would work as well in context.

IV.55.3: In pāda a #*prá ... arkaiḥ*# echoes 2a #*prá ... ārcān*#.

The 2nd hemistich gives some support to my interpr. of vs. 2b, that the dawns are marking the limit between night and day. Here Night and Dawn arrange that both day halves provide protection.

As WG point out, all the divinities here are fem.

IV.55.4: I take *ví ... ceti* to *√ci* ‘pile’; see comm. ad I.90.4. Re assigns it to *√cit* ‘perceive’ (so also Gr); WG to *√ci* ‘perceive’ as an Augenblicksbildung to the aor. stem.

The final word of the vs., *vārūtham*, recalls *varūtā*, the final word of the 1st pāda of the hymn (1a). As indicated in the publ. intro., I consider vss. 3–5 to be a response to the question posed in the hymn’s first pāda.

IV.55.5: The echo of vs. 1 noted at the end of vs. 4 continues here, where *devásya trātúḥ* picks up *trātā* of 1a (as well as *trāsīthām* in 1b). The abl. “(protect) from ...” in 1c *sāhīyasaḥ ... mātāt* recurs in cd *jānyāḍ āmhasaḥ ... mitrīyāt*.

The standard tr. begin a new clause at the beginning of d and take *mitrīyāt* with *uruṣyet*. This is not impossible; nonetheless I prefer to construe *mitró mitrīyāt* with c. The strict parallelism/gapping of the 1st part, plus the pāda-medial *utá naḥ* in d I find too compelling to ignore, since *utá* generally begins new clauses. It is true, however, that *uruṣyá-* is several times found with *āmhasaḥ*. The purport is much the same either way.

The standard tr. take *jānya-* as referring to foreign people (this goes back at least to Gr, meaning 2a). I do not know of any evidence for this interpr., and in fact all clear passages (though see comm. ad X.42.6) indicate that it’s someone/-thing belonging to one’s own people (which would be the default reading of such a deriv., in my view). Here the contrast is between problems internal to the group and those coming from allies (external but contractually connected).

Pāda d revives the question of wide space, here with a god making it for mortals (us), which might give support to the Re / WG interpr. of 1d (see above). Nonetheless, I think the overall structure of the hymn fits better with my interpr.

IV.55.6: This vs. is close to impenetrable. For my view of its function in the hymn, see publ. intro. I am still baffled by the concentration on water in bcd and by the proper disposition of the parts of cd.

The first question to approach is the root identity and referent of *iṣṭá-* in b. The standard view is that it belongs to *√iṣ* ‘desire’ and the phrase *āpyebhir iṣṭāḥ* refers to “desired watery (gods)” (so, more or less, Ge, Re, WG) as an instr. of accompaniment referring to another set of recipients of praise. Although there do seem to be one, at most two, references to watery gods (masc.) -- VI.50.11, maybe VII.35.11 (though that appears to have fem. referents) -- most of the animate beings qualified as *āpya-* are females. I don’t know who the watery gods might be. My interpr. of the phrase is quite diff.: I take *iṣṭá-* to *√yaj* ‘sacrifice’. Although its ppl. *iṣṭá-* is rare and rarely applied to the object sacrificed, there are such examples: compare I.162.15, where it refers to the sacrificed horse, also in the same hymn *sviṣṭa- yajñá-* vs. 5. I then take our *āpya- iṣṭá-* to be equivalent to X.86.12 *āpyam havīḥ* “watery oblation.”

Under this interpr. the water sacrifices are what the unnamed priests have revealed /opened up (*āpa vran*, using language from the Vala myth), and they are implicitly compared with two different entities: the contents of the gharma pot and rivers. In d *gharmāsvarasaḥ*, lit. ‘having the gurgling of the gharma pot’, targets the sound of the watery sacrifices, while *samúdraṃ ná samcāraṇe ... nadyāḥ* “like rivers in their converging on the sea” refers to their movement to their goal (presumably the gods -- cf. X.86.12 *yásyedám havīḥ priyám devēṣu gáchatī*). I have major misgivings about my interpr., however, for several reasons. The parts of the simile just proposed are quite separated, with the first part opening c and the ‘rivers’ only appearing in the middle of d, after the bahuvrīhi referring to the gharma pot. Although some distraction of complex similes is not rare, this seems an extreme example. Moreover, pāda c is identical to I.56.2, where there are no rivers in the context (but where the pāda doesn’t make much sense in context either). On the other hand, rivers converging on the sea is a very common trope in the RV, and so the distraction would not be too challenging to interpret.

I am not particularly convinced by my own construction of this hemistich, but I find the the various other attempts at wringing sense out of it (in addition to the standard tr., cf. Lüders [Var. 190–91]) no more (indeed generally less) persuasive.

IV.55.7: As indicated in the publ. intro., this vs. in part forms a clear ring with vs. 1 and provides the answer to the question in 1a. Note the recurrence of the gods Aditi, Mitra, and Varuṇa, as well as of the agent noun *trātār-* and a finite form of the root $\sqrt{trā}$ (here *trātā trāyatām*).

The 2nd hemistich is somewhat puzzling, however, and has given rise to a number of competing interpr. (in addition to the standard, see Janert [*Dhāsī*, pp. 6, 43ff., 52], Thieme [ZDMG 95.109], Scar [387], and Lühr 1997 [cited by Scar]). Ge and Re both attempt to give *sānu* a loc. sense (Ge by taking it as a truncation of *sānuni*, a move that Re disallows), but by form it ought to be an object parallel to *dhāsīm*: the *dhāsī* of Mitra and Varuṇa (and) the back of Agni. This is the interpr. of Janert, and I follow him in his syntactic evaluation, though I do not necessarily follow him in seeing the *dhāsī* of M+V as the seat of truth nor the back of Agni as the back of the Sun (as the heavenly Agni). I tentatively suggest that not violating the back of Agni means not failing to provide appropriate oblations (recall that Agni is sometimes called *ghṛtāsnu-* ‘ghee-backed’). Judging from X.30.1, the “wellspring of Mitra and Varuṇa” is in heaven among the gods -- presumably the source of rain. Not violating it may again mean not failing to make the oblations that will travel to heaven and replenish that source of water. Perhaps the “watery sacrifices” in vs. 6 are connected.

IV.56 Heaven and Earth

IV.56.1: As often, *ārka-* can be a pun, both ‘ray’ and ‘chant’.

As Ge (and others) suggest, the bull in d is probably Agni (/Sun), who every morning recreates the two worlds in their separation with his light.

IV.56.2: This vs. contains several puns, including a repetition of *śucāyadbhir ārkaiḥ* from 1d. The final word of the 1st hemistich *ukṣāmāṇe* can belong either to $\sqrt{ukṣ}$ ‘sprinkle’ or to $\sqrt{vakṣ}$ ‘grow’, and both are appropriate. And the preceding negated participle *āminatī* can take different objects and utilize different senses of the root $\sqrt{mī}$. On the one hand, as Re (and others) point out, the other occurrence of *āminatī* (I.92.12=124.2) takes *daívyāni vratāni* “heavenly commandments” as object. However, cf. nearby *āmīta-varṇa-* ‘of immutable color’ (IV.51.9), which supports Ge’s “ohne (ihr Aussehen) zu verändern.”

IV.56.5: The phrase *māhi dyāvī* is very problematic morphologically. It echoes the first two words of the hymn: *mahī dyāvāpṛthivī* “great Heaven and Earth,” but in a very refracted form. I do not have a solution for how it came to take the form it has (for various suggestions, see Old and the standard tr., as well as lit. cit. therein, e.g. AiG III.52, 226). I can get a certain distance, quite speculatively, but no further. I tentatively suggest that we start with an alternative dual dvandva **dyāvā-mahī*, with *mahī* ‘the great (fem.)’ substituting for ‘earth’. I then suggest that something like a Vāyav Indraś ca construction was created to it, with the 2nd member properly providing the first term of the construction (see my “Vāyav Indraś ca Revisited”). The proper voc. sg. of *mahī-*

would be *māhi* (which is indeed attested, though without accent [and not qualifying earth]). In this context it shouldn't have an accent, but that's the least of our problems. Unfortunately that's as far as I can get. We should expect, per my suggestion, the 2nd part of the construction to contain **dyaús ca*, and that's about as far from *dyāvī* as one can be and still belong to the same stem. I can spin a line of analogies: *dyāvī* is a rough-and-ready nominative sg., built from a full-grade form of the stem found in *dyāvā* (found in loc. sg. *dyāvi*) and the fem. -ī. But I can't imagine why anyone would create such a form, particularly to a stem so well known to every RVic poet. If it participated in a phonetic or semantic figure, there might be motivation but I see none.

IV.56.6: In ab *mitháḥ* 'mutually' and *svéna dákṣeṇa* 'by your own skill' seem implicitly to contrast.

On the basis of the parallel in X.65.2 *mithó hinvánā tanvā* "spurring each other on mutually," I think an alternative tr. "purifying each other mutually" (rather than "your own bodies") is possible. It would help if we understood what such purification would involve for H+E.

On *ūhyāthe* see Old and more recently Kü (489–90) and Hoffmann (Aufs. III.776).

IV.57 Agricultural Divinities

IV.57.1: With Ge, Re, Oberlies (RRV I.189), I supply *mitréṇa* with *hiténeva*; WG by contrast take it to √*hi* 'impel' and assume a winning horse.

IV.57.4: *śunám* here and in vs. 8 is an adverbial acc. For the straps and goad see X.102.8.

IV.58 Ghee

IV.58.2: The final pāda, with Soma (as a buffalo) vomiting (*avamī*) ghee, takes one aback, esp. after the high-style extolling that has preceded it. Ge's explanation, that "ghee" is a secret sacred word ("ein sakrales Geheimwort") and Soma reveals it, may be correct. But the bluntness of the verb still surprises, and I am inclined to think something further is going on. There are only two verb forms to √*vam* in the RV, and the other one (*vāman* X.108.8) also has speech as its object, but the evil Paṇis as subj. Note that the Paṇis are found in vs. 4, as hidens of the ghee. Does our passage express some sort of rivalry between the two ritual substances? Or does it have to do with the Sautrāmaṇi ritual, meant to cure Indra after vomiting?

IV.58.3: Clearly no bull found in nature. The numerology here presumably has to do with items in the ritual. For a conspectus of later interpr., see WG n.

IV.58.4: As was just noted, the Paṇis (niggards) may be indirectly implicated in the verb *avamī* in 2d. Here they appear overtly, as the hidens of ghee -- presumably a reference to their stealing of the cows, since the gods find the ghee in the cow in pāda b.

The threefold nature and creation of ghee has been variously interpreted; it again participates in the numerology of the hymn. I do not have a view on it.

IV.58.5–10: Each of these 6 vss. contains the phrase *ghṛtāsya dhārāḥ* (or equiv.: *ūrmāyo ghṛtāsya* in 6c).

IV.58.5: “My” ability to see the ghee streams indirectly attests to my good character, since the cheat cannot see them.

IV.58.6: Pāda c combines *etā arṣanti* from 5a with a variant of the repeated *ghṛtāsya dhārāḥ*, namely *ūrmāyo ghṛtāsya*.

IV.58.7: A difficult verse, primarily because of the two hapaxes, *sūghanāsaḥ* and *vātapramiyaḥ*. The former is taken by Ge as ‘whirlpools, eddies’ (Wirbel) (followed not terribly enthusiastically by Re) on no particular basis, and others have added their own at best weakly supported tr.: e.g., Thieme ‘cow-killing’ [*sū-* < **pśu-*] (KISch. 52), most recently WG ‘die schwellenden Massen’ (presumably with root noun 1st member and later *ghana-* ‘clump, mass’). The interpr. reflected in the publ. tr. is no stronger than these others. It begins with *ghaná-* ‘smiter’ (well represented in the RV), as Th’s also must. But for the 1st member I assume a zero-grade of *āśú-* ‘swift’ (for the uncertainties of the initial of the PIE ‘swift’ words, see EWA s.v.) with lengthening at compound seam. With two such ad hoc assumptions, this interpr. is simply a place-holder.

As for *vātapramiyaḥ*, there is no question about its component parts, merely about how they fit together. *-pramiyaḥ* patterns with the nearby forms IV.54.4 *pramíye* (‘to be violated’) and IV.55.7 *pramíyam* (‘to violate’). It also strongly recalls I.24.6 *ná yé vātasya praminānti ábhvam* “nor those [=the gods] who confound the wind’s formless mass.” As Old points out, this latter passage fixes the interpr. of our cmpd.: the first member must be functionally the object of the 2nd. The problem is the accent; it should be a bahuvrīhi, not a tatpuruṣa. See, however, Scar (388), who suggests a plausible bahuvrīhi interpr. ‘die Schmälerung des Windes habend’, with the first member essentially an objective genitive. The point is that the speed and violence of the streams are stronger than those of the wind, which is thus confounded. Given the bahuvrīhi accent, it does not violate the standard practice of rt noun cmpds with direct object first member, not to include a preverb (see comm. ad I.124.7).

I read *kāṣṭhā(h)* in both simile and frame: in the simile it refers to the wooden barriers of the race-course that the horse splits in his speeding around the course, in the frame to sticks floating in the current of the streams and split (against rocks vel sim.) by the violent speed of that current. (Of course the “frame” here is itself metaphorical, since these are streams of ghee, not actual watercourses.)

IV.58.8: The violence of the movement of the ghee-streams in the preceding vs. is abruptly replaced by the placid and benign approach of these same streams in this vs.

IV.58.11: Re points out the ring composition of 11d *mádhumantaṃ ta ūrmím* and 1a *ūrmír mádhumān*.

Commentary V

[V.1–28 JPB]

V.29 Indra

As noted in the publ. intro., the hymn is punctuated by expressions of soma-drinking, each slightly different and generally found in the 2nd half of an even pāda:

2b ... *papivāṃsaṃ sutāsya*

3b ... *sómasya súṣutasya peyāḥ*

3d ... *papivām índro asya* [rhyming with 2b]

5b ... *somapéyam* [cf. 3b]

[7d *sutám píbat ... sómam*]

8b ... *somyāpāḥ*

11d ... *ápibaḥ sómam asya*

V.29.1: I follow Brereton (Ādityas, 165–66), who in turn followed Thieme (Mitra and Aryaman, 78–77), in taking *aryamā* not as nom. sg. masc. (as it is normally and as taken by the standard tr.), but as acc. pl. neut. construed with *trī* (like *trī rocanā* in the next pāda). Against Thieme’s “three hospitalities,” Brereton plausibly suggests that in this context the three *aryamā* must refer to “what governs the ritual,” perhaps the three soma-pressings or the three fires.

Pāda-initial *trī*, found here in a and b, recurs in 7c, 8a, b (also non-initial in 7b).

In c *pūtā-dakṣa-* (*lpūtā-dakṣa-*) is ordinarily Ādityan vocabulary (though used of the Maruts also in VIII.94.7, 10). Ge (/WG) supply the Ādityas as the subj. of *dhārayanta* in b and of course take Aryaman as the subject of pāda a. By contrast, I think the Maruts are subjects of all three pādas -- but they are identified with the Ādityas throughout, as the use of *pūtādakṣa-*, ordinarily a qualifier of the Ādityas, makes clear.

V.29.2: Ge (/WG) take *abhī yād āhim han* as subordinate to *ādatta vājram* in the same pāda. Although this fits the metrical scheme slightly better, it makes some trouble with the logical sequence of events (“he took the mace when he smashed the serpent,” almost implying that the smashing occurred first). It works better as subordinate to the main clause of d.

The word order *āhim hán* and the lack of augment on the verb scrambles the standard formula, producing almost a syncopated effect, which is repaired in 3d.

V.29.3: Ge (/WG) take *havyām* as the subj. of *āvindat*: “the oblation found the cows for Manu.” This interpr. accounts for the accent on *āvindat*, which would be generated by *hí*. But it is otherwise bizarre: *gāḥ √ vid* ‘find the cows’ is a standard formula in the Vala myth, and the subject of the verb is always Indra or his agent(s)/companion(s) (e.g., Aṅgirasas I.62.2, Saramā V.45.7, 8); for Indra himself cf., e.g., I.101.5, II.19.3, VIII.96.17, and in a variant of the formula in the next hymn V.30.4 *vidó gavām ūrvām*. I know of no passages in which the oblation is credited with finding the cows, and in fact soma plays far less of a role in the successful outcome of the Vala myth than in that of the Vṛtra myth (though see 12a below). I therefore take *tád dhí havyām* as a nominal sentence completing b, with a clause break in the middle of c. I attribute the accent on

āvindat to contrast with the immediately following verb *āhan*, which opens the next pāda. This hymn in fact shows a penchant for pāda-internal clause breaks: cf. in the immediately preceding vs. 2c, as well as 8d, 9d, 11d, 13b, all except the last right after the caesura as here.

V.29.4: For Indra enwrapped in the earth, cf. I.173.6 *sām vivya índro vṛjānaṃ nā bhūma* “Indra has enwrapped himself in the earth like a girth.” Cf. also his wearing the earth III.32.11, VIII.4.8. Although here the enwrapping seems presented as a handicap, esp. given the *cīd*, in the just cited passages the images seem rather to emphasize Indra’s vastness.

As noted also by Ge, Schaeffer, and WG, *jígartim ... apajárgurāṇaḥ* is a word play, but the words presumably belong to different roots. The first is universally assigned to $\sqrt{g\bar{r}}$ ‘swallow’, but the root affiliation of the second is disputed. Ge and EWA (s.v. *GAR*¹ p. 470) assign it to a $\sqrt{g\bar{r}}$ ‘hold out’, but I follow Schaeffer (Intens., 116–22) in taking it to $\sqrt{g\bar{r}}$ ‘greet, extol’, with the negative sense contributed by the preverb *āpa*. So also WG and Oberlies (Relig. I.401). See also nearby *apagūrya* (V.32.6).

The etymological separation of *jígartim* and *apajárgurāṇaḥ* invites further scrutiny of the hapax *jígartim*. As noted above, this word is generally grouped with $\sqrt{g\bar{r}}$ ‘swallow’ and interpreted as an agent noun ‘swallower’ (my ‘gulper’). However, with *apajárgurāṇaḥ* off the table, there is no particular contextual support for this interpr., though it is certainly semantically acceptable. Far more troubling are the serious formal problems. For one thing, *-ti-* is by no means an agent-noun suffix; it normally of course forms feminine abstracts, though AiG II.2.636–37 does register a number of such stems that have been reanalyzed “zur Bez. der persönlichen Träger des Verbalbegriffs zu verwenden.” Debrunner himself identifies our form as a 3rd sg. verb form inflected as a *-ti-* stem (AiG II.2.638), but this interpr. has nothing to recommend it. Not only is such a morphological transfer not a feature of the RV, but there is also no such verb stem available to be nominalized. The root $\sqrt{g\bar{r}}$ ‘swallow’ does not have a redupl. pres. or in fact any redupl. stem save for the pf. *jagāra* and the intensive subj. *jalgulas* (I.28.1); the single form of the redupl. aor. *ajīgar* (I.163.7) supposedly belonging to this root (see Gr, and Whit. Roots) actually belongs with the other forms of this stem to the root $\sqrt{g\bar{r}}$ ‘awaken’, and we just discussed intens. part. *járgurāṇa-* above. It is, further, a set root; it’s hard to know what its pre-C full grade should be in a redupl. pres. formation since there are no parallel formations to roots in *-ṛ* that I know of (**jígarīti*? cf. VS *galgalīti* and EWA s.vv. *GAR*², *GAL*), but presumably not simply *gar*. In short, neither the nominal morphology nor the root formation of *jígarti-* is easily accounted for under the standard hypothesis, but I have nothing better to substitute. I therefore retain the rendering in the publ. tr., though with full awareness of its fragility. My thanks to Veronique Kremmer, who drew my attention to *jígarti-* and its many problems and discussed the issues at length with me. See also the illuminating disc. in Vine 2004 “PIE Full Grades in Some Zero-Grade Contexts,” p. 375.

V.29.6: Indra’s two actions in this vs. are expressed by injunctives (*vivṛścāt* b, *bādhata* d), as in the preceding vs. (*kaḥ* 5d), but the middle verb, *ārcanti* in c, is emphatically present. The configuration here, #*ārcantīndram marútaḥ*, matches that of 1c #*ārcanti tvā marútaḥ*. See Hoffmann (Injunk. 165) on this vs., who seems to think the “timeless,

mentioning” function of the injunctive can be so distant from a real preterite that it can drag in present indicatives. I would attribute it rather to the attempt in this hymn to associate the heroic deeds of the past with the activities of the present sacrificers. It is also barely possible that the text originally read **ārcantīndram*, that is, **ārcant īndram* with the underlying 3rd pl. ending *-nt* preserved before vowel, but later reinterpr. as pres. *-nti* after *-nt* regularly became *-nn*. The *-í-* could then have been lengthened, as if a sandhi product of *ārcanti īndram*, with no metrical consequences. The change would have been facilitated by the model of likewise pāda-initial *ārcanti* in 1c, as well as *arcanti* in 12b. Still, on balance I find this unlikely. Other examples of preserved *-nt* because of early misparsing as *-nti* occur before the enclitic pronoun *īm*, and the result in either case would be *-ntīm*. See disc. ad I.67.4, etc.

V.29.7: On neut. pl. *mahiṣā* in conjunction with the numerical expression *trī śatāni* see Old. Note the alternative phrasing with gen. pl. in 8a *trī ... śatā mahiṣāṇām*.

V.29.8: Gr and Ge [/WG] take both *āghaḥ* and *āpāḥ* as 3rd sg. Since *āghas* belongs to the root pres. to *√ghas*, either 2nd or 3rd sg. is grammatically possible. But for *āpāḥ* to be 3rd sg., an *s*-aor. stem *āpās-* has to be posited, for which there is no other support save for a med. *pāsta* in a *mā*-prohibitive in the AV (XII.3.43). Nevertheless, Narten does set up such a stem (Sig.Aor. 168). I see no reason to do so; the presence of nom. sg. *maghāvā*, adduced as evidence by Narten, is not sufficient, since nom. sg. appositives to 2nd sg. subjects are common. Also common is abrupt shifting between 2nd and 3rd ps., found already in this hymn between vss. 1 and 2, 4 and 5, 5 and 6. In our vs. we must assume that a shift happens between the hemistichs, given the 3rd sg. *jaghāna* in 8d, but this is hardly unprecedented -- and note that it returns abruptly to 2nd ps. in vs. 9. I therefore prefer to interpret 8ab as couched in the 2nd sg., as in the publ. tr. But if a 3rd sg. reading of *āpāḥ* is really desirable, I would prefer to consider the *-s* ending a local analogy to the precativ *peyāḥ* at the end of 3b, reinforced by the ambig. parallel *āghaḥ*, rather than setting up an *s*-aorist stem to account for a single form.

I follow Ge in taking both *kārām* and *bhāram* as the direct speech expression of a victory cry. The former is appropriate to gaming contexts, while the latter is at home in battles. Our *ahvanta ... bhāram* has a compositional equivalent *bhāra-hūti-*, for which see comm. ad I.129.2; for *kārām* *√kṛ*, see I.131.5. It may be convenient to assemble here some passages containing both *bhāra-* and *kārā-* (or derivatives): I.112.1 *yābhir [ūtūbhiḥ] bhāre kārām āmśāya jīnvathaḥ*; VIII.66.1 (likewise an Indra hymn): (*īndram ... ūtāye!!*) *huvé bhāram nā kārīṇam*; IX.16.5 *mahé bhārāya kārīṇaḥ*; IX.14.1 *kārām bībhrat puruṣpr̥ham*. See also Wackernagel KISch. 340ff.

V.29.9: On *uśānā* as an indeclinable, see my 2007 “Vedic Uśanā Kāvya and Avestan Kauui Usan: On the Morphology of the Names” (Fs. Jasanoff).

On the basis of other mentions of this myth, 2nd du. *āyātam* must conceal a Vāyav Indraś ca type construction, with the other subject, beside voc. *indra*, being Kutsa. Cf. nearby dual dvandva *indrā-kutsā* (V.31.9). The gapping of Kutsa in the first half of the verse is repaired by cd *sarātham yayātha, kútsena*, with the same root *√yā* as in *āyātam*. I do not understand the change in tense stem.

V.29.10: In the publ. tr. I take *kútsāya* primarily with pāda a, though syntactically and metrically it should go with b. I would now emend the tr. to “the other you made into wide space for Kutsa to drive” or “... for Kutsa for driving.” I’m not sure how a wheel can become a wide space -- what sounds like a kind of highway -- but the addition of Kutsa doesn’t make it any less comprehensible.

I take *anāsaḥ* ‘mouthless’ as proleptic, describing the state of the Dasyus after Indra has finished crushing them (sim. to I.32.6 **anāḥ pipiṣe*), while Ge [/WG] take it as a standing characteristic of the Dasyus (“mouthless Dasyus”). There is no way to tell.

V.29.11: The etym. fig. *pācan paktīḥ* is also a proleptic expression of sorts, “cooking (food, so that it is) cooked,” though since *paktī-* is not an adj./participle, but a noun identifying a type of food, the parallel isn’t exact. For other exx. of *paktī-* √*pac*, see IV.24.7, VII.32.8.

V.29.12: This vs. brings the third repetition of *arcanti* (1c, 6c [or *ārcan(t)*; see above]; cf. *ārcan* 2b).

I don’t quite understand the double *cid* construction in cd, where even one *cid* seems somewhat superfluous. Ge (/WG) take it as concessive and logically to be construed with *apidhānavantam* (“the cowpen, although it had a cover” [Ge: “obwohl verschlossen,” sim. WG]). This is possible, though I don’t like the position of *cid*, and I would also note that #*gāvyaṃ cid ūrvām* is also found in VII.90.4, where a concessive value is harder to wring out.

V.29.13: Gr, Ge (/WG), and Klein (DGRV I.219) interp. *pāri* √*car* as ‘serve’. Although this sense is found in later Vedic, the RVic instances of this lexeme only have the literal meaning ‘go around’ (e.g., III.7.2) with the developed sense ‘encompass’. (I.127.9 comes closest to ‘serve’, but the ‘surround’ sense is dominant.) Interpreting *pāri carāṇi* here as ‘serve’ requires the part. *vidvān* to take an obj. (“knowing your heroic deeds ...”), but pāda-final *vidvān* is almost always used absolutely. Moreover *āparītaḥ* (*pāri* √*i*) in the next vs. continues the thought of conceptual circumscription.

Ge (/WG) and Klein divide the vs. syntactically into ab / cd, with the rel. cl. of c expressing the obj. of d. By contrast I think the lexical parallelism and the conjunction *co* [=ca u] of ... *yā cakārtha / yā co ... kṛṇāvaḥ* of bc mark those relative clauses as tightly conjoined, and I take them as subordinate to pāda a. Further, the last pāda *préd u tā te vidátheṣu bravāma* strikes me as a self-contained (pseudo-)refrain, reminiscent of the Ṛtsamāda refrain in II: *bṛhád vadema vidáthe suvîrāḥ* (II.1.16d etc.).

V.29.14: This vs. is structured somewhat like vs. 13, with (a) *etā víśvā cakṛvān* corresponding to (13b) (*vīryā*) ... *yā cakārtha*, though with pf. participle not rel. cl., and (c) *yā cid nú ... kṛṇāvaḥ* corresponding even more closely to (13c) *yā co nú ... kṛṇāvaḥ*. I would therefore now slightly emend the publ. tr. to reflect this parallelism more closely: “By your nature you cannot be circumscribed in heroism -- you, Indra, (as one) having done all these many (deeds) (as well as) those (deeds) that you will do even now in your daring. There exists no one to obstruct this power of yours.” In other words I take pādas a and c as parallel adjunct expressions, with b as their joint main clause, and d (like 13d)

independent. Note that d has no overt referent for *yā* in c. The English is awkward, but this structure corresponds better to the Skt.

V.29.15: On the sandhi in *nāvyā ākarma* see Old.

V.30 Indra

There are a number of paired repetitions of words and phrases in earlier and later parts of the hymn, but not enough to define an omphalos: e.g., *-senāḥ* 3d / *sénāḥ* 9b; X Y *cakṛṣe* 4a / X Y *cakre* 9a; *yudháye* 4b / 9d; *áśmānam cid* 4c / 8c; *gávām ... usríyānām* 4d / 11d.

V.30.1: Despite the distance between them and the syntagms in between, I take *rāyā* and *ūtī* as parallel polarized instr. to be construed primarily with *gántā*. Ge and WG differently, though also differently from each other.

It is tempting to interpret *gántā* in d as a periphrastic future, a temptation yielded to in the publ. tr.

V.30.1–2: Note the reciprocal ‘seeking’ (*ichán*) of Indra (1c) and his devotee (2b).

V.30.2: WG take *sasvár* as ‘in sleep’, against the standard interpr. ‘in secret’, arguing that the latter does not make sense with *bubudhānāḥ* in d. But pāda d is not directly associated with pāda a, which, with b, compares the poet’s pursuit of Indra to the stealthy tracking behavior of a hunter. Moreover, the other three exx. of *sasvár(tā)* (in a tight knot in VII.58.5, 59.7, 60.10) clearly mean ‘in secret’, as opposed to ‘in the open’ (cf. the contrast in VII.58.5 with *āvīr* ‘openly’). It is true that the standard etymology of *sasvár* takes it from \sqrt{sas} ‘sleep’ (see EWA s.v. *SAS*), but the semantic development to ‘in secret’ isn’t difficult to imagine -- esp. if Skt. \sqrt{sas} , which violates standard root structure constraints, was onomatopoetic for the shushing/hushing verbal gesture (English “shh,” etc.). From “keep quiet” to “keep secret” is a short step. Although \sqrt{sas} is clearly an inherited root, with cognates in Avestan and Anatolian, the onomatopoetic interpr. could be regularly (re-)actualized by association with the (near-universal?) living “shh” interjection.

The position of *anyān* in b should, by my rules, make it definite (“the others”). Though both Ge and WG render it as indefinite, there is no reason why it can’t be definite: the poet consults with his priestly/poetic colleagues or with those “who know” (*vidvāms-*) Their answer, referring to “we men,” suggests that it is a defined group, quite possibly the priests performing the morning ritual. The action that qualifies them for attaining Indra -- waking up (early) -- is surely not simply reflecting a general sentiment like “the early bird gets the worm,” but refers to Indra’s attendance at the morning pressing; cf., e.g., IV.35.7 *prātāḥ sutām apibo haryaśva* “Early in the morning you drank the pressed (soma), you of the fallow bays.”

V.30.3: The syntax in the first hemistich is a little rough. *yā te kṛtāni* in pāda a appears to be an embedded relative clause, a construction that is rare to non-existent in the RV. Its position between the preverb and the verb of the main cl. (*prā ... brāvāma*) makes it difficult to interpret it any other way. The fact that it is a nominal clause, an NP serving

as direct object, may make the embedding seem less of a syntactic violation. See my forthcoming art. on the proto-izafe construction. (Note that Ge simply ignores the rel. prn.) The main verb *brāvāma* is accented because it is effectively in pāda-initial position: the initial accented voc. *īndra* is extra-clausal.

The second rel. clause *yāni no jūjoṣaḥ* “which of ours you will enjoy” appears to be parallel to the embedded NP, but it is a little skewed semantically. Indra should not *enjoy* his deeds, but rather enjoy *hearing* our recital of them (see Ge “die du von uns gern *hören* wirst” [my italics], with ‘hear’ silently supplied). Alternatively it would be possible to assume that the 2nd rel. is (covertly) conjoined to the first and refers to different deeds, “(and) which (deeds) of ours you will enjoy” -- but it is hardly likely that Indra cares about what we do (besides pressing soma), so this interpr. is pragmatically blocked. WG supply “(in) unseren (Worten)” as the antecedent to the second rel. prn., such that what Indra will enjoy is our words, not his deeds (“(in) unseren (Worten), an welchen du Freude hast”); this seems to me to deploy too much machinery to repair what is simply a somewhat loose expression.

It would be technically possible to take the first hemistich as consisting only of relative clauses, with the main clause represented by c with an unexpressed resumptive “(those deeds)”: “Which deeds of yours we shall now proclaim at the pressing, which you will enjoy, (those deeds) he will learn ...” The accent on *brāvāma* would then be because it is in a dependent clause. Although this interpr. would save us from an embedded relative (see above), the rhetoric of the 1st hemistich, with *prā nū vayām ... brāvāma* reminiscent of I.32.1 *īndrasya nū vīryāni prā vocam* and similar passages, strongly suggests an annunciatory declaration rather than a subordination.

V.30.4: Ge (/WG) assume that c, like d, refers to the opening of the Vala cave. They therefore either take *didyuto ví* ‘flashed forth’ as a stand in for ‘broke/split apart’ (Ge, flg. Sāy.’s *vyabhinaḥ*) or disjoin *didyutaḥ* from *ví* and supply another verb with the preverb (or so I understand WG’s “... blitzend, zer(sprengt)”). But c and d do not have to refer to a single feat: a and b do not, and the recital of *kṛtāni* promised in 3ab covers a number of different deeds in the vss. to come. Moreover, though *ásman-* ‘stone’ can refer to the Vala cave, it has a number of other possible referents (see 8c where Namuci’s head is equated/compared with an *ásman-*), including Indra’s own weapon. Cf. IV.22.1 *yó áśmānaṃ śávasā bíbhrad éti* “who [=Indra] keeps bearing the stone with his power,” with the *śávasā* found also here. Since *√dyut* is very commonly found with *ví* (including the common and lexicalized root-noun cmpd. *vidyút-* ‘lightning’) and since one of the sites to which a preverb in tmesis moves is directly after its verb (and here also adjoining a metrical boundary), it seems very likely that preverb and verb belong together -- and have their normal sense. In my interpr. this lexeme incorporates a simile: ‘cause to flash like lightning’ / ‘cause to lightning’ (unfortunately English does not have such a verb). In other words, with his power Indra can make even the dull and homely material stone flash like a lightning bolt.

V.30.5: The Pp. interprets *paramá* as nom. sg. m. *paramāḥ*, and Ge (/WG) follow suit. I prefer the equally possible reading *paramé*, on the basis of several ‘born’ passages with this expression. Cf., e.g., I.143.2 *sá jāyamānaḥ paramé vyòman* (though the subj. is Agni there).

In my view *cid* often takes Wackernagel's Law position, even when it seems to limit a different word in the clause. Hence my "even the gods," though *devā(h)* is at the end of the pāda. Its positioning there may be to take advantage of its adjacency to *viśvā(h)* across the pāda boundary. Although the latter is fem. and must modify acc. pl. *apāḥ* 'waters', its position evokes the common locution "all the gods / the All Gods." In fact, the expression "all the waters" is vanishingly rare — besides this passage I have found only VII.95.1 — and so "all" belongs more naturally with the immediately preceding "gods" than with its grammatical partner.

Note the switch from 2nd ps. ref. to Indra (rel. cl. 5ab) to 3rd ps. ref. (main cl. 5c, new cl. 5d).

V.30.6: Referent shift continues: 2nd ps. in ab, 3rd in cd.

V.30.7: There are several uncertainties in this vs.

As often the function and syntactic affiliation of *januṣā* are unclear. I construe it with *mṛdhaḥ*, but Ge and WG (in different ways) take it with Indra. This is also possible.

The participial phrase *dānam īvan* "stimulating giving" seems oddly embedded in the distracted VP *viśu mṛdhaḥ ... āhan* "you hewed apart the negligent ones." The positioning between the preverb and its verb in tmesis may be a kind of iconic reflection of the separation sense of the preverb ('apart'). For a similar ex. see I.103.2. On the participial phrase see further below.

I have been puzzled by the phrase *gāvā ... saṃcakānāḥ*, though I think I now see a solution (see below). For one thing, $\sqrt{kā}$ [*kan*] is not otherwise found with *sām* (anywhere in Sanskrit, at least judging from Monier-Williams); for another, this root is not construed with the instr. (*pace* Gr, whose supposed exx. should all be interpr. otherwise). And finally I cannot think of a (solitary) cow that figures prominently in Indra mythology, either as a companion (as I took it in the publ. tr.) or as a source of enjoyment. Ge remarks (n. 7a) that Indra gives abundantly as long as he is "im Genuss der erbeuteten Kühe." I suppose this is possible but it assumes a fairly extensive backstory. Like me, Kü (143) takes the cow as comitative: "mit Rindvieh ... dich zusammenwünschend." I was happy to have company in this tr., but I frankly didn't understand what either his or mine is actually meant to express. WG also seem to have a comitative reading, which is similarly opaque: "du erpicht darauf wirst, mit dem Rind beisammen zu sein."

On reconsideration of the passage I now see a possible solution. It is striking that *gāvā* is the only apparent occurrence of the instr. sg. to this stem in the RV. In context it appears directly before *maghavan*. I now think the original form may have been gen. pl. **gāvām*, with simplification of the double *-m m-*. The meter is unaffected, and a gen. pl. would fit the sense much better, as I will now show. This hymn contains four other examples of this very gen. pl. (4d, 11d, 12b, 13b), as well as nom. pl. *gāvaḥ* (10a). The examples in 12 and 13 are in a dānastuti, but the others refer to the cows that Indra freed from the Vala cave (and are in the same metrical position as our form). I see two possible ways to construe my putative **gāvām*. Since forms of $\sqrt{kā}$ can take the genitive as a source of enjoyment (e.g., X.54.16 *drāvīṇasaḥ*), it may go with *saṃcakānāḥ*: "enjoying the cows," referring to Indra's pleasure in his deed and its products. But in vs. 11 Indra, having drunk soma, *pūnar gāvām adadād usrīyāṇām* "gave again of the ruddy cows."

This seems to refer to a redistribution on the ritual ground of the cows that Indra had freed. Bringing together 11d *gāvām adadāt* with 7ab *dānam īnvan ... *gāvām*, I am inclined to think that the cows are the content of the gift and would now alter the tr. to “setting in motion the gift *of cows” vel sim. Under this interpr. *saṃcakānāḥ* is used without complement: “taking pleasure, enjoying yourself” (for a similar absolute use of this participle, see IV.16.15 and Kü 143). Thus the hemistich contains a brief précis of the myth: Indra hews apart those who block his freeing of the cows [I would now probably change my rendering of *mṛdhaḥ* as ‘negligent’ here], which allows him to set in motion the ultimate giving away of the freed cows, and he thoroughly (*sām*) enjoys the whole process. The occurrences of *gāvām* in the dānastuti (esp. 12b *gāvām catvāri dādātāḥ saḥsra*) simply replicate the mythic model provided by Indra’s generous sharing out of the freed cows.

I am not certain what pāda d is conveying. How is it that Indra’s setting Namuci’s head to rolling involves “seeking a way for Manu”? Unfortunately we can glean too little about Namuci from the RV (where he is mentioned only 9x) to know what threat he posed that required Indra to kill him. On the other hand, judging from the usual troubles caused by Dāsas and, particularly, from vs. 9 (see publ. intro.), these foes stand in the way of Ārya movement into new territory. Thus Indra by eliminating Namuci would open the way for Manu and the rest of the advancing Ārya.

V.30.8: Though this vs. follows thematically on vs. 7, it seems disjointed and has given rise to much discussion (see esp. Old and his skepticism about Ge’s interpr.; Bl RR) and incompatible interpretations, which I will not treat in detail further here.

The first question that arises is who is the 1st-ps. speaker in pāda a. Ge suggests that it is Namuci himself, a suggestion rejected by both Old and Bl. I think the root aor. *ākṛthāḥ* is the clue. It is rare that the aorist, esp. the root aorist, is used as a narrative tense, esp. to a root well outfitted with other preterital possibilities. I take pāda a as a parenthetical interruption of the Namuci story, prompted by the last pāda of vs. 7, esp. the mention of Manu. With Old I take “me” as referring to the present-day priest, and in my view he is asserting his ancestral and vocational connection with the primal priest and representative Ārya, Manu. The speaker suggests that Indra’s current partnership with him (“for you have made me your yokemate” with the aorist of the recent past) is evidence of Indra’s active concern for his ancestor Manu in the mythological past. After this interruption *ād īd* functions as a resumptive expression, returning us to and carrying on the story of the myth narrated in 7cd.

In 8c the referent of the “whizzing stone” (*āśmānam ... svaryām*) is disputed. I very much doubt that it is a mountain, despite the occurrence of the same expression in V.56.4, where it definitely is a mountain, and despite Old’s championing of this identification. I think it more likely that the phrase resonates with I.32.2 *vājraṃ svaryām*, where *svaryā-* refers to Indra’s mace. Namuci’s whirling head is being compared to a weapon whirling through the air and making a whizzing sound.

The “rolling, whirling” image is carried further in the next pāda, with the simile “(rolling forth) like two wheels.” The simile makes fine sense with *vārtamāna-*, but what are the two world-halves (*ródasī*) doing there? As it turns out, though it may seem counter-intuitive in real-world terms, the two worlds (under various designations) are regularly associated with the root *√vṛt* (cf., e.g., V.43.2, VI.8.3, VII.80.1, VIII.6.5). In

some of these passages the rolling out of the two worlds is part of a cosmogonic exercise; in some it refers to the visual (re-)appearance of differentiated earth and sky at dawn.

I have no idea what the Maruts are doing here.

V.30.9: For women as weapons see not only I.104.3 mentioned in the publ. intro. but also X.27.10 and disc. ad loc.

For my interpretation of the sense of this vs., see publ. intro. I am tolerably certain about my reading of the first hemistich, but pāda c is more challenging and has given rise to some curious interpretations. Ge tr. “denn er hatte darunter seine zwei Frauenbrüste entdeckt,” commenting (perplexingly, at least to me) “Die beiden Milchbrüste für seine beiden Frauen” (n. 9c). (One would assume there would be four in all, at any rate.) Old thinks the two *dhéne* refer to the two liquids in the Namuci myth and ultimately (see his ref. to his own NGGW 1893 art. [=KISch. 635ff.]) to the Sautrāmaṇī ritual and its two separate oblations, milk and surā. Schmidt (Ged. Nyberg), more or less flg. Bloomfield, suggests that Indra recognizes two streams within himself, songs and libations, but this linkage of the literal and metaphorical through an elliptical dual seems quite unlikely. WG’s “Darunter aber hat er dessen beide Ströme erblickt” is literally close to mine, but they provide no guidance on what they mean by “his two streams.”

My own tr. (“distinguished both his [=Dāsa’s?] streams”) is also not as informative as it might be. One problem is the meaning of the lexeme *antār√khyā*. To *√khyā* ‘see’ *antār* should add the sense of either ‘look within’ or ‘distinguish between’. The similarly formed *antār√paś* seems to have both these meanings: ‘look within’ in I.132.3 and ‘distinguish between’ in II.27.3. (In the latter passage JPB tr. ‘look within’, but I consider that the less likely sense in context.) In the only other occurrence of *antār√khyā*, I.81.9, I tr. ‘detect’ (flg. Ge’s ‘endecken’ for this passage, V.30.9), a sense that can be somewhat tenuously derived from ‘look within a mass of stuff — and visually locate’. It’s also possible in that passage, which concerns the possessions of the impious, which Indra is supposed to bring to us, that he is distinguishing between those possessions and the ones that belong to deserving people and should stay put. In our passage here we might in the first instance think that ‘distinguish between’ would be a promising candidate, given the dual object. But I don’t think Indra is supposed to be seeing a difference between the two streams, but rather perceiving that they are just streams and therefore not formidable weapons -- thus encouraging his advance to fighting in pāda d. I am tempted to emend the publ. tr. to “detected/recognized both of his (weapons) as (just) streams.” Though the weapons (*āyudhāni*) were plural in pāda a, I think that is a general statement about turning women into weapons, whereas pāda c concerns the particular situation Indra confronts, the two barrier rivers -- the same situation as in I.104.3, which also contains two troublesome rivers.

V.30.12, 14: The Anukr. takes *ṛṇamcayā-* as the PN of the king, and the standard interpr. follow this, incl. the publ. tr. I now wonder if it is at least a speaking name – and perhaps not a name at all but a descriptor: “requiting debts.” The royal patron who distributes largesse to poets and priests at a sacrifice is, from the point of view of the ritual economy, requiting his debts to them, who attracted the gods to the sacrifice and entertained them, leading them to grant tangible and intangible rewards to the patron.

V.30.13–14: The two pāda-final sequences *páritakmyāyāḥ* (13d) and *páritakmyā yām̐* (14a) in adjacent pādas are puzzling. The publ. tr. reflects emendations of both forms to loc. sg. *páritakmyāyām*. This loc. occurs 6x, always pāda-final, including in the next hymn, V.31.11 -- by far the most common form to this stem. Moreover, VI.24.9d is identical to 14d, save for having the loc. *páritakmyāyām* -- a variation that BI (RVReps) finds “baffling.” The arguments in favor of emendation are the dominance of the loc. sg. and its appearance both in the next hymn and in the otherwise identical pāda in VI.24.9. However, these arguments cut both ways: it is difficult to understand how these forms would have become mangled – *especially* given the dominance of that same loc. sg. It cannot be claimed that the redactors misunderstood the forms because they had never seen their like. I therefore now feel that we must accept that the forms were in the urtext, deliberately produced by the poet, who was playing games with this well-known pāda-final temporal expression. I still believe that the intent of both forms is the same as the loc., but that the loc. has been deliberately altered, in two different ways, conditioned by the immediate context.

In 13d *aktór vyūṣṭau páritakmyāyāḥ* the form has been given a genitive ending to conform, superficially, to the gen. *aktóḥ*. Gr takes it to an adjectival stem (*páritakmya-*, which doesn’t exist) as a modifier of *aktóḥ*, which, as Old points out, would then have to be fem. here, rather than its normal masc. Old suggests it might be a gen. of time, though he prefers to supply *rātryāḥ* or to have it depend on *vyūṣṭau*. I consider this over-thinking: the poet gives us the loc. form we expect, right up to the very last segment (*-ḥ* rather than *-m*) and then springs the surprise, capitalizing on the superficial resemblance to the gen. sg. *áktōḥ*.

In 14a *aúchat sá rātrī páritakmyā yām̐* the final syllable of the loc. has been truncated and given an accent. The anunāsika can be taken as hiatus-breaking nasalization of a final *-ā* before *r*; this is the standard interpr. (see esp. Old, Noten, with ref. to Prol.). This yields the nom. sg. fem. rel. prn., which allows an interpr. as a nominal rel. clause *páritakmyā yā*, which specifies immediately preceding *sá rātrī*. A pāda-final rel. pronoun and the resulting nominal rel. clause (“... the night, which is *páritakmyā*”) would be highly unusual, but as a poetic trick involving re-segmentation of a well-known form it shows a proto-*śleṣa* sensibility.

The fact that the poet alters the expected form in two different ways in succeeding pādas should alert us to the fact that he is playing verbal tricks, secure in the knowledge that his audience would expect and interpret both as underlyingly locatival. For a different manipulation of the stem, see comm. ad I.31.6. In any case the publ. tr. should have an * before “at its final turn” in both instances.

V.30.14: The primary reading of *ajyámānaḥ* is surely “being driven,” as the standard interpr. have it. But it could also be the passive of *√añj* ‘anoint’ and inhabit the same semantic realm as “well-ornamented with thousands of cows” in 13ab: he would be anointed with prize cows.

V.30.15: The idiom *ā√dā* ‘take’ is ordinarily in the middle, whereas *ādāma* here is active. This active form reflects secondary spread of the apparent act. thematic stem, based on the (pseudo-)active *ādat* ‘took’, for which see comm. ad V.32.8, II.12.4.

V.31 Indra

V.31.1: Against the Pp., which reads *vy ùnoti*, and despite Old's objections, I read *víyunoti*, that is, *víyunoti* 'keeps separate' -- an idea that goes back to Wh's Roots (s.v. *√u*)(see also Old's other reff.) and is accepted by EWA (s.v. *YA V²*); see also Gotō III 31 (1988) -- even though this 5th class pres. is not otherwise attested to this root. Note the same lexeme, *ví√yu*, in the immed. preceding hymn, V.30.10 ... *gāvaḥ ... vatsaír víyutā yád āsan* "since the cows were separated from their calves." This interpr. is, not surprisingly, reflected in WG's tr., but not Ge's 'mustert' (survey, inspect, further glossed in n. 1c as "er wählt den rechten Wagen aus"), whose root affiliation is not clear to me.

This verb seems to work slightly differently in simile and frame. In the simile the herdsman is separating flocks, sorting them on some principle or other (sheep from goats? flock belonging to A from that belong to B? young animals from older? etc.). In the frame I supply *rātham* as object (from 1a) and, as I see it, Indra keeps his chariot separate from the other chariots in the race or chariot drive in order to be first, a position reflected in pāda d. WG slightly different: Indra drives the other, opposing chariots apart.

V.31.2: WG take *písāṅga-* in the cmpd *písāṅga-rāti-* as referring to the color of cows ("Gabe rötlichbraune (Kühe)"), whereas I follow Gr, Ge in taking it as a reference to gold. Either is possible, and it is true that the adj. qualifies other animals -- a dog (VII.55.2), horses (I.88.2, V.57.4) -- though not cows. Nothing rides on the choice.

V.31.3: Ge and WG take *sāhaḥ* as the only subj. of *ājaniṣṭa*, while I take *sāhaḥ* as an appositive qualifying the unexpressed subj. *indraḥ*. Again the difference is minor, but I favor my interpr. because the birth of Indra and the prodigious feats he performs immediately thereafter are frequent topics in the RV.

V.31.5–6: Vs. 5 is syntactically problematic, in that it has two subordinate clauses, one marked by *yád* in pāda a and one marked by *yé* in pāda c, but no obvious main clause. The rel. cl. beginning in c must extend through d, which contains the accented imperfect *āvantanta*, but the extent of the *yád* clause is unclear. It must go as far as the end of pāda a because of the accented subjunctive *ārcān*, but the status of b is in question. Since the vs. otherwise lacks a main clause, Ge and WG make b the nominal main clause, e.g., Ge "..., da waren die Presssteine, die Aditi einverstanden." This is possible, but seems conceptually weak, and both Ge and WG fail to render the subjunctive value of the verb in the *yád* clause -- Ge silently changing it into a preterite ("anstimmten") and WG using a simple pres. ("singen").

But I think the subjunctive should be taken seriously, esp. given its contrast with the impf. *āvantanta* in d. My solution is to assume the main clause is postponed till vs. 6, whose first pāda contains the familiar annunciatory pseudo-subjunctive *prá ... vocam* "I shall proclaim." Thus, vss. 5–6 depict a ritual situation in which the noise of the pressing stones is, as so often, configured as ritual speech (see, e.g., vs. 12c *vādan grāvā* in this same hymn), to which the poet responds in vs. 6. I now think that *vīṣaṇaḥ* in pāda a is not a separate subject ("the bulls and the pressing stones" of the publ. tr.), but instead qualifies the stones ("the bullish pressing stones"; for pressing stones as bulls, see, e.g., III.42.6, VI.44.20), and I would change the tr. to "When for you the bull, o Indra, the

bullish pressing stones will chant a chant ...” Sāy., cited approvingly by Ge in n. 5a, identifies the bulls of pāda a as the Maruts, and WG also accept this identification, but again the subjunctive makes difficulties: the actions of the Maruts should not be prospective, but located in the mythic past (hence, presumably, Ge’s switch to the preterite).

So the skeleton of the sentence spread over two vss. is “When the pressing stones will chant a chant to you, I will proclaim your deeds.”

A few loose ends remain in vs. 5. The presence of Aditi in b at first takes one aback, but as Ge points out (n. 5b), soma is said elsewhere to be prepared “in the lap of Aditi,” so her proximity to the pressing stones is a ritual given. I take *áditiḥ sajóṣāḥ* as a separate mini-constituent, with the nom. sg. of the -s-stem adjective serving for the fem. as well as the masc., as usual. The second hemistich detours into a conceit -- involving an unexpressed comparison of the pressing stones with deadly wheel rims that have crushed the enemy; cf. a similar passage in X.27.6 *ádhy ū nv èṣu vavṛtyuḥ* “The wheel rims should now roll over them.” In part the conceit responds to the chariot-focused theme of this hymn, esp. the chariot conflict depicted in vs. 11; in part it highlights the pressing stones’ demon-killing power, found, e.g., in X.76.4.

The subjunctive *vibhārā(h)* in the *yád* clause is potentially troublesome for my interpr. of *árcān* in 5a, for it seems to refer to past, cosmogonic deed(s) of Indra’s -- the separation of the two world halves and the winning of water for mankind (two events not usually connected). This surprising usage of the subjunctive is noted by Delbrück (AiSyn 322: subjunctive where we expect the indicative of a narrative tense). Old is undisturbed by the subjunctive and points to 5a as similar, which is exactly what I would prefer to point away from; see my explanation of *árcān* above. Hoffmann (244–45) classifies it as “Konjunktiv in präteritalem Sachverhalt” and suggests that the subjunctive in its prospective use can take on a timeless sense (“... einen ausserzeitlichen Sinn annehmen kann”). Ge simply translates it as a preterite (trenntest) without comment, but WG take the subjunctive seriously here (though not in 5a): “... dass du ... trennen und ... gewinnen willst,” without further comment. I do not have an entirely satisfactory answer, but I think the *yád* clause must be evaluated in the context of what precedes: 6ab announces that I will proclaim Indra’s previous deeds (*pūrvāṇi káranāni*) and “the current ones which you have done” (*nūtanā ... yā cakārtha*). This latter expression, which is found identically in VII.98.5, seems temporally incoherent: if they are his current deeds, he should not have already done them; *yā cakārtha* should limit only the first phrase, *pūrvāṇi káranāni*. A fuller expression of this proclamation announcement, with the time of action correctly sorted, is found in nearby V.29.13 *vīryā ... yā cakārtha / yā co nú návyā kṛṇávaḥ* “The heroic deeds that you have done and the new ones that you will do,” with the perfect *cakārtha* qualifying the deeds already done and the subjunctive *kṛṇávaḥ* the new ones. Immediately afterwards it is said *prá ... tā ... bravāma* “we shall proclaim these,” like our *prá ... vocam*. I think we should interpret our 6cd in the light of V.29.13. The rel. clause *yā cakārtha* should, properly speaking, limit only the *pūrvāṇi*, while the *nūtanā* ‘current (deeds)’ are further specified by a single example (or perhaps two), expressed by the *yád* clause in cd using the subjunctive. A problem remains: as noted above, the separation of the two worlds is one of Indra’s standard cosmogonic deeds as is, in the Vṛtra myth, his winning of the waters. We should expect these to be classified among the *pūrvāṇi*. But of course one of the reasons for celebrating older, mythic deeds

is to persuade / compel the god to perform these deeds again in the present for our benefit, and we can interpret the *yád* + SUBJUNCTIVE clause here in that way. The separation of the two world halves is, on a smaller scale, accomplished every morning when dawn reveals the horizon where the darkness had kept earth and sky undifferentiated. And winning waters is something that needs to be repeated at least yearly. The subjunctive here indicates that our focus is on the re-creation of these older deeds, not simply on celebrating their original performance. In this context *mánave* ‘for Manu’ would have the extended sense ‘for mankind’.

V.31.7–8: The recital of Indra’s deeds now reverts to the past tense, to a series of insistently augmented imperfects: 7b *ámimīthāḥ*, 7c *agr̥bhñāḥ*, 7d *asedhaḥ*, 8b *áramayaḥ*, 8c *ayātam*, *ávahaḥ*. (In 8d the Pp. reads unaug. *árantā*, but in its sandhi situation [*uśánārantā*] it could as easily be *árantā*; the accent should be on the augment because it’s in a subordinate cl., but *ā* + *árantā* would come out this way. Either way, it’s not an imperfect, but either a plupf. or a root aor., but this is a minor quibble.) However, note that this series is introduced by 7a *tád ín nú te káranam* “Just this now is your deed,” where the current situation (*nú*) remains in the forefront of the poet’s mind.

With Ge (and contra WG, who suggest Śuṣṇa), I take the strong one (*ugrám*) in c as Uśanā. This is the usual, if wispy, account of Indra and Kutsa’s journey to Uśanā’s house for advice before the Śuṣṇa battle; cf. X.22.6.

The 2nd sg. *ávaho ha kútsam* “you (sg.) conveyed Kutsa,” following immediately on the 2nd du. *ayātam* “you two drove,” seems a quick correction or explanation. The 2nd du. *ayātam* may have seemed to suggest an equality and mutuality between Indra and Kutsa that might have seemed insulting to Indra’s divinity and greater power -- though the return of *vām* in d and the dual dvandva *índrākutsā* and dual verbs of vs. 9 show that the attempt to reestablish hierarchy was momentary.

V.31.8: With Sāy. I was tempted to take *pārā-* in sandhi for loc. *pāré*, against the Pp., since well-attested *pārā-* otherwise just means ‘far shore’ and is common in the loc. But I was persuaded by Ge (n. 8b), who points out that the verb *pārāya-* is used several times in this same myth with Indra as subject, and by Old, who notes that *supārā-* is used several times of Indra (III.50.3, VI.47.7), in the sense ‘providing good passage, deliverance’. I would therefore take the simplex *pārā-* ‘deliverer, transporter’ here as a nonce extraction from the fairly common *supārā-*.

V.31.9: I take this as the direct address of Uśanā to Indra and Kutsa, with his advice and encouragement before they take on Śuṣṇa. In b both Ge and WG have complex and fanciful interpretations of the phrase *ápi kárṇe*. In VIII.97.12 the same expression seems to indicate close, intimate contact -- perhaps close enough to whisper into someone’s ear. In my interpr. Uśanā is recapping their journey to him, suggesting that they should come close enough to hear his intimate counsel.

Although of apparently identical (thematic) formation, *dhámathaḥ* and *varathaḥ* are modally distinct, the first being an indicative present, the second a subjunctive. Although it is tempting to take them both as subjunctives (as WG do), the stem *dháma-* is robustly enough supplied with diagnostic forms (a number of augmented 2nd/3rd sg.) that it would be hard for a poet to mistake the morphology. I therefore assume there is a

reason for the distinction in mood. Perhaps *dhámathaḥ* presents a successful attack on Śuṣṇa as a given (though it has not yet happened), and this success will have the further happy effect stated in d.

V.31.10: Ge supplies a separate verb (“Lenke”) in pāda a, but this seems unnecessary, since the subj. of b, the sage poet (*kavīḥ*) can have gone (*ajagan*) to the horses of a as goal. The identity of the *kavī-* isn’t made clear, but I think the best candidate is Indra. In I.121.12 he is urged to mount (*tīṣṭhā*) the easily yoked (horses) of the wind (*vātasya suyūjah*, as here), while in I.130.9, addressed as *kave*, Indra went (*ajagan*) to Uśanā, just as here. Indra is also said to be ‘seeking help’ (*avasyú-*) in IV.16.11 in connection with the same story, also as here. In other words, all the phraseology points to Indra as subject, with the sly twist that he is called *kavī-*, which evokes the patronymic of one of the other participants, Uśanā Kāvya, who is also on many occasions referred to as *kavī-*.

The plupf. *ajagan* may have anterior sense here. Kü (159) allows a value of “fernere Vergangenheit” in this passage.

V.31.11: The mixture of tenses and moods in this vs. is at first glance bewildering, but I think the uses can be sorted out. We get, in order, a root aor. subj. (*karat* b), a pres. injunc. (*bhārat* c), a pres. indic. (*riṇāti* c), and a future (*sanīsyati* d), as well as a pf. part. (*jūjuvāṃsam* b) and a redupl. pres. part. (*dādhat* d). The vs. seems to be a sort of “color commentary,” recounting the chariot race or contest with vivid immediacy. The first hemistich, as I see it, contains a general prediction of what is going to happen. Since *karat* is a subjunctive expressing prospective action, the perf. part., generally used to express anteriority, does so here, but as a present action/state (“[now] speeding”) anterior to the future expectation of *karat* (rather than a past anterior as is usual). The second hemistich lays out in sequence a past action (*bhārat* ‘bore’), a present action (*sám riṇāti* ‘restores’), and a future one (*sanīsyati* ‘will gain’), with the participial (*puró dādhat* ‘putting in front’) reprising what has gone before. Beyond this I cannot go, as I still do not understand what happens in the Etaśa and sun’s chariot passages. The perplexing nature of this fragmentary myth can be seen in the diametrically opposed translations it receives, with WG exactly reversing the change in position of the chariot in b (from behind to in front, contra Ge and me: from in front to behind). I cannot judge which is right.

Adding to the uncertainty is the lexeme *sám √ri*, which occurs in the RV only here and three times in I.117 (4, 11, 19) of miraculous repairs of the Aśvins. Since *√ri* means ‘let flow, dissolve’, I take *sám* as a preverb that both implicitly reverses that action and expresses unity: ‘put back together’ → ‘restore’.

This is the last vs. before the return to the here-and-now, and the verbal fireworks may mark a poetic climax.

V.32 Indra

As indicated in the publ. intro., although this hymn focuses on the Vṛtra myth, the standard formulaic encapsulation of that myth -- *āhann āhim* “he/you slew the serpent” -- does not appear in it. Instead there are formulaic transformations in the early verses: 1d *āva (dānavām) han* / 2cd *āhim ..., jaghanvān* ... (the closest to the standard formula,

involving only morphological transformation of the verb) / 3b (*mṛgāsya vādhar*) *jaghāna* / 4d *ní jaghāna* (*śúṣṇam*), (*tám ...*) *jaghāna* (6cd).

V.32.1: Old is disturbed by *aramṇāḥ* ‘brought to peace / to a stop’, when we would expect Indra to releasing the waters to flow. I’m not sure this is a problem: since the floods were hard pressed (*badbadhānān*), Indra could be soothing and quieting the tormented waters. Cf. also in the previous hymn V.31.8 *apāḥ ... áramayaḥ* “you brought the waters to rest,” the same sentiment with the same root. However, it could also be an example of alluding to a sub-surface word by the overt use of its opposite, like *bodháya-* for **svāpāya* in I.103.7; see comm. ad loc. In other words, *aramṇāḥ* could be signaling ‘set in motion’ by opposition to its literal sense ‘bring to a stop’. In any case the expected action is expressed later in the vs.: d *śrjó ví dhāṛā(h)* “you set loose the streams,” in a species of poetic repair. See also comm. on vs. 2.

Note the stylistic quirk of post-verbal preverb in *ásrjó* [/śrjó] *ví* OBJ (pādas a, d) versus *ví ... váḥ* (c) and *áva ... han* (d). The latter VP also contains a phonetic figure in *áva dānavám*.

In c the usual placement of the rel. pronoun after at most one constituent is precariously observed (if at all), and in any case the *yád* is descriptively found deep in its clause. However, its placement (almost) conforms to the letter of the law: the voc. *indra* is extraclausal for these purposes, and *mahāntam ... párvatam* though heavy is a single constituent. It’s the *ví* that may tip the balance towards non-compliance. On the other hand, the configuration PREV *yá-* VERB is so standard that this may determine the position of *yád* here.

Technically speaking the opening clause of d may be part of the dependent clause in c (“when you pried apart ... (and) set loose ...”), with *áva dānavám han* the sole main clause, but since in Vṛtra narratives there’s usually a cause-and-effect relationship between opening the mountain and letting the waters flow, I think the publ. tr. is the better choice.

Note the echoing in *áva ... avá(m)* and the abrupt final near-rhyme ... *vám han*. This is the first variant of the basic dragon-slaying formula *áhann áhim*, and the unfamiliar preverb *áva* almost allows *áhan* to emerge: *á(va dānavám) han*.

V.32.2: The first hemistich redeploys vocab. from the 1st vs.: 1) The two members of the NP *útsān ... badbadhānān* in pāda a were both found in 1ab, but not in the same constituent. 2) *áramḥaḥ* ‘you sent speeding’ in b rhymes with *aramṇāḥ* in 1b and is its antonym. This antonymic pairing might support the suggestion floated just above, that *áramṇāḥ* is meant to evoke its semantic opposite.

The function of the instr. *ṛtúbhiḥ* is unclear. I take it as an instr. of extent of time with the part. *badbadhānān* (so approx. also Ge; see his n. 2a, though I doubt that a ref. to menses is involved: *útsa-* is one of the few masculine nouns for water and water sources, so if the poet wanted to make that sort of reference, he could have his pick of fem. nouns). WG take the instr. with the main verb (“sent speeding”), with the sense that after their release the waters now flow regularly (“Du liessest die ... Quellen nach geregelten Zeitabläufen ... auslaufen”). This is certainly possible, though I somewhat favor the former because *ṛtúbhiḥ* is nestled in the middle of the NP *útsān ... badbadhānān*.

The form *ūdhaḥ* is contextually problematic. Formally it is the well-attested nom./acc. *ūdhar*, but I find it difficult to construe an acc. in this sentence. As an acc., it should be the obj. of *āramhaḥ* ‘sent speeding’, but the udder of the mountain should not be subject to such an action, whereas it makes perfect sense as a locative expression. Both Ge and WG tr. as an acc. obj., but don’t explain what they think is actually happening. I am inclined to take the form as a nonce locative, though I recognize the strong arguments against this: 1) *ūdhar* is very well anchored as a nom./acc.; 2) this *r/n* stem has two reasonably well-attested locatives already, *ūdhan* and *ūdhani*. Nonetheless, I wonder if *ūdhar* could have been taken as belonging with the sporadic *-ar* locatives like *vanar* ‘in the wood’, *uṣar* ‘at dawn’ (though the presence of undoubted neut. acc. *vādhar* in the next vs. [3b] might make this harder). It might be worth noting that *ūdhan(i)* is confined to pāda end (except one late Xth book ex.), whereas *ūdhar* here is medial. Alternatively, and on second thought, if we take ‘udder’ as referring to the contents of an udder, namely milk, it *is* possible to interpret it as the acc. it appears to be. For a somewhat similar use of *ūdhaḥ* as ‘milk’, see IV.1.19. I would therefore suggest an alt. tr. by deleting the parenthetical “(in?)” and adding a comma after “seasons”: “you ... sent speeding the wellsprings that had been hard pressed through the seasons, the udder [=milk] of the mountain.”

The ppl. *práyuta-* is variously rendered: Gr ‘achtlos, sorglos’, Ge ‘nachlässig’ (careless, negligent), WG “(alle und alles) verscheuchend” (scaring away). However in all its occurrences it seems to mean ‘spread out, dispersed’. There are four attestations in the RV. Two passages involve cows wandering without a herdsman (III.57.1, X.27.8); in the third (III.55.4) Agni has been dispersed into various hearths and lies spread out at a distance (*śáye ... práyutaḥ*), very much like here (*práyutaṁ śáyānam*). Since this root \sqrt{yu} means ‘separate, keep apart’, my suggested meaning is closer to the root meaning than the suggestion registered above. It is also possible that it does mean ‘scattered, dispersed’ here, if it is interpreted proleptically: after having been smashed, the various parts of the serpent’s body lie spread across some distance. A similar picture is given in I.32.7 *purutrā vṛtró aśayad vyāstaḥ* “Vṛtra lay there, flung apart in many pieces,” with a form of $\sqrt{śi}$ as here. I would then suggest an alternative tr. “having smashed the serpent (so it was) lying dispersed.”

V.32.2–3: An etymological sequence -- *táviṣīm* (2d), *táviṣībhiḥ* (3b), *távyān* (3d) -- that also builds to a climax, from singular ‘(a) power’ to plural ‘powers’ to the comparative ‘more powerful’, all associated with Indra.

The sequence of vs.-init. *t(i)yá- cid* ‘that very one’ discussed in the publ. intro. begins in 3a with *t(i)yásya cid* (and continues with *t(i)yám cid* in 4a, 5a, 6a, 8a). Note that it follows distracted vs.-init. *t(u)vám* in 2a and second-position *cid* in 2c: combining the two produces, by variation, *t(i)yám cid*. That *cid* in 2c follows *āhim* ‘serpent’ provides the referent for the *t(i)yá-* forms to follow. The sequence comes to a temporary close in vs. 6, with *tám cid* opening pāda c a variant of *t(i)yám cid* opening 6a. There is then a brief revival of the phrase in 8a, after skipping a vs.

V.32.3: In c *ékaḥ ... apratīḥ* “alone (and) unopposable” applies to (the unnamed) Vṛtra, but these two words appear elsewhere similarly juxtaposed but applied to opposing referents: IV.17.19 *bhūrīṇy éko apratīni hanti* “alone he smashes the many unopposable

things” and VIII.90.5 *tvám vṛtrāṇi haṁsy apratīṇy éka íd* “You, alone, smash the unopposable obstacles.” This is another example of this hymn taking standard phraseology and turning it on its head. Note that an almost identical phrase, *ékaḥ ... ápratītaḥ* (again with the two words in the same case with the same referent), is applied to Indra in 9b in the triumphant announcement of his universal superiority (see publ. intro.). Though Vṛtra *thought* (*mānyamānaḥ*) he had these qualities in our 3c, Indra possesses them for real -- as shown by the phraseological transfer from the one to the other.

V.32.4: The major problem in this vs. is the identity and syntactic affiliation of the gen. pl. *eṣām*. The standard opinion, found in Ge, Scar (100), and WG, takes it as referring to the gods and construed with *svadháya*. There are several arguments against this. First, the gods are never mentioned or even alluded to elsewhere in the hymn (though goddess(es) are found in 9c and 10a). Second, though *svadháya* √ *mad* is a remarkably common locution (I.64.4, 108.12, 154.4; III.4.7=7.8; VII.47.3; X.14.3, 7, 15.4, 124.8), *svadháya* never has a dependent gen. in those passages. The standard opinion is also hard-pressed to make sense out of the phrase. Ge takes *svadhá-* here as ‘Lebenselement’ and further glosses this as water, but even if “reveling in the Lebenselement/water of the gods” were a possible tr. of this phrase, it is a notion that seems foreign to the Vṛtra myth. Scar and WG have a more reasonable interpr. -- that Vṛtra is reveling in what actually belongs by nature to the gods, that is, as WG say in their n., “Der Dämon usurpiert die Natur der Götter.” But this still requires conjuring up the gods out of thin air and assuming that the audience could do so too, on the basis of an unemphatic, unaccented gen. pl. pronoun. And again the image produced is not a standard part of the Vṛtra myth.

My solution starts, appropriately, by seeking a referent in the context; *dānavásya* in the 2nd hemistich seems a reasonable choice. Although *dānavá-* never appears in the plural in the RV, this stem (related to *dānu-*, the name of Vṛtra’s mother, which I consider a backformation from the demonic ethnonym; see comm. ad I.32.9) names “eine Dämonen-Klasse,” as Mayrhofer remarks (EWA s.v. *dānu-*), and fluctuation between sg. and pl. can happen in such cases (as with the Maruts, plural, versus the Marut flock, singular). The pl. is found in the AV (AVŚ IV.24.2 [with vs. 1 referring to Indra as *vṛtrahán-*], X.6.10; AVP IV.39.3 [≅ AVŚ IV.24.2], VII.12.8, XVI.43.2) and elsewhere in early Vedic as well as later (esp. epic) Skt., and the corresponding Avestan *dānauua-*, also the name of an inimical group, is found in the pl. in Yt. 5.73 and 13.37–38. In the latter it is associated with *vərəθra-* (*vərəθrəm dānunqm*). It therefore seems likely that even in the RV *dānavá-* is not simply a designation of Vṛtra but of the class of beings to which he belongs, and the absence of the plural in the RV is either due to accident or a desire to concentrate on the arch-Dānava, Vṛtra. The gen. here may be construed either with *t(i)yám cid* (“this one of theirs”) or be a free-floating indication of appurtenance, as the publ. tr. takes it. Or indeed, because *eṣām* is in (modified) Wackernagel’s position, it could have originated with any of the descriptors of Vṛtra found later in the verse.

With *svadháya* freed from its supposed genitive dependent, the phrase *svadháya mādantam* now makes sense in a Vṛtra context. He is “drunk on his own power” on the basis of his faulty assessment of this power presented in 3c. The locution recalls a similar one in the great Indra-Vṛtra hymn I.32, where in 6a Vṛtra is described as *ayoddhéva durmádaḥ* “like a non-warrior badly drunk” (lit. ‘having bad intoxication’), foolishly challenging a far more powerful opponent. (I use ‘drunk’ in both instances, instead of our

more usual ‘exhilarated’, because it better captures in English the state of mind of the one so affected.)

The sense of *vṛṣa-prabharmā* is secured by 5c *prābhṛtā mādasya* “at the proffering of the invigorating (soma)” -- hence, as Gr takes it (sim. WG, Scar, and me), “dem der kräftige (Soma) vorgesetzt ist.” This also makes sense in context -- Indra needs to receive the soma before smashing Vṛtra -- and is reinforced by the usual sense of the lexeme *prā √ bhr̥* ‘bring forward, present’. However, Ge renders it “wie ein Bulle angreifend (?)” and I was tempted somewhat in this direction, to ‘having the bearing/deportment of a bull’; *prā √ bhr̥* can, esp. in the middle, mean ‘display, present oneself’. I think both possibilities are latent in this word, and we can view the anchoring 5c *prābhṛtā mādasya* as another example of poetic repair -- or perhaps a poetic thumb on the scales, pressing the choice of one of the options over the other. It is then itself somewhat undercut by 7c *vājrasya prābhṛtau* “at the proffering of the mace.”

In c note the echo ... *-prabharmā ... bhāmaṃ*.

The last word of this vs. is *śūṣṇam*. Generally, of course, this is the name of a different opponent of Indra’s, and a number of tr. take it so here. But I think it has its etymological sense ‘snorter’ (*√ śvas* ‘snort’; cf. EWA s.v.). Our poet is once again toying with us: withholding the real name of the opponent in this hymn, Vṛtra, he is falsely offering a different possibility here.

V.32.5: Unlike 4a where I separate the identically positioned enclitic gen. from the following instr., I do take *asya* here with *krátubhiḥ*, which, unlike *svadháya*, is frequently found with a gen. With Ge I think the referent is Indra (contra WG, who take it to be Vṛtra-Śuṣṇa).

I take *nīṣattam* as proleptic, depicting Vṛtra’s position after the action of *nī jaghāna* in the immediately preceding pāda (4d). With Ge I consider 5a essentially a continuation of 4d and supply the same verb.

In b I supply ‘thinking himself’ with *amarmāṇaḥ* on the basis of 3c and of the almost identical III.32.4cd ... *viveda, amarmāṇo manyamānasya mārma*. The verb in b, *vidát*, is accented because of the following *íd* (see Gr s.v. *íd* 5, though there are fewer clear examples than he presents, since many of them are also pāda-initial).

The Indra-reference shifts from 3rd to 2nd between the first and second hemistich, but this is scarcely novel.

V.32.6: Though Gr refuses to tr., *katpayám* seems to contain the pejorative *ka-* prefix; see EWA s.v. *ká*¹, p. 285.

For *āpa √ gṛ̥* ‘taunt’ see comm. ad V.29.4. As Oberlies (Relig. I.401) points out, this gerund depicts a pre-battle boasting/insulting match -- trash talk (needless to say, this last is not Oberlies’s formulation), flying.

What to do with *uccāḥ* is unclear. Most take it with the gerund *apagūrya*; so Ge “hoch ausholend,” with his interpr. of the gerund as belonging to a *√ gṛ̥* ‘hold out’; with the assignment to *āpa √ gṛ̥* ‘insult’, Schaeffer “nachdem er laut Schmähreden geführt hat”; Oberlies “nachdem er ihn [zuvor] mit lauter Stimme geschmäht hatte”; WG “indem er ihn von oben herab verspottete.” The Schaeffer / Oberlies interpr. of the adverb as ‘loud’ is appealing, but *uccā* is always positional in the RV. The WG interpr. recognizes this fact, but insulting *from above* seems an odd activity. I take it rather with *jaghāna*. A fatal

blow is more likely to come from above than a taunt, and it is notable how often in the hymn it is emphasized that Vṛtra was smashed *down*: 1d *áva ... han*, 4d *ní jaghāna*, 5a *nīṣattam*, 7d *adhamám*, 8d *ní ... āvṛnak*. To depict Indra as correspondingly acting *above* provides the thematic complement. Note also *úd ... índraḥ ... vādhar yámiṣṭa* (“... held up ...”) in the next hemistich, 7ab.

V.32.7: *vādhar* appears here in the same metrical position as in 3b. There the weapon was Vṛtra’s (which Indra struck away), while here it is Indra’s. Another example of vocab. first used of Vṛtra reassigned to Indra -- like *ékaḥ ... apratīḥ* in 3a and the similar expression in 9a. Indeed, *ápratītam* appears here in b, characterizing Indra’s weapon, which is ‘might’ itself (*sáhaḥ*). The use of *sáhaḥ* as an appositive here supports my view of the same usage of this word in V.31.3 (contra Ge [WG]). There it characterizes Indra himself. It is even possible that *sáho ápratītam* here is nominative and an appositive to *índraḥ*, rather than an acc. and appositive to *vādhar*, though the juxtaposition of the two terms in b makes that unlikely. In any case note the similarity in phrasing: 31.3a # *úd yát sáhaḥ ...* 32.7ab # *úd yád ... sáhaḥ*; the verbs in these clauses are also rhyming: 31.3 *ájaniṣṭa*, 32.7 *yámiṣṭa*. On the injunc. *yámiṣṭa* see also comm. ad V.34.2.

As noted ad vs. 4, the poetic repair effected by *prábhṛtā mādasya* in 5c is somewhat muddled by 7c *vájrasya prábhṛtau*. What exactly this latter phrase means is not clear. I doubt that Ge’s “im Schlag mit der Keule” is correct, since ‘strike’ is not a standard sense of *prá √ bhr* (the closest we get is ‘bear down on’). WG’s “beim Vorführen des Vajra” is similar to my “at the proffering of the mace” (‘proffer’ having been chosen to match the tr. of this lexeme in 4c and 5c). The English idiom “present arms” is a direct correspondent, though the action in the English phrase is a gesture of respect, not (as here) of intimidation. The point of both *úd ... vādhar yámiṣṭa* “held up his weapon” and *vájrasya prábhṛtau* seems to be to show Vṛtra the unbeatable power of the *vájra*-. See also the *mahatā vadhéna* in 8c.

V.32.8: The verb *ādat* ‘took’ is superficially active, though the idiom *ā √ dā* ‘take’ is ordinarily middle. As was seen already by Wackernagel, the form must be a re-marked form of the older 3rd sg. middle root aor. The underlying form would be **āda*, which can represent either an old *-t*-less 3rd sg. mid. ending (as in impf. **āduha* → *āduha+t*) or, more likely, the simplification by degemination of an old **ād+ta* with an originally *-t*-full ending. Of course this preform should have yielded **ātta*, but the fact that all other forms of the root aor. have a single *d*- (*ādāt*, etc.) could have induced the geminate to simplify (in this metrically non-diagnostic position after *ā*) and restore the *d* of the root. (Kü [Stativ 50–51] bases the *-d*-form on 3rd pl. *ādiran**.) In any case the *t*-less **āda* would have been activated like the *t*-less middle imperfects of the *āduhat* type. The resulting “active” stem could spread elsewhere; cf. 1st pl. *ādāma* in nearby V.30.15. For disc. and previous lit. see Kü ref. above. The form is very differently explained by Old, who assigns it to *ā √ dr* ‘tear out’ by way of the sandhi form **ādaḥ* (< 2nd/3rd sg. **ādar*) and what seems to me a somewhat sketchy remarking with *-t* (as if 2nd sg. = **ādas*, so 3rd sg. should = **ādat?*). The morphological machinery required seems too complex for its purpose, to avoid a slightly aberrant use of *ā √ dā*, and since *ā √ dr* doesn’t take personal objects (Old finds one late ex.), its usage here would be aberrant as well. Ge assigns it to *ā √ dā*, as do WG (with ref. to Kü, *Stativ*).

For the third time in the hymn, Vṛtra is described as *śáyānam* ‘lying’, each time in the same pāda-final position (2c, 6a, 8a), and pāda-final *nīṣattam* (5a) ‘sunk, lit. sitting, down’ may be a sort of semantic pun on this positional characterization. In I.32, the Indra-Vṛtra hymn with clear phraseological and thematic parallels to this one, *√śí* ‘lie’ is also Vṛtra’s signature verb, esp. describing his position after his defeat, rather than before, as here.

Ge suggests that *árṇam* is an anticipatory haplology (not his term) for **arṇapám* ‘drinking the flood’, immediately before *madhupám*. He is followed by Scar (313 n. 444) and WG. I see no reason to accept this. The stem *árṇa-* exists; the stem **arṇapá-* (*/-pá-*) does not. More importantly, Vṛtra is known for confining the waters, not drinking them. As was just noted, *√śí* ‘lie’ is a defining verb for Vṛtra in both I.32 and this hymn. In the former he lies there as the released waters stream over him (I.32.8ab ... *amuyā śáyānam*, ... *āti yanty āpaḥ*; cf. also 8d, 10). Here, in complementary fashion, he is depicted as lying over them before his defeat.

Although most take *atrā-* as a PN, I still prefer the older derivation (see, e.g., Gr) from *√ad* ‘eat’ with simplification of the geminate (**at-trā-*), *pace* EWA s.v. *átri-*. It does not have to have anything to do with the seer Atri (*átri-*), but *átrin-* ‘voracious’ is, in my opinion, derivationally connected.

V.32.9: As noted in the publ. intro., the question *káḥ ... varāte* “who can obstruct ...?” covertly introduces Vṛtra, the defeated enemy who remained unnamed in the first 8 vss., by way of the verb built to the root *√vr* ‘obstruct’ that furnishes Vṛtra’s transparent name. The implicit answer is “no one, since Obstacle himself could not.”

V.32.10: The *devī svádhitīḥ* in pāda a is much disputed, and for good reason. The stem *svádhitī-* means ‘axe, hatchet’, but the presence of such an implement here is puzzling. Ge, flg. Sāy., wants to take this instance of the stem as independent and equivalent to *svadhā-* ‘autonomous power’. Given the occurrence of *svadhā-* in 4a and the derived possessive adj. *svadhāvan-* in pāda d of this same vs., it is hard not to suspect some connection. On the other hand, *svádhitī-* ‘axe’ is too well established for that sense not to be the first reading, or at least to intrude, and, furthermore, pāda a is twinned with b, which also contains a thing not a quality (and is also a pun).

I therefore think we are dealing with a pun. On the one hand, even the “heavenly hatchet,” which sounds like a formidable weapon, bows to powerful Indra. The hatchet’s submission to Indra is a measure of his might and may also put this weapon into his hands. There may even be another intertextual reference to I.32, as Teigo Onishi suggested to me. In I.32.5c Vṛtra lies “like branches hewn apart by an axe” (*skándhāmsīva kúlīśenā vívrkṇā*). Though this is a simile, not a direct reference to the narrative, and though a different word for axe, *kúlīśa-*, is used, this imagery may be a common trope in the Vṛtra story. As for the reading “the goddess Autonomous Power,” the phonological similarity and possible identical formation of *svádhitī* and *svadhā-* (with *sva-* looking like a first cmpd member in both, and *-dhi-* resembling *-dhā-*, with connection to *√dhā* at least possible [the etymology of *svádhitī-* is “nicht klar” acdg. to EWA s.v.]) make such a reading very easy in this context.

As just noted, pāda b also seems to contain a pun. The way (*gātú-*) yields to Indra, but, acdg. to the Anukramaṇī, Gātu Ātreya is also the poet of this hymn -- though since

only this one hymn in the RV is attributed to him, the name may have been plucked from this context.

This vs. contains another example of the transfer of vocabulary from Vṛtra to Indra. As we saw, in 4a Vṛtra was intoxicated by (his false assumption about) his autonomous power (*svadhāyā mādantam*), but here it is Indra who possesses autonomous power (*svadhāvan-*) for real. With *svādhitī* in pāda a also (partly) expressing Indra's acquisition of this power, his triumph is complete. This sets the stage for the transition to the last two verses, where the poet announces his own contact with Indra's fame and what that will mean for his own good fortune.

V.32.11: I think that this vs. is structured by the implicit contrast between *jātā-* and *nāviṣṭha-*, both used of Indra, but I seem to be alone in this (though see Gr's lapidary comment s.v. *nāviṣṭha*). Ge (/WG) take *nāviṣṭham* as adverbial (Ge "aufs neue," WG "zum letzten Mal"). This is certainly possible, but if it is taken as modifying Indra, the sense becomes more complex and interesting. In the first hemistich "I" announce the famous stable Indra of myth and authority, born (*jātām*) for these roles and continuously occupying them, but in the second hemistich it is the Indra of the ritual who's the focus -- the Indra who is newly brought to every new ritual and whose epiphany is like a new creation every time, caused by the ritual actions themselves.

V.32.12: I take *maghā* as object of both *yātāyantam* and *dādatam*; it is neatly positioned between the two participles. Ge renders *ṛtuthā yātāyantam* as "dass du pünktlich vergilst" (repay, requite), but this is not a standard meaning of *√yat*. WG's "dass du ... die (verdiente) Stellung verschaffst" is closer to the sense of the root, but lacks the obj. one expects with an *-āya*-transitive. A locution very close to my interpr. is found in IX.39.2 *jānāya yātāyann īṣaḥ* "arranging the refreshments for the people."

Contra Old, who assigns *garhate* to *√grabh*, I take it to *√grh* 'complain'; see EWA s.v. *GARH* and esp. Hoffmann "Vedisch grh 'klagen'" (MSS 14 [1959]: 35–38 = Aufs. 439–41) cited there. There is likely a phonological play between this verb and *jagr̥bhre* in the previous, twinned, verse.

V.33–34: Indra

These two hymns attributed to Saṃvaraṇa Prājāpatya are full of puzzles, many insoluble.

V.33 Indra

Although the general outline of this hymn is pretty straightforward, it is full of interpretational problems and grammatical and syntactic obscurities, and the meter is very messy.

V.33.1: The first hemistich begins and ends with an etymological figure: #*māhi mahé ... tavāse ātavyān*#. The *tavāse* also repeats the same form from the preceding pāda.

I supply *śrāvaḥ* 'praise' with *māhi*, since this is a frequent collocation. Sim. Ge, though Kü (258) and WG take it as adverbial.

With Ge (/WG uncertainly) I reluctantly interpr. pāda-final *nṛ̃n* as a gen. pl. (or standing for a gen. pl.), as is sometimes necessary. Old interpr. it rather as a dat. pl., which I don't understand.

With Ge I construe *itthā* with *tavāse*; I assume it adds strengthening to that repeated word. Kü (258) instead takes it as an expression of the method of praise: “auf diese Weise,” so apparently also WG, though muted (“also”).

In the 2nd hemistich the referent of *asmai* is at issue. The standard view (Ge, Old, WG) is that it refers to the singer, the “not so strong” I. In Ge's interpr. this involves rendering *asmai sumatīm ... cikéta* as “der ... diesem (Sänger) seine Gunst zugedacht hat.” That *sumatī-* could refer to Indra's benevolence is easy, but ‘zudenken’ as an interpr. of *cikéta* is hard. This pf. stem ordinarily means either ‘take note of’ or ‘appear as’ (latter generally middle). WG give the pf. its usual meaning but this leaves *asmai* without much to do in the clause. By contrast, I take Indra as the referent of *asmai*. It is not rare for enclitic forms of this pronoun to refer to the subject: a reflexive is not necessary. Under this interpr. *sumatī-* has its common meaning ‘good thought’ = poem, and Indra takes cognizance of this *sumatī-*, which is “for him.” Cf. VII.31.10 *prācetase prā sumatīm kṛṇudhvam* where the *sumatī-* of the poets is intended for a god (Indra, in fact) in the dative who is characterized as *prā√cit*.

V.33.2: The (pseudo-)participle *dhiyasānā-* clearly patterns with *dīdhīye* in 1a, hence my complementary ‘being conjured up’. I take it to mean that Indra's epiphany at the sacrifice is brought about by our chants (*arkaīh*), that his appearance there is literally “thought up” by our thoughts. This notion is close to what is found in the previous hymn V.32.11 (at least by my interpr.), that every sacrifice brings a “newest Indra,” that the Indra of the sacrificial epiphany is newly created by sacrificial activity every time. The standard interpr. of *dhiyasānā-* by Ge [/WG] is more pedestrian: Indra becomes attentive (“aufmerksam geworden”) through our hymns. The other occurrence of the stem, in X.32.1, in my opinion fits my interpr. (see comm. ad loc.), but, to be honest, neither passage is absolutely clear. As for the stem itself, *dhiyasānā-* does not pattern with the majority of *-asānā-* stems discussed ad IV.3.6, and I do not have a satisfactory account of it.

The *sá tvām* phrase does not conform to my rules for the use of *sá* with 2nd ps. reference (see my “Sá figé”), and I likewise can't account for it.

The *yā(h)* beginning the 2nd hemistich is problematic. If it is a rel. prn. it has to be a fem. pl., and there is no obvious referent in the context (*hārīṇām* in b belongs to a masc. stem *hāri-*). Therefore with Ge (/WG) and, very cautiously, Old, I take it as a verb form, belonging to *√yā* ‘drive’. (Note the past part. *yātāh* in 5b.) Because it is followed by two subjunctives, *vākṣaḥ* and *sakṣi* (the latter a “*si*-imperative” derived from a subjunctive), I take *yā(h)* as subjunctive as well. Indeed, if it is read *yāah*, the extra syllable would fix the meter of this pāda -- but since the hymn is full of metrical disturbances, this is not a strong argument. Neither Ge nor WG indicates how they interpr. the morphology, but both tr. as an imperative, as they do the two following verbs.

Both Ge and WG take *aryāḥ* and *jānān* as parallel acc. pl., while I make *aryāḥ* a gen. sg. dependent on *jānān*. There is no way to tell; Thieme (Fremdl., 11 n. 2) refuses to deal with the passage at all.

V.33.3: The sense of the first hemistich -- that by reciting the (yoking-)formulation we will do our part to ensure that your (Indra's) horses will be yoked -- is fairly clear, but the syntax is messy. First, it's couched as a triple negative construction: "it is *not* that X will *not* happen because of *not*-Y," which already puts it on the edge of parsability. The parsing problem is slightly increased by the fact that the content of the negative "that" clause is expressed through a periphrasis involving a negated participle+copula (*áyuktāsaḥ ... āsan* "will be/remain unyoked"). Then, the position of *yád* is utterly non-standard, being found deep in the clause, after several different constituents, right before the final word. I tried various ways to produce a conforming subordinate clause from the text, but failed. The publ. tr. "if it's for lack of a (yoking) formulation" (as if *abrahmātā yád* were a separate embedded clausette) gives the appearance of (almost) succeeding, but it doesn't accurately represent the text (though I still think it might represent the purport of this odd word order). A more accurate tr. would be "Since these horses ... because of a lack ...," as the dependent clause for the main clause in cd. I remain disturbed by the structure of this dep. cl.

A separate problem is the *abhí asmád* in pāda a. The *abhí* is stranded in the middle of the pāda (though immed. after the caesura) and in any case has no verb from which it could have been separated in tmesis. In the absence of anything else to do with it, the default option seems to be to construe it with *asmád*, and this phrase has long (see Old's reff.) been compared to I.139.8 *asmád abhí*, likewise in the middle of the pāda though in opposite order. The problem is that *abhí* as a preposition seems otherwise only to take the acc. Nonetheless, connecting the two seems the best bet, with a meaning such as "with regard to us" or, better reflecting the ablative, my "because of us." So Old, WG. Cf. also Humbach et al. (*Gāthās... and the Other Old Avestan Texts*, II.118), ad Y 35.5 (Yasna Haptaŋhaiti) *ahmaṭ hiiṭ aibī*, a phrase meaning (in his view) "which is with us," with which he compares both our passage and I.139.8. However, Narten (YH, 271–72), fld. by Hinze (*Zoroastrian Liturgy*, 77–78), interprets this three-word phrase, occurring twice in the YH (Y 35.5, 40.1), as containing a postposition *aibī* governing the neut. acc. *hiiṭ* not the abl. *ahmaṭ*, with the whole meaning "from us towards which," thus "as far as we are concerned" (Hintze, 78).

V.33.4: Another troubled vs., though the first hemistich is more transparent than the second. The first thing to notice is that the accent on *cakārtha* in b indicates that b must still be under the domain of *yád* in pāda a, as parallel dependent clauses. Ge (/WG) attempt to make initial *purū* a single-word main clause on which they both depend ("Viel ist, was ..."). This assumes that *purū* is a neut. sg. here. Although the existence of a neut. sg. in *-ū* is standard doctrine (see Lanman, *Noun Inflec.*, 406–7, AiG III.145, etc.), this grammatical truism rests primarily on Gr's identification of twelve forms of *purū* as sg. (see Lanman and AiG), but in only one instance, the late X.94.5, does this seem the likely interpr. (There is also one form of *urū* and, for Lanmann, two of *míthū*, which is better taken as an adv.) I do not therefore think that *-ū* is a possible neut. sg. ending, except, perhaps, in X.94.5. Here the most obvious way to construe *purū* is with pāda-final neut. pl. *ukthā*, the subject of *sánti*. The attempt to impose a singular interpr. on *purū*, as antecedent for the following relative clause with plural subject, yields the awkward rendering of Ge: "Viel ist, was deine Preislieder sind" with mismatch of number (WG more elaborate, but not less clumsy).

For b the only adjustment is to carry *purū* over from pāda a and supply a term like *kṛtāni* or *kārmāni*, easily generated from *cakārtha*: “many are (the deeds) you have done ...”

The 2nd hemistich is more problematic. The first question is how to relate pāda c and d. Ge takes them as parallel independent clauses with the same verb *tataḥsé*, while WG takes it as a single cl. (also Kü 207). With Ge I take them as two clauses and agree that they share a verb, but think that c is a dependent clause still under the control of *yád* in pāda a and parallel to ab, with d the main clause resuming them all.

A related issue is the apparent change of person from 2nd sg. address to Indra in ab and (supposed) 3rd sg. reference to him in cd. The only evidence for this 3rd ps. reference is the verb *tataḥsé*, which is one of only two medial forms of this pf. in the RV. It has no obvious medial value here, and in fact the presence of a dat. of benefit (*sūryāya*) eliminates one possible way of accounting for the middle form. (Kü [207] suggests a “Bedeutungskomponente” ‘(auch) in seinem eigenen Interesse’, which seems a bit desperate.) The puzzle of the middle is somewhat reduced if we interpret the form as *second* sg. mid. The presumed preform **tataḥs-ṣé* would surely come out as our *tataḥsé*, and it would make sense to substitute this nonce middle form for the non-transparent *active* 2nd sg., which should be **tataḥs-ṭha* → **tataḥṭha* -- whereas the active 3rd sg. *tataḥsa* is non-problematic and indeed well attested. So the supposed change of person and the middle form can be accounted for by the same explanation.

After confronting these formal issues, there remains the very knotty problem of what the hemistich is expressing, and part of this depends on whether the relations between Indra and Sūrya here are friendly or hostile: elsewhere they are sometimes one, sometimes the other. (Here I think they are friendly.) A syntactic question is whether *nāma* is the only object of *tataḥsé* or if the clause in c (if it is a separate clause) has a different object. Ge opts for the former choice, I for the latter, and I also think that the verb is used in different senses in c and d, positive in c, negative in d.

In c I supply *purū* again from pāda a and tentatively supply ‘paths’ as the object, bringing to mind the various passages in which a god (usually Varuṇa) makes or digs out paths for the sun to follow through the sky -- e.g., I.24.8 *urūṃ hī rājā varuṇas cakāra, sūryāya pānthām ānvetaṁ u*, VII.87.1 *rādat pathó varuṇo sūryāya*. In one late passage (X.111.3) it is Indra who is named as *pathikṛt sūryāya* “pathmaker for the sun.” It’s also worth noting that, leaving aside this one, 5 of the other 10 occurrences of the dat. *sūryāya* occur in a path-making context. Though, admittedly, I have no parallels using the root *√takṣ* ‘fashion, carve’, it seems in the right general semantic range. As for *ókasi své* this can refer either to Indra’s or to Sūrya’s “own home,” since both of them inhabit the same celestial realms; I favor the Sun’s.

As for d, as is recognized by all, the similarly phrased X.23.2 *áva kṣnaumi dāsasya nāma cit* must be compared. In that passage Indra says “I whet down even the name of the barbarian,” in my tr. Though this passage is the obvious comparandum, it is hardly transparent in itself or in its bearing on our passage, and in fact I think the two passages are less close semantically than their joint isolation invites us to think. In X.23.2 Indra seems to be boasting about his victory over the Dāsa, which is so complete that even his name is obliterated or at least violently ground down. But *√takṣ* generally refers to creating something by carving off bits or fashioning in some other way. Perhaps here it means that Indra, just by fighting (and presumably defeating) the Dāsa, has still made the

latter's name conspicuous, as if by carving it into a surface. (Or perhaps, closer to X.23.2, Indra has obliterated the Dāsa's name as if by gouging it out of a surface.) But either of these interpr. raises a crucial question: what would it mean literally to carve a *name* into (or gouge it out of) a surface before the existence of writing?!

In any case I think that the contrastive positive/negative use of $\sqrt{takṣ}$ in c and d makes the verb sit uneasily in both and poses special challenges to the audience to decode the metaphor in each pāda.

As should be obvious, I do not consider my interpr. of this vs. or most of its part settled and sure. I also don't understand the sequence of ideas. As indicated in the publ. intro., I think that the first pāda, positing many hymns for Indra, may refer to the existence of competing (Ārya) sacrifices. The second pāda cites his activities as a warrior on earth; the dat. "for the cow" may either mean that Indra has fought in order to obtain cows (for the Ārya warriors he is fighting beside) or that he has won meadows for (the Āryas') cows to graze in -- in either case advancing the Ārya cause. In contrast c sets out his beneficial cosmic activity -- keeping the sun on track (if my interpr. of the details of the pāda is correct), which in turn is beneficial to mankind. In at least the first two cases I think there's an implicit Ārya presence, which contrasts with the explicit Dāsa in d.

V.33.5: What constitutes the predicate in ab is disputed. Flg. Old and the model of VII.30.4, I take ab as constituting an "X and which Y" construction, with doubled "and which Y" (more accurately schematized as "X and which Y and (which) Z"). The predication is simply *te* "of you, yours," an assertion of possession. It is predicated of us (*vayām té*) as well as "which men" (*yé ca nārah*) and "(which) chariots" (... *ca rāthāḥ*) -- literally "we and which men and (which) chariots are yours." Both of the latter two are further characterized in b, the men by a participial phrase (*śārdho jajñānāḥ* "having been born as a troop"), the chariots by a simple participle (*yātāḥ* 'driven, driving'). WG seem to follow this interpr. as well, though with some filigree in the middle that seems over-elaborate. Klein (DGRV I.49 n. 10) sets out the schema as above and tr. sim. (I.196). Ge by contrast takes the predication to be *śārdho jajñānāḥ*, applied to both us and the men, with the chariots left hanging: essentially "we and the man are born as your troop, and the chariots." Besides the syntactic isolation of the chariots in Ge's rendering, it also unduly extends the reference of *śārdho jajñānāḥ*. The "men" of pāda a must be, as often, the Maruts, and it is only they who "have been born as a troop," not also us. The word *gaṇā-* is almost exclusive to the Maruts, and the birth of the Maruts is a common topic (e.g., I.64.2, 4).

The phrase *rātho ná yātāḥ* appears in I.141.8. See comm. there, where I suggest that a *yātā-rātha-* is a particular kind of chariot, perhaps one meant for long journeys, rather than referring to the current state of motion of any specific chariot(s).

The problem with pāda c is the clash between the voc. *ahisūṣma* and the 3rd sg. verb *jagamyāt* with its nom. subj. *sātvā*. The stem *sātvān-* in the sg. is almost always used of Indra, and in this context -- a hymn dedicated to Indra and both praising his powers and begging him to deploy them on our behalf -- it is difficult to imagine that we would then express a wish that some indefinite or at least unidentified warrior should come our way instead (as in Ge's "Uns möge ... ein Krieger kommen"; WG almost identical). Surely Indra is the warrior we want! This would require a shift from 2nd to 3rd ps. ref. between ab and cd, but this is not problematic. What is problematic is the voc., which

should also refer to Indra. Gr solves this by positing a bahuvr. *ahisūṣma-sátvan-* ‘whose warriors have a serpent’s hiss’ (‘dessen Helden wie Schlangen zischen’). Unfortunately the accent is definitively against this interpr. I have no neat solution, but am firm in my belief that the *sátvā* is Indra. For a similar vocative/nominative cross, see *vasavānaḥ* in the next vs. (6a); these two problems may be connected.

I take the simile in d as an elaborate pun, playing on the double sense of the three members, *bhāga-*, *hāvya-*, and *prabhṛthá-*. The first can be both the name of the god Fortune and a common noun ‘portion’; *hāvya-* can belong to $\sqrt{hū}$, *hvā* ‘call’ or \sqrt{hu} ‘pour, offer’; *pra* $\sqrt{bhṛ}$ can refer either to the presentation of arms (and the carrying off of booty) in a hostile situation or to the presentation of offerings at a sacrifice. Cf. the double sense of *prā* $\sqrt{bhṛ}$ in nearby V.32.4–5, 7 and comm. there. The first meanings just given for the three items coalesce into one simile, the second ones in another.

V.33.6: The first question about this vs. is the structure of the first hemistich. The standard interpr. (Ge, WG, also Old, Klein [DGRV I.263–64]; see also Kulikov -*ya-pres.*, 580) takes the two pādas as separate clauses with *ca* conjoining them. There are several problems with this division: 1) *ca* is not comfortably at home as clause-conjoiner and usually conjoins NPs; 2) with *nṛmṇāni* in the domain of the 2nd clause, it must be the obj. of the participle (or pseudo-participle; see below) *nṛtāmānaḥ*, but non-causative forms of $\sqrt{nṛt}$ ‘dance’ are never transitive. Both difficulties disappear if we take *nṛmṇāni* *ca* as conjoined with immediately preceding *ójaḥ* as joint subject of the first clause in the hemistich (so also Lowe, 251; see below). The phonological play between *nṛmṇāni* and *nṛtāmānaḥ* may account for the postponing of *nṛmṇāni* till the second pāda, inserting a pāda break between the two conjoined nouns. This phonologically driven positioning may also help account for the very late position of *hí*. The loc. prn. *tvé* ordinarily takes initial position in its clause/verse line, and *hí* would be expected to follow in Wackernagel’s position. But the whole structure may have been shifted rightwards to allow *nṛmṇāni* to neighbor *nṛtāmānaḥ*.

nṛtāmāna- presents difficulties of its own, even after its supposed object has been eliminated. This participle is the only occurrence of the supposed them. aor. (or 6th cl. pres.) in all of Sanskrit. Although, since all forms of this root are poorly attested in the RV, this is not necessarily problematic on its own, the -*ya*-present (1x in RV) does continue post-RV (see Kulikov, *Vedic -ya-presents*, 578–80), and moreover all other verb forms to this root in Vedic are active. Lowe (*Participles in Rigvedic Sanskrit*, 250–51) suggests that it is an artificial form based on the well-attested splv. *nṛtama-* ‘most manly, most heroic’. This is an attractive hypothesis -- among other things, Indra is frequently called *nṛtama-*; the word regularly appears in immediate post-caesura position, as *nṛtāmānaḥ* does here; and it would be playing not merely phonologically but also etymologically with *nṛmṇāni*. Lowe (p. 152) tr. “being the most heroic,” reflecting its nonce jury-rigged participial form. I do think, however, that the form also consciously references $\sqrt{nṛt}$ ‘dance’. Indra is regularly called a *nṛtú-* ‘dancer, prancer’, and note the pun involving *nṛ-* ‘man’ in VI.63.5 *nārā nṛtū* (of the Aśvins). I would therefore modify the publ. tr. to “As the most manly [/ the prancing] immortal ...”

In c *rayīm* must be fem., as occasionally elsewhere, given the fem. adj. *énīm*.

The stem *vāsavāna-* ‘possessing goods, winning goods’ (?) is attested 5x, once as an unaccented voc. sg. *vasavāna* (X.22.15), otherwise accented and with orthodox -*a-*

stem forms, incl. nom. sg. *vásavānaḥ* (I.174.1). The form here looks of course like a nom. sg. but lacks accent. Gr calls it “fälschlich unbetont”; Lub. gives it an accent and a rightward star (*vásavāno**). This seems the best course; I think an attempt to assign it to different stem (perhaps an aberrant *-as* stem) is too elaborate, esp. in this hymn with numerous “off” forms: see esp. the voc. *ahiśuṣma* for expected nom. in 5c. The publ. tr. pays more attention to the lack of accent and tr. as voc.; it would be equally possible to weigh the nom. sg. ending more heavily and tr. it as an appositive subject: “as winner of goods, give us dappled wealth.” Despite the tr. “winner of goods,” I do not think the stem contains a form of \sqrt{van} but is rather a pseudo-participle (another one, but athematic) built to *vásu-* ‘good(s)’. Elsewhere I render it ‘goods-lord’ and the like.

In d *prā ... stuṣe dānam* “I will start up the praise for the gift” is an analytic expansion of the noun *dānastuti*, which, however, is not attested in Vedic or, it seems, anywhere else in Sanskrit lit., though the term is in common use in Vedic scholarship. The last three (or possibly four) vss. in this hymn constitute such a *dānastuti*, and the poet seems to signalling that it is coming up. In the publ. tr. I identify the *arí- tuvīmaghā-* as Indra; I now would be more circumspect, since I now think the phrase applies both to Indra and to the patrons praised in vss. (7 or) 8–10. See also *aryāḥ* in 9d.

V.33.7: This vs. provides a transition between the praise-hymn proper and the *dānastuti*. On the one hand, it straightforwardly makes requests of Indra, as hymn-final vss. tend to do, and it begins with *evā*, a frequent introducer of the final summary vs., but it also turns its attention in cd to those who facilitate the sacrifice, i.e., the patrons. The participle *dádātāḥ* ‘giving’ that characterizes them is telling. Ge suggests that the *dānastuti* begins with 7c and notes that like 7c the vss. of the *dānastuti* begin with *utá*.

The meter of the first hemistich is badly mangled. Old blames the poet “dessen Formgefühl unzweifelhaft schwach war.” But it may be a good strategy to mark the new section with a metrical jolt. Curiously the vs. is mostly free of the verbal knots that bedevil the earlier parts of the hymn.

Ge suggests plausibly that the “skin of the honey” is the skin on which the soma is prepared.

V.33.8–10: As just noted, 7c begins with *utá* as do vss. 8–10, but those vss. of the *dānastuti* proper are further unified, all beginning *utá tyé mā*.

V.33.8: It is unclear whether the horses in ab and those in c are the same or different. In the publ. tr. they are treated as the same; the standard tr. take them as separate groups. The two occurrences of *mā* (a, c) may support the standard view, in which case *vahantu* needs to be supplied in the first hemistich (so Ge, etc.).

I take *saśce* in pass. sense: “I am followed/accompanied.” Ge (/WG, also Klein I.425) take it to mean “be in agreement with,” but I do not know of other occurrences of \sqrt{sac} with this meaning. (Ge’s overelaborate set of explanatory glosses in n. 8d and n. 2 to that n. may attest to his discomfort with it.) The ‘intentions’ by which I am attended are G’s intentions to give; see the expansion on *krātu-* in 9b. I think the point is not that the poet thinks it’s a good idea for G. to give horses to him (that is, agrees with G), but that G’s intentions to give are the poet’s escorts, as it were. (One is reminded of the curious beings known as *rātiṣāc-* ‘Gift-escort’.) Indeed these “intentions” may be the

actual horses given; see 9b where the “bounties” produced by such intention are also actualized as horses.

V.33.9: In pāda a the publ. tr. reads “And (let) these (convey me)”; the “me” should not be in parens.

The bahuvrīhi *krátvāmagha-* is curiously formed, with instr. *krátvā* as its first member, and the publ. tr. “the bounty of his intentions” oversimplifies its structure in order to avoid impossibly awkward English: a full tr. of b would be “(the horses displaying/constituting) the bounty (produced) by his intention at the time of giving in[of] the ceremony.” In other words, the horses that the poet receives possess (that is, embody) Mārutāśva’s bounty effected by his intention (to give). See 8d.

Ge takes *vidāthasya* as a PN, the patron whose patronymic is Mārutāśva, and Mayrhofer (PN s.v.) seems to agree. But there seems no reason not to interpr. it as an example of the well-attested common noun ‘ceremony (of distribution)’, esp. since it fits this context so well. WG do not follow Ge.

The part. *dādānaḥ* appears to be the predicate of this clause. Though rare, med. forms of $\sqrt{dā}$ without *ā* seem to mean ‘give of oneself / one’s own goods’. See also IX.52.3.

I don’t entirely understand d. *ānūkām* is a hapax, but I follow Old in taking it as an adverbial meaning something like ‘afterwards’; so apparently also WG. Ge, fld. by Klein (I.425), takes it as the obj. of *ārcat*, as ‘last (song)’. See Ge’s n. 9d.

The standard interpr. (Ge [/WG], Old, Klein I.425) take *aryāḥ* as nom. sg., referring to Cyavatāna of c, and Thieme (Fremdl. 85) also thinks it’s probably nom. sg., but declines to discuss the passage because of the obscurity of *ānūkām*. But a patron like Cyavatāna should not be chanting or singing; that is the province of the poet-priests he is patronizing. Moreover, *aryāḥ* echoes gen. sg. *aryāḥ* in 6d, which announced the dānastuti to come, and I think the form should be interpr. in the same way in the absence of evidence to the contrary. In 9d I think that the gift of the *arī-* is still in question (as in 6d). The unnamed poet praised (‘sang’ *ārcat*) his gift for the wonder (*vāpuṣe*) of it -- of its over-the-top munificence.

V.33.10: As in 9a “me” should be removed from parens.

The notion of enclosure in cd puns on the name of the Poet Saṃvaraṇa ‘entirely enclosing’ vel sim.

V.34 Indra

V.34.1: A personified (/divinized) form of Svadhā ‘autonomous power’ is found in this set of hymns; cf. the apparent ref. to her also in V.32.10.

V.34.2: The overall structure of the vs. is the first issue to address. The first hemistich begins with a rel. clause (in a) with accented verb *āpiprata*; the second pāda begins with another accented verb, *āmandata*, which can owe its accent either to its pāda-initial position or to being part of the rel. cl. of pāda a. I choose the former interpr., making b into the main cl. of the vs. (so also Hoffmann, Injunkt., 244). Ge and WG choose the second, with ab containing two parallel rel. clauses. Since the 2nd hemistich consists of a

dep. cl. beginning with *yád* in c, with its accented verb *yámat* in d, this leaves the vs. without a main cl. WG remedy this by providing a main cl. frame “Zur Stelle (war er) ...” This posited main clause consists entirely of the preverb *ā* that begins pāda a (see their n.), a slender reed indeed. Offhand I cannot think of any other examples where a preverb by itself constitutes a clause. This interpr. is esp. unlikely because *ā* is an extremely common preverb with $\sqrt{pr}/prā$ ‘fill’, and its default interpr. here is as a preverb in tmesis with *āpiprata*.

This structural question is connected with the problem of *yámat* in the *yád* cl. of the 2nd hemistich. This form should be a subjunctive to the root aor., but it is difficult to construe it as such, viewed in conjunction with the augmented imperfects of ab. In order to hold onto the subjunctive interpr., Hoffmann (Injunk., 244) takes cd as a purpose cl. (“Der Freigeige ... berauschte sich auf dass ihm ... Uśanā ... die tausendspitzige Waffe reiche”), but Indra doesn’t drink soma *so that* Uśanā will give him a weapon, but does so at the same time and occasion when Uśanā gives him the weapon (see, e.g., I.121.12). WG’s “Zur Stelle (war er)” is obviously designed to provide a better pragmatic foundation for the purpose cl. (see their n.), but I have just treated the weakness of their interpr. I therefore think that *yámat* here has to be a nonce injunctive with preterital value, rather than the subjunctive it appears to be. Two pivotal forms allow this reanalysis – 1st sg. *yamam* and 3rd pl. *yaman*. The latter form is morphologically ambiguous: it could be a subjunctive or an injunctive. Although those forms are normally differentiated by the grade of the root (e.g., subj. *gáman* versus injunc. *gmán*), a zero-grade injunc. **imán* is too radical and would be blocked. In fact, *yaman*, which occurs 4x (once as a rep.), is only found in *mā* prohibitives and therefore must be an injunc. in every case. As for 1st sg. *yamam*, it has to be an injunctive (subjunctive would be **yamā[ni]*). Since both *yamam* and *yaman* could also be injunc. to thematic stems, a 3rd sg. thematic-type injunc. *yámat* can be backformed. It is important to note that *yamam* is found in this very myth of the weapon used to kill Śuṣṇa: cf. X.49.3 ... *vádhar yamam*# (1st sg. subj. = Indra) beside our *vádham yamat*, with Uśanā Kāvya as subj. For a more clearly marked injunctive in this phrase see nearby V.32.7 *vádhar yámiṣṭa* with secondary *-iṣ*-aor.

On them. *āpiprata* see Narten 1969 = Kl. Sch. 108–24, esp. 109, 121–24.

V.34.3: On *ūdhar/ ūdhan*- as ‘cold’, beside the homonym ‘udder’, see comm. ad VIII.2.12. Note the phonological echo at the end of pādas a and c: *ūdhan*# / *ūhat*#.

There is considerably more phonological play in the 2nd hemistich: *tatanúṣṭim ūhati*, *tanūśubhram*, enclosed within unbroken *a*: *āpāpa śakrās ... maghāvā yāḥ kavāsakhāḥ*. This phonological pattern may help account for some of the difficulties of interpr. this hemistich.

Before addressing the three hapaxes in cd, *tatanúṣṭim*, *tanūśubhram*, and *kavāsakhāḥ*, note that the āmreḍited preverb *āpa-apa* (that is, *āpāpa*) superficially reads as a stem ‘not evil’. I doubt if that is accidental, esp. since doubled preverbs are quite rare; we will return to it below.

The first two of the hapaxes form the object of *āpa ... ūhati*. The lexeme *āpa √ūh* means ‘pull away’. It is used of the extended penis in cosmic incest in X.61.5; more to the point, in AV XVIII.2.57 it is used of a garment that is to be removed (... *vāsaḥ ... āpaitād ūha yád ihābibhaḥ purā*). A garment could well be described as *tanūśubhra-*

‘resplendent on the body’; cf. I.85.3 *tanūṣu śubhrāḥ* of the Maruts’ ornaments. I therefore supply ‘garment’ as the obj. here. (For a possible variant of this see disc. below.)

Ge refuses to tr. or discuss *tatanūṣṭi-*; AiG is entirely silent on it; Old is non-committal. Nonetheless, the formation of *tatanūṣṭi-* looks fairly transparent, if quite unprecedented. As WG also suggest, it appears to be a *-ti-* abstract built to the weak grade of the pf. part. to $\sqrt{\text{tan}}$ ‘stretch’. WG gloss ‘die Sich-ausgebreitet-haben-schaft’, which in their interpr. is then also applicable to someone who has this quality. They thus assume a personal object for *āpa ūhati*, a dandy (Geck): “den, der sich ausgebreitet hat ... den Geck.” I’m not sure what a “sich ausgebreitet” person would be, and there are other reasons to prefer supplying ‘garment’ or something similar as the referent of these two acc. First, there is the AV passage just cited, where ‘garment’ is the obj. of *āpa √ ūh*. Second, garments are objects of $\sqrt{\text{tan}}$ elsewhere (I.115.4, 134.4; X.106.1). And third, a personal object requires the meaning of *āpa √ ūh* to be seriously attenuated (WG’s *abschieben*: ‘push away, get rid of’). I therefore take ‘spread-out-ness’ to be a quality attributed to a garment or garment-like object. However, this analysis causes problems of its own. For one thing, why not simply use the pf. part. alone to qualify the underlying ‘garment’? Forming a derivational monstrosity -- a *-ti-*abstract based on a pf. part. -- and then turning this stem into a possessive adj. seem a tremendous amount of bother to go to when the participle by itself would convey the sense. Further, the standard words for garment are neut. (*vāsas-*, *vāstra-*), and *tatanūṣṭim* must be masc. (see the adj. *tanūśubhram* agreeing with it). A proper neut. sg. adj. built to a *-ti-*stem should end in *-ti* (though as far as I can tell, there are no exx. in the RV), so if *tatanūṣṭim* is an adj., it is in the wrong gender for the posited noun it modifies. On the other hand, if we try to take *tatanūṣṭim* simply as the *-ti-*abstract, not an adj. based on it, the masc. gender of the qualifier *tanūśubhram* clashes, since *-ti-*abstracts are fem. I have only an ad hoc answer to these problems: assuming the form is an adj. whose underlying referent is neut., the bare neut. *-ti* ending may have seemed anomalous and a more orthodox looking acc. substituted for it, encouraged also by the fact that the next word begins with a vowel and an inserted *-m* would avoid the hiatus. Meter would be unaffected, and *tanūśubhram* can of course be neut. instead of masc. But I do not find this explanation compelling, and a different possibility is discussed below.

I have discussed the third hapax, *kavāsakhā-*, in some detail in Fs. Jasanoff (2007: 163), reviving the old, but generally now rejected, analysis of the first member as the old nom. sg. of *kavī-* matching the Aves. nom. sg. *kauuā* with its hysterokinetic inflection. That this inflectional type may be preserved here may be signalled by the 2nd member - *sakhāḥ*, whose inflection remains hysterokinetic in Vedic and whose nom. sg. is ordinarily *sākhā*. The current standard interpr. of *kavā-* here assigns it to a stem (*)*kava-* ‘humiliating, degrading’ (see EWA s.v. *kavatnū-*). So, e.g., Ge’s rendering of the cmpd as ‘falsch Freund’, with some semantic weakening.

How one analyses the cmpd. depends on what one thinks is going on in the hemistich in general. The first question is who is the referent of the cmpd.? It is found in a two-word nominal rel. cl. *yāḥ kavāsakhāḥ*. Both Ge and WG take its antecedent to be the obj. of the verb *āpa ... ūhati* (e.g., WG “... den Keck, der die Genossen geringschätzt”), but as was just discussed, it is not at all certain (and in my opinion unlikely) that the object of that verb is a person. Moreover, word order -- an often

helpful, though of course not sturdily reliable guide in the RV -- favors Indra as referent: the verse ends ... *maghāvā yāḥ kavāsakhāḥ*.

If my analysis is correct -- that the cmpd. contains *kaví-* 'poet' and that it characterizes Indra -- how can I fit it together with the rest of the vs.? I think the cmpd. has a double sense. On the one hand, the *kavā* part refers to Uśanā Kāvya, who figures in vs. 2. In fact, note that in 2d *uśānā* appears in its usual position, immediately after the caesura following an opening of 5. If we superimpose 3d over 2d, *kavā-* would immediately follow *uśānā*: [x x x x x / *uśānā kavā(-sakha)*], the composite yielding a simulacrum of his full name. And of course, as vs. 2 shows, Indra and Uśanā are partners and companions. Uśanā is referred to as *kaví-* elsewhere, with *kaví-* a substitute for his patronymic; see, e.g., IV.16.3, 26.1.

But the other sense I see here is more sinister and requires considering vs. 3 in connection with the flg. verse. Vs. 4 is a curious, counter-intuitive, and indeed dispiriting vs.: even if Indra kills all your relatives, he still expects you to continue to offer to him. The usual comforting notion in the RV -- that Indra will do well by you if you do well by him, while the non-offerer will get badly treated -- is overturned here. Indra can act cavalierly and arbitrarily to ruin your life no matter how devotedly you serve him. I think the same unsettling idea is presented in vs. 3. Though the standard interpr. of vs. 3 (see, e.g., Ge's n. 3cd) is that the first hemistich depicts the pious man happily rewarded, while cd shows the impious one getting his just deserts, I take the whole vs. as referring to the ups and downs of the pious soma-presser. First, his labors pay off: he becomes *dyumān* 'heaven-bright'. But in the second half Indra snatches away this brightness, which is spread across him like a garment, "resplendent on his body" (*tanūsubhra-*), an appropriate characterization of such brightness. In this reading *kavāsakhāḥ* is ironic; Indra was indeed a companion and partner of the poet, until he wasn't.

If this interpr. is correct, it may help explain the use of the peculiar formation *tatanūṣṭi-* discussed at length above. In pāda b the lucky soma-presser is *dyu-mánt-*, lit. 'possessing *dyu-*'. And by my analysis, it is this purported *dyu-* that is resplendent on his body. But the well-attested possessive adj. *dyu-mánt-* has become lexically separated from *div-/dyu-* 'heaven'; there is no independent *dyu-* 'brightness' that can become the property of a person. (The root noun *dyút-* is rare without preverb and means yet again something different.) It may be that "spreading-ness" is an attempt to capture the quality of heavenly light without having a firm grammatical base, an identifiable independent noun, to found it on. One of the standard tropes using the root \sqrt{tan} is light or a source of light spreading through heaven and other cosmic realms; cf., e.g., X.88.3 of Sūrya *yó bhānúnā prthivīm dyām utémām, ātatāna ródasī antárikṣam*. And so *tatanūṣṭi-* may embody this whole complex of heavenly light spreading across the man's body as if through heaven. By this analysis the *tatanūṣṭi-* is not a garment, as I first suggested, but *like* a garment.

Another piece of evidence may support my view of cd as expressing the undeserved and capricious reversal of fortune of the soma-presser who was riding high in ab. Remember that cd begins with the double preverb *āpāpa*, which could also be the voc. of an adj. 'not-evil'. I suggest that this is a despairing address to the soma-presser of ab: "o un-evil [/blameless] one, see what can happen to you anyway."

V.34.4: As noted in the publ. intro. and in the disc. of vs. 4 immediately above, the sense of this vs. -- which seems surprisingly clear -- is hard to square with our usual notions of Rigvedic reciprocal responsibilities, for the vs. states that Indra can kill all your relatives and still demand your offerings, with no attempt even to deny or distance himself from what he did. Ge and Old pass over this unsettling doctrine in silence; WG suggest that the vs. shows that Indra doesn't fear a blood feud (Blutrache), but this seems to let Indra off too easily. There is no sign of the reciprocity that "blood feud" implies: the hapless man whose relatives have been slaughtered does not seem to have done anything injurious to Indra, nor did his dead relatives -- at least as far as the vs. allows us to see. The killings appear to be the arbitrary acts of a powerful god just because he *can*. It may be no accident that Indra is called *śakrá-* 'able' here and in 3cd, where he also arbitrarily exerted his power. (Of course, *śakrá-* is a common epithet of Indra in the RV and later, and I would not suggest that it is always used with this nuance -- only that our poet exploited the literal sense of the word.) The fact that the word *kīlbiṣa-* is used of Indra's deed supports the view that what he did was simply wrong; see publ. intro.

I take *práyata-* in its usual sense, referring to offerings or bounties 'held forth' or 'presented'. Cf. nearby V.30.12 *práyatā maghāni*, X.15.12 *práyatā havîṃṣi*, etc. I cannot get anything else out of this sentence than that Indra still wants the aggrieved man to keep making giving him oblations. WG tr. "Darreichungen," but suggest in their n. that it refers to "Reparations-, Satisfaktionszahlungen." But what right would Indra have to seek reparations when he was the one who inflicted the damage?

yataṃkará- is a hapax, and the identity of neither of its parts is as sure as the standard interpr. take them. Gr suggests *yataṃ* belongs to the ppl. of \sqrt{yam} , therefore morphologically identical to the immediately preceding (*prá-*)*yatā*, but this analysis is rejected, rightly in my view, by Ge and WG, who take it (the former implicitly, the latter explicitly) as the acc. sg. of a root noun to \sqrt{yat} , found also in the cmpd *saṃyát-* in 9c. Although the uncompounded root noun is not found elsewhere and it is not mentioned by Schindler in his Root Noun diss. or Scar in his disc. of \sqrt{yat} (403-4), I think this must be the correct analysis, with the noun meaning '(proper) arrangement' or the like. The publ. tr. 'arranger' reflects this analysis of *yataṃ*, while taking 2nd member *-kará-* from $\sqrt{kṛ}$; hence 'make arrangements' → 'arranger'. I now think this interpr. of the 2nd member is wrong. This pāda-final compound matches final *ākarāḥ* of the next pāda, which, construed with preceding *vásvaḥ*, means 'distributor of goods'. This *-kará-* does not belong to $\sqrt{kṛ}$, however, but to $\sqrt{kṛ}$, *kṛ* 'scatter', which occurs with *ā* in just this phrase: cf. IX.81.3 *ā naḥ ... kṛā vāsu* "scatter/distribute goods to us." This strongly suggests that the parallel cmpd *yataṃkará-* contains the same form, which leads to a sense 'scattering the arrangement' -- viz., destroying it, blowing it to smithereens and scattering the resulting particles. This accurately reflects what Indra has done in this vs. -- violating the arrangement between men and gods -- worship and offerings in return for protection, aid, and material goods -- by smiting the family of his devotee, though he still provides goods. I would therefore change the publ. tr. from 'the arranger' to 'scattering/destroying the arrangement'. The lack of the preverb *ā*, found in the lexeme *ā√kṛ*, may be analogous to the gapping of preverbs in root noun cmpds with direct object first members.

V.34.5: The usual arrangement between Indra and mortals is re-established in this vs., where Indra's punishment comes only to the stingy and the non-worshipper, and the pious man gets rewarded.

There is a difference of opinion about the sense of pāda a, because of different interpr. of the acc. inf. *ārābham* and of the numerical expressions. Ge takes *ārābham* as 'sich verbinden' and the expressions of numbers as referring to people or gods -- the sense being that Indra doesn't want to team up with others because he's strong enough on his own. But *ā√rabh* does not have that meaning, but only 'to grasp, grab hold of'. WG also take the numbers as personal: "Nicht wünscht er mit fünf, mit zehn (Leuten) das Erraffen (von Beute)," which I confess I don't understand. Is the intent that he wants to pile up his booty all by himself? By contrast, I take the numbers as referring to the means of grasping the offerings/goods -- either by the number of gifts (=in increments of five or ten) or by handfuls: one (=five fingers) or two (=ten fingers) -- and he doesn't want to acquire the goods in such trifling installments.

In c the question is the function of *amuyā*. I cannot identify a part of the WG tr. that represents *amuyā*. Ge's interpr. is minimalistic: *íd amuyā* "nur so," which Klein (II.160) helpfully expands to "only in that circumstance (viz. when a wealthy person does not have soma pressed for him)." This may well be right. However, I compare X.135.2 *cárantam pāpāyāmuyā* "going along yonder evil way." In our passage this may refer to highway robbery: the offending non-presser gets robbed as he makes his way along the road. Or it may be metaphorical: if the non-presser continues to pursue this behavior he'll be punished.

V.34.6: There is puzzling agreement about the meaning of the hapax *cakramāsajá*-. The standard interpr. run counter to the clear structure of the cmpd: a tatpuruṣa with the first member the acc. sg. of *cakrá*- 'wheel' (the acc. blocking hiatus before a vocalic 2nd member) and the 2nd derived from *ā√sa(ñ)j*. The lexeme *ā√sa(ñ)j* means 'attach, affix, hang' (I.191.10, X.124.7); yet this cmpd is universally interpr. as meaning 'impeding/stopping the wheel' (Gr, Ge, AiG II.1.183, EWA s.v. *SAÑJ*) or, acdg. to WG, 'die Wagen bremsend' with *cakra*- as pars pro toto. I do not understand this consensus that the verbal portion should be given a meaning not found with the verb itself, particularly since the context does not impose it. (Sāy.'s gloss *rathacakrasyāsañjayitā* does not seem to be responsible for it either.) Only WG attempt to trace a semantic pathway to the meaning attributed to *āsajá*-, but it is not persuasive. I suppose all these interpr. are thinking of the myth in which Indra tears the wheel off the sun's chariot, but there is no other indication in context that this myth is at issue -- and tearing off and stopping are quite different actions. Given these objections, I prefer to stick with the standard meaning of *ā√sa(ñ)j* and assume 1) that it refers to the *restoration* of the sun's wheel mentioned in regard to Etaśa in nearby V.31.11, or 2) that it refers to an incident in an unknown story, or 3) that it refers to some pre-battle preparation or battle tactic. I prefer the first.

V.34.7: The lexeme *sám√aj* is used elsewhere of 'driving together' cattle (I.33.3); here the *bhójanam* of the niggard is presumably livestock. Though *pañéh* here is used oppositionally to *dāsúṣe* in b (see Ge's n. 7ab), the word also summons up Indra's opponents, the Paṇis, who stole his cows -- so stealing them back (*muṣé*) is only justice.

The syntax of c is quite challenging. Let us begin with *viśva ā purú*. The phrase *purú viśva-* appears to be an idiom, or at least is found twice in the RV, meaning “all the many”: I.191.9 *purú viśvāni* “all the many (bugs),” VII.62.1 *purú viśvā jānima* “all the many tribes.” Here, however, the words are in opposite order, with the preverb/adposition *ā* intervening, and the referent is singular (*viśva[h] ... jānaḥ*). Nonetheless, I think the locutions are essentially the same, though I tr. “each and every” to capture the singular number.

I do not know what to do with *ā*. It is possible that it is a preverb with *dhriyate*, but 1) though *ā* is found with *√dhr*, it is not common, and 2) preverbs in tmesis generally move to metrical or syntactic boundaries, and *ā* is not so placed here. The standard interpr. do not comment on it. I have no solution.

The last issue is the use of *caná*. Ge (/WG) take it as neg. ‘nicht einmal’ (not even). The sense of the clause, acdg. to them, is that a people that has provoked Indra’s anger can’t hole up for a long time even in a place that’s hard to penetrate. Thus by their interpr. *durgá-* is a desirable, fortress-like location for the offending people, but they can’t hold onto it. But *durgá-* is always otherwise an undesirable place, where no one wants to be -- where we wish Indra to send our enemies (VII.25.2) but from which we want to be rescued. I therefore think that the point of this clause is that Indra’s antagonists get confined to such a place and therefore *caná* does not have a negative sense here. Twice loc. *durgé* is followed by *cid* ‘even’ (VIII.27.18, 93.10), and *durgé caná* here may be a variant of this usage. Although he unfortunately does not discuss this passage, Klein’s general disc. of *caná* (DGRV I.285–92) as essentially borrowing negative value from the negative contexts in which it’s ordinarily found allows for an original underlying positive value ‘even’. For further disc. see comm. ad X.49.5, VIII.1.5, X.56.4. The publ. tr. should be slightly altered to “Even in a (place) ...,” though I’m not sure what sense ‘even’ adds - - perhaps that not only are the people confined but they are confined in a really nasty place.

V.34.8: The identity of the verb *āvet* in b is disputed. Gr takes it as an opt. to *√av* ‘help’; Old rejects that analysis but suggests that either *√vid* ‘know’ or *√vī* ‘pursue’ is possible. Ge and WG (see also Oberlies RdV I.535) opt for *√vid* and take the rest of the ab as indirect discourse controlled by this verb (“when he found out that ...”). This is possible, but I find it hard to integrate subordinate *yád* clause in ab (with plupf.) with the *hí* cl. of c (with root aor.) and the main cl. of d (with pres. indic.). I find that the sequence of tense works better if ab is a separate unit, with subord. *yád* cl. in a and main clause in b (*āvet* accented because pāda-initial). Then c is the causal grounds for the main cl. in d and expresses immed. past.

My analysis requires supplying a verb in pāda a, linked to the preverb *sám* (which by the other interpr. must be construed with *√vid*, a combination not found with ‘know’, though it is with *√vid* ‘find’). A good candidate for a verb to supply is given by *sámṛti-* ‘clash’ in 6a, and verbal forms to this idiom (*sám √ṛ*) are fairly common. Cf. VII.25.1 ... *yát samáranta sénāḥ* “when armies clash together.” My analysis also depends on a different analysis of *āvet*, which I assign to *√vī* ‘pursue’. Note *véti* opening 4c.

The def. *anyám* ‘the one’ in c, referring to one of the two opponents in ab, more or less demands a responsive ‘the other’, as Ge and I supply in d.

Old questions the existence of the stem *pravepanín-*, suggesting that *pravepaní* is an adverbial instr. to a *pravepaní-* (fld. by WG). I don't see that a stem *pravepaní-* is appreciably better than an *-ín-* stem and follow the older analysis.

V.34.9: The sense of *samyát-* 'continuous(ly)', root noun cmpd. to \sqrt{yat} (see *yatam-* in 4c and disc. there), must have developed from 'taking their places together, one after the other'. For further disc. of the stem, see comm. ad IX.86.15.

V.35 Indra

V.35.3: *ābhūbhiḥ* 'ready at hand' lacks an overt referent. I supply '(forms) of help' from context -- *āvas-* is the signature word of this part of the hymn. Ge takes it as a nominalized 'Kräfte', though he suggests the Maruts as an alternative referent in n. 3d; WG personified 'helpers'.

V.35.4: The syntactic boundaries do not coincide with the pāda boundary in ab -- a welcome syncope in this otherwise simple hymn. The hemistich is divided into three clauses: *vīṣā hy āsī / rādhase jajñīṣe / vīṣṇi te śāvaḥ*, but the pāda boundary breaks the second into two one-word halves. It might be possible to fold the third proposed clause into the second ("you were born as bullish strength"), if we were willing to be cavalier about the position of *te* and indeed its presence ("you were born as your bullish strength"?), but the nominal clause in VIII.3.10 *tād indra vīṣṇi te śāvaḥ* supports the analysis as a separate unit, if more support be needed.

On the anomalous form *vīṣṇi* (for expected *vīṣṇ(y)am*), see comm. ad VIII.96.19.

satrāhām is a neut. sg. qualifying *paūṃsyam*. It looks like a them. neut. and is in fact classified under *satrāha-* in Gr and Lub (see also Scar 697). Nonetheless, it belongs with the class of root noun cmpds with *-hán-*. The neut. sg. of such a stem should probably be **-ha* (like *nāma* to *nāman-*, assuming radical *-n-* stems work like, or get assimilated to, derived *-n-* stems). I might tentatively suggest that the final *-m* was first inserted (as *anunāsika*) to avoid the hiatus **satrāhā indra* and then reinterp. as a them. neut. ending (see also Lanman, *Noun inflection* 478, AiG III.239). But it is the case that such nasalizations are rare within pādas and almost always concern long *-ā* (see Old, Prol. 469–72). Moreover, the similarly formed neut. *vītrahām* in VI.48.21 precedes a consonant with the *-m* making position.

V.35.5: Ge takes *adrivaḥ* as 'du Herr des Presssteins', but in context a stone as weapon seems more likely (so WG 'du mit den Schleudersteinen', flg. Gr).

I interpr. *sarvarathā* as an adverbial accompaniment to the victim whom Indra runs over: "(him), chariot and all." It is not clear from Ge's "mit ganz Wagenzug" whose chariot he thinks it is, but WG take it to be Indra's chariot, interpr. *sarva-* in its stronger lexical sense 'hale, healthy': "... so, dass dein Wagen heil bleibt." This purpose-clause reading attributes more, and more unambiguous, structure to this single word than I think it can properly bear, and I also don't understand the intended sense: should Indra endeavor to keep the victim's blood from splashing his wheels or his body from making dents?

V.35.6: Note the phonol. figure *pūrvīṣu pūrv(i)yām*, though the words belong to diff. stems. The referent of fem. *pūrvīṣu* is not clear. Gr suggests *ājīṣu* from 7b, and this seems to have met general acceptance (Ge, with ?; WG; Bloomfield RReps, 256), even though *ājī-* is actually masc., a fact no one remarks on. (Gr cites a single. fem. form, in I.116.15, but nothing in that passage signals that gender.) We could, of course, suggest a different word for ‘battle’ with fem. gender, like *pṛtanā* or *samād-*; there is weak support for both (either) of these because they both are construed in the loc. pl. with *ugrā-*, which is also found here: *ugrām ... samātsu* in an oft-repeated pāda (III.30.22, etc.); VII.56.23 *ugrāḥ pṛtanāsu*, VIII.61.12, 70.4 *ugrām (...) pṛtanāsu*. An entirely different referent is also possible: ‘peoples’ comes to mind, picking up the *jānāsaḥ* of pāda b, with several different possible fem. stems as substitute: *kṣitī-* from 2c or the developed sense of *carṣaṇī-*, extractable from 1c (cf. III.43.2 *pūrvīḥ ... carṣaṇīḥ*) or *vīś-* (cf. VII.31.10 *vīśaḥ pūrvīḥ*).

V.35.7: This vs. has a riddle structure: the accusative qualifiers pile up until their referent, the chariot (*rātham*) is given at the very end, immediately preceded by the verb (*avā*) on which the preceding accusatives depend. It proved difficult to capture this effect in tr.

sayāvan- means ‘drive along with’ (the useful German ‘mitfahren’, for which there is no precise English equivalent). It is ordinarily either construed with an instr. of the fellow traveller or is in the instr. qualifying the fellow traveller(s). Here there is no such overt expression, but we can assume it is Indra.

V.35.8: The structure of ab mimics that of 7, which has (a) *#asmākam ...* / (d) *... avā rātham#*, while 8 has (a) *#asmākam ...* (b) *#rātham avā* Another verbal expression is inserted within this structure in pāda a: *éhi naḥ*. Ge tr. as two separate clauses, silently postponing the *asmākam* to the second one (“komm zu uns, begünstige unseren Wagen”). WG take *éhi naḥ* as an insertion: “Unserem -- Indra, komm her zu uns! -- (unserem) Wagen hilf ...” This interpr. seems possible -- save for the position of the voc. *indra*, which is unaccented and precedes *éhi naḥ* so cannot belong to that phrase. (A slightly altered tr. would be “Ours, Indra -- come to us! -- (our) chariot ...”) By contrast I take *éhi ... avā* as a pseudo-serial verb construction (“come help”), though I admit that the *naḥ* might be problematic for that interpr.

Ge (/WG) take both *diví* as ‘today’, but outside of *diví pāryé* ‘on the decisive day’, a phrase characteristic primarily of VI and VII, *diví* always refers to heaven, as far as I can tell. ‘Heaven’ makes fine sense here, and cf. the similar expression V.13.2 ... *stómam manāmahe ... divispṛśaḥ* “we shall conceive a praise-song (for Agni), who touches the sky.”

V.36 Indra

V.36.1: The publ. tr. takes the phrase *vásūnām ... dāmano rayīṇām* as nested genitives (*vásūnām* and *rayīṇām* depending on *dāmanah*), whose head noun is *dātum*. Both Ge and WG break up the nouns into two phrases (though in different ways), with WG taking the verb *cíketat* in two different ways (pf. subj. / plupf. injunc.) with two different complements: “... der auf das Schenken von Gütern [i.e., *vásūnām ... dātum*] achten soll, weil er sich ja auf die Schenkung von Schätzen [i.e., *dāmano rayīṇām*] versteht.” This is

more elegant than my pile-up of gifts and may well be right, though I'm not sure there's sufficient signalling of the double meaning.

V.36.2: The simile in ab depends on the double meaning of the root \sqrt{ruh} , which means both 'climb, mount' and 'grow'. It also hinges on two different senses of *sóma*-, as the prepared ritual drink and the plant from which it is extracted.

In cd there is mismatch in number between the simile in the singular and the frame in the plural, whose number is emphasized by *vísve* 'all'. The point of the simile is that the person "driving his steeds" would be verbally urging them on to greater speed.

V.36.3: The slightly "off" nature of the similes in this hymn continues here. In ab the point of comparison between the rolling wheel and the poet's mind is the trembling (*vepate*). The cause of the trembling -- fear -- is applicable only to the mind, not the wheel.

As disc. in the publ. intro., *ráthād ádhi* "from the chariot" is a curious phrase, and the standard treatments struggle with it. Both Ge and Old think that the singer is expressing a wish for a chariot, but it is hard to see how to make that work syntactically. WG (in n.) suggest that it's either Indra's chariot or that it represents the poet's hymn, but neither of these fits the context well. As indicated in the publ. intro., I think this is a punning allusion to the poet's patron Śruta-ratha (lit. 'having a famous chariot'), praised in the dānastuti in vs. 6. In this scenario the hemistich-initial ablative, referring to the patron, is linked to the hemistich-final word *purūvasuḥ*, referring to the poet. Though Ge (/WG) take this as a PN, giving it its full lexical meaning ('having many goods') makes the verse work better. The singer praises Indra on behalf of his patron Śrutaratha, in order to become "One of many goods" -- from/because of (Śruta)ratha. As Mayrhofer points out (PN, s.v. *purūvasu*-), *purūvasu* is synonymous with Prabhūvasu, the name of the poet acdg. to the Anukramaṇī, so the vs. puns both on the name of the poet and on that of the patron. This might be clearer in the publ. tr. if it were reordered: "Surely the singer will now praise you ... (to become) one possessing many goods from the (Famous-)chariot?"

V.36.4: The semantically complementary expressions referring to giving with the left and right hands have different morphological realizations: instr. *savyéna* and the hapax adv. *dakṣiṇít*. The latter is, of course, anomalously formed; it appears also in the cmpd. *pradakṣiṇít* (6x), which may be the basis here as well -- note immediately preceding *prá*. Thieme (KZ 69 [1951] = KISch 71) suggests that it's a cmpd with the root noun to \sqrt{i} 'go' (with the expected empty *-t* stem final); others that it contains the relic of a PIE instr. ending in *-t/d*. For a full disc. see Scar (42–44). Since the first is not straightforward functionally ("going to the right" is not its sense) and the second depends on a highly dubious morphological reconstruction, I withhold judgment on the source of the form, but see *ubhayāhastí* (or *-ī*) in V.39.1 below. The lack of morphological parallelism in this passage is not surprising, since the hymn tends towards slightly skewed expressions.

V.36.5: I take cd as a single clause (contra Ge [/WG]), because the *sá* with 2nd ps. ref. that opens c is easily explained if it's construed with the imperative 2nd sg. injunctive *dhāḥ* at the end of d, but would otherwise be anomalous. See my "sa figé."

Strictly speaking, *vṛṣakrato* is of course a voc. In the publ. tr. I render it as nom., because of the parallelism *vṛṣā vṛṣarathaḥ ... vṛṣakrato vṛṣā*, with 2 nom. *vṛṣā* adjoining 2 bahuvrīhis with *vṛṣa-* as 1st member.

V.36.6: The sudden intrusion of the Maruts here is somewhat puzzling, but final vss. often open out to a wider set of gods.

V.37 Indra

V.37.1: As was noted in the publ. intro., the first pāda of this first hymn attributed to Atri provides the clue to the solution of the mythical puzzle posed by the narrative in Atri's V.40.5–9 in which Svarbhānu (*svārbhānu-*) pierces the sun with darkness and Atri restores the sun to heaven. The name Svarbhānu means 'having the radiance of the sun', and here Agni aligns himself "with the radiance of the sun" (*bhānúnā ... sūryasya*). As I demonstrated at length in my book *The Ravenous Hyenas and the Wounded Sun*, Svarbhānu is simply an epithet of Agni, who inflicted the wound on the sun for cause (cosmic incest). This pāda signals the underlying connection of Agni and Svarbhānu with a minimum of fuss.

The dawns are 'non-neglectful' (*ámṛdhra-*) because they never fail to appear every morning.

V.37.2: Both Ge and WG take *jarāte* as 'be awake', even though Gotō himself (1st Klasse, 151 and 154) identifies this particular attestation of *jāra-* as ambig. between 'be awake' and 'sing'. Although both meanings are probably present, I think 'sing' is the primary one. The subject's yoked pressing stones speak (*grāvāṇaḥ ... vadanti*) in the next pāda (2c), and throughout the RV there is generally an equivalence between the noise of the pressing stones and the speech/singing of the priests. See in particular in the immediately preceding hymn, V.36.4 *grāveva jaritā ... íyarti vācam* "Like a pressing stone, the singer raises his voice," with the agent noun belonging to the same root.

On the Adhvaryu's trip to the river to fetch water on the morning of the pressing day, see Ge's n. 2c.

V.37.3: See the disc. of this vs. as omphalos and riddle in the publ. intro. As indicated there, I identify the bride as Dawn and the husband as the Sun, while the dominant opinion (see Ge [WG]) is rather Speech and Indra. The latter is certainly not excluded, and the fact that the stem *iṣirā-*, used to qualify the speech of the pressing stones in 2c, also characterizes the wife in 3b may give some support to that view. Cf. also IX.84.4 *vācam iṣirām uṣarbúddham* "the vigorous speech awakening at dawn." Still, the Dawn/Sun interpr. follows naturally from the dawn ritual setting in the first two vss., and the long journey in d would refer to the daily trip across the sky.

As also noted in the publ. intro. *śravasyād ráthaḥ* "the chariot will seek fame" recalls the name of the patron in the immed. preceding hymn, V.36.6, Śrutaratha, which was also punned on in V.36.3.

With Ge I take *purū sahásrā* as a measure of distance and *pári vartayāte* as intrans./reflex., based on its middle form. This is disputed by WG, who take the verb as transitive (but "affektive" [whatever that means], the value that accounts for its middle

form). They supply ‘men’ as the referent of *purū sahāsrā*. The idea is that the noise of Indra’s chariot will cause many thousands of them to turn around and look at it. I suppose this is not impossible, but again it requires supplying much more than is found in the context: a huge crowd of people and the presupposition that “cause to turn” implies “turn to look.”

V.37.4: “Whose comrades are cows” (*gósakhāyam*) modifying soma refers of course to the milk mixture added to soma to make it less unpalatable. (It is somewhat surprising that *sóma-* is also called *tivrā-* ‘sharp’ in the same pāda, since this is usually of unmixed soma.) But the *gó-* ‘cow’ of this cmpd provides a clever transition to the next pāda. Pāda c contains a verb (*ā ...*) *ājati* ‘drives’, which ordinarily takes an object -- and indeed frequently that object is cows: e.g., I.83.5 *ā gā ājat*, V.2.5 *ājāti paśvāḥ*. I therefore supply ‘cows’ as the object in c, extracted from a different use of the ‘cow’ word in b. This then produces a reference to the Vala myth, with the *satvanaīḥ* ‘warriors’ representing the Aṅgirasas as elsewhere (cf. III.39.5, also nearby V.34.8 for association with cattle raiding). Thus pāda c depicts the king protected by Indra as performing a Vala-like deed (*ā satvanaīḥ ājati*) as well as the/a Vṛtra slaying (*hānti vṛtrām*), ascribing (equivalents of) the two signature deeds of Indra to this earthly king. Neither Ge nor WG make much sense of the *ājati* clause.

The accent on *ājati* is contrastive with the adjacent *hānti*.

Both Ge and WG take *kṣitīḥ* with *kṣéti* (“er bleibt in seinen Sitzen” and “weilt sicher in seinem Reich” respectively; see also Oberlies Relig. RV I.441, II.171–72), but $\sqrt{kṣi}$ ‘dwell’ without preverb does not otherwise take the acc., whereas \sqrt{pus} ‘prosper, thrive’ can take a personal acc., and so I construe *kṣitīḥ* with *púṣyan*. In my interpr. the poet juxtaposes the cognate words (*kṣéti kṣitīḥ*), but separates them syntactically.

V.37.5: The pāda-framing *#kṣéti ... púṣyan#* of 4d recur adjacent at the beginning of 5a *#púṣyāt kṣéme* in different morphological form; *kṣéme* ‘peace(ful dwelling)’ is also paired with its opposite *yóga-* ‘hitching up, war’, with two contrastive clauses framed by the subjunctives *#pusyāt ... bhavāti#* predicting success in both peace and war. The war theme is further developed in the following pāda. I take *ubhé vṛtau samyatī* as an implicitly subordinated clause with pres. part. as main verb (an interpr. that WG come close to as an alternative considered in their n.). It would be possible to take this phrase as acc. obj. of *sám jayāti* (so Ge, WG, Oberlies [Relig. RV II.172]), but it doesn’t make sense that the king would conquer both clashing forces, when one of them is likely his own. Rather I think the point is that Indra will favor him over the opponent and therefore his side will prevail. See V.34.8, where Indra links himself to one of two opposing troops and helps his clients win.

V.38 Indra

For the general contents, see disc. in publ. intro. WG interpr. it as plea to Indra for rain -- a purpose that I find very hard to discern and that results in farfetched interpr. of details.

V.38.1: The first hemistich is somewhat awk., with (by my interpr. and Ge’s) a genitive phrase *uróḥ ... rādhasaḥ* “of your broad largess” dependent on an almost synonymous

nom. phrase *vibhvī rātīḥ* “extensive giving.” WG apparently take the first not as gen., but as abl., indicating the source of the giving: “Von deiner ... weitreichenden Gunst aus entfaltet sich die Gabe.” This seems like a good idea and mitigates the awkwardness. I would then change the publ. tr. to “Your extensive giving (comes) from your broad generosity.”

V.38.2: As in several instances in the last few hymns, WG impose extra structure on the first hemistich that is not supported by the phraseology. They supply a verb to govern *śravāyyam*, which then forms the foundation for a 2nd subordinate cl. consisting of *īṣam ... dadhiṣé*: “Was du ... Ruhmvolles (zustande gebracht), dass du dir die Labung ... verschafft hast.” In their introduction to the hymn they explain what lies behind this interpr., adding even further unsupported assumptions. The ‘praiseworthy’ thing that Indra accomplished was his action of freeing the life-giving liquid (*īṣ-*), which they presumably take both as the waters imprisoned by Vṛtra and (proto-)rain. But they give no justification for dividing ab into two clauses, separating the apparently parallel objects *śravāyyam* and *īṣam*, and providing a verb to govern the first that cannot be generated from context or formulaics. It is worth pointing out that *śravāyya-* is never used of a deed or action and most often modifies *rayí-* ‘wealth’ or *vāja-* ‘prize’. Although I can’t see any obstacle to qualifying a deed as *śravāyya-*, there are no familiar phrases containing that notion that would come to mind when encountering an undefined *śravāyya-*. Though I confess I can’t identify the referent(s) here, I find the WG interpr. implausible and forced. For further on this vs. see comm. ad V.39.2 below.

V.38.3: The WG interpr. becomes even more forced in this vs., which is summarized in their intro. by “Die Maruts lassen es regnen,” despite the absence of any reference to the Maruts or any verb for ‘rain’ -- the operative word for ‘rain’ is supposed to be the adverbial instr. *mehānā* generally taken as ‘in profusion’. The single word *śúṣmāsaḥ* is supposed to incorporate “Sturm, Drang, Blitz,” and the Maruts are supposed to be the other half of the dual expression *ubhā devāu* “both you gods” -- that is, Indra and the Maruts -- a highly unlikely use of the dual. The distortion of the text to fit the interpretational preconceptions goes much too far.

To stay closer to the actual wording, the question is how to distribute the various pādas in relation to each other. Ge takes ab as the subject of a clause whose object is in c, though with an unexpressed verb: “Deine Kräfte ... (bringen) beide Götter zur Übermacht.” I prefer to take ab as an extension of vs. 2, adding another quality of Indra’s (his tempestuous force) that extends itself along with fame. Then the two gods of c can be the subject of *rājathaḥ* in d, with *abhiṣṭaye* an infinitival complement. A similar interpr. is given by Scar (598), who takes ab as a nominal clause, “Die ungestümen Kräfte, die dir [sind, sind] in Menge [vorhanden] und gehorchen deinem Willen,” and cd more or less as I do.

As for who the other god is, besides Indra -- Old refuses to speculate, saying it’s an unknown ritual situation. Ge suggests Varuṇa, and this seems the likeliest possibility. Dual forms of *√rāj* generally have Varuṇa as one half of the subject, the other usually being Mitra; cf., e.g., in this maṇḍala V.63.2, 7. But VII.83.5, a hymn to *Indra* and Varuṇa, the verb has those two as subject: *yuvām hí vásva ubhāyasya rājathaḥ* “For you two rule over goods of both sorts.”

V.38.4: The brief excursion into the dual in vs. 3 is over, and Indra is the sole subject again.

The first hemistich is again syntactically incomplete. The standard interpr. construe the genitive phrase *asyá kásya cid dáksasya táva* loosely with *ṇṛmṇám* (e.g., Ge “von welcher deiner Geisteskraft es auch sei, ... bring uns Mut”). This is possible, but I prefer to take ab as an extension of 3cd (as 3ab was to 2cd), supplying ‘rule’ to govern the genitives, using slightly different senses of ‘rule’.

V.38.5: I tr. slightly differently from the standard, supplying another form of *syāma* for ab, rather than making the whole vs. into a single cl. The difference is trifling.

Notice that *abhiṣtibhiḥ* echoes *abhiṣṭaye* in 3c.

WG suggest that this vs. is a joke: asking Indra to be in his *śárman* (‘protection, shelter’; German ‘Schirm’) is like asking to be under his umbrella (Regenschirm). This is a joke that may work in German but seems to have little to do with Sanskrit, which, as far as I know, does not have the concept of a rain-repelling umbrella. Shelters of that physical type are more likely used against the sun, and certainly I know of no use of *śárman*- in a rain context.

V.39 Indra

As was noted in the publ. intro., this hymn is twinned with V.38 in Vālahilya fashion, though it does not give as much help as it might in interpreting the previous hymn.

V.39.1: The poet re-uses *mehánā* from V.38.3 and *rādhah* from V.38.1, as well as *adrivah* (though that voc. is quite common in this run of hymns). Because of their commitment to *mehánā* as ‘rain’ in 38.3, WG are forced to insert rain here, though the context is hardly favorable.

The Pp. reads *ubhayāhastí* with short *-í*, which is assigned to an *-i*-stem by Gr, as a neut. modifying *rādhah*, though he also suggests that it might be read *-ī*, as the masc. nom. sg. of an *-ín*-stem. The latter works better morphologically than the former: *hastín*- is well attested and well formed, whereas there is no straight *-i*-stem *hastí*- and no easy mechanism for producing one -- though a nonce back-formation from the well-formed adj. *-hastíya-* might be possible. See esp. *ubhayāhastíyā vásu* in I.81.7. (A neut. to the *-ín*-stem would likewise probably come out as *-í*, and this may be an easier solution). I nonetheless tentatively suggest that *ubhayāhastí* here (if that is the reading) might be compared with the problematic *dakṣiṇít* ‘with the right (hand)’ in nearby V.36.4, which appears in the same kind of context, concerns hands, and has a problematic suffixal short *-i-*, followed there by a morphologically mysterious dental final.

V.39.2: Although this vs. is lexically and syntactically quite distinct from V.38.2, they seem to share a thematic core. First, note that *vāreṇíyam* at the end of pāda a is positioned identically to *śravāyíyam* in 38a, with the same type of formation and roughly the same meaning, and both are introduced by *yád* ‘which’ at the beginning of their pādas. Here the adj. clearly designates some good thing that Indra should bring us; recall that *śravāyíya-* also usually refers to wealth of some sort. In the second half-verse Indra’s

limitless capacity for giving is expressed in a vivid image -- Indra as unbounded ocean -- while in 38.2cd the unidentified praiseworthy thing spreads itself out longest, also an image of unbounded expanse. The means of expressing the concept are quite different, but the concept itself seems the same.

V.39.3: I take ab as nominal rel. clause with a predicated grdv. *prarādhyaṃ*, while Ge (/WG) simply take it as a nom. cl. (“what is your thought...”). My tr. should be modified slightly to make it clear that the *āsti* is accented: “Which thought of yours, famed and lofty, eager to give, is to [should] be realized, with it ...”

In cd both Ge and WG separate the two pādas and supply a second verb (or, as far as I can tell, a 2nd exemplar of the overt verb *ā darṣi* in different usage). I interpr. *ā darṣi* as taking a double acc. in a condensed expression: “split X for (its contents) Y.” The lexeme *ā √ dṛ* can take as obj. either the container or the contained; for a similar double acc. with both see III.30.21 *ā no gotrā dardṛhi ... gāḥ* “Split open the cowpens for the cows.”

V.39.4: Ge [/WG] take the enclitic *vaḥ* exclusively with pāda a where it is located (Ge: “Euren Freigebigsten der Freigebigen...”). In light of the next vs., I think that it refers to the Atris, who strengthen Indra with their words in 5, and that they are the subject of the infinitival dat. *prāsastaye* in c. It has migrated to Wackernagel’s position in the larger clause (as often), which accounts for its distance from *prāsastaye*.

As I have discussed elsewhere (e.g., *Rgveda between Two Worlds*, Chap. 4, esp. 146–48), the genre of *prāsasti*- and the verbal lexeme *prā √ śams* are associated with the praise of kings already in the RV; *prāsasti* is the standard term for royal panegyric in later Sanskrit and MIA. Note that here the term is used for Indra as king (pāda b *rājānām carṣaṇīnām*).

With the standard interpr., I supply a verb of calling in c.

In d Ge takes *pūrvībhiḥ ... gīraḥ* as co-referential, with *gīraḥ* acc. rather than instr. metri causa. This seems too tricky as well as unnec. With most (incl. Gr, Old, and WG) I supply *prāsasti*- with *pūrvībhiḥ* (cf., e.g., VI.45.3 *pūrvīḥ ... prāsastayaḥ*). WG in their n. suggest that *pūrvībhiḥ* is a “predicative instr” to *gīraḥ*, a construction that I don’t understand and that also seems unnec. Why not an instr. of accompaniment -- hymns along with eulogies? If I am correct that *prāsasti* is a specialized verbal product already in the RV, the differentiation between it and *gīr*- here would be perfectly understandable.

V.39.5: The distinction between verbal products continues here, with *kāvyaṃ vācaḥ* ‘poet’s/poetic speech’, *ukthām* ‘solemn word’, *brāhmaṇ-* ‘sacred formulation’, and *gīraḥ* ‘hymns’ all offered to Indra. For the connection between *prāsasti*- (here, 4cd) and *kavī*-, *kāvya*- see *RV between Two Worlds* cited above.

V.40 Indra and Svarbhānu

The hymn given as V.40 consists of two metrically and, more important, thematically ill-assorted pieces, vss. 1–4 and 5–9. The first three vss., in Uṣṇih, are a banal celebration of the word *vṛṣan-* ‘bull’ addressed to Indra. The fourth is in Triṣṭubh and does not contain any form of the word *vṛṣan-* (though see *vṛṣabhā-* in 4a), but the thematic connection is clear and it climaxes with the appearance of Indra at the Midday

Pressing. The second part, vss. 5–9, is the exquisitely crafted account of the Svarbhānu myth, which on its own constitutes a perfectly balanced omphalos hymn. Metrically it consists of two framing vss. in Anuṣṭubh (5, 9), with the three internal vss. (6–8) in Triṣṭubh. Further evidence of the omphalos structure: the two outer vss. are multiforms of each other; the middle verse (7) is the only direct speech; the immediately surrounding vss. (6, 8) both mention Atri in the sg., both deal with the *māyā* of Svarbhānu, and have complementary vocab.: *divāḥ / divī, sūryam / sūryasya, gūḍhām / aghukṣat, brāhmaṇā / brahmā*.

All of the evidence points to a pair of originally independent hymns, which were later redactionally combined, and this hypothesis also fits their position in the maṇḍala. At four vss., the first part (V.40.1–4) would be the appropriate length to follow on the five-vs. V.39 as an independent Indra hymn, in accordance with the usual principles of Saṃhitā arrangement. The Indra cycle of V would come to an end there; the seams between cycles are where later Anhangslieder get inserted, and V.40.5-9 can be such an Anhangslied, with no original connection to 1-4 at all. Although Indra has a bit part in the Svarbhānu saga (see 6ab, possibly 7c), the story is otherwise independent.

The idea that the two parts of V.40 were originally two separate hymns has a long scholarly history, going back at least to Bergaigne and Lanman, who both thought the division was rather 1–3 / 4–9. See Old, Proleg. 198 and, in detail, Noten ad loc. In the Noten Old seriously considers the possibility that the two parts formed an originally unitary hymn, primarily on the basis of V.78, which he sees as having a similar bipartite structure. I think this is unlikely: V.78 falls into three parts, not two, and in our hymn the Svarbhānu portion is far more intricately structured than anything in V.78. Nonetheless, it is possible that the two separate hymns were joined into V.40 on the model of V.78. For a possible reason for the introduction of the Svarbhānu account just here, see below ad vs. 4.

I treated the Svarbhānu portion at great length in my 1991 *Ravenous Hyenas* in conjunction with the brāhmaṇa prose versions of the myth, and I will not repeat all the details found there. In *Hyenas* (264–67) I identify Svarbhānu, the piercer of the Sun, as Agni, who is frequently said to have the *bhānū-* (‘radiance’) of the sun. For support for this identification see disc. there, as well as comm. ad V.37.1 above.

V.40.1–3: In the refrain (1–3cd) the pl. ‘bulls’ (*vṛṣabhiḥ*) accompanying Indra were identified with the Maruts already by Sāyaṇa. Since this section culminates in the Midday Pressing (4d), this identification makes sense, since that pressing is shared by Indra and the Maruts.

V.40.4: In *Hyenas* (pp. 249–51) I suggest that the Svarbhānu section is introduced after this vs., because there are several connections between the Midday Pressing and the Svarbhānu story. In later śrauta ritual a descendant of Atri (an Ātreya) is given gold at the Midday Pressing of the Aśvamedha. The gold is clearly a symbol of the sun (as often), and the Svarbhānu story is often told in brāhmaṇa prose texts to justify this ritual action. There is also a disguised ritual reenactment of the freeing of the sun (also symbolized by gold) at the Midday Pressing. The suggested connection still seems to me reasonable, but I was more inclined in that book to accept V.40 as a unitary hymn, not a secondary composite. I now think that the independent Svarbhānu hymn was slipped in here at the

end of the Indra cycle because of the mention of the Midday Pressing in the final vs. of the originally separate hymn, now V.40.1–4.

V.40.5: On vs. 5 as a variant of vs. 9, see *Hyenas* 140–41.

V.40.6: On the “fourth formulation,” see *Hyenas* 251–60.

The “circling magic spells” (*māyāḥ ... vārtamānāḥ*) of Svarbhānu are the plumes of Agni’s smoke rising to heaven and obscuring the Sun’s light (*Hyenas* 271–73).

āpavratena ‘against commandment’ is generally taken to refer to the darkness deployed by Svarbhānu, but I argue (*Hyenas* 297–300) that it actually refers to the Sun’s original action, incest with his daughter, that led to his punishment by Agni Svarbhānu.

V.40.7: On this speech of the Sun’s, see *Hyenas* 281–88.

This vs. is usually taken as evidence for the “eclipse” theory of the Svarbhānu story, which aligns it with the later Rāhu myth in which Rāhu swallows the sun. But there is no other evidence for this connection in Vedic, and ‘swallow’ can be accounted for by inner-Vedic parallels. See the cited disc. in *Hyenas*.

Although Atri is usually considered the addressee of the entire vs., for reasons having to do with the Vāyav Indraś ca construction in cd, I suggest (*Hyenas* 284–86) that Indra is the referent of the 2nd ps. in c, conjoined with Varuṇa in d.

V.41 All Gods

As noted in the publ. intro., the hymn consists of verses dedicated to a sequence of gods, both major and minor, seemingly unordered. The full list consists of 1 Mitra and Varuṇa / 2 Mitra, Varuṇa, Āyu, Indra, Maruts, Rudra / 3 Aśvins, Rudra / 4 Trita, Wind, Agni, Pūṣan, Bhaga / 5 Maruts / 6 Vāyu / 7 Night and Dawn / 8 Men (Maruts?), Lord of the Dwelling Place, Tvaṣṭar, trees, plants, Holy Place / 9 Mountains, Āptya / 10 Trita, Apām Napāt, Agni / 11 Maruts, Bhaga, waters, plants, woods, mountains / 12 Agni, Waters / 13 Maruts / 14 Indra (maybe) / 15 Shielding Goddess, Rasā / 16 Maruts, Ahi Budhnya / 17 gods / 18 gods, goddess / 19–20 Idā, Urvaśī. The Maruts regularly recur in this sequence, and though, as noted in the publ. intro., there is little Marut imagery (though perhaps more vocab. than I recognized at the time), if there *is* focus in this hymn, it is probably on the Maruts, who dominate much of the rest of the maṇḍala after the All God hymns.

V.41.1: The conjunction *vā* ‘or’ dominates this vs.: there are 4 overt occurrences (twice in b, once each in c and d), as well as covert encodings, beginning with *vā(mitr)āv(aruṇ)āv* (the latter two inverted) in pāda a and ending with the last word of the vs., *vā(jān)*. The end of the 2nd pāda, *vā dé*, with two monosyllables that, inverted, produce *dévā(h)* (though with wrong accent for **devāḥ*), draws further attention to *vā*. As noted in the intro., the prominence of *vā* may establish a theme of choice or alternatives appropriate to the mass of gods mentioned in the rest of the hymn, and *vā* also echoes the last syllable of the phrase *vísve devāḥ* “All Gods,” to whom the hymn is dedicated.

Given the plethora of *vā*-s and the absence of any finite verb, save for intrusive *trāsīthām* in c, it is not surprising that interpretations of the structure and syntax of the vs. are all over the map. In addition to the standard tr. (Ge, Re [EVP IV, V], WG), see also

Old, Lü (Varuṇa 585–86), Schindler (Root nouns, 24–25), Klein (II.203–4), Scar (581), Keydana (Inf. 155 n. 142). I will not rehearse them all here. Like many of these interpr., I take the three *vā*-s of bc as defining a tripartite structure of roughly parallel entities. I then assume that the *vā* of d is situated on a higher level of structure and is contrasting abc with a new clause inaugurated in d. The two clauses (abc and d) are separated by the independent interjection *trāsīthām naḥ* closing c. As Ge points out (n. 1c), *trāsīthām naḥ* has a similar role elsewhere (IV.55.1, VII.71.2); IV.55.1 is especially similar, since it is in the first vs. of an All God hymn that begins *kó vaḥ* (like *kó nú vām* here), with Mitra and Varuṇa as the subjects of *trāsīthām*.

My interpr. of the larger structure rests on taking *dé* at the end of b as an infin. (with many, but not all) and assuming that the poet has exploited the voice neutrality of infinitives to give it passive value in abc (“[is] to be given”) and active value in d (“[is] to give”). This further assumes that *káḥ* refers to the (mortal) recipient in abc and, resupplied in d, to one of the gods. With these assumptions in place, the case relations in the two syntactically distinct parts of the vs. fall into place: the nom. *káḥ ... rtāyán* “who, performing the truth ...” of pāda a is the mortal worshiper and recipient of the gods’ largess; his counterpart in d is the dat. *yajñāyaté*. The *vām* of pāda a is to be interpr. two different ways: in the first part it expresses the divine beneficiaries of the mortal’s service; resupplied in d, it should be construed with likewise resupplied *káḥ* (or better *katarāḥ*) “which of you two?”

The tripartite *vā* structure of bc details the three sources of gifts that may be given to the worshiper: heaven, earth, and the ritual ground. They are subtly unparallel: ‘heaven’ is a straight noun, either in abl. (as in the publ. tr.) or gen.; earth is represented by a deriv. adj. ‘earthly’ in the gen. (*pārthivasya*). It is a partitive gen., and if *diváh ... máhaḥ* is gen., it too is partitive. If it’s an abl., it expresses the source. The third term, “at the seat of truth” (*rtāsya ... sádasī*), expresses the place where the gift is to be given. Scar supplies ‘at the seat’ for all three terms. This is not impossible, but the poet seems to be aiming for slightly skewed and off-balance phraseology, and three different types of expressions for three parallel terms would suit his purposes admirably.

In the new structure of d, with active value of the infinitive *dé*, *vājān* is its object. The last grammatically unparallel functional parallel is *yajñāyaté ... paśuśó ná*. Assuming that it is a gen. sg. (Old and Re take it as acc. pl.), *paśuśáḥ* ‘of one who wins cattle’ is in some sense parallel to *yajñāyaté* ‘for the one who sacrifices’, in that the *vājān* (‘prizes’) come to both. But *paśuśáḥ* is a gen. dependent on *vājān*, while *yajñāyaté* is the indirect object with the infin. *dé*.

V.41.2: After the cat’s cradle of vs. 1, this vs. comes as a welcome relief -- or at least in its first half, which consists of a list of gods in the nom. and a verb they can all serve as subject to. With 6 gods (and an epithet -- or 7 gods if *ṛbhukṣā* is taken separately) to fit into 22 syllables, the poet can’t get into too much trouble.

The 2nd hemistich is slightly more complex. It consists of an elliptical *vā* rel. cl.: “or (in those) who ...,” with the gapped ‘those’ parallel to enclitic *naḥ* in pāda a. The final word *sajóṣāḥ* I take as referring to the gods; the stem(s) *sajóṣa(s)-* is generally used of gods (see *sajóṣāḥ* in 4b), and note that their verb *juṣanta* ends the first hemistich. But, with the standard tr., it may refer to the mortals providing the gods’ praise.

V.41.3: I take the passively used inf. *huvádhyai* with a gapped agent “by the priests” vel sim., to match the implicit 2nd pl. subj. of *prá ... bharadvam* in the 2nd hemistich. The use of a passive inf. in the 1st half, contrasting with an active usage (though not an inf. here) in the 2nd half, recalls the structure of vs. 1. In our vs. there is a switch of 2nd ps. reference from the (two) gods in ab to the (pl.) mortal officiants in cd.

The use of the derived adj. *ráthya*- ‘belonging to the chariot’ rather than its base noun *rátha*- recalls *pārthivasya* in 1c substituting for a form of the noun *prthivî*-.

Ge (flg. Sāy.) identifies the “lord of heaven” (*divó áśura*-) as Rudra, on the basis of parallels (see his n. 3c).

V.41.4: The parade of ill-assorted divinities and semi-divinities continues. The sequence is made more muddled by the fact that Trita is always a shadowy figure, who is probably (but not certainly) the same as Āptya in vs. 9 (Āptya being Trita’s usual patronymic) and Trita in 10 and who is probably (but not certainly) the referent of pāda a here: “the heavenly victor with Kaṇva as Hotar.” If he is the referent of pāda a, it is slightly odd that he is both qualified as ‘heavenly’ (*divyáh*) and said to be ‘from heaven’ (*diváh*, pāda b). It might be best, with Ge (/WG) to take *diváh* as the place-from-which of all the figures mentioned; however, Wind and Agni are normally associated with the midspace and the earth respectively, and Pūṣan and Bhaga are not particularly heavenly deities. It’s worth noting that *divyá*- continues the poet’s habit of using deriv. -*ya*-adjectives in place of (or perhaps here beside) their nominals, and so the doubling *divyá*- / *diváh* might not be so odd after all.

I do not know exactly what to do with *prá* initial in the vs., but it is noteworthy that it fits into a sequence of *prá*-initial expressions, where the preverb is in tmesis, beginning with 3d *prá ... bharadvam* and continuing with 5a *prá ... bharadvam* again and 6a *prá ... kṛṇudhvam* (followed by initial *prá* in 6b and 7b). In our vs. there is no finite verb to construe it with in tmesis, but note the loc. *prabhṛthé* in c. My assumption is that vs.-initial *prá* simply reinforces *prabhṛthé* in a vs. sandwiched between two full *prá ... bharadvam* expressions. It could also be construed with *jagmuḥ* in d, though one might expect a more prominent, metrical-boundary-adjoining *jagmuḥ* in that case.

The loc. *prabhṛthé* and the acc. *ājīm* both serve as goal with *jagmuḥ* -- another ex. of the poet’s penchant for slightly off-balance parallels.

V.41.5: The first hemistich consists of a syntactically “active” 2nd pl. verb (‘present!’ *prá ... bharadvam*, though it is morphologically middle) paired with a passive (‘should be produced’ *dadhīta*) without overt agent, structurally similar to vs. 3 with a passive infinitive (*huvádhyai*) without agent and the same “active” 2nd pl. *prá ... bharadvam*. This structure is further reminiscent of vs. 1 with passive and act. uses of the same infinitive *dé*.

In this vs. it is not altogether clear who the 2nd pl. subject of *prá bharadvam* is. Ge thinks this is about the dakṣiṇā and suggests as subj. either the Opferveranstalter or the Maruts. I don’t see the dakṣiṇā connection, and given the reciprocal relationship between gods and men depicted already in the hymn (vss. 1 and 3), in the next vs. (6) with *dhiyé dhuḥ* playing off *dadhīta dhīḥ* in our 5b, and elsewhere, I think it likely that the 2nd pl. addressees here are the (All) Gods in general, who are asked to provide tangible wealth in exchange for the praise embodied in the *dhī*- ‘visionary thought’

produced by the poets. The use of the exact same verb *prá bharadhvam* in 3 and 5, with opposite but complementary subjects (priest-poets / gods), is a neat reversal.

The standard tr. take *ausíjasya* as a PN and construe it with *hótā*. This is not impossible, but since, as we've seen, the poet is fond of using *-ya*-deriv. adjectives for nouns, I think it more likely that, using a different kind of derivational adjective, the poet used the *ṽddhi* deriv. to stand for *usíj-* '(type of) priest' in the pl. Assuming as usual, that the Hotar is Agni, who mediates between men and gods, it is reasonable that he would be pleased both by the activities of this priestly group and by those of the gods, represented by the Maruts. For the association of Hotar and *ausíjā-* see also IV.21.6–7, though that passage is exceptionally opaque.

The vs. contains several instances of phonological and morphological play. In b the pāda-final phrase *dadhīta dhīh* shows tight phonological similarity though the two words belong to different roots. The same play is found in the next vs. (6d), likewise pāda-final, in *dhiyé dhuḥ* -- same noun *dhī-*, verb to the same root $\sqrt{dhā}$ -- though the phonological relationship is not as tight. In 5b *dadhīta dhīh* yields a very bad Triṣṭubh cadence, whereas 6d *dhiyé dhuḥ* provides a completely orthodox cadence. This may be an example of metrical poetic repair, where the metrical violation of the first calls attention to the phrase, which is satisfactorily resolved in the next vs.

In the second hemistich we find # *(sus)éva éva(ir)* ... # *(y)é va évā*, evoking *(d)eva-* again. Pāda d lacks a syllable. It is tempting to emend the opening to *yé* vā va évā*, given the prominence of *vā* in the hymn -- as Old also suggests. But this emended sequence makes less sense and also disturbs its phonological echo of pāda c. It should also be noted that *yé va évā* is also found in 13a in a different metrical position and cf. also scrambled *evayā* in 16b. If **vā* were to be inserted, the tr. could be changed to "is well disposed because of the ways of the ... Priests or (those) which are the ways of you powerful ones, o Maruts."

V.41.6: There are again a number of ways to construe this vs., and I will concentrate on my own. Given the alternation I see in this hymn between the actions of gods and men, I think (with most) that the 2nd pl. subj. of *prá ... kṛṇudhvam* is back to the mortal ritual officiants (as in 3cd), rather than the gods (as in 5a). I also take *prá kṛṇudhvam* to be the verb of all of abc, reinforced by *prá* opening b. This further means that the nominatives of c (*iṣudhyāva ṛtasāpah*) refer to the mortals and the *púramdhīh* is acc. pl., not nom. as many take it. Crucial to this interpr. is the parallel cited by Old, X.64.7 *prá vo vāyum rathayújam púramdhim, stómaiḥ kṛṇudhvam sakhyāya pūṣānam*. "Set in front with your praises Vāyu, who hitches up the chariot, Plenitude, (and) Pūṣan for partnership," with clear acc. *púramdhim* a parallel obj. with *vāyum rathayújam* (as here) to *prá ... kṛṇudhvam*.

I then take d as displaying the usual reciprocity found elsewhere in the hymn, but with a grammatical twist. The last set of divine beings honored by mortals, the acc. object *púramdhi-* of c, are, in my opinion, the unexpressed subjects of d and participate in a grammatical play. The noun *púramdhi-* is fem., though it is at most the animatization of an abstract 'plenitude, abundance'. Furthermore, it looks synchronically like a cmpd. with a form of $\sqrt{dhā}$, even though that is not the current standard etym. (cf. EWA s.v.). I therefore think that the pl. obj. *púramdhīh* of pāda c, reconfigured as subjects of d, are depicted as explicitly female -- as 'good wives' (*vāsvīh ... pātñīh*) -- and serve as subject

to a form of $\sqrt{dhā}$ (*dhuḥ*) folk-etymologically extracted from *púramdhi-*. The unexpressed obj. is then (mis-segmented) **púram* **‘plenty’*. As was discussed ad vs. 5, *dhuḥ* also participates in a figure with *dhiyé* that reverses *dadhīta dhīḥ* in 5d.

I do not entirely understand the position of *ā*, which appears to be a preverb with *dhuḥ* (so Gr), but appears to have been moved in tmesis to a position adjacent neither to a metrical boundary nor to a syntactic one (though this would be easier to argue). It may have been flipped (from a putative **dhiyé ā dhuḥ*) to allow the figure just discussed (*dhiyé dhuḥ* picking up 5b *dadhīta dhīḥ*).

On *īśudhyú-*, see comm. ad I.128.6 and my 2020 art. “Vedic *īśudhyá-* and Old Avestan *īśud-*, *īšūidiia-*: The Aim of Praise” (Lamberterrie Fs.).

V.41.7: The hymn contains three exx. of *éṣe* (5b, 7a, 8d). Though Lub classifies them all as locc. to the thematic stem *éṣa-*, I follow the standard tr. in taking the one in this vs. as a 1st sg. pres., while the other two are locc. in the phrase *rāyá éṣe* “in the quest for wealth.” The parallel for 7a cited by Ge, I.186.4 *úpa va éṣe ... uṣāśānāktā*, seems to clinch this interpr., and the next vs. (8), beginning *abhí vo arce*, also PREV *vaḥ* 1st-sg. VERB, reinforces it.

In d I read *āhā* not *ā hā* (a change only in the Pp. not the Saṃhitā text), and analyze this sequence as *ā + āhā*, the neut. pl. of ‘day’. This is one of only two supposed exx. of the particle *ha* with long vowel; the other one (IV.31.5) also follows *ā* and is susceptible to the same analysis. See disc. there.

V.41.8: Ge takes *nṛn* as gen. pl. rather than acc., but this is unnec. The stem *nṛ-* is regularly used of gods, esp. the Maruts, so there is no reason that they cannot be addressees here (so Re, WG).

The standard tr. take *dhányā sajóṣā dhiṣāṇā* as nom. sg. and parenthetic; e.g., Ge “—einverstanden ist die reichmachende Dhiṣaṇā—” But the instr. sg. in *-ā* to fem. *-ā-* stems is still quite common in the RV, and that is how I construe the phrase here.

V.41.9: *svaitu-* in b is a hapax. Following a tentative suggestion of Ge’s (n. 9b), I take it as a $\sqrt{vṛddhi}$ form related to Aves. *x^vaētu-* ‘family’, *pace* Narten (YH 266 n. 59), who, however, does not give reasons for her rejection of the association (though it’s true that we should really expect a thematic **svaitava-* or the like). I confess, however, that my rendering of ab is merely a guess (as, it seems, are the other divergent tr.). I don’t know why the mountains should be associated with our production of offspring; the sexual connotation WG suggest in their n., that mountains are felsenhart and knotig, seems farfetched. My own tentative suggestion is that the progeny here belong to the mountains, not to us, and refer to the material goods originating from mountains that we will enjoy: see I.55.3 *párvataṃ ná bhójase* “like a mountain to be enjoyed” and Ge’s parallels adduced there; also passages like VII.37.8 *ā rāyo yantu párvatasya rātaú* “let the riches of the mountain come here at (the time for) giving”; II.24.2 *vásuṃśantam ... párvataṃ* “the goods-filled mountain.” If I am correct, the simile, in which the mountains are said to be *vásavo ná vīrāḥ* “like good heroes” may be a bit of a pun, with *vásavaḥ* actually referring to the material goods of the mountains. To make my interpr. clearer, I might slightly emend the tr. to “to thrust out their progeny for us.”

The alternative etym. of *svaítu-* found in Gr, favored by Narten, and represented in the tr. of Re and WG analyses it as *svá-etu-* ‘having their own going’, which seems singularly inappropriate. It is regularly emphasized that mountains can’t be moved — except when they’re in fear of some greater force (like the Maruts) — so “going” should not be one of their properties. It could refer to the myth of the winged mountains (the wings then clipped by Indra), but this does not seem the context for a reference to this myth. WG attenuate the sense to a figurative “die ein Eigenleben führen,” which avoids the mountain-movement problem, but essentially denies the force of the etymology. By contrast, a reference to ‘family’ fits comfortably with the production of progeny.

I don’t know what Āptya is doing here, either. Again, the sexual connotation suggested in WG’s n. is invisible to me. It does seem likely that he is the same figure as Trita in 10b, since both are associated with the production of praise. Trita in 4b is less clearly tied in.

Note *śámsam náryah*, which reminds of *nārā-śámsa-* (though they don’t belong to the same syntagm here) and also continues the poet’s fondness for *-ya-*derivatives.

V.41.10: WG take Trita as the persona of the 1st ps. speaker of *astosi* (“ich, als Trita ...”), whereas I follow Ge and Re in supplying a 3rd ps. form of *√stu* for b.

The form *etárī* is, of course, problematic, but is most likely a loc. sg.; for disc. see Tichy (-tar-stems, 59–61). Tichy considers such forms locatives to verbal abstracts; though some such forms seem simply to be straight agent-noun locatives (see, e.g., *kartárī* in I.139.7), Tichy’s analysis fits *etárī*. It is found only here and in VI.12.4, in the same pāda-final phrase *etárī ná sūṣaṁh*. In our passage there is some phonetic justification for the form (though not in VI.12.4); note the *nīri* sylls: *gñīté agnir etárī ... / ... ní riṇāti*.

V.41.12: This vs. presents a number of difficulties. The first is the easiest solved: who is the referent of ab? Although this is almost universally taken to be the Wind, I think it is more likely Agni. Only Agni is called *ūrjām páti-* “lord of nourishments” (otherwise only in the voc. *ūrjām pate*), also *ūrjó nāpāt* “child of nourishment.” Given this exclusive identification, it seems unlikely that the audience would assign a different referent, esp. since *ūrjām pátiḥ* is the first epithet encountered and sets the frame of reference; the others only show up in pāda b. Moreover, though *párijman-* ‘earth-circling’ is used of the Wind, it also refers to other entities, including, fairly often, Agni (VI.2.8, VI.13.2, VII.13.3, I.127.2, III.2.9). The other descriptor in b, *iśirá-* ‘vigorous’, is applied to a variety of beings and things, including the Wind, but also Agni (III.2.14, 5.4). The only activity posited of the subject of this hemistich is *nábhas tárīyān* (for which see below), which is also applicable to either.

The pāda-final *sá* in pāda a is quite unusual. A cursory glance through Lub for parallels yields only II.35.1, III.13.3, (VII.86.6 *sā*), IX.71.8, IX.79.3, X.108.4 (a careful search might produce a few more). All of these exx. are either rhetorically contrastive, or *sá* takes its proper position in a new clause. Although it is possible that the *sá* here also begins a new, purely nominal clause with b, this seems clumsy. I have a quite speculative suggestion about it, linking it with the immediately following *nábhas tárīyān*. The standard — and quite persuasive — interpr. of this phrase is “quicker than a cloud,” but this imposes an abl. sg. interpr. on *nábhaḥ*, which should then belong to a root noun *nábh-* ‘cloud’, beside the standard *s-*stem *nábhas-*. This root noun does not otherwise exist: the

supposed root noun *nābh-* (glossed ‘Zerspalter, Zerbrecher’ by Gr) in I.174.8 is more likely a verb (see comm. ad loc.). And in any case we should expect an accent **nabhás*. Re’s suggestion that *nābhas* is simply haplology for **nābhasas* is probably correct, but I suggest that it left a trace of its vanished final *-as* in the pāda-final *sá* immediately preceding — a tangible sign of the effects of speed: the final syllable got cut off and left behind.

The second hemistich is very puzzling and has given rise to very different and incompatible interpr. (WG being esp. distant from the rest). Mine more or less follows Old (or one of his alternatives), who discusses the passage with his customary acuity; I will not discuss other renderings in detail. I am not at all certain that mine (/Old’s) is correct, however. The framework of the passage compares the waters, subjects of the verb, with fortifications (*púrah*), the point of comparison being their resplendant appearance (*śubhrá-*). So far also Ge; Re also follows this structure, but floats the possibility that *púr-* can mean ‘corps’, which would be convenient but is of course unsupported. With Old and Ge (we now lose Re, who takes *d* as a separate clause with the ladles as subj.), the fortifications are those of a mountain (*ádreh*), and this mountain is characterized as *pári ... babṛhāṇá-* ‘enclosing’ (*pári √ bṛh* has this meaning in the Brāh.). Although we would not ordinarily expect tmesis of a participle, esp. a part. in an oblique case, the tmesis here is iconic: the enclosed object is located between preverb and participle. This object is *srúcaḥ* ‘offering ladles’. Now of course in a literal interpr. a mountain enclosing a bunch of ladles sounds very odd, Old cleverly suggests that the ladles stand for cows -- living ladles, as it were, from which ghee comes as it does from the offering ladles. These cows are then the cows trapped within the Vala cave. The hemistich thus starts jointly in the physical world and on the ritual grounds, since the listening waters are probably both “real” natural waters and the waters standing by for the soma sacrifice. It then moves, via the simile, to the natural world (mountain fortifications) and the world of myth (the Vala cave), and back to the ritual ground, with the enclosed ladles. If this interpr. is correct, it is a very condensed and clever expression.

V.41.13: Another opaque vs., whose difficulties begin with the first word *vidā*. This is taken as the 2nd pl. pf. by Gr, Ge, WG. (Re unaccountably takes it as a 1st sg. ‘Je sais ...’, without comment -- presumably a careless error for *véda*.) I follow Old in taking it as the instr. of the root noun to the same root.

The phrase *yé va évā(h)* recurs from 5d though in a different metrical position. Here as there it refers to the “ways” (*évāh*) of the Maruts (so Ge, Re, flg. Sāy., contra Old’s tentative Ādityas) -- the ways which by our knowledge (*vidā*) we are in a position to proclaim (*brāvāma*), presumably in the form of a hymn, for which we expect reward (*vāryam dādhanāḥ* “acquiring what is choice”) -- just as in vs. 5 a visionary thought (*dhīh*) was to be produced in return for wealth (*rāyá éṣe ávase* “for help in the quest for wealth”). The part. *dādhanāḥ* has almost a purpose function, and to make the reciprocal action clearer I might emend the tr. from “as we acquire” to “while acquiring ...” or even “for acquiring.”

The first sticking point in the second hemistich is *caná*. This is universally taken as negative (as *caná* generally is). However, in this case I think that it is simply equivalent to *ca ná* (so also Klein I: 289–91 with n. 8) and that the *ná* here is serving as the simile-marking particle, not the negative. *vāyah* is often used in a simile at the

beginning of a pāda: I count 7 #*vāyo nā* passages, incl. V.59.7 in this maṇḍala, where it's the Maruts who are compared to birds (cf. also I.87.2 #*vāya iva marutaḥ*) — though I do have to admit that 2 #*vāyaś canā* passages (I.24.6, 155.5) contain the negative.

Therefore, contra all the standard tr./interpr., I take the subject of cd not as 'birds' (*vāyaḥ*), but as the Maruts compared to birds (like V.59.7, I.87.2). The adj. *subhū-* 'of good essence' is regularly used of the Maruts in this maṇḍala (V.55.3, 59.3, 87.3) and would identify them as the referent to an alert audience. In this 2nd half-vs. we make good on our promise to proclaim the ways of the Maruts -- this exploit is one of these ways.

Unfortunately exactly what that exploit involves is unclear. That the Maruts should come down like birds is unproblematic: they regularly fly through the midspace and come down to interact with mortals, generally at the ritual. But the target of their descent, expressed in pāda d, has no parallels, as far as I can find. In my interpr. the mortal (*mārtam*) to whom they come is in distress and receives their help. Unlike the standard tr. I take the hapax root noun instr. *kṣubhā* as characterizing the Maruts' movements (fluttering like birds), not the state of the mortal, which is expressed by *ānuṃyātāṃ vadhasnāḥ* "held/controlled by murderous weapons." I assume that he is under attack by hostile forces and requires the Maruts' assistance to free him.

The phonological play with *va/ā* that we noted earlier in the hymn (particularly vss. 1, 5) has returned here: ... *yé va evā, brāvāma ... vāryaṃ ... vāya(h) ... subhvā(h) ... vadhasnāḥ* — which draws attention to the thematic connection between this vs. and vs. 5.

V.41.14: Since Indra is several times called *súmakha-*, I assume he is the referent here -- though nothing much depends on it in this generic vs. and both Ge and Re take it to be the sacrificer or the patron of the sacrifice.

WG suggest that *candrāgrā(h)* modifies both 'days' and 'hymns'; this is a good idea, with 'gold, gleam' used in two slightly different senses. The days begin with the gleaming of the golden sun, while the hymns offered to the gods are metaphorically tipped with the gold given by the gods in response to praise.

In d *udā* is generally taken as the instr. sg. of a root noun 'water' (so, e.g., Gr and all the standard tr., though Ge hesitates), beside the more common oblique *n*-stem instr. *udnā*. However, I follow Schindler (Root nouns, 12–13), who argues that it is better taken as the nom./acc. pl. to the same *-n*-stem.

The somewhat curious expression *abhīṣātā āṛṇāḥ* "conquered floods" finds its formulaic match in nearby V.50.4 *āṛṇā ... sánitā* 'winner of the floods'; this may well be a general reference to the progress of the Ārya into the Punjab, winning territory river by river. Ge cites as parallel I.131.5 *té anyām-anyām nadyām sanīṣnata* "They kept winning one river after another."

V.41.15: The action in pāda a is a positive one: the speaker is assured to make it to old age. See 17de and disc. there, as well as X.59.4 (disc. ad vs. 17 below), 100.12.

The construction in b, which expresses the agent of *ní dhāyí*, is complex. Its underlying model is the "X and which Y" construction, but it is inverted, with the rel. cl. member first: "(by her) who is ... and by the protectors." Moreover, it contains both *vā* and *ca*. As Klein says (II.174–75), "the construction should most likely be viewed as a conjunctive anacoluthon in which the poet begins by intending alternative conjunction

and finishes with an additive sequence. Within each member the conjunction occupies its normal enclitic position: (várūtrī vā śakrā yā) (pāyúbhiś ca).”

On *ṛjuvāniḥ* see Scar 467–68. Note that this form produces a bad cadence.

On the connection between cd and vss. 19–20 see disc. below.

V.41.16: *upamātivāniḥ* in 16e also produces a bad cadence. On this form and on the meter of both -*vāniḥ* forms, see Scar 467. On *úpamāti-* see comm. ad VIII.40.9.

The opening of the vs., *kathā dāśema*, echoes 11a *kathā ... bravāma*. In both cases the object/goal of our action is the Maruts. Another echo is found in *evayā(h)*, which is a scrambling of *yé va évā(h)* of 5d and 13a (though *yé* and *-yā(h)* are completely different grammatically), in both cases of the Maruts. The sequence in our pāda b, *evayā marútaḥ* “the Maruts traveling their ways,” is also matched by the punctuating exclamation *evayāmarut* found in every vs. of the Anhangslied to the Maruts that ends this maṇḍala (V.87.1–9, tr. there “Maruts on the march”).

V.41.17: As noted in the publ. intro., vss. 16–17, in a different meter from what precedes (and follows), seem to provide a summary of the preceding hymn, esp. 17, with its self-conscious internal quote *ítī cin nú* “in just these (words) now.” See Janert (Dhāsi, pp. 16–17), who argues this position in some detail.

All the standard tr. (as well as Janert, 42) agree in taking d and e as separate clauses and supplying a verb for c. All consider the clauses contrastive: in d I hope to be granted a pleasant or benevolent *dhāśi-* for my body, while in e I express the wish that Nirṛti should swallow my old age. But this is directly contrary to what was said in 15ab, where the securing of his old age was an occasion for celebration by the poet. It is true that two different words for ‘old age’ are involved: *jarimán-* in 15, *jarā-* in 17, but these words do not contrast semantically elsewhere as far as I can see (cf. X.32.5, 8, which contains *jarā-* followed by *jarimán-*)—even though Re remarks “noter l’opposition.” An important parallel is provided by X.59.4 *dyúbhir hitó jarimā sú no astu, parātarām sú nīrṛtir jihītām* “Throughout the days let our old age be secured for us. -- Let Dissolution move herself further away.” There old age is ‘secured’ (*hitáḥ*) as it was in our 15a *jarimā ní dhāyi* (both to $\sqrt{dhā}$), and Dissolution (*nīrṛtiḥ*) is urged to move away. (It should be admitted that that pāda is a refrain to the first three vss. of X.59 and so not necessarily as closely tied to the preceding pāda as it might be.) I therefore doubt that in our vs. the poet is hoping that Dissolution will swallow the old age that he (and other poets) elsewhere want to keep safe. Instead I think de is the expression of his fear that if he fails to win the gods (abc) Dissolution will succeed in depriving him of his wished-for old age. I have pushed *ātrā* perhaps a bit too much -- to ‘otherwise’; I would prefer a ‘lest’ (*néd*) clause or even a *mā* clause, but *néd*, which becomes well developed in Vedic prose, barely exists in the RV and the poet may have been casting about for a way to express this modality.

A further piece of evidence in favor of my interpr. is the word *dhāśi*. Although this word often means ‘well-spring’ or ‘source’ (see comm. ad I.62.3, 140.1), in some cases it seems to mean ‘place, depository’ and be associated with (/derived, at least synchronically, from) $\sqrt{dhā}$. Here the *dhāśi-* seems to be the nominalization of *ní dhāyi* in 15 (cf. *hitáḥ* in X.58.4) — that is, the place in which old age is securely held. I therefore take it as coreferential with *jarām* in e.

V.41.18–20: If, as suggested above, 16–17 are the finale of the hymn proper, these 3 vss. (or 2 ¼) were tacked on. They certainly lack the complications of the rest of the hymn. The dominance of female figures is striking.

V.41.18: Despite the word order, I follow Janert (contra the standard tr.) in construing pāda-final *góḥ* with *īṣam*, rather than with immediately preceding *śāsā*, which saves us from determining what the recitation or instruction of the cow is.

V.41.19–20: The single pāda of 20 simply continues vs. 19 thematically and syntactically, as Old points out. They constitute a single vs.

The signature word of the beginning of the hymn, *vā*, returns in force: *urvāśī vā ...urvāśī vā brhaddivā ... ūṛṇvānā*. Note also *urvāśī ... urvāśī ... abhyūrṇvānā ... ūṛjavyāsyā*.

This vs. sequence seems inspired by 15cd. Vs. 15 has a similar focus on female figures, and 15c *#śīṣaktu mātā mahī rasā naḥ* is echoed by 20a *#śīṣaktu naḥ*, whose subject is likewise a female. The ‘mother’ *mātā* of 15c is matched slightly earlier in this vs. sequence, in 19a, and there she is accompanied by rivers (*smān nadībhiḥ* 19b), even as the mother of 15c is identified as the river Rasā.

In fact 19–20 depict a matriarchal lineage of sorts, as Ge points out (n. 19bc). Besides Idā, explicitly “the mother of the flock” (*yūthāsya mātā*) here, there is Urvaśī, twice: 19b and 19c. I am not entirely sure what to make of this doubling. I doubt that two different Urvaśīs are meant, rather the familiar Urvaśī in two different guises (so Ge). In 19b she is associated with rivers. This reminds us of the attendance of her fellow Apsarases and of the rivers on the birth of Urvaśī’s son in X.95.6–7, with Urvaśī herself qualified as ‘watery’ (*āpyā* in X.95.10b) and her son as “born from the water” (*jāniṣṭo apāḥ*, X.95.10c). Urvaśī Brhaddivā (‘of lofty heaven’; on the accent *brhaddivā*—see AiG II.1.109, 120) in 19c may refer to a return to her residence in heaven after breaking with Purūravas (the return not, however, mentioned in X.95, though it is implied in vss. 16–17). In any case, Urvaśī’s son is named Āyu; his paternal grandmother is Idā, the mother of Purūravas (addressed as *aīḍa* in X.95.18), so the title ‘mother’ given to Idā in 19a has another resonance. Because of Urvaśī’s relationship to Āyu, with Ge and Re I supply ‘mother’ in 19d and 20a to govern the various genitives. Thus with Idā, Urvaśī, and Āyu we have a three-generational family.

I am uncertain what to do with *ūravyāsyā* in 20 (PN or not), and I also do not know what *abhyūrṇvānā* in 19d is conveying.

V.42 All Gods

As noted in the publ. intro., like V.41 this hymn enumerates a number of divine dedicands with no apparent ordering, save for the middle vss. (7–9), where Brhaspati dominates. The list includes 1 Varuṇa, Mitra, Bhaga, Aditi, Aryaman / 2 Aditi, Mitra and Varuṇa / 3 Savitar / 4 Indra / 5 Bhaga, Savitar, Aṃśa, Vāja, and Puraṃdhi / 6 Indra / 7–8 (–9) Brhaspati / 10 Maruts / 11 Rudra / 12 Sarasvatī, Brhaddivā, Rākā / 13 Tvaṣṭar (+ Viśvarūpa?) / 14 Parjanya / 15 Maruts / 16 Earth (etc.) / 17 gods / 18 Aśvins. Note no Agni, unless he’s hidden in 1cd. The hymn is much more straightforward, and less interesting, than V.41, but provides a relaxing interlude in the overheated rhetoric of the All God hymns of V.

V.42.1: As Ge (etc.) point out, *átūrtapanthāḥ* is the clue to the identification of the referent of cd, since this epithet only occurs once elsewhere in the RV, in X.64.5, where it is explicitly used of Aryaman. In that passage he is also qualified as *saptáhotā* ‘having 7 Hotrars’, like *pāñcahotā* here. And of course Aryaman makes sense in this highly Ādityan context. Nonetheless, I think pāda c (*pṛṣadyoniḥ pāñcahotā*) flirts with a different identification -- of Agni -- before sealing that of Aryaman by *átūrtapanthāḥ* in d. Agni could plausibly have a womb of dappled (ghee) (*pṛṣadyoni-*), similar to *ghṛtāyoni-* ‘having a womb of ghee’ used of Agni in V.8.6, as Ge points out (n. 1cd), and of course Agni is both associated with Hotars and is the Hotar par excellence himself. Since, as noted above, Agni is not otherwise found in this hymn, the poet may have gestured towards him covertly in 1c.

V.42.2: This vs. is quite straightforward until we reach pāda d, where the nom. *ahám* ‘I’ demands a verb that isn’t there. Keeping in mind the theme of divine/human reciprocity that runs through the last hymn and the rest of this one and employing our usual method of attempting to supply missing material from context, it seems best to supply a form of *prāti* √ *grabh* complementary to *prāti ... jagṛbhyāt* in a with Aditi as subject. The poet wishes to grasp the *bráhma-* produced by the gods (c) in order to turn it into praise (*stóma-*) for the gods (a). This reciprocal relationship may be signaled by the first word in the vs. *prāti* ‘in return, in response’.

The other question in d is what to do with the untethered locc. *mitré varuṇé*. I have followed Ge in loosely construing them with *mayobhú* ‘joy itself’, even though this stem does not elsewhere take a loc. Ge (n. 2d) cites a series of parallels with locc. *mitré varuṇe* that seem to have similarly loose beneficial value.

V.42.3: Note the distinction in no. between the two 2nd ps. impvs. in ab: sg. *úd īraya* and pl. *unátta*. As commonly, the sg. is probably a self-addressed by the poet to himself; that his object is “the best poet of poets” (*kavítamaṃ kavīnām*) simply emphasizes the closed loop of reciprocity. The pl. impv. is presumably addressed to his fellow celebrants, in this case the priests charged with the physical activity (the Adhvaryu and his helpers, quite possibly). The pl. impv. *unátta* has a strong stem form where we properly expect weak, but the expected form **und-ta* → **untta* → (probably simplified to) **unta* would have been difficult to parse.

V.42.4: Ge thinks it’s *our mánas-* that’s at issue, but context makes it more likely to be Indra’s (so also Re and WG).

Pāda c is a minor variant of 2c and in fact makes clear what the structure of 2c is and where the rel. cl. begins. A minor example of syntactic repair.

V.42.5: In pāda a it is unclear with what noun to construe gen. *rāyāḥ*. Ge and Re take it with *savitā* (Ge: “der Zuweiser ... des Reichtums”), while WG seem to agree with me in taking it with *āmśa(h)*. Since Savitar is a far more defined divine being with a name that, though having the literal sense ‘impeller’, is normally used just as a name, I think *Amśa*, whose animatization is fairly shaky, is more likely to be used in a literal abstract value and construed with a gen. of the same type.

The problematic form in the vs. is *saṃjītaḥ*. Properly speaking, this should either be an abl./gen. sg. or a nom./acc. pl. of the root noun cmpd *saṃjīt-* ‘complete victor’. Gr analyzes it as gen. sg., modifying *vṛtrāsya*, as, apparently, does Re, while Ge and WG take it as nom. pl., presumably applicable to all the gods listed singly before. All construe the gen. pl. *dhānānām* with it (e.g., Ge “die Erbeuter der Schätze”), but this leaves *vṛtrāsya* stranded, since it would be perverse to attribute the victory over Vṛtra to Bhaga, Savitar, and Aṃśa in addition to Indra. Therefore all the standard tr. supply sg. **hantā* (vel sim.) as an appositive to Indra, to govern *vṛtrāsya*. I consider this unnec. Our pāda seems to be based on a much-repeated pāda, couched in the acc. sg., in the Triṣṭubh refrain vs. of the Viśvāmitras’ Indra hymns: III.30.22 (etc.) *ghnāntaṃ vṛtrāṇi saṃjītaṃ dhānānām*. I consider our pāda a nonce adaptation of the orig. pāda, construed as if orig. *saṃjītaṃ* belonged to a them. stem -- in other words *saṃjītaḥ* is a thematic back-formation, nom. singular, that allows the formula to remain metrical. The last part of 7b, with sg. *sanitāraṃ dhānānām*, gives some support to this interpr., and note that Indra alone is called *jīṣṇú-* ‘victor’ in the next vs. (6a). Of course, it must be admitted that in III.30.22 *vṛtrāṇi* is the obj. of a form of \sqrt{han} and so supplying such a form here (as the standard tr. do) also gets some support. But *vṛtrā-* has been transformed from acc. (pl.) to gen. (sg.) in our passage and should be parallel to *dhānānām*.

V.42.7: The splv. *śāmbhaviṣṭha-* recalls *śāmtama-* in 1a. Both stems are reasonably well attested, though *śāmtama-* has the edge. They do not seem to be consistently distinguished in usage, but *śāmtama-* seems more common qualifying inanimates while *śāmbhaviṣṭha-* and its base *śāmbhú-/ũ-* are more common with animates. Such is the case in this hymn, where *śāmtamā* in 1a modifies ‘hymn’ (*gīṭh*) and *śāmbhaviṣṭhaḥ* in 7c modifies Brhaspati. Nonetheless, the tr. of the two forms should be harmonized.

V.42.8: The standard tr. (incl. also Schmidt, B+I 84 and Scar 202) take ab as a separate nominal cl. The difference is trivial.

Less trivial is the difference between my rendering of the last part of d and that of all the others. They take *subhágās tēsu rāyaḥ* as the nominal main clause to the rel. cl. (*yé aśvadāḥ ...*) that occupies the rest of the hemistich. Cf., e.g., Ge “denen gehören die beglückenden Reichtümer.” In contrast I take *subhágāḥ* with the rel. cl., qualifying the givers, and *rāyaḥ* as acc. pl. in the main cl., and in the main cl. I supply a verb ‘confer’ (vel sim.) extracted from *ratnadhéyam* in 7a. In favor of the standard tr. are the facts that by accent *rāyaḥ* is better analyzed as nom. than acc. (though acc. pl. so accented are not rare) and that no verb need be supplied. Although I am usually reluctant to supply material, in this case there are countervailing factors. First, with the exception of one late passage (X.140.5), *subhága-*, which is quite well-attested, is only used of animate beings, not of wealth or the like. Moreover, the standard rendering leaves Brhaspati with little to do. The givers are “accompanied by your help” (*távotībhiḥ*), but otherwise seem to do quite nicely on their own -- whereas we might expect him to be acting on their material behalf by giving to them, just as in the next vs. he is asked to strip the niggardly of their possessions and do worse by other anti-ritualists. By my interpr. the vs. expresses the usual Rigvedic trickle-down theory of material redistribution: the gods give goods to the patrons of the sacrifice (kings, etc.), who then confer them on the priests and poets.

V.42.9: The stilted nominal syntax with dummy verb $\sqrt{kṛ}$ + acc. masc. abstract (*visarmāṇam kṛṇuhi*, lit. “make dissipation”), which together govern a neut. acc. *vittām*, must result from the lack of a transitive pres. to $\sqrt{sṛ}$ ‘flow, run’ -- *pace* Narten (“Ai. *sṛ* ...” 1969: 83 and n. 16 [=KISch 130 and n. 16]), who characterizes several forms of $\sqrt{sṛ}$ as “transitiv,” though the acc. expresses the goal/place-through-which, not a real transitive object.

The expression *prasavé vāṛdhānān* is not entirely clear and is variously rendered — Ge “die im Befehl gross sind,” Re “qui (se croyant) renforcés pour la compétition,” Schmidt (B+I 85) “bei (unserer) Regsamkeit wachsen,” WG “obwohl sie in ihrem Unterfangen erstarkt sind” — differing primarily in what *prasavá-* is taken to mean. By my interpr. these foes, who violate all the norms of Ārya society by refusing to participate in reciprocal exchange, by acting contrary to *vratá-* (the chains of command that structure Ārya society), and by hating the verbal formulations that express the Ārya view of the cosmos and their place in it, nonetheless show their strength on the attack, the forward thrust. All the tr. reflect this notion one way or another: the regrettable strength of the enemies despite their antisocial behavior.

V.42.10: This vs. continues the theme of the impious foe, though the divine ally the poet calls on to destroy the foe has changed from Bṛhaspati to the Maruts. Here (pāda a) the enemy chooses to praise demons (*rakṣāsaḥ*) when gods (*deva-*) are being invited to the ritual and (c) mocks the ritual labor of the devotee. Because of the strong association of sweat with ritual labor in the RV (see my “Avestan *xšuuīd*: A Relic of Indo-Iranian Ritual Vocabulary,” *Bulletin of the Asia Institute* 25 [2011 (2015)], and for \sqrt{sam} ‘labor’ with \sqrt{svid} ‘sweat’ I.86.8), I assume that the enemy himself is engaging in (what we hope will be fruitless) ritual in pāda d, perhaps in service of the demons, not the gods (cf. pāda a). In post-RVic texts the Asuras would probably serve as the polar opposition to the gods, not the Rakṣasas, an indirect piece of evidence for the well-known fact that the Asura-Deva opposition almost entirely postdates the RV.

In the publ. tr. *óhate* in pāda a is tr. as an indicative (‘whoever lauds’), but it should really be a subjunctive (“whoever will laud”), both on the basis of the morphology (it belongs to a root pres., whose 3rd plural is also *óhate*) and of the parallel subjunctives in the passage, cd *yáḥ ... nindāt, ... karate*.

V.42.11: One of the striking passages in which the same divinity, in this case Rudra, is called both *devá-* and *ásura-* (*námobhir devám ásuram duvasya* “with acts of reverence offer friendship to the god, the lord”), strong evidence that the strict division and eternal enmity between Devas and Asuras in later texts has not yet developed.

V.42.12: The grammar of this vs. is quite straightforward; what difficulty it presents lies in the uncertain and permeable boundary between PNs and common noun/adjectives. In b *vibhvataṣṭāḥ*, modifying the rivers, is universally taken as containing the PN Vibhvan, hence ‘fashioned by Vibhvan’. Since the referents of pāda a are the Ṛbhus and Vibhvan is the name of an Ṛbhu, this makes some contextual sense. However, fashioning *a river* seems beyond even the Ṛbhus’ expertise, and, further, in VI.61.13 Sarasvatī, a river after all, is *vibhvāne kṛtā* “made for wide extension / wide ranging.” I think that sense is meant here as well, and there is simply some sly play on the Ṛbhu’s name.

I am less certain about what to do with *br̥haddivā* in c. In the immediately preceding hymn (V.41.19) I take the same form as an attributive adjective with *urvāśī*. *Urvaśī Br̥haddivā* “*Urvaśī of lofty heaven.*” Here it could likewise be attributive to *Sarasvatī* or it could be a separate goddess. See Klein (I.328–29, 337) on this mild dilemma. If *Br̥haddivā* is a distinct entity, she is featureless, so there is little at stake here.

V.42.13: The phrase *nāvyasīm jāyamānam* “the newer (hymn), being born,” with comparative of ‘new’ and the pres. participle seems designed to refer to the current hymn in the process of composition.

Tvaṣṭar is both the possessor and producer of “all forms” (cf. I.13.10 *tvāṣṭāram ... viśvārūpam*) and the father of a being called Viśvarūpa (likewise *viśvārūpa*- ‘possessing all forms’ (cf. II.11.19, X.8.9 *tvāṣṭrá- viśvārūpa*- with the patronymic *tvāṣṭrá*-). In one sense the second hemistich seems to be an attempt to reconcile these two aspects: Tvaṣṭar as a lone creator god, the fashioner of all forms, “(ex)changing his forms” (*rūpā minānāḥ*) as sole agent -- but doing so “bulging (?) in the body of his daughter” (*āhanā duhitūr vakṣānāsu*) (if that’s what it means), which introduces a sexual (indeed incestuous) element that would be appropriate to the fathering of a son. On the one hand, we seem to have a model of primitive embryology, with the fetus changing and developing within its mother’s womb; on the other hand, the half-vs. mirrors the later Sanskrit notion that the father enters the body of the mother and is reborn as the son. Unlike the incest of Dyaus and of Prajāpati, the story of Tvaṣṭar’s incest (if that’s what this is) is otherwise muted and not securely attested elsewhere.

The meaning and etymology of the *s*-stem *āhanās*- are deeply uncertain. In context it seems to mean ‘swollen, bulging, luxuriant, lubricious’. As for the etym. see EWA s.v. and, for a recent etymological attempt, Kulikov in the Lubotsky Fs. (2018). The word has gained a certain notoriety in IEist discourse because it is argued that it preserves the old suffixal accent of *s*-stem bahuvr̥his (see Stüber, *s*-stems [2002] 27, 189). However, it is dangerous to pin the reconstruction of a whole category on a word whose meaning, structure, and etymology are radically uncertain. For disc. of the word, as well as demolition of the accentual theory it is supposed to support, see JL “*αἰνοπαθής*.”

On *vakṣānā*- ‘belly’ as a pl. tantum, see comm. ad X.27.16.

V.42.14–16: This trio of vss. echoes vs. 1 and ring-compositionally seems to bring the hymn to a close, with the single pāda of 17 and the final vs. 18 tacked on (and indeed the 2nd hemistich of 16: see below). The template is *prá* [HYMN, etc.] [GOD] *nūnám aśyāḥ*, realized in 1ab as “May the hymn (*gīṭh*) now reach Varuṇa (etc.).” In 14ab we again have all the elements, while 15ab omits the initial preverb *prá* in favor of *úd* immediately preceding the verb and omits *nūnám* entirely and 16ab reinstates *prá* but still lacks *nūnám*:

1ab *prá ... vāruṇam* (etc.)... *gīṭr ... nūnám aśyāḥ*

14ab *prá suṣṭutīḥ ... ilās pátim ... nūnám aśyāḥ*

15ab *eṣá stómo mārutam śárdhaḥ* (etc.)... *úd aśyāḥ*

16ab *práśá stómaḥ pṛthivīm* (etc.) ... *aśyāḥ*

The impression given by this sequence of syntactic and lexical parallels -- that this is the finale of the hymn -- is supported by the fact that the rest of the hymn, 16cd–18, is repeated as 15cd–17 in the next hymn, V.43.

V.42.14: Despite the position of *prá*, opening a pāda that ends with the part. *ukṣámāṇaḥ*, I take the *prá* not with that participle but with immediately preceding pāda-final *íyartī*. For one thing, *prá* is found elsewhere with *íyar-* while it is not with *√ukṣ*, and in addition tmesis of preverb + participle is fairly uncommon (though certainly not unheard of). Ge and Re seem to follow the other route, taking it as license to interpr. *íyartī* as intrans. or at least objectless (Ge ‘heraufzieht’, Re ‘s’avance’). But *íyar-* is otherwise always transitive, and though we would prefer the two world halves not to be in motion, the point here is that Parjanya’s thunderstorm is powerful enough to shake them. WG’s interpr. is like mine.

V.43 All Gods

This listing impulse so evident in the last two hymns (V.41–42) is less pronounced here, though a variety of gods receive praise -- with Agni especially prominent, as indicated in the publ. intro.: 2 Heaven and Earth, 3 Vāyu, 5 Indra, 6 Aramati, Agni, 7 Gharma pot, 8 Aśvins, 9 Pūṣan and Vāyu, 10 Maruts, 11 Sarasvatī, 12 Bṛhaspati as Agni, 13 Agni?, 14 Agni?, 15 Agni, Earth.

V.43.1: I would now render *tūrṇy-arthā-* as ‘having a goal to advance to’; see comm. ad III.11.5.

On *mahó rāyē* see comm. ad IV.31.11. Again the publ. tr. carelessly follows Ge’s tr., which takes the two forms together, as if they were an adjective-noun syntagm despite the difference in case. I would now take *maháḥ* adverbially with Old. See further ad VI.1.2.

The seven lofty and joy-bringing feminine beings (*bṛhatīḥ sapṭá ... mayobhúvaḥ*) in cd, the target of our invocation, are not further specified. I have supplied ‘cows’ on the basis of ab and IX.86.25, which contains *sapṭá dhenávaḥ*, but this is by no means certain. See other suggestions in Ge’s n. 1. The problem is that there is no reason for the cows to number exactly seven; either ‘seven’ is, as Oberlies (Rel. RV II.74) suggests, simply an indication of totality, or some more standard group of seven, like the rivers, is being referred to (either via the image of cows or directly).

V.43.3: The subject of the impv. in c must also be Vāyu, because he regularly receives the first drink of soma.

V.43.4: In b the agent noun *śamítár-* most naturally belongs with the forms of *√śam* referring to ritual labor. See, e.g., in the preceding hymn V.42.10 *śámīm śaśamānásya* ‘the (ritual) labor of the one laboring.’ However, already in the Aśvamedha hymn of the RV it has acquired the euphemistic meaning ‘queller’, that is, slaughterer, of the sacrificial beast; cf. I.162.9–10, as well as the simile in V.85.1 *ví yó jaghāna śamitéva cárma* ‘who like a butcher a hide split apart ...’ in this maṇḍala. I think it likely that both

senses are meant here; in post-RVic ritual texts Soma is regularly presented as a sacrificial victim.

In the 2nd hemistich Ge and WG (cf. also Old) take c and d as separate clauses, utilizing the verb *duduhe* for both and supplying a priest (Ge: Adhvaryu) as subj. of c. The reason is nom. *sugābhastīḥ* lit. ‘having good fists’, which must otherwise modify *aṃśú-* ‘plant’. With Re, in the publ. tr. I take cd as a single clause with *sugābhastīḥ ... aṃśúḥ* a single NP, assuming that ‘having good fists’ of the soma plant means that the plant has received good handling from the fists of its preparer. (Re, by contrast, tr. “aux beaux rameaux,” with *gābhasti-* referring metaphorically to the growth habits of the plant.) I now think my interpr. pushes the bahuvrīhi further than it should go, so I would now emend the tr. to “(The priest,) having good fists, has milked out the sap of the honey that dwells on the mountain; the plant has milked out its own shimmering, pure (sap).” It is likely that the verb underlying pāda c should be active (perhaps **dudoha*); when middle forms like *duduhe* take an object, the subject is usually a cow or cow-substitute (as here) producing milk from itself.

V.43.7: On the position of this vs. in the hymn and its significance, see publ. intro. If the vs. is an omphalos, it may focus attention on the mysteries of the Pravargya ritual. The vs. is structured as a riddle, with the referent of *yám* (pāda a) withheld till d, with three similes and several technical references to ritual activities in between.

The first simile (pāda a) is oddly structured, in that one expects something to be compared to the unidentified acc. *yám* but there is no overt acc. expressed. Instead we must supply this acc., as the most likely object of the participle *pratháyantaḥ* ‘spreading’ (transitive), which, in default of the acc. obj. itself, carries the simile particle *ná*. The object to be supplied is *barhīḥ* ‘ritual grass’, which at every ritual is spread as a seat for the visiting gods. Generally the verb in the expression “spread (barhis)” is \sqrt{str} ‘strew’, not \sqrt{prath} , but, as Old points out, \sqrt{prath} can also be used, generally for the intransitive sense “(barhis) spreads” (V.5.4, X.70.4, etc.). The object of transitive \sqrt{prath} is generally something much more prominent, like ‘earth’. It may be that \sqrt{prath} was used here to give a cosmic resonance, but it may also be partly ascribed to the alliteration in the vs.: *prathayanto ... víprā, vapāvantam ... tāpantaḥ | pitúr ná putrá upási prāyīṣtha(h)*. The barhis is also sometimes anointed; cf. II.3.4 *barhīḥ ... ghṛténāktám*. Thus, the absent *barhīḥ* is at the intersection of the two ritual verbs ‘spread’ and ‘anoint’, and supplies the missing point of comparison in the simile “They anoint ‘which one’ (*yám*) like X.” The poet is inviting his audience to solve for two variables -- the identity of the focus of the vs. expressed by the rel. prn. *yám* and the object to which it is compared, but he makes the second riddle easier by providing two verbs that could govern it. The overlap of the two produces the answer.

The next simile, in b, targets a different ritual substance to compare with the still unidentified *yám*. This time an accusative does appear on the surface, but it in the form of an associated adjective, *vapāvantam* ‘possessing the/an omentum.’ In classical śrauta ritual the omentum (*vapā*) is the first and probably the most important part of the sacrificial animal to be dealt with; after the death of the animal, the omentum is removed and heated on two different fires, first preliminarily singed on the Śamitar’s fire (NB: see vs. 4 and comm. thereon), then cooked on the Āhavanīya fire (see my Hyenas, pp. 104–5). Here we can assume that what is identified as ‘possessing an omentum’ is the

sacrificial animal (an identification supported by the occurrence of *vapāvantam* in ŚB XIII.7.1.9), which itself is cooked on the fire. Sacrificial animals are also anointed; see IV.6.3 *paśvó anakti* in a hymn that treats the animal sacrifice in some detail. Once again, the incompletely identified target of the simile is at the intersection of two ritual actions: ‘heat’ and ‘anoint’. In this case the similarly unidentified *yám*, the gharma pot, is also subject to both these actions in the Pravargya ritual.

The third simile, in pāda c, is the only one with all its parts, and is also the only one without a ritual reference. It is a version of a standard trope.

V.43.8: The last pāda is difficult, primarily because of *dhúram*. This would ordinarily be the acc. of the root noun *dhúr*- ‘chariot pole’, and indeed that is how I take it. Ge interprets it rather as an acc. infinitive (‘festzuhalten’) to \sqrt{dhr} . But that *aniṭ* root has no *seṭ* forms in *dhur*- (unless *dhúr*- ‘chariot pole’ itself; so Whitney Roots, but see now standard alternative etymology in Schindler, Rt nouns, and EWA, both s.v.). WG’s semantic interpr. (‘zur Sicherung’) is similar to Ge’s, though derivationally distinct: they see it as a secondary abstract(ion) from the ‘chariot pole’ word. Either of these analyses eases the interpr. of the pāda. But given the chariot-part vocab. in the rest of the pāda (*āṇí*- ‘axle-pin, peg’, *nābhi*- ‘wheel-nave’), it seems highly unlikely that a standard word for a part of the chariot would in just this context *not* be so used -- and cf. *sudhúr*- ‘amenable to the chariot pole’ a few vss. back (5c). I think *dhúram* has to be an unmarked simile, an acc. goal parallel to *nidhím*. The Aśvins are asked to go to the *nidhí*- as draft animals come tamely to the *dhúr*-, then to enter it as the pin enters the nave.

I supply ‘honey’ with *nidhím* on the basis of the phrase *nidhí*- *mádhūnām* used twice in Aśvin hymns with sim. vocab.: I.183.4 *ayām vām bhagó nīhita iyām gír, dásrāv imé vām nidháyo mádhūnām* ‘Here is the portion deposited for you, here the hymn, o wondrous ones, and here the deposits of honey for you’ / III.58.5 *éhá yātam pathībhir devayānair, dásrāv imé vām nidháyo mádhūnām* ‘Travel here along the paths leading to the gods. Wondrous ones, these stores of honey belong to you two.’ Since ‘honey’ is thematic in the previous parts of this hymn (1b, 2c, 3a, d, 4c, 6c), supplying it here (esp. in Aśvin context) is easy.

V.43.9: The function of *utá* in the pāda-final phrase *utá tmán* is unclear. Klein (I.347, 349) treats it as an example of an X Y *utá* construction (suggesting several diff. possibilities), but does not consider the positional tendency of *tmán(ā)* or the dossier of rhetorically similar phrases. Both *tmán* and *tmánā* have a distinct preference for pāda-final position, with a word consisting of two light syllables preceding as here -- frequently *iva*, also *úpa*, etc. As a parallel to our passage, cf. esp. IX.88.3 ... *draviṇodā iva tmán*. I’m inclined to think that *utá* is in fact empty here (though perhaps orig. adapted from places where it made sense) and Klein’s piecemeal attempts to make sense of the various passages misplaced. Here the *utá* was perhaps slotted in because *iva* was inappropriate. One can also keep in mind that *-a tmán*- recalls (and replicates metrically) *ātmán*-. Re’s characterization of *utá tmán* as “type de clause inert” seems close to my “empty.”

V.43.10: The instr. pl.s *nāmabhiḥ* and *rūpébhiḥ* identically positioned in pādas a and b seem both to refer to individuated Maruts and also to make reference to the concept later

to be called *nāmarūpa* ‘name and form’ referring to the pairing of words and things differentiating the separate entities of creation. This unusual distinguishing of individual Maruts is then countered by the insistent repetition of *viśve* ‘all’ referring to them as an undifferentiated class in pāda d. In that pāda I take the first *viśve* as voc. pl. with *marutaḥ* (accented because pāda-initial) and the 2nd as a nom. with the verb, but this grammatical separation may not be nec. if the two *viśve*-s are there to match ‘names’ and ‘forms’ respectively. *Viśve Marutaḥ* also semi-equates them with the *Viśve Devāḥ*.

V.43.12: *sādāt-yoni-* belongs to the cmpd type with a verbal-governing 1st member (*sanād-rayi-*, etc.), and given the referent, who was just the object of the caus. phrase *sādane sādadhvam* “make him sit on his seat.” it must mean “sitting on the yoni.” The problem of course is the long vowel in *sādāt-*. This has been taken as a reflex of an old lengthened-grade present or similarly lengthened-g aorist (for reff. see AiG I.2 Nachtr. 88, EWA s.v. *SAD* p. 693). For a contextually driven hapax like this, reaching into deep antiquity seems unnec. and likely wrong. Old suggests we should perhaps read **sadāt*, with the long vowel introduced (redactionally) from the immed. preceeding *sādayadhvam*. I would suggest alternatively that it might indirectly reflect the pres. *śṭṭati*, matching the heavy root syllable of that present, even though marked present stems (outside of *-āya*-formations) seem blocked in this cmpd type.

V.43.13: In d *tridhātu-śṛṅga-* ‘having tripartite horns’ may refer to the three hearths, though see the tripartite cows (*tridhātavaḥ ... gāvah*), probably of Agni, in nearby V.47.4.

V.43.14: On *rāspirā-* see comm. ad I.122.4.

V.43.15: Both Re and WG take pāda a as a separate nominal clause. This is certainly possible, and an alternative tr. of the hemistich could be “to you, the lofty one, there (belongs) lofty vigor, Agni. The ... (priestly) pairs attend upon (you).”

V.44 All Gods

On the manifold difficulties of this hymn and a possible framework in which to interpret them (as a hymn simultaneously applicable to Agni and Soma), see publ. intro.

V.44.1: Save for the fronted pronoun *tām*, this hymn opens with a remarkable series of universalizing adverbs, identically formed with *-(ā-)thā* suffix and linking the current ritual situation (the final one in the series, *imāthā* ‘in this way here’, a hapax) to that of every time and place: *pratnāthā pūrvāthā viśvāthā*. This may give us a foretaste of the poet’s laying bare the underlying identity of the two central ritual substances, fire and soma, and of the service accorded them in the sacrifice.

The poet then, in my opinion, produces a red herring: most of the descriptors found in this vs. could apply to Indra -- esp. *āśúm jāyantam*; cf. *āśúm jētāram* of Indra in VIII.99.7. And most interpreters fall into this trap: as Ge says in his n. 1, “all commentators” identify *tām* as Indra -- incl. Ge himself, Re, and Old (WG forego referents). However, both Agni and Soma receive these or similar descriptors elsewhere. Agni and Soma are both located on the ritual grass (Agni: III.14.2, etc.; Soma: I.16.6, etc.); both are called *svarvíd-* (more often than Indra; Agni: III.3.5, 10, etc.; Soma:

VIII.48.15, etc.), *jyēṣṭha*- (Agni: I.127.2, etc.; Soma: IX.66.16, etc.), and *āśú*- (Agni: IV.7.4, etc.; Soma: IX.56.1, etc.). Soma is qualified as *jáyant*- (I.91.21, etc.), and though Agni is not modified by this participle, he is the subject of verbal forms of \sqrt{j} (e.g., VI.4.4). All of these are, of course, fairly generic characterizations; the point here is that nothing requires us to leap to the conclusion that Indra is the referent.

Another way to approach the question of the referent of *tám* is to consider what referent is appropriate as an obj. to *dohase* ‘you will milk’ -- which first may require us to identify the subj. of this 2nd sg. verb (by most lights: Re takes it as a sigmatic 1st sg., which seems unnec. and doesn’t fit the semantic profile of *-se* 1st singulars). With Sāy. and Ge., I take it as the self-address of the poet, who will perform his milking task ‘with song’ (*girā*). The middle of \sqrt{duh} generally takes milk (either real or metaphorical) as its object, and both Agni and Soma can be conceived of as milk products -- the churning of the fire sticks and the pressing of the soma plant both involve physical actions not unlike milking and what is produced is a fluid or something (fire) that behaves rather like one. Indra is not entirely excluded, however; he could be configured as a cow, “milked” with a praise hymn for him to produce goods. However, as I just said, the milk itself, rather than the cow, is the typical obj. of medial \sqrt{duh} , and so the substances fire and/or soma are more likely referents.

Let us now turn to pāda d. This also contains a 2nd sg. med. present, *várdhase*, in a relative clause whose rel. prn., fem. loc. pl. *yāsu*, has no possible referent in the rest of the vs. Before turning to that problem, I will first say that I do not consider the 2nd sg. subj. of *várdhase* to be the same as that of *dohase*. Instead I think we have switched to the unidentified god/ritual substance referred to by the acc. sg. in the rest of the vs. Although this introduces an interpretational complication, I would point out that in the next vs. (2cd), the god/substance definitely appears in the 2nd person, and note also 8b, which contain a similarly structured rel. cl. ... *yāsu nāma te*#, where the 2nd ps. refers to the god/substance. And, most important, the rel. cl. of 1d shows a closer affinity to Agni and Soma than the generic epithets in the rest of the vs. But first we must identify a possible referent or referents for the fem. *yāsu*. The standard ploy, which I think is basically correct, is to supply a fem. pl. obj. to *jáyantam* ‘winning’ -- generally ‘cows’ (Ge, Re, WG). Old suggests rather ‘waters’, which Ge argues against (n. 1d). Certainly both ‘cows’ and ‘waters’ (both fem. pl.) occur as objects to \sqrt{j} -- and I see no reason to choose between the two; in fact the reason for not specifying either one is to allow both to be understood, under the neutralizing rel. prn. *yāsu*. Both Agni and Soma have connections to both cows and waters: Agni is nourished by the streams of ghee (a milk product) poured into the fire, and in a well-known myth he ran away and entered the waters. Soma is mixed with cows’ milk, as is endlessly emphasized in the IXth Maṇḍala, and before soma is pressed, it is soaked in water to swell the stalks. A third possible fem. pl. referent connected with Agni is plants, in which he is invisible and inherent until kindled. Let us consider some passages whose phraseology resembles our own. In II.13.1 ... *apāḥ* ... *āviśad yāsu vārdhate* Soma, unnamed, “entered the waters among which he grows strong.” (Note the nearly identical rel. cl.) For Agni cf. I.95.5 ... *vārdhate* ... *āsu* “he grows strong among/in them” (here prob. = plants); I.141.5 *ād ín māṭṛ āviśad yāsu* ... *vī vāvṛdhe* “Just after that he entered into his mothers, within whom he grew widely” (again prob. plants; note that *vāvṛdhe*, as transmitted without accent, is not part of the rel. cl. If the transmitted form is correct). The connection of a fem. loc. pl. and a form of

√ *vṛdh* in these passages is striking, and it is Agni and Soma who participate in this phraseology.

Thus, in my opinion, by the end of the vs. the poet has narrowed down the possible referents and set up the rhetorical situation that will dominate the rest of the hymn: an unidentified masc. sg. referent, who can be simultaneously Agni and Soma, and a set of fem. pl. attendants, likewise unidentified, who are connected to the masculine figure.

V.44.2: The first hemistich of this vs. contains those same personnel, again without overt identification, and with the further complication that there is no finite verb until pāda c. Pāda a contains fem. plurals, at least partly in a relative clause (here nom. pl. *yāḥ*, versus loc. *yāsu* in 1d); pāda b has an unidentified masc. sg. as subject. This is the same configuration as 1d. Again I think the duo Agni / Soma is lurking under the masc. sg., and the fem. pl. refers to phenomena associated with each. In addition I take the gen. *kakúbhām* (a fem. cons. stem) in b as the referent of the fem. rel. prn. *yāḥ* in a, rather than attempting to construe it one way or another with *acodāte*, as most interpr. do.

Most take Agni as the referent of the masc. sg.; I think this is correct, but doesn't go far enough. Certainly Agni is an appropriate referent for *virócamānaḥ* 'shining forth', as he is elsewhere (e.g., I.95.2), and the lovely fem. pl. entities of pāda a can easily be his flames (or, in my scenario, the tips [*kakúbh-*] of his flames). Their collectivity can be identified as "the sun of the lower realm" (*úparasya ... svāḥ*). (I see no reason, with Ge [and, at least in tr., with Re] to take *svā* here as gen., referring to Agni.) But the same phraseology can also be applied to Soma. Although nowhere near as commonly as Agni, Soma can also serve as subj. of √ *ruc* (e.g., IX.11.1 *dhārā sutāsya rocate*), and the streams of soma are often compared to the rays of the sun (usually with masc. *raśmī-*, but cf. fem. *tvīṣīḥ ... sūryasya* "the glitterings of the sun" IX.71.9). Moreover, pāda c, whose subj. is most likely the same as that in b, is almost identical to IX.73.8a *ṛtāsya gopā ná dābhāya sukrātuḥ* of Soma, which strongly invites a Soma identification here.

Another problem is *acodāte* in b. This form looks like a dat. sg. to a negated participle, but the accent is wrong (expect **ácodate*), a discrepancy that leads Lowe (Participles in RV, 274 n. 81) to reject this interpr., in favor of a *t*-stem *acodāt-*. I'm not at all sure that in this hymn one can make arguments of the type "can't be X because of some grammatical feature that usually holds," and in any case Lowe does not seem to suggest a different case/no. interpr. or different semantics. For further disc. of the accent see AiG II.1.216 and Old ad loc. Because I construe *kakúbhām* elsewhere, I supply *rādhah* 'largesse' as the obj. of this apparent part., since *rādhas-* is frequently the obj. of √ *cud*. The idea would be that the ritual fire and ritual soma shine for the generous and stingy alike. However, the supplied obj. may not be nec., and the sense would be something like "for the unrousing / unstirring one."

In d I borrow *hitāḥ* from 3d (see also *dhāyī* in 8c), producing "was (set/placed) in truth," but the pāda can certainly be interpr. simply with the pf. *āsa* "was in truth." I take "your name" (*nāma te*) to refer to both Agni and Soma.

V.44.3: Some of the challenges of this vs can be approached by noting the series of phonetic plays it contains: *sacate śac ca dhātu ca / dhātu ca, áriṣtagātuḥ / śá hótā sahobháriḥ / sahobháriḥ ... barhír*.

Let us begin with the first. The curious double *ca* phrase *sác ca dhātu ca* is difficult to render on its own. On the surface it appears to form part of a conjoined NP with the subj. *havíḥ* ‘oblation’, but its ill-assorted nature comes out in tr. like Ge’s “die Opferspende und das Seiende und das Element (?)”. Moreover, though *dhātu-* does not otherwise occur uncompounded in the RV, after the RV it is masc., while this form must be neut, which would be anomalous if it is a noun here. Ge suggests (n. 3a) emending to the bahuvrīhi *saptádhātu* ‘having 7 parts’ (RV 3x), though this is not reflected in his tr. As a bv the neut. gender would be proper, as a modifier of *havís-*. Re suggests rather that *sác ca dhātu* “resolves” an old cmpd. **sad-dhātu*, tr. “et (sa) foundation est réelle.” I am in accord with his rendering but analyze the underlying form differently: I take *sác ca* as a play on MIA *sacca-*, the Middle Indic product of *satyá-*. (That Middle Indic phonological developments are already to be found even in the RV family books needs no further demonstration.) The whole sequence gestures towards a bahuvrīhi **sacca-dhātu-*, whose neut. gender would be appropriate. Note that very similar *satyá-dharman-* (RV 5x) is found at V.51.2 [in this VD seq] and V.63.1, the only attestations in the family books. The putative first member *sacca* here is then provided with an alternative Sanskrit analysis, *sác* [i.e., *sát*] *ca* -- I’m not suggesting an emendation here, but a word play. The second *ca* connects the underlying bahuvrīhi to the noun it modifies, *havíḥ*, hence an underlying sequence *havíḥ ... *saccá-dhātu ca*. I further suggest that this word play is actualized in a different word in the first word of the pāda, *átyam*, which rhymes with *satyá-* (save for accent).

As just noted, pāda b participates in a number of phonetic plays: *-gātuḥ* echoes *dhātu* in pāda; *sá hó(tā)* anticipates immediately following *saho(bháriḥ)*, and *-bháriḥ* is a scrambling of *barhír* in the next pāda. This last is particularly worth noting because *-bhári-* is a Vedic hapax (Whitney, Rts., lists it as RV.C., and its only RV occurrence is here) of somewhat unusual formation (see AiG II.2.295). It is clearly a contextually inspired nonce here and should be given no weight in considering *i*-stem morphology.

The last lexical problem in the vs. is *visrúhā* in d, otherwise found only in VI.7.6. Gr glosses ‘Strom’ and connects it with \sqrt{sru} ‘flow’, which is phonologically impossible (where would the *-h* come from?). Ge tr. ‘Arm’, which is just a contextually inspired rendering, as far as I can see. Re tr. ‘flamme’ (fld. by Kellens, Noms rac. 82–83), though ad VI.7.6 (EVP XIII.127–28) he floats (only to reject) the possibility that it is a variant of *vīrúdh-* (‘sprout, shoot, growth’) on the basis of the similarity between VI.7.6 and II.35.8, which contains a form of *vīrúdh-*. This suggestion fits with Sāy.’s gloss *oṣadhi-* ‘plant’ (for this passage; in VI.7.6 Sāy. glosses the pl. *visruhaḥ* as *nadyaś ca gaṅgādyāḥ* ‘rivers, Gaṅgā, etc.’). The word has received the most attention from Scar, first in his Root noun book (464–65) and then in the n. to V.44.3 in WG (in which Scar is responsible for Maṇḍala V). In the former Scar pronounces *visrúh-* “ganz unklar,” echoed by the somewhat less pessimistic “unklar” in WG, where he tr. “Reisig und Zweigen” and suggests it’s derived from **vi-sr-u-* ‘sich weit erstreckend’, contaminated with *-rúdh-*, *-rúh-*, with the result reminiscent of *vīrúdh-*. I also believe that the word is in the semantic realm of plant growth and that it should be connected with $\sqrt{ru(d)h}$ ‘grow’; this is esp. clear in VI.7.6, which contains a verbal form of that root: *vayā iva ruruhuḥ saptá visrúhaḥ*. However, I do not think that \sqrt{sru} or \sqrt{sr} needs to be brought in, at least directly. Instead I attribute the extraneous *-s-* to a sort of analogical backformation involving the preverbs *ví*, *ní*, and *nís*, starting from the form *vīrúdh-* cited above.

Although the lengthening of the preverb *vī* in that form results from the initial laryngeal of the etymon of \sqrt{rudh} (see EWA s.v. *RODH*), it appears synchronically to result from the sandhi form of a byform **vis* before *r-*, just as there is a *nīs* beside *nī* (with different meanings in that case of course). In particular note the form *nīrohā-* in a TS mantra repeated 3x (III.5.2.5, IV.4.1.3, V.3.6.3 *sañrohò 'sī nīrohò 'sī*), which could be derived either from *nī*+ \sqrt{ruh} (cf. Keith's tr. 'descender') with the same lengthening as in *vīrúdh-* or from *nīs*+*ruh* (so Viśva Bandhu). I therefore explain our *visrúh-* as a learned (and/or playful) but false "restoration" of the putative **vis-* underlying *vīrú(d)h-*. It is here that \sqrt{sru} may have played a part, by facilitating a false segmentation of *vis-rúh-* into *vī-srúh-* (on the basis of the phonological similarity of the roots) and thus blocking the application of morpheme-boundary sandhi between *-s and *r-*. I tr. 'outgrowth'. On a separate but related note, I do not think we need to emend the form to gen. pl. **visrúhām*, an idea that goes back to Sāy., tempted Old inter alia, and is accepted by Scar in WG.

Having dealt with the details of this vs. piecemeal, we should now consider whether it too can be applied to both Agni and Soma, and the answer is yes. *ātya-* is regularly used of both in passages too numerous to cite. Though Hotar is an esp. characteristic role of Agni's, Soma is also compared to a Hotar sometimes (IX.92.2, 6, etc.). Both are called both *vīṣan-* and *śíśu-*. We have already noted their positioning on the barhis ad 1b. Both are called *yúvan-*. The 'outgrowth' can be the flames of Agni and the traces of the spreading of the soma juice on the filter, often depicted on IX. However, it does seem that Soma is never qualified as *ájara-* 'unaging' -- a minor lack. The vs. situates both substances on the ritual ground at the moment of the offering.

V.44.4: My interpr. of both the syntax and the referents of this vs. generally differs from those of others. I will not undertake a detailed disc. of these differences. However, I will note that Ge (n. 4) suggests that both Agni and Soma may be the topic of the vs., in agreement with my general thesis.

In my opinion, a new element enters the ritual scene here, namely ritual speech, referred to by the unidentified *eté* of pāda a. Given the masc. pl. pronoun, the exact referent must be masc. -- perhaps *stómāḥ* 'praises' (cf. nearby V.42.15 *eṣá stómāḥ ...*, 16 *práśá stómāḥ* in the same All God cycle, reminiscent of our *prá va eté ...*). These praises are conceived of as horses, which are easy to yoke (a: *suyújah*) and directed by easily controlled reins (c: *suyántubhiḥ ... abhīśubhiḥ*). As Ge points out (n. 4c with reff.), the reins of priests are their speeches, an association that makes the identification of 'praises' as the subject of pāda a all the more likely. The 2nd ps. enclitic *vaḥ* refers in my view to the priests who are launching/driving the praise-horses. The *prá ... yāman* "forth on the course/journey" invites a verb of motion to be supplied, perhaps a form of \sqrt{sr} , suggested by *prasársrāṇaḥ* beginning the 2nd hemistich of the previous vs. (3c).

The other question confronting us in pāda a is the identity of the dative inf. *iṣṭāye*, which is of course multiply ambiguous: it could belong to $\sqrt{iṣ}$ 'seek, desire', $\sqrt{iṣ}$ 'send', or \sqrt{yaj} 'sacrifice' (on this issue, see Old, ZDMG 62: 473-78 = KISch 282-87). With Old, I take it to the first, but I also think it takes an acc. goal/obj., and that that acc. is the fem. acc. phrase in b, *nīcīḥ ... yamyà ṛtāvṛdhaḥ*. Old also takes this phrase as acc., though he supplies a different verb to govern it; the other interpr. take the phrase as nom. and the subject of an independent nominal clause. With Ge (n. 4b) I take the downward-facing twinned sisters to be both the streams of ghee offered into the ritual fire and the

streams of water with which soma is rinsed (the milk streams with which soma is mixed could also be in play). The praises' seeking of these streams expresses the union of verbal and physical activity in the sacrifice, with the hymns accompanying the pouring of the liquid into/onto the ritual substance. The dat. prn. *amúṣmai* I take as the goal of this pouring: the fire and the soma respectively. The use of the comparatively rare distal deictic *asaú* is noteworthy, since this stem generally refers to the upward or heavenly world or items located there, esp. the sun (for the sun, cf., e.g., I.105.3, 191.9, VIII.12.30). Yet here the streams are going 'downward' towards it. This paradox can be resolved by recalling the phrase in 2a *úparasya ... svàḥ* "the sun of the lower realm," which made reference to well-known conceptions of Agni and of Soma. Agni is frequently considered the earthly counterpart of the heavenly sun, since both blaze brightly and they also make their appearance at the same time (dawn) of the ritual day. Soma, likewise, is often compared to or identified with the sun because of its bright gleam, and there are both a heavenly Soma and his earthly counterpart depicted in the IXth Maṇḍala. Here, in my opinion, *amúṣmai* makes implicit reference to the heavenly Sun [=Fire] and heavenly Soma, while depicting the ritual activity centered on their earthly embodiments, thus erasing the distance between heaven and earth and the distinction between the entities found therein.

Pāda d, which I take as a separate clause, brings its own set of problems, not least with the always enigmatic word *krívi-* (on which see also comm. ad I.30.1). First, however, note the phonological echo of b *amúṣmai* / d *muṣāyati*, though this does not help with the interpr. As for *krívi-*, I take it here as a conflation of two putative stems. On the one hand, at least once (I.30.1) *krívi-* seems to refer to a race horse (there compared with Indra). Since the intertwined Agni/Soma figure in this hymn was just referred to as a steed (*átya-*) in 3a, *krívi-* here seems to be picking up that joint referent. Ge [n. 4d] makes the same identification of *átya-* with *krívi-*, and he also suggests that the pāda expresses the entry of the butter offerings into the fire and/or the streams of water in the soma. I think he is correct as far as he goes, but I think there is a third referent, the poet who is responsible for the praises I suggest are the subject of pāda a. In this case *krívi-* can be seen as a hyper-Sanskritization of *kaví-* (as if from **kṛvi-*) with the *ri* that interchanges with *r* in words like *kṛmi-/krími-* 'worm' (cf. AiG I.33 and Nachtr. 19 [31, 4]), aided of course by the *krívi-* already referring to Agni/Soma. See also disc. ad 9c below.

What does it mean that this *krívi-* "steals (their) names"? Here Old's suggestion is surely correct for the Agni/Soma *krívi-* (for Old, only Soma): that the streams (of ghee/water) lose their identities when they merge into Agni/Soma, and the result is simply called fire/soma. As for the poet, whom I consider the third referent of *krívi-*, he may "steal their names" by using them in his poetry, or perhaps by referring to them but not naming them, as he does in this vs. (and throughout the hymn).

V.44.5: As usual in this hymn, this vs. swarms with difficulties (Re calls it "une suite de *cruces*"), but it continues to depict a relation between a singular masc. entity and a group of feminines. I see this as the thread that leads us through the labyrinth of this hymn. Note also that, as in vs. 3, there are phonetic figures: ab: *saṃjārbhurāṇas tárubhiḥ ... susvárūḥ / su tegṛbham ... cittāgarbhāsu* (with mirror-image *su*).

The instr. *tárubhiḥ* in pāda a is a hapax, obviously built to a stem *táru-*. Both Ge and Re both take it as 'tree', which is tempting given the following *vayākín-* 'twiggy'.

But II.39.3 *jārbhurāṇā tārobhiḥ*, with the instr. pl. to the better-attested *s*-stem built to $\sqrt{tṛ}$ ‘endure, etc.’, suggests that *tāru-* is more likely connected to that root (see on this point EWA I.630). However, I confess that my tr. “quivering with your powers of endurance” conveys little sense. I think the instr. here may do little more than reinforce the intensive (that is, frequentative) value of the participle: the subject keeps quivering with continued force (“staying power”).

As usual, I think the subj. of the participle *saṃjārbhurāṇaḥ* is simultaneously Agni and Soma. Agni is elsewhere subject of this intensive (e.g., II.10.5), clearly with reference to his flickering flames. The semantic connection with Soma is not as strong, and Soma is nowhere the subject of this verb, but the scintillating, undulating waves of soma are a common trope in Maṇḍala IX.

Both these substances are aiming towards the *vayākín-*. The most sensible interpr. of that word is as an *-ín*-possessive built to an unattested diminutive **vayāká-* ‘little branch, twig’ to *vayā-* ‘branch’, hence ‘twiggy’ (see Scar’s n. in WG, referring to his treatment in Rt Noun Cmpds). For Agni this twiggy substance can be brushwood or kindling; the association with Soma is again less straightforward, but it can either refer to the twigs of the soma plant itself or, more likely in my opinion, refer metaphorically to the tufts of wool on the sheep’s fleece filter that catch the impurities in the pressed soma juice. This suggestion is supported by the compd modifying it, *sute-gṛbh-* ‘grasping at the pressing’. If the *vayākín-* is the fleece filter, it most definitely ‘grasps’ the solids that accidentally end up in the pressed juice. For Agni, ‘grasping at the pressing’ is less clear, but the firewood may seem to hold onto the fire burning in it, and the ritual fire burns during the soma pressing.

The rest of the first hemistich consists of *cittāgarbhāsu susváruḥ*. The standard interpr. all analyze the latter word as containing *svāru-* ‘(sacrificial) post’ (though note that Gr does not provide a gloss for it). Although this analysis works formally, it does not fit easily into the vs. semantically. I am inclined instead to take it as containing a form of \sqrt{svar} ‘sound’; cf. *svará-* (2x, unfortunately with different accent), *svarí-*, etc. Ge (n. 5b) in fact suggests an alternate tr. ‘schön tönend’ (vaguely following Sāy.). *-svāru-* would show the same conversion to a *u*-stem as the hapax *tāru-* in pāda a and perhaps follows that word in accent as well. The noise-making capacities of both Agni and Soma are well known.

On *cittāgarbha-* ‘visibly pregnant’ see Ge’s n. 5b and the TB passage cited there. These females would be, in the Agni realm, the pieces of firewood, which are frequently depicted as having an embryonic Agni inside; for Soma most likely the waters in which the soma plant is soaked, swelling him as their embryo, or perhaps the cows whose milk is mixed with him.

I follow Old (ZDMG 62 [=KlSch 284 n.1]) in taking *dhāravākéṣu* as referring to a particular ritual moment, the litanies or recitations when the streams of the oblation are offered, but the equational metaphorical interpr. “recitations (like) streams” found in most tr. is also possible.

The voc. *ṛju-gātha* ‘whose song is straight’ is somewhat puzzling. I think it is best illuminated by II.26.1 *ṛjúr íc chāṃsaḥ*, a phrase I take as a decomposed bahuvrīhi (see comm. ad loc.) meaning ‘whose laud is straight on target’. I would now slightly alter the tr. here to ‘whose song is straight on target’ to make the voc. a little less opaque.

The last pāda is surprisingly straightforward, at least for this hymn. The subject of *vārdhasva* is once again Agni/Soma, who derive their strength from their wives (*pātnī*), the plants/firewood and waters/cows' milk respectively.

V.44.6: As I pointed out in the publ. intro., the first pāda is both a cruel joke -- insisting on the utter transparency of the subject of the hymn -- and a claim on the poet's part that his verbal formulations about the subject are in complete conformity with the underlying reality, however obscure they may at first seem.

My interpr. of the rest of this vs. differs significantly in both syntax and semantics from the standard ones, which I will not treat in detail. I take pāda b as having an unexpressed masc. sg. obj., with *cd* further characterizing that obj. The object is simultaneously Agni and Soma, and it is in this pāda that the identification of the two is most clearly expressed in the hymn (until the last 2 vss.). The unidentified subj. 'they' -- most likely the poets and/or priests -- put together / unite the one (of Agni and Soma) with the other, his counterpart or 'shadow' (*chāyā*). As the two central deified ritual elements, they are mirror images of each other. The union takes place in the waters (*apsū*) for several reasons. Both Soma and Agni have significant presence in the waters -- Soma of course through the ritual use of waters both to swell the dessicated soma plant and to rinse it, Agni in two mythological guises, both as *Apām Napāt* and as the runaway ritual fire that hid in the waters. Moreover, it is also the case that water reflects and was indeed probably the only reflective material readily at hand in this period, so the uniting of one substance and its conceptual equivalent as visual reflections of each other would most naturally take place in water.

The clearest part of pāda c is the cmpd. *uru-śām* 'winning wideness', which I take as a modifier of the unexpressed masc. sg. obj. of b (that is, Agni/Soma). (Since the 2nd member is the rt. noun *śā-*, the cmpd can be masc.) I take the other accusatives in *cd*, *mahīm*, *urú jráyaḥ*, and *sáhaḥ* with its modifiers, as objects of an underlying form of $\sqrt{\text{san}}/\text{sā}$, extracted from *uru-śā-*. For a similar play between a root noun cmpd with 1st member obj. and an independent acc. obj., see VIII.1.2 and comm. thereon. Although this syntactic interpr. may seem over-tricky (to others, not to me), it saves us from positing an extraneous creation myth as Ge and Re do. In my interpr. the various objects won are well within the powers of Agni and Soma to deliver to us. Note that Agni is once called *urujráyas-* (V.8.6, in this maṇḍala) and both Agni (III.5.8, V.24.3 [this maṇḍ.], X.176.4, etc.) and Soma (I.91.15) can be subj. of the verb *uruṣyá-* 'make wideness'.

V.44.7: Again my interpr. differs markedly from those of others. Again I think the unexpressed subj. of the whole vs. is Agni/Soma, not the sun (*sūryaḥ*) with most others. The nom. *sūryaḥ* is instead used to characterize both, since both Agni and Soma can be identified with the sun; that is, each is (equivalent to) the sun in his own way. Cf. "the sun of the lower realm" in 2a with reference to phenomena related to both Agni and Soma.

In pāda a I take the two adj. *ágruḥ* 'unmarried' and *jānivān* 'possessing wife/wives' as expressing two stages in the development of Agni/Soma, rather than as paradoxically simultaneous with Ge and Re (WG interpr. resembles mine). The position of *vaí* supports an interpr. with two clauses. In the first stage Agni/Soma pursues females/wives; cf. VII.96.4 *janīyānto nv ágravaḥ* "bachelors in search of wives." Again

we have unidentified (and here unexpressed) plural females -- in Agni's case I surmise they are the plants that supply firewood and/or the streams of ghee poured in the fire; in Soma's the cows, with whose milk he is mixed, or even the waters that swell him. Once Agni and Soma have "married" these females and are *jānivān* 'possessed of wives', each can use the extra power acquired from these females to best his rivals. In this second clause I supply a second verb, perhaps a form of $\sqrt{t\bar{r}}$, because $\sqrt{v\bar{r}}$ does not otherwise occur with *āti*, whereas *tuturyāma+āti* is found in the next hymn (V.45.11).

In cd I take the verb *vanavat* in two senses, negative and positive, both well represented for this stem. With the obj. *ghraṃsām* 'heat', the verb has the sense 'win' = 'vanquish', as in nearby V.29.9 *āvanor ha śuṣṇam* "you combated / vanquished Śuṣṇa"; with the obj. *śārma* 'shelter', 'win' = 'gain'. I take *rākṣantam* as a qualifier of *śārma* (more or less; see below), with the participle itself taking the obj. *gāyam* ("shelter ... protecting our patrimony"). In taking *gāyam* as obj. of *rākṣantam* I am flg. Old, who cites as parallel I.74.2 *āraṁsad dāsūṣe gāyam*, which seems pretty conclusive to me. There are also two passages (VI.71.3/X.66.3) in which *gāyam* is the object of the semantically parallel verb *pāri* $\sqrt{pā}$ 'protect all round' (e.g., X.66.3 ... *pāri pāhi no gāyam*); note *pāri* immed. flg. *rākṣantam* here. By contrast, Ge, Re, WG all take *gāyam* as an immed. object of *vanavat*, modified by *rākṣantam*, which itself governs *ghraṃsām* (cf., e.g., Re "Qu'il nous assure une demeure protégeant de toutes parts de (son) ardeur ..."). This interpr. not only ignores the $\sqrt{rakṣ} + gāyam$ parallel, but also requires a significant attenuation of the meaning of \sqrt{van} (see Re's n. on the pāda), and I also don't know of parallel uses of $\sqrt{rakṣ}$ meaning 'guard against / from'. Against this we must balance one clear defect in my interpr., that *śārman-* is neut. and the part. *rākṣantam* is masc. To account for the gender discrepancy I would suggest that the immediate referent of *rākṣantam* is not *śārma*, but a different, underlying, *masc.* noun to which *śārma* is an appositive -- perhaps *kṣāyam* 'peaceful dwelling', as in I.133.7 *vanóti ... kṣāyam*. Or it might be enough to invoke the distance between *rākṣantam* and *śārma* in the hemistich, which might account for the gender mismatch. (I prefer the former, grammatically blameless, possibility. In this case the tr. might be slightly changed to "will win (peaceful dwelling) as shelter for us, protecting (our) patrimony on all sides.")

V.44.8: Old's stark statement about this vs., "Ich wage keine Erklärung," is somewhat lowering to the spirit. Nonetheless, I think some sense can be wrung from it. As I said in the publ. intro., I think a new figure enters the scene at this, the midpoint of the hymn -- namely the poet, learning and perfecting his craft -- and in my opinion he is the subject of the vs., though Agni and Soma are still very much present.

By my interpr. the unnamed would-be poet "pursues/proceeds towards/practices" (*carati*) "the older (/superior) sonority of the seers" (*jyāyāmsam ... ṛṣisvarām*), that is, he imitates and aspires to the sound of the legendary poet-seers who preceded him. He does so by means of *asyā yatúnasya ketúnā* "by the beacon of this *yatúna*." Unfortunately *yatúna-* is a hapax, and there is no agreement on its meaning or etym. (see, e.g., EWA s.v.). However, we can approach the sense of this phrase from several angles. The most promising of these, in my opinion, is the recognition that the phrase *yajñāsya ketú-* "beacon of the sacrifice" is a very common expression in the RV (I.96.16, I.113.19, etc. etc., incl. in this maṇḍala V.11.1). Moreover, both Agni and Soma are identified as *yajñāsya ketú-*; Agni: the three passages just cited, plus I.1127.6, III.11.3, etc.; Soma:

IX.86.7. I take *yatúna-* as a nonce substitute for *yajñá-*, with vaguely similar phonology, built to \sqrt{yat} ‘arrange’. (This is the root affiliation suggested by most [cf., e.g., AiG II.2.485].) Unfortunately this root does not seem to be generally used in ritual context, but a generalized abstract ‘arrangement’ can stand in for the more specific ‘sacrifice’. This hapax *yatúna-* echoes immed. following instr. *ketúnā* (though obviously the morphology is different) and also reminds us of the two unexpected *-u-*stems in 5: *táru-* and *-sváru-*. Putting all this together, I would claim that the poet is pursuing the model of the previous poets by means of the beacon of the sacrifice (‘arrangement’), and that this beacon is actually the usual amalgam of Agni and Soma, who, as we just saw, can be so called. In other words, the shimmering leaders of the sacrifice, the two ritual substances fire and soma, provide the (en)light(enment) as the poet follows the progress of the sacrifice as it leads him to his poetic goal.

Unlike most interpr. I take the loc. rel. cl. ending b (*yásu nāma te*) as parallel to the one beginning c (*yādrśmin dhāyi*), also with a loc. expression. Both remind us of 2d ... *ṛtā āsa nāma te*; besides the identical final *nāma te*, note the echo between *yásu* and *āsa*. The fem. loc. *yásu* refers to the now familiar mix of fem. plurals -- waters, cows [=milk], streams of ghee -- with the possible addition of fem. words for mental and verbal products: insights, hymns, etc. In any case the poet finds the *jyāyāmsam ... ṛṣisvarām* he is looking for at the place where the names of Agni and Soma have been set -- that is, at the heart of the sacrifice. I take the referent of *tām* to be *ṛṣisvára-* of b. To find it he needs not only the beacon provided by Agni/Soma but also his own industry (*apasyā-*).

The final pāda reiterates that the poet must rely on himself: he must make the journey to poetic mastery by himself, and if he does, he will get it (that is, the poetry) right. The phrasal verb *āraṃ karat* of course reminds us of *alaṃkāra*, the later technical term for poetic ornament. Cf. already in the RV VII.29.3 *kā te asty āraṃkṛtiḥ sūktaiḥ* “what is the proper way to prepare for you with hymns?” for a connection between hymns and proper preparation. (Contrary to the standard tr., I do not think that *yá u svayám váhate* has anything to do with marriage and bringing the bride home.)

V.44.9: In my interpr., the first half of this vs. depicts the offering of ritual oblations, while the second one connects the poet, whom we first met in the previous vs., with this ritual activity.

The fem. phrase *āsām ... agrimā* “the foremost (fem.) of these (fem.)” must refer yet again to the females we’ve met before: waters, cows, streams of ghee, as was just noted above. In pāda a the first such female goes down into the ocean (*samudrām*); this could be the ocean of soma as often or the undulating flames of the ritual fire (see I.71.7 where the offerings entering the fire are compared to streams entering a *samudrá-*). In pāda b the word *sāvana-* ‘pressing’ limits the reference to soma, but throughout the hymn we have seen phraseology that is more appropriate to one of the gods than to the other (generally, in fact, in favor of Agni). That b is a clear soma pāda does not, in my opinion, invalidate the general interpr. of the hymn as applicable simultaneously to the two gods. It is also worth noting in passing that *sāvana-*, which occurs approx. 100x in the RV, is found only once in the IXth (Soma) Maṇḍala.

Why it is necessary to state that the pressing is not harmed when the female enters it is not clear. Perhaps it is meant as understatement: it is not only not harmed, but is

positively benefitted. Or perhaps there is a whiff of the fear of contamination caused by females.

Pāda c brings us another impenetrable hapax, *kravaṇā-*. The first thing to notice, perhaps, is that it rhymes with *sāvana-* (though it does not match it in accent). As with the hapax *yatúna-* in 8a beside *ketúnā*, one of the contributors to the formation of the hapax may be phonological echo. There is, as usual, no consensus on the etym. or sense of the word; Ge and Re (inter alia) take it as a PN -- a convenient strategy, but in a hymn that contains no other PNs (at least in my opinion) an unlikely solution. WG take it as ‘Opferschlächter’, related to *kravís-*, a suggestion mentioned but not endorsed by Old (see also EWA s.v.). My own tentative suggestion has no better support. I consider it, like *krívi-* in 4d, to be another phonologically scrambled encoding of the word *kaví-*, here perhaps crossed with a form of $\sqrt{kṛ}$, hence my tr. ‘working poet’. (A putative participial -*āṇā-* might have been remodeled under pressure from *sāvana-* in b.) Although I will not attempt a spirited defense of this despairing attempt, it does have certain points in its favor. First, if *krívi-* in 4d and *kravaṇā-* here are both deformations of *kaví-*, which itself appears in 7b, we have a little ring of references to the poet in the midsection of this hymn. More important, reference to a poet in 9c fits well with the subordinate clause in 9d. Just at the time when oblation is made and the soma is prepared (9ab), the poet who is not intimidated (“his heart does not tremble”) finds the poetic expression (*matí-*) that connects him to the purified ritual substances soma and fire. (Though *pūtá-* almost always refers to soma and never to fire directly, other forms derived from the root $\sqrt{pū}$, like *pāvaká-*, are standard qualifiers of Agni.) If I am correct that vs. 8 depicts an apprentice or neophyte poet embarking on his journey to poetic mastery, then 9cd shows him achieving his first success at a climactic moment in the sacrifice, which provides inspiration to his undaunted heart.

V.44.10: Ge and Re deal with the difficulties of this vs. by taking all (or almost all) the genitives as PN, a solution going back to Sāy.: (Ge) Kṣatra, Manasa, Yajata, Sadhri, and Avatsāra, to which Re adds Evāvada. (Note that the Anukr. ascribes this hymn to one Avatsāra Kāśyapa, but this is, in my opinion, based on a later misunderstanding of this vs.) Since all of these forms, on the one hand, either are, or bear a strong resemblance to, real words in the language and, on the other, are not used as names elsewhere, the Ge/Re PN strategy seems like an evasion of responsibility. It is to the credit of WG that this makeshift is not resorted to; all these forms are given full lexical weight. And the WG interpr. of ab is not too distant from mine, in that they take the subject to be a/the poet, who has some connection to the *cítī-* of the figures mentioned in the gen. (WG: “Denn er is es [ein Ṛṣi?] durch die Einsichten dessen ...”), though our treatments of the genitives differ.

My interpr. of the relation between *sá* and *cítibhiḥ* calls upon the ‘bond’ (*bāndhanī*) of 9d, where the poet found the thought that binds him to the ritual substances soma and fire. I think 10ab elaborates on this notion, by ascribing the insights to Soma and Agni themselves.

The second set of genitives, *evāvadāsya yajatāsya sádhreḥ* in pāda b, by my interpr. refer to Agni and Soma simultaneously. Both Agni and Soma are elsewhere described as *yajatá-* ‘worthy of the sacrifice’ (Agni, e.g., I.128.8; Soma, e.g., IX.86.14). Assuming that the hapax *evāvadá-* has the sense ‘speaking thus’ it transparently presents,

it can apply to both Agni and Soma because both substances are often said to speak or sound: for Agni cf., e.g., VI.4.4, 13.6; for Soma cf. esp. IX.113.4, 6. As for *sádhreḥ*, the obvious connection with *sadhryàñc-* ‘directed towards the same goal’ is affirmed by Gr, AiG II.2.154, EWA s.v. *sadhrīm*, etc. It is the morphology that is puzzling, made more complex by the fact that it should be trisyllabic with a short penultimate, hence **sádhriyaḥ?* (so approx. Gr). (HvN simply pronounce the pāda as having 11 syllables, but since this would be a metrical irregularity in a Jagatī hymn and since there is no independent stem **sádhri-* to which *sádhreḥ* would obviously belong, it seems better to perform the metrical distraction.) I have no answer for the morphology or for the accent, but given the morphological flexibility in the rest of this hymn, this is not surprising.) The “same goal” that Agni/Soma are aiming at is the eloquence that the poet is also seeking to harness.

I take this second set of genitives, referring to Agni/Soma, as dependent on, not parallel to, the first pair of genitives, *kṣatrásya manasásya*. My “mental lordship” refers to the mastery those two gods have of the poetry and the insights that produce it. The adj. *manasá-* is a hapax, but it fits a common pattern of deriving suffix-accented thematic adjectives to *s-*stems; cf., e.g., *vacasá-* ‘eloquent’ to *vācas-* ‘speech’ and AiG II.2.136.

The second hemistich takes advantage of the double meaning of *rāṇa-* and its derivatives (*rāṇa-* ‘joy / battle’, *raṇvā-* ‘delightful / battle-lusty’, etc.). I take the referent of the pl. *rāṇvabhiḥ* to be poems (or perhaps the ‘insights’ *cítī-* of pāda a). As warriors fighting alongside us they allow us to win the prize (*spṛṇavāma ... vājam*), but as poems they are also delightful or joy-bringing. That winning the prize requires wisdom, not just brute strength, is expressed by *vidúṣā cid árdhyam* “to be brought to success only by the wise,” a signal that it is insights or their products, poems, that are being deployed.

It remains to identify “the stealthy one” (*avatsārā-*), assuming as I do that it is not a PN. As I just noted, not only do Ge and Re (but not WG) take it as a PN, but the Anukramaṇī ascribes this hymn to Avatsāra Kāśyapa, who is also purported to be the Soma hymns IX.53-60, a group of short Gāyatrī hymns with no obvious connection to V.44. It seems obvious to connect the word with the lexeme *áva √ tsar* and the root *√ tsar* ‘creep’ more generally. The root is poorly attested, and *áva √ tsar* only occurs once (I.71.5 in the notorious heavenly incest story). Agni is once the subject of *√ tsar* (I.145.4), and the occurrence of *áva √ tsar* is found in an Agni hymn (though not with Agni as subject). Soma is never subject of this verb, but its rarity makes this unsurprising. Both Agni and Soma can be conceived of as creeping or stealthy because of their slow and gradual movements -- Agni as the fire slowly catches in the kindling, Soma as the juice spreads across the filter.

V.44.11: If it is possible for this hymn to get *more* obscure, it does so in this vs. (Note that Old simply gives up in vss. 11–13.) Nonetheless, I think a consistent interpr. can be constructed and one that fits well with the increasing pace of the depiction of the ritual in the last few vss. The theme that unifies the vs. is that of ritual binding and unbinding -- conveyed by the words *áditi-*, which I take as the abstract ‘unboundedness’ not the name of the goddess, *kakṣyā-* ‘girding’, and *viṣāṇa-* ‘unharnessing’.

The first half of pāda a (*śyená āsām áditiḥ*) refers to the pre-ritual situation. While Soma is still a falcon, swooping about in freedom before the sacrifice begins, he is/represents freedom also for the classes of females we keep encountering: waters, cows,

hymns. Neither the waters nor the cows (=milk) have taken on their ritual roles, and the words have not yet been pressed into service as ritual speech. (It's important to note that Soma himself is often called a *śyená-* in IX; the bird is not simply the conveyor of the stolen soma.)

In the second half of pāda a (*kakṣyò mādah*) Soma has been transformed into the *māda-*, the exhilarating ritual drink, and that change in turn brings about the girding of the female entities in question. They are hitched up in their various ritual roles, and the sacrifice begins. This ritual commencement is both for the benefit of and involves the active participation of the two gods, Soma and Agni. It is thus that I interpret the genitives in pāda b (*viśvāvārasya yajatāsya māyīnah* (note the recurrence of *yajatāsya* from 10b), also referring, in my opinion, to Agni/Soma. (Once again both Ge and Re take all three genitives as PNs; once again WG do not.)

In pāda c I take the priests as the subject of *arthayanti* 'cause to seek as goal'. They are now directing the ritual proceedings. The first object of *arthayanti* is unexpressed, in my view: it is the female ritual elements, waters, milk, hymns. The priests send them to their ritual tasks, the waters and the cows' milk to soma, the hymns to Soma and Agni. The two gods are here represented by the āmreḍita *anyām-anyam* 'the one, the other; one after the other'. So far in the hymn the two gods have been fused into one, verbally speaking; here the āmreḍita is an intermediate step towards separating them, a step that allows for the introduction of a third god, Indra, in the next vs.

In pāda d the priests realize that with the mobilization of all the elements of the ritual performance -- the soma, the ritual fire, the waters, milk, and hymns -- the climax of the sacrifice has been reached. The unharnessing of these elements can take place because all that remains is for the prepared soma to be drunk. This sets the stage for the premier soma-drinker, Indra, to appear on the scene, which he does in the next vs. The parallel forms *viṣāṇam paripānam* are both best taken as *-ana*-nouns to *-ā-*roots, although Gr identifies the first as a root participle. Cf. AiG II.2.193.

V.44.12: As I just said, I think this vs. represents the epiphany of Indra, come to drink the just-prepared soma. Although, in keeping with the practice of the hymn, he is not named, the presence of a new actor in the hymn is strongly signaled by the verb phrase in pāda a: *vī dvīṣo vadhīt*. Indra is almost always the subject of verb forms to the root *√ vadh*. Although the subject of pāda a is also called *yajatā-*, a word used in the two preceding vss. (10b, 11b) of Agni/Soma (in my opinion), 'worthy of the sacrifice' is a generic descriptor of gods, is used elsewhere of Indra (e.g., II.14.10), and can be so applied here. And 'always giving' (*sadāpṛṇa*, though a hapax, is a good description of Indra -- or at least as we wish him to be.

In b Ge and Re take the three words *bāhuvṛktāḥ śrutavīt taryah* as PNs yet again. I think they are all further qualifications of Indra. The first depicts the physical actions of the priest, who by the ritual activities performed by their arms (*bāhú-*), "twist" Indra to the ritual ground. (For the use of *√ vrj* to refer to bringing a god to one's ritual, see VIII.76.1.) There is also a sly echo of the common bahuvrīhi *vṛktā-barhis-* 'having twisted ritual grass', a ritual action that would indeed be performed by the priests' arms. Indra is also easily qualified as *śruta-vīd-* 'finding [/knowing] what is heard (=praise)'. The third term *taryah*, a hapax, is more difficult. It may simply be a *-ya-* deriv. to *√ tṛ* (see WG "der Überwinder [?]", though this isn't terribly satisfying morphologically. I

tentatively take it as a primary comparative to $\sqrt{t\bar{r}}$, with the short suffixal form *-yas-* rather than *-īyas-* (*tārīyas-* 1x in nearby V.41.12); cf. *nāvvyas-* / *nāvīyas-*. In that case it would be an adverbially used neut. (‘surpassingly’) and the predicate is the *vaḥ śacā* ‘(is in) partnership with you.’ For another predicated pāda-final ENC + *śacā* see VIII.92.29 *ádḥā cid indra me śacā* ‘And so, Indra, (you are) in partnership with me.’

The second hemistich begins with an explicitly marked dual *ubhā ... vārā*, separated by a nom. sg. *śá*. Here we have the triad that has just, in this vs., interrupted the fused identification of Agni and Soma. With Indra represented by *śá*, the two other gods are for the first time in the hymn separated into a grammatical pair (though see the forerunner *anyām-anyam* in 11c), rather than sharing grammatically singular descriptors applicable to each. (For *ubhā ... vārā* referring to animate beings, see X.85.9, where the two are the Aśvins -- though in that case *vāra-* means ‘wooer’.) Indra ‘comes in response’ (*práty eti*) to these two, i.e., to the ritual fire where offerings will be made to him and to his own ritual drink. The second verb *bhāti* ‘is radiant’ is not a typical Indraic verb, but pāda d with its reference to the *gaṇá-* ‘troop, throng’ easily brings the rhetoric back to Indra and his close ties with the Maruts, so often identified as a *gaṇá-*. The lexeme *prá√yā*, found here in *suprayāvan-* ‘driving forth easily’, is also particularly associated with the Maruts; cf. III.29.15 *marútām íva prayāḥ*, and verbal instantiations like I.37.14 *prá yāta*, also I.165.13, V.53.12, 58.6. I’ve supplied ‘chariots’ because *rátha-* several times used in a simile with *pra√yā* (IV.19.5, VII.74.6, IX.69.9).

V.44.13: As indicated in the publ. intro., in this last real vs. of the hymn I think the poet, who has been learning his trade, is extravagantly celebrated as the figure on whom the whole sacrifice depends and the representative of various sacrificial personnel and equipment. By contrast, Ge and Re once again opt for a PN, this time Sutambhara whom they consider to be the patron of the sacrifice. I take *sutambhará-* as the transparent cmpd it appears to be, conforming to the model of other *-bhará-* tatpuruṣas (cf., with acc. 1st member, *puṣṭim-bhará-*, *vājam-bhará-*, etc.) For the underlying syntagm see VIII.66.7 *sutám bhara*, where the subject is a priest or similar figure (also IX.6.6 *sutám bhārāya*). I construe the gen. *yājamānasya* with the 1st member *sutam*, though it could also be a gen. of benefit (‘for the sacrificer’) and loosely construed with the whole cmpd. I do not think it is dependent on *sātpatiḥ*, pace Ge, Re, and WG.

The 2nd pāda identifies the poet with the source (the cow’s udder, *ūdhaḥ*) and distributor (the ladle or scoop, *udāñcanaḥ*) of all poetic visions (*viśvāsām ... dhiyām*), which are here equated with ghee oblations. (For *ud√añc* meaning ‘turn / scoop up’, see V.83.8, AV X.29.8, etc.; in AB and ŚB *udañcana-* is a ‘dipping vessel’.) The conflation of poems with liquid offerings we have already met before in this hymn, though it is only here that the *dhī-* is explicitly referred to.

In c the Pp and the standard interpr. take *dhenū* as the sandhi form of nom. sg. *dhenús* before *r-*. This is of course perfectly possible; however, I take the form as given, as the dual nom./acc. of the same stem. By this interpr. the poet who was the subj. of ab remains the subj. here, with the *-bhará-* of the cmpd in pāda a extracted and converted into a finite injunctive *bhārat*. Who are the two milk-cows he bears? It is of course tempting to identify them as Agni and Soma, the pair that has been hiding in this hymn all along. And in part I think that is the correct answer: the poet, whose verbal formulations are the foundation of the sacrifice, thereby supports the two ritual

substances (/gods) that provide the material realization of the sacrifice. Agni and Soma would be called *dhenū* because of the benefits they provide through sacrifice. But dual *dhenū* is several times used of Heaven and Earth (of the other four occurrences, at last III.6.4, IV.23.10), so that the poet through his sacrificial labors may be supporting the whole cosmos. Moreover, the milk of Heaven and Earth has a special connection with poetry. Cf. the curious passage I.22.14 *táyor íd ghṛtávat páyo, víprā rihanti dhītíbhīḥ* “The inspired poets lick the ghee-filled milk of this very pair [=Heaven and Earth; see vs. 13] with their poetic insights,” though the meaning of this vs. is obscure (see comm. ad loc.).

In any case their milk is brought to perfection (*śísriye*) in the rest of the pāda. Contra Narten (1987: 281) and Kümmel (p. 528), who follows her, in the publ. tr. I take this med. pf. as passive, contrasting with the act. trans. *śísrayuḥ* (2x). However, it is possible that the verb is transitive, as they take it, and the poet remains as subj.: “he brings/has brought their milk to perfection.” This might be preferable, in that it emphasizes the poet’s control over the sacrifice and its cosmic resonances.

The final pāda of the vs., and thus of the hymn, brings us back, abruptly and somewhat reductively, to the poet’s training: “pay attention to your teacher; don’t nod off or go wool-gathering.” The lexemes *ānu* √ *brū* and *ādhi* √ *i* belong to pedagogical vocabulary (for the latter see Apālā VIII.91.3 and comm. ad loc.). The final phrase *nā svapán* “not the one who sleeps” provides a transition to the final two responsive verses with their insistently repeated *jāgāra* ‘is/stays awake’.

V.44.14–15: As was just noted, the final *nā svapán* of 13d provides a segue into this two-verse appendix with its 6 occurrences of *jāgāra* ‘is/stays awake’. The two vss. are strictly responsive -- so strictly responsive that the replacement of *yó* in abc by *agnír* produces an awkward set of 12-syllable lines with Triṣṭubh cadence, an awkwardness surely meant to call attention to their tight twinning. The vs. pair is structured as a riddle + solution, though, given what we have just waded through, not a very challenging puzzle. The focus seems to be on Agni, since he is the solution to the riddle; the balance of the two ritual substances found in the rest of the hymn (if I am correct) thus appears to be disturbed. But I do not think that this means that Agni is the sole subject of the hymn, as Scar suggests in his final comment (in WG). Rather the final word is found in the last pāda of both vss., the direct address of Soma to Agni (*tám ayám sóma āha* “to him does this Soma say”): *tāvāhám asmi sakhyé nyòkaḥ* “I am at home in fellowship with you.” It is the fellowship of Agni and Soma, intimately joined here and identified by name, though neither of them was named previously in the hymn, that we are left with and that allows us to revisit the many obscurities that preceded this statement.

V.45 All Gods

On the structure of the hymn and the grammatical patterning that supports that structure, see publ. intro. Note that this patterning imposes presential renderings of the injunctives in the first three vss.

V.45.1: The Pp. interprets *vidā* as *vidāḥ*, and this interpr. is followed by Sāy., Gr, Ge, Re (EVP XVI.107), and WG inter alia. It has the merit of providing a verb form for the opening pāda, but the 2nd sg. subjunctive it appears to be does not fit well in context. I prefer to take it as instr. sg. of the root noun *vid-* (*vidā* against the Pp.), as tentatively

suggested by Old and, in different ways, adopted by Lüders (*Varuṇa* 325), Thieme (rev. of Lüders, ZDMG 101 (1951) 417 [=KISch 652]), Schmidt (B+I 175–76), and Hoffmann (Inj. 173–74). My interp. follows Hoffmann in particular in taking pāda b as parenthetical, with the singular verb appropriate to pāda a postponed until *āpāvṛta* in pāda c. I far prefer this solution to allowing the sg. part. *viśiyān* in pāda a to be construed with the pl. phrase *arcīno guḥ* in b, with Lü et al. The sg. subj. of a, c is most likely the sun.

In b *arcīn-* is interpr. either as ‘having chant, singing’ (by most) or ‘having rays, bright’. Again with Hoffmann, I prefer the latter. Hoffmann (174 n. 125) suggests supplying *ketū-* ‘beam’, regularly associated with the dawns, and this seems contextually appropriate.

Pāda c contains another *-īn*-stem, this time a hapax, *vrajīn-* ‘possessing enclosures’, in the fem. acc. pl. Gr, Ge, Hoffmann, and WG take the referent to be ‘cows’, but the usual obj. of *āpa* √ *vṛ* is the cow-enclosure (often the base of *vrajīn-*, namely *vrajā-*) or the doors thereto, and ‘door’ is also fem. This noun, *dūrah-*, is found in the next pāda as the obj. of the nearly identical lexeme *vī ... āvāḥ*. In taking ‘doors’ as obj. also of *āpāvṛta* I am in agreement with Lü, Thieme, and Schmidt.

With Hoffmann and against the Pp. I take *āpāvṛta* as an injunc. *āpā + vṛta*. The verb of d, *vī ... āvāḥ*, is undeniably augmented, however; I take it as a summary comment on the description found in the rest of the vs. See Hoffmann’s disc. 174–75.

V.45.2: On *āmāti-* see comm. ad I.73.2.

The problematic pāda is c. The rivers who are its subject are not, in my opinion, either real-world rivers (so, it seems, Ge) or the heavenly streams so beloved of Lü. Rather, to fit the context, they must be, metaphorically, the outpourings of light at dawn, which are so intense that they threaten to destabilize the world with their floods -- a threat countered by the solidity of Heaven described in pāda d. The two bahuvrīhis in c, *dhānv-arṇasaḥ ... khādo-arṇāḥ*, have been much discussed. Noteworthy first is the fact that they have (almost) the same final member: if both cmpds are nom. pl. the 2nd members are *-arṇas-* and *-arṇa-* respectively. Thieme rejects the variation in stem, taking both as containing *-arṇas-*, which requires the 2nd form to be nom. singular. In his interpr. the many rivers described by *dhānv-arṇasaḥ* have joined into one, modified by singular *khādoarṇāḥ*. It is a clever solution, but rather over-clever and in fact unnecessary. Both *arṇas-* and *arṇa-* exist independently, and the plural built to a cmpd. with *arṇas-* as final member (that is, *-arṇasaḥ*) would not fit a Triṣṭubh cadence, while one built to the parallel stem *-arṇa-* does nicely, as if truncated from a Jagatī cadence with *-arṇasaḥ* (see such a cadence in I.182.7).

What then do the cmpds mean? Again, a variety of interpr. have been suggested. I take *dhānv-arṇas-* as an equational bv., ‘whose floods are *dhānu-*’. A *dhānu-* appears to be a high flat plain or steppe; two of its five occurrences in the RV are characterized as *brhatī-* ‘lofty’. In our context I think it refers to what we often call a “wall of water,” a mass of oncoming water far above flood stage, perhaps already flooding over the banks and across the adjacent land. As for *khādo-arṇāḥ*, it should mean something like ‘whose floods are a biting/devouring’; in this case, I think Ge (flg. Sāy.) is correct that the rivers are devouring their banks, eating away at the solid ground. The sturdy pillar of heaven in d provides a bulwark against this featureless undulating torrent of light.

V.45.3: This vs. describes dawn as happening in response to and as a result of the hymn recited at this very moment (hence *asmañ*) at the dawn sacrifice. The two heavy dative phrases, polarized at both ends of the first hemistich, *asmā ukthāya* and *janūse pūrvyāya*, have different functions in the clause. The gaping mountain is an allusion to the opening of the Vala cave, metaphorically applied to the advent of dawn from the night darkness.

In the second hemistich, in c “heaven achieves success” must, in my view, allude to the successful emergence of dawn’s light from the heavenly realm. This is contrasted with d, where an unnamed plural subject is desiring to win the earth (*āvīvasantaḥ ... bhūma*) -- in my opinion, this refers to the fact that features on the earth come only slowly to visual definition at dawn, even as the light comes streaming out of the sky. The unknown subjects are probably the poets responsible for “this hymn here” (*asmā ukthāya*) in pāda a; they must continue their verbal efforts, “exhaust themselves” (*dasayanta*), in order to bring the earth into focus. Supplying ‘poets’ as subj. generally follows Hoffmann, who thinks esp. of the Aṅgirasas (174 n. 126), contra Ge, who takes *bhūma* as subj. (sim. Lü). On *dasayanta*, see my *-āya-Formations*, p. 59. Some take the verb rather to *√damś* ‘work wonders’; see esp. Thieme (loc. cit., n. 7), fld. by Schmidt, WG. This cannot be excluded, but I find the ‘exhaust’ meaning more poetically compelling.

V.45.4: The *vaḥ* in Wackernagel’s position can be construed in a number of different ways. I take it as the poet’s address to his colleagues to praise and importune the two gods. Since the next two vss. (5–6) consist of 1st pl. exhortations to proceed with the sacrifice and achieve effective ritual poetry, my interpr. fits the larger context well. Ge also seems to assume the referents are human, but are rather the potential beneficiaries of the poet’s own plea to the gods (sim. WG). By contrast Schmidt (and less clearly Lü) take it as direct address to the gods; Schmidt “... wollen wir jetzt euch, Indra und Agni, zur Hilfe rufen.” Given the number discrepancy between pl. *vaḥ* and the dual dvandva *īndrā ... agnī*, this seems unlikely. Note also that the non-initial accent on *agnī* precludes a voc. interpr. of the dvandva, though that alone would not prevent *vaḥ* from referring to them.

I do not understand the intrusion of the Maruts here. They are not gods of the dawn sacrifice, nor are they associated with the Vala myth or with the Aṅgirasas. Perhaps their prominence elsewhere in the Vth Maṇḍala (esp. V.52–61) is responsible for their brief appearance here, prompted by the mention of Indra. They are presumably not only the objects of *yājanti* but also of *āvīvasantaḥ*: “winning” them would involve persuading them to come to our sacrifice.

V.45.5–6: As noted in the publ. intro., these two vss. form an omphalos and are structurally parallel, with the poet addressing his priest-poet colleagues with hortatory subjunctives. The immediacy of the vss. and the sacrificial context of the hymn make this a more likely scenario than Sāy.’s suggestion that the Aṅgirasas are speaking these vss. For strenuous arguments against Sāy.’s interpr., see Lü p. 327.

V.45.5: As suggested already by Ge (n. 5b) and, independently, Thieme (ZDMG 95 [1941] 82–83 [=KISch. 7–8]) and accepted by all subsequent tr., a better reading is obtained by segmenting *duchúnām inavāma*, against Pp. *duchúnā minavāma*. This requires no emendation to the Saṃhitā text.

V.45.6: Unlike the first hortatory vs., this second one is not entirely tied to the here-and-now; rather it provides three separate historical/mythological models for the effective poetic vision (*dhī-*) that we are aiming to create now (pāda a). The first model (b) appears to be a variant of the Vala myth so prominent in the rest of the hymn, but those in c and d are obscure.

In b the first question is the grammatical identity of *yā*. It is generally taken as nom. sg. fem., but Old suggests that it might alternatively be a (short) instr. sg. fem. In the former case the referent of *yā* would be the *dhī-* of pāda a, which would be the subj. of *ṛṇuta* and identified with the “mother of the cow” (*mātā ... góh*); in the latter it would be parallel to the two instr. sg. fem. *yāyā* opening c and d. I favor the second interpr.; although the former is not impossible, I find the syntactic parallelism a stronger argument, and *yā* could owe its abbreviated form to being displaced from initial position by the preverb *āpa*. If the instr. interpr. is correct, this leaves the subj. of *ṛṇuta* and referent of “mother of the cow” open. Old and Ge both consider it to be Uṣas. Again, this is not impossible, but I think it may be Saramā, whose finding of the cows is treated in vss. 7–8 -- though Dawn as “mother of cows” (*gāvām mātā*) is found in vs. 2 and is also a strong candidate.

Ge remarks apopos of pāda c “sonst unbekannte Sage” (see also Lü, p. 329), and it is likely that we will not get further than that. Ad VII.99.4 Old tentatively suggests that the name of a Dāsa, *ṛṣasīprā*, that occurs in that passage might have something to do with our *viśīśīprā*, but even if so (and it’s certainly possible), this is a deadend, since all we know of *Ṛṣasīpra* is that he’s a Dāsa and killed by Indra and Viṣṇu. Like the Maruts in 4d, the fleeting intrusion of Manu here is unexpected and unexplained.

Even more so the “wandering merchant” (*vaṇīg vaṅkūḥ*) of d. On *vaṅkū-* see comm. ad I.51.11 and, esp., I.114.4. Although the standard rendering is ‘flying’ (see, e.g., Ge, Schmidt), its derivation from *√vañc* ‘move crookedly, meander’ makes ‘meandering, wandering’ more likely. In I.114.4 it modifies *kavī-*. I suggest there that it refers to an itinerant poet, and merchants are at least as likely as poets to be itinerant, following a meandering course as they peddle their goods. But who this particular merchant is meant to be and how and why he needs a *dhī-* to attain his *pūrīṣa*- remain unclear. If I had Dumézilian tendencies, I might suggest a trifunctional interpr.: pāda b = 1st function, c = 2nd function, and d = 3rd function (at least the latter two might work -- 1st-function b is a bit of a stretch). But even if this interpr. were persuasive, it doesn’t explain what the material is doing in this hymn at this point.

V.45.7–8: Here the mythic model of the dawn accompanying the dawn ritual, the opening of the Vala cave through the verbal efforts of the Aṅgirasas, is spelled out.

Note the variant versions of the phrase “Saramā found the cows”: 7c *sarāmā gā avindat*, with augmented imperfect; 8d *sarāmā vidad gāḥ*, with aor. injunctive (per Pp.) or aor. indicative (*sarāmāvidat*, with augmented *avidat* is a possible reading). For Hoffmann’s interpr. of this vs. pair see Injunk. 164–65.

V.45.7: Note that 3 of the 4 verbs are augmented (*ánūnot*, *ārcan*, *avindat*), the 4th a preterital pf. (*cakāra*).

V.45.8: The subordinator *yád* comes quite late (2nd position pāda b) in the subordinate clause presumably occupying the first hemistich, and it is preceded not only by the subj. (*vísve*) but by a heavy temporal loc. expression (*asyā vyúṣi māhināyāḥ*) -- in violation of standard RVic subordinator placement. This anomaly may have led WG to take pāda a as a nominal main clause: “Sie alle (waren) ... (zugegen).” I am sympathetic, but think the clause division is unnecessarily radical. It is possible that b is a conversion into a subordinate clause of IV.3.11b *sām āngiraso navanta góbhiḥ* with pāda a acting as a preposed afterthought.

The 2nd hemistich brings another syntactic problem: in c the Pp. interprets *útsa* (before a vowel) as nom. -*aḥ*, a grammatical ident. that in turn requires that c be an independent clause. The Pp. reading is defended by Old and fld. by many, incl. Ge, Hoffmann (Injunk. 165), WG. With Lü (385 n. 2; fld. by Schmidt p. 177, Janert p. 10) I prefer the loc. *útse*, parallel to *paramé sadhásthe*, and defining the place where Saramā found the cows in d.

V.45.9: The first hemistich is metrically problematic. HvN put the pāda break after *saptāśvaḥ* and distract *sūryo*, *yātu*, and *saptāśvaḥ*; their 2nd pāda, beginning *kṣétram*, has a caesura after 3 (though see their n.). It is also possible to take *kṣétram* as the last word of pāda a (see Schmidt’s layout, p. 178) and to restrict the distraction to a single word, either *sūryaḥ* or *saptāśvaḥ*, though this produces a bad cadence. In that case I would suggest that the 2nd pāda orig. began **yád yád*; reading **yád yád asya* produces an opening of 4 and, with post-caesura *urviyā dīrgayāthé*, makes a fine Triṣṭubh. The 2nd (or 1st) *yád* would be the neut. sg. N/A participle to *√i*.

Even if this possible emendation is not accepted, it is still possible to take *yád* as the neut. participle, not the subordinator: this interpr. is represented in my tr. by “stretching” and by the lack of a relative cl. With double *yád* the tr. would read “to the tract of land which is stretching widely at (the end of) his long course.”

The 2nd hemistich contains a pres. injunctive, *patayat*, and a pf. [redupl. pres.] subjunctive *dīdayat*. In the publ. tr. they are both rendered as imperatives, matching the pattern set by *yātu* in pāda a. I now think that this interpr. lacks refinement and should be altered. The vs. in general concerns the coincidence between the sunrise and the ritual activities of the dawn sacrifice. We hope for the sunrise (hence the impv.), which is in fact realized in the next vs. By contrast, the ritual activities in the 2nd hemistich are under our (=priests’) control and can therefore simply be described. Exactly what the referents of the falcon (c) and the young poet (d) are is disputed (see the various interpr., incl. those that do not consider them ritual referents at all [notably Lü 329–31]). Starting with d, *yúvan- kaví-* is frequently an epithet of Agni and *√dī* is a typical Agni verb, so it seems likely that this is a reference to the kindling of the fire at the dawn ritual. Although “going among the cows” sounds more like soma (mixing with milk), the cows here can be the ghee oblations poured into the fire, which will cause it to flame more brightly. If d refers to Agni, then c is likely to refer to Soma; certainly the *ándhas-* ‘stalk’ is Soma vocabulary, and the falcon is Soma’s vehicle in the Somaraub. What exactly is going on eludes me, however. As for the tense/mood distinction between *patayat* and *dīdayat*, it may be that the distinction is illusory: one of them was simply brought into superficial harmony with the other, so that both end in -*ayat*, though they should be inj. and subj.

respectively. Or it may be that the injunc. is followed by a subj. to indicate that the 2nd action follows the first (“the falcon flies to the stalk; the young poet will shine ...”).

V.45.10: The structure of this vs. matches that of the last one: the first half describes a cosmic event outside of human control; the second ascribes control to the ritualists. What is striking is that the *same* event is treated in both halves: the rising of the sun. In ab the Sun has agency; he yoked his own horses and mounted the sky. But in c it is the priest-poets (“the wise” *dhīrāḥ*) who guide him, through the waters that stand still for this progress, “giving heed” (*āśṛṇvantīḥ*) presumably to the poets’ words. (I owe the germ of this interpr. to Dieter Gunkel [p.c.].)

V.45.11: Most interpr. construe *apsú* with *dadhiṣe* and tr. the latter as ‘you have placed’, hence “you have placed your *dhī* in the waters.” But med. forms of $\sqrt{dhā}$ generally mean ‘acquire, assume’, and furthermore the standard interpr. is either nonsensical or requires a substantial backstory -- such as Old’s “[ein] Zauber für Wiedererscheinen der Sonne nach langen Regengüssen.” I follow Ge in taking *apsú* with *svarṣām* “das ... die Sonne im Wasser gewinnt”; the sun was manifestly in the water(s) in the immediately preceding vs. -- however metaphorically we wish to interpret those waters (I would take them as the floods of dawn light we encountered in vs. 2). Thus “winning the sun in the waters” is simply an expression for causing the sun to rise at dawn. For further disc. on the place of this vs. in the hymn, see publ. intro.

The number discrepancy between 2nd pl. *vaḥ* and 2nd sg. *dadhiṣe* is easily accounted for in the same general manner as the *vaḥ* in vs. 4 (see comm. thereon): *dadhiṣe* is the poet’s self-address to himself, while *vaḥ* is addressed to his colleagues. As in vss. 5–6, these two distinct 2nd ps. references are joined in a joint 1st pl. in cd (*syāma ... tuturyāma*).

V.46 All Gods

On my hypothesis concerning the reason for this hymn, viz., support for the ritual innovation of the Patnī, see publ. intro. Save for the final two vss. devoted to the wives of the gods, there seems no rationale for the deities included or excluded from the enumerative vss. or for the repetition of some and not others.

V.46.1: As noted in the publ. intro., this preliminary vs., preceding the apparently unconnected series of enumerative vss. calling on various gods, esp. female divinities and the wives of the gods, sets up the scenario: in pāda a the poet-sacrificer has yoked himself to the chariot pole (*dhūr-*) along with his wife, the recently introduced ritual Patnī, an image found elsewhere for the same pairing. Since *dhūr-* is feminine, the remaining feminines in this vs. (b *tām ... pratāranīm avasyúvam*, c: *asyāḥ*) can refer both to the chariot pole and to the Patnī. In b the feminine obj. is said to be “furthering (the sacrifice)”; though the default obj. of *prá √ t̥* is *āyus-* ‘lifetime’, *yajñám* can also serve as obj.: cf., e.g., III.17.2 *yajñám prá tira*. (On *avasyúvam* see comm. ad vs. 7 below. One might also note that, while ‘seeking help’ makes sense in context, esp. when read with vs. 7, this word could also be taken as a phonological scrambling of *āyus-*.) In c the speaker asserts that he does not wish to revert to the old ways or be released from the yoked pairing. In other words, he has accepted the ritual innovation of the Patnī.

Most interpr. take *patháh* as gen. sg. with *vidvān*. Since that pf. part. is generally used absolutely (“[as] knowing one”), I take *patháh* rather as acc. pl. extent of space with *néṣati*. For a clear acc. of the path with *néṣa-* see I.91.1 *tvām rájiṣṭham ánu neṣi pánthām*.

V.46.2: Among this group of mainly male divinities we find the Wives (*gnāḥ*, a word only used for the Wives of the Gods in the RV) and Sarasvatī in the 2nd hemistich.

The first pāda consists only of vocatives, each accented since there is no inherently accented word preceding. In b the accent on *māruta* (modifying pāda-initial *śárdhaḥ*) is surprising, however, since it follows the verbal lexeme *prá yanta* with accent on the preverb, and the following voc. *viṣṇo* lacks accent following *utá*.

Notice the coincidence of verbal endings for two different person / number / voice combinations: *yanta* 2nd pl. act. impv. √*yam*; *juṣanta* 3rd pl. med. injunc. √*juṣ*.

V.46.3: The previous vs. consisted of vocatives in ab and nominatives in cd. Here we find accusatives, with the governing verb *huvé* postponed until the beginning of the 2nd hemistich. The first four divinities in vss. 2 and 3 are the same, but the four individual vocc. *ágna índra váruṇa mítra* of 2a are arranged in 3a in two dual dvandvas *indrāgnī* and *mitrāvāruṇā*, in opposite order. The Maruts, Viṣṇu, Pūṣan, and Bhaga (*bhága-*) are also repeated from vs. 2. Otherwise the emphasis is on divinized natural elements. As for female divinities, we find Aditi immediately after her offspring Mitra and Varuṇa, as well as the waters (*apáh*).

Unfortunately the repetition of *bhága-* is obscured in the publ. tr. by its rendering as “Fortune” in 3d, though both 2d and 6c call him Bhaga. “Fortune” in 3 should therefore be changed to “Bhaga.”

V.46.4: In pāda a *asrídhaḥ* is clearly pl., though it occurs in dual context (*utá ... viṣṇur utá vāto asrídhaḥ*). There seem to be 3 possibilities: 1) it also modifies the gods in pāda b, the Treasure-giver (*draviṇodāḥ*) and Soma; 2) it refers to the gods in general, as in I.3.9 *vísve devāso asrídhaḥ*; 3) it refers to goddesses or the trio of goddesses so denominated in I.13.9 *īlā sárasvatī mahī tisró devīr mayobhúvaḥ / ... asrídhaḥ* (note *mayobhúvaḥ* like *máyas karat* in our pāda b). There is no clear way to choose, and it scarcely seems to matter. I would of course prefer the third possibility, since it involves a female presence in this vs., but the support for this possibility is not strong.

The vs. contains the 3rd mention of Viṣṇu and the 2nd of the Aśvins; the other divinities are newly named.

V.46.5: The Maruts recur for the third time (the 2nd time in the corporate entity, the Marutian troop [*mārutam śárdhaḥ*]), as does Pūṣan, with Bṛhaspati substituting for the Brahmanaspati in 3c. Varuṇa and Mitra also make their 3rd appearance, this time with their regular companion Aryaman, rather than the Aditi of 3a.

V.46.6: The mountains of 3b reappear here; the waters, their companions in 3b, are replaced by the rivers (*nadyāḥ*), also feminine of course. Bhaga also recurs from 2d and 3d. It seems significant that Aditi is the last divinity named before the “wives” vss.

V.46.7: The help for which the wives of the gods are insistently entreated (*avantu nah*, *prāvantu nah*) reminds us of the adj. qualifying the chariot pole / Sacrificer's Wife in 1b, *avasyúvam* 'seeking help' and provides a type of ring.

With Ge and WG, I take *tujáye* as referring specifically to the propagation of children, a function appropriate to the wives of the gods, against Re's insistence that it refers to the production of inspiration (though in his long n. he admits that there is "une certaine association entre *túj* et la notion de procréer").

V.46.8: This last vs. is in a diff. meter and also shows some metrical irregularities (see HvN notes). It seems tacked on, to allow an enumeration of the gods' wives in question, most of whom (save for *Indrāṇī*) have a very shadowy existence. It is also not clear whether *aśvínī* and *rāṭī* refer to a single individual or two.

The last phrase, *yá ṛtúr jánīnām* "which is the regular season for women," is somewhat puzzling, made more so by the fact that there is no overt referent in the main clause for the *yáh*, since the verb *vyántu* lacks an object (also in pāda a). I follow Ge (flg. Sāy.) in taking this as a reference to the *patnīsaṃyāja* offering (or its forerunner), and I therefore supply 'offering' as obj. for *vyántu* (*havís*-, etc., is a common, though not invariable, obj. to this root). The rel. cl. is then also a pun: it refers not only to this offering, which is the ritual "time/season" allotted to women, but probably also to their menstrual periods, since *ṛtú*- is regularly so used later. For a similar pun, using the adj. *ṛtvīyāvatī*-, see VIII.12.10, 80.7.

V.47 All Gods

V.47.1: As noted in the publ. intro., I take the subj. of this riddling vs. to be *manīṣā* 'poetic inspiration', but until this word appears (end of pāda c), the vs. both invites an identification of the subject with Dawn and makes that impossible. The nom. sg. participles *prayuñjatī* and *bodhāyantī* are characteristic Dawn vocabulary, but Dawn is also regularly identified as "the daughter of heaven," which phrase is here in the genitive: *diváh ... duhitúh*. It is her "great mother" (*māhī māṭā*) who is the grammatical subj.

My interpr. generally follows that of Old. Others (Ge, Re, WG) seek to make Dawn subj. at least of the first hemistich and are thus forced into awkward interpretations of the phraseology and into division of the vs. into two clauses. Assuming (with Old and me) that *manīṣā* is the subj. of the whole vs., the point would seem to be that the inspiration that produces the poetry of the early morning ritual has the power to beget even Dawn herself -- the usual semi-hubristic boast by the poets that even the cosmos is regulated by the ritual performance and the poetry recited there. The phrase "(coming) from the fathers" (by my interpr.; some others take *pitṛbhyah* as dative) reflects the transmission of the poetic tradition from older generations to younger ones. For *manīṣā* 'constantly calling' (*jóhuvānā*), see VII.24.2 *jóhuvatī manīṣā*, also adduced by Old.

V.47.2: Again I take the vs. as having one referent, while Ge, Re, and WG split it into two sentences with two different subjects. In my view, the intent is again to mislead -- that is, in this riddle hymn, to suggest one referent to the audience and then spring a different one on them towards the end of the verse, in this case the very last word *pánthāh* 'paths'. These are presumably the paths that connect heaven and earth and enable the

gods to come to the sacrifice and the sacrificial offerings to make their way to heaven. Although paths are not ordinarily credited with much agency -- and the descriptions in the first hemistich attribute bustling activity to their referents -- the lively traffic between heaven and earth can spill over onto the paths that bear this traffic.

tādapaḥ is most likely adverbial here (so already Gr), though Ge suggests it is nom. pl. “mit Abfall der Endung,” for which there is no motivation.

The “nave of the immortal one” (*amṛtasya nābhim*) can refer both to the ritual ground and to the height of heaven, again suggesting the connection between those places that is established by the paths.

For *anantā*- see disc. ad vs. 4.

For the formula *viśvātaḥ sīm pári* and the unusual placement of *sīm*, see my “Rigvedic *viśvātaḥ sīm*, Or, Why Syntax Needs Poetics” (1998, Fs. Watkins).

V.47.3: In this riddle vs. the referent is not explicitly named, and in fact an initially bewildering set of incompatible identifications comes pouring out: a bull, the sea, a bird, a stone. But all of them are possible aspects of the sun (for similar vocab. see IX.83.3), and esp. in the 2nd hemistich the position specified (“in the middle of heaven”) and the actions depicted point strongly to the sun -- a referent generally agreed upon by interpreters.

The “womb of the age-old father” (*pūrvasya yónim pitúḥ*) is a gender-bending, though understated, paradox. It is likely that the sun’s age-old father is Heaven (Dyaus Pitā) -- on the parental relationship of Heaven and Earth to Sūrya, see esp. I.160 -- in which case the womb is probably (lower-case) heaven, the place through which the sun travels. In the next pāda he is unambiguously situated there: *mādhye divó nṛhitaḥ*, so at least in this instance one of the side-riddles of the vs. is solved almost as soon as it is posed.

V.47.4: As often elsewhere in the RV, numerology begets obscurity. Nonetheless, the most likely referent here is Agni. As Ge points out, the four and the ten in the 1st hemistich may well refer to the four priests (so already Sāy.) or the four arms of the two main priests, the ten, as often, to the fingers. The “bearing” by the four might refer to the transport of the new Āhavanīya to the east end of the ritual ground and the depositing there (hence the “rest”); the ten (fingers) are making offering into the fire (“giving it suck”), to cause it to flare up. Hence the balanced opposition of rest and motion in ab.

The threefold cows of pāda c are puzzling, but three is of course a number closely associated with Agni: the three ritual fires, his three births (e.g., X.45.1), the three pressings, etc. For Agni’s triads, cf. X.45.2 (right after the three births just referred to) *vidmā te agne tredhā trayāṇi* “we know your threefold triads” (also VIII.39.9 for his three domains). See also *tridhātu-śṛṅga*- ‘having tripartite horns’ of Agni in nearby V.43.13, where it may refer to the three hearths – not candidates for our tripartite cows, I’m afraid. For these threefold cows Sāy. (see Ge n. 4c; so also Re) suggests sun’s rays, WG milk-streams, but ‘threefold’ is not a standard characterization of either set. Note also *tridhātubhir āruṣībhiḥ* “with threefold ruddy (cows)” in IX.111.2, where the phrase refers to accoutrements of Soma, and Soma is a possible, if somewhat unlikely, referent for this vs. as well: the ten (fingers) are a common trope in the soma maṇḍala, referring to the priests pressing and preparing the drink. Pāda a is harder to apply to soma, beyond the

generic notion of four priests. The circling threefold cows could, I suppose, be the streams of the heavenly soma. Still, Agni seems a better, though not perfect, candidate.

Pāda d, with *divāḥ ... ántām*# “the ends of heaven,” echoes 3d *rájasah ... ántau*# “the two ends of the airy realm,” and both contrast with the “endless” (*anantāśah*) paths of 2cd. The dual in 3d points to a straight trajectory from one end to the other, reinforced by the verb *ví cakrame* ‘he strode’ (though it’s not in the same clause with the “ends”): the sun’s journey across the sky from one horizon to the other. The plural in 4d is more diffuse, as is the verb *caranti pári* “they wander/circle around.” The phrase *divó ánta-*[pl.] “the ends of heaven” is quite common, but I am not sure what the plural conveys -- that there are numerous divisions of heaven, each with its own boundaries? that heaven is effectively end-less (like the *anantā-* paths of 2) because there are always more ends? In any case the sun’s purposeful trip from one place to another in vs. 3 seems contrasted with the more comprehensive travels of the subject of *caranti* in 4d. Is that subject the threefold cows of 4c? If so, many of the possible triads suggested above are eliminated. Save for the ‘threefold’ (and, I guess, the cows), Agni’s plumes of smoke would make the most sense in d. But I confess bafflement.

V.47.4–5: Note the parallel openings of 4a *catvāra īm bibhrati ...* and 5c *dvé yád īm bibhrtāḥ ...* But this parallelism gains complexity from the fact that *√bhr* is used in two different senses: in 4 it means ‘carry’, but in 6 it refers to the bearing of children.

V.47.5: The opening *idám vāpur nivācanam* “Here is the wonder, the enigma” announces this vs. as potentially even more obscure than what precedes. Each of the three following pādas is presented as a paradox, but the contents do not seem significantly more enigmatic than the rest of the hymn; in fact, the explicit paradoxes point the way to their solution.

The first -- the rivers move, but the waters stay -- seems unconnected to the themes of the hymn, simply presenting a wonder of the natural world: no matter how much the rivers flow, there is always water in them (see Ge n. 5b). The verb *cāranti* repeats that of 4d (and see *cārase* in 4b), but does not echo its meaning there.

The second hemistich does continue the ritual and cosmic focus of the rest of the hymn (see the parallel openings of 4a and 5c cited just above). It treats the surrogate parentage of an unidentified figure. Ge (n. 5cd) suggests that this figure can be both Agni and the sun, with two different mother-substitutes referred to depending on the original identification of *īm*. In Ge’s view, Sūrya’s “real” mother is Dawn, but the two other females who bear him are Heaven and Earth; for Agni, the kindling stick is the mother, but the two other females are Night and Dawn. In both cases the two have different places of birth, but form a twin pair. Although I am not overwhelmingly convinced by Ge’s identifications, I do not have better ones. Of his two suggestions, Agni seems significantly more likely than the sun. The sole passage he cites as evidence for Dawn as the sun’s mother (VII.63.3) does not seem to me to say that, and of course Dawn is more commonly his lover. The evidence for Night and Dawn as Agni’s surrogate mothers is much more robust; the two passages he cites (I.95.1, 96.5) both depict the two giving suck to Agni using the same verb as found here (4b), though not in this vs.: I.95.1 *anyānyā vatsām úpa dhāpayete*; I.96.5 *náktoṣāṣā ... dhāpāyete śísūm ékam*.

V.47.6: This is the last real vs. of the hymn, preceding the meta-reference to the hymn itself and wishes for its efficacy (vs. 7).

In the first hemistich the subj. of *ví tanvate* appears to me to be the poets/ritualists; I am not sure of the identity of *asmai*, but given its lack of accent, it should be someone already present in the discourse -- probably the *īm* of 5c, which, as was just discussed, can be either/both Agni or/and, less likely, Sūrya. Pāda b continues the motherhood theme of 5cd. With Re, I consider the mothers here to be an unmarked simile: the production of ritual poetry by the poets is implicitly compared to the weaving of baby clothes by mothers.

The “paths of heaven” of vs. 2 return in the phrase *divās pathā* (6d) “along the path of heaven” (note the close sandhi). Who the referents are and what is going on in the 2nd hemistich are unclear, made more so by the grammatical multivalence of the principal actors in the 2nd hemistich: *vṛṣanaḥ* can be nom. pl. or, less likely, acc. pl. (or, even less likely though the solution of most [Ge, Re, WG], gen. sg.: the gen. sg. is otherwise *vṛṣṇas* and, as far as I know, never read trisyllabically); *vadhvāḥ* can be nom. pl. (Ge, Re, WG), acc. pl., or gen. sg.; the part. *módamānāḥ* can be nom. pl. masc. or fem. or acc. pl. fem. Ge in his Nachtr. does confront the morphological problem of *vṛṣanaḥ*, suggesting that it’s an irregular gen. sg., but he also provides an alternative transl., with *vṛṣanaḥ* as nom. pl., that my own tr. follows. In this interpr., acdg. to Ge., the gods are the bulls on their way to unite with their wives, “die Dichtungen der Sänger.” Assuming that the referents of *vadhvāḥ* are the *dhíyaḥ* of pāda a, the sexual union of these thoughts and the gods for whom they’re composed seems plausible (in a RVic universe). The only question is who is going to whom, and the two-way street of Vedic ritual allows movement in either direction: the hymns going to heaven to unite with the gods, or the gods coming from heaven to the ritual ground to unite with the hymns. I have gone for the latter. See disc. of the paths ad vs. 2.

With Old I take *upaprakṣé* as loc. to a them. stem *upaprakṣá-*

If this interpr. of the vs. is correct, it provides the hymn with a thematic ring compositional structure. The first two vss. provide the materials that will return in vs. 6. Vs. 1 introduces the inspired thought coming from heaven and established at the sacrifice, thus linking the divine and human worlds, and vs. 2 sketches the highway linking these two worlds, the encircling paths. In vs. 6 the inspired thought of vs. 1 is represented by the *dhíyaḥ* (insightful thoughts) produced by the unnamed priests (ab), and these thoughts are configured as the new brides of the bullish gods who have utilized the paths of vs. 2 to come to the sacrifice and unite with them. The interior vss. present the sun (vs. 3) but concentrate on the ritual fire (vss. 4–5). Given the emphasis on the ritual and its connection to heaven, I’m not quite sure why the sun intrudes in 3—perhaps its journey across the sky is compared or contrasted with the journey between heaven and earth we find elsewhere in the hymn.

V.48 All Gods

V.48.1: My interpr. follows that of Old in most particulars, but is also informed by my view that the hymn as a whole is a Dawn hymn (see publ. intro.). I therefore think that in the 1st hemistich the dative recipient of the poets’ compositions is Agni, not, per Old, Varuṇa, nor, per Re, Indra. (Ge and WG do not identify the recipient.) Although the

descriptors in b are not strongly typical of Agni, the “own dear foundation” (*priyāya dhām(a)ne*) in pāda a would be appropriate for the establishment of the offering fire at the beginning of the morning sacrifice.

With Old I take the subject of cd, identified as feminine by nom. *māyīnī*, as Dawn, and I also follow him in considering the hapax *āmenyā-* as dissimilated from **āmemyā-*, a thematic nominal deriv. of the intens. to $\sqrt{mī}$ ‘(ex)change’, formed like *vitarturā-*, *ādardirā-*, as he suggests. Modifying *rājas-* ‘(dusky) realm’, it would express the constantly changing color of the sky at dawn, and is comparable to the intens. part. in I.96.5 *náktośāsā várṇam āmém(i)yāne* “Night and Dawn, ever exchanging their color,” as Old also points out. Whatever the etymology of *māyā-* (whose possessive deriv. *māyīnī* closes the vs.) -- I favor Thieme’s connection with $\sqrt{mī}$ ‘(ex)change’, which, however, is rejected by Mayrhofer (EWA s.v.) -- the polarized initial and final words of the hemistich, #*āmenyāsya ... māyīnī*#, provide a phonological and, if Thieme is correct, an etymological frame for the hemistich.

And what happens within that frame? In my view the image is that of dawn in a partly cloudy sky. The conceit is that the rays of Dawn spreading across the cloudy sky look like streams of water -- water that Dawn has appropriated from the cloud (“choosing the waters in the dark cloud” *abhrā ām̐ apó vṛṇānā*). Since the image makes sense with the transmitted *apāh* ‘waters’, I see no reason to follow Old (and partly WG) in assuming it stands for **āpah* ‘work’. The same phrase “choosing the waters” is also found in IX.94.1, though in a very different context. I explain it there as a deliberate poetic deformation of the common expression *apó vasānā-* “clothing oneself in the waters.”

V.48.2: The image in 1cd is repeated with variation in 2ab. The fem. sg. subj. of 1d has been replaced by the fem. pl., easily interpr. as plural Dawns, as often. The verb is held constant, though the root aor. *atnata* substitutes for the pres. *vitanoṭi*. The waters/rays of light that the Dawn spread out in 1cd are now characterized as forming a pattern or tracery across the dusky realm (*vísvam ā rájah*) that also figured in 1cd. The spreading performed by the Dawns is done “along the same course” (*samānyā vṛtáyā*) by my interpretation -- that is, the same course that the successive Dawns follow day after day. I do not understand why their pattern of light is “hero-strengthening” (*vīrá-vakṣaṇa*). Perhaps this is simply a reference to the usual trope that dawn rouses all people to undertake their daily labors.

The adjective may also prepare for the more human-oriented 2nd hemistich, in which the pious man seems to do battle with time itself, embodied by the ever advancing dawns. The interpr. of the hemistich is complicated by the shifting senses of the words *āpara-* and *pūṛva-*. If these have temporal reference here, the sense would have to be that the man repels later dawns, while lengthening his life with earlier ones (so in fact both Ge and Re). But this does not accord with Rigvedic conceptions of time: there is no preventing the dawning of each new day; even a hero cannot contravene the cosmic laws of time. It would also be somewhat odd to say that a man lengthens his life with *past* dawns; this would seem to indicate that he has no future, unless he can fight off the dawns to come. It therefore seems preferable to follow Old (also fld by WG), who takes the two adjectives as spatial: *āpara-* ‘behind, to the west’, *pūṛva-* ‘in front, to the east’. With these values in play, the man sends each new day behind him -- the dawn facing

backwards as she passes from east to west -- and piles up his future with the dawns in front of him, to come.

This vs. is full of alliteration and sound play, esp. in pāda c: a: **tā atnata** **vayúnaṃ** **vīrávakṣaṇaṃ** / c: **ápo ápācīr áparā ápejate** (noted also by Watkins, Dragon 109) / d: **prá pūrvābhis**.

V.48.3: As noted in the publ. intro., this vs. is the hardest in the hymn and, as the middle vs., serves as an omphalos. It contains several temporal expressions and thus continues the theme of the passage of time found in the 2nd half of vs. 2, but the rest is rather unclear. My rendering is tentative and also differs considerably from those of others, the details of which cannot be fully covered here.

Already in pāda a the alternation of days and nights is alluded to with the polarized expression *ahanyèbhir aktúbhiḥ*. Although the adjectival form of *ahanyà-* seems to invite an interpr. whereby the word modifies the adjacent instr. pl. *grāṇabhiḥ*, the result, “with the daily pressing stones” (Ge “mit den täglichen Presssteinen”), doesn’t make sense, and I prefer to follow Re in considering it “une variante probable de *āhabhir aktúbhiḥ*.” Cf. *āhobhiḥ ... aktúbhiḥ* X.14.9 and, with lexical substitution, *dyúbhir aktúbhiḥ* (I.34.8, I.112.25, III.31.16).

A more serious problem is figuring out what action is being performed in the first hemistich. In literal terms, the subject, whoever it is, sprinkles the/a superior mace, along with or by means of the pressing stones. Assuming we take the verb *ā jigharti* seriously -- unlike Ge and Re, who tr. contextually (‘schleudert’ and ‘brandit’ respectively), with Ge suggesting a possible derivation from \sqrt{hr} not \sqrt{ghr} -- the action is difficult to interpret, whoever the subject is. Why would one ‘sprinkle’ a mace? Old, flg. Bergaigne, suggests that the mace is really soma, but although we might think this would get us out of the difficulty, in fact the object of (*ā*) \sqrt{ghr} is never the liquid sprinkled, but the object that is sprinkled with it.

Working backward from vss. 4–5, which have pretty clear references to Agni, I take Agni as the subject of *ā jigharti* here. He prepares the mace by “sprinkling” it with his sparks, a sort of final or symbolic forging, while the soma produced by the pressing stones is sprinkled on the weapon at the same time. The two acts of sprinkling make the weapon ritually fit for use. (Agni’s ‘streaming’ *rīt-* is found in 4a—another configuration of Agni as a liquid or as controlling liquid.) Under this interpr. the three apparently anomalous forms of *ā* \sqrt{ghr} in the RV, here and in IV.17.14 and X.6.4, can be given a unified interpr. All three have Agni as subj. (in my view), and in all three Agni “sprinkles” an object with his sparks. See comm. on the two other passages.

The loc. *māyīni* is a separate problem. The standard view is that it refers to an enemy at whom the vajra is wielded, hence tr. like Ge’s “... schleudert er die beste Keule auf den Zauberischen,” which, as we saw, requires the verb *ā jigharti* to be semantically twisted. But the near rhyme *māyīnī* at the end of vs. 1 refers to a positively viewed figure (in my interpr.), the goddess Dawn, and I suggest that *māyīni* here, which occurs in the same prominent hemistich-final position, also identifies a positive figure -- in fact, Indra. Indra is called *māyīn-* in VIII.76.1 and his *māyā-* are often referred to (see the passages listed by Grassmann, s.v., including V.30.6 in this maṇḍala). If it is Indra, the loc. does not have to refer to the goal of a brandished weapon, but can simply be a type of loc. absolute: “when the *māyīn-* (is there),” that is, when Indra attends the sacrifice.

The doubled preverb *ā*, found both at the beginning of the hemistich and directly before the verb, seems to be a case of redundant repetition.

The second hemistich also contains a temporal expression, *saṃvartāyanto ví ca vartayann āhā* “rolling up the days, they unroll them (again).” The idiom *sám/ví√vṛt* is used of rolling up or out hides (*cárma*, VI.8.3, VIII.6.5), and this action is then metaphorically applied to darkness (*támas-*) (cf., e.g., V.31.3). The rolling up and out of darkness is thus a way of expressing the alternations of darkness and light, night and day -- in other words, a more poetic instantiation of the phrase in pāda a *ahanyèbhir aktúbhiḥ*. The problem is how to connect this fairly straightforward expression to pāda c, if it *is* connected. Although it is an easy assumption that cd has a subord. clause / main clause structure (so Ge and Re), it is possible to take c as attached to the first hemistich and d independent (so WG and me). The next question is whether the pl. subject of *pracáran* and that of *ví ca vartayan* are coreferential, and if so, who are they? and whose “own house” (*své dáme*) do they enter? The latter question is easier to answer: (*své*) *dáme* is almost always Agni’s. I therefore think that *yásya* also refers to Agni, and this is indirect evidence for my identification of Agni as subj. of *ā jighartí*. But who enters Agni’s house “by the hundred” (*śatám*) and rolls up and unrolls the days? In the publ. tr. I tentatively identify the subj. as “dawns,” with full awareness that this is grammatically problematic: the pres. part. *vartāyantaḥ* in d is masc., and so the only way to make this work is to assume that dawns are the subj. of c, but the subj. of d reverts to a generic masc. I suggested the dawns as subj. because they are the standard regulators of time (for this see VII.79.2, 80.1 with *sám√vṛt* and *ví√vṛt* respectively). Others (explicitly WG) suggest the gods or some subset thereof, but the gods don’t really have the role of causing the alternation of days and nights. I must leave the identity of the subject uncertain, although I am still inclined to think that it is at least an indirect ref. to the dawns.

I do not understand the function of *vā* in c; JSK does not discuss this passage. As for the *ca* in d, I think it contrastively conjoins the preverbs *saṃ* and *ví*, even though the morphological formations to which these preverbs are attached are not parallel. The *ca* also enables a sort of syncopated phonological figure, with (*pra*)*cáran* in c deconstructed to (*ví*) *ca vartayan*.

V.48.4: This vs. is characterized by words regularly (though not exclusively) associated with Agni: *ánīka-* ‘face’, *várpa-* ‘form’, *rátanam√dhā* ‘establish a treasure’. This vocabulary gives support to my suggestion that Agni is also the subject of vs. 3, esp. since the *asya* in pāda a (and b) should refer to something already present in the discourse.

As for the *tām ... rītīm paraśór íva*, most comm. appositely compare V.7.8 *prá svádhitīva rīyate* “(Agni) streams forth like an axe.” I consider the *rītīm* to continue the liquid imagery of 3b. The abstract *rītí-* in its 4 other occurrences is either construed with the gen. pl. *apām* (VI.13.1, IX.108.10) or implicitly with other liquid vocabulary; cf. also the compd. *rītyāp-* (2x). The attempts by most interpr. to impose a different sense (e.g., Re ‘l’*élan-destructeur*’) on this transparent deriv. of *√ṛ* ‘flow’ seem to stem from discomfort with the image, and esp. the simile of the axe. But the arc of sparks that sprinkle the mace in 3b (by my interpr.) would look like a stream, and anyone who has ever watched a person swing an axe (properly) would recognize the image: the fluent movement in a stream-like curve. (There are numerous You-tube videos.)

For *bhārahūti*- see comm. ad I.129.2, V.29.8.

Ge, flg. Gr., reverses 4cd and 5ab. I do not see the necessity for this. It puts the two forms of *(-)ānīka-* in the same vs. and continues the description of Agni begun in 4ab, but leaving the hemistichs in their transmitted order certainly causes less thematic disruption than most changes of topic in the RV.

V.48.5: Ge emends *vāruṇo* to *āruṇo* ‘the reddish one’, but this seems completely unnecessary. Although putting people in their places (generally *jāna-* √ *yat*) is ordinarily Mitra’s duty not Varuṇa’s, these closely linked gods trade off qualities. That there is no simile marker is not surprising; gods are often equated directly with other gods when they perform the others’ functions. See, e.g., the series of identifications of Agni with other gods in II.1.

On the formula *dāti vāryam* see my forthcoming article on *dātivāra-*. Although *dāti* here looks like an anomalous root present, it is most likely a root-aor. subjunctive, which works very well here.

V.49 All Gods

V.49.1: As noted in the publ. intro., the first hemistich seems to pick up the last one of the previous hymn (48.5cd), where Bhaga and Savitar are identified as the givers of desirable things. Āyu is always a somewhat mysterious figure in the RV, and in this case it is difficult to tell whether the gen. *āyóḥ* dependent on *rátanam* (also in 2d) is in possessive or indirect object use -- that is, are the two gods distributing treasure to Āyu or Āyu’s treasure to others. Ge seems to opt for the former, Re and WG the latter. In this case, the end of the last hymn may be helpful: V.48.5cd *ná tasya vidma ... yáto bhágaḥ savitá dāti vāryam* ‘We do not know that from which Bhaga and Savitar will give what is choice.’ The ablatival *yátaḥ* ‘from which’ indicates the source from which they will acquire what they then distribute. If 49.1 is in some way responsive to this, *āyóḥ* should likewise indicate the source not the recipient of the treasure.

In the 2nd hemistich I tr. the vocc. *narā purubhujā ... aśvinā* as if acc., to avoid extra fuss.

V.49.2: The standard tr. construe *vidvān* with *prayāṇam ásurasya* (e.g., Ge “Der Ausfahrt des Asura gewärtig,” with a slightly odd rendering of *vidvān*, perhaps because he construes it with *práti?*). But pāda-final *vidvān*, which is quite common, is generally used absolutely, without an object (and tmesis would be unusual, though not unprecedented, with a participle). The absolute usage would be reinforced by likewise pāda-final *vijānán* ‘discerning’ in c; the two participles define the subject as a sagacious and perceptive poet/sacrificer.

The referent of the acc. sg. adj. *jyēṣṭham* is entirely ambiguous: it can be neut. and modify *rátanam* or masc. and modify *vibhājantam*. Since *jyēṣṭha-* ‘distinguished, pre-eminent’ is used of both animates and inanimates, there is no way to tell -- and the decision hardly matters. More interesting is the *ca* in d, which must link the phrase *jyēṣṭham ... rátanam vibhājantam āyóḥ*, which refers to Bhaga (see 1b), with a gapped Savitar, who, though present in pāda b and conjoined with Bhaga in 1ab, is not found in the clause in 2cd. See Klein DGRV 127.

V.49.3: The hapax *adatrayā* is universally taken as an adverbial instr. built to a fem. **adatrā*- with the meaning ‘ohne Geschenk empfangen zu haben’ (Gr), ‘ohne ein (Gegen)geschenk zu verlangen’ (Ge), ‘nicht geschenkweise’ (AiG III.76), etc. But the morphology rests on very little (there is no independent fem. -*ā* stem), and, so interpreted, the word is also hard to make sense of. If it means ‘in a non-giving/distributing fashion’, it is immediately contradicted by the statement that the gods do distribute good things (*dayate vāryāni*). To make it work somewhat better, most interpr. sneak in the notion of *counter*-gift: that is, the gods distribute good things without expectation of getting something in return. But this hardly fits the Vedic conceptual universe any better. Gods don’t selflessly hand out “free gifts”; they expect praise and oblations in return. This is, after all, the reciprocal arrangement that the whole RV rests on! I therefore suggest an entirely different analysis of the word, as *adatra-yā*-, a root noun cmpd. with $\sqrt{yā}$ ‘travel, drive’ as 2nd member, hence ‘traveling to those (so far) without gifts’. The accent is correct for such a cmpd. We need a nom. sg. with underlying final -s, but *-*yās* in sandhi would yield the -*yā* found in the passage, so only the Pp. would need emendation. The cmpd. would refer to the standard journey of gods to the sacrifice, bringing goods to distribute to the sacrificers; note the presence of the same root $\sqrt{yā}$ in *prayānam* ‘advance’ in the preceding vs. 2a, referring to the same advent of the god(s) at the sacrifice.

As noted in the publ. intro., the vs. seems to refer to the distribution of dakṣiṇās, a ritual event that in RVic times happened at the dawn sacrifice (as here: *vāsta usrāḥ*), not at the Midday Pressing as in classical śrauta ritual.

This phrase *vāsta usrāḥ* is found 3 other times, all pāda final, with the other three occurrences (IV.25.2, VII.69.5, VIII.46.26; cf. also VI.3.6 *vasta usrāḥ*) containing *usrāḥ*. Although Gr classifies *vāsta* as the 3rd sg. med. pres. of \sqrt{vas} ‘wear’ (that is, pausal form *vāste*; so Pp.), it is clear from the phraseology that it must belong with \sqrt{vas} ‘dawn’, and is most likely a form of the loc. to *vāstu*- ‘dawning’; see AiG III.153–54 with lit. cited there. I do not entirely understand the mechanism that produced the form we have, and in fact several different pathways have been suggested. Wackernagel simply attributes it to shortening of -*ā* in **vāstā usr...* < **vāstāvusr...*, but I find the shortening hard to motivate. Others (e.g., Oldenberg) suggest that it rests on a *u*-stem loc. sg. *-*av* / -*o*, which would yield the sequence directly. Although I was dubious about Old’s suggestion because of the cost of positing an alternative loc. sg. that is not directly attested, I have been persuaded by TY’s view that it continues an IE endingless loc. (in full grade), and this archaism was preserved in a cadential formula that enforces a light syllable in this position.

V.49.4: The standard tr. supply a verb (such as ‘grant’) in pāda a, but this seems unnecessary. The clause can be an equational expression; gods are called upon to be *vārūtham* ‘defense’ elsewhere: cf. I.59.8 *bhāvā vārūtham grṇatē* ... (Agni); sim. VII.32.7 (Indra), VIII.67.3.

V.49.5: There is no overt referent in the main clause (c) for the *yé* in ab, but ‘they’ (namely the poet/sacrificers) are clearly to be the beneficiaries of the good actions in c, who, in d, appear in the 1st ps.

V.50 All Gods

As often, the poet embellishes a fairly simple message by playing with personal reference, cycling through all three persons in very short compass. See the disc. in the publ. intro. as well as more details in the comm. on individual vss. below.

V.50.1: The vs. (and hymn) opens cleverly: the 1st two words are *vísvo devásya*, and until we encounter the genitive ending on the 2nd word, we expect the “every god” that would be appropriate to an All God hymn. Instead, the 2nd pāda opens with the real referent of *vísvaḥ*, namely the polar opposite of ‘god’, *mártah* ‘mortal’.

On *iṣudhyati* see comm. ad I.128.6 and my 2021 “Vedic *iṣudhyá-* and Old Avestan *išud-*, *išūdiia-*: The Aim of Praise” (Fs. Lamberterie). In the course of re-examining the members of this word family, I have somewhat changed my interpr. of this passage. In the publ. tr. I take “wealth” as the target or goal of *iṣudhyati* ‘aims at’; however, insofar as the Vedic and Avestan verbs express the target, it is in the acc. (see VIII.69.2), and it is the divine recipient of praise, not the desired countergift to the praise. The Pp. interpr. *rāyá* as dat. *rāyé*, which is neither the desired case nor the desired goal. It would be possible to read it as acc. pl. *rāyāḥ* ‘riches’, which *could* be an acc. goal (“everyone desires riches”), but since this still deviates from the preferred expression with *iṣudhyá-*, I now prefer to supply “god Leader” as the goal, with dat. *rāyé* expression what we hope for in return: “Everyone aims (praise) (at god Leader) for wealth.”

Pādas b and d both contain a 3rd sg. mid. to \sqrt{vr} ‘choose’, in the same metrical position and with the same metrical shape: root aor. *vr̥ita* and 9th cl. pres. *vr̥ṇita*. The first is clearly an optative, though it has a somewhat unexpected shape and is quite rare (only twice in the RV); its unusual root syllable (*vr̥* < * \underline{ur} H, expect **ur* as in part. *urāná-*) is found elsewhere only in *hotṛ-vūrya-* (2x, with pre-C outcome). The second, *vr̥ṇita*, is formally ambiguous: it can be an optative parallel to *vr̥ita*, as I have taken it (so also at least Re), or simply an injunctive. I would suggest that the poet first deploys the rare but unambiguously optative *vr̥ita* to set the modal tone and then uses the more common *vr̥ṇita* as its morphological parallel. But it would of course be possible to argue that the poet wishes to contrast the two modalities; so I interpr. Ge. IH (diss.) suggests that the poet is deliberately allowing both readings – aorist optative and habitual present – and tr. “(everyone) would choose brilliance – and does so – in order to thrive.”

V.50.2: As discussed in the publ. intro., this vs. effects a transition from the undefined 3rd ps. sg. “every mortal” (*vísvaḥ ... mártah*) of vs. 1 to a 1st ps. pl. referring to us. This has been definitively accomplished by pāda d, which opens with the finite 1st pl. *sācemahi* ‘may we be accompanied’, but earlier in the vs. this plural is carried by the insistent masc. nom. pl. pronominal forms *té ... yé ... té ... té*. These forms invite a 3rd plural reading (“they ... who ... they ... they”): although the *sál tām* pronoun is capable of having both 1st and 2nd ps. reference, 3rd ps. is the default. The first 3 pādas of the vs. cleverly avoid forcing the reference by using predicated dative infinitives (*anúsāse ... āpṛice*), which leave the person unfixed, rather than finite verbs, which would force such a reading of the person. The poet draws attention to his syntactic modulation through the singsong effect of *té te de(va) ..., yé ca ... | té (rāyā) té (hí āpṛ)ce, sāce(mahi) saca(thíyaiḥ)*.

The syntax is further complicated by the parenthetical expression embedded in pāda c, *té hy āpīce*.

The thematic continuity with vs. 1, despite the fancy referential footwork, is emphasized by d *sācemahi sacathyañh*, which echoes *sakhyām* in 1b.

V.50.3: The reference-shifting game continues here and also pulls in some polarized lexical choices. The 1st pl. of vs. 2 becomes the 2nd pl. of the impv. in 3b *daśasyata* ‘[you all,] show favor’, but a trace of the 1st pl. is left in the enclitic *naḥ* ‘our, for us’ in 3a. This is the familiar scenario whereby the poet addresses his fellow officiants in the 2nd pl., urging them to do something on behalf of ‘us’ -- with ‘you’ and ‘us’ coreferential but distinguished pragmatically.

Although the identity of the addressees -- the officiants -- and the recipients of their favor -- the gods and their wives -- is ultimately clear, the lexicon complicates this interpr. The verb *daśasyā-* generally has a god or gods as its subj. and a mortal (vel sim.) as its obj., often *naḥ* (e.g., VI.11.6 *daśasyā naḥ purvañika hotaḥ* “Be favorable to us, o Hotar of many faces [=Agni]”). Here we must reverse the verbal arguments. The 1st object in the 1st pāda, *nñ* is ambiguous: although it of course means ‘man’ (or ‘superior man’), it is frequently used of gods as well as mortals; it would be possible to interpr. *naḥ ... nñ* as ‘us men’, rather than taking *naḥ* as a genitive (as I and the standard interpr. do). What helps clinch the divine reference is the 2nd acc. in that pāda, *ātithīn* ‘guests’. This is the only pl. form of this stem in the RV; the sg. forms are exclusively used of Agni, thus skewing the word towards the divine, and of course the model of the sacrifice as guest-reception for the visiting gods is always conceptually present.

The presence of the gods’ wives, *pātnīḥ*, in b may allude to the shadowy “God Leader” (*devā- netār-*) who opens (vss. 1–2) and closes (vs. 5) this hymn, since an agent noun to the same root $\sqrt{nī}$ ‘lead’, namely *nēṣṭar-*, is the leader of the wives of the gods and, later, of the sacrificer’s wife in classical śrauta ritual.

On *patheṣṭhā-* see comm. ad X.40.13.

V.50.4: This vs. is quite obscure, but seems metaphorically to depict the soma sacrifice. The problems are, as usual, compounded by the fact that the two (or one?) principal actor(s) are not identified. Interpr. of the vs. differ, and I will not discuss them all in detail.

In the first hemistich I take the draft animal (*vāhniḥ ... paśúḥ*) to be soma, as often; the adj. *drónya-* ‘belonging to/seeking the *dróṇa*’ seems to clinch this, since *dróṇa* is always the soma cup. The action depicted is the standard flowing of the soma towards and into the soma vessels, regularly conceived as a (male) animal running (here \sqrt{dru}) to a goal. The verb *dudrāvāt* is a pf. subj.; as I have established elsewhere (García Ramón Fs.), pf. subjunctives are simply subjunctives in value, with a future (not a future perfect) sense.

I take the 2nd hemistich as the main clause construed with the dependent *yátra* clause in ab. Its predicate is the agent noun *sānitā* lit. ‘winner’. Because of the future-value subjunctive in the dep. clause, *sānitā* looks to me like a good prospect for a periphrastic future use of the agent noun (so, it seems, Ge; in contrast cf. Tichy, 229: “Wo sich ... beeilen wird, *gewinnt* ...” [my italics]).

The subject in cd is, in my opinion, Indra. The adj. *nṛmāṇas-* ‘manly minded’ is used most often of him, and of course it is Indra for whom the soma is destined. *vīrā-pastya-* is a hapax, but it seems a bahuvrīhi of the type *vájra-bāhu-* ‘having an arm with a mace in it’, hence ‘having a house with heroes in it’, presumably referring to both divine and mortal warriors that Indra can muster in battle -- his household.

The first two words in the last pāda, *árṇā dhîreva*, are problematic, the 2nd more than the first. For *árṇā* we must assume a neuter substantivization (‘flood[s]’) of the adj. *árṇa-* ‘flooding, undulating’, here in the pl. Given its sandhi position it could in principle instead represent *árṇās*, a feminine substantivization; since *árṇa-* several times modifies fem. *áp-* ‘waters’, this might work better -- but it makes it harder to explain the difficult *dhîrā*, which is most easily taken also as a neut. pl. These floods are surely the floods of soma that are racing in the first half-verse.

As just noted, the simile *dhîreva* [= *dhîrā / iva*] is problematic. It is tempting to take it as *dhîrah* with irregular sandhi (so Roth; see Old), but this is of course not a legitimate interpretational technique. It is also tempting to leave it untranslated, as Ge does. Sāy. takes it as a fem. nom. sg., but who would this wise woman be? Ge considers the possibility of an instr. sg., but not seriously enough to tr. it so. Reluctantly, with a similarly reluctant Old, I take it as a neut. pl., meaning ‘wise (thoughts)’. This is unsatisfying because the adj. *dhîra-* otherwise only refers to animates. There are partial parallels for \sqrt{san} with thoughts/wisdom as obj., e.g., IX.9.9 *sānā medhām*, X.143.3 *sīśāsataṃ dhīyaḥ*, but not with *dhîra-*. A possibly more promising interpr. is suggested by Re, who points out that the only other neut. form of *dhîra-* is found with *janūṃṣi* ‘races’ in VII.86.1; this also seems to underlie Tichy’s “wie verständige (Wesen).” I would now emend the publ. tr. to “... like the wise (races).” This isn’t a great deal better, but it at least deals with the problem of animate/inanimate.

V.50.5: As all comm. remark, the meter in pāda b is flawed. Curiously enough, the other two occurrences of *rāthaspátih* (in the closely related X.64.10, 93.7) are also found in metrically wanting pādas—each missing a syllable—as Old notes. The metrical problem may (or may not) be connected with the morphological anomaly in this cmpd.: the 1st member *rāthas-* to the extremely well-attested thematic stem *rātha-*. We would of course expect **rātha-pāti-*, but the problem with this form emerges immediately on constructing it: 4 light syllables. On this form and similarly anomalous hapax *ṛtas-pāti-* (VIII.26.21; voc., so unaccented) see Wackernagel’s rather elliptical treatment (AiG II.1.241, 246–67), where he classifies the two forms with gen. *pāti-* cmpds, without explaining how he analyzes the *-as* forms morphologically. I would suggest that the putative, metrically difficult form with stem as first member was “fixed” by analogy to the common genitival *-pāti-* cmpds to athematic noun stems (or opaque ones), most esp. *bṛhaspāti-*, which is very common and phonologically similar. However, this does not address the metrical problem. Arnold (101) suggests reading **rāthasas*, which fixes the meter but at the high cost of inventing an *s*-stem to *rātha-*, which makes no sense derivationally (rightly rejected by Old). Old attributes the metrical disturbance to “laxe metrische Praxis,” which is, at best, a description, not an explanation. I do *not* think *rāthas-* represents an archaic gen. form—all the less so since it’s not clear that the form was correctly transmitted. In any case, Old considers the *rāthaspāti-* a divine being of some sort; the “Lord of the Chariot” here joins another very marginal figure, God Leader. *rāthaspāti-* is found with

Bhaga elsewhere (X.64.10, 93.7), and such an association would fit the emphasis on ‘wealth’ (*rayí-*) in b and c.

The forms *īśastútaḥ* and *devastútaḥ* in d and e can either be nom. pl. root noun agentive cmpds or acc. pl. tatpuruṣa action nouns (both with 2nd member *-stú-t-*); see Scar 636–7. Although most interpr. (Ge, Re, WG) opt for the former, I have chosen the latter, on the basis of a number of passages in V where a praise song (vel sim.) is the obj. of *manāmahe*: V.13.2 *agné stómam manāmahe*, V.35.8 *diví stómam manāmahe*, V.66.3 ... *susṭutím ... stómair manāmahe*; also VII.82.10 *devásya ślókaṃ savitúr manāmahe*.

V.51 All Gods

On the structure of this composite hymn, see publ. intro. It is bland and featureless throughout, reminding us that there must have been a lot of mediocre Rigvedic poets and/or ritual occasions that did not require (or pay for) the best of what the poets had to offer.

V.51.1: The eponymous phrase *vísvaiḥ ... devaiḥ* opens successive pādas here (b, c), but the adj. is in fact more narrowly construed with immediately following *ūmebhiḥ*. This is rather like (or, rather, opposite to) the manipulation of the phrase in vs. 1 of the preceding hymn (50.1).

V.51.3: On the basis of VIII.38.7 *prātaryāvabhiḥ ... devébhiḥ* I construe those two instr. most closely together.

V.51.4: On the loc. *camū* see AiG III.188. It belongs to the category of endless locatives discussed by TY; see comm. ad VII.102.3.

V.51.5-10: These next 6 vss. are in Uṣṇih, divided into 3 (vss. 5–7) and 3 (vss. 8–10) by their refrains: *abhí práyaḥ* of 5–7 and the full-pāda *ā yāhy agne atrivát suté raṇa* of 8–10. In fact vss. 8–10 are rigidly -- and boringly -- structured, with each of the first two pādas containing a form of *sajūḥ* ‘jointly’ and as many god-name instrumentals as can be fitted in.

V.51.5: This vs. begins the second hymn in this conglomeration. Note that it repeats pāda-final *havyádātaye* from 1c, and the infinitive at the end of its first pāda, *vītáye*, rhymes with *pītáye* at the end of 1a.

V.51.11–15: Considered by Old to be an Anhang even to this set of appended hymns. Its lexical hero is *svastí-*, a form of which appears in every pāda between 11a and 15a. The poet seems to be trying to show how many different syntactic constructions he can plug *svastí-* into. Unfortunately this is not sufficient to hold our attention.

V.51.11: *anarváṇaḥ* receives far more attention than I think it deserves. See esp. Old. However, now see the abundant references to my own comments on the various *anarvá(n)(a)-* stems in the lexical commentary index. JPB (Ādityas 218–19) has a convincingly scenario for this form as a backformation from *anarváṇam*, which he sees as the proper acc. sg. of a fem. *n*-stem.

V.51.12: My tr. of ab differs from the standard, which take *bhúvanasya yás pátiḥ* as a rel. cl. limiting *sómam*. Since the acc. of the god name seems to correlate with “call upon *for* well-being (*svastáye*),” and the rel. cl. is preceded by *svastí*, which is found as acc. in the “establish/mete out well-being,” I supply “mete out” here and take the rel. cl. as the subject without overt antecedent.

V.51.12: Bṛhaspati’s “whole flock” (bv. *sárva-gaṇa-*) may refer to the Aṅgirasas. In any case note *sárva-* rather than the older *visva-*, esp. notable in a Viśve Devāḥ hymn (though *visve devāḥ* opens the next vs.).

V.52 Maruts

The pattern of the mention of the Maruts’ name in this hymn is worth noting: it might be called a “versified paradigm” (à la I.1) with a hole in it. The various oblique forms of the plural stem *marút-* are densely clustered at the beginning of the hymn: instr. *marúdbhiḥ* (1b), gen. *marútām* (3c), loc. *marútsu* (4a), dat. *marúdbhyaḥ* (5d), and acc. *marútaḥ* (6d) -- each oblique case represented (if abl. is lumped with dat.), each once only. In addition there are three forms of the vṛddhied *mārutam* in the neut. acc. sg. later in the hymn (8a, 13c, 14a). However, though these gods are frequently referred to in the nom. pl. in the hymn, beginning with *yé* in 1c, and once in the voc. (*dhṛṣṇavaḥ* 14c), there are no forms of the nom. *marútaḥ* or the voc. *mārutaḥ* / *marutaḥ*, although these are the most common forms of this stem in the RV. After the paradigm has been established in the early part of the hymn (1–6), there are no further occurrences of the simple stem in the 11 remaining vss. (7–17), only the three vṛddhi forms. I don’t know what, if anything, to make of this, but it does not seem by chance.

On the responsions and ring-compositional structure of vss. 1–5, see the publ. intro. and my “Poetic ‘Repair’ in the Rig Veda” (2006: 133–36), as well as *The Rigveda between Two Worlds* (2007: 112–13). The responsions and the versified paradigm are most likely related; as I argue in “Poetic ‘Repair’” the instr. in the phrase *ārcā marúdbhiḥ* ... in vs. 1 is somewhat anomalous, but it is “repaired” by the substitution of the expected dat. in 5d ... *ārcā marúdbhyaḥ*. To summarize those discussions briefly, in a hymn devoted to the Maruts, beginning with the self-exhortation of the poet “chant forth,” we might expect the Maruts to be the recipients (dat.) of the chant, not, as it seems, fellow-chanters (instr.) with the human poet. But putting them in the instr. emphasizes an important part of their profile, that they are also known to chant, a feature that is alluded to by the hemistich-final adj. *īkvabhiḥ* ‘possessing the chant’. Thus the beginning of the hymn seems concerned with the Maruts’ contrastive and mediating functional roles as expressed by the oblique cases of the paradigm.

V.52.1: On the somewhat anomalous expression in the first hemistich, see reff. given just above.

The 2nd hemistich is also syntactically somewhat compromised. Forms of uncompounded \sqrt{mad} that mean ‘take pleasure in / enjoy’ seldom if ever (possibly VII.49.4) take the acc. (as also noted by Re), in preference to instr., gen., or loc.; yet *mādanti* here seems to take acc. *śrávaḥ* as obj. It might be possible to extract *ānu* from the cmpd *anuṣvadhām* ‘according to their own nature’ and construe it with *mādanti*, since

ānu √ *mad* ‘cheer on’ does take an acc. -- but a personal acc., not the neut. inanimate ‘fame’ that it would govern here. So an unresolvable syntactic tension has been set up. I think the tension reflects the double role of the Maruts already encountered in pāda b. As recipients of Śyāvāśva’s praise chant, they would “take pleasure in their fame,” but as participants in the chanting they would “cheer on” the fame of other(s).

Ge and Re seem to take *adroghám* as an adv., a possibility also mentioned by WG. However, the other apparent adv. form has initial accent (*ádrogham* VIII.60.4), and furthermore the existence of a bahuvrīhi *ádrogha-vāc-* (2x) and the syntagm *adroghá-vācas-* (III.14.6) support a collocation with semantically similar *śrávas-*.

V.52.2: It is not clear why the rel. cl. of ab contains *sánti*, as the clause seems a simple equational one (“since they are comrades”), and such clauses generally lack an overt copula. Ge takes *dhṛṣṇuyā* as a predication with *sánti*, as, it seems, do WG. This is in principle appealing, but given that we get untethered adv. *dhṛṣṇuyā* in the previous and following vss. (1a, 4b) and a similar equational (rel.) cl. in 13ab (*yé ... kaváyaḥ sánti* “who are poets,” it does not seem compelling.

Ge takes *dhṛṣadvínaḥ* as acc. pl. with *śásvataḥ*, but he seems isolated in this interpr., starting from Sāy., who takes it as the nom. pl. that otherwise universally prevails.

V.52.3: As Ge points out, the verb *āti* √ *skand* ‘spring across/beyond’ is reminiscent of *ádhi* √ *skand*, which refers to sexual mounting. He supplies a parenthetical “(auf die Kühe)” in the simile (so also Re), and I would now also do so: “they spring across the nights, as streaming bulls spring (upon cows).”

The meaning ‘night’ for the rare and etymologically unclear (see EWA s.v.; also WG n., with more confidence in the etym.) *śárvarī-* seems established by later Vedic and MIA evidence, but I do not know why the word appears in this passage. A fem. word for night is necessary to make the implicit sexual pun work, but the better attested *rātrī-* is of course also fem. It somewhat responds phonologically to likewise pāda-final *śásvataḥ* in 3b, and it therefore might form a web, along with *syand(rāsaḥ) ... ṣkand(anti)* earlier in the hemistich -- but the phonological connections seem too slight. Maybe Śyāvāśva just likes words that begin with his initial.

I am not certain what image is being conveyed. Ge suggests that the Maruts’ storms calm down at night and then take on renewed energy in the morning, but the two passages he adduces don’t seem to support that interpr. Moreover, ‘spring across/beyond’ seems to me the opposite of what Ge envisions: it’s a vigorous action not a relaxation into tranquility. I tentatively suggest that it refers to the fact that thunderstorms (or, rather, the associated lightning flashes) are especially visible at night and appear to streak across the dark sky.

V.52.5: This is the vs. in which the problematic instr. of 1b is resolved -- “repaired” -- but, as discussed in my 2006 paper, the poet produces a new conundrum, though this one can be, as it were, pre-repaired. The obj. *yajñám* ‘sacrifice’ is unexpected with the verb *prá ... arcā* ‘chant forth’; we expect a verbal product as object. But the *yajñám* here is picking up the conjoined phrase *stómam yajñám ca* of 4b, whose *stómam* would be an appropriate obj. of *prá ... arcā*.

V.52.6: This vs. is in Paṅkti; that is, it contains five 8-syllable pādas rather than the four of Anuṣṭubh, otherwise the meter of the hymn until the end, where the final two vss. are also in Paṅkti. Here the slight shift in meter seems to mark a boundary: on the one hand it brings the versified paradigm to a close, with the acc. *marútaḥ* in d; on the other it announces the advent of the gods with their storms and inaugurates the descriptive passages that dominate the remainder of the hymn.

The first pāda lacks a verb; Ge makes a valiant effort to construe *asṛkṣata* of b with pāda a as well, in two different senses (see his n. 6; ‘... sind ... herangesprengt’ for a, ‘haben ... geschleudert’ for b), but the former would be a unique sense for *ā√sṛj*. Gr also invents a unique sense ‘decorate X with Y’ to allow the two pādas to be construed as a single construction. To avoid such ad hoc contrivances it seems best to follow Old in supplying a verb of motion with the insistent *ā* in pāda a.

The adj. that begins pāda b, *ṛśvā(h)*, can be either acc. pl. fem. modifying *ṛṣṭīḥ* ‘spears’ (so Gr, apparently also WG) or nom. pl. masc. modifying *nāra(h)* ‘men’. The pāda break preceding it might favor the former interpr., but 13a, where the Maruts are definitely called *ṛśvā(h)*, favors the latter, esp. since the Maruts are also *ṛśvā-* elsewhere (e.g., I.64.2). Note that in 13a the adj. is also followed by ‘spear’, but safely bound in a cmpd: *ṛśvā ṛṣṭividyaḥ*; this bahuvrīhi ‘whose spears are lightning flashes’ combines the independent words *ṛṣṭīḥ* and *vidyútaḥ* of our vs. (pādas b and c respectively) and enforces their identity. This resolution in 13a of the ambiguity of 6ab can be seen as another example of “repair.” Partly because the poet seems to be drawing attention to the phrase by resolving it in 13a I am now inclined to take *ṛśvā(h)* in 6b with both of its possible referents and emend the tr. to “the lofty men have launched their spears aloft.” It would be one of the reasonably many examples where a grammatically ambiguous descriptor is positioned exactly between its two possible referents.

The hapax fem. part. *jājḥatīḥ* ‘giggling’ is, of course, phonologically quite striking. As discussed by Hoffmann (Aufs. 306 and n. 3 = KZ 83 [1969]), the form is based on the redupl. pres. to *√has* ‘laugh’ with a Middle Indic (“dialectal”) development of the cluster **gh-s* (rather than the expected *-kṣ-* found in the masc. part. to the same redupl. pres. *jākṣat-* in I.33.7). The use of such a phonologically exotic word is reminiscent of the equally exotic *akḥkhalī-* in the frog hymn (VII.103.3). The latter, as Thieme has convincingly argued, is an importation from pedagogical discourse, conducted for young boys in a preform of Middle Indic. Our form here seems adopted from vernacular “women’s language” and brings a whiff of family life: little girls running after their brothers or parents with little-girl giggles -- a life that would, of course, be conducted in a vernacular (pre-) Middle Indic.

Pāda e has several parallels, given by Ge in his n. 6e. The question in our passage is whether *divāḥ* is gen., as I’ve taken it (so also Ge and somewhat differently Re), or abl. (“The radiance arose ... from heaven”; so WG). The parallels cut both ways: V.25.8 *svānó arta tmānā divaḥ* and VII.34.7 *úd asya súṣmād bhānúr nārta* seem to favor an abl. interpr., but IV.1.17 *úd devyā uṣáso bhānúr arta* a genitive. In the end, I don’t think the choice materially affects the sense of the passage: whether the radiance is ‘of heaven’ or ‘from heaven’ the result is pretty much the same.

V.52.7: This vs. consists of a single rel. cl. (*yé ... yé*) with no main cl. It is most probably preposed to vs. 8 with its correlative the neut. sg. *śárdho mārutam* “the Marut troop,” despite the mismatch in number and gender. The end of vs. 6 has no reference to the Maruts, and, as I noted above, it serves as a boundary vs. The same structure with number disharmony envisaged here across pāda boundary (7a *yé ...*, b *yé ...* // 8a *śárdho mārutam ...*) is found, more clearly, within a vs. in 13: 13a *yé ...* / 13c *tām ... mārutam gaṇám ...*, perhaps another example of repair.

The usual tripartite division of the cosmos (earth, midspace, heaven) is here complicated by the intrusion of a fourth, “the precinct of the rivers” (*vr̥jāna- nadīnām*). Re also notes this, but suggests that c does nothing but “enjoliver” (embellish) a -- that is, that the rivers are a variant of the earth. In a basic sense he is correct, but I would add that what we have here may be the clash of two formulaic expressions of contrastive geographic totality -- the standard tripartite model and one, barely attested, in which a nearer or lower *vr̥jāna-* is contrasted with something more distant. Cf. esp. I.101.8 (with mention of the Maruts) *yád vā marutvaḥ paramé sadhásthe, yád vāvamé vr̥jāne mādayasva*, a bipartite phrase where a seat (*sadhástha-* as here) that is *paramá-* ‘high/distant’ is contrasted with *avamé vr̥jāne* ‘lowest/nearest enclosure’; a *vr̥jāna-* is similarly *ávare* in II.24.11. Thus, though pāda c may refer to the same general geographical location as a, namely earth, it also evokes a paired, rather than tripartite, contrast like that in I.101.8 just cited.

The pf. injunc. 3rd pl. *vāvṛdhānta* (see Kü 471) is attested several times elsewhere and manifestly belongs to a redupl. stem. It is worth noting, however, that the poet seems to be playing with its long reduplication. The *vā* is positioned exactly where we would expect *vā* ‘or’ to be (Wackernagel’s position: #*yé vāvṛdhānta ...*), anticipating the two *vā*’s in pādas c and d, also in Wackernagel’s position. I am not suggesting a re-segmentation as *vā vr̥dhānta*, simply pointing to Śyāvāśva’s penchant for verbal play and for making single forms do double duty. To extend this analysis, note the beginning of pāda b, *ya urāv ...*, with *āv* that could be taken as a metathesis of *vā*.

V.52.8–9: I don’t understand the force of *utá sma*, which opens 8c and 9a, with *utá* opening 9c. Klein (DGRV I.416–17) says that they introduce parallel statements about the Maruts and represent “concatenation across the stanza-boundary,” halfway between intrastanzaic and interstanzaic usage. But the role of *sma*, whatever it may be, seems downplayed in this description.

V.52.8: Ge takes *syandrā(h)* as acc. pl. fem. and supplies antelopes as the obj. of *yujata*. This is not impossible, but *syandrā(h)* was already used of the Maruts in 3a (cf. also V.87.3).

V.52.9: The phrase *páruṣṇyām ūrṇā vasata* is similar to IV.22.2 *páruṣṇīm uśámāṇa ūrṇām*, but while in the latter *páruṣṇīm* modifies ‘wool’, here it must be a loc. sg. The ‘wool’ in both passages is best understood as a metaphor for ‘foam’. The stem *páruṣṇī-* is the fem. corresponding to *paruṣá-* ‘gray’. It is also a river name, presumably so called because it is covered with grayish foam. For disc. see Old, Hoffmann (Aufs. 333–35 [=Die Sprache 1974]). The mediating image in this picture is provided by *sundhyávaḥ*; I follow Thieme (KZ 79 [1965] = Kl Sch. 219ff.) in interpr. this form as ‘preening

[waterbird]’ (to \sqrt{sudh} ‘clean’). As pointed out in the publ. intro., the density of imagery is remarkable: the Maruts swathed in clouds (not explicitly mentioned) are compared to birds in a river covered with foam, with the foam (again not explicit) characterized as wool.

The instr. sg. *pavyā* to the masc. stem *paví-* shows the older *-ā* ending, which becomes limited to fem. *-ī*-stems when the masc./ neut. adopt *-inā*.

V.52.10: The first half-vs. consists of fanciful names of the individual Maruts (never otherwise named), summed up with the instr. phrase *etébhiḥ ... nāmabhiḥ* “with these names” in c. The rest of the second hemistich is unclear, however, primarily because the formal identity and meaning of *ohate* are disputed. The former issue is the easier to solve: though Gr identifies the verb as a 3rd sg. and Re hesitates, it must be a 3rd pl. to the root pres. (of $\sqrt{oh/uh}$) (see EWA s.v. *OH* and esp. Narten [Kl Sch. 98–100 = 1969]). The basis for considering it a 3rd sg. is the Pp’s interpr. of *viṣṭārā* as nom. sg. *viṣṭārāḥ*, but a loc. sg. in *-é* is equally possible. It is highly unlikely that *ohate* would be 3rd singular in 10d but 3rd plural in 11a, b, as Gr, for ex., takes them. The questions then are who is the subj. and how does the verb fit with the rest of the material in the half-verse. Most interpr. take *yajñām* as the obj. and tr. “praise the sacrifice,” with either the Maruts or unidentified priests/poets as subj. This is not impossible, but given the two *ohate* in the next vs., which lack objects (unless *yajñām* is supplied, so, e.g., Gr), I prefer to seek a consistent interpr. of the verb forms. The root is used on a number of occasions as a passive ‘be lauded’ / reflexive ‘vaunt oneself’ (cf., e.g., V.30.6, VIII.5.39). Here I take the Maruts as subject and the names in ab to be the verbal content of the Maruts’ vaunt. (Note that the threefold repetition of *ohate* here is matched by the three occurrences of *vocanta* in vs. 16, also with the Maruts as subj.) Under this interpr. the dat. *māhyam*, which is problematic in most interpr., expresses the verbal recipient of the boast. This leaves *yajñām viṣṭārē*. For most interpr. the latter word characterizes the Maruts as they come to the sacrifice -- e.g., Ge ‘in breiter Schar’. Again, not impossible. However, the root \sqrt{str} ‘strew’ is almost always closely associated with the ritual, esp. with the strewing of the barhis, and I suggest that *viṣṭārē* is a infinitival locative that takes verbal rection, hence “at the bestrewing of the sacrifice.” However, I realize that this interpr. has some problems: *-stārē* is an unlikely infinitival form, and \sqrt{str} doesn’t elsewhere take *yajñām* as object. Moreover, one nominal form of \sqrt{str} , namely *viṣṭārāḥ* in II.13.10, does seem to have spatial force (JPB ‘far-flung’). I don’t have a good solution.

V.52.11: My interpr. of this vs. follows from that of 10 and diverges from those of others. By my interpr. the nom. plurals are further names the Maruts call themselves, shown most clearly by the *īti* ending pāda c. Most interpr. take c with d, syntactically and semantically divorced from ab -- e.g., Klein (DGRV II.102–3, closely flg. Ge) “(And) the men proclaim it (as worthy) and (their) teams proclaim (it so), and wondrous (are their) forms, worthy of being seen, (of whom they say,) “(They are) from the distance.” But the *ādḥā*’s that open pādas a, b, and c impose, or at least beg for, a parallel interpr. of the three pādas, esp. with the *īti* closing the last, and the parenthetical “(of whom they say)” is ad hoc, generated only from the *īti* of c.

One of the problems not mentioned by the standard interpr. is the intrusive *nī* in pāda a. The verb \sqrt{uh} does not otherwise occur with this preverb, and since *ohate* is

surrounded by identical forms without preverb (10d, 11b) it seems unlikely that only the middle one would have the preverb. It might be loosely inspired by the *ní* in *niyúta(h)* in b, but Śyāvāśva does not seem the type of poet to throw in verbal fragments without function. I suggest rather that it continues but varies the naming pattern of 10ab with PREV-*pathi*-, here with the *ní* a very minimalist predication of *nāraḥ* “men down.”

V.52.12: This vs. bristles with difficulties. The first to present itself is the least of them: the root noun cmpd *chandastúbh*-. Thus the transmitted form, but it is analyzed by the Pp and all subsequent treatments as *chandaḥ-stubh*, with the *s*-stem *chāndas*- ‘rhythmic chant’. This makes sense and the phonology is impeccable. However, this *s*-stem has decidedly late distribution (X, 1x Vālah., with the deriv. *chandasyā*- once in late IX), and I now wonder if it contains a thematic stem instead.

The next word, the hapax *kubhanyú*-, is more troublesome. There are several competing interpr. of this word, though Ge refuses to tr. it at all. Re tr. “voués à un rite communiel,” which he derives from Benveniste (BSL 52 [1956] 11–12 [not yet seen by me]), who connected it with Ossetic material: see KEWA III.676; the Ossetic connection was disputed by Szemerényi; see KEWA ref. and EWA s.v., and seems in principle farfetched. Another, going back to Neisser (see EWA s.v.) and followed by Scar (640) and WG, is ‘yelling, shouting’, from \sqrt{bhan} ‘speak’, with the pejorative prefix *ku*-. (Remmer [Frauennamen, p. 48] also follows this basic analysis, but takes the *ku*- in positive sense: “welche Redner!” hence “wortgewaltig.”) More likely is an analysis stemming ultimately from Sāy.’s *udakecchavaḥ* (see Ge’s n. 12a “Wasser wünschend”). Ge cites similarly formed *udanyávaḥ* ‘water seeking’ in nearby V.54.2, 57.1 (latter also has an *útsa*- ‘wellspring’ as here). The Kubhā river also figures in this Marut cycle, in the next hymn V.53.9 in a list of river names. A derived adj. **kubhā-yú*- ‘seeking the Kubhā’ can easily have been formed. Given the common interchange of *-ā-yá/ú*- and *-an-yá/ú*- derivatives (type *vr̥ṣāyá*-, *vr̥ṣanyá*-), **kubhāyú*- could have been reformed as *kubhanyú*-, esp. under the influence of *udanyú*-, see also *iṣanyata* in 14d. Here it can mean either ‘seeking the Kubhā River’ or ‘seeking water’ more generally. Since their goal in the following pāda is a wellspring (*útsam*), seeking some sort of water source makes good sense in the passage.

The meaning of the word *kīrī(n)*- is disputed, with the two leading contenders ‘bard’ and ‘weak, poor’. The former, the only sense given by Gr, seems to be currently in the ascendancy after eclipse -- e.g., KEWA glosses it only as ‘gering, niedrig, arm’, but EWA as ‘Dichter, Lobsänger’, with ‘weak’ banished to the small print -- perhaps because it is easier to etymologize ($\sqrt{kṛ}$ ‘celebrate’). But the contexts, esp. the fact that it is regularly followed by *cīd* ‘even’ and often refers to a person receiving divine aid despite his condition, favor the latter. See also my brief disc. in Hyenas (251–52). The sense ‘weak, poor’ fits our context less well, since the Maruts are powerful and outfitted with enough bling to make them rich. But if ‘weak’ can be interpreted as ‘lightweight, light on their feet’, it can work: the Maruts are *dancing* to the wellspring. Another issue is the status of the stem *kīrīn*- to which this form is assigned. The only other forms possibly belonging to this stem are 3 instr. sg. *kīrīṇā* (I.100.9, V.4.10, 40.8), but they can also of course belong to the reasonably well-attested simple *i*-stem *kīrī*-. Mehendale (“Two Vedic Notes: (1) *kīrīn*?” BSOAS 1974: 670–71) attempts to eliminate the *-īn*-stem entirely by analyzing our form as instr. sg. *kīrīṇā* + *u*, with *u* replacing the usual *cīd*, and

this interpr. is tentatively followed by WG. But *u* is hardly equivalent to *cid* and it is highly unlikely to be placed here, in the middle of a pāda and a clause. Our understanding of Rigvedic particle usage has advanced considerably since 1974. If we want to eliminate, or limit, *kīrín-*, it should first be noted that of the three instr. sgs., two are in Maṇḍala V (V.4.10, 40.8), and so it is possible that the poets of V reinterpr. *kīrínā* as belonging to an *-ín*-stem; there are no unambig. exx. of the plain *i*-stem *kīrī-* in V. Certainly there is no possessive sense associated with the putative *kīrín-* forms as far as I can see.

The 2nd hemistich also presents difficulties: how to construe the indefinite expression *ké cid*, why the Maruts are compared to/identified with thieves, and whether *c* and *d* form a single expression or two. These questions have been addressed in various ways in the standard transl.; I will treat only my own. My rendering assumes that *c* and *d* are separate clauses (contra the standard view) depicting a two-step process. For *c* I start with the fact that what thieves mostly do in the RV is hide. I assume that the Maruts are likened to thieves because on their first approach, enveloped in clouds perhaps, they are indistinct and unidentifiable; this is also conveyed by the indefinite *ké cin ná* “like who knows who.” (I do not take *ké cid* directly with *tāyāvaḥ*, but interpr. them as two different ways of referring to the stealthy Maruts, again against most interpr.) In *d* the Maruts suddenly flash out (*āsan dṛśí tvīṣé* “came to glitter in my sight”) as the storm, or specifically the lightning. As they become visible in this way, it also becomes clear that they are ‘helpers’ (*ūmāḥ*); as usual, the assumption behind this is that the storm, though violent, brings fructifying rain -- rain which is previewed in the first hemistich, where the Maruts seek water and prance to the wellspring, while chanting in rhythm, presumably a reference to thunder.

V.52.13: On the phrase *ṛṣvā ṛṣṭívidyutaḥ* see disc. ad vs. 6; for the number disharmony in *yé ... tām* see disc. ad vs. 7; for the seemingly unnecessary copula *sánti* see disc. ad vs. 2 as well as immediately below.

This vs. serves as another boundary. The Maruts of the thunderstorm, dominating the middle of this hymn, are reconfigured as ritualists, appropriate guests and participants at our sacrifice. The ritual context now takes over for the rest of the hymn. This thematic transition may help explain the *sánti*. In pāda *a* the Maruts are still lofty ones with spears of lightning -- untamed forces of nature -- but in *b* they are asserted to be poets and ritual adepts (*kaváyaḥ ... vedhásah*). Perhaps the *sánti* marks the two forms in *b* as predicate nouns in an equational sentence (X IS Y), where X and Y belong to very different domains.

The address or, as seems likely, self-address to the seer (*ṛṣe*) returns us to the very beginning of the hymn, with Śyāvāśva’s clear self-address in 1ab.

V.52.14: The self-address of 13c seems important enough to repeat here in pāda with minimal variation, though the syntactic function of the acc. *mārutam gaṇám* is different and the rest of the vs. much less clear.

The first hemistich lacks a verb; the parameters of what to supply are set by the nominal arguments in *a* -- the seer is commanded (/commands himself) to [DO SOMETHING] to(ward) (*ácha*) the Marut flock -- and further limited by the simile in *b*, with the nom. maiden (*yoṣāṇā*) roughly corresponding to the seer and the acc. friend/ally

(*mitráṃ*) to the Maruts. I have supplied ‘approach’, others ‘invite, address, turn’, etc., all more or less acceptable.

The question then is what the simile in b is conveying. Most of the renderings attribute bolder action to the maiden than I think gently bred Vedic girls would ordinarily undertake (see esp. Klein, DGRV II.183–84: “... like a maiden entices a friend”). My solution is to read *dānā́* twice in two different morphological interpr. First, with the standard interpr., as the instr. sg. of ‘gift’ (on the possible stems, see EWA s.v. *dānā́*). But also as a root aor. mid. participle in the nom. sg. fem. with passive value. Although such a participle is not recognized by the standard grammars, it is exactly the form we would expect and fits the gift-marriage model perfectly. The *mitrá-* to whom she is given is presumably her spouse; on *mitrá-* in a wedding context see X.27.12 and my “The Rigvedic Svayaṃvara” (Fs. Parpola 2001), 309–13.

The final word of b, *yoṣāṇā́*, is anomalously accented (vs. standard *yóṣaṇā́*). See below comm. ad 15b for a possible explanation.

The second hemistich seems to be presented as a disjunctive alternative to the first, introduced by *vā́*. The “or” does not make much sense; it is tempting to follow Re’s judgment: “*vā́* irrationnel.” But Klein (II.184) may have rightly divined the rationale: “the poet first beseeches the Rishi to entice the Maruts to the worship, but then, as an alternative, appeals directly to the Maruts themselves to come.” I would tweak this slightly by suggesting that the action to which 14cd is presented as an alternative is not 14ab, but rather 13cd, of which 14a(b) is a variant. The ṛṣi orders himself to stop the Maruts with a song (13cd) but then suggests to them that they initiate the journey themselves (14cd).

The voc. *dhṛṣṇavaḥ* addressed to the Maruts again reminds us of the beginning of the hymn, with *dhṛṣṇuyā́* (1a, 2b, 4b) and *dhṛṣadvínaḥ* (2c).

V.52.15: This vs. is a variant of 14, with the parts somewhat differently distributed. The phrase *devāṃ áchā́* in b resembles *ácha ... mārutaṃ gaṇám* in 14a, and it therefore seems prudent and economical to supply the same verb as in 14a.

Although in 14ab *dānā́* belonged to the same syntagm as *ácha ... mārutaṃ gaṇám*, here it is construed with a different part of the sentence, with the opt. *saceta* ‘would/might/could keep company’. In 14 the poet was offering a gift to the Maruts; here he “keeps company with a gift” -- that is, receives it -- bestowed by the Maruts. The situation is the standard reciprocal exchange of praise and worship for the gods for material benefits from the gods. The givers are first identified as *sūrī*-s ‘patrons’ (c), and one could think of the human patrons often so called, but pāda d makes it clear that the Maruts are meant, and the identification of the *sūrāyaḥ* with the Maruts is even clearer in 16b.

The two instr. in d are off balance: *yāmaśrutebhiḥ* ‘famed on/by their course/journey’ modifies the Maruts, but, *pace* Gr, Ge, and WG, *añjībhiḥ* should not, because *añjī-* is only a noun ‘unguent, adornment’ (see in the next hymn V.53.4), not the adj. their tr. require. Re recognizes the problem and suggests that it is an “instrumental of identification”: “en tant que (porteurs d’) ornements.” I think rather that *yāma-* and *añjībhiḥ* are functionally parallel, both to be construed with *śrutá-*, but one in a cmpd and one in an independent syntagm. For similar interplay between cmpd member and independent word, see comm. ad VIII.1.2.

The real problem in this vs. is *vakṣāṇā*. In the publ. tr. I follow Ge and Re in taking it as an acc. pl. of *vakṣāṇā* ‘udder’, but of course this stem is fem. and the acc. pl. form here should be *vakṣāṇāḥ*. Ge (n. 15b) casually suggests that it is exceptionally neuter or else a mistake for *vakṣāṇāḥ*, Re that it’s a “nt. insolite.” Others provide different morphological analysis: Gr sets up a special stem *vakṣāṇā* ‘Darbringung’ and must take it as a nom. sg.; Old suggests emending the accent to **vákṣaṇā*, allowing it to belong to the stem *vákṣaṇa-* ‘strengthening’ and takes it as a neut. nom. pl. (“wie zu den Göttern die Stärkungen”); WG maintain the ‘udder’ analysis but take it as a nom. sg.: “Der ... (wendet) sich den göttlichen (Maruts) zu wie ein Schlauch (der gefüllt sein will).” This last is the most ingenious and does the least violence to the morphology / repertoire of stems, but the image is an odd one, to say the least.

My explanation, admittedly rather weak, starts from the similar patterning of vss. 14 and 15: 1) the *ácha* + acc. gods noted above (though *ácha* differently positioned), in each case requiring a verb to be supplied; 2) *dānā* (beg. of 14b/15c); 3) the parallel endings of the b pādas: 14b ... *ná yoṣāṇā* / 15c ... *ná vakṣāṇā*. The final word of each of these pādas is problematic: *yoṣāṇā* has the wrong accent, *vakṣāṇā* has the wrong ending. I suggest that the words were mutually adjusted to each other, either in composition or redactionally. Oldenberg already suggested (in his n. 2) that *yoṣāṇā* might owe its accent to *vakṣāṇā*, but the suggestion was half-hearted since he really wanted to emend the accent of *vakṣāṇā* to **vákṣaṇā*, as I just noted. However, this seems the best explanation of the accent of *yoṣāṇā*, and conversely this allows us also to assume that acc. pl. **vakṣāṇāḥ* lost its *-h* to match *yoṣāṇā*. Although this may seem no different from Ge’s and Re’s arbitrary conferral of neut. gender, my explanation is contextually tied and has some possibility of being correct.

V.52.16: This Pañkti vs. is the last real vs. of the hymn, since 17 (also Pañkti) is a dānastuti. It begins with *prá*, just as vs. 1 did, and continues with the insistent repetition of the verb of speech *vocanta* (pādas b, c, e). The vs. is also reminiscent of repeated *ohate* ‘vaunt themselves’ in 10–11; as there, the recipient of the Maruts’ speech here is “me.” The structure of the vs. would be clearer if the tr. read “Those who proclaimed ... they proclaimed P. their mother, then they proclaimed their father ...”

On *iṣmín-* see comm. ad I.87.6.

V.52.17: By all standard interpr. the Maruts are the subjects of this dānastuti, but it is worth noting that they are not named -- and so it is possible that a set of human patrons, assimilated to the Maruts and thus endowed with their prestige, are the actual donors praised.

Note the etymological chaining between the subj. of 16e *śíkvasaḥ* and 17a *śākínah*, both deriv. from √*śak*. This could be evidence of the identity of the subjects (Maruts both), or it could be another way of conferring Marut qualities on the human patrons.

The unbalanced āmreḍita *ékam-ekā* is curiously formed. AiG III.395 (fld. by Klein, *Āmreḍitas*,” p. 791 [JAOS 123 (2003)]) suggests that the pl. *ekā* has been attracted to the following *śatā*, whose attribute it is. It also seems an attempt, utilizing both sg. *ékam* and pl. *ekā*, to express the awkward distributive, of *one* hundred per each of seven Maruts, producing a total of plural hundreds.

V.53 Maruts

For the complex metrical structure of the hymn, see publ. intro. Despite the numerous different names for the meters, with few meters repeated in adjacent vss., they are all combinations of 8- and 12-syllable pādas, and so the hymns is metrically more harmonious than the long list of meters implies.

V.53.1: Like V.52.14 in the immediately preceding hymn, this vs. contains a *vā* ‘or’ whose disjunctive alternatives do not seem parallel. While it is true that both alternatives are questions beginning with *kāḥ* ‘who’, the questions seem ill-matched. Re’s assessment here is “illogisme de *vā* [*sic* -- he prints it with accent].” Perhaps the point is that if no one knows as far back as the Maruts’ birth, there may still be someone who has had long association with them and their habits.

V.53.2: In b *kathā yayuḥ* could be resolved as *kathā ā yayuḥ* “how did they drive here?” This interpr. might be favored by *āyayūḥ* in 3a, although it is disfavored by *prā yayuḥ* in 12b.

The sandhi form *āpāya* at the end of c is universally interpr. as the nom. pl. *āpāyaḥ*, referring to the Maruts; it could, however, be just as easily dat. sg. *āpāye* and refer to the good giver (*sudāse*) immediately preceding. In fact, I think it should be read as both, as reflected in the publ. tr. This double reading is favored by the way the vs. is structured, a striking pattern discovered by Natalie Operstein (in class, early 2000s). In general in this verse syntactic constituency is alternating and interlocked -- that is, constituents have the pattern X Y X’ Y’, etc. So, pāda a:

ā *rātheṣu*
etān *tasthúṣaḥ*
 with the acc. pl. *etān* ... *tasthúṣaḥ* interrupted by the loc. pl. *rātheṣu*, which is governed by *ā* preceding the acc. pl. The pattern is similar in cd:
kásmai *sudāse* *ídābhir* *sahá*
sasruḥ *ānu* *vṛṣṭáyāḥ*
āpāya

The datives *kásmai* ... *sudāse* form a constituent, interrupted by the 3rd pl. verb *sasruḥ*, whose preverb *ānu* follows the dat. *sudāse* and whose overt subj., nom. pl. *vṛṣṭáyāḥ* itself interrupts the postpositional phrase *ídābhir* ... *sahá*. In this configuration *āpāya* is not definitively paired: it could go with dat. *sudāse*, separated from it by the prev. *ānu*, or with the nom. pl. *vṛṣṭáyāḥ*, likewise separated from it by a single word, instr. *ídābhir*. Note also that it is the final word of a 12-syllable pāda, in a verse whose other pādas are 8-syllables, so it is metrically almost isolated and could almost (not quite -- it’s only 3 syllables) attach itself to d rather than c. Since *āpī-* ‘friend’ is an inherently reciprocal word, its double application is especially appropriate.

V.53.3: The referent of *té* in the opening phrase *té ma āhuḥ* “They say to me” is not entirely clear. It is universally taken as the Maruts, and that is probably correct. Among other things it is reminiscent of the Maruts’ proclamations “to me” in the previous hymn: 52.10 ... *máhyam* ... *ohate* and 52.16 ... *me* ... *vócanta*. However, it is possible that the subj. is instead unidentified human associates of the poet. This would avoid the

awkwardness of having the Maruts refer to themselves in the 3rd ps.: “They say to me, ‘When you see them [expect “us”], praise.’”

In pāda a note the figure *āhur yā āyayūr*.

As Re points out, *yā āyayuh ... mādē* is the implicit answer to *kathā yayuh* in 1b. The two instr. in b *dyúbhir víbhiḥ* have provoked more commentary than they probably deserve. Ge (fld by WG) takes the former as referring to daybreak and the birds are then the birds that start stirring at that time. This is not impossible, but *dyúbhiḥ* (incl. *úpa dyúbhiḥ* VIII.40.8) generally means ‘through the days, day after day’, and that is fine here. The Maruts would then fly “with the birds” because they come through the midspace, where birds are at home.

V.53.4: The vs. consists entirely of a nominal rel. cl. without verb, presumably hanging off vs. 3.

The problematic form is the hapax *śrāyā* (Pp. *śrāyāḥ*). It is generally taken as a nom. pl. thematic deriv. of $\sqrt{\text{śrī}}$, so ‘resting in’, attenuated by some to ‘provided with’ (with loc.). I cannot find particular fault with this analysis, save for its banality and the unclear source of the root-syllable *ā*. I am inclined instead to take it as an instr. sg. (*śrāyā*, equally possible in this sandhi situation) to a derivative of $\sqrt{\text{śrī}}$, parallel to *śriyā*, which is regularly used of the Maruts. But I confess I do not know why *śriyā* wouldn’t have been used instead or exactly what the derivational mechanism would be, incl. again the source of the *vṛddhi*.

V.53.5: The construction of this vs. is very problematic and has been much discussed (see, e.g., Old’s long consideration). In the end my interpr. is closest, but not identical, to Re’s, though perhaps not arrived at by the same means.

To deal with the easiest issue first, *pace* Gr and Ge I do not construe *ānu ... dadhe* together. For one thing *ānu* $\sqrt{\text{dhā}}$ barely exists; moreover a preverb in tmesis is unlikely to move to the end of the preceding pāda (so also Re). Rather, it surely governs preceding immediately *rāthān*, like similarly pāda-final *ródasī ānu* in 6c. It can be further noted that *ānu* is a signature word of this hymn, occurring 6x: 2c, 5a, 6c, 10c, 11c, 16c. With *ānu* otherwise assigned, the simplex verb *dadhe* ‘I take my place’ is then easily construed with the purpose dat. *mudé*.

The real problem in the verse is what to do with pāda c. The easy sense that Ge extracts from it (“die wie die Himmel (Tage) mit Regen kommen”) makes a hash of the grammar. Assuming that he means *dyāvah* to be compared with the chariots, with the point of comparison found in the part. ‘coming’ (*yatīḥ*),

- 1) *dyāvah* must be taken as an acc., which is simply impossible; or
- 2) the alternative to 1) is to assume the whole simile has reverted to the nominative, something that doesn’t happen in RV, as I long ago demonstrated (“Case disharmony...”) though Ge asserts it here (his n. 5c referring to his n. to I.180.3d);
- 3) the fem. part. *yatīḥ* should modify masc. *rāthān* or else, by attraction, *dyāvah*, which latter is only fem. in the meaning ‘heaven’, not ‘day’.

A way to a solution (or partial solution) comes from recognizing that the fem. pl. part. *yatīḥ* regularly modifies ‘waters’; cf. *āpah ná pravātā yatīḥ* VIII.6.34 = 13.8 = IX.24.2, *āpo ādṛśram āyatīḥ* X.30.13, *apām ārtham yatīnām*. It is therefore quite likely, esp. in this rainy context, that ‘waters’ is gapped here, solving the gender problem -- and

also the case problem, because, adding another nominal element to the syntagm allows *dyāvah* to take its expected nominative role and respond to the acc. represented by (*apó*) *yatīh*. Re's tr. reflects this: "comme les cieux (agrément les eaux), qui vont avec la pluie."

The question is then what is the mediating verb? Re's 'agrément' makes sense, but he doesn't explain where he got it. I think it is possible to generate it from the datival *mudé* of b, either by simply switching emphasis from the finite verb *dadhe* to its infinitival complement or, in a trickier move, reading *mudé* a 2nd time, but this time as a 1st sg. mid. to a root present: \sqrt{mud} has a hapax med. root opt. *mudīmahī*, and though it is generally classified as a root aor., a root pres. is certainly not excluded. It is worth noting that this opt. is construed with the preverb *ānu* (VIII.1.14 *ānu stómam mudhīmahī*). Assuming this lexeme in our c would simplify the rendering of the simile. I therefore suggest a slight alteration to the published translation, to "(I delighting/delight) like the heavens (in the waters) when they come with their rain."

See also disc. ad 10c, which in some ways repairs this problematic passage.

V.53.6: As noted by most comm., masc. acc. sg. *yām*, presumably modifying *kósam*, has no referent in the main cl. Such "improper" relativization is not rare in the RV.

ānu at the end of c can also, secondarily, be read with d: *ānu, dhānvanā*.

V.53.7: In c I construe *ādhvanah* as an abl. with *syannā(h)* rather than a gen. with *vimócane*. The effective difference is trivial, but the image seems more dynamic if the horses, unhitched, rush off into the roadside pastures (perhaps in pursuit of the "dappled females," though if the latter are antelopes, this would lead to species crossbreeding).

V.53.8: The abl. *parāvatah* is somewhat odd with *māva sthāta* "don't stay away"; we would expect loc. *parāvāti*, which is quite well-attested. It may be that *parāvatah* has simply been harmonized with the ablatives in ab: *divá(h) ... antárikṣād amāt*. However, it's also possible to take *māva sthāta* in c as a parenthetical exclamation and *parāvatah* as a continuation of the abl. phrase of ab: "Drive hither, Maruts, from heaven, from the midspace, from nearby -- don't stay away! -- and from a distance." This might also explain the unusual pāda-final *utá* of b. I therefore offer this as an alternative to the publ. tr.

There is also the question of what the lexeme *áva* $\sqrt{sthā}$ means here. Generally it means 'descend', often into a river or the like (see Re ad loc.). But that doesn't make sense here: if the Maruts are to come here from heaven or the midspace, as they are invited to in ab, they will *have to* descend. If we take the *áva* seriously, perhaps the idea is that the Maruts shouldn't perform their descent somewhere else than here-- at a distance -- perhaps into the rivers named in the next vs. But this seems overly complex.

V.53.8-9: Note the phonological modulation of #*ā* ... (8a) to #*māva*...(8c) to #*mā vo* (9a) / *mā vah* (9bc). The *vah* then migrates to the end of 9d.

V.53.10: In some ways this vs. is both a variant and a repair of vs. 5. Like that vs. it begins with an acc. phrase referring to the Maruts' chariots. Following (*ānu*) they come the rains: *ānu prā yanti vṛṣṭáyah*, a variant of 5c *vṛṣṭī ... yatīr iva* "(fem. pl.) coming with their rain," where I supplied 'waters' as the referent of the participle. The syntax is

somewhat different, but the elements are there. In this passage the relationship between the metaphor and the natural world is drawn more clearly: the chariots and the flock of Maruts represent thunder and lightning (see below), which are regularly followed by rain.

While a, c may function as repair, the phrase in b, ... *gaṇām mārutam nāvyaśīnām*, introduces a new poetic complication. It is found identically in V.58.1, where it is even more troublesome. The problem is what to supply with gen. pl. fem. *nāvyaśīnām*. Ge and Re, rather bizarrely, choose to supply Maruts -- e.g., Ge “der ... marutische Schar der neuesten (Marut).” This not only contravenes the unmistakable gender of *nāvyaśīnām*, but it produces an awkward and clunky pleonastic expression. It is also unclear to me who the “newer” or “newest” (latter both Ge and Re) Maruts would be: it is generally emphasized that the Maruts are indistinguishable and “there is no last one” (V.58.5). Nonetheless the view that *nāvyaśīnām* refers to the Maruts is well entrenched. There is no masc. gen. pl. comparative attested in Vedic, and both Lanman (Noun Inflec. 515) and Macd (VG 234) state that the fem. form is used instead in these two passages “in agreement with *marūtām*” (Macd, as if gen. pl. *marūtām* were actually in the passage), due to “metrical exigencies” (again Macd, but same view expressed by Lanman). The metrical argument is strikingly weak: although neither a putative masc. gen. pl. **nāvyaśām* nor **nāvīyaśām* built to the alternative comparative stem would fit this exact metrical slot even with distraction of the gen. pl. ending (as here), neither form would have any trouble fitting into other parts of a Vedic metrical line (including the cadence), and it’s difficult to believe that a poet like Śyāvāśva would set his heart on putting a comparative *just here* and then seriously distort the grammar to shove it in. (Sāy., it should be noted, does not supply Maruts, but still ignores the gender of *nāvyaśīnām* by glossing it with the grammatically ambiguous *nūtanānām* and then connecting that gen. pl. with *rāthānām* in pāda a.)

WG have the merit of supplying a fem., namely ‘rains’, borrowed from the *vṛṣṭāyaḥ* of c. But this again seems pleonastic: why would the rains follow the rains, and indeed why would the (temporally unmarked) rains follow the newer rains? I start by considering what is regularly called ‘newer’. To this there is a ready answer: hymns, songs, formulations, thoughts, etc. -- the standard verbal products celebrated in RVic discourse, several of which are fem. In fact, note that in the next vs. (53.11) two such words are prominently positioned at the ends of pādas: *suśastībhiḥ* (11b) ‘good chants’ and *dhītībhiḥ* (11c) ‘poetic thoughts’, both of which are elsewhere modified by *nāvyaśī-*: VIII.5.25 *nāvyaśībhiḥ suśastībhiḥ*; I.143.1 ... *nāvyaśīm dhītīm*. I therefore propose that we should supply such a word with *nāvyaśīnām* in 10b. (In the publ. tr. it is ‘hymns’.) But this produces an odd locution, “the Marut flock of newer (hymns),” with semantically ill-assorted elements joined -- or so it seems at first glance. But remember that the poet is depicting a metaphorical thunderstorm: the rains, undisguised, come last, but I think we have both thunder and lightning earlier in the vs.: the flock is *tveṣām* ‘glittering’ (though, I must admit, the word sometimes just means ‘turbulent’: see *vāta-tviṣ-* ‘turbulent as the wind’ in the next hymn, V.54.3), which can represent the lightning. And the flock also consists of “hymns,” which in this context can be the regular booming of thunder claps.

V.53.11: The Maruts’ thunder-hymns are then met with our reciprocal offered praise hymns.

In pāda a *va eṣām* is taken by all standard tr. as a doubled gen. pl., essentially “of these you,” though not so tr. I think rather that *eṣām* refers to the chariots, and *vaḥ* is the gen. dependent on the whole NP *śārdhaṃ-śardham ... eṣām*, which simply reprises 10a *tām vaḥ śārdhaṃ rāthānām*, with gen. pl. of the chariots.

V.53.12: The question *kāsmāi ... prā yayuḥ* “to whom have they driven” returns us to the questions in vs. 2: *kathā yayuḥ / kāsmāi sasruḥ* “How have they driven? To whom have they flowed?” The referent of *kāsmāi* in 2, the “good giver” (*sudāse*), is further specified here as “one who has given an oblation” (*rātāhavyāya*), though with different roots ‘give’. This ring-compositional reprise brings to a close the descriptive portion of the hymn, and the poet turns to requests.

V.53.13: With the standard tr. I take *yēna* in pāda as referring to *enā yāmena* in the previous vs. (12c).

I tr. *dhānyā*- lit., ‘related to grain (*dhānā*), as ‘granular’, because I think it refers both to the raindrops, shaped like grain, and the actual grain that results from the rain.

I.57.1 *rādhō víśvāyu* suggests that *visvāyu* belongs to what precedes, rather than to *saubhagam* as Ge and Re take it.

V.53.14: The standard tr. take *usrī* as having temporal domain over the whole of pāda c: “when it rains, the waters at dawn are luck, lifetime, and medicine.” I don’t see any way to tell, and in fact I don’t see why dawn should limit any of these predicates.

V.53.16: Unaccented *asya* should not modify *stuvatāḥ* as WG take it. Better the solutions of Ge and Re, esp. the latter, who separate these two genitives, with Re supplying “Marut troop” with *asya*.

V.54 Maruts

V.54.1: The first word of the hymn is *prā*, as it was in V.52, the first of Śyāvāśva’s Marut hymns. It would at first appear to be in tmesis with *anajā* in b (so Gr and see Re’s bizarre tr. “je veux lancer-avec-onction”), but *√añj* does not otherwise appear with *prā*. I think it rather belongs with the last word of the vs., *arcata*. The syntagm *prā √arc* is quite common and, more to the point, began the first hymn in this cycle: V.52.1ab *prā ..., ārcā*. The rest of our vs., from *śārdhāya* to *dyumnāśravase*, is set into this celebratory frame.

anajā is the 1st sg. act. nasal infix pres. subjunctive, as all the standard tr. take it, *pace* its assignment to the pf. by Gr, Wh, Macd.

My tr. of *gharmastúbh-* ‘with the rhythm of the gharma-pot’ sounds like a bahuvrīhi, which it is not. Better would be ‘chanting rhythmically (like) the gharma-pot’ (cf. *chandastúbh-* in nearby V.52.12). The point of comparison, as is noted by most comm., is the regular bubbling of the gharma-pot.

My “sacrificing on the back of heaven” agrees with Ge and Re in taking *divāḥ* as limiting the first member of *pr̥sthayājvane*. Old allows both this and a syntagm *divā ā* “from heaven,” while WG follow Old’s 2nd alternative and suggest that the Maruts are sacrificing on the back of the earth (to be supplied). It is difficult to make a judgment here.

V.54.2: Like the 1st vs. this one begins with *prá*. Also like the first vs. the first hemistich of this one is dense with cmpds, here describing the Maruts' chariots.

The repetition of *párijrayaḥ* at the end of both hemistichs seems a bit clunky and perhaps especially so because, if the forms are nom. plurals (as generally taken), the supposed stem *pári-jri-* is ill-formed: we expect an empty final *-t-* on what looks like a root noun in short resonant. This supposed stem *párijri-* occurs once outside of this hymn, also pāda-final, also as apparent nom. pl. of the Maruts (I.64.5), and the root noun *-jri-* is also supposed to be found in *urujrí-* twice, again as nom./voc. pl. *urujráyāḥ* (accented VIII.70.4, unaccented voc. VII.39.3, the only form not pāda-final). Thus all attested forms of the supposed *-jri-* stem are in the shape *-jrayaḥ* (accented or not). The 2nd cmpd exists beside an *s*-stem bahuvrīhi *urujráyas-* (twice in acc. sg. *-asam*), and a simplex neut. *s*-stem *jráyas-* is well attested (approx. 15x), with Aves. and OP cognates *zraīiaḥ-* and *drayaḥ-* respectively. All of this makes the stem *-jri-* seem very fishy. Debrunner (AiG II.2.44) explains the forms, which, as we saw, all end in *-ayas*, as haplogologies from **-ayasas*, making ref. to Wackernagel's AiG III.80, which presents other possible haplogologies to *-s*-stem **-asas* forms. Though I am leery of systematic haplogologies, I think this has a reasonable chance of being right, esp. in this pāda-final position. However, in our passage I think there is another contributing factor. Ge (n. 2ab) adduces two passages containing *jráyas-*: X.92.5 *pariyánn úru jráyāḥ* (IX.68.2, not cited by Ge, is identical) and I.95.9 *urú te jráyas páry eti*, with *pári* (+ VERB OF MOTION) collocated with the *-s*-stem *jráyas-*. In V.54.2 *párijrayaḥ* seems almost like a univerbation of a prepositional/adverbial phrase *pári *jráyāḥ* "around the (broad) expanse." It is even possible that one of the forms in this vs. is meant to represent the adverbial phrase -- so, possibly, ab "forth (go your chariots) around the expanse," referring to the Maruts' circling the earth or the midspace -- while the other is a nom. pl. (by old haplogology), to be rendered as in the publ. tr.: "the waters swirling in their stream bed." This would alleviate the clunkiness of the repetition, which would then be only apparent.

As Ge. remarks (n. 2c), "Trita's Beziehung zu den Marut ist dunkel." Trita is associated with the Maruts also in II.34.10, 14. In vs. 10 of that hymn Trita seems to be associated with making noise, as here; that is as far as I can get.

V.54.3: Pāda-final *parvatacyút-* returns here (from 1b) but in a different form: nom. pl. *-aḥ* rather than dat. sg. *-e*.

V.54.4: The vs. sets up pairs of antitheses: nights/days (a), midspace/dusky realms (b), with the third only indirectly implied: fields [=dry land]/ *water [via boats] (c).

The *īm* that interrupts the simile *nāvaḥ ... yathā* in c is superficially puzzling, but I think it is related to the implication just noted: it stands for the acc. 'waters' in the full realization of the phrase "like boats (through waters)." It is also worthy of note that the cadences of pādas c and d are phonologically similar, esp. at beginning and end, though they achieve this through very different grammatical means: ... *nāva īm yathā* # ... *nāha riṣyatha* #.

V.54.5: Note the phonetic echoes: (*mahi*)*t(v)anā(m)* ... (*ta*)*tāna* ... (*é*)*tā ná* ... (*áyā*)*tanā*.

I take “greatness” (or “heroism [and] greatness”) to be the unexpressed subj. of *tatāna* in b, rather than *yójanam* with Ge. The latter is an acc. of extent of space, and the phrase #*dīrghām ... yójanam*# is iconically positioned to express the distance traversed.

In the second hemistich contra Ge and Re I take c as a separate nominal main clause, with d a temporal dependent cl. This allows the *yád* to be properly positioned, rather than occurring deep in the dependent cl. (The WG treatment is similar to mine.) The shared characteristic in the simile in c, ‘having ungraspable brilliance’ (*āgrbhītasocis-*), presumably refers to the combination of speed and timidity that characterizes antelopes, deer, and their ilk and makes them hard to catch. If we were to speculate more narrowly, the ‘brilliance’ might refer either to the conspicuous white spots on the coat of the chital deer or the white sides, underbelly, interior legs, and hindquarters of the blackbuck -- both species that seem native to the right location.

The puzzle in d is the phrase *ánaśvadām ... girīm* “the non-horse-giving mountain.” In order to approach it, we might first tackle the verb that governs it, *ny āyātanā*. The lexeme *ní√yā* is generally hostile; cf. nearby V.42.10 (also of the Maruts) *yá óhate rakṣáso devāvītāv / acakrēbhis tám maruto ní yāta* “Who(ever) will laud the demons at the invitation to the gods, run him over/down, Maruts, with your wheel-less (chariots).” In our passage the sense seems to be that the Maruts trample down or overrun a mountain whose behavior deserves it. But what is a non-horse-giving mountain? On the one hand, it may simply refer to a stingy mountain, comparable to a stingy patron, contrasted to *aśvadā-* ‘horse-giving’ used of generous patrons elsewhere. But still, why horses? Mountains can be the source of nourishment and wealth; cf. I.65.5 *gírīr ná bhújma* “a source of benefit like a mountain” (also VIII.50.2 and comm. ad I.55.3). But mountainous terrain is not particularly friendly to horses, which are most at home in open, relatively flat grasslands. I therefore wonder if the operable segmentation of the cmpd is *anaśva-dā-* ‘giving non-horses’ (rather than *an-aśvadā-* ‘not giving horses’). This might then be an oblique reference to the Vala myth and the mountain that yields up cows (that is, non-horses). However, since the Maruts are not generally associated with the Vala myth, this may be farfetched. The safest interpr. is Old’s deflection, that the phrase is “auf unbekannte Erzählung anspielend.”

V.54.6: My interpr. follows that of Narten (Sig.Aor. 195–96), with the first pāda consisting of the *yád* clause, the 2nd the main cl. Both Ge and Re take the first part of pāda a as the main cl., with the dependent clause starting with *yád*. Although *yád* is better positioned in their interpr. than in Narten’s, they must make *arṇasám* an obj. of *móṣathā* (in unconvincing fashion) and the sequence of tense/mood is badly off: aug. aor. *ābhrāji* ... aor. subjunctive *móṣathā*, lit., “it has flashed when you will steal ...” Ge simply renders the subjunctive as a preterite, while Re’s parenthesis in “vous déroba(i)ez” is masterfully evasive even for him.

As I just said, I am not happy with the position of *yád* in Narten’s/my interpr., since it follows both the verb and part of the subject (plus a voc., but that doesn’t count). There is another possibility, that *yád* functions here as a sort of izafe, connecting *śárdhaḥ* and *arṇasám*: “the troop, which is a flood.” In this case *ābhrāji* would be a main-cl. verb, and the two pādas, a and b, would be syntactically unconnected: “The troop that is a flood has flashed; you will plunder ...” *arṇasá-* is a hapax. Narten takes it as an adjectival deriv. of *arṇas-* ‘flood’, but it could have been (re-)substantivized as ‘flood’.

The point of comparison in b between the Maruts and the caterpillar is that violent storms also strip the leaves off trees.

The sequence *vrkṣām kap(anéva)* is oddly reminiscent of *Vṛṣākapi*, the randy monkey in X.86, but this must be accidental.

In the publ. tr. the voc. *sajoṣasaḥ* is not rendered as a voc., since the Engl. would be awkward.

The *s*-aor. subj. *neṣathā* ‘you will lead’ is particularly appropriate to the obj. *arāmati-*, the personified feminine Proper Thinking, since the verb \sqrt{ni} , esp. in sigmatic forms, becomes specialized for leading females in ritual settings; cf. the priestly title *Neṣtar*. Although *neṣtar*- probably owes its *-s-* to crossing of the agent noun *nétar-* with *Tvaṣtar* (*tvāṣtar-*), who is also associated with ritual females (see EWA s.v. *neṣtar-*), its apparent coincidence with the *neṣ* of the *s*-aor. could spread the semantics.

V.54.7: In d the sequence *ṛṣim vā* must have been fronted around the rel. *yām*, since the phrase as a whole *ṛṣim vā yām rājānam vā* does not mean “either the seer or which king” but “which seer or king” -- or even better “which one, whether seer or king.”

I take the thematic stem *sūṣūda-* as ultimately deriving from a pf. subjunctive, despite accent. In this particular form, the 2nd pl. indic. pf. **sūṣūda*, with the rarely occurring 2nd pl. act. pf. ending *-a*, would have simply been extended by the prim. ending.

V.54.8: In the cmpd. *grāmajīt-* the 1st member could have either an acc. or an instr. relationship with the root noun. Both would be possible: ‘conquering roving band’ (so Gr, Ge, Re, Thieme [M+A 81]) or ‘conquering with/in roving bands’. Although in such root noun cmpds an acc. relationship is more common, indeed also among cmpds in *-jīt-*, I follow Scarlatta’s preferred interpr. (156) found also in his tr. (=WG), although the acc. interpr. is hardly excluded. The parallel I.100.10 *grāmebhiḥ sánitā*, cited by Re, is suggestive.

My interpr. of b follows Thieme (M+A 81), esp. of *aryamānaḥ*, which he takes as “hospitable ones (hospitable householders who refresh the stranger).” Others take it as a pregnant pl. referring to “(Mitra, Varuṇa, and) Aryaman.”

The dep. cl. in c, *yád ināso ásvaran*, can be construed either with what precedes or what follows, but sits uneasily with either because of its augmented *ásvaran*, which doesn’t match the pres. indic. *pínvanti* (c) or *undanti* (d). I chose to connect it with d, as thunder before rain.

V.54.9: *dyaúḥ* is clearly fem. here, given the adj. *pravátvatī*, but this gender choice must be conditioned by its standard formulaic partner, fem. *prthivī*, in the preceding pāda, modified by the same adj. in the same position.

The nom. pl. *jīrádānavaḥ* ‘having lively drops’ in d must modify the mountains (*párvatāḥ*), but in the immed. preceding hymn it is found in the voc. of the Maruts (V.53.6, in the same metrical pos.; cf. also I.34.4 a nom. pl. of the Maruts in the same position). There are no grounds for emending the text by deleting the accent and making it into a voc. (which would also entail a switch from 3rd to 2nd ps. ref.); how would it have acquired the accent here? Rather it must be word play: mountains produce torrents of water when it rains.

V.54.10: The *s*-stem adj. *sá-bharas-* (so accented in X.101.3, though it is an accentless voc. here), tr. here ‘of equal gravity’, is a bahuvrīhi with the lit. sense ‘having the same burden / weight’, with the same *-bharas-* as in *viśvá-bharas-* ‘bringing all’, i.e., lit. ‘having/bringing all burdens’ in IV.1.19.

s^uvarṇarāḥ at the end of pāda a picks up *nāraḥ* at the end of 8a and 10b and *asvaran* at the end of 8c.

V.54.12: Note the repetition of *ágrbhīta-śociṣ-* from 5c; this cmpd is found only once elsewhere in the RV (VIII.23.1, of Agni).

The first hemistich is discussed in some detail by Thieme (Fremd. 68–70), whose interpr. I basically follow. I would add that the (heavenly) brilliance that cannot be grasped by the Ārya on earth is shaken down as rain by the Maruts.

There are two basic interpr. of c, depending on what the subject of *sám acyanta* is taken to be. For Ge the subj. is the Maruts, with *vṛjānā* the grammatical obj. referring to their girthbands: they are girding themselves for battle. WG’s interpr. also takes the reference to be to the Maruts, but with *vṛjānā* as the subj. referring to the closing of the ranks (Reihe) of the Maruts, again before some warlike manoeuvre on their part. In both these interpr. the referent of the subj. of *sám acyanta* and *átitviṣanta* is the same: the Maruts. With Re I instead consider the verbs to have different subjects: the subj. of *sám acyanta*, *vṛjānā*, refers to the circles or communities of the Ārya, while the Maruts are the subj. of *átitviṣanta*. I think the two hemistichs contrast the Maruts’ effects on the Ārya communities: in ab the Maruts bring them the welcome rain they cannot get themselves, but in cd they cling together during the violence of the Maruts’ storm. (I cannot decide which strain Kü’s tr. (224) follows, though WG’s paraphrase of it in their n. leans towards the Re/JB side.)

V.54.13: The verb in d, *rāraṇta*, presents difficulties both morphologically and semantically. Formally it has received a variety of analyses: Gr classifies it (impossibly) with \sqrt{radh} ‘subdue’; as Old notes, in context it would best belong to $\sqrt{rā}$ ‘give’, but it is hard to make this work formally. Given the long redupl. characteristic of the pf. to \sqrt{ran} ‘enjoy’, the form most likely belongs there. Lub. classifies it as a med. (3rd sg.) injunc. to that root, but there are no other med. forms to this stem or indeed to the root (*raṇáyanta* being an *-anta* replacement). I think we are therefore stuck with the formally most likely analysis, given by Kü, as 2nd pl. pf. impv., with (as often) irregular full grade (see also Ge n. 13d). This poses problems semantically. It should mean ‘enjoy’, with the Maruts as subject. The gapped obj. is qualified by *sahasrín-* ‘possessing/in thousands’; as Re points out, this is a stable epithet of *rayí-* ‘wealth’. And this is the problem: the Maruts have just given us wealth; we should be the ones enjoying it. Gods never enjoy wealth -- they distribute it. Ge suggests in his n. that the thousandfold wealth they enjoy is “in Gestalt von Opfern,” which is certainly a good try (probably the best available). Old tries to make the verb into what looks like a reflexive causative: “macht [den Reichtum] bei uns sich erfreuen” -- that is, the Maruts should make the wealth be happy to stay by us. WG go one step further in the causativization process: “(An diesem Reichtum) ... macht, dass man sich hier bei uns daran freue ... am tausendfachen.” But these last two attempts to separate the Maruts from the enjoyment are unconvincing, because no other forms to this stem show this causative tendency. I think we probably should stick with the meaning

imposed by parallel forms (so also Re) and deal, perhaps as Ge does, with the Maruts enjoying riches. The possible transitivity of *rārandhi*, built to the same stem, in X.59.5 (q.v.), via reinterpret. as a redupl. aor., is not really available here because *asmé* is not acc. and so the phrase cannot straightforwardly mean “make us enjoy wealth.” However, it might be possible to interpr. it as “make wealth enjoyable to us.”

V.54.14: The problematic wealth of 13d reappears in 14a as the obj. of a gapped verb whose subj. is the Maruts, but in this case we can borrow the verb from the next pāda, *avatha* ‘you aid’. Ge unaccountably supplies a verb (“gewähret”) that matches neither what precedes nor what follows.

The pāda-final words in the first hemistich, ... *spārhāvīran*# and ... *sāmavīpram*# are phonologically similar. This partial match may help explain the odd hapax *sāmavīpra*-. Although my tr. ‘inspired in his melody’ is structurally similar to the other standard renderings (e.g., Re ‘inspiré par la mélodie-sacréé’), the cmpd should not mean that. For one thing the 2nd member *vīpra*- is almost never used adjectivally (*pace* Gr), but almost always as a noun referring to a type of poet. Moreover, the accent strong suggests a bahuvrīhi. A literal rendering of such a bahuvrīhi would be something like ‘whose inspired poet is the melody’ or ‘whose inspired poet has the melody’ (latter like *vājra-bāhu*- ‘having an arm that has a mace (in it)’), which do not work as descriptors of a seer. I wonder if the phonological play just noted didn’t flip the order of the cmpd members, and the underlying form would be **vīpra-sāman*- ‘having the melody of an inspired poet’. Exact parallels are *vīpra-manman*- ‘having the thought of an inspired poet / having inspired thought’ in VI.39.1, where it modifies *kavī*-, and *vīpra-vacas*- ‘having the speech of an inspired poet / having inspired speech’ in VIII.61.8.

V.55 Maruts

V.55.1: The question about *prāyajyu*- is how technically it is meant; I here follow Re.

The first hemistich recalls vs. 11 in the previous hymn, esp. in the bahuvrīhi *rukma-vakṣas*- ‘with brilliants on their breasts’ (lit. ‘having breasts with brilliants on them’, of the *vājra-bāhu*- type), which matches the nominal phrase V.54.11b *vākṣassu rukmā*, but also in *bhrājad-ṛṣti*- ‘having glinting spears’, whose members are distributed differently in 54.11a *āmseṣu ... ṛṣṭāyaḥ* and b *agnībhājasah*.

The idiom *śubham* √ *yā* is used of the Maruts elsewhere, in nearby V.57.2 as well as I.23.11; cf. also the cmpds *śubham-yā(van)*-. My “drove in beauty” is of course a conscious echo of Byron’s “She walks in beauty, like the night.” A different kind of English resonance would be offered by “gone to glory.”

V.55.2: The verb *vī rājatha* can mean either ‘shine forth’ or ‘reign over’; both fit the context and the subject, though given pāda a “you assumed your power,” perhaps ‘rule’ has the edge. The root noun cmpd *virāj-* seems confined to the ‘rule’ sense, when it does not refer to the meter by that name.

V.55.4: I take *ābhūṣēnya*- as a quasi-desiderative gerundive, parallel to *didṛkṣēnya*- ‘desirable to be seen’ -- hence ‘desirable to become’ → ‘to be emulated’. However it may simply mean ‘to be attended upon’.

The *utá* introducing the impv. in c is awkwardly rendered as ‘and’. Klein (DGRV I.454) says it means rather ‘therefore’, which works better in English. However, ‘therefore’ for *utá* does not have much support (3 passages cited by Klein out of over 750) or a clear path of development, and a closer look at the context does not yield a causal “X, therefore Y” interpr. It is possible that the morphologically ambiguous *dadhātana* is not an imperative but an injunctive, which would yield a more acceptable pendant “and you establish us in immortality.” And it is also possible that the *utá* here loosely matches the other 3rd-pāda *utá*-s in 2c, 7c, while anticipating 5a #*úd*.

V.56 Maruts

V.56.1: Ge (/WG) supply “bring,” an impv. addressed to Agni, in the first hemistich. There seems no particularly reason to do so, since the acc. phrase of ab can be construed with *áva hvaye* in c. Perhaps it’s on the basis of the *ā* in pāda a, but this is in the wrong position to be a gapped preverb. I don’t actually know what *ā* is doing, but note that in the ring-compositional expressions in vss. 8–9, the ‘call’ verb is construed with *ā*.

V.56.2: The question in this vs. is who is the 2nd sg. referent of *mānyase* (a), *te* (c), and *vardha* (d). Acdg. to Sāy. it is still Agni, but Ge suggests alternatively that it could be the self-address of the poet, a view shared by Re. (WG think Agni, but with a very peculiar tr. of pāda a). I think poetic self-address is excluded because of the *me* in b: the poet is unlikely to refer to himself as “you (sg.)” and “me” in successive pādas (and then back to “you”), so Agni is the more likely. The point must be that both Agni and the poet want the same thing -- for the Maruts to come to the sacrifice. The identification of you as Agni requires that he possess/produce *hāvana*- ‘calls’ in c. This can refer to the crackling of the fire. Alternatively, flg. Gr, *hāvana*- could belong to *√hu* and mean ‘oblations’, but *pace* Gr none of the occurrences he adduces need to have that meaning.

V.56.3: The gender politics of this vs. would not bear modern scrutiny: the idea seems to be that the Earth enjoys rough sex because she gets nice presents. But it is a powerful image.

The poss. adj. *mīlhuśmant-* occurs twice in the RV; the other form is found in VI.50.12, where it is masc. and seems barely distinct from *mīlhvás-* ‘giving rewards, generous’. Here in this fem. form the possessive value of *-mant-* does have force, assuming the correctness of Ge’s and Re’s interpr. as ‘possessing a generous (man/lord/spouse)’. WG take it rather as ‘Soldatenbraut’, interpr. *mīlhvás-* as ‘one who has *mīlhá-*’ (booty, etc) and further suggesting that the woman in question was part of the spoils of war. This is appealing in some ways, but it does not fit well with the last word of the hymn, *mīlhuś*.

As Ge points out (n. 3a), *pārāhatā* may have two senses -- simply ‘beaten aside’ by the onslaught of the Maruts and ‘(sexually) penetrated’, for which sense he cites ŚB XI.5.1.1 *vaitasēna daṇḍēna hatāt* [*sic*, not Ge’s *hatā*], the ŚB paraphrase of Urvaśī’s ... *mā ... śnathayo vaitasēna* (X.95.5) “you pierced me with your rod.”

V.56.4: *ní√ri* means ‘make flow’, hence ‘liquefy, dissolve’. In I.127.4 the very similar *sthīrā cid ānnā ní riṇāti ójasā* has ‘sturdy foods’ as obj., but since Agni is the subject, the

food is presumably wood of some sort. In nearby V.58.6 a middle intrans. of \sqrt{ri} (though without preverb) takes trees as subj.: *riṇaté vānāni* “the trees dissolve.” I therefore supply them as obj. here.

What then does the simile in b have to do with this? Even unruly oxen are unlikely to dissolve trees. Because the images don’t easily harmonize, I now think that the simile in b should go with the 2nd hemistich: unruly oxen *can* cause the ground to shake. This is somewhat difficult to convey in tr. -- I might rearrange it to “like oxen averse to the yoke / they shake ...”

The phrase *gāvaḥ ... durdhúraḥ* echoes *dudhró gaúḥ* of 3d phonologically, even though the adjectives are entirely unrelated.

As often Ge takes *cīd* in c as a simile marker, a function for which there is no good evidence.

V.56.5: Ge takes the impv. *út tiṣṭha* as another self-address of the poet; again the presence of a 1st ps. sg. in the vs. (*hvaye* in d) makes that unlikely. I think it is directed rather at Agni, like the direct addresses in vss. 1 and 2. For the same impv. cf. IV.4.4 *úd agne tiṣṭha* (sim. VIII.23.5): the ritual fire is blazing up while the Maruts are called to the sacrifice. In this case Agni may be commanded to rise up with praises (*stómaiḥ*) -- praises like his calls in 2c. Alternatively, there may be a clause break after the impv., with a new clause beginning with *nūnām* and continuing to the end of the vs. (This division was suggested by Natalie Operstein in class in the early 2000s.) The praises will then be those produced by the 1st ps. poet who is the subj. of *hvaye* at the end of the vs.

In b *sāmukṣita-* can hardly be separated from nearby V.55.3 *sākām ukṣitāḥ*, and V.57.8 *bṛhád ukṣāmāṇāḥ* also supports the root etym. to $\sqrt{vakṣ}$ /*ukṣ* ‘be(come) strong’, against Gr’s connection with $\sqrt{ukṣ}$ ‘sprinkle’.

V.56.6: As Bl (RVReps) and Ge point out, this vs. appears to have been constructed from textual blocks found in I.14.12 and I.134.3. Our pāda a *yuṅgdhvám hy áruṣī ráthe* is identical to I.14.12a except for the sg. impv. *yukṣvā hí* rather than our pl. *yuṅgdhvám hí*. If our pāda is modeled on I.14.12 (or a similar source) it could explain both the *hí* with no obvious function and the sg. chariot *ráthe* for the plural Maruts; this mismatch in number is repaired in the next pāda *yuṅgdhvám rátheṣu rohítaḥ*. This latter pāda has no close parallels in the RV, though I.14.12b ends with *rohítaḥ*, which is a further obj. to *yukṣvā* in pāda a (I.14.12b *haríto deva rohítaḥ*) and so may be a distant source. Our 2nd hemistich *yuṅgdhvám hári ajirā dhurí vólhave, váhiṣṭhā dhurí vólhave* closely follows I.134.3bc *vāyú ráthe ajirā dhurí vólhave, váhiṣṭhā dhurí vólhave* (whose pāda a contains the ‘yoke’ verb: *vāyúr yunkte ...*). What I don’t understand is why Śyāvāśva has made these clumsy adaptations just to produce a vs. that in context is just treading water -- there’s no need for a yoking vs. here.

Note that *váhiṣṭhā vólhave* “the two best pullers to pull” is an etymological figure, with both words built to \sqrt{vah} , though it is not at all transparent. Perhaps this is what attracted Śyāvāśva.

V.56.7: Whatever the reason for the previous vs., *syá vājy áruṣaḥ* “this reddish race horse here” contrasts with the *áruṣī(h)* ‘reddish (mares)’ in 6a. Although in the publ. tr. I identified the referent as Agni (and I still think he is a possible secondary referent), I now

accept the view of Sāy., Ge, and Re that it is the Beipferd of the Maruts (see the parallels adduced by Ge in n. 7a); otherwise the 2nd half of the vs. makes little sense.

The *mā* prohibitive in c contains what looks like a root aor. subjunctive *karat*. Flg. Wackernagel (Fs. Jacobi), Hoffmann (Injunc. 55–56; see also 92) explains this potentially embarrassing form as the injunctive to a thematized root aor., which thematization began from the ambiguous 1st sg. *ākaram*. He (somewhat disingenuously) notes that outside of *mā* clauses the *kara*- forms are otherwise only subjunctives, and he further suggests that his two exx. are found in idiomatic expressions that belong to the Volkssprache, which could explain the earlier thematization (cf. also Aufs. II.344 n. 2). (His other ex. of *mā* ... *karat* in VIII.2.20 I explain differently, as not belonging to the *mā* clause at all. See comm. ad loc.) Hoffmann’s thematic aor. explan. has been apparently accepted by Lub, who classifies the two forms identified thus by Hoffmann under “A-AOR.inj.” I am generally dubious, because the root aor. of \sqrt{kr} is so well entrenched in the RV and the -a-forms are otherwise found in clear subjunctive usage. However, I am somewhat sympathetic to the “idiomatic” explanation, esp. combined with a metrical observation: the injunc. *kaḥ* expected here is found almost entirely at the end of Triṣṭubh pādas, but would not work here at the end of a Jagatī pāda. Nonce thematization, esp. perhaps in a low-register expression, would be a quick fix.

WG produce a curious hybrid of prohibitive and subjunctive: “Nicht *soll und wird* er ... (euch) langsam *machen*” (my italics). I do not understand the explanation given in the n., or at least do not understand what sort of grammatical category is envisioned: “Uns scheint ein expekativer oder voluntativer Konjunktiv deutlich mitzuschwingen: >(Auf keinen Fall erwarten wir), dass er euch langsam mache< bzw. >Dass er euch ja nicht langsame mache!< This clearly builds on Tichy’s analysis of the function of the subjunctive as “expectation,” but I do not understand how the subjunctive would interact with the *mā*.

V.56.8–9: These two vss. essentially duplicate each other The main verbs of the two vss., *ā huvāmahe* (8b) and *ā huve* (9b) resonate with the verb in the 1st vs. (*ā...*) *āva hvaye*.

The battered-woman Earth who received presents (*mīlhuṣmatī*) in 3ab is balanced here by the glorious Rodasī, standing in apparently equality with the Maruts, dispensing presents herself (8c *surāṇāni bibhratī*, 9d *mīlhuṣṭī*). I see no merit on flg. Ge’s acceptance of Sāy.’s interpr. of *mīlhuṣṭī* as the name of the wife of Rudra.

V.57–58 Maruts

As Old (Proleg. 204–5) points out these two hymns are parallel and share a final vs. He attributes their position at the beginning of the four 8-vs. Marut hymns to this twinning. Otherwise V.58, in Triṣṭubh, should follow V.59, in Jagatī.

V.57 Maruts

V.57.3: After *dyām* in pāda a we expect **pṛthivīm*, but get phonologically similar *párvatān* instead. This disappointed expectation is “repaired” in pāda c, where *pṛthivīm* appears as the obj. of a different but semantically similar verb.

V.57.6: The pf. that ends the vs., *pipiśe*, produces a bad cadence that would be fixed by a heavy redupl. syllable. The metrical problem is not mentioned by Old or Kü; HvN note it but do not suggest a solution. I wonder if it is for intens. **pepiśe*; the act. intens. is found once in the late RV, while the middle begins to be attested in the AV, with a sense not appreciably different from non-intens. forms. Of course, the *t*-less ending *-e* would have to be accounted for, but several 3rd sg. med. intensives have such an ending; see Schaefer 44. Of course, this might all be more trouble than it's worth for a metrical violation.

V.57.7: The sentiment in pāda c is somewhat puzzling, though the grammar is straightforward: *práśastim naḥ kṛṇuta rudriyāsaḥ*. This should mean “make a eulogy for us, o Rudras,” with the VP *práśastim* √ *kṛ*. Though the three other occurrences of this VP, in I.113.19, 181.1, and II.41.16, do conform to expectations, taking it that way here would reverse the sacrificial bargain. As detailed in the first hemistich, the Maruts have given us bountiful riches of all sorts; in return we should be producing a *práśasti*- for them -- not they for us. In fact, of course, it is never the gods' job to produce praise for humans. In order to make sense of the phrase, I have pushed the sense of √ *kṛ* from ‘make’ to ‘make good’ -- that is, act such that the praise we are giving you is true. (You have given us many things; do it again.) Re's “faites nous (aujourd'hui une récompense digne du) panégyrique” is similar, despite the overstuffed parenthesis. There is another, less likely, alternative. As I have argued elsewhere (RV between Two Worlds, pp. 146–48), even in the RV the *práśasti*- was probably a genre of praise appropriate to kings and only secondarily applied to gods. It might be that the poet is asking the Maruts to render his patron and king deserving of his [=poet's] *práśasti*-, either by redistributing the wealth that they showered on the king or by the king's performing some worthy feat. But this seems overly complex and far less likely, and since *práśasti*-s in the RV are often directed at gods, it is unnecessary.

V.57.8: The vs. consists almost entirely of accented vocatives. Only the last phrase *bṛhád ukṣámānāḥ* escapes the voc. and that probably because accent conversion would be tricky.

The juxtaposition (across hemistich boundary) of *ṛta-jñāḥ* and *sátya-śrutāḥ* is striking -- and in my opinion telling with regard to the difference between *ṛtá*- and *sátya*-, both often tr. ‘truth’. Here *ṛtá*- is something one knows, but *sátya*- is something one hears. In my view *ṛtá*- is the immanent truth -- the principles and relations that lie underpin the world as we know it -- while *sátya*- is the realized truth. In some contexts this can be simply palpable reality, but here I think it refers to how *ṛtá*- is realized verbally, in the formulations of poets, available to be heard.

V.58 Maruts

V.58.1: On the phrase ... *gaṇám mārutam návyasīnām* with its problematic fem. gen. pl. *návyasīnām*, see the extensive disc. ad V.53.10.

There is complete fungibility between the collective sg. *gaṇám mārutam* “Marutian flock” and the plural *yé* in the 2nd hemistich referring to the individual Maruts, which picks up *gaṇám mārutam* by sense though not strictly by grammar. The *eṣām* at the end of pāda a seems clumsily pleonastic, however. It must refer also to the pl. Maruts and

depend on the acc. *gaṇám* (“the flock of them”), doubling the vṛddhi deriv. *mārutam*. It should *not* be construed with the fem. *nāvyasīnām*.

āśvāśva- shows phonological play, as well as being a buried etymological pun, if the old connection between *āśú-* and *āśva-* holds. It is also a kind of anagram for the poet’s name *śyāvāśva-*. Note that both words must be distracted to 4 syllables (*āśú-aśva* and *śyāvā-aśva* respectively).

The sequence *utésire* is entirely ambiguous between *utá īsire* and *utá ísire*. The Pp. reads the unaccented verb, but the *utá* suggests that the verb is conjoined with *váhante* and belongs to the rel. cl. and should therefore be accented.

V.58.2: In my opinion the same switch in number happens in this vs. as in the preceding one, exactly in the same way -- with *yé* in c picking up *gaṇám* in the first hemistich. The standard tr. take the rel. cl. of c with d: the pl. *yé* matches the number of its putative antecedent *nṛṇ* in d exactly. Although connecting with c thus appears to be the easier syntactic course, the exact parallelism between 1abc and 2abc makes that structure more appealing, and in addition the pāda-init. impv. *vāndasva* in d seems to be marking a syntactic break.

The first hemistich, which consists entirely of an acc. phrase, obviously simply continues vs. 1, skipping back over the rel. cl. in 1cd to the *gaṇám* phrase in 1ab.

The bv *dhúni-vrata-* ‘possessing a turbulent commandment’ has, at first glance, a curious sense, but the point is that, as the thunderstorm, the Maruts’ job -- their *vratá* -- is to be noisy, boisterous, and tumultuous.

The orig. *s*-stem *māyas-* has become a frozen, synchronically uninflected form in the RV. Therefore, the accent shift that makes possessive adjectives out of many neut. *s*-stems (type *yásas-* ‘glory’ → *yaśás-* ‘glorious’) was probably not an available derivational strategy -- hence the somewhat clumsy cmpd with *bhū-*.

The phrase *mayo(-bhúvah) ... ámitāḥ* appears to be an etymological play but of course is not. Note also *māyínam ... mayo-*.

It’s worthy of note that the vs. contains four nominal forms with 1st member ending in *-i*, with three different explanations: *khādi-hasta-*, *dhúni-vrata-* (both bahuvrīhis with regular *-i*-stem 1st members; for the latter see AiG II.2.296), the somewhat mysteriously formed (see below) *dāti-vāra-*, and *tuvi-rādhās-* (Caland compounding *-i-*). To which we might add *mayínām*, as well as *mahitvā* and the immediately preceding *ámitā(h)* with mirror-image phonology.

The cmpd. *dāti-vāra-* occurs 3x in the RV (and nowhere else): here, I.167.8, and III.58.2, but its repetitions in the Indo-Europeanist literature must number in the thousands. It is there generally taken as a representative of an archaic cmpd type with a verbal governing first member, found also in Greek forms like *βοτρί-άνειρα* ‘nourishing men’. The proposals for the identity of the first member vary wildly, though probably the current favorite, due to the prestige of J. Schindler, who championed it, is a *-ti*-stem nominal. This is not the place to explore the history of this cmpd., but two things are worth noting: 1) the evidence for the other Vedic cmpds that are supposed to belong with it is very weak; see esp. the remarks on *rīty-āp-* and *vṛṣṭi-dyu-* ad IX.106.9; 2) the three occurrences of the cmpd. have to be assessed in the context of apparent syntagms closely connected to it formulaically. The cmpd. always occurs as the final in a Triṣṭubh line; the VP *dāti vāriyam* is found at the end of Jagatī/dimeter lines at VII.15.12, 42.4, with

accented *dāti* at V.48.5, with impv. *dātu* at VII.15.11; with semantically similar obj., *dāti vājam* (Triṣṭubh) at VI.24.2, and non-adjacent with semantically similar obj. *dāti ... vāsu* at IV.8.3. It is hard to know what to make of this assemblage. The *dāti* forms are clearly finite verbs (note the lack of accent on several, as well as the impv. form *dātu*) in the independent syntagm, but they are not standard forms of $\sqrt{dā}$; at best the *dāti* forms are aorist subjunctives. But their appearance in the syntagm, with adjacent VO order, is obviously not independent of the cmpd. It is quite possible that *dāti* was extracted from the cmpd. and reinterpreted as a finite verb, but at the very least this means that the *dāti*- in the cmpd was not synchronically interpr. as a *-tí*-stem nominal. In any case, I am dubious about the antiquity of *dāti-vāra*- itself and even more so about the existence of a “type *dātivāra*,” as I have discussed elsewhere. On *vīti-hotra*- see comm. ad II.38.1, on *rītyāp*- and *vṛṣṭi-dyu*- comm. ad IX.106.9. For further disc. of these issues, see my forthcoming art. “Vedic Evidence for the Verbal-Governing *dāti-vāra*- Compound ‘Type’: A Critical Reassessment.”

V.58.3: The enclitic 2nd pl. *vaḥ* in pāda a must refer to the assemblage of ritual celebrants and its referent is not the same as the 2nd ps. ref. to the Maruts in the 2nd hemistich (voc. *marutaḥ*, impv. *juṣadhvam*, vocc. *kavayo yuvānaḥ*).

As JL observed, pāda d has only one accented syllable (the first word *etām*). The voc. phrase that ends it, *kavayo yuvānaḥ*, recurs in the final vs., 8c [=V.57.8c], but with voc. accent because it is in a string of such vocc.: *kāvayo yúvānaḥ*. As noted ad V.57.8, that verse consists almost entirely of accented vocc., so the poet seems to be playing with extremes of syntactically driven accent here.

V.58.4: The wrong sandhi in d *yuṣmád sádaśvo* is found in both Aufr. and HvN, but the Max Müller ed. has the correct *yuṣmát*. So, a copying error going back to Aufr., presumably generated from the *yuṣmád* beginning c, as well as immediately following *sád*-.

The two cmpds in c are a little aberrant in their semantic/morphology “interface.” Given the sense of the phrase, it’s possible that we’re dealing with a lower linguistic register with somewhat looser cmpding practices. *muṣṭi-hán*- (3x RV): as a root noun cmpd we might expect the 1st member to have object relationship with 2nd – and mean ‘smiting fist(s)’ like, e.g., *vṛtra-hán*- ‘smiting Vṛtra’. Scarlatta (690) suggests some (not very convincing) ways around this. In *bāhú-jūta*- we might expect agent+passive semantics: ‘sped by the arms’, like *índra-prasūta*- ‘impelled by Indra’ (etc. etc.).

Like 3d, 4b has only one accented syllable: *vibhvataṣṭám janayathā yajatrāḥ* -- though the lack may be less noticeable since the accented syllable comes closer to the middle of the line.

The sense of *írya*- is disputed, and it has no secure etym. (see EWA s.v. *írin*-). Schlerath (Königtum) suggests that it’s a deriv. of *írā*- ‘refreshing drink’, meaning ‘Nass spendend’, and this suggestion has been adopted by Oberlies (RdR II.178). However, this does not work in all passages, nor with *írin*- (V.87.3) if that is related. It seems best to follow the old standard gloss ‘regsam, rührig’, etc., and the posited connection to \sqrt{r} ‘arise’, etc. (see EWA loc. cit.).

There are two approaches to the interpr. of *vibhva-taṣṭá*-. One assumes that the first member is a PN, the name of one of the R̥bhus (so Re, WG). One of the occurrences

of the cmpd is in a Ṛbhu hymn, IV.36.5, in a vs. with both a form of the word *ṛbhú-* and the name of another Ṛbhu, *vāja-*. There the PN interpr. seems correct or at least a pun. However, in the other passages, III.49.1, V.42.12, and this one, all lacking a strong Ṛbhu presence, it seems best to see a more general meaning. Ge seems to follow this course (here and III.49.1, though not V.42.12) but his “vollendeten” doesn’t give much hint as to how he interprets the first member.

The hapax *sád-asva-* appears to be the only RVic cmpd with the first member *sa(n)t-* -- assuming, with most, that *sát-pati-* contains a reduced form of *sádas-* ‘seat’ (see EWA s.v.). I take it as semantically related to the derived adj. *sátvan-*, of warriors ‘the real thing’. So ‘(having) true horses’ in the sense of “good men and true”; English “trusty” works well. We might have expected *s(u)vásva-* ‘having good horses’ parallel to *suvīra-* at the end of the pāda, but perhaps the poet wanted to vary the expression – though the pun on his name in 1c *ās^śvásva-* would suggest differently.

V.58.5–7: Sustained phonetic play, esp. with *p* and *r/ṛ*, in *prá-pra* (5b), *pṛśneḥ putrá(h)* (5c), *prāyāsiṣṭa pṛśatībhiḥ* (6a), *prāthiṣṭa ... pṛthivī* (7a).

V.58.5: Note the phonetic play on initial *a* and final *ā*: *arā ... ācaramā āheva ... ākavā*.

The syntactic break in the middle of pāda a, after *ivéd*, and the enjambment across the pāda boundary, with *āheva* in pāda a the subj. of the verb *prá-pra jāyante* in b, give the sense of unstoppable motion that the similes also provide.

Flg. Hoffmann (Aufs. II.413 [=MSS 10 (1957) 61–62]), WG and Re (though Re rather mutedly) take *ākavā(h)* as meaning that the Maruts do not become reduced in power, and Ge’s rather vague ‘vollkommen’ is in the same realm, though obviously without the benefit of Hoffmann’s disc. I prefer to take the adj. as outer-directed -- ‘not stingy, unstinting’ rather than inner-directed ‘not retracting’.

The VP *sváyā matyā ... sám mimikṣuḥ* “They have equipped themselves with their own poetic thought” seems implicitly to contrast with the opening of the previous hymn, V.57.1 *iyám vo asmát ... matīḥ* “This poetic thought from us for you.” This should remind us that the Maruts are both recipients and producers of praise poetry. See the disc. of the opening of this Marut cycle, V.52, where much is made of this dual role. A number of tr. take *matī-* as the equivalent of ‘will’ or ‘intention’ (van Bradke [Fs. Roth (1893) 119] Will, Ge, Kü [386] Absicht, WG Antrieb), but this stretches the meaning of this word unacceptably. In any case the locution must harmonize with the very similar one in I.165.1 adduced also by Ge: *káyā śubhā ... marútaḥ sám mimikṣuḥ / káyā matī*.

V.58.6: Although the adjacency of *pṛśatībhir ásvaiḥ* might seem to lend credence to the supposed shifting gender of *ásva-* ‘horse’ due to the clear fem. form of the preceding adj., it is better to follow the standard tr. in taking the two words as separate, with the fem. referring to dappled antelopes or simply dappled mares that serve as the horses for the Maruts’ chariot. Note that this type of double ref. to their draught animals is found in the next vs., 7c, where the Maruts yoke “the winds as their horses” to the chariot pole.

Pāda c is cleverly constructed: *āpaḥ* ‘waters’ would be a perfectly acceptable subject of the following verb *riṇaté* ‘flow, dissolve’, but it is “bound” to *kṣódante* with the accent on *riṇaté* making the syntactic break clear. But the *real* subject of *riṇaté*, *vánāni* ‘trees’, is a much less appropriate subj. than what preceded.

VIII.7.26, adduced by Ge, makes it clear that Heaven is roaring with fear, but the roaring must also represent thunder.

V.58.6–7: The final word of vs. 6 is *dyaúḥ*, while *pr̥thivī* appears in the 1st pāda of 7, implicitly linking this standard pair, although they are contextually separate.

V.58.7: The first hemistich has distinct sexual overtones, with the Earth spreading herself to receive the Maruts’ “embryo” -- though it is more decorously phrased than V.56.3.

It is difficult to get a causal reading from *hi* in c. It cannot be connected with the preceding pāda, and the action of c seems irrelevant to d, so connection with the following pāda seems unlikely. I have settled for the craven ‘certainly’.

Note that *dhurī* here was anticipated by injunc. *dhuḥ* at the end of b. Moreover, verse-final *dyaúḥ* in 6d resonates with hemistich-final *dhuḥ* of 7b. One could almost wonder if the primal incest of Heaven and Earth is being subtly alluded to.

V.58.8: See comm. above on the identical vs., V.57.8. Although it is a repeated vs., it fits nicely into this hymn: 1) *ámṛtā ítajñāḥ* has ring-compositional relationship with 1d *amṛtasya svarājaḥ*; note the twisted phonetic relationship between *svārājaḥ* and *ítajñāḥ*. 2) *túvīmaghāso* echoes *tuvirāḍhaso* of 2d; 3) Pāda c: the accented voc. *kávayo yúvānaḥ* repairs the unaccented identical phrase in 3d. Perhaps this internal quotation is responsible for the metrical problem, 10 syls. with rest after caesura.

V.59 Maruts

V.59.1: As was indicated in the publ. intro., the referent of the ‘spy’ (*spátī*) is unclear. Ge suggests a number of possibilities, none compelling; WG take it as the singer. Most bizarrely, Old interprets the word as an interjection. I think it possible that it is the sun. One clue is the repetition of the phrase *suvitāya dāvāne* “to give good faring,” which is used of the Maruts in 4d. I therefore think the ‘spy’ must be a being that can function in the same way as the Maruts and provide the same type of benefit. The sun is elsewhere called a spy (X.35.8), provides light for creatures to move about, and appears before and, more importantly, after a storm.

Part of the solution to the foregoing question depends on another problem in the first pāda, the interpr. of the 3rd sg. verb (*prá ...*) *akran*. It is regularly assigned to \sqrt{kran} ‘roar’ (so, e.g., Gr, Lub), and the standard tr. all interpr. it so. But this interpr. is by no means universal: both Wh (Rts) and Macdonell instead assign it to \sqrt{kram} ‘stride’. (Old, again bizarrely, takes it to $\sqrt{kṛ}$.) Narten sides with the \sqrt{kran} contingent (Sig. Aor. 99 n. 254), though without argument, simply asserting “... kann nicht ... zum Wz.-Aor. von *kram* gestellt werden.” On the one hand, of course, the argument against \sqrt{kram} is obvious: it is a seṭ root -- its 3rd sg. root aor. should be, and in fact is, *ákramīt*. But there are countervailing arguments. \sqrt{kran} is found with the preverb *prá* in the RV only in IX.77.1 and, at least acdg. to MonWms., nowhere else in Skt., whereas *prá* \sqrt{kram} is common. Vs. 4d, containing the other occurrence of *suvitāya dāvāne*, also contains a verb of movement (at least acdg. to me and Ge), *prá bharadhve* ‘press forward’; moreover, *suvitāya* elsewhere in the RV regularly appears with verbs of motion (cf., e.g., nearby V.57.1 *suvitāya gantana*), whereas it does not fit easily with verbs of proclaiming (though

cf. VIII.27.10 *prá naḥ pūrvasmai suvitāya vocata*). As for the morphological problem, from the fairly common (9x) 3rd pl. root aor. (*ā*)*kramuḥ*, an anīṭ-type *kran* could easily be backformed. If the verb does belong with *√kram* and the spy therefore *strides* forth, rather than *roars* forth, an entity like the sun makes good sense.

The pāda-initial *ārcā* exactly matches pāda-init. *ārcā* in the opening vs. of the opening hymn in the Marut cycle, V.52.1. As there, so here, we can read the preverb *prá* with that verb, borrowing it either from the vs. initial form or from the third word in the 2nd pāda. In fact this 2nd *prá* can be read as a preverb in tmesis either with *ārcā* or with final *bhare* (or both), and in the former case, it could be interpr. as having moved to the end of its clause *ārcā divé prá* right before the caesura with an opening of 5, rather than being the first word of the 2nd clause *prá prthivyā ṛtām bhare* right after the caesura with an opening of 4. In other words, *prá* is ambiguously positioned both syntactically and metrically.

Another ambiguous form is *tāruṣanta* (in sandhi) in c, which can be resolved either as finite 3rd pl. med. *tāruṣante* (so Pp, Gr, etc.) or an act. pres. part. masc. pl. *tāruṣantaḥ*. In the first instance it owes its accent to its clause-init. position; in the latter, because it's a participle. Since this stem has exactly 3 forms in all of Skt. -- this one, an active *taruṣema*, and a med. 3rd pl. (-*anta* replacement?) *taruṣanta*, there is no way to tell, though, since *taruṣanta* could also belong to an underlyingly active stem, I'm somewhat inclined towards the act. part.

V.59.2: The publ. interpr. of d follows Thieme (Untersuchungen, p. 39). WG draw attention to Th's revised interpr., in Kl. Sch. II.998–99 (and 834), in which he takes *mahé* as a dual and *vidathé* as a final dative: “sie halten inne, um den Regen zu verteilen,” closely followed by WG “... haben zwischen den zwei Grossen (Himmel und Erde) zur Verteilung (des Regens).” Some of this seems worth adopting. Because of the *antár* a dual interpr. of *mahé* is attractive, but rather than separating *vidáthe* from *mahé* syntactically (the interposition of the caesura, invoked by Thieme and WG, does not seem sufficient reason) and making it a dative (though the stem is otherwise only thematic and a dat. should be excluded), it seems best to return to Old's suggestion that *mahé vidáthe* is a dual acc. phrase, as it is in VIII.39.1. I would then emend the tr. to “the men have taken their places between the two great divisions [=Heaven and Earth].” This is in fact where the Maruts as thunderstorm are positioned -- in the midspace.

V.59.3: The various tr. configure these four similes somewhat differently; I won't comment in detail on these versions. The most puzzling one is the first, in great part because it is not clear what the Maruts' horn would be -- perhaps the superstructure of their helmets? or their lightning bolts? (Sāy. takes it as their turban.) Ge suggests that it has a double meaning, horn and Selbstgefühl, but we still need some physical aspect of the Maruts that could be compared to cowhorns, so the second abstract sense doesn't help much.

Most interpr. take *sūryo ná cákṣuḥ* either as a mistake for gen. *sūrah* (so Gr, e.g.) or as a decomposed bahuvrīhi, both yielding “like the eye of the sun.” I see no reason to adopt either interpr. The suggested phrase, with a proper gen., is found in 5d *sūryasya cákṣuḥ* (and, of course, elsewhere) in the same metrical position. If Śyāvāśva had wanted to say that here, he would have. Instead he must be comparing the Maruts' eye to the sun,

with both in the nom. Since *sūryasya cākṣuḥ* is a fairly common expression, its appearance in vs. 5 can be seen as poetic repair of the double nom. in our vs. In my view the quality held in common by sun and eye is the light emitted in the journey through space, but this depends on one's interpr. of *visárjane*. Ge gives it a later sense not otherwise found in the RV (Aufhören 'stopping', sim. WG Schwinden); Re takes it as 'expansion'. I see it as a variant of *ví√sr* 'stream/run/spread through'. Cf. *rájaso visāré* I.79.1, used of Agni compared to the sun. In fact, we might consider the two phrases to be variants of each other; both are pāda final, with I.79.1 in a dimeter (hence iambic) cadence, while ours provides a Jagatī cadence.

V.59.4: Pāda b succinctly summarizes the special skills of the Maruts, which lie in their ability both to produce praise poetry and to perform hypermasculine feats.

The sandhi of *kás kāvya* is irregular, but connected to similar irregular sandhis before *kaví*-elsewhere. See comm. ad VII.18.2.

V.59.5: The simile in pāda a requires a hidden term of comparison. The "reddish horses" (*ásvāḥ ... aruṣāsaḥ*) must be, covertly, the flames of a fire; that is why they have the same lineage, because they all flare up from the same source. I doubt that the poet was telling us that all red horses have the same bloodlines.

The two middle similes (b, c) seem redundantly phrased, in that in each case one of the terms applied to the subject also provides the verb: *prayúdhaḥ prá ... yuyudhuḥ* (b), *suvírdho vāvrdhuḥ* (c). I do not understand the stylistic point of this redundancy, but since it's repeated in adjacent pādas it must be deliberate.

I also don't understand the *utá* in b, placed between preverb and verb (*prótá yuyudhuḥ*) and with nothing obvious to conjoin. Klein (DGRV I.373–74) takes it as conjoining b with a, but gives no explanation for its position, whose extreme rarity he notes. For another ex. of *utá* between preverb and verb, see X.53.7.

Another anomaly in b is the metrical shape of the verb, in pāda-final position: *yuyudhuḥ* would be far better read **yūyudhuḥ*. Although no forms of this poorly attested perfect are transmitted with long reduplication, it's worth noting the hapax redupl. *i*-stem *yūyudhi*- (X.149.4), a variant of *yūyudhi*- (2x).

V.59.7: This vs. contains several syntactic ambiguities of not much moment. The rel. prn. *yé* in the 1st hemistich can in principle be picked up by either *ásvāsaḥ* 'horses' or *eṣām* 'of them [=Maruts]', and in fact either the horses or the Maruts could easily be compared to birds. I don't see any way to decide, though it's true that the default ref. of any masc. pl. in a Marut hymn is the Maruts.

In b *brhatáḥ* can in principle be acc. pl., gen. sg., or abl. sg., so that it could technically modify any of the three nouns in that pāda: acc. pl. *ántān*, gen. sg. *diváḥ*, or abl. sg. *sānunaḥ*, and it is found with both *diváḥ* and *snóḥ* (alt. form of *sānunaḥ*) elsewhere. With the standard tr., I take it with 'back'. Flg. Ge and Re, I assume that the 'back' is heaven's -- and in fact the gen. *diváḥ* could be read both with *ántān* and with *sānunaḥ*, between which it is positioned. WG suggest rather that it's the back of the earth, namely the mountains, and this is worth considering. If they're coming from the mountain, it may explain why/how they have stirred the *nabhanú*- of the mountain. Still, the clear phrase *diváḥ ... sānu* in the next hymn (V.60.3b) favors 'heaven'.

On *nabhanú*- see comm. ad IV.19.7.

V.59.8: The second clause of pāda a, *áditir vītáye naḥ*, is underspecified and has been variously interpr. Since *vītáye* is frequently used in stereotyped passages of gods ‘pursuing’ the oblation, often with a verb of motion, I supply this context here. For parallels, cf., e.g., VIII.20.10 *havyā no vītáye gata*.

The nom. pl. demon. *eté* is pāda-final, which seems an odd position for such a pronoun. But a glance at Lub’s Concordance shows that *eté* is found in just that place fairly commonly -- e.g., in the next hymn, V.60.5a.

V.60 Maruts

V.60.1: The opening of the hymn, *īle agnīm*, is a flipping of the opening of the first hymn in the RV, I.1.1 *agnīm īle*, but since this phrase, in both orders, is found a number of times in the RV, we should perhaps not make too much of it. However, it’s worth noting that this is the only other place where it opens a hymn.

This is the only occurrence of the ppl. *prasattá-* ‘seated to the fore/in front’, and it here seems a substitute for the standard *puróhita-* ‘placed in front’, of Agni as the offering fire on the ritual ground. If *īle agnīm* is a conscious evocation of RV I.1.1 (or a templatic Agni hymn), then *prasattáḥ* could be evoking the third word of I.1.1 (*agnīm īle*) *puróhitam*.

However, the gambling phrase that follows goes off in a very different direction; as is recognized by all standard tr., the phrase *vī cayat kṛtām* is dicing vocabulary. For the VP see I.132.1 and Falk (1986, *Bruderschaft und Würfelspiel*, pp. 126–28).

V.60.2: The parallelism between the two loc. phrases *pr̥ṣatīṣu śrutāsu* (a) and *sukhēṣu ... rátheṣu* (b) seems clear, but this entails that the Maruts are mounted both on their horses and on their chariots. This is a price that most tr. are willing to pay, but Re avoids it at the price of the parallelism, by attaching the dappled females to the chariots: “... qui sont montés sur les chars aisés conduit par les (antilopes) tachetées.” Since the Maruts are clearly astride horses in the next hymn, V.61.3, I think we can have them there here as well.

The person changes between hemistichs from 3rd (ab: *yé tasthúḥ*) in the rel. cl. to 2nd (cd: voc. *ugrāḥ ... vah*) in the main cl.. This is hardly unusual in the RV. The standard tr. register this anacoluthon in various ways, WG most sharply, by supplying a main cl. for ab: “(Sie sind es), die ...” and separating the two hemistichs into two sentences. This seems unnec.

V.60.2–3: Note the concatenation: 2d ... *párvataś cit*# // 3a #*párvataś cit* ... The two vss. also hold the verb *rejatē/rejata* steady (2d, 3b, though in slightly different metrical position, both post-caesura, with one pres. and the other injunc.), but in the first instance it’s earth (*pr̥thivī*) that trembles and in the 2nd (the back of) heaven (*divāḥ*, initial in its pāda like *pr̥thivī*). So the standard pair heaven/earth are contrasted and identically positioned, but they are grammatically non-parallel. There is also a repetition of ‘fear’, though again in different forms -- nominal *bhiyā* in 2c, pf. *bibhāya* in 3c, both pāda-final. This kind of patterned and varied repetition may not reach the heights of poetic art, but it

is a pleasing demonstration of the way a RVic poet infuses freshness into the clichés that are his bread-and-butter.

V.60.4: The “marks of greatness” of the publ. tr. follows Re’s “signes-de-grandeur”; *māhāṃsi* must refer to something that can be visible on their bodies.

On the wooing context of this vs. see comm. ad X.94.10.

V.60.5: The standard tr. (all ultimately deriving from Sāy.) take Rudra and Ṛṣni as the joint subj. of a verb to be supplied (“prepared,” vel sim.), with *sudínā* as obj. (e.g., Ge “Ihr ... Vater ... (und) ... Ṛṣni (haben) den Marut schöne Tage (bereitet)”). This seems unnec. The first part of this hemistich (through *ṛṣniḥ*) seems simply to define the Maruts’ parentage: *pitā ... rudrāḥ* is answered by *ṛṣniḥ*; no ‘mother’ is necessary, because her role as their mother is virtually her only function in the RV and because the bahuvr. *ṛṣni-mātar-* ‘having P. as their mother’, modifying the Maruts, is used three times by Śyāvāśva in this cycle (V.57.2, 3, 59.6). As for *sudínā*, it is used several times in the kind of nominal cl. envisioned in the publ. tr.; cf. IV.4.7 *víśvéd asmai sudínā* ... “All (days) (will be) day-bright for him”; VII.11.2 *āhāny asmai sudínā bhavanti* “for him the days become bright shining,” both with dat. as here.

The epithet *sudúghā* used of Ṛṣni may be somewhat ironically meant. At least in VI.66 it is said that Ṛṣni only once produced milk (vs. 1), that is, she milked out her sons the Maruts, but that she did not give milk to them (vs. 5).

V.60.6: The second hemistich has a few complications. We can start with the *utā vā*: what is it conjoining? Ge and Re seem to take it as conjoining the vocc. *rudrāḥ* and *āgne*, and Klein (DGRV II.170) explicitly follows this interpr., though giving no other exx. of conjoined vocatives. But esp. given the various choices of place given in ab, conjoined by *vā*, the more natural reading is to assume it offers another alternative to *átah* ‘from there’ in c; the most natural of those choices would be “or (from) here.” WG, by contrast, recognize that a choice of locations is what is probably meant, but have to supply the 2nd alternative complete: “von da aus ... oder (von wo ihr euch) auch nun (befindet).” My solution may be too tricky to be acceptable, but I think the ‘here’ is implicit in the *asyalasyā*. First, note that the cross-pāda sandhi ... *asyāgne* ... is compatible with either an unaccented or an accented gen. sg. pronoun. The Pp. takes it as the former, but if it is to be construed with *havíṣaḥ* in the next pāda, as the standard tr. (incl. the publ. tr.) take it, as an adjective it should be accented (*asyā*). I do think it has an adjectival role with *havíṣaḥ*, but I also think this near-deictic is a substitute for an adverb of place like *ihá* or *itás*, and the possibility of non-accentuation is an indirect indication that it can also be taken independently of *havíṣaḥ* to express the potential location of the Rudras here and now on the ritual ground with Agni. I would slightly adjust the tr. to “from there, o Rudras, or (here and) now, o Agni, be cognizant ...” The awkwardness of folding Agni into the Maruts’ actions is also on view in the next vs.

I do not understand the presence of the future impv. *vittāt*. Perhaps with Sāy. (... *āgacchateti śeṣaḥ*), we should supply a verb of motion that implicitly precedes the action of *vittāt*: “from there (come here and) take cognizance ...” The following hymn, V.61, gives some support to this scenario. In V.61.17 Night is ordered to carry off the speaker’s hymns to his patron, with an ordinary impv. *pārā vaha*, while the flg. vs. contains a future

impv. *vocatāt* (V.61.18) ordering her to speak for him once she gets there. It may also be that the future impv. was used here for convenience because the future impv. neutralizes number (also person, but that's irrelevant here) and thus can be applicable both to the plural Rudras and the singular Agni. It's accented because it follows an extrasentential voc. and therefore counts as being pāda-initial.

The standard tr. take *yád* as the neut. rel. prn. with *havís-* as antecedent (“... the oblation that we sacrifice”), but \sqrt{yaj} never takes the offering as object, but rather the god who is the recipient. I therefore prefer to take *yád* as the subordinating conj.

V.60.7: The first pāda, *agnís ca yán maruto viśvavedasaḥ*, is a particularly complex ex. of a reverse *vāyav índraś ca* construction, with the subordinator *yád* placed, in modified Wackernagel's Position, after the first term and a voc. adj. attached to the second. This sequence of three vss. (6–8) contains three different versions of the awkward pairing of singular and plural entities in a voc. phrase: vs. 6 with its independent non-adjacent vocc. *rudrāḥ ... ágne*, this *vāyav índraś ca* construction, and 8a *ágne marúbhiḥ* with an instr. of accompaniment. Note that the adj. *viśvavedasaḥ*, which, since it's voc., should technically only modify the Maruts, is more commonly applied to Agni in the RV, and so he should probably be included in its domain.

The problematic epithet *riśādas-* has already been discussed; see comm. ad I.2.7. As indicated there, the publ. tr. weakly favors Th's ‘caring for the stranger’ over Hoffmann's ‘fastidious’. The original meaning is difficult to get to, because by either etymology (or any other one) the word would by this time be entirely opaque and, with no synchronic lexical anchoring, it would have been free to float semantically and get attached to other words secondarily. It is often used of the Ādityas, both collectively and individually, for whom ‘caring for the stranger’ is a quite congenial reading. But it is also, as here, often used of the Maruts, where it is not so good a fit. But generally when it is applied to the Maruts, it is either with reference to their benevolent and generous aspect (as here, where they are *viśvavedasaḥ* ‘affording all possessions’ and are urged *vāmám dhatta* “establish a thing of value”) or is found nearby occurrences with the Ādityas (so here and V.61.16, with Mitra and/or Varuṇa V.64.1, 66.1, 67.2; cf. also I.186.8 *riśādaso mitrayújāḥ*) or both (cf. Agni, the Ādityas, and the Maruts all as both *viśvavedasaḥ* and *riśādasah* in VIII.27.4).

V.60.8: The publ. tr. takes *āyúbhiḥ* in c as a PN (as often), thus identifying a separate group of co-soma-drinkers. The standard tr. take the instr. phrase in c as a further characterization of the Maruts, with *āyú-* as ‘langlebig’ (Ge, WG), ‘vigilants’ (Re). I now think this is the better course and would emend the tr. to “along with the pure, lively ones who set all in motion.”

V.61 Maruts

For the structure of this hymn and its place in the series, see publ. intro. Although there is an *itihāsa* in the Bṛhaddevatā (V.50) that supposedly recounts the circumstances of Śyāvāśva's composition, it was clearly constructed secondarily and fancifully on the basis of the Rigvedic text (see both Old and Ge).

V.61.1: Note the doubly marked superlative *śréṣṭhatama-* (also I.113.12), which therefore ought to be rendered as “the most fairest.” It must be nom., not voc., because of its accent, since in a standard voc. phrase it would be unaccented flg. unaccented *naraḥ*.

It is somewhat notable that the Maruts are referred to *éka-ekah* “one by one,” since they are usually not differentiated at all.

V.61.1–2: These two vss. contain a fairly high percentage of the total number of RVic 2nd pl. active pfs., with the poorly characterized ending *-a* on the weak stem: *āyayā* (1b), *śeka*, *yaya* (2b). Macd. (VG p. 358) lists only twelve forms in all of Vedic (some of which have more than one token) of the 2nd pl. act. pf., and one of these (*anāha*) is better interpr. otherwise (see comm. ad VIII.48.5).

V.61.2: *kathā* can be read thus or as *kathā ā*, with the same preverb as in the unverbated *āyayā* in the rel. cl. of 1b. The Pp. does not read the preverb. It is possible that the variation between *kathām* in the first question of the pāda and *kathā* is meant to enable the preverb reading, and the publ. tr. reflects that.

With Ge and Re I assume a gapped *kvā* in c and in 3a. WG simply take them as questions without an explicit interrogative (“Ist ein Sattel auf einem Rücken ...?” etc.). The difference is unimportant rhetorically.

V.61.3: For this vs. see publ. intro.; as pointed out there, the simile in c can either refer to sex or to childbirth.

It is interesting that *sakthāni* is plural. Although there are plural ‘men’ (*nāraḥ*) and therefore twice as many thighs as men, in Classical Sanskrit it is my impression that the dual would ordinarily be used in such a situation, where a number of men each spread their two thighs. RV seems more flexible.

V.61.3–4: The final word of vs. 3 is *jānayaḥ*, while the final word of the 1st hemistich of 4 is (*bhadra-*)*jānayaḥ*, showing the standard distribution of the ‘wife’ word, with simplex *jāni-* and *jāni-* as 2nd cmpd. member. The distrib. here is complicated by the fact that 3c ... *nā jānayaḥ* produces an unusual cadence of four shorts, which **jānayaḥ* would easily repair. But since the long-vowel variant never shows up as a simplex, we should presumably resist the temptation to emend.

V.61.4: The 2nd pl. impv. *etana* shows an unexpected full-grade root syllable in the Saṃhitā text, but is read with metrically problematic but morphologically “correct” zero-grade in the Pp (*itana*). Of course, such full-grade 2nd pl. impvs. are found elsewhere, but in this case I wonder if it’s a secondary extraction from forms cmpded with the preverb *ā*, as in V.87.8, also a Marut hymn, with pāda-final *étana*. See also disc. ad VI.42.2.

V.61.5: As noted in the publ. intro., the standard tr. (now incl. WG) take *sānat* as meaning ‘gave’ (Ge schenkte, Re a donné, WG geschenkt hat), not ‘gained’; Indeed Re claims that the stem *sāna-* means ‘give’ in dānastutis, but provides no parallels. I have found none in any of the occurrences of this stem, but by contrast quite a number of exx. of *sāna-* in dānastutis with the expected meaning ‘gain’ (I.126.3, V.30.14; VIII.25.22, 24; 46.22, 29; 68.17; X.62.11). Note, however, the honorable exception of Klein (DGRV

I.431) “That one *has obtained* [my italics] a herd consisting of horses ...”; Grassmann likewise gives the verb in this passage its standard meaning ‘erlangen’. The only possible reason I can imagine that this array of skilled philologists resolutely turned their backs on the very clear evidence of the semantics of this root is that they couldn’t imagine that a female could have won or gained these prizes -- though, as noted in the publ. intro., it would be just as anomalous for a female to *give* them. If I am right that the woman in question is a favored concubine, or even the Favorite Wife (*Vāvātā*) of later Vedic ritual, of Śyāvāśva’s royal patron, then he may have indulged her with a little gift at the time of the general distribution of bounty. She does, after all, perform services for him, as pāda d shows.

śatāvayam is almost universally interpr. as ‘consisting of a hundred (/hundreds of) sheep’, with the 2nd member derived from *ávi-* (so Gr, Ge, Re, Klein; also AiG II.2.140 and II.1 Nachtr. 34), and certainly sheep fit nicely into a sequence with horses and cows. WG demur, suggesting that such a cmpd should rather be **śatāvya-* and proposing an alternate analysis on the model of *cátur-vaya-* ‘fourfold’ (2x) -- hence “livestock in horses and cows a hundred fold.” However, the *-vaya-* of *cátur-vaya-* is not otherwise found in such cmpds and has no obvious source (see AiG II.2.906), and the long final vowel of the first member *śatā-* would not be quite as easily explained (though stems like *śatāmagha-* and *śatāvant-* also show unetymological long vowels). I do think WG’s point is well-taken that **avaya-* is an unlikely deriv. to *ávi-*, esp. since that stem shows “closed” inflection, but *-vaya-* ‘-fold’ has its own problems. I suggest rather that the cmpd orig. contained the well-attested deriv. *avyáya-* ‘sheep-y, ovine’ (hence **śatāvyaya-*), which has undergone haplology of the first *y*. Note that there’s a lot of phononological play in these vss. (sibilants and *v*’s, with *a*’s), inspired by the poet’s name Śyāva-aśva: 5a *śā áśv’yam* ... b *śatāvayam* ... c *śyāvā-aśva* [or HvN’s *śyāvāś’va*] ... 6a *śāśtyasī* ... b ... *vāsyasī*, which could have contributed to the deformation of the underlying cmpd. I would therefore keep the older meaning, but with a different analysis of the 2nd member.

Note also that the end of c, (*-stut*)*āya yā*, is nearly identical to the ends of 1b *āyayā* and 2b (*kath*)*ā yaya*.

V.61.6–8: As indicated in the publ. tr., I consider these vss. a digression reflecting on the character of women in general, motivated by the introduction of the winning woman in vs. 5.

V.61.6: The comparative *śāśtyas-* is attested only twice in the RV, here and in IV.32.3. Though they have different senses in the two passages (‘more reliable’ here, ‘more numerous’ there, at least by my interpr.), the semantic dev. from the positive *śāśvant-* ‘regularly recurring, in unbroken sequence, each and every’ to the two senses of the comp. is fairly straightforward. Here, regularly recurring > constant > reliable. In VIII.1.34 this development takes a sexual turn, with a *śāśvatī nāṭī* being one who is “ever ready” for sex (in my interpr.), and a sexual nuance is not ruled out in our passage either - though here the emphasis is on her dependable qualities compared to the unsatisfactory man.

V.61.7: The relativization is loose, at least in the Eng. rendering. Literally it should be “More reliable than a man is a woman who discerns the thirsting one ...,” etc.

The lexeme *ví√jñā* means ‘discern, recognize’, and a full rendering of the implication of these VPS would be something like “who recognizes (that a particular man) is famished ...” -- the idea presumably being that, having recognized their plights, she then sees to them, each in his own need. I have folded this two-step process into ‘pay attention to’. If she does see to the needs of each, the third in the series *kāmínam* ‘the desirous / lusting one’ again introduces the sexual: she feeds, clothes, and has sex with the three in turn, at least by my interpr. The standard tr. have a tendency to attenuate the third term -- e.g., Klein (DGRV I.432) “the one desiring (aid)” -- but in this saucy hymn I think sex is never far from the surface. I do have to admit, however, that *kāmín-* is not otherwise used of sexual desire, but has a more general application, incl. to the Maruts in this same cycle (V.53.16).

V.61.8: On *vaíradeya-*, lit. ‘what is to be given for a man/hero’, as Wergeld or blood money, see Roth (ZDMG 41: 672–76) and Macdonell-Keith Vedic Index s.v. *vaira*. Another indirect ref. to the same phenomenon is found in II.32.4 *vīráṃ śatádāyam* “a hero (for whom) a hundred (cows) are to be given.” In our case the person in question is hardly worth the name ‘man’ and would be better off dead than alive, since his relatives would still receive the standard recompense for a *vīrá*, whatever his personal failings had been. It is telling that he is called a *pañí-* ‘niggard’, a reminder to Śyāvāśva’s patron that stinginess is a grave flaw.

V.61.9: On this vs. see publ. intro. As detailed there, I take the vs. as an elaborate pun. On the one hand a young woman (*yuvatīḥ*) is narrating the course of a race (or perhaps the progress of the horses that are to be given to the poet as his prize) to the poet -- thus the word *vartanī-* ‘course, track’ in b and the two chestnut (horses) (*róhitā*) in c. (Note also that *śyāvā-* is not only the short form of the poet’s name but also, more usually, a horse color term.) But a more intimate scene is signalled by her low voice (*√rap* is ordinarily used of murmuring or muttering; see the esp. telling passage in the Yama/Yamī hymn X.10.4, where it is contrasted with *√vad*), her use of a nickname “Dusky” (*śyāvā-*), and esp. the pf. part. *mamandúṣī* ‘having intoxicated, beguiled, seduced’ (I follow Kü [366–67] in taking the pf. as transitive and supplying ‘me’ as its obj.). And the whole vs. can be read as a description of sexual intercourse. The ‘course’ would be the course of the sex act, and the two ruddy ones in c can be any paired female body parts; given the use of the same verb *ví√yam* here as in 3b, where men spread their thighs, they may be thighs, but the labia and breasts are also possible. Both Ge and Re take the dat. *purumīlḥāya* in c as a PN and therefore not coreferential with *śyāvāya* in b. But it makes more sense to interpr. *purumīlḥā-* in its full lexical sense ‘having many rewards’ (so also WG), describing the poet (*vīprāya* in d) who has received his dakṣiṇā from his patron and who is in fact Śyāvāśva -- and implying that part of this dakṣiṇā is the seductive woman in this very vs. On Purumīdha in later Vedic see comm. on the next vs.

As a number of others have noted (e.g., Hoffmann, Injunkt. 150), though the Pp. reads *arapat*, the actual form may be the injunctive *rapat*; the Pp’s augment is not realized metrically or in the transmitted text. This doesn’t affect the interpr. one way or the other. Though Gr lists *prāti* as a preverb with *rapat*, this lexeme is not otherwise found (in all of

Skt., if Mon-Wms is to be believed), and given the distance between the two words and what would be an unusual position for a preverb in tmesis (pāda-initial but in the pāda *after* the verb), I think it unlikely that they are to be construed together. I take *prāti* as adverbial, reinforcing the intimacy of the scene, hence my ‘face to face’.

V.61.10: My interpr. of the *dānastuti* vs. proper differs from the standard, which has in my opinion been unduly affected by the later Vedic rationalization of the passage. Both JB (I.151) and PB (XIII.7.12) briefly narrate a tale in which Purumīḍha and Taranta figure as the two sons of Vaidadaśvi, but as we just saw, *purumīḍhā-* is better taken in its literal sense. I also take *tarantā-* not as a PN but in lexical value. In either case it is likely a thematization of the pres. participle *tārant-* (cf. AiG II.2.211), showing the same accent shift as AV *jīvantā-* from *jīvant-*, and it should mean ‘overcoming, victorious’ → ‘victor’. By contrast I do think *vaidadaśvi-* is a PN, but a speaking name, as the vṛddhi deriv. of **vidād-aśva-* ‘finding / acquiring horses’ (cf. *vidād-vasu-*), an appropriate name for a patron. It is worth noting that both names Śyāvāśva and Vaidadaśvi have Iranian counterparts; see Mayrhofer Personennamen s.vv.

How to distribute *yáh* and *yáthā* and whether to interpr. the latter as a subordinator or a simile marker are the syntactic problems in this vs., and diff. tr. have diff. solutions. I take *yáh* as marking a generalizing rel. cl. (‘whoever ...’) and *yáthā* as a simile marker, with c a nominal cl. functioning as the main clause to ab. The verb in b, *dádat* is a short-vowel subjunctive (“whoever will give ...”) but can also be interpr. as a thematized injunc., which in turn can be read with Vaiśvadaśvi (“as V. did”). If I had had the courage of my convictions, “did” would not be in parens. in the publ. tr.

V.61.11: As indicated in the publ. intro., this vs. marks the beginning of the second, more conventional hymn in this composite, at least in my analysis.

Technically speaking ‘horses’ should be in parens.

It is not clear if *īm* has its usual acc. function: it could anticipate *mádhu* in b, though that seems somewhat distant and that participial phrase is otherwise fully contained in b; it could function as a reflexive marker (“drive *themselves*”); or it may be one of the rare instances of functionless *īm*.

I have silently depluralized *śrávāmsi*, since ‘fames’ is not English. Perhaps the point here is that each Marut has his own *śrávas*, though, since they are seldom distinguished, this may be overthinking it.

V.61.12: This vs. has produced more consternation than it deserves, because of the reluctance of many interpr. to allow *yéṣām* to be coreferential with the subj. of *vibhrājante*. In these interpr., if the subj. of that verb is the Maruts, then another referent for *yéṣām* must be found; if *yéṣām* refers to the Maruts, then another subj. of the verb must be found. See Old’s lengthy disc., which includes the differing suggestions of numerous scholars (incl. also interpr. *yéṣām* as **yé eṣām*) but doesn’t reach firm conclusions. Of modern interpr., Re takes *yéṣām* as the Maruts and makes *ródasī* the subj. of the verb: “les Deux Mondes brillent au loin”; in a fractured sense this goes back to Max Müller’s tr. in SBE 32, but Müller emended the verb to **bhrājate* and took *ródasī* as sg., whereas Re mentions no such emendation and seems to be taking *ródasī* as dual, which will certainly not work grammatically with a pl. verb. WG seem to have accepted

the **yé eṣām* interpr. Ge, surprisingly, is more relaxed and allows coreference under the rubric of “der reflexive Gebrauch des Relativs,” which seems perfectly plausible to me: they flash with their own splendour.

The “bright ornament” of c is the sun: *rukṃá-* is so used elsewhere in clearer context (VI.51.1, VII.63.4).

V.61.13: I have taken the two negated adjectives at the end of b and c, *ánedyaḥ* and *ápratiṣkutaḥ*, as predicated, in contrast to all the standard tr. There is, of course, no way to tell.

V.61.15: Whose *dhī-* is it? Ge, Re, and WG all assume it is the mortal’s (e.g., Ge “Ihr ... führet den Sterblichen recht nach seinem Sinn”), but the placement of the phrase *itthā dhiyā* right after *praṇetāraḥ* and at some distance from *mārtam* at least weakly suggests that it is the Maruts’s. Since, as I have had occasion to remark many times, the Maruts sometimes have the role of verbal praisers and sometimes are the recipients of the same, I think both readings are possible and the poet may have wanted it to remain ambiguous. Tichy’s tr. (-tar-stems, 300–301) seems to attribute the *dhī-* to the Maruts or at least remains neutral: “Ihr bringt den Menschen vorwärts ... recht mit Bedacht.”

Note that in the compd *yāma-hūti-* it is the Maruts’ journeys (*yāma-*, 1st member) but the mortal’s invocations (*-hūti-*, 2nd member).

V.61.17–19: As noted in the publ. intro., the patron’s name Rathavīti (‘pursuit of the chariot’?) in 18, 19 is punned upon. In 17 (before he is explicitly mentioned, though the patronymic Dārbhya would presumably evoke him) Night is asked to carry the hymns “like a charioteer” (*rathīr iva*); in 18 the 2nd compd. member *-vīti-* is derived from the same root √ *vī* ‘pursue’ that supplies the verb *āpa veti* ‘goes off track’.

V.61.17: I do not understand why the goddess Night acts as the intermediary between the poet and his patron; see Ge’s n. 17–19, which doesn’t seem to me entirely satisfactory.

V.61.18: The Rathavīti phrase is in the loc.; the publ. tr. renders it as if the addressee, which is technically incorrect. It is either a loc. absol. without participle or a “chez/bei” expression: “speak for me thus when R. (is present) / at R’s.” Since the net result is the same, I have kept the easier-to-parse addressee tr.

V.61.19: Ge and Re take *gómatīḥ* as a ref. to the Gomatī river; WG to “cow-rich lands.” I think it’s likely a pun, and I supply *vīśaḥ* ‘clans’ for one half of the pun.

[V.62-78 JPB]

V.79 Dawn

The meter of this hymn is Pañkti, with five 8-syllable pādas. The fifth in all vss. is the refrain, a voc. phrase *sújāte aśvasūṇṛte* “o well-born lady, liberal with horses,” which is essentially detachable. So the hymn comes across as standard Anuṣṭubh, with an appended and superfluous refrain. As indicated in the publ. tr., the contents are for the

most part uninspired, contrary to most Dawn hymns, though closer inspection reveals more intricate patterns than a superficial reading turned up.

V.79.1–3: These three vss. follow the same pattern: Dawn is urged to repeat for us now a previous action she performed in the presence of and for the benefit of a previous patron. The name Satyaśravas Vāyya appears in all three vss. (The Anukr. attributes the hymn to Satyaśravas Ātreya, but as Ge points out [n. 1d] he is surely the patron, not the poet.) Curiously in vss. 1 and 3 Satyaśravas Vāyya is identified as the previous patron, while in vs. 2 he is the current patron and the previous patron has a different name. This chronological slippage is somewhat confusing -- and is emphasized by having identical clauses differing only in the tense/mood of the verb and the demonstrative vs. relative pronoun:

2cd *sā vy ùcha sáhīyasi, satyaśravasi vāyyé*

3cd *yó vyaúchaḥ sáhīyasi, satyaśravasi vāyyé*

The insistence on this generous patron of the past has a purpose: there is a parallel insistence on the patrons of today in the rest of the hymn. Although only Dawn is addressed, the poet is clearly sending a message to the patrons, to generously redistribute the wealth that Dawn will bestow on them, on the model of Satyaśravas.

V.79.1: The phrase *mahé ... rāyé divítmatī* is very reminiscent of IV.31.11 *mahó rāyé divítmate*, with an adverbial *maháḥ* but a dat. *divítmate* modifying *rāyé*. See comm. ad loc. It seems likely that our fem. *divítmatī* is a nonce adaptation to the fem. context. As for *divítmant-*, I now tentatively accept the analysis of *divít-* as containing the root noun -*i-t-* and would alter the tr. to “as one coming from heaven” or “as heaven-sent one.”

V.79.2–3: Is the comparative ‘mightier’ (*sáhīyas-*) used to assert that Satyaśravas Vāyya is mightier than Sunītha Śaucadratha?

The Pp. reads accented *ví* even directly before accented *aúchaḥ* (2b, 3c), where we might expect univertation and loss of accent on the preverb. The Saṃhitā text (*vyaúcho*) is of course ambiguous. I would read the sequence with unaccented and univertated *ví*; the verb *aúchaḥ* owes its accent to its presence in a rel. cl. The Pp. may have accented *ví* on the model of the impv. *ví ucha* (2c, 3b; *vy ùcha* in the Saṃhitā text).

sā with the 2nd ps. impv. *ucha* simply shows the common use of the *sál tám* prn. with 2nd ps. impvs.; see my 1992 “Vedic ‘sá figé’: An inherited sentence connective?” Elaborate semantic/functional interpr., like Re’s “de la même manière, dans les mêmes conditions (heureuses)” (EVP 3, ad loc.) or WG’s *yā ... sā ...* “welche du ... als solche du” are unnec.

V.79.3: *yó* beginning pāda c represents *yā + u* (note Pp. *yó íti*), but the apparent masc. form causes a momentary stir.

V.79.4: With the standard tr. I take cd as the main cl. corresponding to the rel. cl. in ab, despite the lack of a resumptive pronoun and of a verb. The pattern established in the first 3 vss. of alternating rel. and main clauses makes this interpr. likely, even though the subjects have changed.

Contra Ge, who takes ab as referring to the singers and cd to the patrons, I think both hemistichs refer to the singers. So also Re and WG, an interpr. that goes back to Sāy. (see Ge's n. 4). Here the circulation of wealth appears to be a two-way transaction: the poets praise Dawn and receive bounties. How that happens is laid out in the next few vss., which complicate the two-way model.

V.79.5: The two-party sketch in vs. 4 gives way to a three-party model: when Dawn gives them the go-ahead, as it were, the patrons, who have not yet been mentioned in the hymn as a class, bestow bounties on the poets.

This vs. presents some difficulties, not least the referent(s) of the various plurals and their grammatical identity. With most, I take the *gaṇāḥ* to be the priest/poets who were also the subj. of the preceding vs. and who greeted Dawn with praise in 4ab. The first hemistich of this vs. expresses the potential reciprocity for this praise: Dawn considers its producers worthy to be given bounties, the same bounties referred to in 5c.

I part company with the standard tr. in the 2nd hemistich. Most take the subj. here to be the patrons, who either physically surround the priest/poets (so I read Old) while giving to them or have succeeded (using a sense of *pāri √ dhā* ['conclude' not found till later]) in giving, finished giving to them (Ge, Re, WG). By contrast I consider the subject still to be the priest/poets. They surround the patrons, who are giving to them. *dādātāḥ* is of course grammatically ambiguous: I take it as acc. pl., while the rest interpr. it as nom. pl. The use of the word *gaṇā-* 'throng' to refer to the poets in ab helps explain the surprisingly physical verb 'surround' in cd: the picture is of the over-eager (*vāṣṭi-*) ritual recipients almost ganging up on the patrons.

V.79.6–7: Here the patrons, who have properly compensated the priest/poets, receive their own reward from Dawn. Interestingly it is not material, but rather *yāśas-* 'glory' -- though glory consisting of heroes (*vīrávat*), meaning, narrowly, sons, but also men belonging to our side who will perform well in warfare and acquire battle glory. The emphasis on non-material rewards for the patrons continues in vs. 7 with "lofty brilliance and glory" (*dyumnā bṛhád yāśaḥ*), while the poets receive material gifts, *rādhāṃsi áśvyā gavyā* "benefits consisting of horses and cows." For a similar split between material rewards for the singers and non-material ones for the patrons see V.86.6, where the patrons get "lofty fame" (*śrávo bṛhát*) and the singers get wealth and refreshment (*rayīm ... íṣam*).

V.79.8: The two-party model returns here, with Dawn bringing the gifts directly to the priest/poets.

V.79.9: The last vs. before the summary vs., this one brings the hymn ring-compositionally back to its beginning with its opening impv. *vy ùcha* 'dawn forth', a lexeme found 4x in vss. 2–3 (2b, 2c, 3b, 3c).

As noted in the publ. intro., this prohibition and its striking simile are the most notable features of this hymn. The *mā* clause contains a present injunctive, not an aorist. Hoffmann (79) explains it as an inhibitive, not a prohibitive -- his standard explanation for the use of present injunctives in such contexts. Although IH has demonstrated that this explanation of the use of pres. injunctives with *mā* doesn't hold -- they are generally

used when an aor. injunc. is not available -- in this case, Hoffmann's analysis may be correct. There is a perfectly fine root aor. to \sqrt{tan} and it in fact occurs once with $mā$ (I.91.23), so we may need to seek a functional explanation somewhat in the manner of Hoffmann's. On the other hand and after further thought, I wonder if the pres. stem is used in this context in order to express a *durative* prohibitive, rather than an inhibitive. That is, *starting now*, when you dawn, don't dawdle at your work. She's just been ordered to dawn, which makes the start time now, not in the past, but the poet fears that once she starts she's going to draw it out longer than she should. It shouldn't be inhibitive in KH's sense, because that would mean she's already started the work. On still another hand, however, since this is functionally the final vs., which refers back to the beginning of the hymn, perhaps the poet *is* saying that Dawn has been at work since that beginning and should finish it up.

It is difficult not to take *sūrah* as a nom. sg. to a thematic stem (so, e.g., Ge and Re), although many occurrences of *sūrah* are better interpr. as gen. sg. to *svār-* -- incl. in this same sequence *sūro arcīṣā* in VIII.7.36. WG take it as a gen., but then must identify a different subj. for *tāpātī*, leading them to introduce Varuṇa and a superstructure of explanation that seems over-elaborate. As indicated in the publ. intro., I think the point of contact is the assumption that thieves work at night and if the sun rises on them, they will be caught out.

V.79.10: *pramīyase* is variously rendered, but 'diminish' or the like fits both the root and the context. Thieme's principled insistence on 'tauschen, täuschen' (ZDMG 41 [1941] 107–8 = KISch 32–33) produces an unconvincing interpr., requiring further shoring up: "... die du ... nicht getäuscht wirst (= du, deren Absicht zu schenken nicht vereitelt wird)." That Dawn does not diminish in cd harmonizes with the increase in gifts that the poet urges in ab.

The dat. *stoṭṛibhyaḥ* may be construed with *uchāntī* rather than *pramīyase*, thus "dawning for the praisers, you do not diminish" (so Re, Th), but this would have no appreciable effect.

V.80 Dawn

As noted in the publ. intro., every vs. but the first begins with *eṣā* 'she, this one here'.

V.80.1: In contrast to the relentless nominative representation of Dawn in the rest of the hymn, this 1st vs. begins with 3 full pādas of accusative describing her.

V.80.3: I previously accepted the standard view that *āprāyu-* is a root noun compound derived from *prā√yu* (\sqrt{yu} 2 'keep away') and is essentially a variant of *āprayuchant-* (cf., e.g., EWA s.v. *YA V*², p. 404 with lit.). There are, of course, two formal problems with this analysis: the long *ā* of the preverb, which, notably, is not found in *āprayuchant-*, and the lack of the empty *-t-* suffixed to root nouns ending in short resonants (cf. *dveṣo-yú-t-* to this same root). It should also be noted that the Pp. analyzes *āprāyu* as *āpra-āyu* (also in I.89.1); although the Pp. is not always a reliable guide, its evidence should be considered. The issue has recently been discussed in detail by Scar (439–40), who in the end rejects the *prā√yu* interpr. in favor of a bahuvrīhi with *āyu-* 'youth, lifespan', a neut.

noun that is less well-attested than both the neut. *āyus-* ‘id.’ and the derived adj. *āyú-* ‘lively’. The semantics of this cmpd. are a little tricky: Vedic people always pray to have their lifetimes lengthened, using the preverb *prá* (generally with $\sqrt{tṛ}$), so **prāyú-* should mean ‘having a lengthened lifetime’, a good thing, and *āprāyú-* the reverse, hence a bad thing. However, Scar suggests ‘nicht alternd, ewig jung’, a good thing. Although it’s somewhat disturbing that the usually positive collocation of *prá* and *āyú(s)-* remains positive when negated, Scar’s reconstruction of the semantic development seems plausible. A further development from ‘ever young’ → ‘lively’ → ‘not slacking, unremitting’ can be envisioned -- esp. if, as I think likely, the word ceased to be transparent and got partially captured by *prá√yu* and its negated adj. *āprayuchant-* (a scenario also sketched by Scar). Note *āprayuchan* nearby in V.82.8. Though I do not feel that the publ. translations of *āprāyú-* need to be altered, my analysis of the form now starts in a very different place. A somewhat different value is proposed for *āprāyus-* in I.127.5, but starting with the same basic elements; see comm. ad loc.

V.81 Savitar

The hymn falls into three symmetrical sections (vss. 1–2, 3, 4–5) based generally on their verse/pāda-initial elements, but these sections do not correspond to thematic divisions. The first section, vss. 1–2, is marked by *ví*. Though the first pāda of vs. 1 lacks *ví*, the repetition is insistent starting with pāda b *víprā víprasya ... vipāścītaḥ*, followed by hemistich-initial *ví* in 1c *ví*, 2a *vísṣvā*, 2c *ví* along with other, internal *vī*’s: 1c *vayunāvíd*, 2a *kavíḥ* / 2b *prāsāvíd ... dvipāde* / 2d *ví rājatíḥ*. The *ví* may play on the middle syllable of the god’s name *savítár-*, and it also ties him to the *vípra-* he is identified with in 1b. Given that the next hymn (V.82) plays on the first syllable of his name (*su/sav*) and the root from which it’s derived, it may not be farfetched to suggest that this section focuses on the 2nd syllable.

Both hemistichs of the next vs. begin with the rel. prn. (3a *yásya*, 3c *yáḥ*), a relatively low-energy repetition between the *vī*’s of vss. 1–2 and the *utá*’s of 4–5. In these last two vss. the repetition of *utá* explodes: every pāda save for the last (5d) begins with *utá*, seven occurrences in all. Beside these patterns of repetitions, it is striking that the first and last pādas of the hymn do not participate; the last pāda serves as an extra-hymnic summary pāda.

The name Savitar is found once in each vs.

V.81.1: With Ge I take *vipāścītaḥ* as nom. pl. qualifying the (human) *vípra*-s, who attend to the inspiration of “the lofty inspired poet,” namely Savitar (sim., but not ident., WG). By contrast, Gr, Re, Th (Unters. 21) take *vipāścītaḥ* as gen. sg., modifying Savitar. The latter interpr. requires that the gen. phrase *víprasya bṛható vipāścītaḥ* is dependent on *mána utá ... dhíyaḥ* in the previous pāda. In other words, the poets hitch up the mind and insights of Savitar, not their own. This would not be impossible but is less likely in the context of Vedic poetic composition, and the middle voice of *yuñjate* suggests that the objects of the verb are the poets’ own.

The word *páriṣṭutíḥ* is a hapax, and the lexeme *pari√stu* is otherwise only late and rare. I do not know exactly what it refers to, but it is likely a technical ritual term.

V.81.2–3: Just as Savitar follows the lead (*prayāṇam*) of Dawn in 2d, the other gods follow his lead (also *prayāṇam*) in 3a. The masc. rel. prn. *yásya* beginning 3 makes it clear that the referent has changed -- which is not clear from the English.

V.81.3: The publ. tr. takes instr. *ójasā* as belonging to the gods, whereas the standard interpr. assign this *ójas-* to Savitar. Although there is no way to tell from the Skt., I think “with/through his power” is the better choice, esp. given the parallel instr. *mahitvanā* in d, which is definitely Savitar’s. I would so emend the tr.

The second hemistich at first appears quite straightforward syntactically, but the syntax clashes with what we expect the sense to be -- and on further inspection the syntax turns out to be skewed, too. I’m afraid that in the publ. tr. this has produced regrettable incoherence. Looking at the syntax first, we seem to find a textbook case of a relative / correlative construction: *yáḥ ... sá ...*, with an accented verb in the rel. cl. *vimamé*, hence “who measured out the earthly (ones), he ...” But there is a problem, because the direct object of the rel. cl., *pārthivāni*, should be completed by *rājāmsi*, which is technically in the main clause beginning with *sá*. This does not bother Ge or Re, who tr. the two acc. pls. together in the rel. cl. (e.g., Ge “der die irdischen Räume durchmessen hat ...”). WG by contrast do notice the problem and tr. *pārthivāni* in the rel. cl. and *rājāmsi* in the main cl. and supply all the missing parts in each cl.: “(er), der die irdischen (Räume) durchmessen hat, er ist Etaśa, der ... die (irdischen) Räume (durchmessen hat) ...,” which is similar to my publ. tr. -- though a bit more coherent -- but also a bit clumsier. The publ. tr. assumes that the 2nd set of spaces are ‘heavenly’; cf. IV.53.3 *āprā rājāmsi divyāni pārthivā* “(Savitar) has filled the heavenly and earthly spaces.” The semantic problem is posed by the phrase *sá étaśaḥ* smack in the middle and apparently starting the main clause, coreferential with the *yáḥ* in the rel. cl., which we all had good reason to think was referring to Savitar. One solution has been to take *étaśa-* as an adj., ‘dappled’ vel sim (so Sāy.: *etavarṇaḥ śubhraḥ śobhamānaḥ*) or ‘hastening’ (so Gr, though not for this passage). But most take it as the PN Etaśa, the famous, if often enigmatic, horse of the sun. Following that tactic, as far as I can see we must take it as an identification or a simile, with Savitar equivalent to Etaśa -- not as a complete change of subject. There are two ways I can see to do this -- 1) take *sá étaśaḥ* as a parenthetical interjection within the relative clause, which otherwise occupies all of cd: “Who measured out the earthly spaces -- he is Etaśa! -- with his greatness -- god Savitar ...” or 2) to keep the rel./corr. structure but fold *étaśaḥ* in as unmarked identification / simile: “Who measured out the earthly (spaces), he, (like/as) Etaśa, measured out the (heavenly) spaces with his greatness: god Savitar.” I prefer the latter, because it allows us to supply ‘heavenly’ in the main clause, and surely the point of contact between Savitar and Etaśa in this context is that Etaśa crosses the heaven daily, “measuring it out,” as he pulls the sun’s chariot. Etaśa as a measurer of earthly spaces makes little sense. I would therefore emend the publ. tr. to the 2nd alternative. That Savitar is identified with Etaśa in one of his aspects may be supported by the explicit identifications with other figures in the next two vss.: *mitró bhavasi* (4d), *pūṣā bhavasi* (5b).

V.81.4–5: 4b and 5d are entirely parallel in structure:

4b *utá mitró bhavasi deva dhārmabhiḥ*

5d *utá pūṣā bhavasi deva yāmabhiḥ*

This strict parallelism should extend to the two final instr. pls. -- that is, Savitar should become the god in question by virtue of a quality/entity held in common and expressed in the instr. I therefore think it unlikely that *dhármabhiḥ* is the vague “nach deinen Eigenschaften” of Ge or “par (tes) dispositions-naturelles” of Re; it needs to refer to an actual thing, like Pūṣan’s journeys. In the publ. tr. I render it as ‘supports’ (sim. WG “durch deine Unterstützungen”), keeping in mind that Savitar often holds up his arms, which may function as literal supports. But it may rather be something like ‘institutes, ordinances’, referring to the regulation of time and activity that Savitar performs.

V.82 Savitar

As noted in the publ. intro. as well as just above ad V.81, this hymn contains numerous verbal and nominal forms of the root $\sqrt{sū}$ ‘impel’, whose agent noun ‘Impeller’ Savitar is grammatically. Every vs. in the hymn contains a form of the name *savitár-*, but play on the root doesn’t start till vs. 3. There are eight such forms, with a concentration on the impv. in the middle: pres. subj. *suvā́ti* (3b), aor. injunc. *sāvīḥ* (4b), pres. impv. *suva* (4c, 5b, 5c), them. loc. *savé* (6b), them. acc. (*satyá*)*savam* (7c), with a return to the original pres. subj. *suvā́ti* (9c). Starting with vs. 3, only vs. 8 lacks such a form -- but *s^uvā(dhīr)* with distracted *suvā* fits phonologically, though not etymologically. We might also note that the first two vss., which lack the punning root forms, do contain forms that might be considered phonological precursors: 1c *sarva(-dhātāmam)*, 2a *sváyaśastaram*, 2c *svarājyam*. With so much concentration on form in this hymn, we should not be surprised that the content is not particularly stimulating.

V.82.1: As Re points out, this vs. is reminiscent of the Gāyatrī mantra, III.62.10. Putting them side-by-side, it is difficult not to assume that one of them (presumably this one) is a deliberately fractured version of the other:

III.62.10 *tát savitúr váreṇyam, bhárgo devásya dhīmahi*
dhíyo yó naḥ pracodáyāt

V.82.1 *tát savitúr vṛṇīmahe, vayám devásya bhójanam*
śréṣṭham sarvadhātāmam, túram bhágasya dhīmahi

Note esp. the first pādas, whose 1st 2 words are identical and whose last words both belong to $\sqrt{vṛ}$ ‘choose’. In the 2nd pāda *devásya* is identically positioned, and the phrase *bhārgaḥ ... dhīmahi* is echoed by our pāda d *bhágasya dhīmahi*, but with a diff. noun (*bhāga-*, not *bhārgas-*). The remainders of the vss. diverge, but the tone is certainly set by pāda a and the similarities of b/d. It is difficult to know what to make of this -- whether the Gāyatrī mantra had already achieved some sort of local fame that lent itself to parodic imitation or whether the similarities are just the result of the usual formulaic underlayer (though there are no other vss. that begin *tát savitúr*). It’s also somewhat striking (and could be used as an argument either way) that the vs. in our hymn is not a Gāyatrī but an Anuṣṭubh -- and it is the only Anuṣṭubh in a Gāyatrī hymn. If III.62.10 was already known as the (or a) Gāyatrī mantra, our poet could be slyly tweaking that reputation. Or this can all be my post-hoc invention.

V.82.4: Ge interpr. *sāvīḥ* as modal (“mögest du ... zuweisen”), and KH (Injunc. 264) explicitly takes this injunctive as the substitute for the unattested *iṣ*-aors. impv. to this root. But given the pres. impv. to the same root in the flg. pāda (*pārā ... suva*), as well as

in the next vs. (5b, 5c), I think it more likely to be a contrastive expression of recent past – though I take the other two occurrences of *sāvīṭh* (II.28.9, VI.71.6) as imperatival, for slightly different reasons.

V.82.8: With regard to *āprayuchan* see disc. of *āprāyu-* ad V.80.3.

V.82.8–9: There are no overt main clauses in these last two vss., whose vs.-init. rel. prns. *yāḥ* hang off the accs. in vs. 7, but it is possible that the vs.-final *savitā* (or in 8 *devāḥ savitā*) in both cases constitutes a de facto main cl.

V.82.9: A further question concerns the last clause of 9c, *prā ca suvāti savitā*. Ge (fld. by Klein [DGRV I.248 n. 93, 251]) takes *cā* as subordinating, tr. ‘wenn’, thus producing a dependent clause dependent on another dependent clause “who ..., when he ...” (Re has a fussy interpr. involving an ellipse that I find puzzling.) I see no reason for Ge’s interpr., but take the *ca* as conjoining the two clauses ab and c (or their verbs). The accent on *suvāti* is already accounted for by its presence in a rel. cl., and I think it more likely that the poet would end the hymn with a ringing announcement of what Savitar is going to do rather than a conditional uncertainty about whether he’s going to do it.

The phrase *āsrāvāyati ślókena* is technically an etymological figure, somewhat obscured by the *l*-form of *ślóka-* and its highly lexicalized state.

V.83 Parjanya

V.83.1: The verb *dadhāti* can be read with both *rétaḥ* and *gárbham*, the latter in the idiom *gárbham √ dhā* ‘impregnate’, found again in 7a.

V.83.2: This vs. quickly modulates from the physical to the moral, with Parjanya the scourge not only of the trees but of demons and evil-doers.

V.83.3: We might expect **rathīr iva* here, to the *vrkī-*stem *rathī-*, but the ending *-ī* must belong instead to the *-ín-*stem *rathín-*, which does have an independent existence. See Old ad loc.

I take the whip in the simile to be lightning; both a whip and a lightning flash are slender, fast, unpredictable, and have a non-straight trajectory. The flash of lightning would also do the revealing in pāda b. Note also that thunder is covered in pāda c and rain in b and d, so lightning is what’s otherwise absent.

“Rain-bearing cloud” (*varṣyāṃ nābhaḥ*) in d seems like a quick and a bit half-hearted poetic repair of “rain-bearing messengers” (*dūtān ... varṣyān*) in b. The two pādas hold the verb *kṛṇute* constant.

V.83.5: Note the unusual geminate in *nánnamīti*, dissimilated from **námnamīti*.

In pāda b the question is whether the scene is set during the thunderstorm, with frightened quivering livestock, or afterwards, as they gambol in new growth. Pāda a speaks for the former, c for the latter. Ge (and, it seems, WG) opt for the latter, while I favor the former, though without strong grounds.

The first three pādas of this vs. begin with *yásya*; the fourth does not, but ends with a close phonological match, *yacha*.

V.83.6: The default referent of *ásuraḥ pitā naḥ* ‘the lord, our father’ here is of course Parjanya, since this is a Parjanya hymn and the subject is urged to pour out water (cf., e.g., Hale, *Asura*, 46–47). However, I wonder if this is not rather a reference to Dyaus Pitar, or at least an identification of Parjanya with Dyaus Pitar. For Heaven as *pitár-ásura-*, see X.124.3 as well as disc. and other related passages in my ‘The Divine Revolution of RV X.124’ (Ged. Staal, 2016), 294, and of course Zeus famously ‘rains’ in Greek.

V.83.7–8: These two vss. ring changes in the oppositional pair *úd* ‘up’ and *ní* ‘down’: 7c *níñcam*, 7d *udváto nipādāḥ*, 8a *úd acā ní śiñca*. Note that 7b *udanvātā* might seem to belong with this sequence, but *udan-* there is the ‘water’ word.

V.83.8: Hoffmann’s positing (Aufs. I.164 = KZ 79 [1965]) of a separate root $\sqrt{aṇc}$ ‘scoop, draw (water)’ seems unnec., at least for this passage.

V.84 Earth

For a discussion of this hymn as an implicit riddle, see my ‘A Sanskrit Riddle in Three Movements: Rig Veda V.84,’ in *Beyond Hatti: A Tribute to Gary Beckman*, ed. Billie Jean Collins and Piotr Michalowski, 2013, pp. 155–58. Its placement immediately after the Parjanya hymn, to which it is attached as a kind of pendant, is important. Note also that all three standard words for ‘earth’ are found in the hymn: *pr̥thivī* (1b), *bhūmī-* (1c), and *kṣām-* (3b), though in different cases and usages. The riddling middle vs. lacks such a word.

V.84.1: The exclamation with which the hymn opens, *bád*, has a very un-Indo-Aryan shape, with a plain *b* and an unmotivated retroflex *ḍ*. This *ḍ* becomes *ḷ* before words beginning with a vowel, showing the standard R̥gvedic intervocalic change -- which, interestingly, operates across word boundary here and in the 7 other passages in which *bád* is followed by a vowel; in VIII.101.11 it becomes *ṇ* before a nasal, in VIII.101.12 a *ṭ* before *s*. In 4 of its occurrences, incl. this one, it is immediately followed by *itthā*; the combined sense of the two particles escapes me. The non-Sanskritic phonology of *bád* suggests that there is a colloquial flavor to the word, but it is hard to capture exactly what that is -- esp. as the rest of the vs. doesn’t show markedly low register features.

Note the phonetic figures *párvatānām*# ... *pr̥thivī*# (ab), *#prá ... pravatvat*# (c), and *#mahná ... mahin*# (d), all positioned at pāda boundaries and all involving a fem. voc. as the 2nd word. The first two pairs of course also play off each other.

This first verse presents an unsurprising picture of the earth, weighed down by mountains whose slopes define her and providing support for the life that flourishes upon her. This vs. serves as scene-setter and contrast to vs. 2.

V.84.2: *vicāriṇī* is generally taken as ‘far-wandering’ vel sim. (e.g., Ge ‘du Wandelbare’), but cf. X.173.2, where the mountain to which the newly installed king is compared is

āvicācaliḥ ‘unwavering’; remember also that earth is said to ‘bob up and down’ (*nānnamīti*) during the thunderstorm in the preceding hymn (V.83.5).

This is the riddle vs.: the puzzle involves positing a number of qualities of the earth that don’t appear to be characteristic of her -- quite unlike the first vs. -- and implicitly asking under what circumstances these unlikely attributes would be true of the earth, who is not explicitly named. In this vs. she is addressed as a ‘wobbler’ (*vicāriṇī*), she is associated with nights (*aktúbhiḥ*), she is said to “fling moisture forward” (*perúm āsyasi*), and she is silvery (*arjuni*). Neither the unsteady actions nor the silver color and association with night are earth-like.

As Thieme already suggested (Gedichte, 58), the nights can represent the darkness of monsoon clouds and her wobbling results from the thunderstorm. She is also ‘silvery’ with rain, which she ‘flings’ in the forms of streams and rivulets down her slopes, the slopes mentioned in verse 1.

V.84.3: The first half of this verse restores to us the familiar steady, sturdy Earth of vs. 1, while the second half identifies the special circumstances that held in vs. 2. Because it is made up of two subordinate clauses, it must be attached to the previous verse and the 2nd person referent must be the same. This verse, with its straightforward diction and balanced construction, provides the answer to those dullards in the audience who failed to solve the implicit challenge of vs. 2.

The standard tr. all supply a verb for *vidyútaḥ* -- e.g., WG “wenn ... die Blitze (blitzen) ...” -- but I don’t see why the lightning bolts can’t ‘rain’ -- in particularly violent thunderstorms lightning flashes can seem to come as thick and fast as raindrops.

Note that ‘earth’ is reunited with her usual formulaic companion ‘heaven’ in the final pāda of the hymn. It should be kept in mind that this is the only hymn dedicated only to Earth in the RV, instead of to Heaven and Earth.

[V.85 JPB]

V.86 Indra and Agni

The hymn begins with the voc. dual dvandva *īndrāgnī*, and a form of that cmpd is found in 2d, 4b, 6a; vss. 3 and 5, which lack the cmpd., begin with dual pronouns (*táyoh* and *tā* respectively), while dual forms of both the demonst. and the rel. pronoun are also common elsewhere in the hymn.

V.86.1: The 2nd hemistich is a little tricky. As noted in the publ. intro. it seems to concern the Vala myth, though with Trita as hero -- an odd substitution in a hymn at least half dedicated to Indra. Moreover, there’s a functional slippage in the accusatives with the verb *prá√bhid* ‘split (forth)’. The first acc., neut. pl. *dṛ̥l̥hā*, is of course very common, used of fastnesses or strongholds (which usually get split or otherwise breached). The standard interpr. (Gr, Old, Ge, Re) take it with *dyumnā* (e.g., Old “feste Herrlichkeiten”), but this is an uneasy collocation. The *dyumnā* should be the brilliant things desired to be obtained; they are more likely to be held within strongholds than to be strongholds themselves, and the consistent use of *dṛ̥l̥hā*- as ‘fastness, stronghold’ makes it unlikely that it can here refer to the thing held rather than what holds it within. I assume that *prá√bhid* can take a double acc.: ‘split X (to release) forth Y’, with X the container and Y

the contained. Old is quite dismissive of a variant on this explanation, but I do not see the objection -- particularly as whatever *vāñīḥ* refers to, it is more likely to be the contained than the container. As for *vāñī-*, this stem usually refers to music or voices. Ge's tentative suggestion, that these are the voices of the cows released from the Vala cave, makes the most contextual sense -- even though, as Ge points out, the word is not otherwise used of animal noises. On the other hand, as he also points out, it *is* used of rivers, so that application to non-human sounds that are comparable to a choir of human voices is possible. That *vāñī-* is also sometimes used of the choir that encourages Indra in a Vala context (e.g., III.30.10) might add an additional resonance to the usage here, but I do not think it is the primary reading.

V.86.2: The publ. tr. starts the vs. in the 2nd ps. ("you two who") and ends in the 3rd ps. ("these two"). This does not represent the text entirely fairly, because the grammatical person is entirely unclear until the last pāda, which contains an acc. dual dvandva and a 3rd ps. dual acc. prn. (*tā*) and a 1st ps. pl. verb. Until pāda d Indra and Agni are represented only by the insistent rel. du. *yā* (a, b, c). The vs. could therefore be couched entirely in the 3rd ps. ("the two who ..."), as the standard tr. do. I stand by my modulatory tr. because, based on vs. 1 with its voc. dual dvandva and 2nd du. verb *āvathaḥ*, we start vs. 2 assuming the 2nd ps. context carries over, and nothing disturbs that assumption until the very end of the vs.

V.86.2–4: Vs. 3 is the middle vs. of the hymn, since vs. 6 is in a different meter and is an extra-hymnic summary vs. It has the marks of an omphalos, esp. semantic and syntactic obscurity. The real difficulties lie in the central 3cd along with 4a, which is verbally related to 3cd by the problematic *eṣ*-forms (see below). The omphalos is framed, in classic omphalos fashion, by *indrāgnī (tā) havāmahe* in 2d and 4b.

V.86.3: 3cd has elicited much disc.; see esp. the lengthy treatment of it by Old, with several different possible tr. supplied, Ge's n. 3cd, and a fairly detailed disc. in WG's n. (now supplemented by an even lengthier and somewhat ill-tempered treatment by Slaje [Vájra, 92–94]). Among the problems are 1) what is the referent of the 'wood(en)' in instr. *drūṇā*; 2) who is the subj. of the verb and is it his hands (*gābhastyoḥ*) that are in question; 3) what is *gāvām* construed with; 4) what case is *vṛtraghná*, that is, what is its pausal form?

I will begin with 3): flg. Ge (n. 3cd), I supply a loc. **éṣe* to govern *gāvām* "(in the quest) for cattle." This is supported by *éṣate* in this pāda, *éṣe rāthānām* "in the quest for chariots" in the next pāda (4a) likewise with gen., and X.48.9 *gāvām éṣe*. As Ge suggests, **éṣe éṣate* may have been simplified by a sort of word-haplology. However, this interpr. is slightly complicated by the fact that I, at least, take *éṣe* and *éṣate* to different roots: *éṣe* as a loc. sg. to a thematic deriv. to *√iṣ* 'seek' and *éṣate* (with most) as the stem *īṣa-* + *ā*, which I take to be the orig. desid. to *√i* 'go' (see Gotō 1st Cl. p. 77, citing Hoffmann; Heenen Desid. 96ff.). The publ. tr. "goes questing (in his quest) for cattle" seems, however, to connect the two etymologically. I meant rather that the 'seek' sense of nominal *éṣa-* "bled" into the desid. sense 'desire to go', on the basis of their shared phonology and the fact that 'seek to go' is very close to 'quest'. The verb form *éṣa-* must, of course, have a preverb, because it should not otherwise be accented.

As for 4), the underlying form of *ṛtraghñá* — contra the Pp and most interpr., who take it as dat. *ṛtraghñé* — I think it is a genitive (*ṛtraghñáh*), dependent on *gábhastyoh* -- a possibility floated but ultimately rejected by Old. A parallel passage with a weapon (in fact, a *didyút*; see our 3b) being wielded in the arms of a man is found in VII.25.1 *pátāti didyún náryasya bāhóḥ*. A dat. does not make much sense here because *ā* *√iṣ* doesn't ordinarily take a dative, nor does *prāti*, so we are left with no way to fit a dat. **ṛtraghñé* into the existing syntax of the sentence, save as a free-floating dat. of benefit. (Re, curiously, seems to take it as a loc. “chez *Ṛtrahaṇ*” [*sic* the retroflex *ṇ*]. This seems to go back to an idea of Hillebrandt's that it belongs to an otherwise unattested thematic stem; see Old. This has nothing to recommend it.) In answer to 2), if I am thus correct that the hands are those of Indra, it seems likely that he is also the subject of *éṣate*. Otherwise the subject is an unidentified other party or (so most interpr.) is the missile (*didyút*) of pāda b. What then to do with *drúnā*? This is the most problematic of the problems. Most interpr. take it as the handle of the *didyút* (which, acdg. to WG, might be a sort of Vedic boomerang). In VIII.96.11 and IX.98.2, the same instr. seems to refer to a wooden paddle or the like. A similar wooden implement, usable as a weapon, may be meant here -- though it seems a come-down for vajra-wielding Indra. More likely it is equipment esp. suitable for cattle herding -- a prod or goad, and this would account for Indra's trading in his usual weapon for something more appropriate to a quest for cows. Of course, since soma is usually poured into wooden cups, this may also depict Indra with a wooden soma cup in his hands, preparing to drink before he goes out on his quest. I might emend the publ. tr. to “With the wooden (goad / soma-cup) in the hands ...”

I am not at all certain of the correctness of any of these answers to the questions posed above. Nor do I have any explanation for *prāti*, beyond pointing out that 4c begins with rhyming *pātī*. And, most especially, I don't understand why this cramped and obscure half-verse is found in this otherwise rather anodyne hymn.

V.86.4: As noted above, the *éṣe* + GEN. here helps explain 3cd. It is also integrated into the omphalos-framing (semi)repeated pāda *indragnī havāmahe*. Most standard tr., however, render *éṣe* here not as ‘in quest of, in pursuit of’, but as ‘rush, run, course’ (e.g., Ge “im Rennen der Wagen,” Re “pour la course de chars,” WG “anlässlich eines Wagenrennens”), implicitly accepting Gr's separation of *éṣa-* into two stems ‘das Hineilen, Eilen’ and ‘Aufsuchen, Begehren’. *éṣe* + GEN. is found three times elsewhere in V -- V.41.5, 8 (both *rāyá éṣe* “in quest of wealth”) and this very pāda in V.66.3 -- and it seems uneconomical to give these similar syntagms in the same maṇḍala two entirely different meanings. Old (ZDMG 62: 477–78 [=KISch 286–87]) makes similar points, arguments accepted by Bl (RReps ad V.66.3).

With the phrase *turásya rādhasaḥ* compare the cmpd. *tuvi-rādhās-* (3x, incl. V.58.2). This pair, cmpd. and free phrase with *tuvi-* and *turá-* respectively, confirms at least a synchronic connection between the Caland cmpding form *tuvi-* and the *-rá-* adjective, even though from *√tū* we should expect long-vowel **tūrā-*. Contamination with *turá-* ‘swift, impetuous’ surely contributed to the vowel shortening, as is generally supposed: the two adjectives would be hard to sort out in many contexts where vague and general flattery was being conveyed. For *turá-* and *√tū*, see also *tavāse turāya* (3x) with a different derivative of *√tū*.

V.86.5: The verb *puró dadhe* gives a more Agni-esque cast to the vs. than the more Indiraic vss. that have preceded.

The standard tr. separate c and d into two clauses, but I think the two expressions are meant to be balanced against each other. The idea seems to be that though (*cid*) the two gods deserve portions (*árhantā*), I have set them out as if they themselves were portions (*ámśā-iva*), prizes for a prize-winning steed. What it means to “set them out” I don’t know. It’s worth noting that *√arh* regularly takes *pītīm* ‘drink(ing), share of drink’ as object (e.g., V.51.6), so the reciprocal notion would be familiar to the audience.

V.86.6: *havyá*, so accented, is generally ‘oblation’, as opposed to *hávya-* ‘invocation’. However, in this case it is difficult not to see a pun, with the hymn just completed counting both as an oblation (“*like* ghee ...,” pāda c) and an invocation, accompanying the physical oblation. The pun is further enabled by the adj. *śūṣyā-* ‘forceful’, which in its other two occurrences (I.54.3, VII.66.1) modifies types of speech (*vācas-* and *stóma-* respectively).

This pun may help explain the curious expression “like ghee purified by stones” (*ghṛtām ná pūtām ádribhiḥ*). The problem of course is that it is soma, not ghee, that is purified by stones. It is very doubtful that stones could play a role in preparing melted butter (pity the poor cow), and although the root *√pū* is occasionally used of *ghṛtā-* (VI.10.2 and esp. the fixed simile *ghṛtām ná pūtām* in III.2.1, IV.10.6, and esp. the very similar VIII.12.4 *ghṛtām ná pūtām adrivaḥ*) -- and consider the English term for ghee, “clarified butter” -- it is overwhelming characteristic of soma. The standard tr. deal with the disharmony in this simile by separating it into two -- e.g., Ge “durch die Presssteine (gepresst), wie Schmalz geklärt.” By contrast, I think the ill-assorted technology in the simile was deliberately introduced, to match the same punning lack of fit in the frame, where the forceful/noisy *havyá-* has been poured (*áhāvi*): the jarring “ghee pressed by stones” calls attention to the more subtle mismatch in the frame. We might almost call this ritual synaesthesia.

V.87 Maruts

Re nicely characterizes this hymn (in his comm. on vs. 5) “l’hymne est fait de débris empruntés au cycle ancien des M.” Certainly there is a sense that the vss. are constructed of loosely connected phrases, which may well be connected with the unusual meter.

As disc. in the publ. intro., the final word of the 2nd pāda of each vs., *evayāmarut*, appears to be an exclamatory internal refrain without syntactic connection to the rest of the vs. Ge by contrast takes it in each case as forming a nominal sentence with unexpressed Viṣṇu (usually, but see below): “(Viṣṇu is der) mit dem die Marut gern kommen.” But though Viṣṇu is surprisingly prominent in this hymn, I don’t think he outranks the Maruts, and the formation of *evayāmarut* is too peculiar to be folded into a conventional (if invisible) nominal clause. Though sg., I think it must refer to the Maruts, who, after all, appear in the collective sg. in the rest of the vs. (pādas cde) as a troop (*śárdha-*). For the phrase on which this is built, see V.41.16 *evayā marutaḥ*.

V.87.1: The grammatical identity of *giriḥ* (in sandhi) ‘mountain-born’ is problematic (see Old’s disc.). The Pp. takes it as *giriḥ*, which could be nom. pl. fem. (so Gr and Re) and

modify ‘thoughts’, but this makes little sense: the thoughts in question are surely home-grown, as it were, not outsourced from a mountain. (Though Old’s offhand suggestion that the cmpd might mean “in der Rede geboren,” with otherwise unattested loc. sg. of *gír-* ‘hymn’, is worth considering as a second punning reading, suitable for ‘thoughts’. See *gírā* in 3a.) *gírijāḥ* could likewise be nom. sg. masc. and refer to Viṣṇu. This is the basis for Ge’s first Satzparenthese “-- er ist der Berggeborene, mit dem die Marut gern kommen --” and he is followed by Scar (136). But switching the ref. to Viṣṇu from dative (... *mahé ... víṣṇave, marútvate*) to nominative in the middle of a pāda right at the end of the dative phrase is highly unlikely. Although the morphology doesn’t entirely work, I think it must be a dative. The problem of course is that the dat. to this *-ā*-root noun should be underlying **gírijé*, which should appear in sandhi as *gírijá*, not *-já*, as here. It should be noted, however, that datives in *-é* to root nouns in *-ā* are exceedingly rare (see Macd., Vedic Gr. p. 252; AiG III.125), and beside them exist infinitives in *-ái* to roots in *-ā* (Macd. loc cit.; AiG III.129) like *pratikhyaí, vayo-dhaí*. Esp. in this sandhi situation, I see no reason why this extended dat. sg. would not have been available even to a non-infinitive. In favor of a dat. referring to Viṣṇu is the very similar passage I.154.3 *prá víṣṇave sūśám etu mánma, gírikṣíta urugāyāya víṣṇe*, with the semantically corresponding dat. root-noun cmpd. *gírikṣíte* ‘mountain-dwelling’ in a lengthy dat. phrase referring to Viṣṇu and *prá ... etu mánma* matching our *matáyo yantu* almost exactly. (Curiously WG tr. *gírijā* as if a dat. parallel to *marútvate* “... zum grossen Viṣṇu, der in Begleitung der Maruts ist, der in den Bergen geboren ist,” but Scar, who was responsible for this vol. of WG, seems to hold onto the nom. sg. interpr. in his n. -- though the n. is a bit incoherent.)

The hapax cmpd *bhandád-iṣṭi-* is variously rendered. Both Ge and WG (latter flg. Gotō, 1st pres. cl., 224) interpr. *-iṣṭi-* as “sacrifice” (hence Ge’s ‘opferliebend’, WG ‘deren Opferungen erfreuen’). But *-iṣṭi-* is far more often ‘desire, quest, seeking’ than ‘sacrifice’ in the RV, and notice the concentration of such forms of *√iṣ* in the previous hymn (V.86.3, 4, at least by my interpr.). As Lowe points out (*Participles*, 270–71), *bhandát-* and its ilk result from reanalysis of governing cmpds, producing pseudo-act. participles to roots without an active paradigm (like *√bhand*, which is otherwise only middle). The cmpd is exactly parallel to rhyming *krandád-iṣṭi-* (X.100.2), whose interpr. also varies. Although both cmpds have the look of governing cmpds, neither *√bhand* nor *√krand* is transitive; I therefore think we have more or less standard bahuvrīhi semantics ‘having a fortunate quest’ and ‘having a roaring quest’ respectively, whose English I have adjusted to something more palatable.

The adjectivally accented *távase* beginning d points up the nominally accented rhyming *śávase* at the end of e. With Re I think the Maruts are being equated with *śávas-* itself, but it would be possible to take *śávase* as a separate purpose dative ‘for strength’ (with or without *távase*).

On *dhúni-vrata-* see comm. ad V.58.2.

V.87.2: This vs. is quite loosely constructed. To begin with, the rel. cl. of ab has no obvious main clause, though the two *yé*s do, of course, refer to the Maruts, who show up in the voc. in c. The rel. cl. could also hang off vs. 1, with pl. *yé* picking up the collective sg. *śárdha-* in 1cde.

The next question is what belongs with each *yé*. The easiest solution and the one taken by the standard tr. (as well as Klein DGRV I.118) is to take the first as a nominal cl. *yé jāṭā mahinā* and the 2nd as containing the accented verb *prá ... bruváte*. But there are several factors against this. For one thing the *prá* that begins the 2nd pāda is actually a repeat of the one that begins the vs. (#*prá yé jāṭāḥ ... yé ca ..., prá ... bruváte ...*); that is, the first *prá* seems to have been extracted from the second *yé* clause and fronted around the first, which may well be a violation of RVic clause structure and at best is highly unusual. If we take *prá ..., prá ... bruváte ...* as the verb for both *yé* clauses, as I do, it is considerably less problematic. Moreover, the *yé ... yé ca* construction is far more at home in expressing complementary pairs (see Klein I.115–16) than in conjoining coreferential entities with semantically unconnected predicates, as the standard tr. requires (e.g., Klein 118: “Who were born with greatness and who now themselves proclaim (their might) with knowledge.”). In my interpr. the *yé ... yé ca* construction expresses two types of Marut birth, “born/produced by might” and “self(-produced/born),” with the *svayám* signalling the 2nd type. The Maruts are called *svajāḥ* in I.168.2; cf. also I.64.4 *sākām jajñire svadhāyā ...* “They [=Maruts] were born all at once by their own power.” I see only two arguments against my interpr.: 1) the *nú* in the second *yé* clause, which might mark a chronological progression (as in Klein’s tr. [also WG]; Ge and Re both ignore the *nú*, and it’s certainly true that *nú* need not be temporal); 2) the apparently required underlying assumption that there are two groups of Maruts. As to that, I don’t think the complementary pairing needs to indicate that there are two distinct groups of Maruts sorted by their means of birth, but rather that we can view their births in different ways.

The next question is how to construe *prá ... bruváte*. Ge and WG both take it as reflexive “announce themselves,” but *prá √ brū* is not elsewhere reflex./pass., even in the middle. Re supplies as object “leur naissance,” which can be justified, but I prefer Klein’s “their might.” The resonant word *śávas-* is found on either side of this phrase, at the ends of 1e and 2c and is the focus of 2cde, and *prá √ brū* elsewhere takes such objects (*indriyām* I.55.4, *bālāni* X.54.2).

The rest of the vs. consists, in my opinion (flg. Re), of two parallel clauses, each beginning with instr. of respect, followed by *tád* and a gen. referring to the Maruts (2nd ps. in c, 3rd in d), and, as predicate, a negated form of *√ dhṛṣ* ‘dare (against), assail’. The *tád* is specified as *śávas-* in the first clause, which identification carries over into the second:

krátvā tád vo (maruto) nādhṛṣe śávaḥ
dānā mahná tád eṣām ádhṛṣtāso (nádrayaḥ)

This striking parallelism makes the interpr. of Ge and WG unlikely: they take *krátvā* as the weapon that someone might try to use, unsuccessfully, against the Maruts’ *śávas-*, whereas *dānā mahná* they take as instr. of respect. Actually, Ge’s treatment is more complicated: his tr. reflects the interpr. I just paraphrased (“Diese eure Macht ist nicht durch Einsicht zu erzwingen”), but in his n. 2c–e he describes the three instr. as parallel: “Der Sinn ist jedenfalls, dass keiner wagt, es ihnen an Umsicht, Freigebigkeit und Grösse gleichzutun.”

As Ge points out (n. 2e), masc. pl. *ádhṛṣtāsaḥ* has been attracted to the number and gender of the simile (*ádrayaḥ*); it is still specifying *śávaḥ* in the frame.

It’s also worth noting that pādas c and d both contain *ná* in sandhi with a following vowel in quite similar phonological sequences: *nādhṛṣe ... nádrayaḥ*. The first

ná is the negative (matched by *a-* in *ádhr̥ṣṭāsaḥ* in the next pāda); the 2nd is the simile marker.

V.87.3: Like vs. 2 this vs. begins with several relative clauses (*yé* pāda a, *yéṣām* c), with no clear main clause.

The first pāda of this vs. is syntactically straightforward, but we might wonder why the Maruts are heard “through a/their hymn.” In answer, there is the fact, often referred to above, that the Maruts are singers as well as sung-to. Further, in this context their “hymn” may be a metaphorical reference to thunder. It is also possible that it is a pun, as indicated in the publ. tr. and also implicitly by Scar (537), with the *-ā* variant form of the *i*-stem loc. sg. of *giri-*. (Interestingly Scar’s alternative “mit einem Lied (/im Gebirge)” in the root noun book is not reflected in his tr. in WG, which limits itself to “mit ihrem Lied.”) Of course, such a loc. sg. would be wrongly positioned: it is the *-au* loc. sg. form that is overwhelmingly found at pāda end (see, e.g., Lanman, Noun Infl., p. 385), but as a secondary punning reading the “wrong” form could be acceptable, esp. as it precedes a consonant, as most forms of loc. sg. *-ā* do. Thus the Maruts would be heard “on a mountain” -- as their storm often is.

The hapax nom. sg. *írī* is problematic formally and semantically. In this sandhi sit. the long *ī* final can only belong to a devī-type *-ī*-stem or an *-in*-stem. It is usually cited as the latter (e.g., Gr, EWA), but this analysis seems excluded formally because *-in*-stems are always suffix-accented. An underlying *-in*-stem is emphatically denied by AiG II.2.328 (“Die Barytona v. *írī* ... gehören nicht hierher”; see also Old’s serious doubts). Debrunner (AiG II.2.407–8) seems to favor (if “favoring” means sticking it in that section but then calling it “ganz unklar”) a masc. devī-type *-ī*-stem, but of course such stems are rare and problematic in all their occurrences. Nothing in the passage actually excludes an analysis as a *feminine* *-ī*-stem, but who would such a feminine be? The other question of course is what is it derived from and what does it mean. I follow the line of least resistance that has been fld. by a number of others and connect it with *írya-*, which is better attested though not much clearer, and is found in another Marut hymn in V, V.58.4; see comm. ad loc. If the basic sense is something like ‘energetic’, the form of *írya-* in V.58.4 is positive in sense, while *írī* is negative.

I do not understand the pāda-final *ā*. Assuming that *īṣte* belongs to $\sqrt{īṣ}$, that root does not otherwise appear with *ā* (or any other preverb). It’s worth noting that *īṣte* here is the only *t*-full 3rd sg.; the usual and very well-attested 3rd sg. is, of course, *īṣe*. We might try to connect the form with $\sqrt{īṣ}$ or $\sqrt{iṣ}$, but neither is promising formally or semantically.

The last pāda, *prá syandrāso dhúnīnām*, confronts us with a lexical conundrum: it contains two plurals, one nom., one gen., both of which are good Marut words. For the Maruts as *syandrā-* see V.52.3, 8; for *dhúni-* see *dhúni-vrata-* in this hymn (1e) and V.58.2, as well as the simplex adj. in numerous passages (e.g., V.60.7). So which one modifies the (unexpressed) Maruts, and what should we do with the other? The poet seems to be messing with our minds: we encounter the first, *syandrāsaḥ*, and understandably assume it refers to the Maruts, then come to the second, *dhúni-*, which is an even more characteristic Marut word, and have to readjust. Ge supplies ‘chariots’ (Wagen, sim. WG Fahrzeuge) with the nominative, and the publ. tr. tentatively follows that. Re manages to make both words refer to the Maruts, “(dieux) bruyants qui rapides (vont) de l’avant,” breezily remarking “il n’est pas indispensable de sous-entendre « les

chars ».” But, though I’m sympathetic to his intuition that both words should refer to the Maruts, the grammatical difference is unambiguous. In Max Müller’s tr. of this hymn (SBE 32), he tr. “the rushing chariots of these roaring Maruts come forth” and notes that “chariot” was Oldenberg’s suggestion (presumably in their consultation on the SBE translations; the suggestion is not registered in the *Noten*). One of the problems with supplying “chariots” is the preceding pāda (d), also in the nom. pl., which seems clearly to describe the Maruts. If *syandrāsaḥ* does not refer to the Maruts but to their chariots, we must either assume that the flashing entities in d are also chariots or put an unsignalled break between the two pādas. The publ. tr. essentially does the latter, but it is unsatisfactory. Ge does the former, which isn’t satisfactory either, and WG stir the pot even further by supplying ‘weapons’ as the comparandum in d.

V.87.4: The “common seat” (*samānāsmāt sādasaḥ*) is presumably one shared by Viṣṇu and the Maruts and is also presumably the same as the *sadhāstha-* in the previous vs. (3c) -- perhaps the midspace? The standard interpr. (incl. mine) also assume the same seat (or a similar place) is the referent of *svāt* ‘from his own’ in pāda c. For other exx. of the idiom \sqrt{yuj} +ABL. ‘yoke from’ with ‘seat’ in the abl., see Old.

Similar to *āyukta tmānā* is V.52.8 *prā ... yujata tmānā*, in the latter passage the verb is used absolutely, without expressed obj. That is possible here too, though it is also possible, and indeed more likely, to take *viṣpardhaso vímahasaḥ* in d as the obj. (so also Re and WG), referring to horses, an interpr. that saves supplying a verb to govern that phrase, as Ge does (“lenkt”). (See Max Müller’s solution below.) It should be noted, however, that neither of these adjectives is otherwise used of horses: *viṣpardhas-* is found twice elsewhere, once of human contenders (I.173.10), once of, apparently, flames (VIII.23.2); *vímahas-* is only attested once elsewhere, in I.86.1 of the Maruts. Max Müller in the SBE 32 tr. takes the two adj. as a voc. phrase addressed to the Maruts. This seems unlikely in the middle of a sentence devoted to Viṣṇu and only turning to the Maruts in its last word, *nībhīḥ*, and so a ‘horse’ interpr. seems the best course.

The publ. tr. renders *ādhi ṣṇúbhiḥ* as “upon the (mountains’) backs,” but in accord with the standard sense of this phrase (e.g., V.60.7) and in harmony with the standard tr. I would now alter this to “along the (mountains’) backs.” This complicates the rendering of the rest of the clause, because there is no verb of motion, just ‘yoke’. Both Re and WG supply an expression to provide this motion: Re “(pour courir) à travers les hauteurs” and WG “(zur Ausfahrt) über die (Berg-)Rücken.” Reluctantly I would join them and supply something like “(to travel) along ...”

The standard explanation of *śévṛdha-* as a haplology of **śéva-vṛdha-* (already Gr, endorsed by AiG I.279, tentatively also by EWA s.v. *śéva-*) seems correct, but this does not settle its sense. Cmpds in *-vṛdha-* have a range of senses, both transitive and intransitive, and of relationships to their 1st member, and none of the quite varied contexts in which *śévṛdha-* appears is sufficiently diagnostic. Several of them apply to Agni as the ritual fire just kindled (X.46.3, X.61.20 [the latter accented *śevavṛdhá-*]); once (I.54.11) it is used of ‘brilliance’ (*dyumná-*) and once (III.16.2) of ‘riches’ (*rāyaḥ*). The preponderance of the evidence, esp. the two “fire just born” passages, seems to point to an intransitive/passive reading of *-vṛdha-* and an instr. reading of *śé(va)-*, hence ‘growing strong through kindness/benevolence’ or, perhaps better in English, ‘through kind attention’ (to which I would now change this tr.). Although an intrans. reading of the

publ. tr.'s "strengthening with kindness" is possible, this English expression is more likely to be read as transitive, and I would therefore alter the tr. to the clearer 'growing strong ...' What this descriptor means in our passage is entirely unclear to me -- that the Maruts are treating Viṣṇu well and he thrives?

V.87.5: Note the chiasmic phonetic figure that begins the vs.: *svanó ná vo*.

The caus. injunc. *rejayat* needs an obj. I supply 'earth' on the basis of intrans. *rejate* passages with *bhūmi-*, *pṛthivī*, et sim. as subj., but any standard cosmic feature will do (Re 'I'univers', WG 'alles').

Pace Gr, *ṛñjāta* is better analyzed as a 3rd pl. mid. athem. form than a 2nd pl. act. them. All the standard tr. follow the 3rd pl. mid. interpr.

The source of *sthāraśman-* is disputed. First note that this peculiar form can be partially motivated contextually: 6c begins *sthātāro*, so there was some incentive to begin our pāda with a word of similar shape. We can begin by dismissing the odd Pp analysis of this cmpd, *sthāḥ'raśman-*. It is difficult to know what this is meant to represent. AiG II.1.316 and II.2.9 take *sthā-* simply as the cmpded root or root noun, and Wackernagel (II.1.316) classifies it with verb-first verbal governing cmpds, an analysis that has been taken up by others (see e.g. Tribulato, *Ancient Greek Verb-Initial Compounds*, 164 and passim), though there are no transitive forms to *√sthā* except the *p*-causative. Bloomfield (RVReps ad loc.) suggests that it's "a kind of haplology" from *sth(ir)āraśmānaḥ*, with *sthirā-* 'firm' as 1st member (note Sāy.'s gloss *sthiraraśmayo*), and this is accepted by Ge (n. 5d). It is not clear where the long *ā-* of his posited *sth(ir)ā-* would come from, however; is he thinking of a nom. pl. syntagm **sthirā raśmānaḥ*, with univerbation and loss of the noun's accent? Moreover, in the Nachtr. to AiG II.1.316 [=Nachtr. 87] Debrunner points out that haplology of Bl's posited form should produce **sthirāśman-* (undoubtedly why Bl calls it "a kind of haplology"). Re proposes a 1st member adj. **sthāmān-* 'bien en place' or 'solide', internally derived from the noun *sthāman-* 'station, standing place', but this requires several more steps derivationally and semantically, and the haplology (if that's what he sees it as) would involve loss over an intermediate syllable and loss of a heavy consonant-final syllable, both of which are problematic: *sthāmān-raśman-*. Certainly *sthirā-* makes the most sense semantically, but, as noted above, Bl's haplology runs into formal difficulties. However, if we begin with my observation that 6c *#sthātāro* makes a *sthā* opening desirable, an irregular reduction of **sthirā-raśman-* may be the best option. In fact if we operate with a slightly different form of the 1st member, the development may be easier to explain. I suggest positing a reduced form of *sthirā-*, namely **sthṛā-*, showing the same *-irV-* ~ *-rV-* alternation as *indra-* ~ **indira-* (metrically guaranteed, but not transmitted in the Saṃhitā; cf. AiG I.55) and the 3rd pl. med. pf. endings *-ire* and *-re* (AiG I.23). **sthṛā-* would thus show the loss of an apparent svarabhakti vowel, rather than the insertion of one. The posited cmpd **sthṛā-raśman-* would then undergo liquid dissimilation, not haplology. This still doesn't explain the long *ā-*, but the parallel *sthātārah* might help there.

V.87.6: Note *#sthātārah ... sthana#*.

This vs. reprises some of what came before. The focus on *śāvas-* earlier in the hymn (1e, 2cde) is emphatically revived with ab ... *vṛddhaśavasah ... śāvah*; the hapax epithet *suśukvan-* in the nom. pl.. *suśukvānaḥ* in 3b is cleverly echoed by the pf. part.

śuśukvāṃsaḥ, where the redupl. *śu-* matches the prefix *su-*; and the simile in 3d *agnāyo nā svāvidyutaḥ* appears in reverse order (and a different shared quality) in *śuśukvāṃso nā-agnāyaḥ*. There is also a local repetition of *tveṣā-* in 6b, echoing the same stem in the same position in 5b.

V.87.7: This vs., too, reprises earlier material: there is a 3rd “fires” simile, this time marked with *yathā*, not *nā*, and extended over the pāda boundary (*agnāyo yathā, tuvidyumnāḥ*); *avantu* in b echoes *avatu* in 6b in the same metrical position; the ‘seat’ returns for the third time (pāda c), with yet a different word: *sādman-* versus 3c *sadhāstha-* and 4b *sādas-*.

The last two pādas present several problems. One is how to reconcile *yēṣām* and *śārdhāṃsi*, which are presumably coreferential and refer to the Maruts. Simplest is to accept Ge’s “der reflexive Gebrauch des Relativs” (n. 7d); cf., e.g., V.61.12 and comm. thereon. The publ. tr. does not render *yēṣām* literally, but as “when ... of them,” for the sake of English, since “at whose drives” is awkward in context.

The causal connection between the journey of the Maruts (d) and the spreading out of the earth (c) is clear in V.58.7, also adduced by Ge: *prātiṣṭha yāman pṛthivī cid eṣām* “Even the Earth has spread herself at their journey,” but pāda c cannot be brought into the domain of the relative in d (though Old tries) because of the lack of accent on the verb *paprathe* in c. Instead d and e must together make a circumstantial clause dependent on c. With Ge and Re I supply a verb of motion ‘ap(proach)’; this can be partly generated from the *ā* in c, though that *ā* is primarily a postposition with the loc. and is not in the right place for a preverb in tmesis. The *étana* in the next vs. (8a) may support the supplying of a verb of motion here.

The next question in de is the grammatical analysis and reference of *mahāḥ*, which presents us with entirely too many possibilities: abl./gen. sg or nom./acc. pl. of *māh-*, nom. sg. of *mahá-*, adv. *mahás*. On the basis of the gen. phrase in the next vs., 8c *vīṣṇor mahāḥ* (cf. also 1a *mahé ... vīṣṇave*), I take it as gen. sg. and supply Viṣṇu: the Marut troops are here said to be Viṣṇu’s. This more or less follows Ge; Re takes *mahāḥ* as adv., WG as nom. sg. See also Old’s disc.

The final problem is the bahuvrīhi *ādbhuta-enas-*, which is found once elsewhere (VIII.67.7). The problem is to find some plausible overlap between the senses of the two members and a plausible reason why whatever is so constructed should apply to the Maruts. The standard sense of *éna-* is ‘offense, transgression, outrage’; *ādbhuta-* is famously problematic, but probably the most widely accepted analysis currently is as a negated form of *√dabh* ‘deceive, trick, harm’ (see EWA s.v.), hence ‘infallible, unerring’, shading (probably because of loss of transparency) into ‘wonderful, astonishing, ineffable’. Put these together and you get the highly unconvincing ‘having infallible offenses’ or the like -- not a good epithet for a favored group of gods. Clearly something has to give, and in most interpr. it’s the semantic integrity of the parts; e.g., Re decides that *éna-* here preserves an earlier sense, derived from its relationship to *ínóti* and means ‘élan’, yielding a cmpd “à l’élan extraordinaire,” which fits smoothly into the context by virtue of suppressing the semantics of both cmpd members. In the other occurrence of the cmpd in VIII.67.7 I take it as applying to the Ādityas (most others see it as a gen. sg.) and meaning ‘whom (others’) offenses cannot mislead’. That is, the stripped-down sense is ‘possessing unmisleading/misleadable offenses’, but the offenses are committed by others

and the Ādityas are not tricked by them. This may provide more tricky structure than a bahuvrīhi can quite manage, but it does preserve the lexical senses of both members. It may mean this here as well -- the Maruts are no more trickable than the Ādityas -- and I propose that as an alternate tr. But the publ. tr. takes a different route, with the sense ‘harm’ for \sqrt{dabh} , hence ‘whose offenses are beyond harm’ -- meaning, perhaps, that the violence and turmoil attendant on the Maruts’ stormy passage on the one hand leave no lasting damage and on the other cannot be held against the Maruts. They are not moral lapses.

Note the figure in c: *pr̥thú paprathe ... p̥r̥thivam*, which is both phonological and etymological.

V.87.8: The first word in the vs. *adveṣāḥ* must be adverbial; it of course resonates with the 2nd to last word in the vs., *dvēṣāṃsi*.

The construction of the gen. (or possibly, in principle, abl.) phrase *viṣṇor mahāḥ* isn’t entirely clear. Old is insistent that it belongs with the voc. *samanyavaḥ*, hence “of equal fervor with Viṣṇu,” but this adj. is not otherwise construed with a third party but rather indicates that those so described are equally fervent with each other. Moreover, the genitive is not the most likely case for the proposed meaning, and we might also expect the gen. phrase to lose its accent or take vocative accent if it were part of the vocative phrase. The standard tr. take the gen. as simply identifying the Maruts as “Viṣṇu’s,” and this may well be the best way to do it. The publ. tr. construes it with *smāt* ‘together with’ at the beginning of d, as Gr also indicates. The genitive case is problematic, however: *smāt* takes the instr. Further, as Ge points out, rather than *smāt* we should expect **asmāt*, the 1st pl. abl. prn. to be construed with *yuyotana ... āpa dvēṣāṃsi* “keep hatreds away from us”; see parallels cited by Ge in n. 8d. Unfortunately *asmāt* does not work metrically. WG cleverly suggest that the end of c and the beg. of d, underlyingly **yuyotanā *asmāt*, were combined in sandhi as **yuyotanāsmāt* and then decoupled first into **yuyotanā, smāt* and then, with shortening of the variable final vowel of the impv., to the transmitted *yuyotana, smāt*.

The instr. *daṃsānā* must belong with the simile: cf. VIII.101.2 *tā bāhūtā nā daṃsānā ratharyataḥ* “With their wondrous skill as if with their arms they drive their chariot,” also adduced by Ge.

V.87.9: The first two pādas of this vs. are essentially variants on the first two pādas of the previous vs., with 8a *gātum étana* corresponding to 9a *gāntā* and *śrótā hāvam* identically opening both b pādas. The adverbial *adveṣāḥ* ‘without hatred’ in 8a is matched by *araksāḥ* ‘undemonically’ in 9b, though the adv. has been moved to the second cl. (With Re I take it as an adv.; Gr takes it as an adj. with *hāvam*, which requires him to identify only this occurrences of *hāva-* as a neut.; WG see it as a nominative in a stand-alone nominal sentence. The patterning of vss. 8–9 just laid out makes the adverbial interpr. the strongest one.)

The final word of pāda, *suśāmi*, makes both metrical and morphological trouble. The pāda is short a syllable (11, not 12) and the cadence is bad even for a Triṣṭubh, with a light penultimate syllable. Gr proposes to fix the first of these problems by reading *suśāmiyā*, but though this gets us 12 syllables, it makes the cadence worse -- not to mention that there’s no reason why the textual change would have occurred. Old

proposes to read *suśāmī*, matching the other two instr. occurrences of this stem; the same phenomenon is found with the simplex, where an instr. *śāmi* with short final occurs at the end of the pāda, while *śāmī* is found pāda-internal. Since in our passage the next pāda begins with a cons. cluster, the original length of the final vowel would be obscured anyway. However, this suggestion does nothing to fix the cadence or the deficient syllable. See also the disc. in WG; in the WG tr. they take it as a neut. acc., but the disc. in the n. is more equivocal. I have no solution. Of course, those who wish to see laryngeal effects preserved at this stage would argue that the problematic short penultimate could be explained by the fact that $\sqrt{\text{śam}}$ is a *seṭ* root and the root syllable would originally have been heavy (**śamH* in a bastardized notation).

The rest of the vs. is more opaque, or rather it is difficult to reconcile the simile in c with the directive to the Maruts in de. The problem is similar to the one posed by *ādbhuta-enas-* -- that the two parts of the expression are semantically disharmonious. The wish expressed to the Maruts is that they should be *durdhārtu-*, which should mean ‘difficult to maintain or uphold’ or, extending the sense of $\sqrt{\text{dhṛ}}$ a bit, ‘difficult to restrain’. This works pretty well in the directive: the Maruts should not hold back from punishing someone who insults one of us. The gen./abl. *nidāḥ* is not the ideal case, but it may well refer back to the same form in 6d *tē na uruṣyatā nidāḥ* ‘deliver us from insult,’ with a highly condensed expression. In the publ. tr. I have tr. the form in 9e as “at an insult” rather than “from an insult,” because “difficult to restrain from an insult” sounds as if the Maruts are itching to insult *us*. The question is -- why are they like ancient mountains (*jyēsthāso nā pārvatāsaḥ*) when they are acting thus? As a class of objects, mountains are among the least likely to need restraining: they are fixed and stable. Ge gets out of this problem by supplying, out of whole cloth, a different quality that the Maruts and the mountains have in common, the parenthetical “(ragend),” but there is no basis for this. WG take *jyēsthā-* itself as the point of comparison (despite the fact that it should really be part of the simile proper) and push its sense: “sehr mächtig wie die Berge.” I think the clue to the solution is the location of these mountains, *vyòman* ‘in distant heaven’. There are of course no mountains in heaven, at least in the usual Vedic cosmological picture -- but there *used* to be: the winged mountains that flew around until Indra clipped their wings. The splv. *jyēsthāsaḥ* ‘most ancient’ may refer to this primal, unclipped state. Although this interpr. may seem farfetched, I think it best accounts for the odd expression -- and this may be Re’s view too, based on his tr. “comme de très puissantes montagnes (qui circuleraient) dans l’espace” (he has no disc.). Note in any case that the mountains here recall the mountain(s) in vs. 1 (*giriḥ*?) and possibly vs. 3; the agreement in sense with vs. 1 provides another example of non-lexical ring composition.

Commentary VI.1–20

VI.1 Agni

VI.1.1: As noted ad loc., the first hymn of Maṇḍala IV begins identically (IV.1.1.a): *tvám hí agne*, with the same puzzling use of ordinarily causal *hí* in the first pāda of a hymn. It might be possible here to tr. the first hemistich as a causal clause subordinate to cd: “Because ... you became the first minder of this insightful thought and the Hotar, you made ...”

On the stem *manótar-* see comm. ad II.9.4 and IV.1.16, 5.10. Note also that the HvN pausal resolution of the word as *manóta* is faulty; it should end in a long *-ā*.

Ge construes the gen. *asyā dhiyáh* with both *manótā* and *hótā*, but the latter doesn’t usually govern a genitive.

The *sīm* in c presumably refers to the *dhī-* of b. The publ. tr. could be slightly altered to “made it into power ...”; so Ge “... machtest es zu ... Macht.” On the infinitival construction in cd, see also Keydana (253). Note the attraction of the object of *sāhadhyai* into the dative case (*vísvasmai sáhase*). Pāda d is also noteworthy in having three forms of *√sah*, though two belong to the same *s*-stem.

VI.1.2: Pāda b ends with one of the rare examples of non-concessive *sán*, nom. sg. m. pres. part. to *√as*. Its presence here may be due to an effort at metrical adjustment. The stem *īḍya-* is almost invariably read distracted as here, and it is extremely common in pāda-final position. This is fine for dimeter meter and for Jagatī, but the distracted stem obviously doesn’t fit a Triṣṭubh cadence. The addition of monosyllabic *sán* allows such a cadence here. Note also that *sán* rhymes with *gman*, which closes the next two hemistichs (2d, 3b). The only ex. of a non-distracted form of *īḍya-* (save for a lone Xth Maṇḍala gen. sg.) is found likewise in a Triṣṭubh cadence in IV.24.2 *sá vṛtrahátye hávyah sá īḍyah*, where a non-distracted *īḍyah* sits uncomfortably after a distracted *háv’yah*. So, two different solutions to the problem of fitting *īḍya-* into a Triṣṭubh cadence.

Ge suggests that the second hemistich “spielt auf Agni’s Flucht ins Wasser an.” I don’t myself see this, and I do not know what his evidence is, beyond *ānu gman* ‘have followed’. In this ritual context, the “god-seeking men” “have followed Agni first,” because he is the conduit of their offerings to the gods and the divinity who is installed in their own houses. They must go through him, as it were, to reach the gods. The first hemistich emphasizes this ritual connection: Agni “sits down” (that is, is installed) as Hotar and superior sacrificer, and the place where he is installed is specified as “the footprint of refreshment” (*ilās padé*), a kenning for the ritual ground (see, for a similar installation scenario, I.128.1 and II.10.1).

On *mahó rāyé* see comm. ad IV.31.11. The interp. of the rest of pāda d is uncertain, primarily because of the multiply ambiguous *citáya-* stem. The pāda most resembles V.15.5 *mahó rāyé citáyann átrim aspah*, rendered by Ge as “du hast jetzt zu grossem Reichtum dich offenbarend dem Atri (aus der Not) herausgeholfen” (though in our passage here he takes *citáyantah* as “aufmerksam,” a completely different sense of *citáya-*) and in the publ. tr. (JPB) as “...then appearing greatly for wealth, you have rescued Atri.” My publ. tr. here (“distinguishing themselves”) is closest to Ge’s tr. of V.15.5, though I think it adds a crucial element. The point must (or at least may) be that

the men seek to make especially conspicuous offerings to the gods, via Agni, for the sake of acquiring the wealth that accrues to the successful sacrificer. The apparent reflexive tr. ‘distinguish oneself’ is really just an extension of the common value of *citáya*- ‘appear’/ ‘appear (good), be conspicuous’. Re’s “fixant leur pensée sur la richesse (pour l’atteindre) grandement” is an extension of Ge’s “attentive” sense, but I think he has extended too far.

VI.1.3: The first hemistich of this vs. presents some difficulties. One of the problems is that the acc. *yántam* in the first pāda most naturally invites Agni as referent, since the main verb of the clause, *ánu gman*, is the same as in 2cd, where Agni was definitely the acc. complement. But in pāda b Agni is represented by a loc. *tvé* and there is a different acc. *rayím*. One solution has been to construe *rayím* loosely (or not so loosely) with the pf. part. *jāgrvāṃsaḥ*, leaving *yántam* in pāda a as the only acc. with *ánu gman*. This is the solution Old favors (ZDMG 55.271–72 = KISch 730–31: “bei dir Reichtum erwachend”), but *√gr* ‘be awake’ does not otherwise take an acc. Both Ge and Re supply a parenthetical non-finite verb more or less dependent on *jāgrvāṃsaḥ* to govern ‘wealth’: “das sie bei dir Reichtum (erwartend) gewacht haben” and “... vigilants, (pour atteindre) en toi la richesse.” Since I prefer not to supply anything I don’t have to, I’ve tried another tack -- making *yántam* (with Agni as referent) and *rayím* conjoined goals of *ánu gman*. In other words, the wakeful men (presumably the priests alert at the sacrifice) pursue both Agni as he comes with goods and the goods themselves that are nearby him after he has deposited them on the ritual ground. I don’t, however, find this very satisfactory -- though I don’t find the other possibilities satisfying either (and I simply don’t understand Ludwig’s interpr., as reported by Old, 271–72 = 730–31). Somewhat in favor of my interpr. is Re’s comment that *tvé rayím ... ánu gman* is a “variation inorganique” (whatever he means by that adj.) of *tvā ... rāyē ... ánu gman*. I would rephrase it slightly to say that my “they follow you *and* wealth” (3ab) is a variant (inorganic or not) of “they follow you *for* wealth” (2cd)

In any case, the string of accusatives in cd all clearly refer to Agni, and we are back on firm ground.

VI.1.4: Again Ge claims that this verse is about the myth of the flight of Agni, presumably on the basis of *padām devāsya ... vyántaḥ*, but the track of the god doesn’t have to be his flight, but simply the ritual cursus.

How one interprets the larger sense of the vs. depends on how one interprets the verb forms: *āpan*, *dadhire*, and *raṇayanta*, esp. the first. Both Ge and Re take *āpan* as preterital (“... haben sie ... erlangt,” “ont obtenu”), presumably taking it as a pluperfect or a thematic aorist (both either augmented or not) to *√āp*, and Ge clearly thinks the subj. is the Aṅgirasas. (Gr takes it as an aor.) But nothing prevents it from being a pf. subjunctive. In that case, the priests pursuing the ritual cursus in pāda a, who are seeking fame (*śravasyāvaḥ*), *will* obtain fame through their priestly activities. The pf. *dadhire* in c can then have, as often, immediate past reference (“they have assumed names” – presumably their priestly titles), and the injunctive *raṇayanta* in d is easily compatible with that scenario as a general timeless presential. Because of the otherwise exclusive focus on the ritual function of Agni in this hymn, my interpr. seems preferable to one that goes haring off into the mythological past.

Note *śrávaḥ ... ámr̥ktam* “indestructible fame” as a variation on the formula *śrávaḥ ... ákṣitam*.

VI.1.5: The referent of the phrase “both riches of the people” (*rāya ubháyāso jánānām*) is not entirely clear. The standard assumption is that it refers to material goods of some sort, but which are the two kinds? Ge (n. 5b) cites Sāy on the TB for heavenly and earthly riches -- though Sāy on our passage suggests rather (domestic) animals and non-animals (*paśvapaśurūpāṇi*). Ge’s own suggestion is our own goods and those of our enemies, based on VII.83.5 *yuvám hí vásva ubháyasya rájathah*, where the publ. tr. (JPB) tentatively suggests rather those of war and peace. Acdg. to Re, they are material and spiritual goods, which he thinks are *rayí-* and *vásu-* respectively -- a completely arbitrary and ad hoc differentiation of these two extremely common stems, not supported in other passages as far as I can see. Ge’s interpr. is more plausible, but it seems strange to announce that goods of whatever sort “strengthen” Agni -- esp. as in vss. 2–3 Agni is depicted as the bringer and provider of goods for us. I have a completely different view of the phrase -- that it refers metaphorically to manpower. In VI.14.3 the “riches of the stranger” (*rāyo aryáḥ*) contend with each other (*spárdhante*), where the verb invites an animate referent for the subject. Moreover, *ubháya-* regularly refers to two different groups of beings: e.g., I.60.2 *ubháyāsaḥ ... usíjo yé ca mártāḥ* “both ... his (ancient) priests and mortals (now)”; II.2.12 *ubháyāsaḥ ... stotāraḥ ... sūráyaś ca* “both praisers and patrons.” In II.6.7 *jánmobháya* “both breeds” refers to the human and divine races, similarly *jātām ubháyān* in IV.2.2. Here either human/divine or patrons/singers (or some other division of mortals) would be possible, but I favor the latter, given the concentration on humans and their ritual activities here.

VI.1.6: Pāda b *hótā ... ní śasāda yájīyān* closely echoes 2a *ádhā hótā ny àsīdo yájīyān*. The opening of pāda c (as well as 7a), *tām tvā*, also matches 2c, and *dīdivāṃsam* of c matches the same adj. in 3d.

Whatever the exact posture described by *jñubādhah* (for detailed disc. see Scar 343–45), the Engl. idiom “on bended knee” conveys the same sense of physical reverence.

VI.1.6–7: I do not understand why 6c has the act. pf. part. *dīdivāṃsam* while, in the same metrical position, qualifying the same entity, and apparently meaning the same thing, 7c has the middle part. *dīdiyānaḥ* (whose tense-aspect stem affiliation is not entirely clear: its accent weakly suggests that it already belongs to the new redupl. pres. [reinterpreted from the pf.], but the redupl. forms to this root are in flux; see my “perfect impv” paper in the Lubotsky Fs.). Of course a nom. form of the act. part would not fit this slot in 7c, but an acc. form of the middle part. would be fine in 6c. I doubt that the poet is contrasting old perfect and new pres., or trying to draw a semantic difference between the voices. The participle *dīdiyāna-* is the only medial form to this root; all the finite forms are active, with intrans. value, as are the two act. participles, old-style pf. *dīdivāṃs-* and new-style redupl. pres. *dīdyant-*.

VI.1.7-8: Both Ge and Re take *návyam* in 7a as an adv. (e.g., “aufs neue”), but since the adj. *návya-* in the nom. (hence not a possible adverb) regularly qualifies Agni (V.12.3,

VII.4.8, VIII.11.10, X.4.5), I see no reason not to take it as an adj. here. The reference of course is to the newly kindled ritual fire.

Ge, flg. Ludwig, thinks that 7c concerns battle, which again I find difficult to see. I am more persuaded by Proferes's reading (pp. 29–30), that the hymn in general presents Agni as the fire held in common by the larger community and that in vss. 7–8 “this common fire is a symbol of centralized sovereignty,” therefore a leader of the clans and, in 8a the clan-lord of each and every clan.

Vs. 8 is couched entirely in the acc., referring to Agni. It can't be directly attached to either what immediately precedes or what immediately follows, since both 7cd and 9ab have Agni in the nom. However, it follows nicely after the accusatives in 7ab, with 7cd an intrusion. To indicate that the description of Agni is in the acc., I have resupplied “we implore” from 7b.

On the semantics of the root $\sqrt{tuś}$ in *nitósana-*, see comm. ad VIII.38.2.

The hapax cmpd. *prétiṣaṇi-* is curiously formed and its sense not entirely clear, esp. because the root affiliation of *-iṣaṇi-* is uncertain and because the cmpd type is muddled, at least by its interpreters. Ge takes the 2nd member with $\sqrt{iṣ}$ ‘seek, desire’: “der das Auftreten (des Opferpriesters) wünscht”; while Re opts for $\sqrt{iṣ}$ ‘impel’: “qui pousse en avant l’incitation,” with alternatives in the notes “qui aspire à aller de l’avant” ($\sqrt{iṣ}$ ‘seek, desire’) or “qui fait avancer l’incitation (des humains)” ($\sqrt{iṣ}$ ‘impel’). The ‘seek, desire’ root is also represented by Debrunner’s “zum Vormarsch strebend” (AiG II.2.208). In my interpr. I take Old’s point (Noten ad loc.; he doesn’t discuss in ZDMG 55) that the accent suggests a bahuvrīhi, and I favor a connection of the 2nd member with $\sqrt{iṣ}$ ‘impel’ and esp. the 2ndary verbal stems *iṣanaya-* and *iṣaṇya-*, both ‘impel’. A literal rendering would then be something like “having the impulsion of the forward progress (of the sacrifice),” but in English the bahuvrīhi gloss is too awkward, hence my “impelling ...” The point here is that Agni controls the pace and movement of the sacrifice, which progress is often expressed by the idiom *prá √i* (cf. the common loc. absol. *prayaty ādhvaré* “while the ceremony is advancing”) found in the 1st member *préti-*. The 2nd member *iṣaṇi-* is immediately followed by the part. *iṣáyantam*, but I think this is a playful juxtaposition: the two words have nothing to do with each other, and the sense ‘prospering’ for the latter was established in the fuller expression in 2b.

VI.1.9: There are a few small questions in this vs. In b both Ge and Re take instr. *samídhā* as referring to the concrete material kindling stick, as often -- while I think it refers to abstractly to the moment of kindling (as also, in my view, in VI.2.5 and quite possibly VI.5.5). The abstract sense is allowed by Scar (52–53), and the fact that the dat. to the same stem, *samídhe*, can be used as an infinitive (see, inter alia, Keydana 186 n. 160) supports this interpr. It has to be admitted, though, that the same instr. in the following vs. (10b) does refer to the physical object.

In c my “knows his way around” is a literal calque of *pári védā* into an English idiom (cf. almost identical passage I.31.5). (A more chaste rendering would have been “thoroughly knows.”) In both passages we might have expected univerbation of the preverb and verb with loss of accent on *pári* in the rel. cl.; I have no explanation for why this did not happen, save for the possibility that *pári* does not function as a conventional preverb but as an adverb or postposition and also given the fact that such univerbation is not generally obligatory.

Ge and Re take c with d rather than ab; this is certainly possible and there are no implications either way.

VI.1.10: The doubling of the 2nd sg. enclitic *te* by init. *asmaí*, the here-and-now demonstrative, is somewhat unusual, though in the same general vein as *tám tvā* (2c, 6c, 7a).

Ge and Re (see also Klein I.329, Oberlies II.133) take *védī* as a loc., but in this passage, embedded in a long series of instrumentals, there seems no reason not to interpr. it as the instr. it appears to be. See AiG III.155, where Wack identifies it as an instr. here. The very similar passage VI.13.4 *yás te sūno sahaso gīrbhír ukthaiḥ ... vedyānaḥ* (that is, probably to be emended to **védyānaḥ* and analyzed **védyā ...*), supports the instr. interpr. -- which is argued for for both passages by Bloomfield (RR ad VI.1.10) and Old (Noten ad VI.13.4).

Re (see also Klein I.52, 71) take *bhāsā, śrávobhiś ca* as a conjoined NP, with Re putting immediately following *śravasyāḥ* into a separate syntagm (Klein doesn't treat anything but the two nouns). Although *ca* does generally conjoin nominals, both the pāda break between the instrumentals and the etymological figure *śrávobhiḥ ... śravasyāḥ* suggest that the two instr. belong with different parts of the clause.

VI.1.12–13: These two vss. play on the two words *purú-* 'many' and *vásu-* 'good' in this final explosion of begging for a suitable return from the god.

VI.1.12: I take *nṛvát* as an adverb, since this neut. is almost always so used. Ge and Re instead take it as a full adj. 'consisting of men, accompanied by men' modifying a gapped noun (Besitz, la richesse) and implicitly parallel to *bhūri ... paśvāḥ* "abundance of livestock." I am not convinced, and curiously the passage Ge cites in his n. 10a as support for the interpr. contains a *nṛvát* that must be adverbial. Still, I do have to admit that a few such expressions do exist outside of the neut. sg.: I.92.7 *nṛvātaḥ ... vājān*, IX.93.5 *rayīm ... nṛvāntam*.

VI.2 Agni

VI.2.1–2: The opening of the first hymn in this maṇḍala, *tvám hí* (see above), is replicated in the first two vss. of this hymn. The *hí* is similarly hard to account for in both these vss.

VI.2.1: The etymology and therefore the sense of the vṛddhi form *kṣāita-* (IX.97.3), *kṣāitavant-* (here) are disputed; see EWA s.v. The question is whether it belongs with *kṣití-* 'settlement' (Aves. *šiti-*), etc., to *√kṣi* 'dwell', or is the counterpart of YAves *xšaēta-* 'lordly' vel sim., to *√kṣā* 'rule over'. As the Avestan forms show, the two interpr. are not etymologically compatible. With Ge (hesitantly) and Re (sim. AiG II.2.127 [though see 933]), I have opted for the former. For one thing the various 'people, settlement' words are prominent in this run of hymns: *kṣití-* VI.1.5, *carṣaní-* in this vs. and twice in the next (VI.2.2), as well as VI.1.8, *vís-* VI.1.8, and it also makes sense for Agni, as the ritual fire in the household and the focus of the extended family and clan unit, to be associated here with the glory of those people. Another reason emerges from

consideration of the whole vs.: the verb stem *púṣya-* (see *puṣyasi* pāda d) is formulaically associated with *kṣéti* ‘dwells in peace’, belonging to the same root $\sqrt{kṣi}$ ‘dwell’ (cf. *kṣéti púṣyati* I.64.13, 83.3, VII.32.9 and similar expressions); see esp. in this very same hymn VI.2.5cd ... *sá puṣyati, kṣáyam* ... “he prospers his dwelling place.” However, the other interpr., ‘lordly’, is certainly not excluded, esp. since both occurrences of *kṣáita-* are associated with *yásas-* ‘glory’ (*kṣáitavad yásah* here; *yaśástaro yaśásām kṣáitah* IX.97.3 of Soma).

The simile *puṣtīm ná puṣyasi* “you prosper X like prosperity” seems a bit lame. I suppose the idea was to capture the cognate accusative. Or it can be a placeholder for *puṣyati kṣáyam* in vs. 5 and the very awkwardness of the first expression focuses attention on the “repaired” (or perhaps “enhanced”) phrase in vs. 5.

VI.2.2: I doubt that the *vājín-* of the 2nd hemistich is just any horse. It could be a mythical horse: Dadhikrā is called *vājín- viśvákrṣṭi-* “a prize-winner belonging to all communities” in IV.38.2. Or a god, perhaps Soma, Indra, or the Sun.

VI.2.3: The standard tr. take *juhvé* to \sqrt{hu} ‘pour, offer’, but this causes a problem with the main cl. verb, the pres. *indhate* ‘kindle’, if we assume that the pf. of \sqrt{hu} has some kind of preterital sense. It does not make ritual sense to offer the melted butter in the fire before kindling it. Ge avoids the problem by translating with a present, but this is ad hoc. With Sāy. I take the verb to $\sqrt{hvā}$ ‘call’ instead, since invocations can be and regularly are made after the fire is kindled. Although Kü follows the \sqrt{hu} interpr. (605), he admits that the alternative should be seriously considered (n. 1316). It might be objected that a pf. to the set root $\sqrt{hvā}$ should be read trisyllabically (*juh^uve*), as it indeed is in X.149.5, but as Kü points out (n. 1317), an undoubted 3rd sg. pf. to $\sqrt{hvā}$, *juhve* in I.32.6, is disyllabic. (The sequencing of actions problem with \sqrt{idh} -- \sqrt{hu} could be avoided if the former means something like ‘fan the flames’, an action that could indeed follow the pouring of the butter into a banked fire. But I don’t know that we have any evidence for this sense -- beyond the fact that *indhate* belongs to a pres. stem and could have durative value.) For further support for my interpr. of this vs. see immed. below.

VI.2.4–5: These two vss. are in some ways an expansion of VI.1.9: 4ab are the equivalent of VI.1.9a (for disc. see below); 5ab corresponds to VI.1.9bc. Note esp. VI.1.9b *yás ta ānaṭ samídhā havyádātīm* “who after kindling you [lit. with the kindling of you] has achieved your oblation-giving” and VI.2.5ab *samídhā yás ta āhutiṁ, níśitīm mártyo náśat* “The mortal who after kindling (you) [lit. with the kindling (of you)] will achieve the offering to you and the whetting of you.” (A side note: *havyádātīm* in VI.1.9b is the counterpart of *āhutiṁ* in VI.2.5a, but note that VI.1.9 also has *āhutiṁ* in the immediately following pāda (c).) In both VI.1.9b and VI.2.5a the root noun instr. *samídhā* seems to express priority of action: “with X (then) Y” → “after X (then) Y.” If this interpr. is correct, it provides support for my assertion ad VI.2.3 that kindling must precede oblation and therefore the pf. *juhvé* cannot belong to \sqrt{hu} ‘pour’. For further evidence for the priority of kindling to oblation, see II.37.6 *jōṣi agne samídhāṁ jōṣi āhutiṁ*, VIII.19.5 *yáḥ samídhā yá āhutiḥ yó védena dadāśa márto agnáye*, X.52.2 *brahmā samíd bhavati sāhutiḥ vām*.

It might be observed in passing that the temporal priority I'm assigning to the instr. *saṁídhā* also accounts for a much more widespread syntacto-semantic development -- that of the standard preterital use of the gerund. Since by most lights the gerund in *-tvā* (and most likely the one in *-ya*) is a frozen instr., we can envision a development of the type “with going” → “having gone,” etc. See my review of Tikkanen, *The Sanskrit Gerund* (1987), in *JAOS* 109 (1989): 459-61.

VI.2.4: The problematic form in this vs. is the first word *ṛdhat*. It clearly belongs with the root aor. attested primarily in the opt. (*ṛdhyāma*, etc.) but also found once in the participle *ṛdhánt-*, with expected suffixal accent. It is the root accent that distinguishes the form here. Old (ZDMG 55.279 = KISch 738; also Noten) suggests that it is a neut. part. used adverbially, with accent shift (**ṛdhát* → *ṛdhat*) -- claiming that adverbial accent shift can go either way, simply marking an oppositional formation. But the standard exx. (*dravát* to *drávati*) involve a rightward shift, and in any case the whole notion of adverbial accent shift has recently been called into question (see Emily Barth's Cornell diss.). Re considers both possibilities and opts finally for the adverb, while Ge takes it as a finite form. I prefer to take it as an aor. subjunctive (see also Lub, Concordance, where it is so identified) parallel to *śaśámate*. Although I cannot entirely explain the zero-grade root syllable for expected full-grade **árdhat* (though see below), I can suggest a local explanation for the (supposedly) unexpected root accent. The next hymn contains the hapax verbal-governing cmpd. *ṛdhád-vāra-* ‘bringing wishes to success’. Whatever the original grammatical identity of the 1st members of this fairly common cmpd. type, synchronically they appear to be neut. sg. participles in *-át* with accent consistently on the suffix (type *bharád-vāja-* [in fact, the name of the poet of this hymn and of the VIth Maṇḍala in general], *dhārayát-kavi-*, etc.; see AiG II.1.317–20), and the verbal stems from which they are derived regularly are accented one syllable to the left. So, for the examples just given, 1st class pres. *bhárati*, *-áya*-formation *dhāráyati*, etc. I would therefore suggest that our poet, who had *ṛdhát-vāra-* in his repertoire, back-formed the root-accented finite form *ṛdhat* on this model. A possibly simpler alternative is to begin with a hypothetical root aorist paradigm, whose injunctive act. sg. **árdham*, **árd/t*, **árd/t* should have full grade and root accent and whose subjunctive should likewise have both: **árdhā(ni)*, **árdhas(i)*, **árdhat(i)* (cf. injunc. *kár* and subj. *kárati*, e.g.). As it happens, the root aor. of *√rdh* is attested only in forms where we expect zero-grade root and suffixal accent, but the starred forms just given are the paradigmatically expected act. sg. forms. Under this explanation, the root accent of subjunctive **ṛdhat* is not the problem; its zero grade is. And we can explain that either by the influence (at time of composition or of redaction) of *ṛdhád-vāra-* in VI.3.2 or by the absence of other attested full-grade verbal forms to this root (though cf. gerundive *árdhya-*) and consequent generalization of the zero-grade. Of the two explanations just given, I mildly favor the first – in part because the poet Bharadvāja would have been acutely aware of the accentual properties of his name.

A minor support for the interpr. of *ṛdhat* as finite subjunctive, not adverbially used participle is provided by formulaics. As Re sketches, *√rdh* can take *yajñám* as object; cf. X.110.2 *mánmāni dhībhúr utá yajñám ṛndhán* “bringing the thoughts and the sacrifice to fulfillment through his visionary thoughts.” The VP *yajñám √rdh* “bring sacrifice to fulfillment” can be seen as a variant of simplex *√yaj* ‘sacrifice’, and *√yaj* and *√śam* form

a conjoined pair for our poet in nearby hymns: VI.1.9 *só agne īje śāsāme ca mārto* “O Agni, that mortal has sacrificed and ritually labored” and VI.3.2 (the same vs. that contains *rdhādvāra-*) *īje yajñēbhiḥ śāsāme śāmībhiḥ* “he has sacrificed with sacrifices, he has labored with ritual labors.”

X.110.2 quoted above also suggests that, despite the pāda break, *dhiyā* in our passage is better construed with *īdhat* as in the publ. tr. than with *śāsāmate* with, e.g., Ge “... (und) mit Andacht den Dienst versieht.”

Note the sandhi *ūtī śā*, with retroflexion despite the lack of a close syntactic connection, as well as the unusual position of ordinarily pāda-init. *śā*. An incomplete collection of relevant passages shows that this retroflexion of non-initial *śā* in ruki contexts is standard but not invariable: IV.26.4 *prā sū śā* ..., VI.2.4 *ūtī śā* ..., VI.14.1 *bhāsan nū śā* ..., VI.20.5 *urū śā* ..., VII.104.10 *nī śā* ..., VIII.20.16 *abhī śā* ..., IX.73.8 *trī śā* ..., IX.79.3 ... *arīr hī śā*. But I.64.13 *prā nū śā* ..., without ruki.

VI.2.5: The two adjectives *vayāvantam* and *śatāyusaṃ* are best taken as proleptic, with Ge and Re.

For extensive disc. of this vss., see comm. ad VI.2.4–5 above.

VI.2.6: Just as in VI.1.2 there is a nom. sg. masc. pres. part. *sān* without any obvious concessive value; unlike VI.1.2 there is no metrical explanation available. The close sandhi in the phrase *divī sān* might seem to give us a clue -- that the two words should be read as a constituent and are the equivalent of a circumstantial clause: constituency could account for the ruki. This is responsible for my tr. “when it is in heaven” (sim. Ge), instead of construing *divī* with *ātataḥ* like Re (“s’étendant au ciel”). However, assembling the retroflexion data both for *sān/sāt* in a ruki environment and for *divī* with following *s-* weakens this hypothesis. In the former case *sān/sād* generally doesn’t exhibit retroflexion; see III.9.2 *dūrē sān*, IV.15.1 *vājī sān*, IV.27.1 *nū sān*, VIII.43.9 *gārbhe sān* (though the first and third phrases are constituents); V.44.3 *sacate sād*, VI.27.2 *māde sād* + *niśādi sāt* + *vividre sād*, X.129.1 *nó sād*. However, there is retroflexion in II.41.10 *abhī śād*, *ānti śād* IV.5.10, VIII.73.1 (though the two forms don’t form a syntactic constituent in any of these passages) and in IX.61.10 *divī śād* (almost exactly our phrase). In other words, the data are equivocal. On the other hand, the loc. *divī* regularly retroflexes the initial *s-* of forms of *√as*, as here: I.108.11 *divī śthó* [dual verb], V.2.10 *divī śantu*, V.60.6 *divī śthā*, VI.33.5 *divī śyāma*, and the just cited IX.61.10 (cf. also VI.52.13 *dyāvi śtha*), though it does not retroflex other initial *s-*s; cf. I.125.6 *divī sūryasya*, V.27.6 = V.85.2 *divī sūryam*, V.35.8 *divī stómam*, VIII.56.5 *divī sūryo*, X.75.3 *divī svanó*, X.85.1 *divī sómo*. It thus appears that the retroflexion of *śān* here is an automatic product of a rule that induces ruki in *s-*initial forms of the verb ‘to be’ after *divī* and does not give information -- or at least high-quality information -- about constituency. I have no idea why *√as* should exhibit this behavior; it cannot be due to (lack of) accent, since several of the ruki-ed forms are accented (including the one here). MLW comments: “But maybe it was despite its accent somehow a clitic just as there are accented 2nd pos. clit. This reminds me of the loss of *s* in Old Latin comedy which is especially well attested before the verb ‘to be’.”

VI.2.7: The 2nd hemistich presents some interpretational problems, generated by the standard assumption that *jūrya-* belongs to $\sqrt{j\acute{r}}$ ‘be/get old’. Not only is the expression “delightful like an aged one in his stronghold” odd, but such interpr. require bleaching out the gerundive value of *jūrya-* (esp. unlikely given that it’s parallel to *trayayāyyah* in d and *īḍyah* in a). Cf., e.g., Ge’s “behaglich [cozy, snug] wie ein Greis in seiner Burg,” which also pushes *raṇvā-* into a meaning otherwise unknown to it. Re’s “joyeux, tel un vieil (homme) dans la forteresse” maintains the meaning of *raṇvā-*, but the connection between it and the simile seems strained. Old (ZDMG 55: 279 = KISch 738) cleverly suggests that there’s a crisscross word order, with the son of the simile in d appropriate to the adj. in c and vice versa: so something like (he doesn’t actually translate) “delightful like a son, to be protected like an old man in his stronghold.” But this is an ad hoc response to dissatisfaction with the apparent pragmatics of the passage.

These problems can be solved in twofold fashion. 1) I take *raṇvāḥ* as a pun, a word common to both similes. In both cases it applies to Agni, but in two different senses. 2) This reinterpretation is enabled by a different analysis of *jūrya-*. I take it to the root \sqrt{jvar} ‘burn, flame’, showing the same zero-grade as in *jūrṇí-* ‘firebrand’ (<**jvṛH-C*, with loss of -v- before *ū/u*, as in *urú-* < **vṛH-u*). I can see no possible formal objection to this analysis, despite the apparently universal insistence that *jūrya-* must belong to $\sqrt{j\acute{r}}$.

Starting with these assumptions, we can take the two gerundives, *jūryah* in c and *trayayāyyah* in d, as the predicates of their respective pādas (as *īḍyah* is of pāda a). One of the drawbacks to the standard interpr. is that this syntactic parallelism is broken. In c the picture is of a battle-eager (warrior) (for a similar usage of *raṇvā-* see X.115.4 and remember that *rāṇa-* means both ‘joy’ and ‘battle’) who is to be enflamed / set blazing; in the simile *jūrya-* is metaphorical, but of course the word is literally applicable to Agni the fire, who is the upameya, the target of the simile. One minor problem with this interpr. is that the simile marker *iva* is in the wrong position: we would expect to find it after *raṇvā-*. But there are enough displaced simile markers in the RV that this positioning is not a major obstacle.

When applied to the simile in d, *raṇvā-* has its more usual meaning ‘delightful, bringing delight’, which is appropriate to the son and helps explain the desire to protect him. Here the publ. tr. adds “to the home” to “a son who brings delight.” I made this addition because I think there’s a buried pun. On the one hand, in c *raṇvāḥ purí* (“battle-lusty warrior in a fortress”) construes a locative with the subject (acdg. to my view of the constituency) and we might expect a similar loc. in the corresponding expression; on the other, *raṇvā-* in its meaning ‘delightful’ is often a descriptor of a home or construed with a loc. of ‘home’. Cf. I.69.4–5 *raṇvó duroṇé* “bringing joy to the house,” precisely of Agni. It may be that *pūrí* can be directly applied to the simile in d and in that context means ‘home’ -- though I doubt it: RVic *pūr-* does not have domestic associations. Instead I think that *raṇvā-* in the “protected son” context evokes *duroṇé*, and this subsurface evocation is realized in the next verse by the phonologically similar loc. *dróṇe* ‘wood(en) cup’. The unexpected and unusual use of *dróṇa-* in that vs. (for which see comm. ad loc.) suggests that it may have been deployed there in order to play on the unexpressed (*)*duroṇé* here. This may seem overclever; in that case the tr. could stop short at “to be protected like a son who brings delight.” In any case, it would probably better to put “to the home” in parens.

A last comment on the hemistich: I have tr. cd in the opposite order, so that the domestic half (d) immediately adjoins the “dear guest” of b. This is not necessary, but given that my interpr. of c involves a radical rethinking of the standard view, it seemed best to make the new reading easier to assimilate.

The gerundive of d, *trayayā́ya-*, is a hapax and a striking formation -- in the first instance, just because of the rhythmic rollout of -VyV- sequences. With regard to its derivation, as Debrunner points out (AiG II.2.285–86), it seems to pattern with -ā́yya-gerundives built to -ā́ya-stems: *panayā́yya-*, *mahayā́yya-*, *spr̥hayā́yya-*. However, there is no such verb stem **trayā́ya-*. Debrunner adds the parenthetical remark “von v. Präs. *trā́ya-*,” but of course in that case we should expect **trā́yā́yya-*. Both the short root vowel and the extra -ya- remain unexplained by that derivation. I have only the wispiest gestures towards an explanation. For $\sqrt{trā}$ we would probably expect an -ā́ya-formation **trā́paya-*; however, it might have followed the model of $\sqrt{pā}$ and $\sqrt{pyā}$ with a -y-hiatus filler instead (*pā́yā́yati* and *pyā́yā́yati* [AV+] respectively), hence **trā́yā́yati*. We might then invoke the tendency of roots with the shape *CRā* to shorten their root vowel in the *p*-causative, type *jñā́payati* and, specifically with *Crā* root, *śrā́pā́yati* (both AV+). For disc. see my 1983 monograph on the -ā́ya-formations, pp. 208–11. So one might posit such a shortening to the differently formed causative to a *CRā* root **trayā́yati*, which could serve as base for our *trayayā́yya-* here (encouraged by the short root vowels of the -ā́ya-stem -ā́yya-gerundives quoted above). But the chain of assumptions and unattested forms seems too long, and we might instead just attribute *trayayā́yya-* to a poet’s whimsical multiplication of -ya-s -- his version of tra-la-la. MLW suggests: “From *i*-extended form of **terh-* ‘rub’ (Lat. *trivī*, etc.), with double sense ‘to be rubbed’, i.e., caressed, and also referring to the fire drill?” This is an appealing suggestion, but the lack of other representatives of this root in IIr. might disfavor it.

VI.2.8: The voc. *ā́gne* was omitted in the publ. tr. I would insert “o Agni” after “purpose.”

Note that the first hemistich begins with *krátvā* and ends with *kṛtvā́yah*.

This vs. displays the same verbal intricacy as the immediately preceding vs. 7. As also in vs. 7 the first hemistich is less complex than the second, but that doesn’t mean it lacks puzzles. The principal question is the root affiliation of *ajyā́se*. With Ge, I take it as a pun, as passive to both $\sqrt{añj}$ ‘anoint’ and \sqrt{aj} ‘drive’ (Old opts for \sqrt{aj} , Re for $\sqrt{añj}$)—a pun that we also find frequently in Maṇḍala IX. The primary connection is presumably to $\sqrt{añj}$: the ritual fire is “anointed” with the offering butter; cf. the nearby occurrences of the ppl. *aktá-* ‘anointed’ (VI.4.6, 5.6). But the loc. *dróṇe* casts a shadow on the clarity of this association. Though the stem *dróṇa-* is doubtless a deriv. of *dā́ru-/drú-* ‘wood’ (see EWA s.v.), it doesn’t refer to wood as a general material, much less to firewood. It is specialized as the (wooden) cup for soma; the stem is mostly limited to the Soma Maṇḍala, but even in its two other occurrences in VI (37.2, 44.20) it refers to the soma cup. Therefore, if we want to take *dróṇe ajyā́se* here to mean something like “(the fire located) on the (fire-)wood is anointed,” we must take *dróṇe* as a specialized stand-in for *vā́ne* or the like (see the passages assembled by Ge in n. 8a; cf. also *drusádvā* ‘sitting on the wood’ in the next hymn, VI.3.5), whose meaning has been twisted. This unusual substitution pushes us in two directions. On the one hand, if *dróṇe* here is meant to evoke *duroṇé* ‘at home’ in the previous vs. (7cd), we can explain its unusual employment here

and the twisting of its referent from wooden cup to wood -- and even take it as gesturing to ‘home’ here as well, ‘home’ being Agni’s fireplace as well as the home of the sacrificer. On the other hand, since the soma after its purification is regularly driven into its containers, we can take *ajyāse* also to *√aj* ‘drive’ and see the common identification of the two ritual substances, fire and soma, that pervades much of the RV. One of the characteristic ritual actions performed on Soma would here be attributed to Agni. The simile in b, *vājī nā* ‘like a prize-seeker’ works with either verb, since horses are both anointed and driven. Moreover, both *vājín-* and *kṛtvya-* are regularly used of soma -- further strengthening the Agni/Soma connection sketched in pāda a.

The similes in the next two pādas cause further problems. In c the first question is the case of *svadhā*. Ge and Old favor nom., Re and I instr. If *svadhā* is nom., the series of similes with Agni as implicit subject and upameya is disrupted. The next issue is what is meant by a *párijmā ... gáyaḥ*. Both Ge and Re take it as some sort of mobile home (e.g., Ge “ein fahrender Hausstand”). Although in a pastoral society like that of the RV such a notion is not as comic as it might at first seem — and although fire is frequently depicted as burning across the land — I do not think that that is the image meant there. Note first that *gáya-* is several times associated with the preverb *pári* (esp. *pári √pā* VI.71.3, X.66.3, though as an object not a subject, I have to admit). And from its literal sense ‘earth-encircling’, *párijman-* can develop the sense ‘encircling, encompassing’. That is the sense I see here, with the domestic deity Agni compared to the extended family that embraces everything belonging to it -- a likely reference to the ritual fire as the joint possession and symbol of the Ārya clans.

The second simile depends on the meaning of *hvāryā-*. This stem must belong to the root *√hvr̥* ‘go crookedly’. Ge thinks it refers to a bird, which has little to recommend it since there’s already a horse in the passage; others (Re, Th [KlSch 78]) to the meandering or zig-zag movement of the fire (e.g., Re “(il va) zigzaguant ...”). I prefer to take it as a gerundive (despite the accent, which is unusual for such a formation) and indeed one to an underlying causative. My further assumption is that the “young steed” of the simile is being trained, by being run in circles (around someone in the middle holding a rope attached to the horse -- a standard part of horse training today it seems from images and videos conjured up by Google -- and recall the Mitanni horse-training tablets with their numbers of ‘turns’ [*vartana*]). Although *√hvr̥* often refers to more random motion, it implicitly contrasts with motion in a straight line, which a circle is not. The advantages to this interpr. are 1) it would refer to something that the ritual fire actually does or is made to do: the Paryagnikaraṇa or the circling of the sacrificial animal (and associated paraphernalia) with a firebrand; 2) it would implicitly pick up *párijmā* from the beginning of the hemistich, with a more literal sense of ‘encircle, encompass’ than in pāda c. If this latter suggestion is correct, as in 7cd the first word of pāda c, *párijmā*, would be applicable to the similes in both c and d with slightly different senses, just like *raṇvāḥ* in 7c.

VI.2.9: With Ge, I supply the verb ‘eat’ in pāda a. Although Ge does not give his reasons, the existence of a parallel passage in this Agni cycle gives a clear warrant: VI.15.1 *jyók cid atti gárbho yád ácyutam* “For a long time the embryo eats just what is immovable.” Re supplies a different verb in a from the one he supplies in b: “(tu ébranles) ... comme le bétail (dévore) ...” But this violates the structure of the RVic simile.

The problem in the 2nd hemistich is the form *dhāmā*. Gr, fld. by Lub, interprets it as a 1st pl. root aor. injunctive, but though a 1st person would work in some hymns, there seems to be no personal intrusion in this one -- nor can I figure out how a 1st pl. “we establish(ed)” would fit here. Both Ge and Re take it as a neut. pl. to *dhāman-* and therefore the subject of *ṛścānti*. However, this requires an interpr. of *dhāman-* -- Ge “Kräfte,” Re “pouvoirs-d’état” (whatever that means) -- that I do not think is possible for this word, and, in any case, can “powers” hew? On the basis of VI.6.1 (also in this cycle) *ṛścādvana-* ‘wood-hewing’ (the compounded version of our *vānā ṛścānti*), which modifies Agni, I think that the subject of *ṛścānti* must be Agni, or rather some parts of Agni, since a plural is required. I therefore take *śikvasaḥ* as a nom. pl., not gen. sg. (with Ge, Re), referring to Agni’s flames or his various embodiments. This leaves *dhāmā* stranded; I take it as an annunciatory main clause with *yād* as the definitional relative clause: “(this is your) principle, that ...” My tr. assumes a neut. *singular dhāmā*, allowed by Wackernagel (AiG III.272), Old (ZDMG 55: 280 = KISch 739), etc. It would also be possible to tr. as a plural: “(these are your) principles, that ...” A different possibility is enabled by Ge’s suggested alternative tr. of *dhāmā* (n. 9c) as “Erscheinungsformen,” which is more palatable than his “Kräfte.” If we allow the meaning of *dhāman-* to stretch to this extent, we could tr. cd “when the forms of you, the dexterous one, hew the woods,” with *śikvasaḥ* a genitive with *te*. Nonetheless, I still prefer the publ. tr.

VI.2.10: I interpr. pāda a (which is identical to IV.9.5a) as a variation on passages like X.2.2 *vēṣi hotrām utā potrām jānānām* “pursue the office of Hotar and of Potar of the peoples,” but with gapping of the terms for the priestly offices.

The standard tr. take *samṛdhāḥ* as an abstract ‘success’ (e.g., Ge “Schaff ... Gelingen”; cf. also Re, Scar [67]), but the only other occurrences of this root noun, in the frog hymn VII.103.5, clearly means something like ‘unison’, referring to the frog chorus. One of the two finite forms of this lexeme, *sām āṇḍhe* in X.79.7, also seems to have this sense: Agni “comes together” with his parts or limbs (*pārvabhiḥ*). The other, in X.85.27, has a sense closer to simplex *ṛdh* ‘be (completely) realized, come to success’. In our passage here, the ‘unison’ interpr. makes sense, esp. in the larger context of this hymns (and also VI.1), with the focus on Agni as clanlord of the separate Ārya clans, which are nonetheless working towards a common goal. On the other hand, the appearance of simplex *ṛdhat* in this hymn (4a, on which see comm. ad loc.) and in the cmpd. *ṛdhādvāra-* in the next (VI.3.2) might suggest a rendering closer to the simplex here as well.

VI.2.11: As noted in the publ. intro., this vs. forms a slight ring with vs. 1, with voc. *mitramahaḥ* echoing *mitrō nā* of 1b.

Both Ge and Re take *vīhī* as having a double acc., with *svastīm suksītīm* the secondary object expressing benefits we seek from the gods whom we pursue (e.g., Ge “Ersuche die Männer des Himmels um Glück, um gutes Wohnen.” But this seems unnecessary (and is not the usual syntax of *√vī*); the root *√vī* takes a variety of objects, including concrete inanimates, as in VI.12.6 (in this cycle) *vēṣi rāyāḥ* “you pursue riches,” and here I see it as having both inanimate and animate objects.

Pāda d *dviṣō āmhāmsi duritā tarema* is a reprise of 4d *dviṣō āmho nā tarati*.

VI.3 Agni

VI.3.1: The standard tr. take *te* with *jyótiḥ*, i.e., “your light.” Because of its somewhat unusual pāda-final position, however, I construe it rather with immediately preceding *devayúṣ* “seeking you as god.” The retroflexion in *devayúṣ te* might have been interpr. as an indication of constituency and therefore as support for my interpr., but this argument does not hold. For retroflexion of *te* after a rukified or -fiable -s, cf. I.11.6, 7 (I.131.4, IV.42.7) *vidúṣ te*, I.48.6 (I.69.7, VIII.24.17) *nákiṣ te*, I.104.1 (VII.24.1) *yóniṣ te*, IV.4.3 (VIII.71.8) *mákiṣ te*, IV.10.4 *ābhíṣ te*, V.38.1 *uróṣ te*, VI.44.11 (VIII.40.9) *pūrvíṣ te*, VII.3.4 *prásitiṣ te*, VII. 18.18 *rāradhúṣ te*, VIII.14.3 *dhenúṣ te*, VIII.17.6 *svādúṣ te*, VIII.44.23 *syúṣ te*, IX.104.4 *góbhiṣ te*, X.33.7 *pitúṣ te*, X.38.3 *asmābhiṣ te*, X.56.2 *tanúṣ te*, X.85.40 *agníṣ te*, X.112.1 *ukthébhiṣ te*. Counterexamples: I.80.8 *bāhvós te*, I.147.2 *vandārus te*, I.163.3 *āhús te*, III.55.22 *niṣṣídhvarīs te*, IV.12.1 *trís te*, IX.79.5 *āvis te*, IX.86.5 *prabhós te* [VII.99.7 *váṣaṭ te*]. In other words, retroflexion is the most common outcome of *te* after a word ending with a ruki-fiable *s*, though it is not without exception. Constituency does not seem to play a role, nor (though this is not clear from the examples just assembled) does metrical position: all of the non-rukified examples occur first in their pādas, but rukified examples occur in every sort of metrical position, including, regularly, initial in pāda. See also the data on retroflexion discussed just above ad VI.2.6.

In the 2nd hemistich *ámhaḥ* is the most problematic form. In the syntagm *pāsi ... mártam ámhaḥ* we should like an ablatival reading: “you protect the mortal *from* narrow straits.” There are several ways to achieve this reading or to configure the form in a syntactically different way. For general disc. of this problem see Old, ZDMG 55: 280–81, and Schindler, Root noun, pp. 10–11. Gr (fld. by Kuiper III 1: 49 [1957]) invents a root noun *ámh-* for just this passage, beside the very well-attested *s*-stem *ámhas-*, to which our form could be the abl. Although this solves the immediate problem, inventing a stem for a single occasion otherwise has little to recommend it, and we should in any case expect accent on the ending, **ámháḥ*. Others take it as an abl. to the *s*-stem, truncated in some way and at some period. M. Hale (Fs. Melchert) sees it as an archaic zero-grade abl. to the *s*-stem, preserved from a pre-*proto* stage of IE -- though he otherwise sets forth quite cogently the arguments against positing the preservation of such archaisms. Wackernagel (AiG III.80) interprets it as a haplology from **ámhasaḥ*, an ad hoc solution that again solves the problem, but rather crudely. Schindler, flg. an oral suggestion of Hoffmann’s (in turn fld by Scar 135, 300), takes it as the acc. it appears to be, governed by a participle to be supplied (he suggests *ā√r*, on the basis of V.31.13): “den Sterblichen, den du, O Gott, beschützt, wenn er durch Verlassenheit in Bedrängnis (gerät).” This again takes care of the form, but requires supplying material from nowhere.

I also am inclined to take it as an acc., but not via the same mechanism as Schindler (/Hoffmann), but by way of syntactic ambiguity plus metrical convenience. I start with the fact that 1) abl. *ámhasaḥ* is common with *√pā*, often final in a Jagatī cadence; in this cycle cf. VI.16.30, 31 (though these two are actually in dimeter cadences) ... *pāhy ámhasaḥ*#. 2) Another, semantically similar, expression involves *ámhas-* and (*ví*) *√muc* ‘release’, but this expression can have two different syntactic realizations: personal ACC. + ABL. of the danger, or ACC of danger + personal ABL. Cf., e.g., I.118.6 *ámuñcatam vārtikām ámhaso níḥ* “you two released the quail from *ámhas-*” versus II.28.6 (etc.) *vatsāḍ ví mumugdhy ámhaḥ* “release *ámhas-* from the calf.” The same duality of construction is found with *√pr* ‘carry across, rescue’. Cf. in the next hymn VI.4.8 *pārṣy*

āmhaḥ “carry (us) across narrow straits” versus VII.16.10 *tān āmhasaḥ pipṛhi* “rescue them from narrow straits.” I suggest that here we have a blend of these constructions extended to semantically similar $\sqrt{pā}$. The person remains in the ACC., but the danger is put into the ACC. as well. The similarity of the expression here ... *pāsi* ... *āmhaḥ*## and, in the next hymn, VI.4.8 *pārṣi āmhaḥ*## may have contributed. And I don’t think we should discount metrical convenience: the expected abl. *āmhasaḥ* is fine for a Jagatī cadence but doesn’t fit a Triṣṭubh cadence like this one, whereas *āmhaḥ* is quite common in Triṣṭubh cadences. So if the poet can find a syntactically principled way to use acc. *āmhaḥ* here, he will — and, in my opinion, he did. Note also *āmho mārtaṁ* in the next vs. (2d), the same words in opposite order to our *mārtaṁ āmhaḥ*, as well as *āmhaḥ* in the previous hymn, VI.2.4.

A less pressing problem is how to construe the instr. *tyājasā*. In the Hoffmann/Schindler interpr., it is simply construed with the invented participle: “wenn er durch Verlassenheit in Bedrängnis (gerät).” Both Ge and Re take it as the cause leading to *āmhaḥ*, e.g., Ge “... vor Not infolge einer Unterlassungssünde,” but Ge suggests in a n. (1) that it could be an instr. of accompaniment with *āmhaḥ* (“vor Not und Sünde”). That is the tack I adopt here, but I consider *tyājas-* as something that might befall the hapless mortal rather than something he might commit (like Sünde) and bring about his bad fortune. On the semantics of *tyājas-* here and elsewhere in the RV, see Old, ZDMG 55.280–82.

VI.3.2: As Ge points out, pāda a recalls VI.1.9a with *īje śasamé* as here; the addition of *ṛdhāt-* in pāda b also recalls VI.2.4a *ṛdhat ... śasāmate*. In fact, the diction of the first hymns in this Agni cycle is very similar; cf. e.g., the repetition of *āmhas-* (VI.2.3, 11; 3.1.2, 4.8), the use of the verb $\sqrt{naś}$ (*ānaṭ* VI.1.9, *aśyām* VI.1.13, *naśat* 2.5, *naśate* 3.1, 2, *aśyāma* 4x 5.7), etc. Other echoes have been treated elsewhere in the comm. The two forms of *naśate* in these first two vss. express mirror images: the first (1b) has the virtuous mortal as subject, suitably rewarded by attaining the light; the 2nd (2d) has the same mortal as object, with the verb negated, to express the evils that will not reach the mortal.

On *ṛdhād-vāra-* see comm. ad VIII.46.23

VI.3.3: This vs., esp. its 2nd half, bristles with difficulties and has been interpr. in an exhausting variety of ways (not only the usual tr., but also, e.g., Old at length in ZDMG 55.283–84=KISch 742–43; Thieme Unters.; Lüders, AcOr 13 [=Phil.Ind.]; Scar 146–47; Gonda, Ved.Lit. 219). I will not treat these other interpr. in detail, but merely lay out my own, which is in closest agreement with Lüders (“Ved. heṣant-...,” Philol. Ind.: 781ff.) through the first half of c. The general point of the vs. seems to be, as often, to contrast the fearsome and militant aspects of Agni with his benign ones.

It might also be pointed out that pāda a, which is the most straightforward part of the vs., has a bad cadence that is not easily fixable; in fact it presents an unusual sequence of 5 light syllables: (*sūro ná yá*)*sya dṛśatīr a(repā)*. I do not see any way to make *-tīr* heavy.

The first question, in the relatively transparent 1st hemistich, is what *bhīmā* modifies. Though Ge and Re take it with *dṛśatīr* -- that is, Agni’s appearance is both spotless (*arepā*) and fearsome -- the pāda boundary weakly suggests that *bhīmā* should be

construed with the other fem., namely *dhīh*. On the assumption that this *dhī-* is Agni's, *bhīmā* identifies the *dhī-* with the violent side of Agni.

In c, with Ge and Lü inter alia, I assume that a new clause begins with *nāyām* and, also with Lü, that *heṣasvant-* means 'possessing arms, armed'. The opening of this pāda *heṣasvataḥ śurúdhah* then is a nominal clause, with the gen. *heṣasvataḥ* expressing possession. Cf. III.38.5 *imā asya śurúdhah santi pūrvīḥ* "here are his many proliferating riches"; sim. IV.23.8 *ṛtasya hí śurúdhah santi pūrvīḥ* "Of truth there exist many riches." The rich spoils that fall to Agni are presumably the various materials he burns.

The published tr. importantly omits *aktóh*. It should be corrected to "(But) on his own, by night, this one here ..." This temporal adverb implicit contrasts with *sūro ná* of pāda a. That is, the appearance of the militant Agni is compared to the sun, the light of day, whereas the benign Agni described in the second half of c + d is a phenomenon of night.

On the famous crux *nāyām* see comm. ad VIII.2.28 and my 2013 Fs. Hock article. Pace Thieme (1949: 51–52) and Lub, who classifies this passage separately, I believe that *nāyām* here belongs with the other occurrences of this syntagm.

The adj. *raṇvā-* recurs here from VI.2.7. On its indirect association with 'home, dwelling' in that passage and its direct associations elsewhere, see comm. ad loc., also I.66.3 and X.33.6. Here it might be better to render the phrase *raṇvó vasatīḥ* as "delightful dwelling" rather than "cozy nest" to bring out the echoes with the passage in the previous hymn.

I take *kútrā cid* as temporal rather than spatial.

VI.3.4: This vs. continues with the description of violent Agni.

Pāda d has caesura after 3; there are two other exx. of this metrical irregularity in the hymn, 6b and 8b, both of which have bad cadences as well. Here the early caesura might be calling attention to the extreme alliteration of the pāda: *dravír ná drāvayati dāru dhákṣat*. The same is not true of the others.

The 3rd sg. *bhásat* is most likely a subj. to a root aor.; see Gotō 82.

The hapax *yamasānā-*, an apparent participle to a supposed "Doppelstamm" to \sqrt{yam} , does not fit the pattern of most of the other *-asānā-* stems, on which see comm. ad IV.3.6 -- in that it neither falls into the semantic sphere of violent activity nor has an associated *s*-stem. Note here, however, that *rabhasānā-*, which meets both criteria, is found in the last vs. of this hymn (8d) and could have provided a model for this formation. I also wonder if *yamasānā-* is not a pseudo-cmpd. of *yāma-* 'bridle' (e.g., V.61.2) and $\sqrt{sā}$ 'bind', as if with a middle part. of the root aor. *asāt*, etc. (*viśāṇa-* in V.44.1, identified as a part. by Gr., is better taken as an *-ana-* nom. to the same root [*<sā-ana-*]; cf. AiG II.2.193). Hence, 'being bound to the bridle'. Needless to say, this would not be well formed by standard Vedic compounding rules, but is not completely out of the question as a nonce inspired by *rabhasānā-*, itself a nonce. Note also the phonological figure (*yam*)*asānā āsā*.

The simile in c, *vijéhamānaḥ paraśúr ná jihvām*, has been variously interpr. I take the frame to be (*agnīḥ*) ... *jihvām* -- that is, the tongue is Agni's, as usual, and refers to his flame(s). As for the comparandum, the ax -- I assume that *its* tongue is its blade, extending from the handle as a tongue does from a mouth. The blade might be found in

the next vs. in *dhārā* (5b). See VI.2.7–8, where I argue that a word missing from vs. 7 is found or gestured toward in the following vs.

The hapax *dravīh* in the next pāda is universally taken as a nom. sg. masc. to an *i*-stem *dravī-* meaning ‘smelter’ (so Gr, etc., and cf. AiG II.2.297) or ‘cutter’ (so Hoffmann, Aufs. 420, to $\sqrt{drū}$ ‘cut’, rather than \sqrt{dru} ‘run’). But agent nouns in simple *-ī-*, though they do exist (see AiG II.2.296–97), are not exactly thick upon the ground. I suggest instead that it is a neut. *-īs*-stem like *havīs-* ‘oblation’, *sarpīs-* ‘melted butter’ (on this type, including those built to anṭ roots, see AiG II.2.364–67). It would then be a cognate object to *drāvayati* in the simile and, on the one hand, be a more likely substance to be caused to run than wood (*dāru*) and, on the other, refer to the parts of wood that really do ‘run’, like sap. It might be worth noting that the much later cvi formation *dravī-bhū* (etc.) means ‘become liquid, liquefy’. (This of course has nothing to do with the *-ī-* in *dravīh*, but does show that ‘run’ is used of liquids, a reasonably widespread semantic extension -- e.g., in English.)

The standard tr. take *dāru* as the obj. of *dhākṣat* ‘burning’, rather than of *drāvayati*. This is, of course, the safer course. But cf. V.41.10 *nī riṇāti vānā* ‘he liquefies the trees’ (also of Agni), V.58.6 *riṇatē vānāni* ‘the trees dissolve,’ both with the root \sqrt{ri} ‘flow’.

VI.3.5: This vs. is comparatively straightforward, esp. the first hemistich.

I take *tējah* in its literal etymological value: ‘sharpness’ → ‘point’, given *tigmā-* ‘sharp’ in 4a.

In c note the phonetic play of (*citrādh*)*rajatir aratīr*.

Despite the pāda boundary, I take *vér ná* as the simile with both c and d, unlike most, who limit it to d. The root \sqrt{dhraj} ‘swoop, soar’ (found in the b.v. *citrā-dhrajati*) is generally limited to birds (cf. I.165.2, IV.40.3) and the wind, and so comparison to a bird here would be apt. Note also that a form of \sqrt{dhraj} and an uncompounded form of *pátman-* are found together in 7c.

Though most interpr. take *aktóh* as a gen. either with *aratīh*, imposing a forced reading on the latter (Ge “der Lenker der Nacht,” Lü [Philol.Ind. 783] “als Herr der Nacht”), or with a gapped “Agni” (Th [Unters.] “der (Agni) des Nachts”), I think it likely that it is adverbial, as it is two vss. earlier (3c) in the same metrical position. So also Re.

Our *druśādvān-*, a hapax, exists beside 2 occurrences of the simple root noun cmpd. *druśād-* -- one of which is in an exactly parallel context: IX.72.5 #*vér ná druśād* (like our #*vér ná druśādvā*). I assume that the extension by the derivational suffix *-van-* simply serves metrical convenience, since the forms seem identical semantically. Several other *-śād-* cmpds have the same extension: *nṛśādvān-* (1x), *parīśādvān-* (1x), and *admasādvān-*, found once in the very next hymn (VI.4.4), and *-van-* extensions are not rare in root noun cmpds, esp. to roots ending in *-ā*, such as *vājadāvan-* ‘giving prizes’, *sahasradāvan-* ‘giving thousands’, etc.

The final word of the vs., the b.v. *raghu-pátma-jamhāh*, is unusual for the RV in having three full members, as Re notes. He discusses the cmpd at some length and considers it a “conglomérat” of a tatpuruṣa **raghu-pátman-* (entirely parallel to *raghu-pátvan-*) and the attested bahuvrīhi *kṛṣṇā-jamhas-*, tr. “(dieu) au vol rapide, au plumage (noir)” (I.141.7). I see no reason to involve the latter cmpd., detach the (compounded) first member *raghu-pátman-* from the second, *jāṃhas-*, and insert a ‘black’ not found in

the text to qualify the second member. The English designation “flight feathers” would have the same structure (save for the bahuvrīhi) as *raghupátma-jamhas-*, that is, “feathers suitable/specialized for flight.” Note that in this bahuvrīhi with a cmpd first member, “first member accent” actually falls on the second member of the first cmpd., matching that of the original tatpuruṣa (cf. just cited *raghu-pátvan-*) -- in other words, when the bahuvrīhi is formed, the internal structure of its first member is no longer visible to the process.

VI.3.6: The noun *rebhá-* is generally tr. ‘singer’ and the root \sqrt{ribh} from which it is derived, ‘sing’. However, as I discussed in “On Translating the Rig Veda” (2000, Proceedings of UCLA IE conf.) and again in the Intro. to the publ. tr. (p. 78), the limited number of attestations of the verbal root and the variety of contexts in which it is found suggest that its meaning is more specific than ‘sing’. That the sound of \sqrt{ribh} can be compared to that made by birds of prey (IX.97.57) or by ungreated wood on a wagon (TS VII.1.1.3) suggests something on the lines of ‘squawk, squeak, rasp’ -- a hoarse or husky voice quality that would perhaps not be surprising in a middle-aged man in antiquity, esp. one who spent a lot of time huddled over fires. (See also X.87.13 where these performers produce “harshness of speech.”) The verb with which *rebháḥ* is construed in this passage, *rārapīti*, is likewise usually rendered in very general fashion, as ‘speak, praise’ or the like. But again it seems to have a more specific sense: ‘mutter, murmur’ vel sim. (see EWA and, e.g., Schaefer, Intens., both s.v. *rap*). So the anodyne tr. of Ge “Wie ein Bard ruft er ... laut” and Re “comme un barde ... il parle-puissamment” (both ascribing real intensive sense to *rārapīti* rather than the more likely frequentative) can be replaced with something both more pointed and more appropriate to Agni, who is the referent here: “like a hoarse-voiced (singer) he keeps muttering (=crackling) with his flame.”

The phrase *prāti vasta usrāḥ* should be read with accented *vásta*, an old correction, endorsed by Oldenberg inter alia. Cf. pāda-final *vásta usrāḥ* at IV.25.2, VII.69.5, VIII.46.26. The erasure of accent here may be redactional, based on the verb *vaste* in the next hymn, VI.4.3b. It should be noted, however, that Re interpr. *vasta* as a finite verb form to \sqrt{vas} ‘wear’ (“Comme un barde, il se revêt des aurores”), and he is followed by Lub. That the exact phrase, but with accent, occurs 3x elsewhere makes this interpr. unlikely. There remains, however, the question of what the underlying form is. The Pp analyzes it as *vaste*, but Old prefers -o (both here and for the other occurrences of the phrase), a loc. to *vástu-*. On -o (from -au) as u-stem loc., see AiG III.153–54, and now TY, who argues for its continuing a PIE endlingsless loc., which would be preserved unaltered in a cadential formula. Cf. also *sāno ávye* “on the ovine back,” also with putative endless loc. *-au to *sānu-*. See disc. ad IX.86.3.

As for *usrāḥ*, in this phrase it appears to be an anomalous gen. sg. to the notional stem *usr-*, whose gen. sg. also appears as *usrāḥ* (III.58.4, possibly also VI.12.4, but see comm. there). See AiG III.213. The long-vowel -āḥ ending seems to be the result of “feminizing” the form; cf. loc. sg. *usrām* in X.6.5 (on the pattern of *devy-ās*, *devy-ām*). Since in all four instances of *vásta usrāḥ*, *usrāḥ* is at the end of the pāda, the length could be redactional for **usrāḥ*, as the forms would be metrically equivalent. However, gen. sg. *usrāḥ* is found in other contexts, e.g., in II.23.2. We should also bring into the mix II.39.3 ... *prāti vásta usrā*, with an unaccented dual voc. *usrā* referring to the Ásvins, and perhaps IV.45.5 *usrā jarante prāti vástor ásvínā*, where the *usrā* may be again be a dual modifying

the Ásvins (so Ge, implicitly Pp.) or a masc. nom. pl. (*usrāḥ* out of sandhi) modifying the fires that ended the preceding pāda – or another gen. sg. *usrāḥ* to be construed with *prāti vástoh*.

Although *prāti* is not found in the other 3 exx. of the phrase, *prāti vástor* is attested in II.39.3, IV.45.5, X.189.3, so it is likely to form part of the phrase here. Given its position, it would be difficult to take it as a preverb with *rārapīti*, esp. since \sqrt{rap} isn't otherwise construed with *prāti*; see comm. ad V.61.9.

As noted previously, pāda b is metrically bad, with caesura after 3 and a bad cadence *mitrāmahaḥ*, where we should have a heavy penult.

The *īm* in Wackernagel's position in pāda a is, in my opinion, a long-distance anticipation of the *īm* in c, and both are placeholders for *nṛn* at the end of c and d. This might be clearer if the publ. tr. read "he keeps muttering to them."

The second hemistich consists of a pair of parallel relative clauses with no overt verb. It also, quite unusually, shows verbatim repetition after the caesura: x x x x / *aruṣó yó divā nṛn*. Such tag repetitions are far more characteristic of short echo pādas in meters like Atyaṣṭi, and even in those meters there tends to be some patterned variation. I don't know what function this repetition serves here. I would attribute it to the poet's flagging imagination, except the rest of the hymn bursts with imagination.

There have been various solutions to the lack of verb in these relative clauses. Old, fld. by Re, supplies 'protects' ($\sqrt{pā}$). There's nothing wrong with this -- it provides a verb to govern acc. pl. *nṛn*, and "protect men" is a relatively common predicate, as Old points out. But there's nothing in the context that imposes this addition; the closest we can come is *pāsi* in 1d. Ge takes these as nominal clauses -- "der bei Nacht, der am Tage das rötliche (Ross) der Männer ist" -- which saves him from supplying an unmotivated verb, but requires *nṛn* to be a gen. pl., which I think we should avoid if at all possible. The simplest solution, at least as far as I can see, is simply to continue the verb of the first hemistich, *rārapīti*. The *īm* of 6a, echoed by *īm* in c, may suggest that the clauses follow the same template, and as noted above, *īm* in 6a is easiest to explain if it anticipates *nṛn* in the relative clauses. Needless to say, when a verb needs to be supplied in the RV, a silent iteration of a verb in a previous nearby pāda or verse is often the best choice. And in this case the intensive (=frequentative) form of *rārapīti* in b may be reflected iconically in the implied repetition of Agni's muttering in the rest of the verb. The next two vss. provide some further support for this suggestion. In 7ab an intensive in the relative clause of pāda is matched by an intensive to the same root in pāda b, and in 8a supplying an intensive in the rel. cl. to match the one in the main clause of b also makes sense. Although I still think the 2nd half of this vs. is clumsy, it may be clumsy apurpose.

VI.3.7: More or less with Ge (fld. also by Re), I supply a word for sound or noise as the subj. of pāda a; see Ge's parallels cited in his n. 7a. They opt for 'voice', while I favor something generated from the two verbs in this hemistich, both derived from \sqrt{nu} 'roar', e.g., *nāvā-* 'roar(ing)'.

The two verbs themselves require comment, *nāvīnot* and *nūnot*, both pāda-final. First, note that the accent on the first but not the second requires that pāda b must be the main clause to pāda a. The stems of the two verbs are similar but not identical; both have heavy or intensive redupl. and appear to mean pretty much the same thing. *nāvīnot* is clearly an intensive to \sqrt{nu} (or $\sqrt{nū}$? see EWA s.v.); the stem is attested once elsewhere in

the RV (VII.87.2), though the better-attested intens. stem is *ánono/*-. The other verb *nūnot*, which is also attested once elsewhere (V.45.7), is less clear morphologically. Wh classifies it as a redupl. aor., and Schaeffer (Intens. p. 147) also attempts to argue for this identification. There are two problems with taking it as a redupl. aor. First, there is no causative attested to this root — *nāvayati* is only found in the Skt. lexica, not independently in text, at least acdg. to Whitney (Rts) — but a redupl. aor. of this shape should be secondarily generated to a causative. Second, a redupl. aor. should have transitive/causative value, but neither occurrence of *nūnot* has this sense, and in our passage it is difficult to see how to construct such a contrastive value for *nūnot* in opposition to *nāvīnot*. They seem to be used in identical fashion. Schaeffer in fact does try to claim that *nūnot* has factitive-transitive value, translating *nāvīnot* as “brüllt” and *nūnot* as “Gebrüll erregt.” But “Gebrüll erregt” is a translational sleight of hand -- simply a phrasal paraphrase of “brüllt,” enabled by German (similarly in English “shouted” / “raised a shout”). There is no acc. obj. in the Skt.; the noun “Gebrüll” is a dummy noun. I therefore think we should take them both as intensives with the same meaning. I do not understand the reduplication vowel of *nūnot*; metrically **nonot* would have been equivalent and could belong to the better attested intensive stem cited above -- though it should be noted that the attested 3rd sg. to that stem is a (pseudo?) set *nónavīti*, so the secondary form might be expected to be **nonavīt*. All of this is made more complicated by the metrical irregularity of pāda b, which has only 10 syllables. However, (*oṣa*)*dhīṣu nūnot* provides a fine cadence to this line, while repeating *navīnot* from pāda a would yield enough syllables but a bad cadence, (*oṣadhī*)*ṣu navīnot*, and the hypothetical **nonavīt* would also produce a bad cadence.

rukṣā- is a hapax. It is generally taken as a nom. sg. -*as* out of sandhi with a meaning ‘shining’, derived from *√ruc*. So Gr, Ge, EWA s.v., etc. This is perfectly possible, harmless, and not very interesting. I favor the more daring hypothesis: that it is a loc. in -*e* out of sandhi and belongs to a **rukṣā-* ‘tree’, found also in the widespread MIA *rukkha-* ‘tree’ (Pāli, Pkts.), which is probably a metathesis of *vrkṣā-* ‘id.’ (see EWA s.v. *vrkṣā-*). So also Re. In this context it could be indirectly alluding to its source by its position after *vr̥ṣā*, which is phonologically close to *vrkṣā-*.

The second hemistich presents its own difficulties. A crucial problem is the apparent lack of a verb. Ge and Re supply ‘fill’ (e.g., “Himmel und Erde mit Gut (erfüllt)”). I follow Old’s suggestion (ZDMG 55.290=KlSch 749; not very enthusiastically alluded to in the Noten) that we should emend *dām* in d to *tán* (root aor. injunctive to *ā√tan* ‘stretch’). As he points out, this lexeme with *ródasī* (vel sim.) as object/goal, often Agni as subject, and an instr. is quite common, esp. in this set of hymns (VI.1.11, 4.6, 6.6 [recall how tight the phraseology is in this Agni cycle]); cf., e.g., *ā yás tatántha ródasī ví bhāsā*. Although I strenuously resist emendation ordinarily, the echo of IV.19.7 *dāmsupatnīḥ* might have led to the change here. (On that form see comm. ad loc.) In any case, *pace* the Pp. (see also Lubotsky s.v. *dām-*), I think it unlikely that the sequence contains the accented monosyllable *dām* followed by an accented *supátnīḥ*. Inter alia, the root noun *dām-* outside of the cmpd *dāmpati-* and esp. the archaic gen. *dán* in the phrase *pátir dan* are confined to Maṇḍalas I and X. If the emendation of *dām* to **tán* seems too radical (and I’m inclined now to think it is), I would read **dāmsupatnīḥ* with one accent, supply a verb, and tr. “... (fills) with goods the two worlds, who (thus) have (in him) a wondrous husband.”

In c I take the participle *yán* with both the simile and the frame.
Note the return of \sqrt{dhraj} (*dhrajāsā*) and *pátman* (*pátmanā*) from 5cd.

VI.3.8: The vs. is structured as two *vā* alternatives; the reason for this is unclear. See Klein II.203–4.

The rel. cl. of pāda a has no verb, and the verb of b, *dauidyot*, must belong to a main clause because of its lack of accent. Ge, Re, and Klein (II.203–4) supply “become strengthened”; this certainly makes sense, but there is nothing in context or parallel passages that encourages this invention. Kü (206) goes for a more restrained “versehen ist,” a nominal clause with predicative instrumentals, I suppose. But given the twin rel. cl./main cl. intensives in 7ab (*nāvīnot ... nūnot*) and the intens. *dauidyot* in 8b, I wonder if the same pattern holds here, and we should supply an intens. form of \sqrt{dyut} in a.

The *arkā-* of pāda a are most likely both chants and rays.

Pāda b is once again metrically irregular: it has a caesura after 3 and its cadence consists of 4 heavy syllables (*s''vebhiḥ śúsmaiḥ*).

VI.4 Agni

VI.4.1: As Re also points out, the *yáthā ... evá* framework of this vs. and the *adyá* and the *-sí*-impv. *yakṣi* in the *evá* clause lead us to expect a preterite in the *yáthā* clause: “as you *have sacrificed (in the past) ..., so sacrifice today.” Encountering the pres. subj. *yājāsi* instead is surprising. Re operates with his usual parentheses to introduce the preterite: “S’il est vrai que (tu as sacrifié et) sacrifieras ...” I have inserted the totalizing qualifier “always” (“regularly” vel sim. would also work) to enable the future sense that I generally see in the subjunctive. Taking the subjunctive in a more modal fashion (“should sacrifice”) or, à la Tichy, as expectative (“Just as [I expect] you to sacrifice ...”) would be less troublesome in this passage, but I am reluctant to allow context to dictate function to that extent. I should note that Tichy does not treat this passage in her subjunctive monograph. IH suggests that the subjunctive here may show generalizing value, as in Greek, spread from indefinite contexts (“whoever [will] do X ...,” as in VI.5.4-5 ... *yáḥ ... dádāsat / śá ...* “whoever will ritually serve, he ...”).

VI.4.2: Ge takes both *vibhāvā* and *caḥṣāṇiḥ* as transitive: “Er ist unser Erleuchter wie der Erhellter am Morgen.” But well-attested *vibhāvan-* does not elsewhere take an object or an objective gen. (on X.8.4 see comm. ad loc.). By contrast, *caḥṣāṇi-* is a hapax and so its value is more up-in-the-air. AiG II.2.207 takes it as an agent noun ‘Erhellter’ and explains it (p. 208) as a nominalization of an infinitive in *-āni*; in our passage *caḥṣāṇir ná* “als Anzeiger” is said to rest on **caḥṣāṇi ná* “wie um anzuzeigen.” But this is not how RVic similes work, and further a class of *-āni* infinitives is marginal at best (see most recently Keydana, *Infinitive im Rgveda* pp. 190–96). I take it as an intrans. ‘sighting, vision’ -- AiG II.2.207 lists action nouns as one of the two standard values for *-āni*-nominals -- to harmonize in sense with *vibhāvā*, though other interpr. are not excluded. Old suggests ‘Beschauer’, sim. Re.

The tr. of *védyā-* is in accord with my usual interpr. of this stem as ‘to be acquired’ (see comm. ad II.2.3) and my understanding of the original meaning of the

epithet *jātávedas-* (in d here) as ‘having (all) beings as possessions’. However, ‘to be known’, found in the standard tr., would certainly be possible here.

Note that the phrasal verb *cáno √ dhā* ‘take delight’ takes an acc. obj. *vandāru*, as is standard.

In the 2nd hemistich it is uncertain (but not terribly important) which of the nominatives is the predicate with *bhūt*. It is more difficult to attribute the usual change of state sense ‘become/became’ to *bhūt*; Hoffmann’s interpretation (p. 136) as a general statement about Agni seems reasonable. Indeed, I might be tempted to emend my ‘has been’ to ‘is’, to match the presential injunctive *cáno dhāt* in the preceding hemistich. The presence of this unnecessary *bhūt* may well be accounted for by the figure in which it participates: *uṣarbhúd bhūd*, which pleasingly has near rhyme forms from two different roots.

The collocation *uṣarbhúd- átithi-* recurs in VI.15.1.

VI.4.3: The first hemistich treats the billowing smoke and bright flames of physical fire. The kernel of the first pāda, ... *yásya panáyanti ábhvam*, is almost identical to II.4.5 *ā yán me ábhvaṃ vanádaḥ pánanta* “The formless mass [=smoke] of the woodeater which they (first) marvelled at.” Cf. comm. ad loc. In that verse also the next step for Agni is to become bright. In our vs. I supply ‘mortals’ from 2c as subj. of *panáyanta*, but undefined ‘they’ is also possible.

The problem in pāda a is *dyāvo ná*. We might like this to be genitive sg., allowing it to be parallel to *yásya* and depend on *ábhvam*: “whose formless mass they marvel at like that *of heaven.” But there is no way that *dyāvaḥ* can be a genitive, and in any case it is also not at all clear that heaven is shaped like a formless mass. Old (ZDMG 55.291 = KISch 750) attempts to rescue this interpr. by assuming anacoluthon and mixture between the two constructions “Agni has *ábhvam* like the heavens” and “they admire A’s *ábhvam*,” but besides being overtricky, in both instances ‘heaven’ should be genitive, since Skt. lacks a ‘have’ verb and uses GEN X for such values. (He does not push this interpr. in the Noten.) Taking *dyāvaḥ* as the nom. pl. it must be, Ge and Re assume that *dyāvaḥ ná* belongs with the second pāda, as a simile with the verb *vaste* -- so Ge “Er ... kleidet sich wie die Himmel in Glanz.” Although this makes sense, it is syntactically impossible, at least as far as I can see: it requires fronting the simile around the entire relative clause, a major violation of standard RVic syntax. My own interpr. takes both the morphology and the syntax seriously: given the structure of the pāda, nom. pl. *dyāvaḥ* should be being compared to the subject of *panáyanti*. In fact, this is possible semantically as well: the heavens can marvel at Agni’s smoke that is billowing all the way up there. As often, assuming what the meaning of a RVic passage should be has led interpreters to distort the grammar to get to that meaning and has prevented them from reflecting on what the poet meant in producing a non-hackneyed image.

The 2nd hemistich presents its own problems, primarily because of missing or unspecified arguments to the verb. In c *ví ... inóti* lacks an overt object. Ge supplies “Schätze” and interprets the phrase in positive fashion. He reasonably cites as parallels, both from the immediately following hymn, VI.5.3 ... *inoṣi ... vāsūni* and VI.5.1 ... *ínvati dráviṇāni* with ‘goods’ and ‘chattels, treasures’ as obj. respectively. But these passages lack the preverb: although Gr lists VI.5.3 with *ví* as preverb, and Ge apparently follows him, *ví* in that passage should be construed otherwise, not as a preverb with *inoṣi*; see

comm. ad loc. In my opinion a more telling parallel is found in VI.10.7, also in this Agni cycle, with the *vī. vī dvēṣāmsīnuhī* “dispel hatreds.” Re also considers the expression to be negative, on the basis of the same parallel, and tr. “lui qui chasse au loin (les ennemis).” The preverb *vī* is not found elsewhere with this verb. IH now makes the attractive sugg. that the obj. is actually the ‘smoke’ implied in the first hemistich. I consider this an alternative possibility.

In d the verb *śíśnathat* is construed with an acc. *pūrvyāñi*, but the referent of this generic adj. ‘primordial’ is not clear. Other occurrences of both of these words (*√śnath* and *pūrvyā-*) don’t give clear formulaic guidance for what to supply as the real obj. This pāda is identical to II.20.5, an Indra hymn, and it does seem imported from an Indric context here. (Bloomfield does not comment in RVReps.) Ge supplies Burgen (with ?) here, but Werke in II.20.5. Although the former works fine semantically, *pūr-* ‘fortress’ is fem. and so is excluded. Re supplies “performances”; he does not indicate what Sanskrit word he had in mind or why he thought it was apposite. Though it is the case that both *kṛtāni* and *kārmāni* appear with *pūrvyā(ñi)*, I do not see how one can ‘pierce’ them. I supply ‘domains’ (*dhāmāni*), on the basis of IV.55.2 *dhāmāni pūrvyāñi*, VIII.41.10 *dhāma pūrvyām*, although not with a great deal of confidence.

Ge and Re take *ásna-* as a PN, but I see no reason not to take it, with Gr, as a straightforward derivative of *√as* ‘eat’. Mayr splits the difference in his PN book, listing it as a PN but noting its likely original identity with the adj. *ásna-* ‘hungry’.

VI.4.4: The rare word *vadmán-* is found only here and in VI.13.6, also belonging to this cycle. It presumably presupposes a neut. **vādmān-* ‘speech’, from which *vadmán-* was derived by accent shift, like neut. *brāhman-* → adj. *brahmán-*. *vadmā* here participates in a phonetic figure with pāda-final *admasādvā*, where both the 1st cmpd member *adma* and the 2nd *sādvā* match the basic phonological structure of *vadmā*.

The immediate context in VI.13.6 is similar, *vadmā sūno sahaso no vīhāyā*, but it contains the full voc. phrase *sūno sahasaḥ* “o son of strength,” rather than the truncated *sūno* here (the only place in which the bare voc. *sūno* is found in the RV). The phrase “son of strength” is hypercharacteristic of this Agni cycle: besides VI.13.6 the full voc. is found in the 1st vs. of this hymn (1b), as well as nearby VI.1.10, 5.5, 11.6, 13.4–6, and 15.3, and the acc. *sūnūm sāhasaḥ* in VI.5.1, 6.1, the nom. in VI.12.1. This density of occurrence alone would strongly suggest that gen. *sahasah* has been gapped here, but I wonder if a factor contributing to the omission of *sahasah* is the two occurrences of *ūrj-* ‘strengthening nourishment’ in pāda c, given the similar, common voc. phrase *ūrjo napāt* “o descendent of nourishment” (e.g., in this cycle VI.16.25). The *ūrj-* forms would, as it were, substitute for *sāhas-* in this stereotyped “son/descendent of X” expression.

It is difficult to contrive a causal sense for *hi* here, and the particle is therefore not rendered in the publ. tr.

The meter of pāda c is problematic. HvN make the obvious distraction *tuvām*, which produces an orthodox opening of 4, but a bad cadence. Old (both ZDMG 55.291 and Noten) suggests not distracting *tvām*, which produces an opening *sá tvām na ūrja-*, with caesura in the middle of the cmpd *ūrja-sane*, and reading *ūrjam* trisyllabic (with a medial rest: *ūrj am*). Although I usually pay heed to Old’s metrical observations, this requires two highly unusual features: the caesura splitting the type of cmpd that is seldom split and a reading of *ūrjam* that is unprecedented in the occurrences of this stem, while

failing to distract *tvám*, which is more often disyllabic than not. In this instance Old's usual good sense seems to have deserted him, and the HvN reading seems preferable. Part of the bad cadence may be attributable to following a phrasal template: pāda-final *ūrjaṃ dhā(h)* has the same structure as pāda-final *cāno dhāt* in 2b. However, the light final preceding it (*ūrjasana ūrjaṃ dhā(h)*) is harder to explain; of course the *-a* represents voc. *-e* in sandhi and perhaps we can unusually restore it.

VI.4.5: The first half of this vs. is fairly straightforward; the second bristles with nearly insoluble difficulties.

The adverbial *nītkti* 'sharply' presumably refers to haste -- as in Engl. "look sharp!" meaning "hurry!" Alternatively it could refer to the shape of flames, with their apparent sharp edges.

In b *rāṣṭrī* is quite surprising, whether it is applied to *vāyúḥ* 'wind' (so Ge) or to Agni (publ. tr.), since it is fem. and both of those are masc. (*pace* Debrunner, who suggests, implausibly, in AiG II.2.407 that *vāyú-* might in this passage be "ausnahmsweise Fem."). Gr simply lists this occurrence as a separate stem *rāṣṭrī* masc., next to the same stem identified as fem. (Curiously, Tichy [-*tar*-stems] takes no notice of the form; she recognizes only the two fem. occurrences of *rāṣṭrī*.) It unfortunately cannot be the masc. nom. sg. of an *-ín*-stem 'possessing a kingdom (*rāṣṭrá-*)' because it should then be accented **rāṣṭrī*. This *-ī*-stem occurs twice elsewhere referring to Vāc and therefore is clearly fem., as we would expect. In our passage I think it has been employed as an imperfect pun with (unexpressed) *rātrī* 'night' to evoke that stem in this passage concerning Agni's dominance of the nights (*aktūn*), here expressed by a distinct stem *aktú-*.

The image is that of a triumphant king marching across territory. Cf. the similar sentiment in VI.9.1, again part of this Agni cycle, ... *ná rājā / ávātiraj jyótiṣāgnís támāṃsi* "(Agni) like a king suppressed the dark shades with his light" and IV.4.1 (also of Agni) *yāhí rājeva ámavāṃ íbhena* "Drive like an aggressive king with his entourage." The relevance of the wind is unclear to me, except perhaps to indicate the speed of Agni's progress.

As noted above, the 2nd hemistich is a mess. So Old (ZDMG 55.291–92) "Der dritte Pāda ist schwierig und ein s i c h e r e s Resultat wohl unerreichbar." Interpr. therefore differ significantly, and I cannot treat the details of all. As already noted by Old, some help is given by semi-parallel passages containing $\sqrt{t\bar{r}}$ + *árātīḥ*: IX.96.15 *átyo ná vājī táratīd árātīḥ* "(he,) like a prize-winning steed, outstrips hostilities" (also with a horse in the simile, as here); III.24.1 *duṣṭáras táraṇn árātīḥ* "hard to overcome, but overcoming hostilities"; and, in this Agni cycle, VI.16.27 *tárantō aryó árātīḥ* "overcoming the hostilities of the stranger." Similar to this last passage is VIII.60.12 *tárantō aryá ādísāḥ* "overcoming the aims of the stranger." These parallels suggest that the frame of the passage is *árātīḥ* $\sqrt{t\bar{r}}$. The superimposability of the last two passages further suggests that *árātīḥ* and *ādísāḥ* in our passage should be equated, since acc. plurals of both serve as obj. of *tárantāḥ* in the same formula, and that *ādís-* here has negative connotations, unlike some other occurrences of this stem. Of course, the difference in case between them here (acc. pl. *árātīḥ* versus gen. pl. *ādísāḥ*) makes the equation tricky, but I think that, in juxtaposing these two negatively viewed objects, the poet has demoted one (*ādís-*) to a

dependent genitive. (That is, rather than having “may we outstrip hostilities (and) (ill-)intentions,” we have “may we outstrip the hostilities *of* (ill-)intentions.”)

The remaining problem in pāda c — and it is a major one — is what to do with the truncated relative clause introduced by *yās te*. Old (ZDMG 55.292, reprised in Noten) considers numerous possibilities, none of which he seems particularly enamoured of, and Ge, Re, Gonda (VedLit. 236), Hoffmann (Fs. Thieme [1980] =Aufs. III.753–54), Scar (708), etc., add more. A number of interpr. take the rel. construction as embedded between the verb *tūryāma* and its object *ārātīḥ*, sometimes by introducing an otherwise unidentified new actor, sometimes by emending *yās* to **yās* to allow it to refer to one of the fem. pl. *ādīśām* or *ārātīḥ*. I would of course prefer to avoid such embedding on principle, and in fact each attempt to produce such an interpr. runs into further difficulties, which require emendation (of the rel. pronoun or of gen. *ādīśām*), highly unusual case usage, or supplying significant amounts of material — or a combination of the three. So embedding does not produce an otherwise clean syntactic or semantic result. I will not rehearse the details of all these ultimately unsatisfactory proposals, but simply present my own (also ultimately unsatisfactory, I’m afraid). I take *tūryāma yāḥ* to be an improper relative construction “... we who ...”, with disharmony in number between the 1st pl. verb and the sg. rel. prn.; the sg. *yāḥ* would have been imported from/enforced by the numerous rel. cl. in this Agni cycle beginning *yās te* and referring to the pious mortal and his ritual service to Agni. Similar 2nd position rel. are VI.2.4 *īdhād yās te* ..., 2.5 *samīdhā yās te* ..., and there are also a number of pāda-initial exx. of *yās te*: VI.1.9, 5.5, 13.4, 15.11. Thus, although the overall structure of the sentence in cd is couched as (1st) plural, the template of the “pious mortal” defining relative clause would impose a singular in that construction. (Note that the *person* is unspecified, since the rel. cl. lacks a verb.) In the publ. tr. I supply a verb “serve,” but I would now omit the verb, with the rel. cl. only nominal *yās te* “who is/are yours” or “who is/are for you.” The main-clause verb *tūryāma* would have been fronted around this minimal clause.

We come finally to the simile of pāda d, which again has inspired numerous interpr., which again I will leave undiscussed. The particular issues are 1) the precise sense and reference of (*pari*)*hrūt-*, 2) the grammatical identity of *hrūtaḥ* and *pātataḥ*, which could both be either gen.-abl. sg. or acc. pl., 3) whether those last two should be construed separately or together, 4) whether √*pat* can mean ‘fall’ at this period. I answer 4) with a negative, though Ge’s and Scar’s interpr. depend on that sense. I also follow Hoffmann in seeing the simile as depicting a race and racecourse, though I think *-hrūt-* refers to the curves of the racetrack and the curving course of the racehorse. I take both *hrūtaḥ* and *pātataḥ* as acc. pl., but in separate syntagms: *pātataḥ* is the obj. of *tūryāma* in the simile and refers to the competing horses “flying” around the course -- thus corresponding to *ārātīḥ* in the frame -- while *hrūtaḥ* is construed with *parihrūt* as an etymological figure and has no direct correspondent in the frame. For the other occurrence of the root noun *hrūt-*, where it likewise refers to real life curves, see comm. ad IX.61.27.

VI.4.6: *ā ... bhānumádbhīr arkaīḥ ... tatántha* is an elaboration of VI.6.6 (next hymn) *ā bhānúnā ... tatantha*. In our passage *tatántha* is accented because it follow pāda-initial, extra-sentential voc. *ágne*.

In c *nayat* ‘leads’ would seem to need an obj.; with Re I supply “us.” Ge leaves it object-less.

There is no agreement about where to construe the instr. *śocīśā*. Re takes it with *aktāḥ* (“oint de flamme(s)”), while Ge’s interpr. isn’t clear (at least to me). I assume it goes with the VP: Agni’s bright flame illuminates the passage around the darkness(es).

I am rather baffled by the simile in d. The vṛddhi form *auśijā-* is usually used as the patronymic of Kakṣivānt, one of the great poets of maṇḍala I (e.g., I.119.9, 122.4, 5), but morphologically it could also simply be a derivative of *uśij-* ‘(type of) priest’. It also occurs once (I.112.11) with the rare word *vanīj-* ‘merchant’; that passage also contains Kakṣivānt (though not in the same syntagm). Ge claims that our passage is part of “die Sage vom fliegenden Kaufmann,” but the two other passages he cites (one of them I.112.11) certainly do not add up to a saga, and *ḍīyan* ‘flying, soaring’ does not have to belong to the simile as he (and Re) take it. I am inclined to think that the referent of *auśijāḥ* is, as usual, Kakṣivānt. His (other) patronymic, according to the Anukramaṇī, is *dairghatamasa* ‘descendent of Dīrghatamas’, another celebrated poet of Maṇḍala I, whose name means ‘having long darkness’ (=blindness, quite possibly). I suggest that we have here a reference to Kakṣivānt via the vṛddhi deriv. *auśijā-*, and this reference to Kakṣivānt then obliquely evokes his relationship to Dīrghatamas. So, somewhat ironically, a poet connected to “long darkness” leads us around (/helps us avoid) darkness. I would further suggest that *pátman ... ḍīyan* “soaring in flight” might refer to soma exhilaration (as in X.119 the Labasūkta). Cf. I.119.9 *māde sōmasyauśijó huvanyati* “in the exhilaration of soma, (Kakṣivānt), the son of Uśij, cries out (to you),” where Kakṣivānt, identified as *auśijāḥ*, cries out “in the exhilaration of soma.”

If this nomenclatural intertextuality seems too far-fetched, we can take *auśijā-* simply as descended from / connected to (fire-)priests and assume that Agni is being compared to his priest (for, to me, unspecified reasons).

VI.4.7: This vs. has a number of metrical problems or peculiarities. In pāda a the caesura unusually splits the splv. suffix from its base: *mandrá-tamam*; pāda b has an unusual opening (on which see below). Pāda c is, at least by the Pp. analysis, not only a syllable short (hence HvN’s rest at 5), but has a bad cadence for a Triṣṭubh; for possible solutions, see disc. below. Pāda d also has a bad cadence, but a different one and not easy to fix.

Instr. *arkaśokaīḥ* unites the instrumentals *arkaīḥ* of 6a and the *śocīśā* of 6d. I take it as a pun, with *arka-* representing both ‘ray’ and ‘chant’, both of which meanings are found for this stem in nearby passages: in the immediately preceding vs. 6a it means ‘ray’ and refers to the similarity of Agni’s rays to those of the sun; in the next hymn VI.5.5 it appears in a sequence of ritual items, adjacent to *uktaīḥ*, and must refer to priestly chants. In our passage “ray-flames” are attributed to Agni, “chant-flames” to “us.”

In b, as noted above, the first word *vavṛmāhe* is metrically bad: a heavy 2nd syllable would be preferable, as it would in the other 4 occurrences of this 1st pl. pf., as well as in 2nd sg. *vavṛṣé*. Kü (459) plausibly suggests that the original reading of this form was **vuvūrmāhe*, as we would expect for this *seṭ* root, which was redactionally changed, as *aniṭ* forms crept into this root. Note the echo *-māhe māhi*.

The accent on *śróṣi* is somewhat troubling, as it is very unlikely to begin a clause. One could construct such a meaning: “Since we have chosen you ... as a great thing for us, listen, o Agni!” But the most natural way to construe the sequence is ... *naḥ śróṣi*

“listen to us” (cf., e.g., I.133.6, VI.26.1 (...) *śrudhī nah*, etc.), as Old (ZDMG 55.292) also points out -- which in turn requires that immediately preceding *māhi* be part of that clause to host the enclitic *nah*. Old (ZDMG 55.292–93 and Noten) suggests rather that *śróṣi* is still under the domain of *hi*, but this seems unlikely, since it would involve an asyndetic conjoining of a preterital perfect and a *śi*-impv. (/subjunctive). I suggest that the accent was supplied redactionally on the basis of *pārṣi* in the next vs. (8b) and, especially, *ghóṣi* in the next hymn (VI.5.6d), both in the same metrical position and receiving their accents honestly.

śróṣi is also the only attestation of this *śi*-imperative, an isolated formation beside the very well-attested root aorist. In particular, there are no *s*-aor. subjunctive forms of the type that regularly support the *śi*-impv. I do not entirely understand how or why it was formed, but, given the tight formulaic relationships between the hymns in this Agni cycle, I suggest it may have been based on semantically identical and rhyming *ghóṣi* in VI.5.6; as was discussed above, it is possible that the accent of *śróṣi* is owing to the same source. However, MLW reminds me that “*s*-forms of *k’leu* are very wide spread in Indo-European (Lith. *klausyti*, TB. *klyaus* and there might even be an exact match for *śróṣi* in Messapic *klaohi*. Cf. also *srausat*. Nonetheless, I still favor an internal Skt. explanation.

As already noted, pāda c is both metrically deficient and afflicted with a bad cadence. Old (both ZDMG 55.293 and Noten) suggests restoring *devātātā*, as in 1a, also pāda final. Though this would fix both metrical problems and would also make contextual sense, I do not understand how such a corruption could have arisen. I prefer, and have adopted, Ge’s suggestion (n. 7cd) to read *vāyúm* beginning pāda d as *vā āyúm*, with *vā* going with the previous pāda. *devātā* appears several times in a Triṣṭubh cadence followed by a monosyllable (IV.44.2, 58.10, VII.85.3) -- so ... *devātā vā#* would be a fine pāda-end -- and the *vā* can easily conjoin the two instr. *śávasā devātā*. The reanalysis of *vā āyúm* to *vāyúm* can have been based on pāda-initial *vāyúr* in 5b. Agni is called *Āyu* on a number of occasions (see, e.g., I.31.11, X.20.7, and Gr s.v. *āyú*- def. 2). Although Ge’s idea seems eminently sensible to me, it is passed over in silence by Re. An asterisk should be inserted before “*Āyu*” in the publ. tr.

I do not see any way to improve the cadence in d. The splv. *nṛtama-* is not suitable for the cadence of any Rigvedic meter, though it also appears there in VI.33.3.

VI.5 Agni

VI.5.1: I supply ‘our’ with ‘thoughts’ (*matībhiḥ*) in pāda b, though the subject of the overt verb *huvé* is only 1st singular. I assume that the *vah* ‘for you’ is addressed to the poet’s fellow celebrants and therefore there is an implicit 1st pl. It would, however, also be possible to tr. “with my thoughts.”

ínvati is obviously a thematized Vth Class pres. (see Gotō, 1st class, p. 76). What is rather surprising is that the athematic stem is found two vss. later, as *inoṣi* in 3c, as well as in the previous hymn (*inóti* VI.4.3; cf. also the impv. *inuhí* in nearby VI.10.7). It is true that *ínvati* provides a more favorable heavy syllable in 2nd position, but I do not otherwise see the motive for using both stems in this hymn.

Note the etymological connections *yúvānam* ... *yáviṣṭham*, *ádrogha(-vācam)* ... *adhruk*, and (*viśvá-*)*vārāṇi* (*puru*)*vārah*.

VI.5.2: In almost all occurrences in which it is possible to determine, animate forms of *yajñīya*-refer to gods. They may be the referents here as well: the gods may send goods to Agni to be redistributed to his mortal worshippers.

The syntax of *cd* is somewhat problematic, since there is incongruity between the simile and the frame. Ge evades this by taking the simile that begins *c* (*kṣāmeva vísvā bhúvanāni*) with *ab*: “In dir ... bringen die opferwürdigen (Götter) ... Schätze zum Vorschein wie die Erde alle Geschöpfe,” and beginning a new clause with *yásmín*. This is not impossible, but it is unnecessary and, given the hemistich break, undesirable if another interpr. can work. Various ones have been tried (see Old, ZDMG 455.293 and Noten), but, flg. Old, I think it is yet another example of case disharmony in similes, utilizing two possible alternative interpr. of the verb (*sám ...*) *dadhiré*. In the frame this medial verb has a passive sense ‘be held, encompassed’, with *saúbhagāni* as subj. For this construction cf. VI.38.3 *bráhmā ca gíro dadhiré sám asmín* “the sacred formulations and the songs together have been placed (/are encompassed) in him.” But the same verb form can also be transitive, with the object expressing what is encompassed or placed. This is the construction of the simile, with nom. *kṣāma* (or *kṣāmā*? see Old) and acc. *vísvā bhúvanāni*. For such a transitive construction, cf. III.19.4 *bhūrīni hí tvé dadhiré ánīkā ... yájyavo jánāsaḥ* “the peoples eager to sacrifice have established in you [=the fire] your many faces.” In our passage the *object* of the simile thus corresponds to the *subject* of the frame; that both are neut. pl. makes their correspondence easier to process, despite their different grammatical functions.

VI.5.3: As noted above *ad vs. 1*, we have both thematized *ínva*- and *athem. ínó*- in this hymn, with very similar objects: *drávināni* ‘movable goods’ (1c), *vásūni* ‘goods’ (3d). As was also noted above, *ad VI.4.3*, Ge (and others: cf. Gr and Re) construes the *ví* opening pāda *d* with *inoṣi* in *c* and uses this supposed lexeme to argue that *ví ... inóti* in VI.4.3 has positive value. As I argued there, *ví ... inóti* is more likely to mean ‘dispel’ and to take a negatively viewed object. In our passage here I do not think that *ví* belongs with *inoṣi*. Instead I think *ví* forms a phrase with immediately following *ānuṣák*; cf. the same pāda-initial expression I.58.3, 72.7, IV.12.3, as well as #*ví ... ānuṣák*# V.16.2. I assume that the expression arose from passages like I.72.7 *vy ānuṣak ... dhāḥ* “distribute in due order” with *ví √ dhā* (reinforced here by *vidhaté*), and then *ví* and *ānuṣák* became phrasally fused.

VI.5.4–5: These two vss. are contrastively paired: each has a generalizing rel. clause describing the activities of a mortal -- harmful in 4ab, beneficial in 5ab -- while the 2nd hemistichs of each set out the results of such actions. The pairing is further emphasized by the phonological similarities of the oppositional verbs *abhidāsat* ‘will assail’ (4a) and *dádāsat* (5b) ‘will ritually serve’.

VI.5.4: Note the extreme etymological figure that occupies the whole of pāda *d*: *tápā tapiṣṭha tāpasā tāpasvān*. For the last two words, see the parallel structure in 6b.

VI.5.5: I now would be inclined to take *samídhā* as an abstract “with kindling,” rather than as the concrete material “with kindling wood” as in the publ. tr. See disc. *ad VI.1.9, 2.5*.

VI.5.6: The pāda-final *sáhasā sáhasvān* is morphologically entirely parallel to 4d *tāpasā tāpasvān*.

In d *tād* may not be a temporal adverb as in the publ. tr., but a neut. acc. obj. of *juṣasva*, with which ‘speech’ vel sim. should be supplied. So Ge and Re -- e.g., Ge “so freue dich an diesem (Gedicht) des Sängers.” However, since *√juṣ* can take a gen. complement (though more rarely than the acc.), *jaritūḥ* may be construed directly with the verb, as in the publ. tr.

On *ghōṣī*, which I take as an anomalous *-sī* imperative, see comm. ad IV.4.8, which contains the other occurrence of this form. On the possible relationship between *ghōṣī* and *śróṣī* in VI.4.7, see comm. ad loc.

VI.5.7: This vs. is characterized by etymological figures: b *rayīm rayivah*, c *vājam ... vājáyantaḥ*, d *ajarājāram* -- a stylistic tick found also in vss. 1, 4, and 6 -- see comm. ad locc.

VI.6 Agni

VI.6.1: The subject of this vs. is not overtly expressed, but it cannot be Agni, who is the acc. goal. Re cleverly suggests that the subject is indicated by the participle *grṇánt-* ‘singing, singer’ in the last pāda of this hymn. If so, this is an oblique form of ring composition.

Contrary to my usual principles, rather than construing *návyasā* with *yajñéna* in the next pāda (so Ge, Re), I supply a form of ‘speech’. I do so on the grounds that *návyas-*, particularly in the instr., is specialized to the realm of speech. Cf. *návyasā vācasā* (VI.62.5) as well as the famous pāda-final disharmonious formula *návyasā vācaḥ* (II.31.5, VI.48.11, VIII.39.2), along with fem. forms of the comparative with different ‘speech, thought’ words (e.g., nearby VI.8.1 *matír návyasī*).

The hapax *vṛścād-vana-* ‘hewing wood’ shows the poet’s penchant for the type of cmpd. that provides his name, *Bharád-vāja*. Cf. also *ṛdhád-vāra-* in VI.3.2.

VI.6.2: The first hemistich mixes the visual and the audible in a species of synaesthesia, esp. clear in the description of Agni as “brightening thunder,” but note also his “ever-roaring” flames.

The standard tr. construe *purūṇi pṛthūni* with *bhárvan*; e.g., Ge “die vielen, breiten (Flächen) fressend.” But nearby VI.12.5 *anuyāti pṛthvīm* favors taking the acc. as an acc. of extent with the verb *anuyāti*, as in the publ. tr.

Note the phonetic figure in *pāvakāḥ purutāmaḥ purūṇi, pṛthūni*, esp. the last three words, of which the first two also etymologically related.

VI.6.3: Alliteration continues, with *ví ... vísvak* (a), *śuce śúcayaḥ* (b), *návagvā vānā vananti* (cd). The first two are etymological figures; in the third, intricately structured one, *vānā vananti* is not, but mimics one.

Flg. Ge (fld. by Re), I assume that the Navagvas are in an unmarked simile: the flames break and overcome the woods as the Navagvas broke Vala. The gapping of the simile marker *ná* would not be surprising in the *-na*-rich environment of the figure noted

above: *nāvagvā vānā vananti*: we might have expected *divyā *nā nāvagvā*, and haplology would not be surprising.

The identity of the root found in *tuvi-mrakṣā-* is disputed; see EWA s.v. *MARC*, with $\sqrt{mṛc}$ ‘harm’, $\sqrt{mṛj}$ ‘wipe’, and $\sqrt{mṛś}$ ‘touch’ all possibly in play. $\sqrt{mṛc}$ ‘harm’ seems the most likely to me. The Schwebeablaut outcome *-mrakṣ-* is standard when *-kṣ-* ending the root syllable would yield a super-heavy cluster **-rkṣ*. Cf. *drakṣyati* (not **darkṣyati*) to $\sqrt{dṛś}$ (see AiG I.212–13). Any of the roots just listed would follow this pattern.

VI.6.4: In my view (flg. Re), the rel. cl. of the first hemistich hangs off the previous vs. 3 and supplies the subject (*śúcayaḥ* ‘flames’) of *vananti* in 3d. However, Ge takes the rel. prn. *yé* as a stand-in for ‘wenn’, providing a subordinate clause to cd, with its resumptive *ádha*. The conspicuous alliteration of vs. 3, continued here (4a) — *śukrāsaḥ śúcayaḥ śuciṣmaḥ*, also a triple etymological figure — might be a weak arg. in favor of a connection with vs. 3, esp. 3b *śuce śúcayaḥ*.

In b *kṣāṁ* must be read disyllabically.

In the publ. tr. “like” should be enclosed in parens, as there is no overt simile marker in b. The question is why the flames are likened to “unharnessed horses” (*viśitāso áśvāḥ*). Ge and Re think they are grazing, and this interpr. might fit well with *vápanti* ‘shear, shave’ -- a slightly different image of what happens to vegetation when fire moves across the earth: grazing “shears” the grasses like shaving does. However, I tend to think that *viśita-* adds a different semantic dimension: horses out of harness racing about wildly without control.

In d the standard view (e.g., Ge, Re, Macd [*Hymns*, p. 74], Klein [DGRV II.106], Mau [p. 24]), fld. also in the publ. tr., is that the gen. *pṛśneḥ*, lit. ‘speckled, dappled’, refers to the earth. And this seems perfectly reasonable. However, it should be noted that *pṛśni-* is nowhere else unambiguously used of the earth in the RV, except in the metaphorical *dhenúm ... pṛśnim* “dappled cow” in I.160.3. Though Re (comm. ad loc.) suggests that there is such a ref. in IV.5.7, 10, those are desperately obscure passages and nothing can be built upon them. Generally *pṛśni-* names the mother of the Maruts, who seems to have been a dappled cow, and “dappled (cow)” → “earth” is not a difficult step in RVic discourse. Still it should be kept in mind that it’s a step that hasn’t been taken elsewhere.

VI.6.5: The rendering of *goṣu-yúdh-* as ‘cattle-raider’ loses the specificity of the loc. pl. 1st member, but ‘of the one battling for cattle’ seemed excessively heavy.

The hapax *kṣāti-* is built to $\sqrt{kṣā}$ ‘burn’. I have borrowed the felicitous bilingual pun ‘ardor’ from Maurer.

On Gotō’s posited \sqrt{di} ‘destroy’ supposedly found in *dayate* here, see comm. ad III.34.1. There is no need for a separate root, as ‘divides’ → ‘fragments’ is a plausible semantic pathway.

VI.6.6: This vs. has a number of connections with phraseology elsewhere in this Agni cycle: *ā ... bhānumádbhiḥ ... tatántha* (VI.4.6): *ā bhānúnā ... tatantha* (6a); *dhṛṣatā* (3d, 6b); *spṛdho bādhasva* (VI.5.6): *bādhasva ... spṛdhah* (6cd, though with the two forms

belonging to separate clauses, not a VP as in 5.6); *vanuṣyāt* (VI.5.4): *vanuṣyān vanúṣaḥ* (6d).

The referent of the gen. phrase *mahás todásya* ‘great goad’ is not entirely clear -- some take it as some feature of Agni (e.g., Ge), others as the sun (e.g., Mau). Most construe it with *bhānúnā* (as I do), though Re takes it with *pārthivāni jráyāṃsi*. If, as is likely, it goes with *bhānúnā*, this provides a good clue to its identity. The bahuvrīhi *svār-bhānu-* ‘having the radiance of the sun’ is obviously based on a genitival tatpuruṣa **svār-bhānú-* ‘radiance of the sun’, and GEN. *bhānú-* would simply be the analytic version of this cmpd., with the phrase *mahás todásya* substituted for putative gen. **sūrah* or **sūryasya*. VI.4.6 *ā sūryo ná bhānumádbhir arkaīḥ* “like the sun with its radiant rays” provides further support for this interpr. Although it is true that in nearby VI.12.1, 3 the ‘goad’ (*todá-*) appears to be Agni, the qualifier ‘great’ in “*great* goad” here might point to the cosmic body, the sun, of which the earthly fire is a less powerful earthly counterpart.

VI.6.7: The insistent etymological alliteration in this vs. seems to me inartful overkill, though it certainly provides an explosive climax. The forms of \sqrt{cit} in the first hemistich — *citra citrām citáyantam ... citrakṣatra citrátamam* — give way to \sqrt{cand} in a slightly more restrained array, *candrām ... cándra candrábhiḥ*. Since both roots belong to the same semantic sphere and begin with *c*, the difference in effect between the hemistichs is minimal.

It is not clear what should be supplied with the fem. instr. pl. *candrābhiḥ*. The standard tr. use ‘flames’, and I’ve followed suit, but *súci-*, which figured in vss. 3–4, is unfortunately masc. when used as a noun. Re suggests alternatively *stutíbhiḥ* ‘praises’ (fld. by Mau), pointing to the adjacent *gr̥naté* ‘singer’, but it is more natural to take the instr. *candrābhiḥ* with Agni syntactically, rather than construing it with the dat. participle, and further, *candrā-* seems never to be used with verbal products.

VI.7 Agni Vaiśvānara

As noted in the publ. intro., this hymn is heavily seeded with forms of \sqrt{jan} ‘beget, be born’. The epithet *vaiśvānará-* is also found in every vs. (1b, 2c, 3c, 4d, 5a, 6a, 7a), in all cases initial in its pāda.

VI.7.1–2: These two vss. are paired, both ending with *janayanta devāḥ* and sharing an opening pāda with the structure ACC SG + GEN ACC SG + GEN; this NP structure is also found at the end of 1c and 2c (one iteration each), but is upended by GEN + ACC SG *yajñásya ketúm* in 2d. It is perhaps a measure of the sensitivity of the RV to subtle patterns that this syntactic metathesis feels strikingly disruptive. It may well be that the poet generated this disruptive order in order to call attention to this very phrase; see the importance of the word *ketú-* in vss. 5 and 6, with the comm. there. There is an important difference, however: here the “beacon of the sacrifice” must be Agni, whereas in vss. 5–6 it is the sun.

There are only three finite verbs in this two-vs. sequence, all injunctives: 1d *janayanta*, 2b *abhí sám navanta*, 2d *janayanta*. The temporal reference is therefore unspecified. I tr. them as preterites (as do Ge and Re) on the assumption that Agni’s begetting by the gods happened only once in the mythological past. It would be different if priests were the subject.

VI.7.1: Since Agni is often called the mouth of the gods, Ge (and others) assume that the loc. *āsán* in d refers to Agni, and the gods have produced a drinking cup (*pātram*) to put in his mouth. But this requires Ge to treat the three-pāda accusative phrase that opens the hymn and refers to Agni as grammatically untethered, as an anacoluthon with the referent picked up in the loc. in pāda d (see his n. 1d). But, with Re, I see no reason why Agni cannot be conceptualized here as the cup that the gods drink from. Re considers *āsán* simply an attribute limiting the *pātra*-, a “réipient pour la bouche, réipient à boire,” while I take it as referring to the gods’ (collective) mouth.

Note the phonologically matching words *aratīm* and *ātithim* stationed in the same metrical position in pādas a and c.

VI.7.2: On *mahām* as acc. sg. masc. see AiG III.251, EWA s.v. *mahānt*, p. 338.

The paradox of calling fire “a great watering trough” (*āhāvā-*) simply sharpens the slightly discordant image in 1c of Agni as ‘cup’. Although *āhāvā-* is clearly derived from *ā√hu*, a standard lexeme for the oblations that Agni would be receiving, this particular noun is associated with a well in X.101.5 and is therefore associated with more mundane acts of pouring water (which of course should extinguish fire). Agni is a trough because the gods get their “water” there.

VI.7.3–5: The middle of the hymn is characterized by initial (or modified initial) forms of the 2nd sg. prn.: 3a *tvát*, 3b *tvát*, 3c VOC *tvám*, 4a *tvám*, 4c *táva*, 5a VOC *táva*.

VI.7.4: *abhí sám navante* reprises *abhí sám navanta* of 2b and perhaps confirms the preterital interpr. of that injunctive, since the verb in this vs. is marked as pres., though the gods are also subject here. However, how to interpret the tense values in the 2nd hemistich is unclear. Pāda c has an unambiguous impf. *āyan*, which, with its goal of immortality (*amṛtatvám*), would seem to refer to the remote mythological past (though see below). The verb is the last pāda, *ādīdeḥ*, can be either a plupf. (to the older stative pf. *dīdāya*) or an impf. to the new redupl. pres. remodeled from the pf. stem (Kū opts for the impf.; see 228). But whatever its morphological identity, it seems to refer to an event in the immediate past or the immediate neighborhood -- assuming that *pitróḥ* refers to the two kindling sticks -- namely, the regularly repeated kindling of the fire. This interpr. would be supported by 5c with pres. part.: *jāyamānaḥ pitróḥ upásthe* “being born in the lap of your two parents.” In the publ. tr. I assumed that the first hemistich refers to the regular kindling of the fire and the gods’ response, while the 2nd one refers to the Ur-kindling in mythological time. However, I now wonder if we should interpret the abstract *amṛtatvám* in c in light of the voc. *amṛta* in pāda a. In the first hemistich Agni is addressed as “immortal one” when he is being born and the gods cry out to him; indeed the voc. “o immortal one” might be the content of their cry, expressed in the verb *abhí sám navante*. In the second hemistich the gods went to immortality (*amṛtatvám*), that is, to the abstract quality possessed by the one addressed as *amṛta*, and they did so “according to your [=Agni’s] intentions” (*táva krátubhiḥ*), again when he was born. The gods’ journey to *amṛtatvám* may therefore not be one of the distant mythic past (or not only of the distant past), but one they undertake whenever he is kindled. The abstract

principle of immortality may also be found in the gen. *amṛtasya* in the last pāda of the hymn (7d), where Agni is identified as its protector.

Note that the phrase *vísve ... devāḥ*, parcelled out over two pādas, may teasingly invite us to connect the first term, *vísve*, with the dominant epithet in this hymn, *vaiśvānarā-*.

VI.7.5: The disjunction between pf. *dadharṣa* in the main clause of b and impf. *āvindaḥ* in the subord. cl. of d is likewise a bit disturbing. Flg. Kü (266), the publ. tr. renders the perfect presentially as “ventures against,” but I might be tempted to change that now to “has ventured against” (cf. Ge’s “... hat noch keiner angetastet”). The question is what is the relationship between the two clauses. I think that Agni’s *vratās* are those that he established after he discovered (*āvindaḥ*) the phenomenon in d.

This in turn raises the question of what that phenomenon is and, more precisely, to which noun (*ketúm* or *vayúneṣu*) the gen. *áhnām* belongs. Most (Ge, Re, Old) take it with *vayúneṣu*; cf., e.g., Re “quand ... tu eus découvert le signal-lumineux pour les jalonnements des jours.” Old, who should know better, even cites word order as support of this interpr. And certainly *áhnām* does (once) occur with *vayúna-*: II.19.3 *aktúnāhnāṇ vayúnāni sādhat* “He perfected the patterns of the days through the night.” But far more often *áhnām* limits *ketú-*, several times in a Vaiśvānara context: VII.5.5 *vaiśvānarām uṣāsām ketúm áhnām* “V., the beacon of the dawns and of the days”; X.88.12 *vaiśvānarām ketúm áhnām akṛnvān* “they made V. the beacon of the days.” Cf. also III.34.4 *ketúm áhnām*, X.85.19 *áhnām ketúr uṣāsām*, and VI.39.3 *imām ketúm adadhur nū cid áhnām*, this last with separation between the noun and its gen. as in our passage. In my interpr. of this pāda the *vayúna-* are the ritual patterns, the regularly repeated sequence of events in the ritual, including the kindling of the fire. The “beacon of the days” is the sun, which rises at that kindling. (clarified in the next vs.), in contrast to the “beacon of the sacrifice” in 2d, which is Agni. Note that Agni, addressed as Vaiśvānara, is here distinct from the sun, which he finds. (See further ad vs. 6.). Finding the beacon of the days in the (ritual) patterns means recognizing and replicating the regular rising of the sun that coincides with the kindling of the ritual fire. As usual in Rigvedic discourse the correct performance of ritual governs the rhythms of the natural world.

To return to the question of the relationship between the two hemistichs, I suggest that the “great *vratās*” of Agni that no one has/does venture against are the ritual patterns, esp. the dawn kindling, which in turn control the repeated return of the “beacon of the days.”

VI.7.6: This vs. continues, and clarifies, the theme of the 2nd hemistich of vs. 5. Although Agni as Vaiśvānara is often identified with the sun and although several of the passages cited immediately above, ad 5d, identify Vaiśvānara with the “beacon of the days,” here Agni Vaiśvānara is separate from the sun (as indeed he was in 5cd), which is his eye (*vaiśvānarāsya ... cákṣasā*) and which is further characterized as “the beacon of the immortal one” (*amṛtasya ketúnā*), taking up the *ketú-* of 5d, which Agni found. The sun “measures out the backs of heaven” by crossing the sky on his daily passage.

In c the referent of *tāsya* in the phrase *tāsya ... mūrdhāni* “on his head / on the head of this one” is not specified and could either be the sun, as expressed by the instr. of ab, or Agni Vaiśvānara. It is surely the latter, however: *mūrdhāni* echoes the first word of

the hymn, *mūrdhānam*, which refers to Agni himself as the “head of heaven.” And the *viśvā bhūvanāni* “all creatures” who take their place on this head are a twist on Agni’s epithet *vaiśvānarā-* ‘belonging to all men’, which dominates this hymn.

On the formation of *visrúh-*, which occurs only here and in V.44.3, see comm. ad V.44.3, where I connect it (as a number of others do) to *√ru(d)h* ‘grow’. In our passage this etymological connection is actualized in the figure *ruruhuḥ ... visrúhaḥ*, and the vegetative image is further anchored by the simile *vayā iva* “like twigs.” With Re (and Kellens, *Noms. rac.*, 82–83), I think the ‘outgrowths’ are Agni’s flames, but unlike those two I would not *translate visrúhaḥ* as ‘flames’: it’s a metaphor.

VI.7.7: In this vs. the subject of the cosmogonic *ví√mā* ‘measure out’ is Agni Vaiśvānara, not the sun, as in the immediately preceding vs., and the more usual identification of Agni Vaiśvānara with the sun seems to have reasserted itself. See VI.8.2.

In a *sukrátuḥ* reprises *krátubhiḥ* in 4c, and it might have been better to render the *krātu-* in the same way -- either as “by your resolutions” ... “the very resolute one” or “by your intentions” ... “he of good intention.”

VI.8 Agni Vaiśvānara

This hymn, like the last, is dedicated to Agni Vaiśvānara and has a form of this epithet in every vs. but 5, always pāda-initial as in VI.7. However, the hymn is somewhat different from VI.7. In that hymn Agni Vaiśvānara was distinct from and dominated the sun (see esp. VI.7.5–6) until the last vs., while in this hymn the usual identification of Agni Vaiśvānara and the sun is in evidence. See esp. vs. 2.

As noted in the publ. intro., the hymn is also heavy with initial *v*’s, esp. in the earlier parts of the hymn, which index the epithet. Note esp. the three hemistichs that begin with the preverb *ví* (2c, 3a, 3c), as well as 1ab ... *vīṣṇaḥ ... vocaṃ vidáthā ...*, 2ab ... *vyòmani, vratāni ... vratapā ...*, 3cd ... *avartayad, vaiśvānaró viśvam ... vīṣṇyam*.

VI.8.1: On *prkṣā-* see comm. ad II.34.3.

VI.8.2: Here Agni Vaiśvānara is “being born in highest distant heaven” (*jāyamaṇaḥ paramé vyòmani*), presumably in the form of the sun, in contrast to VI.7.5 with the same participle but a different location: *jāyamānaḥ pitrór upásthe* “being born in the lap of your parents,” usually a kenning for the ritual kindling sticks, so that VI.7.5 refers to the kindling of the ritual fire. In that vs. Agni found the sun (“beacon of the days”), which was therefore distinct from him, and in the next vs. (VI.7.6) the backs of heaven were measured out by the sun as an organ -- the eye -- of Agni Vaiśvānara (*vaiśvānarasya vímitāni cákṣasā, sánūni diváh*). Only in the last vs. of that hymn, VI.7.7, did Agni Vaiśvānara himself measure out the cosmos and take on his usual solar aspect. The two pādas VI.7.7a (*ví yó rájāṃsy ámimīta sukrátuḥ*) and our VI.8.2c (*vy àntarīkṣam amimīta sukrátuḥ*) are almost identical, but the former represents the resolution of the disjunction between Agni Vaiśvānara and the sun, while no such disjunction is found in our hymn.

VI.8.3: The cosmogonic activities of Agni Vaiśvānara continue here, but I would argue that they are instances of the *daily* creation of the cosmos by the light of the sun. The propping apart of the two world halves refers to the visual separation of earth and sky at

the horizon at first light, and the rolling out of the two skins is a similar image, of the full extent of earth and sky revealed to sight at that time.

It is not entirely clear why Agni Vaiśvānara is called an “unerring ally” (*mitró ábhutaḥ*; see the identical phrase in I.94.13 and similar I.77.3 *mitró ná bhūd ádbhutasya rathīḥ*). Agni is of course regularly identified as an ally (*mitrá-*) and is compared to Mitra because of his role as go-between between gods and men; in this particular case the sun’s role as the most visible of the gods and the heavenly being most clearly engaged with human life may have elicited this description. The covert presence of Mitra here may also play off the covert presence of Varuṇa in 2b, in the phrase *vratāni ... vratapā arakṣata* “as protector of *vratas*, he guarded the *vratas*: *vratās* are Varuṇa’s special province, although curiously Varuṇa is never called *vratapā-* in the RV.

The interpr. of pāda b is disputed because of disagreement about the sense and formation of *antarvāvat* (also found in I.40.7). Ge tr. the pāda as “er zerteilte die dazwischenliegende Finsternis durch das Licht” (almost identically also Oberlies Relig. I.191), presumably with the ‘between’ sense of *antár* nominalized with the complex suffix *-vā-vant-*. Re denies that the formation has a complex (or duplicate) suffix but rather considers it an imitation of *arvāvāt* ‘nearby’, despite the difference in accent, and renders the word (in his note) as “un domaine intérieur (= invisible).” His tr. of the pāda is “il a fait que les ténèbres (devinssent) par la lumière un domaine-cachée.” So, he takes *antár* in the meaning ‘within’, but the further morphological analysis is unclear. Old (ad I.40.7) also sees the ‘within’ sense of *antár* here, but with a more plausible interpr. of the suffixal material — with the whole meaning ‘inhaltsvoll’ (that is, ‘having [something] within’). He also considers it is entirely or roughly synonymous with *antárvant-*. (Both of these views are also found in AIG II.2.893, and the whole is laid out with admirable clarity by Schmidt [B+I 102]. Both AIG and Schmidt explain *-vā-vant-* as pleonastic.) The second observation seems to me the most important clue: *antárvant-* is in fact only attested in the fem. *antárvatī-* (III.55.5, X.91.6) in the meaning ‘pregnant’. In both I.40.7 and our passage here the ‘pregnant’ sense is used metaphorically of non-females (*kṣáya-* ‘dwelling place’ in the former, *támas-* ‘darkness’ in the latter). (So also Schmidt; AIG doesn’t go quite this far.) One could speculate that the pleonastic suffix is used because a non-fem. *antárvant-* would seem distinctly odd, and the addition of a second suffix attenuated this oddness. In our case, the *antarvāvat* can directly modify neut. *támaḥ*; in I.40.7, since *kṣáya-* is masc., the connection is less direct. See comm. ad loc. In our passage this interpr. produces a striking image, of the darkness of night swelling with light as day breaks.

VI.8.4: I have no idea what the buffaloes (*mahiṣāḥ*) are doing here or why they do what they do in the lap of the waters. Ge (n. 4a) suggests that the buffaloes are the gods or the old singers, but this does not actually explain anything (including why they would be called buffaloes). Ge notes the very similar passage X.45.3 *ṛtīye tvā rájasī tasthivāmsam, apām upásthe mahiṣā avardhan* “The buffalos strengthened you, who were standing in the third realm, in the lap of the waters.” That passage occurs in a hymn concerned with Agni’s triple birth, one of which is in the waters, but the identity of the buffaloes remains unclear. In X.8.1 it is Agni himself who as buffalo grows strong in the same place: *apām upásthe mahiṣó vavardha* “the buffalo has grown strong in the lap of the waters.”

The second pāda shows the connection between Agni Vaiśvānara and royal power and the second hemistich the connection between that thematic complex and Vivasvant, as Proferes convincingly argues (*Sovereignty*, pp. 28–29 and passim). The passage cited just above, X.45.3, may also concern Agni Vaiśvānara.

Note the phonological intertwining of #*vísō ... / ... vivásvato* # *vaiśvānaró* ...

VI.8.5: In the first hemistich the distribution of the accusatives is at issue: *vidathyām ... rayīm yaśásam ... návyasīm*. The first, *vidathyām*, must be either masc. or neut.; *yaśásam* is ambiguous between masc. and fem. (though far more often masc. than fem.); *návyasīm* is clearly fem. The sole noun, *rayīm*, is generally held to be normally masc., but occasionally fem. Although I think this statement is true, I also think that the number of supposedly fem. occurrences can be considerably reduced, to the point that apparently fem. examples should be viewed as aberrancies, not as normal if rare usages. In this particular case Old (ZDMG 55.296 [=KISch 755], not restated in Noten) and Ge decide that *rayīm* must be fem. here, as evidenced by *návyasīm*, so that another noun must be supplied for *vidathyām* to modify. Old supplies *agnīm* and takes that phrase as an obj. to the part. *gr̥ṇádbhyaḥ* (without tr.), while Ge supplies *vīrām* (which does indeed occur with *vidathyām* in I.91.20 and VII.36.8) as an obj. parallel to *rayīm*: “... einen in Weisheit tüchtigen (Mann) ... und Ansehen bringenden neuen Reichtum.” Re allows everything to modify *rayīm*: “une richesse (émanant) des participations-rituelles, (richesse) honorable, plus nouvelle,” with his n. on the gender mixture seemingly meant to cast obscurity rather than illumination. In my opinion, *rayīm* is masc. here, modified by *vidathyām* and *yaśásam* (so also Thieme, Unters. 48, who simply elides *návyasīm*), and *návyasīm* belong to a separate NP, for which I supply *matí-* ‘thought’, which appears in the phrase *matír návyasī* in the first vs. of the hymn, 1c. Note that vs. 1 also contains a form of *vidátha-* ‘ceremony, rite of distribution’, to which our *vidathyā-* must belong (pace Ge, who seems to derive it from √*vid* ‘know’). In vs. 1 the poet proclaims the *vidáthā* of Agni and announces that a “newer thought” is being prepared for him. In this vs. he asks Agni to keep providing both wealth for the *vidátha-* and a “newer (thought).” Although Agni does not himself compose the poem, it is a commonplace of RVic discourse that the gods provide the inspiration for the poets’ compositions.

In the 2nd hemistich Ge and Re take *téjasā* with the simile (“mit dem Schärfe (der Axt)” and “avec l’aigu (de la hache)” respectively), while I attribute the sharpness only to Agni in the frame. Certainly their interpr. fits the word order well (*vaníṇaṃ ná téjasā*), though it doesn’t necessarily require *téjasā* to be part of the simile. On the other hand, it does require *pavyéva* at the beginning of the hemistich to be dissociated from the later simile or at least considerably sidelined. In the end, I would go for a compromise position, that *téjasā* should be read with both simile and frame: “as if with a metal wheel rim, hew down the curser with your sharpness like a tree with the sharpness (of an axe vel sim.).”

I have not separately rendered *nīcā* in the phrase *nīcā ní vṛśca*, which seems simply to reinforce the *ní*.

VI.8.6: Both Ge and Re take *ajāram* with *suvíryam* (e.g., “die unbeugsame Herrschaft, das nicht verwelkende Heldentum”), while I take it with *kṣátram*. The Ge/Re interpr. is perfectly possible, and there are no grammatical or syntactic features to allow a clear

decision. My interpr. is based on the rhetorical arg. that the two privative adjectives (*ánāmi* and *ajāram*) belong together, but I can also see that rhetoric might also favor parallel phrases: PRIV-ADJ. X, PRIV-ADJ. Y. My other, quite faint, consideration was that the adj. *ajāra-* was used of the king (=Agni) in the previous vs. (*rājan ... ajara*) and would transfer easily from the king to his dominion (*kṣatrā-*).

VI.8.7: On Ge's proposed emendation of *iṣte* to *iṣṭébhiḥ* see comm. ad I.143.8, which has the same form in a lexically and rhetorically similar passage (containing, inter alia, *pāhi* and *ádabhebhiḥ*). Old (ZDMG 55.296 = KISch. 755) is adamantly opposed to Ge's suggestion, and there seems no good reason to emend the passage and no obvious trigger for such a corruption.

It is difficult not to interpr. the *-iṣ*-aor. injunc. *prá ... tārīḥ* as an impv., given its overt coordination with *rākṣā* in pāda c.

VI.9 Agni Vaiśvānara

On the structure of this complex hymn and for a verse-by-verse synopsis, see publ. intro. It has been much translated and discussed -- in addition to the usual treatments, see, e.g., Thieme, *Gedichte*; Renou, *Hymnes spéculatifs*; Wendy Doniger, *Rig Veda*. Oldenberg (ZDMG 55.296–97) gives a detailed (for him) account of the contents and pronounces it an *ākhyāna*, an opinion repeated in the *Noten*, though he doesn't spell out who the speakers might be verse by verse. Gonda (*Vedic Literature*, 99) calls it "a profound glorification of Agni as the great immortal conceived as the inner light and placed among the mortals to guide them in the mysteries and intricacies of the ritual." As discussed in the publ. intro., the hymn concerns the development of the poet's craft and resembles IV.5, in which the poet also receives his poetic inspiration from Agni Vaiśvānara. I do not see the poetic contest (brahmodya) that others (starting with Geldner [*Ved. Stud.* II.181–82], fld by Re, Doniger, George Thompson ["Brahmodya"]) take as the mise en scène of the hymn. See Old's explicit rejection of the brahmodya interpr. (ZDMG 55.297), with which I concur. The brahmodya interpr. primarily rests on a brief phrase in vs. 2, on which see below.

VI.9.1: The first hemistich has two nom./acc. dual expressions (*áhaś ca kṛṣṇám áhar árunam ca* and *rájasī*) and a dual verb *ví vartete*. The question is which of the two dual expressions is the subject of this verb, or is the subject both or neither? The standard interpr. (Old, Ge, Re, Doniger) is that both expressions serve as subject and that *rájasī*, usually an expression referring to space, here qualifies the two day(-halves), light and dark. However, flg. Thieme, I instead take *rájasī* as an accusative expressing extent of space, preferring to keep the temporal and spatial concepts separate. I do have to admit that an image of rolling out the dual spaces finds support in the preceding hymn, VI.8.3c *ví cārmaṇīva dhiśāṇe avartayat* "He rolled out the two Holy Places [=world-halves] like skins," and even more so in VII.80.1 *vivartáyantīm rájasī sámante* "(Dawn,) unrolling the two adjoining realms." The object of the transitive *ví vartáya-* in those passages should be the subject of the intrans. simplex verb. Nonetheless, see nearby VI.7.7 *ví yó rájāmsi ámimīta* "who measured out the dusky realms," with *rájas-* as object, and the frequent use of *ví* to refer to movement through space. As I see it, the image here is of the day and night proceeding through the cosmos, spreading first light and then darkness. Since *ví* can

also be used for alternating movement, that notion is also probably present: “The black day and the silvery day roll out *alternately* through the two dusky realms,” referring to the regular alternation of night and day.

Re points out two minor anomalies in word placement: *ca* in pāda a, *ná* in pāda c. The first is not immediately second in its constituent (expect **áhaś cārjunam*, like the first constituent *áhāś ca kṛṣṇám*, not *áhar árjunam ca*). Klein (DGRV I.133) suggests that the construction is a conflation of the expected sequence (given as starred just above) and one with only an adjective in the second constituent (*kṛṣṇám cáhar árjunam ca*, as he constructs it). This is possible but seems somewhat over-complex. It’s worth noting that a properly placed *ca* would be damaging to the meter, whether it was read undistracted (*cārjunam*), the more common option for *ca* + V, or distracted (*ca árjunam*). I had thought that another argument for the unusual placement might be that *ca* + V is generally avoided, but a quick glance at Lubotsky turns up about 70 instances of *ca* + V (out of 1094 total instances of *ca*). I doubt that this represents a statistically significant underrepresentation, although I ran no tests.

As for *ná*, it ordinarily is also positioned after the first element in the simile, but it is highly unlikely (that is, quite impossible) that Agni is being compared to a king *being born*, with the simile comprising *jāyamāno ná rājā*, but rather Agni, even as he is being kindled, is compared to the victorious (adult) king, with the simile just *ná rājā*. Such “wrong” positioning is not unprecedented — other examples have been noted in the comm. — and, as Re points out, it is “masked to the eyes” by *jāyamānaḥ*, which matches *rājā* in number, gender, and case.

VI.9.1–2: Note the echo of the last word of vs. 1, *tāmāṃsi*, in the last word of the 1st hemistich of b, ’*tamānāḥ*. The latter form is the pres. part. to the 1st class pres. of √*at* ‘wander’, with aphoresis of the initial vowel after *samaré*. This abhinihita sandhi, relatively rare in the RV, is metrically guaranteed, and it may have been applied in order to bring the participle more into phonological line with *tāmāṃsi*.

VI.9.2: The 1st person speaker, the poet in training, takes over here, with a statement of his ignorance about his own metier. He expresses this ignorance in the metaphor of weaving, a well-known trope for poetic composition that reaches back into Indo-European antiquity.

The main support for the brahmodya interpr. is the loc. *samaré*, which is almost universally construed with (*á*)*tamānāḥ* in the sense “entering the contest” (vel sim.: Ge: “wenn sie in den Wettstreit eintreten,” Re: “quand ils marchent dans l’arène”). But this bends the sense of both words. The other occurrence of the medial participle *átamāna-* (II.38.3) does not signal the type of purposeful motion implied by those translations; there are no other middle forms in the RV, only a single active (I.30.4), whose goal-oriented motion can be accounted for by both the voice and the presence of a preverb. Assuming that √*at* is continued by younger √*aṭ* (see EWA, s.v. *AT*), the usual gloss of the root, ‘wander’, is probably accurate. As for *samará-*, it is obviously formed of the same elements (*sám* √*ṛ* lit. ‘come/move together’) as *samāraṇa-*, which does usually mean ‘collision, conflict’ (cf. also the hapax denom. *samaryátī*), and it has a derivative *samaryá-* that generally refers to the same. But *samará-* itself is found only twice elsewhere, both times in the meaning ‘gathering, confluence’ with a genitive expressing

goods or spoils (VI.47.6 *samaré vásūnām*, X.139.3 *samaré dhānānām*), a benign assemblage rather than a hostile clashing together. Thus, “entering the contest” is at best a weakly supported interpr. of *samaré* ‘*tamānāḥ*’; we are free to interpret that phrase differently and, with the supposed rival poet-competitors removed from the passage, to concentrate on the real competition -- that between the poet and his father, as set out in the second hemistich of this vs.

However, let us first consider the rest of the first half-verse. The poet expresses his ignorance of three things: *tántum ... ótum ... yám váyanti*. Most tr. try to make *tántum* and *ótum* grammatically parallel, either by making them both nouns (e.g., Re “Je ne connais point la lisse ni la trame ...”) or both infinitives (e.g., Thieme “Nicht verstehe ich [die Fäden des Aufzugs] zu spannen, nicht [die Fäden des Einschlags] zu weben.”). This is understandable, since the two terms are identically formed, with full-grade accented root and *-tu-* suffix. However, this morphological identity conceals a difference in usage. *tántu-* behaves like a straight noun: it has nominative forms; it occurs in the plural; it has adjectives modifying it (e.g., IX.83.2 *śócantaḥ ... tántavaḥ*, as well as *tatá* ‘stretched’ several times) and genitives dependent on it (e.g., IX.73.9 *rtásya tántuḥ*). By contrast, outside of this hymn *ótu-* is found only in the clear dative infinitives *ótave* (X.130.2) and *ótavaí* (I.164.5, where in fact acc. pl. *tántūn* is construed with it). I therefore think that *tántum* and *ótum* in this passage are non-parallel, just as the third source of ignorance, expressed in a rel. cl., is not parallel to either of the others. In my view, having three non-parallel objects to the verb *víjānāmi* makes the bewilderment stronger: it’s not just three different things the poet doesn’t understand, but three categories of things -- which categories of things are expressed by different grammatical categories: a noun, an infinitive, a relative clause (without antecedent). “I do not understand the thread (noun), nor (how) “to weave” (infinitive), nor “what they weave” (rel. cl.). Although *-tum* infinitives are quite rare in the RV (5 stems, acdg. to Macdonell VG §586b, Re GLV §371), I suggest that *ótum* was formed and used here, rather than the already existing dat. inf., to provide this grammatical contrast with apparently identical *tántum*.

Since, contra the standard tr., I do not believe that the subject of the verb *váyanti* refers to rival poets, I must propose a different subject. Here the alternative possibilities for *átamāna-* and *samará-*, as discussed above, provide the clues, along with a rudimentary understanding (which is all I have) of the weaving process. With the warp threads (*tántu-*) stretched lengthwise on the loom, “wandering” is a pleasingly apt description of the way the weft threads go alternately under and over the warp threads proceeding horizontally, and this mingling of warp and weft could easily be characterized as “a meeting/gathering.” My only uncertainty is the precise identity of the subjects who do the weaving (*váyanti*). Are they the weft threads themselves as they wander over and under? Are they the human weavers, or their fingers, manipulating the weft threads? Or some technological substitute like shuttles. As MLW reminds me, that Vedic India knew such technology is clear from X.130, a cosmogonic hymn whose operative metaphor is weaving and that contains a word plausibly taken to be ‘shuttle’ (*tásara-* in vs. 2).

Of course, since the weaving in this verse is metaphorical for poetic composition, ultimately the subjects of *váyanti* must underlyingly be poets — those who do know how and what to “weave.” But my point here is that the imagery of weaving is carried further than the standard brahmodya interpretation allows: the wandering and the coming together refer to the weaving process, not to a putative poetic competition. Moreover,

with the contest interpr. banished, the underlying poets need not be guys physically present in the next room, as it were, polishing their verses; they can be any poets in the tradition. Which brings us to the father.

The second hemistich contains two sets of polarized terms: *putrá-* / *pitár-* ‘son’ / ‘father’ and *pará-* / *ávāra-* ‘above’ / ‘below’. (That *pará-* and *ávāra-* make up a polarized pair is clear from numerous passages in which they are contrasted [e.g., I.164.17, X.88.17].) The case assignment in the text, nominative for the first of each pair, instrumental for the second, makes it clear that it is the son who is above, the father below, although this is the counterintuitive pairing. As noted in the publ. intro., despite his professed ignorance of poetic craft, the young poet feels that he must not only equal but surpass his father, to further the poetic lineage. That *pará-* can mean not only ‘higher’ but also ‘further’, while *ávāra-* means both ‘below’ and ‘nearer’, allows the sense of “furthering” the line also to be read in the passage. The father is close by, both to the poet and the present moment, but the poet himself must go farther, in the future, beyond the model of his father, to speak “what is to be said” (*vāktvāni*); it is perhaps ironic that the only other occurrence of *vāktva-* in the RV outside this hymn is as a genitive pl. dependent on ‘father’: III.26.9 *pitāraṃ vāktvānām* “the father of what is to be said,” referring to Agni. It is a nice touch in our vs. that because ‘father’ is in the instr., it better fits the phonological template of ‘son’ than the direct cases would: *putrá ... pitrá*.

VI.9.3: This vs. is responsive to vs. 2, repeating pāda a almost verbatim, while transposing it into the 3rd ps. from the 1st and into the positive from the negative. The 2nd pāda abbreviates the 2nd hemistich of vs. 2, pulling out the all-important object and verb (*vāktvāni ... vadāti*) that had been scattered across two pādas in vs. 2. The 2nd hemistich introduces new material — identifying the person who does know what the poet says he doesn’t yet — while replacing the *pará-* / *ávāra-* pair with the almost identical *pāra-* / *avāḥ* ‘below’ [adv.].

The first half-verse with its near identical repetition is straightforward, but, with its repetition of “just he ... he ... he” (*sá íd ... sá ... sá*) as the subj. of ‘knows’ and ‘will speak’, it promises both a resolution to the poet’s anxiety of ignorance in 2ab and an answer to the question “whose son?” (*kásya putráḥ*) in 2cd.

But though the identity of the “he” of 3ab is surely revealed by the relative cl. in the 2nd hemistich, beginning “who ...” (*yáḥ*, 3c), the referent is far from clear. There are both an apparent and apparently obvious answer and, in my opinion anyway, a covert but enlightening answer that depends on tricky manipulation of the words as given -- which is, after all, the point of the hymn, to learn the ins and outs of verbal weaving. The standard tr. take Agni as the subject of the whole vs.; he is the one who know the thread and the weaving and can say the things to be said. There is a good, obvious piece of evidence that this interpr. is correct: the subject of the relative clause in c appears to be identified as *amítasya gopāḥ* “the herdsman of the immortal.” This epithet was used of Agni only two hymns previously (VI.7.7); it *seems* to clinch the identification. But note what precedes it: *yá īm cíketat* “who will perceive him/it.” Ge (fld. by Doniger) takes *īm* as referring to the thread, while Re simply ignores it. But Thieme takes *amítasya gopāḥ* as the content of the act of perception, as a quotation: “der ihn (Gott Feuer) erkennt: ‘[Er ist] der Hüter des Lebens,’” with *īm* the obj. of *cíketat* anticipating the revelation of Agni’s role and power in the quote. I find Thieme’s interpr. very persuasive. The one

who knows all this is not Agni, but the poet who rightly perceives Agni, who possesses the esoteric knowledge acquired by contemplating the ritual fire and receiving its vision.

Thieme then takes pāda d as referring to the poet-subject of c, but I think we can go one better: d is both a description of the poet, as Thieme takes it, *and* a continuation of the right perception of Agni that the poet received, the second part of the quoted revelation “he is the herdman of the immortal.” In this latter interpr., Agni “moves about below” (*avás cáran*) as the ritual fire of mortals, but “sees above the other one” (*paró anyéna páśyan*), because he (in the form of smoke) goes to heaven bringing the oblations to the gods. By my rules of placement for *anyá-* (1997, Fs. Beekes), it should be definite here (“the other,” not “another,” as in most interpr.). Here “the other” is quite possibly the sun, which is Agni’s allo-form but also presumably somewhat lower in heaven than the smoke carrying the oblations. In the alternative application of this pāda, to the poet, I differ in some crucial ways from Thieme (whose interpr. I will not present further here). The poet also “moves about below” not only as a mortal on the earth, but also as a son, who in one sense is “below” his father in the lineage. But he “sees above the other,” who is the father whose skills he is trying to best. Though in this pāda both *aváh* and *pára-* refer to the son, whereas in 2cd *pára-* referred to the son and *ávare-* to the father, here the ultimate superiority of the son is triumphantly announced, whereas in 2cd this outcome was in question. The cleverness and intricacy of this 2nd hemistich, esp. immediately following the near verbatim repetition found in the first, is a clear demonstration that the young poet has come into his skills and his poetic heritage.

VI.9.4: As argued in the publ. intro., this vs. is the omphalos of a well-structured omphalos hymn, and it contains the “message” of the hymn: the revelatory vision of Agni immediately before the eyes of the poet. This immediacy is conveyed by the near-deictic pronoun that begins the first three pādas — *ayám* (a), *idám* (b), *ayám* (c) — and also ends the first pāda (*imám*). The immediacy is also conveyed by the abrupt command “look at him” (*páśyatemám*) at the end of the 1st pāda; since the impv. is in the 2nd plural, it cannot be addressed to the poet alone. Instead I suggest that it is the poet speaking, urging his priestly colleagues to behold the revelation that has just come to him. As noted also in the publ. intro., the name Agni does not occur in this verse. In fact, in the whole hymn *agní-* is found only in the first and last vss. (1d and 7b), another reinforcement of the omphalos structure. But every phrase in this vs. is an unmistakable description of Agni, and each could be matched by many similar phrases in Agni hymns. Unlike many omphalos vss., this one is not enigmatic and riddling (save for the omission of the name), but straightforward and obvious, one might say *blazingly* transparent. In this way it captures the poet’s sudden burst of enlightenment, in which he truly *sees* for the first time what is (and has always been) in front of him. As such it can be characterized as an epiphany in the technical sense: although the ritual fire has been there all along, it is only now that the poet sees that the fire is really the god. This divine revelation is underscored by the two occurrences of “immortal” (*jyótir amṛtam* b, *ámartyah* d), taking up the poet’s initial true perception in 3c, where he saw that Agni was “the herdsman of the immortal” (*amṛtasya gopāḥ*).

dhruvá in *dhruvá ā* is ambiguous. The Pp. takes it as nom. *dhruváh*, but modern interpr. differ: Old (ZDMG 55.297 and Noten, with Gr [transl.], Hillebrandt, Pischel) and Thieme opt rather for the loc. *dhruvé*, while Gr (Wö), Ge, and Re follow the Pp. — as do

I: *dhruvām* modifying Agni as light (*vyōtīḥ*) in the next vs. (5a) seems decisive. The constructions are quite parallel: the “steadfast light” of 5a was also “set down” (*nīhitam*), just as “steadfast (Agni)” was “set down” (*nīṣattāḥ*) in 4c. A loc. interpr. is not out of the question, however.

VI.9.5–7: The last three vss. of this hymn are dominated by play on the syllable *vī*, which is also evident, though recessive, in the first part of the hymn. Starting with 5c every hemistich begins with *vī*: 5c *vīśve*, 6a *vī*, 6c *vī*, 7a *vīśve*; note also *vī* in the middle of 5d and 6a and beginning 6b. This sequence culminates in 7c *vaiśvānaraḥ*, whose first syllable is phonologically a vṛddhi form of *vī* and whose first member *vaiśva-* is morphologically a vṛddhi derivative of *vīśva-*. That the two forms of *vīśve* in 5c and 7a are in the syntagm *vīśve devāḥ* “all the gods” and the 2nd member of *vaiśvānara-* is contrastively *-nara-* ‘man’ makes the pattern all the more pleasing. And of course it is Agni *Vaiśvānara* who is the source of the poet’s revelation and therefore the focus of the hymn. The stationing of *vaiśvānaraḥ* at the beginning of the last hemistich of the hymn also forms a ring with the same form at the beginning of the second hemistich of the 1st vs. and reinforces the omphalos structure.

VI.9.5–6: The transference of the properties and powers of Agni to our poet is explicit in these two vss. In 5a Agni is light set down or deposited (*vyōtir nīhitam*); in 5b he is “swiftest mind” (*māno jāviṣṭham*). In 6b the poet comments on “this light that has been deposited in (my) heart” (*idām vyōtir hṛdaya āhitam yāt*; note the near-deictic *idām* again), and in 6c “my mind goes widely” (*vī me mānaś carati*).

The two vss. are also contrastive. In 5 *all* the gods sharing the *same* mind and the *same* perception (*sāmanasaḥ sāketāḥ*) converge on Agni as the *single* focus of their intention or resolve (*ēkaṁ krātum abhī vī yanti sādhu*), whereas in 6 the poet vividly describes the dis-integration of his senses, emphasized by the repetition of *vī* ‘widely, apart). But rather than expressing a worrisome loss of physical and mental control, the vs. seems rather to dramatize the exciting expansion of his sensory horizons, the limitless potentials for thought and speech that he now experiences. His ears flying apart (*vī me kārṇā patayataḥ*), his mind moving widely (*vī me mānaś carati*) are anticipated by Agni’s mind “swiftest among those flying” (*jāviṣṭham patāyatsu*), and the insistent *vī* in this vs. is given a positive spin by the pattern of *vī*-s leading to *vaiśvānara-*, as discussed above.

In the omphalos structure this vs. is twinned with vs. 2, where the poet worried about his lack of knowledge and skill; here his mind and body can literally not contain the possibilities. One index to the change in his mental attitude may be shown by the difference in mood between the tentative subjunctive *vadāti* in 2d and the purposeful future *vakṣyāmi* in 6d. Both are in questions, but the first wonders “whose son *will (be able) to speak ...?*” while the latter seems only to question which of the many possibilities he should begin with: “what *shall I say?*” There are only two finite forms of the future to √ *vac* in the RV (plus one participial form), so the choice of this form must be marked here. The other is *pravakṣyāmaḥ* in I.162.1, announcing the recital of the heroic deeds (*vīryāṇi*) of the horse to be sacrificed and therefore functioning exactly like the more common, likewise annunciatory *prā vocam* (e.g., in the famous opening of the Indra-Vṛtra hymn I.32.1 *īndrasya nū vīryāṇi prā vocam*). The correspondent of this future is found rather often in Old Avestan, where 1st sg. (*fra*) *vaxšiiā* regularly performs the same

function of proclamation, as in Y 30.1, 45.1 — perhaps indicating a common IIR. employment of this future as an introducer of formal praise. The use of this form here suggests that our speaker is foreseeing his role as official encomiast and poet of record, not simply casting about for something to say. It is possible that *svid* (*kīm svid vakṣyāmi*) contributes to this sense, but I don't have a good sense of the function of this particle in the RV.

VI.9.7: The final vs. of the hymn forms the outer frame of the omphalos structure with vs. 1. We have already noted the resposion of hemistich-initial *vaiśvānarāḥ* in 1c and 7c and the only two occurrences of the stem *agní-* in 1d and 7b. Another important verbal repetition is *tāmas-*, the last word of vs. 1, found in 7b in the phrase *tāmasi tasthivāṃsam* “(Agni,) standing in darkness.” The sentence in which this is found seems an odd way to end a hymn: “all the gods, in fear (*bhiyānāḥ*), offered homage (*anamasyan*) to you, while you were standing in darkness.” Why are the gods afraid and what time period does the augmented imperfect refer to? And why is this somewhat downbeat statement the real end of the hymn (the last hemistich being a generic request for aid)? I don't have certain answers to these questions, but I think the omphalos structure gives us some guidance. This final vs. seems not simply to circle round to the 1st vs., but in fact to take us to a time (right) before the events depicted in the first vs. In vs. 1 Agni overcame the darkness with his light (1d); here he is still in darkness, before he has become equipped with light, before he has been kindled, in fact. The gods are afraid because they fear he won't light up -- and, reading between the lines, he will only light up if the human ritualists kindle him. Even the gods are dependent on our dawn sacrifice, and, reading further between those lines, our newly minted poet will have a crucial role in making that sacrifice succeed.

The last hemistich has a curious etymological figure, repeated for emphasis: *avatūtāye* (i.e., *avatu ūtāye*) “let him help for help.”

VI.10 Agni

VI.10.1: In the lexeme *puró√dhā*, *purāḥ* serves as a pseudo-preverb; the phrase shows extreme distraction (pseudo-tmesis) here, with *purāḥ* initial in the 1st hemistich and *dadhidhvam* final in that hemistich. The phrase is then revitalized with *purāḥ* opening pāda c, thus directly adjacent to its verb though across a hemistich boundary. That the opening words of pāda c, *purá ukthébhiḥ* belong to the clause in the first hemistich is further shown by the abrupt clause boundary and change of subject in the middle of c, clearly signalled by a typical clause-initial sequence of PRN + Wackernagel-position particles, *sá hí naḥ*.

Pāda b has two extra syllables. The meter could be easily fixed by deleting *agním* with no ill effects to sense or metrical structure. This is an old idea (see Old's reff., ZDMG 55.298), but though harmless, it may be better to accept the text as given (see Old, Noten ad loc.).

On *suṛktí-* as a secondary bahuvrīhi, meaning ‘possessing/receiving (hymns) that possess a good twist’, see comm. ad II.4.1. This interpr. as a masc. adj. is imposed by the otherwise unbroken string of acc. sg. masculines: *mandráṃ divyám suṛktím ... agnīm*. In the comm. ad II.4.1 I suggest that it can also have the primary bahuvrīhi meaning

‘having a good twist’, referring to Agni’s curls of smoke and flame. This would also be possible as an alternative or secondary reading here.

I take *adhvaré* as part of the loc. absol. *prayatí yajñé*, contra Ge. (Re seems to ignore the second loc.) Nothing much rides on either choice.

VI.10.2: As was discussed in the publ. intro., this hymn traffics in disappointed expectations and truncated syntax, and this vs. displays both in extreme form. The vs. begins *tám u* “him/it [acc. sg.] PARTICLE.” Given that the dedicand of the hymn is Agni and vs. 1 contained a long acc. phrase referring to Agni (though that vs. ended with Agni as nom. subj.), we might expect that *tám* = Agni, and our expectations would be supported by a little formula found in various places in the RV (see Klein, *Particle u*, 67–68):

VIII.95.6	<i>tám u ṣṭavāma yáh</i>	“let us praise him who ...”
VIII.96.6	<i>tám u ṣṭuhi yáh</i>	“praise him who ...”
V.42.1	<i>tám u ṣṭuhi yáh</i>	(ditto)
I.173.5	<i>tám u ṣṭuhi ... yáh</i>	(ditto)

as well as variations on it. In our vs., immediately following *u* there is a long interruption, consisting mostly of vocatives addressed to Agni (*dyumaḥ purvaṇīka hotar, ágne*), leaving the *tám* in syntactic suspension. But when we finally reach the end of the hemistich, we encounter a nominative participle *idhānāḥ* ‘being kindled’, which can only refer to Agni. This leaves the initial *tám* doubly unmoored: it can’t refer to Agni, as we’d thought, and it can’t be construed with *idhānāḥ*, which is intransitive and doesn’t take accusatives.

The resolution of one of these problems comes at the beginning of the second hemistich, which opens with the acc. *stómam*, which must be the referent of *tám*. This is a pleasing twist on the formula just noted: the root \sqrt{stu} is preserved, but as a coreferential nominal, not as the verb governing the *tám*. There is also an element of “vertical mantra,” since the elements of the NP *tám stómam* are positioned “vertically” in identical metrical slots.

There is no resolution of the other problem, however: what governs this acc. phrase. *stómam* is immediately followed by the rel. prn. *yám* introducing a dependent clause (and reminding us of the *yáh* in the quoted formula). There is no overt governing verb in the main clause; all we know is that it should have Agni as subject, given the nom. part. *idhānāḥ*. Ge, flg. Sāy. and fld. by Re (in his tr., which reflects neither of his suggestions in the n.), supplies the impv. “hear.” This is of course nothing wrong with the sense of this (“[hear] this praise which ...”), but there is also nothing in context to support it. I have supplied “take to yourself,” assuming a medial form of $\sqrt{dhā}$. There are two pieces of supporting evidence for this. It could be generated (somewhat trickily) from *dadhidhvam*, the impv. in the previous verse. And — rather stronger evidence — a similar expression is found overtly in vs. 6: “you [=Agni] have taken to yourself the well-twisted (hymn)” (*dadhiṣe suvrktīm*), with a medial form of $\sqrt{dhā}$ with Agni as subject and a praise as object. Old’s “nimm ... an” (both ZDMG 55.299 and Noten) coincides with my interpr., but he does not, as far as I can see, provide a motivation for it.

What to do with the rest of the first hemistich, namely *agnībhīr mānuṣaḥ*, is another problem. With Ge I take *mānuṣaḥ* as dependent on *hotar*, despite the distance between them and the fact that *mānuṣaḥ* is accented in a voc. phrase (easily accounted for

by the distance). The phrase *mānuṣo hōtar-* is common in the RV (e.g., I.180.9, II.18.2, IV.6.11, V.5.7). The instr. *agnībhiḥ* must be construed with the part. *idhānāḥ*, as witnessed by the identical expression in the next two hymns (VI.11.6b, 12.6b), but whether it is an instr. of accompaniment as I take it (“along with the [other] fires”), as apparently also Ge, or a true instrument (e.g., Re “allumé par les feux...”) isn’t certain — though I’m not sure what Re’s “being kindled by the fires” would mean.

The relative cl. of pāda c is in no better shape than the main clause of ab. It too lacks a verb. Though there *is* a finite verb in pāda d, *pavante*, it not only lacks an accent and therefore can’t be part of the rel. cl., but it is also intrans. and cannot take *yām* as object. Moreover, both *asmai* and *mamāteva* present difficulties of their own. Let us begin with *asmai*. It surely refers to the recipient of the praise, which just as surely must be Agni. But Agni is addressed in the extensive vocative phrase in ab, and so he must be present both as 2nd ps. addressee and 3rd ps. recipient in the same sentence. Switch of person even within a syntactic construction is of course not unusual. I have no particular answer to this example of it beyond suggesting that 1) the poet may have lost a bit of track of his referents in this syntactically truncated construction, and 2) *asmai* may also be serving as a near deictic, pointing to “this (Agni) here.” It is barely possible, but I think highly unlikely, that *asmai* refers to another ritual participant, despite Ludwig’s interpr. (see Ge n. 2c) “für diesen Opferer.”

mamāteva is presumably to be analyzed, with the Pp., as *mamātā iva*; the resulting *mamātā* is a hapax. It is generally taken as a PN (“like Mamatā”), an interpr. whose strongest support is the vṛddhi deriv. *māmateyā-*, usually a metronymic of Dīrghatamas (I.147.3, 152.6, 158.6, particularly clear in the last passage), which presupposes an underlying PN of this shape. Both the *-eyā-* suffix of *māmateyā-* and the name Mamatā itself suggest that the person may be female. However, there is some direct evidence that a masc. **mamāta-* is found in the Bharadvāja lineage. Cf. VI.50.15 *evā nāpāto māmā tāsya dhībhīr / bharādvājā abhī arcanti arkañ* “In just this way the Bharadvājas, the descendants of me, this Mamata, chant with their insightful thoughts, with their chants,” where *māmā tāsya* is probably a play on the PN. For disc. see Old, ZDMG 42.211–12 = KISch 580–81, though I do not think the text needs emending. However, our *mamātā* is also most probably a pun, on a *-tā-* abstract built to the gen. sg. of the 1st ps. pronoun; such a stem is attested Epic+ in the sense ‘Selbstsucht, Eigennutz’. In this reading it could be an instr. sg. of the *-tā-* stem, ‘with/in my me-ness,’ in addition to being a nom. ‘like Mamatā’. On these questions see now Mayr, PN 2.1.393. Old (ZDMG 55.298–99) explored the possibility of taking *mamātā* (or *-ta*) as the missing verb of the rel. cl., as did I, but both of us came up short.

It is therefore likely that another verb has to be supplied. Contextually, ‘sing, speak, chant’ vel sim., is likely, and both Ge and Re go in that direction, as do I. Specifically I supply a form of *√rc* ‘chant’, which takes *sūṣām* as obj. on a number of occasions (I.9.10, X.96.2, 133.1); see also VI.50.15 cited just above with the locution *abhī arcanti arkañ*. All three of us assume that the verb is 1st sg, although there is less support for that assumption, since there are no other 1st persons, sg. or pl., in the hymn. The pun “in my me-ness” that I see in *mamāteva* would provide some support for my “I,” but neither Ge nor Re so interprets *mamāteva*.

VI.10.3: This vs. also appears to be deliberately misleading, though less so than vs. 2. It begins *pīpāya sá* “he becomes swollen.” Although $\sqrt{pī}$ ‘swell’ is not a particularly Agnaic verb, it still could be applicable to the ritual fire, and the audience might expect an unidentified subject to be the deity of the hymn. But the second pāda, with dat. *agnāye* and nom. *vīprah*, contravenes our expectations: it is the poet who becomes swollen, as a result of his successful service to Agni.

I would emend the tr. of pāda a: *śrāvasā* should be rendered ‘with fame’, not ‘with praise’.

VI.10.5: The usual truncation of instr. pl. *ūtūbhiḥ* (appropriate to final position in Jagatī and in dimeter meters) to sg. *ūtī* in final position of a Triṣṭubh pāda. Cf., e.g., *nītamābhir ūtī* in VI.19.10 versus, e.g., V.40.3 (etc.) *citrābhir ūtūbhiḥ*. Our own hymn contains an ex. of the full instr. pl. phrase in 3c *#citrābhiḥ ... ūtūbhiḥ ... #*. I consider such truncations to be synchronically generated, providing no evidence for any deep historical practice.

The bahuvrīhi *puruvāja-* is a hapax and may be a play on the poetic lineage *bharadvāja-*, which name appears in 6c.

VI.10.6: Another slightly off expression: with monotonous regularity throughout the RV Agni is described as ‘sitting’ or ‘sitting down’ or ‘made to sit (down)’. Although ‘sit’ in these locutions is always expressed by the root \sqrt{sad} , it still seems odd to characterize the human ritualist as ‘sitting’ (*āsānāḥ*, using the regularized participle to $\sqrt{ās}$, not *āsīnā-*), in a context where we might expect the referent to be Agni.

The expression *dadhiṣe suvṛktīm* “repairs” both vs. 1 and vs. 2. In 1a we had the adj. *suvṛktīm*, which had to be a masc. referring to Agni and therefore a secondary bahuvrīhi. Here *suvṛktī-* has its usual meaning of ‘well-twisted (hymn)’ and is presumably fem. As for *dadhiṣe*, recall that I suggest supplying a medial form of $\sqrt{dhā}$ to govern *stómam* in 2. Here we have the full VP.

VI.10.7: The accent on *inuhí* can easily be explained as contrastive to the immediately following verb *vardháya*.

VI.11 Agni

VI.11.1: Although the vs. seems superficially straightforward, it presents a number of small difficulties. We might start with the meter of pāda c: in order to reach 11 syllables, something has to be distracted. HvN suggest *nāsatyā*, but this produces a bad cadence: – ~ ~ ×. Oldenberg (ZDMG 55.300 and Noten) instead suggests distracting the initial preverb *ā*, which produces an even worse cadence (*-ñā nāsatyā* – – – ×). And the third possibility, *nāsatyā*, produces a third type of bad cadence (~ ~ – ×). Only if we could read the first vowel of *nāsatyā* as distracted – ~ can we fix the cadence, but there is no real license for this.

The first morphological problem is *bādhaḥ* in pāda b. Gr takes it as the acc. pl. of a root noun ‘Treiber, Förderer’, but it is hard to fit this into the passage semantically. Schindler (Rt. nouns) finds the passage unclear and does not commit to a root noun interpr., much less a case form. Scar (346–47) takes it as a root noun, but in the abl. sg. (“aus dem Drängen heraus”), in which he calls a “hoffnungslos obskur” passage -- a

characterization that, given the super-abundance of hopelessly obscure parts of the RV, seems rather overdramatic for this minor conundrum. With Old (ZDMG 55.300), Ge, and Re -- and *pace* Scar (346–47) -- I take *bādhah* as an adverbially used neut. *s*-stem, like (and perhaps truncated from) *sabādhah*, also an adverbially nom.-acc. *s*-stem, which, however, Scar also thinks is an old abl. sg. of the root noun. However, even if Scar should be right, the interpr. of *bādhah* as abl. sg. of a root noun could be adapted to the adverbial interpr. with one further step (as he recognizes): ‘out of urgency’ → ‘urgently’.

The next question is the application of the simile *marútām ná práyukti* and the morphological identity of the last word. To start with the latter, with most interpr. I take it as an instr. **-tī* shortened in pause (or, with a more modern descrip., with loss of its final laryngeal in pause [and here before a vowel beginning the next hemistich]). But what does the hitching up of the Maruts have to do with Agni’s sacrificial performance? My assumption is that the simile is limited to qualifying the adverbial *bādhah* ‘pressingly, urgently’. Since everything the Maruts do is precipitous, no doubt the yoking up of their horses is performed with the same urgency, to get on the road as soon as possible. Both Ge and Re push *prá√yuj* further than I think it should go -- to ‘impulsion, instigation’ (“wie auf Betreiben der Marut” and “à l’instigation des Marut” respectively), a sense that seems distant from the ‘yoke, hitch up’ sense of *√yuj*. I also don’t see that the Maruts would be the ones to set Agni’s sacrificing in motion; they are not even associated with the dawn sacrifice and don’t have much to do with Agni. My “at the hitching up” reads as if it were a locative. Though that tr. was made for English parsing reasons, I might slightly alter it to “with the hitching up.”

In pāda d both Ge and Re (flg. Gr’s interpr.) take *hotrāya* as simply referring to the sacrifice (e.g., “zu unserm Opfer”), but *hotrá-* is elsewhere not the sacrifice, but the office of Hotar or the performance of the Hotar’s duties. My tr. (“turn [various gods] to the Hotar-work”) makes it seem that those gods will perform that office, but, since Agni is the Hotar par excellence (see, e.g., pāda a, also 2a, 6a), it must rather be that Agni is urged to cause the gods to turn towards his own performance of his duties. It might be clearer if the tr. read “toward my Hotar-work.”

VI.11.2: The disposition of the elements in pāda b is not entirely clear. In the publ. tr. I construe *antár* with *mártyeṣu* “(god) among men/mortals” and consider *vidáthā* an acc. of extent of time/occasion “through the rites.” Ge agrees with the first, but supplies a verb to govern *vidáthā*: *sādhān* “der ... die Opfer (zustande bringt),” on the basis of two passages containing this phrase (III.1.18, IV.16.3 *vidáthāni sādhān*). I did not believe then that these two passages constituted sufficient formulaic support for supplying a form of *√sādh*, but now I’m more sympathetic to Ge’s view. But there are also other possibilities. In Agni passages *antár* is often in a lexeme with *√i* or *√car*: ‘go between’ -- usually between heaven and earth or men and gods. Flg. Old and Re, such a lexeme, with the verb of motion supplied, could be construed with *vidáthā*: e.g., Re “(te mouvant) entre les participations-cultuelles.” And, if we take *vidátha-* in its occasional meaning of ‘(cosmic) divisions’, we can follow Thieme (Unters. 43) in his interpr. “zwischen den Verteilungen (Himmel, Luftraum, Erde) ist er, der Himmlische unter den Sterblichen.” Any of these is, in my opinion, possible, but I will stick with the publ. tr., as involving the least amount of extra manipulation.

Since *vāhnir āsā* is a fairly common locution (see passages assembled by Ge ad I.76.4), instr. *āsā* ‘with the mouth’ is not parallel to instr. *juhvā* ‘with the tongue’, despite grammatical and semantic similarity.

VI.11.3: There are several metrical problems in this vs. Pāda c has the caesura after 3; there seems no way to remedy this, and the rest of the meter is fine. Pāda a is rather more interesting: the Samhitā text as given yields 10 syllables; there are two possible distractions: *dhán(i)yā* (HvN’s choice) and *t(u)vé*, but both produce the same bad cadence ($\sim - - \times$). As Old points out (ZDMG 55.300 and Noten), if we distract neither of these choices, the vs. reads fine until the last word, with an opening of five and *dhiṣāṇā* taking post-caesura position. (It is worth noting that *dhiṣāṇā*- is almost always immediately post-caesura, whether after an opening of 4 or of 5.) All that’s wanting to make a fine Triṣṭubh line is a single light syllable preceding *váṣṭi*. Although I would not presume to supply such a syllable (nor does Old), it does seem preferable to allow for a rest here with syncopation, rather than to choose one of the two possible distractions that yield a bad cadence.

The syntax and exact sense of the first hemistich are somewhat unclear. Ge and Re take the pādas together, with *dhiṣāṇā* as subj. both of *váṣṭi* and of the infin. *yájadhyai* (approx. “the Holy Place wishes to sacrifice in you ...”). I have two objections to this interpr.: 1) as Old (ZDMG 55.300) points out (sim. Re; see below), it is Agni who should be doing the sacrificing (though I.109.4, where *dhiṣāṇā* presses soma willingly [*usātī*], renders this objection less forceful); 2) the *prá* beginning pāda b suggests that there’s an intermediate verb form between *váṣṭi* and the infinitive or at least that there’s a subclausal break at the pāda boundary. Re also notices the 2nd problem indirectly, suggesting in his n. an alternative tr. “elle veut (ceci): qu’(Agni) sacrifie en avant” (with the *prá* presumably represented by “en avant”). My publ. tr. reflects such an intermediate verb form, from a supplied form of $\sqrt{dhā}$, with a form of ‘you’ also to be supplied — with the sense “to (put) (you) forward to sacrifice ...” For $\sqrt{dhā}$ + *yájadhyai* see nearby VI.15.15 *ní tvā dadhīta ródasī yájadhyai* “One should set you [=Agni] down, to sacrifice to the two world-halves.” The locution *dhiṣāṇā* $\sqrt{dhā}$ is also quite common, aided by real or pseudo-etymological association; cf. III.31.13 ... *dhiṣāṇā* ... *dhāt*; III.56.6 *dhiṣaṇe* ... *dhāḥ*, IV.34.1 ... *dhiṣāṇā* ... *ádhāt*; VI.19.2 ... *dhiṣāṇā* ... *dhāt*; VII.90.3 ... *dhiṣāṇā dhāti*. However, I am now no longer sure that my objections to the standard tr. are strong enough to merit the additional complexity of my publ. interpr., and I am also disturbed by having to interpr. loc. *tvé* as “in regard to you.” The next hymn contains a passage that strongly encourages construing *tvé* here with *yájadhyai* “to sacrifice in you”: VI.12.2 *ā yásmin tvé ... yákṣat*. I would now alter the tr. here to “For even the wealthy Holy Place longs to sacrifice in you to the gods, to their races, for the singer” -- though I am still bothered by the *prá*.

Another problem in this syntagm is *devāñ jánma*. Old (explicitly, ZDMG 55.300) and Ge (in tr.) take *devāñ* as a gen. pl., a form that could either represent the survival of a very archaic PIE gen. in **-ōm* or the truncation of the standard form *devānām*. I do not think this nec., subscribing to Re’s assertion (in n.) “*devāñ jánma* ne comporte pas de désinence abrégée ou archaïque, mais signifie «la génération (, à savoir) les dieux»,” with *devāñ* and *jánma* as parallel acc. However, I now realize I cannot entirely gainsay the

other instances of *devāñ jánman-*, which also favor a gen. pl. and now suggest an alt. tr. “... sacrifice to the races of the gods.”

In the second hemistich the referent of the subj., *vépiṣṭho áṅgirasām ... vípraḥ* is in question. Ge, flg. Sāy., suggests the current poet, and the presence of the singer in b (*gr̥naté*) might support this view. However, his superlative status among the Áṅgirasas makes it more likely that it is Agni. Cf. the similar expression in I.127.1 *jyēṣṭham áṅgirasām vipra* “(We call upon you), o inspired poet, as the oldest/most important of the Áṅgirasas,” as well as the fairly frequent use of *áṅgirastama-* ‘first/best of the Áṅgirasas’ for Agni (I.31.2, 75.2; VIII.23.10, 43.18, 44.8). If Agni is the referent, there has been a switch from 2nd ps. reference (*tvé* in pāda a) to 3rd ps. reference here, but this is hardly novel. See the next vs. (5).

As disc. ad VI.3.6, I interpr. *rebhá-* not as ‘singer’, but as ‘hoarse/husky-voiced (singer)’, sometimes used of Agni, whose crackling is likened to singing. He is so identified nearby in VI.3.6, and the use of this adj. here is another piece of evidence that Agni is the referent of the subject in this hemistich.

In d *chandáh* is taken by Gr as the sole example of suffix-accented thematic *chandá-* (not only in the RV but, acdg. to Whit, Rts., anywhere), beside *chándā-*. Gr glosses our form ‘singend, preisend’ and *chándā-* as ‘glänzend, strahlend’; Ge, by contrast, takes it as an *s*-stem and dismisses the accent: “*chandáh* doch wohl für *chándāḥ*.” Pointing to the suggestive juxtaposition *mádhu chandáh* here, a near exact match for the PN *madhuchandah*, to whom the first ten hymns in the RV are ascribed (though the name doesn’t appear in the RV text), he tr. “seine süsse Weise.” Re follows suit (“le doux chant”), with the somewhat cryptic note “*chandáh* «qui charme», comme *chándāḥ*.” (Curiously, Old doesn’t comment.) Although I would like to be able to follow their interpr., with *chandáh* an anomalously accented neut. *s*-stem, rather than an *-á*-stem with Gr, I do not see any way to get the suffix accent redactionally or grammatically. My interpr. in the publ. tr. introduces complications, in order to avoid positing arbitrary accent shifts. I suggested that the form *is* an *s*-stem, derivationally related to neut. *chándas-* ‘rhythm, meter,’ showing the usual rightward accent shift of adjectival possessive derivatives to neut. *s*-stems -- hence ‘having rhythm’. I would have preferred that the form in the text were *chandās* (*chandā* in sandhi), describing Agni the poet, but it is not. I therefore suggested that it is either a neut. used adverbially (“rhythmically” as in the publ. tr.) or that it qualifies *mádhu* “rhythmic honey,” of the song. But as discussed ad V.52.12, VIII.7.36, and I.92.6 I am now disturbed by the late distribution of the neut. *s*-stem *chándas-*, which might call into question the existence of forms based on it deeply embedded in the core RV. I don’t quite know what to do and leave my unsatisfactory solution in place, at least for now.

VI.11.4: On *svápāka-* see comm. ad IV.3.2.

Note the switch from 3rd ps. reference (pāda a) to 2nd ps. (b). The 2nd ps. reference continues by default through the rest of the vs., though the publ. tr. appears to switch back to 3rd ps.: (“(anoint) him ...”) for Engl. convenience.

VI.11.5: Old (ZDMG 55.301), fld. by Ge and Re, interprets *vṛñjé* as a *t*-less 3rd sg. passive, rather than as the 1st sg. it appears to be. I do not see the necessity for this. The same VP is found in I.116.1 (... *bárhīr iva prá vṛñje*), where the 1st ps. interpr. is

reinforced by the flg. pāda containing the 1st sg. act. *iyarmi*. Further, in the almost identical pāda VII.2.4 *prā vṛñjate nāmasā barhír agnaú*, the med. 3rd pl. *vṛñjate* must be transitive with sg. *barhíḥ* as obj. The best support (see Old) for a pass. interpr. is that then all 4 pādas in this vs. would begin with a passive (b: *áyāmi*, c *ámyakṣi*, d *ásrāyi*), but in that case we might expect a form *more* parallel to the other three. Although *√vṛj* has no passive aorist attested, there are no morphological or phonological barriers to building **ávarji* (cf. the very common *ásarji* to *√srj* ‘discharge’). I confess I do not understand the sequence of tense, with pres. *vṛñjé* in the *yád* clause, followed by 3 main clause augmented aorists, but taking *vṛñjé* as a passive does not solve this problem.

I do not understand the semantic difference between *sádman-* and *sádana-*, if there is one.

VI.11.6: As noted above, ad VI.10.2, the phrase *agníbhīr idhānāḥ* is found both there and in the next hymn, VI.12.6. It therefore seems unlikely that *devébhiḥ* should be construed in this collocation, despite its apparent parallelism, and, with Ge and Re, I take it as an instr. of accomp. with *daśasyā*.

My interpr. of the simile in the 2nd hemistich differs from the standard. Ge and Re assume that the comparandum for *vṛjānaṃ ná* is *ámhaḥ*. Given the adjacency of the two expressions, this is reasonable. Ge’s version, however, relies on a somewhat unlikely interpr. (insofar as we understand this root) of *áti √sras* as ‘abstreifen’ (strip off): “... möchten wir die Not wie einen Gürtel abstreifen,” and the notion of “stripping off” *ámhas-* seems odd. Re’s “puissions nous ... glisser hors du défile-étroit comme (hors de) l’encerclement (ennemi)” does better with the verb, but requires *vṛjāna-* to have a particular negative sense not elsewhere met with (*pace* his citation of X.27.5). In the publ. tr. I take the simile with *rāyáḥ* .. *vāvasānāḥ* “clothing ourselves in riches,” comparing the wealth we wear with a girthband. For a very similar expression, cf. I.173.6 *sám vivya índro vṛjānaṃ ná bhūmā* “Indra has enwrapped himself in earth, like a circlet,” with the same simile. Although the distance between *rāyáḥ* and the simile might speak against this interpr., it does work better semantically, and the parallel passage provides strong support. It does give me pause, however, that MLW is not convinced and thinks *vṛjānaṃ ná* must be construed with *ámhaḥ*.

VI.12 Agni

VI.12.1: The ‘goad’ (*todá-*) found in VI.6.6 reappears here, as well as in vs. 3. Thus, 3 of the 5 occurrences of this word in the RV are found in this Agni cycle. In VI.6.6 I argue that the referent of the “great goad” is the sun (see comm. ad loc., sim. I.150.1). Old (ZDMG 55.301, also Noten) thinks the sun is the referent in our passage as well, and, further, he construes the gen. *todásya* in pāda b with *śocíṣā tatāna* in pāda d, on the basis of VI.6.6 *bhānúnā ... todásya ... tatantha*. Although the parallel is suggestive, the distance between the genitive and its supposed governing instr. in our passage seems too far, esp. since the 2nd hemistich begins *ayám sá* “here is he” or “this one here,” a sequence that seems to open a new (though co-referential) clause. Moreover, in vs. 3 *todá-* seems to refer to or be compared to Agni himself, and so the internal evidence of the hymn favors a connection of the goad with Agni, not directly with the sun. I therefore follow Ge in taking *todásya* as dependent on *rāt*, which also governs *barhíṣaḥ*. It may be that *rāt* ...

todāsya “ruler of the goad” is a phrase like *sūnūḥ sāhasaḥ* “son of strength” (see 1c), where “son of X” is tantamount to X. In the same way “ruler of the goad” may be the equivalent of “the goad” itself. Both the sun (“the great goad”) and Agni are goads because with their appearance at dawn they set the world in motion. Since Agni is often taken as an earthly form of the sun, sharing the same third party identity would not be surprising, with Agni being the lesser of the two by nature.

For Agni as “ruler of the ritual grass,” see VIII.13.4=15.5 ... *asyā barhīṣo ví rājasi*, though the subject there is Indra.

I take *yājadhyaī* as a predicated infinitive (sim. Ge, Re, Keydana [Inf., 171]). The VP *ródasī* √*yaj* is found elsewhere in this cycle: 11.4 *yājasva ródasī*, VI.15.15 *ní tvā dadhīta ródasī yājadhyaī*, with the same infinitive.

VI.12.2: On *svápāka*- ‘very clever’, also VI.11.4, see comm. ad IV.3.2. As noted there the Pp. analyses this sequence as *sū āpāka*-, though Ge and Re take it as a cmpd ‘having a lovely backside’. Kü (214), however, follows the Pp. analysis (also fld. by Gr), and tr. “von Ferne kommend” (as Gr does). I do not see how a derivation from *āpā(ñ)c*- ‘facing/turned backward’ could yield such a sense, esp. in a non-ablatival formation, and, furthermore, Agni, the most *present* of gods, should not be “coming from afar.” Keydana’s “der du entfernt bist” lacks the ablatival element but still runs afoul of the other problems just noted.

‘Heaven’ (*dyaúḥ*) is the performer of the sacrifice in Agni; the qualification *sarvātātā-iva* “as if in its entirety, in its entirety as it were” is explained, reasonably, by Ge as meaning the gods collectively, with *dyaúḥ* ‘heaven’ equivalent to “die Götterwelt.” Re follows this interpr., suggesting that *sarvātātā* is a variant of *devātātā*. For all the gods performing such sacrifice, see, e.g., X.88.7 adduced by Ge.

In tr. *yajatra* as ‘the means of sacrifice’ I am taking the *-tra*-instrument suffix seriously: Agni as the receptacle and recipient of the oblations is indeed the *means* to sacrifice.

In the publ. tr. the phrase introduced by the em-dash “— you the very clever ...” contains only vocatives, though for ease of English they do not read as vocc.

jāmhas- is found independently only here, but also appears in the bahuvrīhis *kṛṣṇā-jāmhas*- (I.141.7) and *raghupātma-jāmhas*- (in nearby VI.3.5). Though *jāmhas*- has no direct cognates and at best a root connection to IE **ǵhengh* ‘go’ (EWA s.v.), the cmpds occur in contexts that limit the semantic realm to birds (to which Agni is compared in both cases, as also here) and that point to a bird body part, *pace* Gr’s ‘Weg, Gang, Bahn’ -- wings, wing-feathers, or plumage. The question is what the point of comparison between the bird’s *jāmhas*- and three-seated (*triśadhástha*-) Agni is, if in fact the simile is meant to further characterize that descriptor. Ge suggests that a bird alighting from flight appears to settle on his two wings and his tail-feathers (though MLW points out to me that, observationally, a bird appears to settle not on its two wings, but its two *legs*). MLW then suggests that “maybe *jāmhas*- means originally ‘stride’ and then the ‘striding parts/ locomoting parts’ and finally ‘the bottom parts’” which in a bird may be three. Re, by contrast, takes the simile separate from *triśadhástha*- and also interprets *jāmhas*- as ‘enjambée’ (stride), though, as he explicitly admits, this involves “renouncing” the meaning ‘plumage’ that he ascribes to the same word in nearby VI.3.5,

because “on obtient un sens plus facile” (a very dangerous principle to apply to RVic lexicography!).

With most, I take *yájadhyai* again as a predicated inf. “(you are) to sacrifice,” as in vs. 1. Kü (214) curiously interprets it as passive (“... sind die Opfergaben ... zu opfern”), though, as Keydana (174 n. 171) points out, the nom. *triṣadhástḥaḥ* is then left hanging.

VI.12.3: The rel. cl. that begins this vs. cannot span the hemistich, since the verb that ends b, *adyaut*, is unaccented. There is the further problem, long noted (see Old ZDMG 55.302), that the apparently easy application of the initial adj. *téjīṣṭhā* to the next noun *aratīḥ* is problematic, because *aratī-* is masc. (though both Thieme [Unters. 29] and Re are willing to allow a fem. here, and Old toys with this notion). In my view the rel. cl. consists only of the first two words, *téjīṣṭhā yásya*, with *yásya* of course referring to Agni. The rest of the hemistich is couched in the nominative, with descriptors most naturally applicable to Agni (like *aratī-*, which generally has Agni as its referent), and so a syntactic shift must happen between the *yásya* and the following nominatives.

Therefore, a noun must be supplied with *téjīṣṭhā* in the rel. cl., as Old already suggested (ZDMG 55.302 n. 1). His candidates are ‘Glut’ or (in pl.) ‘Flammen’; Ge follows the former suggestion, supplying *tapanī* as in II.23.14. In contrast I suggest ‘course’. As we’ve seen, the Agni cycle of VI is tightly knit, and in VI.3.4 (a hymn with another connection to this one, disc. ad vs. 2) we find *tigmám cid éma ... yásya* “whose course is sharp ...” Of course, *éman-* is a neut. and cannot be supplied with fem. *téjīṣṭhā*, but cf. I.53.8 *téjīṣṭhayā ... vartanī*; *vartanī-* generally means ‘course, track’, though in that particular passage I take it as ‘(wheel)edge’. In any case that fem. would fit here nicely and match the “sharp course” of VI.3.4.

Note that both *(-)rāt* and *todā-* return from vs. 1. As discussed ad vs. 1, *todā-* now seems to apply directly to Agni. I take this word as part of the simile (so also Ge, Re), despite the right displacement of the simile particle, *todó ádhvan ná*, for which I have no explanation.

Hemistich-final *adyaut* echoes *dyaúḥ* at the end of 2b.

In c the first question is the meaning and root affiliation of the hapax *dravitā*. Older interpr. ascribe it to \sqrt{dru} ‘run’: Gr ‘Renner’, apparently (with some attenuation) Ge ‘Ausreisser’, while Re renders it as ‘fondeur’ (smelter), with, presumably, a developed sense of \sqrt{dru} . However, the set character of the agent noun makes this problematic, and Hoffmann (MSS 10 [1957] 70 = Aufs. 420) convincingly connects it with his set root $\sqrt{drū}$ ‘cut, reap’ -- an ascription that has been followed essentially by everyone since (e.g., EWA s.v. *DRAV*, Gotō 1st Kl., 138–39, Tichy Nom.Ag., 35, 285, Keydana Inf., 194 n. 18). The adj. characterizing this agent noun, *adroghá-*, is unexpected. It ordinarily means ‘undeceptive’ and qualifies speech (as in the bahuvrīhi *ádrogha-vāc-*), but “undeceptive reaper” is puzzling. I pushed the adjective further than it should probably go, to ‘undisguised’, which, in conjunction with *tmán* ‘in person’, may express that Agni’s role in cutting down plants is plainly evident to all. But the locution still seems awkward. Tichy’s ‘zuverlässig’ (trustworthy, reliable) mitigates some of this awkwardness and does not stray too far from the sense of the adj.; I would be inclined to emend my tr. to ‘trustworthy’.

In d *avartrá-* is likewise a hapax. It appears to be a bahuvrīhi built to *vártra-* (AV+) ‘dam, dike’; see Debr’s Nachtr. to AiG II.1 (p. 58).

VI.12.4: The first hemistich is partly assembled from material also found elsewhere: the quite straightforward 2nd pāda is identical to VII.12.2b. The post-caesura portion of the first pāda, *etārī ná sūṣaīḥ*, is also found at V.41.10, where the pre-caesura portion, *grñīté agnīḥ* ‘Agni is sung’, is functionally identical to our 2nd pāda (esp. *agnī ṣṭave* ‘Agni is praised’). On *etārī* as a loc., see comm. ad V.41.10; note that this word is a partial anagram of 3a *vanerāt*.

In c note the insistent phonetic figure: dr(ú)vanno **vanván** krát(u)vā ná árvā.

The interpr. of pāda d is difficult because of the highly unusual form *jārayāyi*, which has been much discussed (see esp. Old ZDMG 55.302–3). Since the hemistich otherwise lacks a verb form, it is tempting to see a verb here. But the accent makes trouble because this is a main clause with no syntactic break evident before the word. Nonetheless, it is generally taken as a nonce aor. passive and quite possibly a punning one: as a denom. to *jārā-* ‘wooner, lover’ (hence ‘become a wooer’) and as a pass. built to the caus. *jārayati* (/ *jaráyati*) ‘awaken’. The pun is most clearly expressed in Ge’s tr. “wie der Vater des Uṣas zum Buhlen ward, so wurde er durch die Opfer erweckt”; he takes it as referring to the myth of incest of Heaven, also signalled by the phrase *usrāḥ pitéva* ‘like the father of Dawn.’ Although I am always game (perhaps too game) to see puns everywhere in the RV, I am dubious about the one suggested here. For one thing the somewhat anomalous stem *uṣār-/usr-* is never used for personified Dawn, but only for the temporal dawn. (For supposed voc. *uṣar* in I.49.4 see comm. ad loc. and Lundquist 2014.) It seems unlikely that the stem typed for the goddess, *uṣās-*, would not be used in this myth where her identity is so very crucial. Moreover, I rather doubt that *usrāḥ* here is a gen. sg. with *pitéva*. Not only is the simile particle wrongly placed (though this is not rare), but *usrās* is almost always an acc. pl., which can express extent of time (e.g., VII.15.8). The solution I favor for *jārayāyi* is one also mentioned by Old, stemming from Ludwig, and endorsed by Debrunner in the Nachtr. to AiG I [p. 163] -- that it belong to a gerundive stem *jārayāy(i)ya-* ‘to be awakened’ and the expected nom. sg. **jārayāy(i)yaḥ* lost its final syllable by haplology before *yajñāḥ*, not surprisingly in this *y(a)*-rich environment. This gerundive is predicated and serves in lieu of a finite verb. For a similarly formed predicated gerundive, see nearby *trayayāy(i)yaḥ* at VI.2.7.

VI.12.5: With *tákṣat* we can supply *vānā* on the basis of I.127.4, as noticed by the standard comm.

ṛṇā- is otherwise neut., meaning ‘debt’ (Gr’s supposed fem. *ṛṇā* in X.127.7 is actually a neut. pl.). I am inclined to assume that this masc. nom. sg. is a nonce application. But see the cmpd. *ṛṇa-cyút-* ‘shaking the debtor’ in VI.61.1, in which I also interpr. *ṛṇa-* as masc. and animate. I would now suggest that the masc. may have been extracted from the privative bahuvrīhi *anṛṇā-* ‘without debt’, which, though not found in the RV (perhaps because it belongs to the technical legal register), is reasonably well established in the AV.

The last word of the vs., *rāt*, seems to reprise the similarly pāda-final *rāt* in 1a and *vanerāt* in 3a, but because it is unaccented, it must be a verb form belonging to *√rāj* ‘go straight’.

VI.12.6: In the first pāda as transmitted (metrically faulty), there is a hapax *nídāyā(h)* supposed built to a fem. *nídā-* ‘scorn’. There is no verb to govern this word, so “protect” vel sim. must be supplied. Ge adduces nearby VI.14.5 *nídāḥ ... uruṣyāti*, while Gr suggests II.34.15 *nídó muñcātha*. I am now somewhat more sympathetic to these makeshifts than I was when I produced the publ. tr., but the fact remains that protection from scorn would be rather intrusive in the passage, in a hymn that focuses almost exclusively on Agni’s travel and speed. In the publ. tr. I suggest a different analysis of the sequence, which I still favor: *arvann íd *āyāḥ*, resegmenting the Pp. analysis and taking *āyā(h)* to *ā√yā* ‘drive here’. This requires an alteration of the Saṃhitā text by accenting *āyāḥ*. The posited verb form could be an impf., injunc., or subj. to the root pres. to this root, or an indic. or injunc. to the *s*-aorist. Since no other such forms occur unambiguously in the RV, it could have been reanalyzed and lost accent. For a possibly similar form see *yā(h)* in V.33.2 and comm. ad loc. Although the particle *íd* would be slightly oddly positioned after a voc., it is fairly regular in pre-verbal position when the verb is final in its pāda (e.g., in this maṇḍala VI.19.13 *śátroḥ-śatror úttara ít syāma*, 42.3 *dhṛṣát tám-tam íd eṣate*, 45.7 *yó gṛnatām íd āsitha*). Note also the phonetic figure closing a and b: *nídāyā(h)ḥ ... idhānāḥḥ*, which would be stronger if the first was *ídāyā(h)*.

VI.13 Agni

VI.13.1: The voc. *ágne* was omitted from the publ. tr.

Although *śruṣṭī* can represent nom. sg. *śruṣṭiḥ* and is so taken by Ge, Re (and seriously entertained by Old), I accept the traditional analysis as instr. sg. (allowed by Ge in n. 1c); elsewhere the instr. sg. form is almost always pāda-initial as here, whereas the rare nom. sg. never is. The point seems to be that Agni listens to us attentively and subsequently metes out rewards.

VI.13.2: As usual, the form *iśé* is subject to multiple possible analyses, but most interpr. opt for a dat. of *iś-* ‘refreshment’, as do I. With most (but not Old), I split pāda a into two nominal clauses, based on the apparently clause-initial sequence *ā hí* after the caesura. The enclitic *naḥ* must of course belong properly to the 1st clause, though it can be understood with the 2nd as well.

In pāda b, the referent in the simile qualified as *párijmā* ‘encompassing’ has been variously identified: Ge (sim. Lü) Vāyu, Re the sun or Agni solaire, Gr Agni himself. By contrast, I supply ‘household’ (*gáya-*), on the basis of nearby VI.2.8, where Agni is said to be *párijmeva ... gáyah* “encompassing like a household” (on which see comm. ad loc.). This simile would play on Agni’s well-known connection to the domestic sphere. The point of comparison is that the household is the unit that controls the wealth of its members. I supply “over treasure” on the basis of *rátanam* in pāda a; *kṣayasi* in b needs a gen. complement to parallel the simile in c: *mitró ná brhatá rtásya*. 3

VI.13.3: The anomalous root pres. *bharti* (otherwise found only at I.173.6) here immediately precedes *vājam* and therefore evokes the poet of this maṇḍala, Bharadvāja. As is remarked elsewhere in the comm. to VI (passim), there is much play with this name. Here it is possible that the nonce athematic form *bharti* was substituted for a

thematic injunctive *bharad* because the latter produces a bad cadence. This does not account for *bhārti* in I.173.6, but I am way off ascribing deep archaism to *bhārti* (as is often done; see, e.g., A. Willi, *Origins of the Greek Verb*, 177, 197).

VI.13.4: The sequence *vedyānaṭ* is emended by Old (ZDMG 55.304 and Noten) to *védyānaṭ* with two accents (that is, underlying *védyā* or *védī* ‘with the altar’ + *ānaṭ*). He convincingly adduces nearby VI.1.10 *védī sūno sahaso gīrbhir ukthaiḥ*, identical to our pāda a save for the first word. See comm. ad loc. The standard interpr. read *vedyā* (Ge, Re, Lub, etc.) with the Pp and render as ‘with wisdom’ vel sim. It’s worth noting that *vedyā-* is otherwise only plural, an argument about ascribing our sg. form to that stem.

With Ge I think *prāti vāram* should be construed together, even though the standard expression is *prāti vāram* (II.11.21, etc.). Re suggests a haplology from **prāti vāram vāram*, but this seems unnecessarily complex. I consider *vāram* from **vāram* a minor metrical adjustment to fit a Triṣṭubh cadence. And see immed. below for another possible lengthening.

Ge takes *dhānyā-* as ‘grain’, a deriv. of *dhānā-* ‘id.’. Certainly the other occurrence of *dhānyā-* does have this meaning (V.53.13; cf. also *dhānyākṛt-* X.94.13), but here a deriv. of *dhāna-* ‘wealth’ makes more sense (see Re’s ‘richesse’). Old suggests emending to *dhānyam*, which exists in this meaning, but I don’t see the need for this. Why not simply take it as a (nonce) *-ya*-suffixed vṛddhi deriv. of *dhāna-* (on such formations see AiG II.2.834ff.), since vṛddhi derivatives are fairly prominent in this hymn (*saúbhagāni* 1a, *sauśravasā* 5a)?

VI.13.5: Despite their distance from each other, the two datives *nībhyaḥ ... puṣyāse* seem to form a de facto infinitive phrase: “for men to thrive” -- although it is certainly possible to construe them as separate datives with *dhāḥ* “establish (goods) for men, (goods) for thriving.”

I supply ‘goods’ with the neut. pl. adjectives *sauśravasā suvīrā*, on the basis of *vasavyaiḥ*, the last word of the preceding vs. (sim., Re “[choses]”). It would also be possible, with Ge, to take *sauśravasā* as a substantive: “Diese Ruhmesherrlichkeiten.” Cf. also Thieme (Fremdl., 47).

On first encounter the sentiment of cd is unsettling. What the text seems to say -- and what I think it does say -- is that Agni provides good things for the archetypal pair of inimical creatures, the wolf (*vīka-*) and the stranger (*arī-*). (For the pairing, see, e.g., nearby VI.15.3, where Agni is asked to keep us free of them.) It seems even worse that what Agni provides in our vs. is “an abundance of livestock” (*bhūri paśvāḥ*; cf. nearby VI.1.12) that becomes *vāyas-* (‘vigor, vital energy’) for those creatures: in other words he deprives human communities of their domestic livestock in order to feed hungry wild beasts and outlaws. There have been two basic responses to this apparent breach of the divine/human compact. Acdg. to Old (ZDMG 55.305), since Agni provides even for the wolf and so on, he should most definitely provide at least as much for us. Ge more or less follows this interpr. (see n. 5d), as do I. It is supported by a similar passage in an Ásvin hymn, VII.68.8 (also adduced by Ge) *vīkāya cid jāsamānāya śaktam* “Do as you are able, even on behalf of a wolf that is worn out.” Note the *cid*, which is unfortunately missing in our passage. (Cf. also VI.45.2 *avipré cid vāyo dādhat* “placing vitality even in the uninspired,” with the VP *vāyah √ dhā* as here and a *cid*.) By contrast, Thieme (Fremdl.,

47), fld. by Re, interprets the dat. phrase *vīkāyāraye jāsuraye* not as a dative of benefit, but of malefit, as it were: “...wenn du gross machst die Lebenskraft des Viehs durch deine Stärk für den (i.e. zur Verteidigung gegen den) Wolf, den Fremdling, der verschmachtet.” The slipperiness of glossing “for” as “for defense against” seems unacceptable to me, a clear instance of allowing our contextual expectations to trample the grammar. Th also severs the little formula *bhūri paśvāḥ* (found in nearby VI.1.12, as already noted, as well as III.54.15), taking the gen. *paśvāḥ* with *vāyaḥ* (“die Lebenskraft des Viehs”) and *bhūri* as part of a phrasal verb with *kṛṇōṣi* (“wenn du gross machst”). Re’s interpr. basically follows Th’s, with some curlicues of its own.

Although Th/Re produce a more acceptable sense, they do so at the expense of the clarity of the grammar, which is supported by a number of parallel passages. I think we must accept that Agni is providing for these undesirables. It might be worthwhile to speculate about what the real world analogue might be. Here I suggest (with no certainty at all) that this might be a forest fire. MBh I.217–19 depicts the horrific burning of the Khāṇḍava Forest, in which most of the animal denizens of the forest were killed in the conflagration and those that tried to escape were cut down by men stationed at the perimeter. Although in the MBh account there is no difference between prey animals and their prey -- they all perish -- it does suggest an analogue, that wolves and outlaw men might capitalize on the panic roused by a forest fire to capture easy pickings. An internet search turns up a passage in J. F. Bendell, “Effect of Fire on Birds and Mammals” (in *Fire and Ecosystems*, ed. T. T. Kozlowski, 1974), 75: “many birds and mammals are attracted by fires, probably to feed upon prey driven from their homes. Komarek (1969) mentioned species of birds in Australia, Africa, and North America that come to and hunt in front of fires.”

On the meter of d see Old ZDMG 55.305 and Noten.

VI.13.6: Both Ge and Re separate pādas a and b, and Ge’s tr. seems at least potentially to take the subj. of a, *vadmā*, as non-coreferential with Agni (“Ein Redner ... (werde) uns ... zuteil”), but since *vadmān-* occurs only here and in nearby VI.4.4, where it definitely refers to Agni, I do not see the point.

A factor influencing the Ge/Re separation of the pādas may be the apparent presence of enclitic *naḥ* in both pādas: ... *no vīhāyā(h)ḥ* / ... *no dāḥḥ*. However, the second *naḥ* should almost certainly be read as the final syllable of the preceding *vājī*, thus **vājīnaḥ*, acc. pl. of *vājīn-*, a possibility floated by Ge in n. 6b. Note only does this reading eliminate the pleonastic enclitic, but it also eliminates the only supposed neut. nom./acc. sg. to *vājīn-*, which would be required to modify neut. *tókam* (e.g., Ge “siegestekrönten leiblichen Samen”). A change is only required in the Pp.; the Saṃhitā text is undisturbed. An asterisk should be inserted in the publ. tr. before “prize-winning.”

The seemingly late position of *naḥ* in pāda a, before the final word *vīhāyāḥ*, is actually not so late after all: it can count as (modified) Wackernagel’s position, after an accented initial word (*vadmā*) followed by the phrasal vocative *sūno sahasaḥ*.

VI.14 Agni

VI.14.1: This vs. is beset with small difficulties, which add up. To begin with, what should be done with *dúvaḥ* in the first pāda? Since the first hemistich has only a single

expressed verb, *jujōṣa*, the question is whether both *dúvaḥ* ‘friendship’ and *dhíyam* ‘insight’ are objects of this verb. Re (flg. Gonda) takes the two nouns as appositional and both objects of *jujōṣa*: “Le mortel qui a-toujours goûté en Agni le privilège (de) la vision-poétique,” but this depends on his particular interpr. of *dúvas-* and, even with that, doesn’t make a lot of sense to me. Ge in his n. 1ab calls *jujōṣa* a Zeugma, which I think *ought* to mean that both nouns are its object, with slightly different senses of the verb -- but in fact he supplies a separate verb with *dúvaḥ*: “Welcher Sterblicher Agni die schuldige Achtung (erweist) und mit seinen Gedanken gern (seiner) gedenkt.” Since he seems to take *dhíyam jujōṣa* as a phrasal verb “gern (seiner) gedenkt” [think well of him, vel sim.], he may be using Zeugma in a different sense (unless he’s taking “erweist” as a different sense of *jujōṣa*). But I do not see submerging the distinct sense of $\sqrt{juṣ}$ ‘taste, enjoy’ into an anodyne idiom with *dhī-*, ‘think well of’, and I don’t see how he could get that out of the two words that go into it. In the publ. tr. my solution to the *dúvaḥ* problem was to supply a form of $\sqrt{dhā}$ as in IV.8.6 (also adduced by Ge), I.4.5, VII.20.6, all with acc. *dúvas-* + LOC, as here. It would also be possible to supply a form of $\sqrt{kṛ}$, as in III.16.4, IV.2.9, VIII.31.9 with the same complements. However, the two hymns following this one each contain a form of \sqrt{van} ‘win’ with *dúvas-* as obj.: VI.15.6, 16.18, and I would therefore change my tr. to “(has won/wins) friendship in/by Agni.”

In the second pāda we encounter two closely related stems: the root noun *dhī-* as object of *jujōṣa* and the instr. *dhītūbhiḥ* to the *-tī-* stem to the same root, and some distinction must be meant. In my opinion, *dhīt-*, esp. in the plural, are generally the insightful thoughts of the human poet, whereas *dhī-* can be the insight that gods bestow on that very poet and that gives rise to his *dhīt-*, and those two values are found in our passage: the poet savors the *dhī-* that Agni provides him, which is manifested in the poet’s *dhīt-*.

The second hemistich presents more problems, beginning with the first word: *bhāsan* is analyzed by the Pp. as *bhāsat*, hence as a finite verb form -- either an injunc. to a thematic stem *bhāsa-* (so Gr, Macd VGS, tentatively Whitney Rts) or the subjunctive to a root aor. (so Gotō, 1st Kl, 82; also EWA s.v. *BHAS*¹). This is not impossible, but I take the underlying form to be the same as the sandhi form, *bhāsan*, and, with Old (ZDMG 55.305–6, Noten), identify it as a act. part. nom. sg. masc. The question is to what stem. Although as just noted, the older authorities posit a them. pres. *bhāsa-*, in fact the other two forms to this putative stem, *bhāsat* VI.3.4 and *bhasáthas* VI.59.4, are more likely root aor. subjunctives (see Gotō ref. above and my comm. ad locc.) Of course, a root aor. participle should technically be **psán*, but one wonders how long that would last. In any case, taking it as a finite form would not appreciably change the meaning of the hemistich; in that case I would alter the tr. to “he will chew it now; he should ...”

The pāda-medial sequence *X nú śá prá* is somewhat puzzling, since both *śá* and *prá* seem out of place. Gr takes *prá* with *bhāsan*, but I think it goes more naturally with *vurīta*, though in either case the position of the preverb is odd. I’m also not sure what, if anything, the retroflexion of *śá* after *nú* is telling us. I have found no other examples of this sequence, though cf. VIII.27.18 with ... *páro nú śāḥ*, without retroflexion.

The next question is what \sqrt{bhas} ‘bite, chew’ is doing in this context. Ge tr. “der soll zuerst den Mund auf tun,” remarking in his n. 1c that it means something like ‘yawn, gape’ -- but he doesn’t explain what this means in context. Both Old and Re supply “enemies” as obj. (e.g., Old “... möge (seine Feinde) zermalmend”); this makes

somewhat more sense, esp. given the hostile sentiments later in the hymn. But I think it can be better integrated into the context of the vs. in which it's found. The vs. has a sequence of verbs $\sqrt{juṣ}$ 'taste, savor, enjoy' -- \sqrt{bhas} 'bite, chew' -- $\sqrt{iṣam}$ $\sqrt{vṛ}$ 'choose (as) refreshment / nourishment', all centering on eating. In my view they all take the same object, *dhīyam*, and all metaphorically refer to the mortal poet's eating the insight that Agni has conferred on him -- that is, consuming it and turning it into his own substance. It is a striking image.

VI.14.3: As discussed ad IV.48.1 and VI.1.5, I take the phrase *rāyo aryāḥ* "the riches of the stranger" here and in IV.48.1 (cf. also VI.47.9; also *aryāḥ ... rayīḥ* in VI.20.1) and the phrase *rāya ubhāyāso jānānām* "both the riches of the peoples" in VI.1.5 as referring metaphorically to people, as the most valuable resource of a society. In our passage there are three different parallel designations for these same people: "the clans of Manu" (*mānuṣo viśaḥ*) understood from the last pāda of the previous vs. (2d), "the riches of the Ārya" (pāda b), and "the Āyus" (*āyāvaḥ* in c). To make matters more complex, these people are not only contending among themselves -- that is, divided and engaging in internal conflict -- but are also fighting united against common enemies, namely the Dasyu (*dāsyum*) and one without commandment (*avratām*), as was already seen by Ge (n. 3). This is the usual "fission and fusion" model of Rigvedic society, as discussed at length by Proferes (2007, esp. Chap. 2). The internal conflict is expressed in the first hemistich by the reciprocal verb *spārdhante* 'they contend with each other', while the second hemistich concerns their joint enterprises, expressed by the participles *tūrvantaḥ* 'overcoming' and *śīkṣantaḥ* 'seeking to vanquish'.

VI.14.4: The hero whom Agni bestows here is the concrete realization of the help (*avas*-) sought in vss. 1 and 3.

The standard interpr. (though not Gr) construe *sāvasaḥ* with *bhiyā* "with fear of his vast power." This is certainly possible, but a construction with *saṃcākṣi* seems equally possible and the adjacency of the two words (though across a pāda boundary) very weakly supports my interpr.

VI.14.5: By my interpr. *rayīḥ* here has the same metaphorical sense as *rāyaḥ* in 3, namely manpower, or perhaps more narrowly the hero given by Agni in 4. Both Ge and Re take *sahāvā* 'victorious' as an epithet of Agni, despite the hemistich boundary. This is presumably because the adj. is felt to be more appropriate for an animate being than for wealth -- but this problem disappears if we take wealth figuratively for manpower. (They may also unconsciously take the 2nd position of *yāsya* in c as an indication that the rel. cl. begins there, though of course they regularly interpret 2nd position relatives correctly.) The repeated adj. *āvṛtaḥ* is also better applied to an animate being (4x of Indra, once [oddly] of barhis), and it must belong to the rel. cl.

VI.15 Agni

VI.15.1: On *rñjase* see comm. ad IV.8.1. A tr. "aim at/towards" would be more transparent here.

The problematic pāda here is c: *divāḥ*, *kác cid*, and *ā* are difficult to construe and interpret. Ge takes the first as referring to ‘day’ rather than ‘heaven’ and makes it dependent on *kác cid*: “zu jeglicher Zeit des Tages,” but *divāḥ* is far more often ‘heaven’ than ‘day’ (the latter sense usually confined to use with *trír ā* and a few temporal adverbs). Re takes *divāḥ* as an abl. of ‘heaven’ (“Il s’avance du ciel”), and he takes the *kác cid* adverbially with *janúṣā ... śúciḥ* (“pur de toute manière quant à la naissance,” where the indefinite sense of *kác cid* has been replaced by a totalizing one). In the publ. tr. I agree with Re in taking *divāḥ* as ablative of ‘heaven’, construing it with distant *ā*, and supply ‘food’ with *kác cid*. But I now don’t think this makes much sense. I will suggest an alternative that makes more sense, but that doesn’t solve all the difficulties and requires some special pleading.

First I’d observe that the word order in this pāda seems particularly contorted. I ascribe this to the position of *janúṣā*: this instr. occurs 20 times in the RV and it always occurs immediately after the caesura, whatever its function in the clause. In this particular case, it is generally agreed that *janúṣā* should be construed with *śúciḥ* (see Ge’s n. 1c), despite the intervening material. I’d argue that the need to plunk down *janúṣā* smack in the middle of the pāda has disrupted the constituencies of the rest of the pāda as well. Therefore, we cannot use word order and adjacency as reliable guides here (even less so than in the rest of the RV).

Now, let’s start with the verb *véti*, which opens the pāda, and with the observation that the poet of this hymn is supposed to be Vītahavya, who is in fact mentioned in both the other vss. of the trca (2c, 3d). If we decompose this cmpd. name we can make a putative *havyām* ‘oblation’ the object of *véti* (cf. I.74.4 *véṣi havyāni*; sim. III.53.1, VI.60.15, etc.; for similar gapping in this hymn, see 14b), which can be qualified by *kác cid*: “he pursues any (oblation) whatever.” I further suggest that *divāḥ* should be construed with *ā*, as in my publ. interpr., but that here *ā* means ‘all the way to X’, rather than ‘from X here’. Although in the ‘all the way to’ sense, *ā* normally precedes the ablative (see Gr, s.v. *ā*), as already noted, the word order in this pāda seems particularly scrambled, and, in any case, *ā* often follows an acc. in the ‘to’ sense. I would therefore now substitute the tr. “Just he, blazing from birth, pursues any oblation whatever all the way to heaven.” This would be a description of the flames rising up towards heaven as they carry the oblation up to the gods.

The next pāda is implicitly contrastive: although the flames of the ritual fire actively reach for heaven in pāda c, the fire itself, just kindled, starts by burning the kindling sticks, which are immovable as opposed to the oblation later poured into the fire.

The cadence of d is bad.

VI.15.2–3: In accord with the standard interpr., in the publ. tr. I take *vītā-havya-* in 2c and 3d as a PN, which the Anukr. also provides as the name of the poet of this hymn. But since in VII.19.3 the cmpd is an adj. modifying Sudās (‘whose oblation is pursued’), I now think it likely that the same adjectival value should be slotted in here as well: “well pleased in the one whose oblations is pursued” and “for the one whose oblation is pursued.” See also disc. of *vītī-hotra-* ad II.38.1. The Anukr. ascription was transparently plucked from these two vss.

VI.15.2: The first hemistich treats Agni in the accusative, so that no grammatical person needs to be expressed. It therefore appears to continue the 3rd ps. of vs. 1, but modulates to the 2nd ps. reference of cd.

VI.15.4: As noted in the publ. intro., this initial vs. of the 2nd ṛca is a variant on the 1st hemistich of the 1st ṛca: in their first pādas an opening of 5 ending in *vo* is followed by *ātithim*; the end of the 2nd pāda of vs. 1, *ṛñjase girā*, is reprised by 4cd ... *suvṛktībhiḥ*, ... *ṛñjase*.

VI.15.5: In b both Ge and Re take *uśāsaḥ* as a nom. pl. rather than a gen. sg. as I do (e.g., “comme les aurores avec leur rayon”). Either would work contextually. However, in IV.1.17 in the phrase *uśāso bhānūḥ* (like our *uśāso ná bhānúnā*), *uśāsaḥ* has to be gen. sg. and Ge so interprets it there.

In c and d I take the crucial terms with double reference, in both simile and frame. In c this term is the pres. part. *tūrvan*: in the frame it refers to Agni and is construed with loc. *yāman* “going in triumph on his course”; in the simile it is construed with loc. *rāṇe* “like the victor in the battle.” The battle with (lit. of) Etaśa is a reference to the conflict between Indra and the Sun involving the Sun’s horse Etaśa in some unfortunately puzzling way. To make this clear, “battle over Etaśa would be a better rendering, as MLW points out to me. A further resonance of this phrase *tūrvan ná yāman* is the PN Tūrvayāṇa found several times in the RV, incl. nearby VI.18.13.

nū in c seems to have no function and is curiously positioned, though it might be noted that there’s a minority position of *nū/nū*, penultimate in the pāda, and this is fairly common in VI.

As for d, the standard interpr. (Old ZDMG 313 + Noten, Ge, Re) take the part. *tatṛṣṇānāḥ* only with the simile; this requires supplying an elaborate verbal predicate (“goes to water”) that is not found in the Sanskrit; cf., e.g., Old “er der herbei (eilt) wie im Sonnenbrand der Durstende (zum Wasser eilt).” I again think that the participle applies in both simile and frame: in the simile it refers to someone becoming thirsty in the (sun’s) heat, whereas in the frame it refers to Agni “thirsting” for oblations. This participle is used unambiguously of Agni elsewhere (I.31.7, II.4.6) in describing his voracious appetite for fuel.

In a clever poetic trick the sun is referred to indirectly in both c (his horse Etaśa) and d (his heat: *ghṛnā*).

VI.15.6: The locatival inf. *gṛñṣāṇi* occurs only here and in VIII.12.19. Curiously, in both passages it is construed with āmreḍitas: here *priyām-priyam ... ātithim* (matching *agnīm-agnim* in pāda a), in VIII.12.19 *devām-devam ... índram-índram*. I don’t quite know what to do with this fact. Keydana (p. 178) takes it as a “Matrixinfinitiv” functionally equivalent to an imperative, pointing to impv. *duvasyata* in pāda a. However, it would also be possible to interpret it as I do, with *duvasyata* the main verb of both pādas and the infinitive an adverbial adjunct to both pādas. I would change the tr. of the āmreḍitas, however, to one more in harmony with that in VIII.12.19: “Time after time do friendly service to the fire with a kindling stick, time after time to your dear guest, in hymning (him).”

The morphology of *gr̥ṇīṣāṇi* is of course unusual, though it belongs with the small group of RV *-san-i* locative infinitives, some of which (cf. esp. *upastr̥ṇīṣāṇi*, which, however, I now consider to be based on *gr̥ṇīṣāṇi*; see comm. ad VI.44.6) are built to already derived verbal stems (see AiG II.2.924–25). In this passage it phonologically echoes *ghṛṇé* and *tatr̥ṣāṇāḥ* in the preceding vs. (5d), and in the next vs. (which also belongs to the next *ṛca*) *pāda*-final *gr̥ṇe*, which is also of course etymologically related.

VI.15.7: This vs. begins a new *ṛca*, but seems like a mish-mash of the vss. that precede it. The 1st *pāda*, *sámidham agnīm samídhā girā gr̥ṇe*, telescopes vs. 6: *agnīm-agnīm ... samídhā* (a), *gr̥ṇīṣāṇi* (b), *gīrbhiḥ* (c). It also contains two etymological figures (*sámidham ... samídhā* and *girā gr̥ṇe*). The next *pāda*, *śúcim pāvakām puró adhvaré dhruvám*, is more eclectic in its sources: *śúciḥ* (1c), *pāvakáyā* (5a), *svadhvarám* (4b); *pāda*-final *dhruvám* has no direct correspondent, but resonates with both *dúvaḥ* (*pāda*-final in 6e) and *adrúham*, which ends the next *pāda* (7c). The first two words of *pāda* c, *vīpram hótāram* have correspondents in 4c and b respectively. Only *pāda* d breaks significantly new ground.

VI.15.9: The publ. tr. fails to tr. *dūtó devānām*. The tr. should be emended to “... as messenger of the gods, you speed ...”

The lexeme *vī√bhūṣ* occurs only here and I.112.4 until Epic, and it is not entirely clear what it means here. “Seeking manifestation” of the publ. tr. depends on the usage of rare *vī√bhū*, which can mean ‘become manifest’; an example is found (at least by my lights) in vs. 14. But it might have the less marked meaning ‘becoming conspicuous, distinguished’ or ‘becoming extended/extensive’. In any case it picks up *vībhúm*, which opens the last *pāda* of the preceding vs. Note also the polarized preverbs *vī* and *sám* at opposite ends of the hemistich.

The Pp. takes *ubháyāṁ* as acc. pl. masc. *ubháyān* (so also Gr), but as Old suggests (ZDMG 55.313, Noten), it could be neut. pl. *ubháyā* with nasalization in hiatus, and a neut. pl. construed with *vratā* is an attractive choice here. The phrase *ubháyā(ṁ) ánu vratā* “following both (kinds of) commandments” would of course refer to those of gods and men, who were mentioned in 8c.

VI.15.10: This vs. is rhetorically pleasing, though unremarkable in content. It opens with three cmpds with *su-* as first member, all in the realm of appearance (at least as I interpret the sequence) *suprátikam sudṛśam s(u)vāñcam*. The next *pāda* juxtaposes a negated form of the pf. part. of *√vid* with a comparative built to the same stem (though different allomorph), *ávidvāṁso vidúṣṭaram*, picked up by a third form to this participle, *vidvān*, at the end of the next *pāda* -- which itself participates in an alliterative sequence *vísuvā vayúnāni vidvān*.

svāñc- of course patterns and inflects with the *-añc-* stems, generally built to preverbs/adverbs in the meaning of ‘directed’ (e.g., *údañc-* ‘directed upward’), and in 2 of its 6 occurrences (IV.6.9, VII.56.16) the context favors the sense ‘well-directed’ (VI.58.4 is unclear). But here, as well as in similar adjectival sequences in VII.10.3 and in IX.73.7, it appears with words referring to seeing or appearance, and I suggest that this usage preserves a semantic relic of the ‘eye’ word (**h₃ekʷ*) that, according to most, is one contributor to the blend that produces the hybrid suffix *-añc-* (see, e.g., AiG III.230). I

therefore render it in these contexts as ‘of lovely outlook’ (contra Ge’s ‘schön von ... Bewegung’). Re’s ‘de belle allure’ avoids the directional sense and may reflect an analysis similar to mine, but he does not comment. A zero-grade of the ‘eye’ word is also buried in *prātīka-*, also found in our sequence (*suprātīka-*), and in *ānīka*, which contributes *svanīka-* in 16a (for both see EWA s.vv.).

Although pāda-final *vidvān* is generally used absolutely, here it must take an object, *vayúnāni*.

The clear *s*-aor. subj. *yakṣat* in c invites a subjunctive reading of *vocat* in the next pāda, though it is of course injunctive. Nonetheless, modal readings are quite common for this stem.

VI.15.11: This vs. is unusually conjunction-heavy, with *utā* in pāda a (conjoining clauses) and in d (conjoining nouns), and *vā* 3x in c. In fact there at first appear to be more *vā*’s than there are constituents to conjoin: *yajñāsya vā nísitim vā-úditim vā*. However, Klein (DGRV II.195) plausibly explains the first *vā* as sentential (I would prefer the term ‘clausal’ in this case), connecting pāda b with its relative clause *yáh ... ānaṭ ...* with its continuation in pāda c. The other two *vā*’s are subclausal, conjoining the two *-ti*-stem action noun phrases, *nísitim vā-úditim vā*, both of which govern the gen. *yajñāsya*, the constituency being interrupted by the clausal *vā* in Wackernagel’s position.

In c I assume that the verb is a gapped repetition of *ānaṭ*. Klein tr. the skeleton of bc as “who has attained ... or (has brought about) ...,” so I assume he thinks c has a different underlying verb from b. But the full VP *nísitim ... ānaṭ* in nearby VI.13.4, as well as VI.2.5 *nísitim ... naśat* also in this Agni cycle, establish this as a ritual idiom.

Note the complementary preverbs *ní* ‘down’ and *úd* ‘up’ in the conjoined *nísitim ... úditim*. The latter word is not otherwise used as a ritual term; in all its other occurrences it is a loc. and refers to the rising of the sun. Here it seems to refer to the outcome or the progress of the sacrifice, though it could be more narrowly used for the “rising up” of the fire when it is kindled. This is probably the better interpr. because in 2 of the 4 occurrences of *nísiti-*, VI.2.5 and VIII.19.14, it is implicitly use of the fire.

VI.15.12: The problematic pāda here is c. The initial *sám* in both c and d and the fact that d otherwise contains only a phrase in the nominative invite us to assume that c and d have the same structure and that we should supply the verb *abhy ètu* from c for d, as well as, quite possibly, *tvā*. But though the NP in d, “thousandfold desirable wealth,” is something we would quite naturally invite to “come to you entirely,” the general assumption is that *dhvasmanvát*, whether it modifies *páthah* ‘fold’ (Gr, Re) or not (Old, Ge), refers to something undesirable -- e.g., Old’s (ZDMG 55.313) tentative “was voll von Zerfall [decay] ist.” It is therefore uncomfortable to invite it to come anywhere near Agni or us. Certainly both occurrences of its base *dhvasmán-* (IV.6.6, VIII.66.15) are in fact in negative contexts. But the substance itself, smoke, is semantically neutral, and in this ritual context something ‘possessing smoke’ can be positive: the oblation as it is poured into the fire will be surrounded by smoke, and, by one model of the sacrifice, it will go to the gods in Agni’s smoke as that smoke rises to heaven. I therefore supply *havyám* here (found in this *ṛca* in 10d), and take *tvā* and *páthah* as two sequential accusatives of goal. Agni is the first destination of the smoke-wrapped oblation, which must be poured into the fire, but it then goes to “the fold (of the gods)” for their

consumption -- *devānām* is a standard dependent gen. with *pāṭhaḥ* (esp. in Āprī hymns, II.3.9, III.8.9, etc.).

VI.15.13: Pāda b is nicely configured: *viśvā veda jānimā jātāvedāḥ*. The first two and the last two words alliterate. The final word, the epithet *jātāvedas-*, is immediately preceded by two independent words etymologically related to its two members (in reverse order): *veda* to *-vedāḥ*, *jānimā* to *jātā-*. (Of course, *-vedas-* may ultimately derive from *√vid* ‘find, possess’, but at least folk-etymologically it belongs with *√vid* ‘know’.) And *viśvā veda* evokes the cmpd *viśvā-vedas-*, a parallel formation to *jātā-vedas-*. Nothing profound here, but a pleasing way to deploy four words.

VI.15.14: The first pāda is a 13-syllable Triṣṭubh; as Old notes (ZDMG 55.313 and Noten), it would be possible to delete init. *agne* without affecting sense, but on the other hand it is difficult to see why it would have been secondarily appended.

In pāda a it is unclear how to construe *viśāḥ*. Note first that by accent it must be abl./gen. sg., not acc. pl. (*viśāḥ*). Ge (see n. 14ab) takes it as a second gen. with following voc. *hotāḥ*, but in that case we would expect *viśāḥ* to lose its accent in the voc. phrase (as *adhvaryasya* has), and, further, *viśó hotar-* is not a standard title, as far as I can find. It might be possible to supply **pāti-* “(lord) of the clan,” matching *grhāpatiḥ* in the previous vs. (13a), next to *hotā*, cf. *viśpātiḥ* in 8d. However, I think the most likely solution is similar to the one also proposed for 1c -- to supply *havyām* as the object of *vēḥ* in b (see *havyā* in d), with *viśāḥ* dependent on *havyām*. Recall that the poet’s name is Vītahavya, and he seems to like concealed puns on his name. As a support for their connection, note that the two phonologically similar words *viśāḥ* and *vēḥ* take the same position in their respective pādas. Re’s solution is somewhat similar to mine, with *viśāḥ* dependent on an object supplied for *vēḥ*, but his proposed object is “la fonction du messenger” and he makes *adhvarasya* a parallel gen. to *viśāḥ* ignoring its lack of accent. His supplied obj. *dūtyāni* is certainly conceivable: he adduces IV.7.8 *vēr adhvarāsyā dūtyāni ...* But to my mind the pun on the name of the poet weighs more heavily.

In pāda b there is close sandhi in the sequence *vēṣ t(u)vām*; the reason for this is unclear, esp. since by all standard interpr. (incl. mine) *t(u)vām* belongs to a new clause -- the parenthetical one marked by *hī* -- and so there is a particularly sharp syntactic boundary between them.

In c *mahinā* fits semantically much better in the subordinate *yād* clause than in the main clause (and is so taken by the standard interpr.), but it seems to be positioned too far to the left, with another element interposed before the subordinator: ... *mahinā ví yād bhūḥ*. I attribute this word order disturbance to the same factor that caused trouble in 1c: like *janúṣā*, *mahinā* only occurs immediately after the caesura in trimeter vs. Given this constraint, the only possible adjustment to produce the expected sequence would be an ordering *mahinā *yād ví*, which would put the subordinator in the correct 2nd position of its clause but produce a bad Triṣṭubh cadence (– – ~ ×). A somewhat similar situation is found in II.1.15c *prkṣó yād átra mahinā ví te bhúvat*, where *mahinā* causes some distortion in word order, though the placement of the subordinator is not affected.

With Lüders (438) I take *ṛtā* as neut. acc. pl. and supply ‘hymns’ (Lieder), rather than taking it as an instr. sg.; this interpr. is supported by VII.39.1 *ṛtām ... yajāti*, with the neut. sg. acc.

Note the phonetic interplay of *v*, *h*, and *y* in d *havyā vaha yaviṣṭha yā ...*

VI.15.15: As Old points out (see publ. intro.), this is no doubt the last vs. of this collection of ṛcas, with vss. 16–19 later additions. There is some faint sign of ring composition with the first ṛca: *súdhītāni* in pāda a reprises *súdhitam* in 2a, as *dadhīta* with Agni as object does *dadhūh* also in 2a. The last three pādas of this vs., esp. de, appear to be a refrain: pāda e is identical to VI.2.11e = 14.6e in this Agni cycle, and pāda d *āgne víśvāni duritā tarema* is a variant of VI.2.11d = 14.6d *dviṣó āṃhāṃsi duritā tarema*, hence my supplied “narrow straits” here. These refrain pādas also signal that the hymn (or the ṛcas loosely collected into a hymn) once ended here.

On the anomalous position of *hí* here, see comm. ad III.31.12, where the idiosyncratic behavior of *√khyā* is discussed. Here the immediate preverbal position of *hí* is esp. anomalous because the preverb *abhí* has been fronted (as opposed to III.31.12 ... *ví hí kyán* #, where the preverb stays in the verb complex).

VI.15.16: The phrase “wooly womb” (*ūṃāvantam yónim*) is striking as a designation of Agni’s seat. Ge (n. 16b) thinks it refers to the barhis, but in fact the fire is not placed on that dry grass, which might produce a conflagration disruptive to the ritual. I think it must rather refer to twigs and foliage still present on the firewood.

In agreement with Ge (who is hesitant -- see n. 16c) and Re, I see a verse-internal enjambment: the two accusatives directly after the hemistich boundary, *kulāyīnam ghr̥tāvāntam*, qualify *yónim*, which ends pāda b; then there is a syntactic break in the middle of the pāda, with dat. *savitré* construed with d, not c. This is unusual, but it is difficult to find a function for *savitré* in the preceding clause.

VI.15.17: Ge and Re take *ānkūyānt-* as a positive quality parallel to *āmūra-*; e.g., Re: “(dieu) faiseur de méandres, (dieu) exempt d’égarement.” I think rather that they are opposites and that the vs. concerns the flight of Agni and his recovery by the gods: note the imperfect *ānayan* (Pp. *ā ānayan*, though technically it could be *ā nayan* with an injunctive). Though Agni sought to elude the gods by taking a circuitous course, they found him and brought him straight back from the dark depths of the water. The “dark places” can of course also refer to the night, after which the ritual fire is kindled, but I think the primary reference is mythological.

VI.15.18: On *jāniṣvā* as belonging to the *-iṣ-* aorist, see Narten (Sig.-Aor, 68).

VI.15.19: The slangy *asthūri* ‘not one-horse’ is appropriate to this later addition to the hymn. Its positive *sthūri* ‘one-horse’ is found in the RV only once in the late X.131.3, also in a slangy context.

VI.16 Agni

VI.16.1: The tr. “for the human race” reads like a dative, but *mānuṣe jāne* is of course a locative. Unfortunately English lacks the “bei” / “chez” locution that would idiomatically tr. this loc.

VI.16.2–3: The first pādas of these vss. end respectively in *adhvaré#* and *ádhvanah#*, which seems to signal an awareness of the deeper etym. relationship between the two stems.

VI.16.3: Klein (DGRV II.122) tr. b *pathás ca devāñjasā* as “and the paths going straight unto the heavenly ones,” apparently reading *devāñjasā* as a compd., contrary to the Pp. and all standard tr. (incl. mine), which separate *deva* as a voc. Although I think the voc. interpretation is correct, cf. X.73.7 *pathó devatrāñjaseva yānān* “... the paths as if going straight to the gods,” with the adv. *devatrā* immed. preceding and construed with *āñjasā*. On the basis of X.73.7 and similar phraseology, Insler (KZ 82 [1968] “Vedic *āñjasā*, *ñjasānā-*, and the Type *sahasānā-*,” p. 6) takes *devāñjasā* as a shortening of *devatrāñjasā* or “a type of haplological abbreviation of *devayānān āñjasā*” or possibly even directly as an “adverbial-type compound” *devāñjāsā*, and Klein must be flg. the Insler interpr. one way or the other. Although X.73.7 is suggestive, I do not think it is sufficient to allow the rather extreme type of haplology posited by Insler.

VI.16.4–6: As noted in the publ. intro., each vs. in this *ṛca* begins with a form of the 2nd sg. prn., although all three are slightly different: the acc. sg. *t(u)vām* in 4a shows distraction; both 5a and 6a contain the nom. sg., but the 1st is undistracted, the 2nd distracted.

VI.16.4: Klein (DGRV II.122) ascribes “logical conjunctive value ‘therefore’” to *ádha* here, connecting vss. 3 and 4. But since vs. 4 begins a new *ṛca*, it seems unlikely that vs. 4 is being conjoined to the *ṛca*-final vs. 3. Moreover, *ádha* here is displaced from its usual pāda-initial position to immediately precede *dvitā*, as it does several times elsewhere (I.132.3, VIII.1.28, 84.2, all pāda-final as here; also pāda-initial VIII.13.24 = IX.102.1, VIII.83.8). On the preceding page (DGRV II.121) Klein calls *ádha dvitā* a collocation and gives it “quasi-formulaic status.” The occurrence here must belong to this group.

In b *bharatō vājībhiḥ* “Bharata with his prize-winner” is an untranslatable pun on the poet’s name Bharad-vāja, whose name appears in the next vs. (5c).

The ritualistic verbs *īle* ‘reverently invoke’ (a) and *ījé* ‘sacrifice’ (c) are exact rhymes (save for accent). I take them here as 3rd sg., as do Ge and Re. Although the 3rd sg. to the former stem is usually *ītte* with *īle* the 1st sg., in this context a 3rd sg. reading is favored, and the lack of accent on *īle* allows it to be drawn into the morphological orbit of the pf. *ījé* (cf. 3rd sg. perfect-accented *īḍé* in IV.3.3). Kü (389), flg. Tichy, takes both verbs as 1st sg., which is equally possible, as long as Bharata is referring to himself by name: “You do I, Bharata, reverently invoke ...”

VI.16.5: A verb must be supplied in this vs., with ‘give’ being the obvious choice.

VI.16.6: The “divine race” (*daívyam jánam*) here may resonate with the “human race, race stemming from Manu” (*mānuṣe jáne*) in 1c, though they belong to different *ṛcas*.

VI.16.7–9: This *ṛca* likewise has a form of the 2nd sg. prn. beginning each vs. (7 *t(u)vām*, 8 *táva*, 9 *t(u)vám*), again all different.

VI.16.8: (*prā*) *yakṣi* is morphologically ambiguous -- 2nd sg. act. -*si* impv. or 1st sg. middle *s*-aor. -- and opinion is divided: Old (ZDMG 55.314, Noten) dithers and doesn't ultimately decide; Ge, Narten (Sig.Aor. 200–201), and Klein (DGRV I.385) opt for the 1st sg., Re for the 2nd but to the root $\sqrt{yakṣ}$. A strong factor in favor of a 2nd sg. to \sqrt{yaj} is the presence of an undoubted form of this same -*si* impv. in the following vs. (9c; cf. also 2c); in favor of a non-2nd-sg. interpr. is the difficulty of construing pāda-initial *táva* with such an impv. I consider the form the 2nd sg. act. to \sqrt{yaj} , on the basis not only of 9c but also vs. 13 in the previous hymn (VI.15), where Agni is the subj. of a (pres.) impv. to *prā* \sqrt{yaj} : VI.15.13d *yájiṣṭhaḥ sá prā yajatām ṛtāvā* “let him, the best sacrificer, the truthful one, set the sacrifice in motion.” What then to do with the rest of the first two pādas? I accept Ludwig's suggestion (registered by Old) that *prā yakṣi* is a parenthesis -- or rather, I think that, because of the rigid parallel patterning in this ṛca, *táva*, which belongs with the clause beginning *saṁdṛśam*, has been fronted around the peremptory impv. *prā yakṣi*, and that it is dependent on the NP *saṁdṛśam utá krátum*: “your manifestation and resolve do they take pleasure in.” This is, strictly speaking, ungrammatical, but rhetoric occasionally trumps syntax.

VI.16.10: Both Ge and Re supply ‘gods’ as the underlying object of *vītáye*, and this is supported by *devāvītaye* in vs. 7 (and 41). But as in the previous hymn (VI.15.1, 14), I think the default object of $\sqrt{vī}$ here is *havyá-*, suggested by the name Vīta-havya, the poet to whom VI.15 is ascribed. Here the *havyá-* can easily be extracted from the parallel purpose dative *havyá-dātaye* in b and its absence explained as gapping. However, the Ge/Re solution is certainly possible, and there are no major implications either way.

VI.16.13–15: Another ṛca with fronted ‘you’ beginning all three vss., though here the 2nd two occurrences actually involve the enclitic with preposed pronominal prop: 14–15 *tám u tvā*, as opposed to 13 *tvām*. This ṛca is also characterized by snippets of mythology, contrasting with the otherwise monotonous focus on the standard ritual tropes. Unfortunately the snippets are just that -- they remain undeveloped.

This ṛca is recited in śrauta ritual during the churning of the fire; see Krick (Feuergründung, 297)

VI.16.13: On the ritual use of the lotus and the relevance of this vs., see Krick (Feuergründung, 155–59), where (155) she calls this vs. “die Primärquelle für die Verwendung eines Lotusblattes im Feuerritual.”

In c *vāghātaḥ* can be gen. sg. or nom. pl. (as I take it, with Ge and Re). Since I don't know what's going on here, I would certainly not exclude the gen. sg.: “... (churned) from the head of every *vāghát*” (so Krick 297) It is perhaps relevant that *vísvasya vāghātaḥ* phonologically echoes *vísvasya jāgataḥ* “of the whole world” (I.101.5, IV.13.3, VI.50.7, VII.60.2, 101.2, X.73.8).

VI.16.16: The stem *ítara-* is very rare in the RV and has a late distribution: besides this passage it is found only in the funeral hymns X.16.9–10 and X.18.1. This comparative isolation makes it difficult to determine its nuance here. Both Ge and Re (cf. also Klein DGRV I.266, Oberlies RdR I.242) think the phrase “other hymns” (*itarā gírah*) refers to

the hymns of a rival sacrificer (or sacrificers), and certainly the *-tara-* suffix implies a choice of two, which has the further potential implication that one of them is bad. But, though the publ. tr. rather vaguely reflects this interpr., I now think it is likely wrong. Instead, I think that the implicit contrast is between *itthā* ‘in just this way’ and *ítara-*, and I further think that *ítarā gírah* is the acc. obj. of *brāvāṇi*, not the nom. subj. of a nominal clause in embedded direct speech. By this interpr. the speaker is telling Agni that in addition to the hymn or hymns he [=Agni] has already heard, the speaker will tell him other hymns *in the same manner* as the previous ones. In other words, he is promising a continuation of the recitation that has already pleased Agni, as well as promising to strengthen him with a physical offering — the usual pairing of verbal and physical in the sacrifice. This interpr. follows that of Hertha Krick (Feuergründung, p. 571): “Komm herbei, Agni, schön will ich dir auf solche Weise noch andere Lobpreisungen sagen! Durch diese Tropfen sollst du wachsen.” I would now emend the tr. to “Come here. I will speak other hymns to you, Agni, in this same way, and with these drops here you will become strong.”

Oberlies claims that this is one of the only places in the RV that soma is pressed for Agni, but I do not see why the drops (*indu-*) can’t be drops of ghee. To be sure, *indu-* overwhelmingly refers to soma drops, but I don’t think that soma *has* to be the referent.

VI.16.17: Note the phonological resonance between 16b *ítarāḥ* and 17b *úttaram*.

The temptation is very strong to take *dadhase*, despite its lack of accent, as the verb of the subord. cl. introduced by *yátra kvà ca* in pāda a, whose correlate *tátra* begins the last pāda (c). And indeed almost all interpr. (Old, Ge, Re, Klein DGRV I.266) have succumbed to this temptation. Old (ZDMG 55. 314–15) constructs an elaborate justification for the interpr., which he maintains in the *Noten* (though without the extensive special pleading). But despite Old’s claim (*Noten*) that “*dadhase* kann nicht ohne Gezwungenheit als Hautptsatzverb aufgefasste werden,” I see no problem. I agree that a form of $\sqrt{dhā}$ should be supplied in the *yátra* clause -- perhaps *hitám*, as in I.187.6 *tvé ... máno hitám*. The main clause of b, with its short-vowel subjunctive *dadhase*, expresses the next step in the process: after he has set his mind on something, he then will apply his skill to it -- the progression from mental conception to physical realization that we frequently encounter in the RV. I take *úttara-* here not as a qualification of value, ‘higher’ (e.g., Klein’s “higher skill”), but as a temporal or logical ‘next, later’ expressing the progress from a to b. The *tátra* clause of c gives us a third step, but the fact that this adverb correlates with *yátra* does not mean that the intermediate clause has to be under the domain of *yátra*.

VII.16.18: It is not clear whether *te pūrtám* refers to a gift given *to* Agni or *by* him. The publ. tr. takes it in the former sense, assuming that our gift to Agni will trigger his own actions for us in pāda c, in the standard reciprocal model of Vedic sacrifice. Scar (293), in keeping with his interpr. of *nemānām* (see below), also thinks it’s a gift to Agni, but from others (“was [dir von anderen] geschenkt wird”). Re (see esp. his n. expanding his tr.) takes it as Agni’s gift to us, and I interpr. Ge’s “deine Schenkung” in the same fashion. In fact, either interpr. is possible, and the choice will be influenced by one’s interpr. of pāda c.

The stem *néma-*, cognate to Aves. *naēma-* ‘half’, is implicitly oppositional, picking out one moiety or side, or simply “some” out of a larger group. Here the unaccented gen. pl. *nemānām*, part of the voc. phrase headed by *vaso*, refers, in my view, to *our* side. This is clearly Ge’s view because he footnotes his slightly awk. “du Gott der einen Partei” with “Der Fromme oder Arier.” Other renderings are so awkward as to be almost unintelligible: Re “o Vasu, (dieu) de quelques-uns,” Klein (DGRV II.71) “o Vasu of some (races).” And Scar (293) takes it as referring to the opposition (“o du Vasu der andere”), which then requires Agni to do some amends-making in pāda c. I consider it extremely unlikely that the poet would address Agni, the focus of his praise, as a god of just *some* people, diluting his power and denying his omnipresence -- much less as a god of others. I might, however, slightly modify the publ. tr. from “on (our) side” to “of (our) side.”

At first glance pāda c, *átho dúvo vanavase*, with its middle voice seems to involve Agni’s winning *dúvas-* for himself. This would be compatible with the Ge/Re interpr. of pāda a: if Agni gives us a not insignificant gift in pāda a, he has a good chance of winning our *dúvas-* in c. However, the almost identical expression in the immediately preceding hymn, VI.15.6d *devó devēṣu vānate hí no dúvaḥ* “for the god will win friendship for us among the gods,” with the crucial loc. *devēṣu* and dat. of benefit *naḥ*, suggests that Agni is winning something on our behalf. Cf. also, in this hymn, VI.16.28 *agnír no vanate rayím* “Agni will win us wealth.”

The root \sqrt{van} ‘win’ is strongly represented in this hymn, esp. in the middle section. Here we have *vanavase*; elsewhere *vanvánn ávātaḥ* 20, *vanván* 26, *vanvántaḥ* 27, *vanate* 28, as well as *vivāsasi* 12. This repetition cuts across *ṛca* boundaries.

VI.16.19: The “passive” aorist *agāmi* is a hapax and, in this context, a scrambling of adjacent *āgní(r)*.

VI.16.20: The root $\sqrt{dās}$ ‘piously serve’ almost never takes an acc. object of the service or offering (but see vs. 31 below); moreover, it almost exclusively has a mortal subject and a god as recipient of the piety. Here, however, we have the opposite situation: it is impossible to avoid taking Agni as subject and a very concrete *rayím* as acc. object, with the implied recipients being us mortals. The clue here may be the preverb, as *āti* $\sqrt{dās}$ in its other occurrence seems to mean something like ‘out-pious the pious’: *maghaír maghóno áti śūra dāsasi* “With your bounties you outdo the bounteous ones in piety, o champion [=Indra].” Although the case frame is not exactly the same, the nuance is similar: human patrons are bounteous, but Indra is super-bounteous. In our passage Agni provides wealth “beyond all earthly (goods).” I previously thought that “earthly goods” were simply those material things that have their origins on/in the earth rather than heaven, but it may well be more pointed than that here: “goods that are given by those who stem from/dwell on earth, that is, humans.” So Agni outdoes human givers by providing wealth in excess of all the goods they can supply. On ‘goods’ as the appropriate noun to supply with *vísṃvā ... pāṛthivā*, cf. VI.45.20ab *sá hí víśvāni pāṛthivāṃ, éko vásūni pātyate* as well as VI.59.9, IX.100.3, X.111.10.

VI.16.22: Pāda a contains a 2nd plural enclitic prn. and a plural voc. (*vaḥ sakhāyaḥ* “to/of you, o comrades”), while c has two 2nd singular imperatives (*árca gāya*). The discrepancy

in number must reflect the common situation of a poet's mixing address limited to himself with address to his colleagues and fellow ritual participants. So Ge (n. 22), and see my 2009 "Poetic Self-Reference in the *Rig Veda* and the Persona of Zarathustra," BAI 19 (Fs. Skjaervø). Ge suggests without much enthusiasm that *ārca gāya* could be shortened 1st sg. subjunctives (**ārcā *gāyā*), evidently responding to Caland/Henry's reading the verbs thus in their 1906 *L'Agniṣṭoma*, p. 428 (see Old, who likewise rejects it). It's worth noting that VI.45.4 has the same configuration but with 2nd plural imperatives: *sākhāyaḥ ... , ārcata prā ca gāyata* "o comrades, chant and sing forth ..." This parallel is adduced by Bl (RR) ad V.52.4, where he calls our verse "a scrappy stanza ... modelled after existing patterns" (that is, VI.45.4). The parallel is certain apposite, but I doubt that our number discrepancy is simply the result of our poet jumbling together scraps drawn from different sources.

VI.16.23: The injunc. *sṭdat*, in conjunction with the acc. of extent of time *mānuṣā yugā* "through the human lifetimes," seems almost to have shed the literal sense of the root \sqrt{sad} 'sit' in favor of expressing pure durativity ("who, through the human lifetimes, *has (always) been ...*") -- though the immediately following *hótā* evokes the standard phrase for the installation of Agni as Hotar, with the full 'sit' clearly present if metaphorically meant. as in VI.1.2 *ādhā hótā ny āsīdah* ... ("then you sat down as Hotar") in this Agni cycle. I rather imagine both senses are meant.

VI.16.25: Given the proximity of *ūrj-* '(solid) nourishment' beginning c, *iṣayaté* in b might better be rendered in a manner closer to *iṣ-* 'refreshment' in the same semantic domain. So Ge "für die speisewünschenden Sterblichen," Re "pour le mortel cherchant la jouissance." I might suggest an alternative "... for the mortal seeking refreshment, / o child of nourishment." What gives me pause, however, is *iṣáyantaḥ* in vs. 27 in the same *ṛca*, where the 'prosper' sense is favored. Although our dat. part. has accent on the ending, whereas *iṣáyantaḥ* has (secondary) "causative" accent, in fact oblique forms of -*āya*-participles seem regularly to have desinential accent: cf. *mahayaté* (VII.32.9) to *maháyati*, *kṛpayatāḥ* (VIII.46.16) to *kṛpáyati*. See disc. in my 1983 -*āya*-book, p. 49 with n. 3. Therefore these two nearby forms are likely to belong to the same stem and invite the same tr.

VI.16.26: The *krātu-* is presumably Agni's; cf. vs. 23 *kavíkratuḥ* used of him. Ge tr. *krátvā* as "Mit dem Gedanken," and takes the interior pādas bc as the directly quoted content of that thought. In addition to the aberrant tr. of *krātu-* (though one could tr. "with the intention"), this seems unnecessary. Although, as Ge notes, *krátvā* in IV.1.1 does introduce such direct speech, it is marked there by *ítí*, and the circumstances there are different as well.

VI.16.29: This vs. ushers in a set of forms of \sqrt{bhr} (also vss. 36, 40, 41, 47, 48).

VI.16.30: Note the close sandhi effect in the voc. phrase *brahmaṇas kave*. As Ge points out, this pāda is a variant of I.18.3 *rākṣā no brahmaṇas pate*, with the more usual head noun *pāti-*. Because it is part of a voc. phrase and such phrases show close sandhi effects

elsewhere, this does not necessarily belong with the other instances of irregular sandhi of -s before *kaví-*, on which see comm. ad VII.18.2, though that may be a factor.

VI.16.31: I do not know what the *ā* ending the first pāda is doing. Sāy. takes it as preverb with *dāśati*, but this root doesn't otherwise appear with *ā*, and pāda-final position is a strange place to put a preverb. There's a pāda-final *ā* also in 35a, but it is easier to justify, as governing a locational acc.

I am disturbed by the usage of *dāśati* here; for another problematic form to this root, see disc. ad vs. 20 above. The example here describes not pious service but a hostile act exactly contrary to the standard usages of the root. It also deviates from the usual case frame (offer service to a god [DAT] with an offering vel sim. [INSTR]), though a few passages match ours by expressing the offering in the ACC, e.g. I.93.3 ... *yá āhutīm, yó vām dāśād dhaviṣkṛtim* "whoever will piously perform a poured offering or the preparation of an oblation for you." Assuming the reading is correct, I think we must see this as a monstrous reversal: instead of piously offering an oblation (ACC) to a god (DAT), the evil mortal is impiously offering *us* (ACC), as a sort of oblation, to a weapon of death (DAT). The standard tr. (including mine) elide the shock of the use of this verb of ritual service in such a context, by tr. *√dāś* differently from usual. But I'm not sure how to remedy this in tr. without a lot of explanatory baggage. Perhaps "who will 'piously' offer us ..."?

Ge and Re take *tásmāt ... āmhasaḥ* as a single NP "from that *āmhas-*," but this requires taking *yáh* in pāda a as an improper rel. for "when" (so Ge) or seeing the relation between ab and c as an anacoluthon (so Re), because their interpr. of c provides no referent for *yáh ... mártah* in the dependent cl. This can all be fixed by separating the two abl. in the main clause, with *tásmāt* the correlative to *yáh*. Since the immediately preceding vs. (30) has exactly the structure envisioned for our c pāda -- two parallel ablatives, one *āmhasaḥ* and the other referring to a person -- there is very local precedent.

VI.16.35: This vs. is syntactically incomplete (unless we take *sīdan* in c as a predicated pres. part., which seems unlikely, since this is a repeated pāda [=IX.32.4, IX.64.11]), but it works well as adjunct to the previous vs., 34.

Pāda a shows the preoccupation with kinship that is characteristic of Agni material. The paradox "father of his father" (*pitúṣ pitā* [note close sandhi effect]) probably reflects two themes -- 1) that the priest who kindles the fire is in some sense his/its father, but Agni the god has a fatherly relationship to his mortal worshipers, 2) that the offering fire (later called the *Āhavanīya*) is "taken out" of what is later called the *Gārhapatya* and is therefore in some sense its son, but the offering fire is more important than the other fires on the ritual ground and can therefore be considered their father.

The meaning 'syllable' for *akṣāra-* is quite stable in later Skt., but in the RV it sometimes has its literal sense 'imperishable'. Nonetheless in our passage I think 'syllable' is meant: the ritual fire is kindled when the hymn (here represented by the syllable) is recited. So, more or less, Ge "bei der (heiligen) Rede (?) aufleuchtend" (sim. Kü 250), though cf. Re "dans (l'espace) inépuissable."

The pāda-final *ā* in c was mentioned above ad vs. 31, where it was pointed out that the occurrence here in 35c can easily be accounted for. *ā* frequently governs a

preceding acc. (see collection in Gr., col. 169), and in fact *yónim ā* is found not only in this pāda and its repetitions (see above), but also in similar pādas in IX.61.21, 65.19).

VI.16.39: Unlike most *-hán-* cmpds, whose 1st member is the target of the smiting, in *śarya-hán-* the 1st member *śarya-* ‘arrow’ must be in an instr. relationship with the 2nd (see Scar 693), like *muṣṭi-hán* ‘smiting with the fist(s)’. Because “like a powerful shooter with arrows / one who shoots arrows” is exceptionally awkward in English, I’ve substituted ‘sharpshooter’, though it interferes with the *tigmá-* in *tigmá-śṛṅga-* ‘sharp-horned’ in the next pāda.

VI.39.40: The simile marker *ná* is wrongly placed in pāda b, for no obvious reason.

The two comparanda to Agni -- a bangle in the hand, a newborn babe, both carried -- suggest that this is the newly kindled fire, probably the offering fire, being taken out of the householder’s fire and carried to the east.

VI.16.41: This impression about vs. 40 is supported by vs. 41.

VI.16.42: However, the waters are somewhat muddled by vs. 42. The loc. *jātāvedasi* (the only such form in the RV) is puzzling, since *jātāvedas-* is one of the standard epithets of Agni and the accusatives in the vs. clearly refer to Agni as well. Thus we must be dealing with two fires. This idea would be perfectly compatible with the scenario I suggested for vs. 40 -- *except* that acc. *gr̥hapátim* in pāda c suggests that the newly born fire being “whetted” is not the offering fire (later to be called the Āhavanīya) taken out of the old fire and moved to its new location, but rather what will come to be called the Gārhapatya. The (later) ritual complex that our passage most resembles is the creation of the Mahāvedi (see my Hyenas, p. 89, inter alia), in which the old Āhavanīya of the standard ritual ground is moved further to the east during the creation of the Mahāvedi, and the old Āhavanīya becomes the Gārhapatya. Thus it seems that vss. 40–41 concern the further displacement of the Āhavanīya fire and 42 depicts the resettlement of the original householder’s fire onto the place the Āhavanīya occupied in the more restricted ritual ground. This may be Ge’s view; see his n. 41ab, where he refers to the *agnipraṇayana*, which is the technical term for carrying the Āhavanīya to the Uttaravedi in the animal sacrifice (see Sen, Dict. of Vedic Rituals, s.v.; Caland-Henry, Agniṣṭoma pp. 78–79). However, his n. 42 goes in a different direction. If this really does concern the creation of the Mahāvedi from the ordinary ritual ground, we would have evidence for this degree of elaboration already in (late) Rigvedic ritual.

VI.16.43: The *hí* in the impv. clause is somewhat disturbing, since there is no following impv. in this vs. to which the *hí* impv. clause could serve as basis. However, 44a contains two impvs. that logically follow the *yukṣvā* ‘yoke!’ -- namely *yāhi ā vaha* “drive and convey here!” and so the usual use of *hí* in impv. clauses can be seen here, across two vss.

VI.16.44: The very compressed pāda b could be elucidated with “... for (them=gods) to pursue (them=offerings).” There are numerous parallels that establish this as the intention.

VI.16.47: Bloomfield (ad V.6.5) proposes tr. our passage “We bring ... oblation with song fashioned in the mind,” suggesting that “the cases of *ṛcā* and *havīḥ* are inverted.” This is certainly true at the level of deep-structure formula: *hṛdā taṣṭā-* “fashioned by the heart” normally modifies a verbal product, e.g. I.171.2 *stómo hṛdā taṣṭāḥ*. But, as so often, the poet is playing with our expectations by producing a twist on the standard phraseology.

VI.16.47–48: This long hymn (or the short final *ṛca*) seems to end with a buried poetic signature: 47b ends with *bharāmasī*, 48c with *vājīnā*, the last word of the hymn. Together they are the elements that make up the poet’s name Bharadvāja.

VI.17 Indra

This hymn is marked by clusters of localized repetitions and echoes; see disc. below.

VI.17.1–3: These first three vss. form something of a unity. Each begins with a “drink!” imperative (1a *pībā sómam*, 2a *sá īm pāhi*, 3a *evā pāhi*), and each contains the lexeme *abhí√ṛd* ‘drill through to’. As outlined below, it is a pleasingly designed rhetorical structure, whose balance and contrast only become evident after conscious analysis.

VI.17.1: Ge (flg Gr, fld. by Schmidt, B+I, 144) takes *yám* as obj. of *abhí* and referring to *sómam* in the opening impv. phrase (“Drink the soma, towards which ...”). As Old points out (both ZDMG 55.319–20 and Noten), this entails either that the soma is within the cow enclosure or at least that breaking into the cow enclosure is a necessary auxiliary action for getting or preparing the soma -- which is, of course, not a standard part of the Vala myth. Old therefore emends the text, from *yám* to **yáh*, producing parallel rel. clauses concerning the Vala myth and the Vṛtra myth respectively, with Indra the subject of both, represented by **yáh*. But how would this corruption arise? Old suggests that **yáh* (**yá* in this sandhi context) was changed to *yám* because it immediately follows *abhí*, but it is hard to conceive of a Rigvedic poet who could be misled by a separable preverb, esp. since the 2nd hemistich has a supposedly parallel rel. cl. containing *yáh*, likewise following a preverb (*vī*). I agree with Old that Ge’s interpr. is unlikely, but I do not think this requires changing the text. Instead I think *pībā sómam* is an abrupt hortatory opening, essentially detached from the rest of the vs., and I take the *yám* as referring to the *ūrvām gávyam*. This whole clause anticipates the imperatival main clauses that end the next vss., 2d *sá indra citrām abhí ṛndhi vājān* and 3d ... *abhí gā indra ṛndhi*, both with *abhí√ṛd* and an obj. that refers to the contents of the cattle enclosure. My interpr. requires the rel. cl. of 1ab to float in syntactic suspension till it is resolved in 2d, with a number of other things going on in between -- mostly rel. clauses with Indra as subject, but I do not think this is much to ask of a Rigvedic audience. In fact, I think that the rel. cl. in 1ab is the initial marker of the ring structure that prevails in these three vss.

In d Ge suggests that *vṛtrām* is a “collective singular” and should be construed with neut. pl. *vīśvā amitṛyā*, tr. “alle feindseligen Vṛtra’s.” I see no advantage to ignoring the number, and the passages he adduces as parallel do not impose the notion of “collective singular.”

VI.17.2: Again I think the “drink!” imperative is semi-detached from the rest of the vs., a mere interruption of the sequence of rel. clauses with Indra as subj., which begins with a fully realized clause in 1cd and continues in 2abc with a set of five compressed definitional nominal clauses with an izafe-like feel.

VI.17.3: The “drink!” sequence is brought to an end with a summary *evā* in 3a. The verse continues with a series of 7 choppy imperatival clauses, all but the first (*māndatu tvā*) with Indra as subj., which balance the choppy nominal relative clauses of vs. 2. The last of these clauses is the third iteration of *abhí√trd*, with which we began.

VI.17.3–5ab: *māndatu tvā* in 3a inaugurates a 3-vs. sequence chained together by the root *√ma(n)d* ‘exhilarate’, a sequence whose 1st vs. (3) overlaps with the last vs. of the initial triad. The other representatives also occur in the 1st pāda: *mādāḥ* in 4a and *mandasānāḥ* in 5a. Cf. also *matsarāsaḥ* in 4d. The conceptual unity of the sequence is underlined by the fact that 5ab is a rel. clause that must hang off the previous vs. The 2nd hemistich of 5 marks a sharp break.

VI.17.6: This last vs. of the Vala section reprises *ūrvām gavyam* from 1b with *ūrvāḍ gāḥ* in 6b, both immediately pre-caesura, producing a ring. Thus, the supposedly problematic rel. cl. of 1ab participates in two rings in this brief 6-vs. section, with different parts of the clause in play in the two rings. See disc. ad vs. 1.

VI.17.7-10: An initial phonological sequence unifies this set of vss.: from the 2nd half of 7 through the 1st half of 10, every hemistich begins with *ádḥ* (or the variants *ád* and *áh*): 7c *ádḥā(rayo)*, 8a *ádha*, 8c *ád(eva)*, 9a *ádha*, 9c *áh(im)*, 10a *ádha*.

VI.17.7: Both Old (ZDMG 55.320 and Noten) and Ge (fld. by Klein DGRV II.92–93) strongly argue that *paprātha* belongs to *√prath* ‘spread’, not *√prā* ‘fill’, to which Gr assigns it. I find their insistence puzzling. On their side, *ví√prath* is a fairly common lexeme, used often of the earth, whereas *ví* is rare to non-existent with *√prā*. But the actual verb form is wrong for all sorts of reasons. First, the indic. pf. of *√prath* is otherwise only middle, but this would be act. Second, the root *√prath* never otherwise has *vṛddhi* forms, but the root syllable here is *prāth*. Then, if it is a 3rd sg. (so Ge “Er breitete ...”), it opens a cosmogonic sequence of 2nd sg. expressions, and such formulaic cosmogonies tend to be consistent in ps. and no. (though see 9cd below). Recognizing this last problem, Old suggests it’s a 2nd sg., standing for **paprath-tha > *papraththa*, with the heavy syllable **atth* redistributing metrical weight [not his terminology] to *āth*. This type of change would not be unusual in Middle Indic, but it would have been useful to provide parallel examples in the Rig Veda. Moreover, since *√prath* is a set root, we should in any case expect a 2nd sg. **paprathitha*. The only factor on their side of the ledger is the preverb, and since our poet no doubt playfully recognized that the form would evoke *√prath*, it is not surprising that he would import the preverb. Unambiguous perfect forms to *√prā* ‘fill’ frequently take the earth as obj. as here (e.g., III.30.11 *índra ā paprau pṛthivīm utá dyā́m*), which makes the Old/Ge intransigence all the more surprising.

In pāda a *māhi dāmsaḥ* interrupts the obj. phrase *kṣām ... urvīm*. Ge's nominal phrase “— ein grosses Meisterstück—” is less disruptive than my nominal clause “great is your wondrous skill,” and might be preferable on those grounds.

VI.17.8: As Ge points out, the non-god (*ādeva-*) is presumably Vṛtra. This identification is clinched by the fact that the verb here, *aūhiṣṭa* ‘vaunted himself’ (*√uh/oh*), reappears in the (pseudo-)participle *óhasāna-* modifying *āhi-* ‘serpent’ in the next vs. (9c).

In d the pres. *vṛṇate* is a bit surprising in this mythological narrative.

VI.17.9: The word and particle order of the 1st hemistich seems designed to produce despair in those of us who seek (and believe in) principles and rules for such ordering: *ádha dyaús cit te ápa sã nú vájṛād, dvitānamat ...* seems randomly to scatter nouns, pronouns, and particles through the first pāda. However, I think that my interpr. of the first pāda imposes more rationality on the sequence than Ge's does and also eliminates at least one further problem. Note first the preverb *ápa* in the middle of the 1st pāda, though preverbs in tmesis (as this is, from *anamāt* in b) usually move to metrical boundaries. [It is true that it appears directly after the caesura, but generally a preverb in tmesis takes this position only when the verb is in the same pāda, or such is my impression.] Note, moreover, the apparent doubling of the subject *dyaúḥ* with the pronoun *sã* likewise in the middle of the same pāda, directly after the preverb. Note finally that after a beginning that seems to conform fairly well to Rigvedic word-order norms (extraclausal introductory *ádha*, noun+emphatic ptcl *dyaús cid*, enclitic prn. in modified 2nd position *te*), the clause seems to begin over again: preverb *ápa*, prn. *sã* (curiously, fem. *sã* seems more inclined to 2nd position than masc. *sã*), modified 2nd pos. ptcl. *nú*. Ge's tr. simply ignores this stuttering start (“Da wick selbst der Himmel von deiner Keule ..”), and he also doesn't comment on the fact that his interpr. implicitly requires *dyaúḥ* to be picked up by a fem. prn.: Gr lists this passage as one where that noun has fem. gender. Although ‘heaven’ sometimes does seem to be fem., such passages are rarer than Gr makes out, and this example would be esp. striking because there's no reason for *dyaúḥ* to be doubled by a pronoun in the first place, whatever its gender.

I think both problems can be solved by assuming that *sã* actually adds a second referent to the clause; in context with ‘heaven’ this would obviously be the fem. ‘earth’ (generally *prthivī-*, but perhaps here, because of their joint presence in 7ab, *kṣã-*). No Rigvedic audience would need further specification, once the feminine gender of the referent was established. By this interpr. the post-caesura sequence *ápa sã nú ...* is not an awkward redo of the 1st half of the pāda, but introduces a parallel subject to *dyaúḥ*, more clearly distinguished from ‘heaven’ than in the usual dual dvandva formulation. The separation of the two subjects is, in my opinion, signalled by *dvitā* ‘yet again’ beginning the next pāda; I render it here as “likewise also.” The parallels adduced by Ge (IV.17.2, I.80.11, II.12.13, V.32.9) actually support my interpr. because all four of them depict *both* heaven and earth (or in the case of the last, the two world-halves) trembling in fear of Indra.

Alternatively, MLW suggests (p.c.) that *dyaúḥ* could have fem. gender here because of its unmanly behavior in flinching away from Indra's weapon. Restarting with *sã* would emphatically draw attention to this gender switch: “Then even Heaven, really a *she* ...” This is clever, but I still prefer my own solution.

Flg. Ge (“... dass er für alle Zeit erlag”), I take *śayáthe* here as a quasi-infinitive expressing purpose with *jaghāna*; in this function it seems directly parallel to *śayáthāya* in the next hymn (VI.18.8), to the same stem. Unfortunately they must then be in different cases, the dative, understandably, in VI.18.8, the loc., less understandably, here. However much I would like to, I cannot find a way to make our *śayáthe* a dative, there being no athematic stem **śayáth-*. We could, of course, interpr. the locative as a real expression of location: “struck down the serpent in his lair,” but not only am I reluctant to lose the semantic connection with VI.18.8, but the acc. extent of time *viśvāyuh* ‘for a full lifespan’ only makes sense with the verbal interpr. of *śayáthe* ‘to lie’.

Despite Gr and Lub, a number of *viśvāyuh* forms, which they assign to the stem *viśvāyu-* and therefore interpr. as nom. sg. masc., must have the 2nd member *āyus-* and therefore be nom./acc. sg. neut., often used as an adverbial indication of extent of time as here (so Ge’s tr. as well; see above). See AiG II.2.479. I concede that it would be possible to take the form as a nom. here — “when Indra, having a full lifespan, struck down the serpent ...” — with Indra’s full lifespan implicitly contrasting with Vṛtra’s death, but I find the extent-of-time adverbial more compelling. And in a passage like I.68.5 *viśvāyur viśve āpāmsi cakruḥ* “all have performed their tasks lifelong,” the plural subject rules out a nom. sg. interpr. for *viśvāyuh*. Although the stem *viśvāyu-* certainly exists, it has a doublet with final *-s-*, exactly like the simplex pair *āyu-/āyus-*.

Assuming the correctness of the above disc. of *viśvāyuh*, Vṛtra’s fate, “to lie there for a full lifespan,” is somewhat ironic, since he’s dead: he will spend his full lifespan dead.

VI.17.10: With Old I assume an underlying *mahé*, contra Pp. *maháh*, despite Ge’s doubts (n. 10b).

The morphological identity of *vavṛtat* isn’t at all clear. Gr calls it a “Conj.” aor.; Whitney seems to suggest a subj. to a redupl. pres. Lub identifies it as a “[RED.AOR.inj.(them.)].” A pf. subj. makes the most formal sense, save for the zero-grade root syllable, but a subjunctive would be out of place in this mythological passage. Kü (460) treats our form as a “Sonderfall” and calls it a thematic injunctive, expressing an action prior to that of the verb *sám piṇak* in d. Since, in his view, this same anterior value is expressed by the impf. of the caus. (*āvartayat* in I.85.9), he calls our form an “Oppositionsbildung zum Kausativ,” whatever that means, but ultimately gives up on determining its morphological identity. I agree that the form cannot functionally be a subjunctive and am willing to accept that it is a nonce injunctive -- but this is a description, not an explanation. Note the pf. opt. *vavṛtyāt* in 13d, whose redupl. profile *vavṛt-* matches that of this form.

As for what the clause expresses, I assume that Tvaṣṭar is manufacturing the *vájra-* by turning it on a lathe or lathe-like device. (The internet tells me that the lathe dates back to antiquity, with good evidence from ancient Egypt, but it is difficult to know how much to trust this.) Alternatively, but less likely in my view, Tvaṣṭar is displaying it to Indra by turning it here and there to allow its spikes and edges to glint in the light.

The other verb form in this vs., *sám piṇak* in d, also presents difficulties, because, despite being in a relative cl., it is unaccented. I have no explanation for the failure to accent (nor does Old, I’d point out). Of course, one can note the unusual position of the rel. prn. *yéna*, at the end of pāda c as the first word of the subord. clause that otherwise

occupies d, with the rel. prn. intervening between the acc. sg. masc. phrase *nīkāmam arāmanasam* that modifies the *vájram* of the main cl. and the acc. sg. masc. phrase *návantam áhim* that provides the object of the rel. cl. But Rigvedic poets are unlikely to be thrown by this positioning. It is also noteworthy that pāda c as it stands has only 10 syllables; Old suggests that we might read *iénā* to round out the Triṣṭubh, which would be unprecedented in the rel. prn., as far as I know. Pāda c is also unusual in having 5 light syllables in a row: (*nīkā*)*mam arāmana(saṃ yéna)*, and indeed, were we to read *íénā*, this would rise to 7. Since *arāmanasa-* is a hapax and it participates in a metrically disturbed sequence, it may be that the pāda is somehow corrupt. But no way of fixing any of this comes to mind.

On the retroflex *ṇ* in *piṇak*, see Old, ZDMG 55.321.

VI.17.11: For Agni as the subj. of *pácat* and cooker of the buffaloes, see V.29.7–8 adduced by Ge and Old, ZDMG 55.321.

In the 2nd hemistich we have only two expressed subjects, Pūṣan and Viṣṇu, but a plural verb *dhāvan*. The obvious solution, as seen by all, is to assume that other gods participated in this action.

The question is -- what action? The verb is generally assigned to $\sqrt{dhāv}$ ‘run’. Gr gives a transitive-causative value to this stem in this passage and this passage alone (Gr “jemandem [D.] etwas [A.] zuströmen”); Ge follows this trans. interpr.: “... liessen für ihn den ... (Soma)stengel ... strömen,” and indeed interprets another passage as having this value (IX.54.2). However, since all other acc. with $\sqrt{dhāv}$ are goals to an intrans. verb of motion, this contextual adjustment is unacceptable. Gotō (1st Klasse, 183 and n. 325) disputes both of Ge’s trans. interpretations and fixes this passage by dividing the two pādas into two clauses. The first has an acc. goal *sārāṃsi* (“...eilen zu den drei [Soma]seen”), which seems reasonable (indeed cf. IX.54.2 *ayám sārāṃsi dhāvati*), but he must supply a verb (‘gave’) out of thin air to make pāda d to work: “[sie geben] ihm den Vṛtratötenden, berauschenden Somastengel.” The problem can be solved by assigning the verb to the other root $\sqrt{dhāv}$ ‘rinse’, part of the standard vocabulary of soma preparation. VIII.2.25 (*ā dhāvata ... sómaṃ vīrāya*) presents an exactly parallel construction with soma as acc. obj. and the recipient, Indra, in the dat. Moreover, ‘rinse’ would add a complementary food-preparation term to \sqrt{pac} ‘cook’ in pāda b, with both solid and liquid nourishment thus covered, whereas ‘run’ is a bit of a non sequitur. The only thing that gives me pause is X.113.2 *tám asya víṣṇur mahimānam ójasā, aṃśúm dadhanvān ...*, where we have Viṣṇu, the *aṃśú*, and an undoubted ‘run’ (to the separate root $\sqrt{dhan[v]}$). But this late passage does not seem to me sufficient to outweigh the fact that a ‘rinse’ interpr. here allows the hemistich to be a single syntactic unit and forestalls the need to supply a verb for d out of nowhere.

VI.17.12: In d *apásah* ‘busy, industrious’ (Ge’s fleissig) is, of course, a pun on the ‘water’ word, whose acc. pl. is *apás*.

VI.17.14: I take the construction $\sqrt{dhā}$ ACC [anim.] ACC.ADJ -*mant-/vant-* to mean “provide someone (X) with something (Y),” lit. “establish X as possessing (-*mant-/vant-*) Y.” The datives of ab are then further objects to aspire to: once the poets have brilliance,

they can use that brilliance, which transforms into poems, in pursuit of more worldly goals, the prize, etc. This interpr. essentially follows Ge's.

VI.18 Indra

VI.18.1: This vs. contains two pairs of positive/negative etymological figures, both consisting of a pres. participle with “active” value (though one of them is morphologically middle) and a negated past part.: *vanvánn ávātaḥ* “vanquishing but unvanquished” and *āṣāḥam ... sāhamānam* “conquering but unconquered.” It may not be an accident that the root syllables in each pair, though related by standard derivational processes, are quite distinct because of morphophonemic changes: *van* / *vā* and *sah* / *ṣāḥ*.

VI.18.2: On unclear *khaja*- see comm. ad VII.20.3.

VI.18.3: The sequence 2ND SG. PRN *ha tyád* (here *ha nú tyád*) is fairly common and appears to be strongly emphatic, hence my tr. “it was just you” (etc.). In several hymns (I.63.4–7, VIII.96.16–18) this construction is found in series.

I take the fronted *ásti* followed by *svid* to be a strong existential “does it exist?” rather than simply the possessive constr. that Ge sees: “Hast du ... diese Manneskrafte ...?”

For *tád ṛtuthā ví vocaḥ* see the nearly identical phrase in X.28.5 and the disc. of the lexeme *ví* / *vac* as X.11.2. I argue there that it means ‘provide a decisive answer to a question’, and a question has certainly been posed here.

VI.18.4: The fronted *ásti* in the previous vs. is matched by equally emphatic, fronted *sád íd*. Although Ge takes *sát* as the modifier of the *sāhaḥ* that begins the next pāda, I think instead that it answers the question posed in 3cd and therefore implicitly modifies *vīryām* in 3c. This is then further specified as *sāhaḥ* beginning in b, which then is qualified by the adjectives *ugrām* and *tāvīyaḥ* in c.

The last three pādas of the vs. are a veritable riot of etymological figures, with two each in b and c and one in d: b *sāhaḥ sahiṣṭha turatás turásya*, c *ugrām ugrásya tavásas tāvīyaḥ*, d *áradhrasya radhratúraḥ* ... The 2nd member of this last cmpd, *-tur-*, belongs etymologically with the 2nd figure of b, *turatás turásya*, though unfortunately since it's used in a somewhat different sense, this connection cannot easily be conveyed in translation. Similarly, the 2nd figure of c, *tavásas tāvīyaḥ*, picks up the *tuvi-* of the cmpd in a, *tuvi-jātá-*. So, in addition to the juxtaposed linear figures, there is some interweaving across pāda boundaries.

VI.18.5: As the opening words of pāda b, *itthā vādadbhiḥ*, indicate, the previous pāda is the direct speech of the Ṃgirases. In keeping with the two immediately preceding vss., I take *astu* as an existential: “let that partnership (still) exist.” The wording is otherwise very like IV.10.8 *śivā naḥ sakhyā sántu ... devēṣu yuṣmé*. The clear loc. *devēṣu* in that passage anchors the loc. identity of *yuṣmé* both in that passage and this one. The loc. is somewhat odd: generally *sakhyá-* is construed with gen. or instr., as already set forth by Gr s.v. However, cf. VII.22.9 (=X.23.7), which also contains a pl. ps. prn. in *-e*: *asmé te santu sakhyā śivāni*. In the publ. tr. I take the *asmé* there as a dat.: “Let there be friendly

fellowship of you for us.” But in light of the two parallel structures with *yuṣmé*, I think it must be a loc., and these three passages, each of which is rendered differently in the publ. tr., should be harmonized. I now think that all three are existential (although the two with *śívā-* could be equational, with a pred. adj.) and that the loc. specifies the locus of the partnership, either in or “bei” the pronominal referent. Though this is functionally equivalent to “with,” as in the publ. tr., I would slightly modify the tr. to better reflect the loc.: “Let there (still) be age-old partnership for us among you,” though “... with you” would in fact be clearer.

The placement of *valám* in the middle of the instr. phrase in b, with its governing verb (*hán*) not found till c, is somewhat odd, but see comm. ad vs. 8 below.

Presumably the Vala cave is “prospering” because it is full of cows. On the accent of *iṣáyantam* here, see my *-áya-Formations*, p. 49 and n. 3.

The positive active / negative passive figure found twice in vs. 1 is here embodied in the single word, the root-noun cmpd voc. *acyuta-cyut-* ‘shaker of the unshakable’.

VI.18.6: The vs. contains 3 coreferential *sá*, at the beg. of a and of c and in the middle of c. I have interpr. the first half of c as belonging with ab, with the loc. *tokásātā tánaye* parallel to loc. *mahatí vṛtratūrye* in b and the mid-pāda *sá* in c introducing a new cl. Others (Ge, Schaef., Intens. 126) take all of c with d. There is no way to determine and very little riding on it. However, see the comm. on the next vs.

The *hí* in pāda a seems to have little or no causal value; similarly the one in 4a.

Although the overt *ásti* reminds us of the other overt forms of \sqrt{as} in previous vss. (3, 4, 5), which were (at least by my lights) existential, *ásti* here seems to be a straight copula and therefore pleonastic.

In *tokásātā tánaye* we can assume that *tánaye* shows a kind of gapping of the 2nd cmpd member found in *toká-sāti-*, hence a putative **tánaya-sāti-*. Ge’s cited parallels, e.g., II.30.5 *tokásya sātāu tánayasya ...*, confirm this.

VI.18.7: This vs. continues the overabundance of *sá* from the last vs., esp. in the 2nd hemistich, with initial *sá* and post-caesura *sá* in c and initial *sá* in d, in addition to the one opening the vs. Each of these *sá* is associated with a different instr. phrase or phrases. The one in the first hemistich has the capacious bipartite *majmánā ... ámartylene nāmnā* embedded in a full clause with the verb *prá sarsre*; the two in pāda c occur only with instrumentals (*dyumnéna* in the opening and the conjoined *śávasotá rāyā* after the caesura); the one in d has only a single instr. (*vīryèṇa*) but is part of a clause again, though with a pred. adj. *sámokaḥ*, not a finite verb. Since the structure of this vs. is like that of vs. 6, the question again arises as to where to attach c (or the two parts of c). Flg. Ge I take all of c with d, construing all the instrumentals with *sámokaḥ* ‘at home (with)’. But I now see that, because the structures in c are minimal, it could as well go with ab (or the first half with ab, the second with d). This would produce alternative translations “Through his greatness and his immortal name he extended himself, (and also) through his brilliance and his power and wealth. He is at home with heroism.” or even “Through his greatness and his immortal name he extended himself, (and also) through his brilliance; he is at home with power and wealth and with heroism.” (This last, with the first part of c leaning backward and the 2nd leaning forward, would mimic my interpr. of

vs. 6.) Again I do not see a way to decide the question, but I think it's worth noting how the poet has cleverly constructed pāda c so that it is ambig.

VI.18.8: As Ge points out (n. 8b), the role of Cumuri and Dhuni in the RV is to be put to sleep by Indra, so that Dabhīti can deliver the coup de grâce to them. See the various passages adduced by Ge and esp. nearby VI.26.6. In our vs. they are marooned at the end of the first hemistich, and after an initial verb in c another set of Indra's victims is introduced: Pipru, Śambara, and Śuṣṇa. Ge asks whether we should assume an ellipsis with the Cumuri/Dhuni phrase (in other words, supply a form of "put to sleep") or a zeugma (in other words, to take them as objects of *vr̥ṇák* with the Pipru group, though their fates were met in different ways). I have chosen the 2nd option. The audience would certainly know the particular destiny of Cumuri and Dhuni but would also be able to lump them in with other targets of Indra, all as objects of a generically violent verb. (It may be worth noting that *vr̥ṇák* here is one of the very few forms of *√vr̥j* that lacks a preverb, though cf. nearby VI.26.3.) The segregation of Cumuri and Dhuni in pāda b, away from the verb and the other victims, might give us pause, but cf. vs. 5, where the obj. *valám* is found in the interior of pāda b, with the verb beginning c.

In d the datives *cyautnāya* and *śayāthāya* have parallel infinitival function. For the latter cf. also *śayāthe* in the preceding hymn (VI.17.9, with disc. ad loc.) with the same apparent meaning but in a different case.

VI.18.9: *udāvatā* is read *udāvatā* by the Pp. and is generally considered the instr. of the pres. act. part. of *úd√av* 'help', with metrical lengthening (so explicitly Lub), a lengthening that is unmotivated. It is also the case that *úd* is not especially common with *√av*, though I concede that the six passages I'm aware of make this an established usage. I also find it surprising that there is no preverb with *tiṣṭha* in the expression in b, *rātham ... tiṣṭha* "mount the chariot," since this expression is almost always found with preverb, generally *ā*, also *ādhi*. I therefore wonder if the initial string in pāda a is actually concealing the preverb(s), in tmesis: *ud-ā*, followed by the uncompounded pres. part. *āvatā*. This analysis is responsible for my tr. "up and mount ..." I realize, however, that a number of objections can be raised. The combination *ud-ā* doesn't otherwise occur with *√sthā*, but I would point out that both occur with that root individually. Two further potential problems: 1) two preverbs next to each other in tmesis, rather than the usual single one. I confess I do not know of other examples. 2) the accentuation: the accented vowels of *ā* and *āvatā* would coalesce, resulting in a single udātta -- this is unproblematic -- but the lack of accent on *ud* looms larger. Here I rely on Macdonell's observation (VGS, p. 469) that when *ā* is immediately preceded by another preverb, *ā* alone has the accent. In Macdonell's formulation this applies (only) to these sequences when compounded with verbs; I would here extend that to the same sequence in tmesis. This may be too much machinery to deploy simply in order to account for the surprising, supposed metrical lengthening of *udāvatā* and the surprising lack of preverb with *tiṣṭha*, but it seems worth considering. Alternatively, it could be that *udāvatā* is a compd pres. part., but compd not only with *úd*, but also *ā*. This is the solution of Rivelex (I.541), and it may be the best compromise, though *ā* is not otherwise found with *√av*, as far as I know. (I have not been able to find the *ā+√av* claimed by Rivelex in the head note on p.

538, and in the claimed *prá ā* passage (VIII.23.2), *ā* is a postposition, as is more or less admitted p. 543 n. 1.)

The *ca* in the instr. phrase in pāda a seems pleonastic, and if it is implicitly connecting the two adj. modifying *tvákṣasā*, viz. *āvatā* (or *udāvatā*) and *pānyasā* (Klein DGRV I.71 “aiding and wondrous”), they seem ill-assorted semantically. I wonder if it is meant to connect the first ADJ.-NOUN pair with a 2nd, with gapping of the noun modified by *pānyasā* (“with your helpful energy and ever more admirable X”). But there is no standard *pānyas*-NOUN formula, so I will not pursue this.

In d Old (Noten) and Ge assume that the *māyāḥ* are negative magical wiles that belong to Indra’s opponents. A negative valuation of *māyā-* is of course common, and is clear in the nearby passage VI.22.9, where a pāda almost identical to our c, urging Indra to take his mace in hand, precedes one in which he is urged to destroy *māyāḥ* (VI.22.9cd *dhiṣvā vājraṃ dākṣiṇa indra hāste, vīśvā ajurya dayase vī māyāḥ*) -- though see comm. ad loc: a secondary positive reading is also possible. This parallel is an important piece of evidence for both Old’s and Ge’s assessment of *māyāḥ* here. However, this reasonable interpr. ignores one major factor in our passage: the verb *abhī prá manda*. This lexeme occurs a number of times elsewhere (V.4.1, VII.33.1, VIII.12.13, 93.19), and it is always otherwise positive: act. ‘exhilarate’, mid. ‘become exhilarated’. A negative interpr. of *māyāḥ* requires a serious distortion of the meaning of the verb (e.g., Old’s ‘verwirren’, adopted from BR), whereas assuming the *māyāḥ* belong to Indra allows it to have a small extension of its usual sense: ‘exhilarate’ → ‘stimulate’. Just as soma exhilarates and stimulates Indra for the Vṛtra-smashing, so does Indra exhilarate and stimulate his own powers. Old in fact previously (ZDMG 55.323) made a good case that the *māyāḥ* are Indra’s, third in a list of his Kampfmittel that includes the chariot of b and the mace of c, and he suggested a tr. “Setze deine Wunderkräfte in freudige Erregung” very much like mine. He attributes his change of heart in the Noten to VI.22.9 just cited and to his consideration of “Der Gesamteindruck des Auftretens von *māyāḥ* in den Indraliedern.” But, in fact, he overlooked one very crucial occurrence, in this very hymn: in vs. 12 Indra himself is called *purumāyā-* ‘having many magical powers’ (cf. also nearby VI.21.2 and 22.1 in this same Indra cycle, also III.51.4). This seems to me clinching evidence against the Ge/Old interpr. of our d: Indra has many *māyā-* and he deploys them to achieve his ends. (Gotō [1st Kl., 236 n. 521] finds the passage puzzling, but does try to reconcile it with the usage of the verb, not entirely successfully.)

VI.18.10: The imagery is somewhat mixed here: it is hard to see how either a missile (nom. *aśāniḥ*) or a lance (instr. *hetī* [contra Pp. *hetīḥ*, as seen already by Gr etc.]) can *burn down* anything. I assume it’s a transferred visual image from the fire simile, since flames can have a lance-like shape and shoot out dramatically.

The fem. instr. adj. phrase *gambhīrāya ṛṣvāyā* lacks an overt referent. Ge supplies *Stimme* without disc. In the absence of any obvious choices, I follow Gr in assuming *hetī* from pāda b. Neither *ṛṣvā-* nor *gambhīrā-* has a standard fem. referent.

The obj. of *ruṛōja* is likewise unexpressed. Ge supplies *Burgen* (*púrah*, a common obj. of this verb), but (n. 10cd) suggests that *rākṣaḥ* from b is also possible. Since the *yó ruṛōja* rel. clause of c is picked up by the main cl. of d, I instead supply *duritā*, which is the obj. of the conjoined verbs of d. Elsewhere *duritā* is the obj. of *√han* (IX.62.2, 90.6, 97.16), a verb semantically similar to *√ruj*.

VI.18.11: Gr takes the referent of *yásya* as ‘wealth’ (see col. 1114, s.v. *yótu-*). But it is far more likely that it is Indra, whom we are urging to come here -- and whose arrival might be threatened by the actions of the ungodly man. (It is not possible to determine from Ge’s tr. (“den”) what he thinks the referent is.) The relationship between *yāhí* and *yótoḥ* might be clearer if the rel. clause were tr. “... never has the power to keep away.”

On *yótoḥ* see now also Keydana (Inf., 77–78), who does not consider it a true infinitive. He takes *yásya* simply as the determiner of a gen. action noun *yótu-*. I am more inclined to see *yótuḥ* as an infinitive, and therefore consider *yásya* as an example of “attraction” to the case of the infinitive from an underlying obj. **yám*. The dative to the same stem does function as an infinitive and takes acc. rection: VIII.71.15 *agním dvéṣo yótavai no grñīmasi* (cf. VIII.18.5 *dvēṣāmsi yótave*).

VI.18.13: This vs. is structurally reminiscent of vs. 8. Like there, we have a clause occupying the first pāda (both ending in *bhūt/bhūt*, as it happens), with (most of) b belonging to a different but radically incomplete clause, containing a marooned set of accusative PNs whose fate at the hands of Indra is well known. Pāda c continues with other accusative victims of Indra, but also provides a verb to govern them. In both vss. the names in the b clause have a well-known and quite specific outcome at Indra’s hands: Cumuri and Dhuni in 8b were put to sleep by Indra, to weaken them for a death blow administered by someone else; as for our vs., acdg. to I.53.10 Indra made Kutsa, Āyu, and Atithigva subject (*arandhanāyaḥ*) to Tūrvayāṇa, who also appears by name in our pāda d. In both 8b and 13b the publ. tr. follows the same strategy: co-opting the verb in c (*vrñák* in 8, *ní śísāḥ* in 13) to govern not only the accusatives in its own pāda but also those in pāda b. This is syntactically a bit more complex in our vs. because b is a relative clause (with *yád*) so the unaccented verb of c cannot be applied to it directly. I still think this is the correct strategy in 8 and probably also here as well, but the presence of dat. *asmai* in b along with its likely referent *tūrvayāṇam* in d makes me wonder if Ge (n. 13b) may be right in simply supplying the verb found in the very phrase in I.53.10 *tvám asmai kútsam atithigvám āyúm, ... arandhanāyaḥ*, despite the isolation of that passage and its distance from ours. (Alternatively we could use *árdayaḥ*, which governs the same three names in VIII.53.2, but there is no dat. there; and it is likewise isolated and distant.) Old (both ZDMG 55.323 and Noten) is also in favor of supplying such a verb. Note in passing that unaccented *asyai* in our b presupposes a referent already in the discourse, so it must be anticipating *tūrvayāṇam* in d. For Tūrvayāṇa cf. the simile *tūrvan ná yāman* in nearby VI.15.5 with disc. ad loc.

VI.18.14: The aor. subjunctive *káraḥ* is generally taken as preterital, an interpr. licensed by Gr, who identifies it as “Impf.” But this is morphologically irresponsible, and further, given the injunc. *mádan* in the main cl. (b), a proper subj. value is quite possible. I think this is an example of the standard rhetorical move to take Indra’s signal mythological deeds and make them a model for his behavior in the future, to our benefit. The next and final vs. continues this point of view. See Hoff (Injunc. 55 and n. 37) for a similar assessment, though he also envisions the possibility of “Konjunktiv im präteritalen Sachverhalt.”

VI.19 Indra

This hymn is something of a bricolage, with numerous phrases, pādas, and whole verses borrowed from elsewhere. (I say “borrowed” rather than the more neutral “parallel to,” because the sheer number of the matches strongly suggests that there is a magpie quality to the construction of this hymn.) For details of the matches, see Ge’s nn. (though he doesn’t note all of them) and Bloomfield RR.

VI.19.1: The publ. tr. should read “manfully” with adverbial *nṛvāt*.

On possible configurations of the terms connected by *utā*, see Klein DGRV I.341.

Gr derives *aminā-* from \sqrt{am} (‘mächtig andringend, gewaltig’), but it must belong to $\sqrt{mā}$ as thematic parallel to *āminant-*. See Old (ZDMG 55.323).

The phrase in d, *sūkṛtaḥ kartṛbhir bhūt* “he was well made by his makers,” is somewhat startling as a description of the great god Indra. Who are his makers? Is this a depiction of his original creation, or does it have a more narrow and current application? Because of the previous pāda, ... *vāvṛdhe vīryāya* “he has been strengthened for his heroic deed,” I am inclined towards the latter: the soma drinks and ritual activities and praise have made him the consummate heroic actor. The pl. agent noun *kartār-* may refer to the soma drinks or to the priests who prepared and offered them to Indra. Because I think the reference is to the immediate past, I would slightly alter the tr. from “was well made” to “has been well made.”

VI.19.1–2: These two vss. show a penchant for synonymous pairs: 1d *urūḥ pṛthūḥ* “wide (and) broad,” 2b *bṛhāntam ṛṣvām* “lofty (and) towering,” *ajāraṃ yūvānam* “unaging (and) youthful.”

VI.19.2: *śāvasā sūśuvāṃsam* “swollen with strength” is an etymological figure, though *śāvas-* has lost its tight connection to $\sqrt{sū}$ ‘swell’. Both words are reused in this hymn: 6a *śaviṣṭham ... śavaḥ* “strongest strength”; 7b, 8b *sūśuvāṃsam*.

VI.19.4: Since *śākā-*, so accented, is the adj. ‘able’, not a noun *śāka-* ‘ability’, I supply ‘men’ on the basis of IV.17.11 *ebhūr nṛbhiḥ ... asya śākaiḥ*.

With pāda d I supply opt. *syāma*. Cf. II.27.7 *ūpa syāma puruvīrā āriṣṭāḥ*, sim. vs. 16; X.128.3 *āriṣṭāḥ syāma tanvā suvīrāḥ*.

VI.19.5: The gen. phrase *vāmāsya vāsunaḥ* in b is difficult to construe. Ge supplies “(Spender)” as its head noun; my tr. assumes that it is a loose genitive specification of the *paśú-* that is lurking in the *-kṣú-* in the bahuvrīhi *puru-kṣú-* ‘possessing much livestock’. This interpr. is suggested by the other occurrence of this gen. phrase in VIII.1.31 *utā vāmāsya vāsunaś ciketati, yó ásti yādvah paśúḥ* “of the valuable goods what will stand out is the livestock coming from Yadu,” where the *vāmā-* *vāsu-* is identified as a particular *paśú-*. But the syntax proposed for our passage is sketchy.

By accent *rāyaḥ* should be nom. pl., not, as I have tr. it, gen. sg. As Ge suggests in his n. 5c, it reads literally “the paths, the riches ...” Nonetheless, Old (ZDMG 55.324 and Noten) considers the nom. pl. reading “forced” (gezwungen) and interprets it as a gen. sg. (on the basis in part of VII.18.3 *pathyā rāyaḥ* with a clear gen. sg.). In the ZDMG

treatment he explicitly says that emending the accent isn't necessary, though he doesn't indicate why.

In d Ge suggests a haplology of **samudréṇa ná*, with an instr. rather than a loc., as in III.36.7 *samudréṇa síndhavo yādamānāḥ*, where he proposes a similar haplology. This is possible, but not nec.: I see no reason why rivers can't unite *in* the sea as well as with it. As for III.36.7 see comm. ad loc.; I do not think that a simile particle is necessary there.

VI.19.6–8: As noted in the publ. intro., all three of these vss. contain the phrase “bring here to us”: in 6a and 7b *na ā bhara* straddles the early caesura; in 8a *ā no bhara* opens the vs. Since vss. 6–8 are the middle vss. of this hymn, this repeated phrase might identify an omphalos, but if so it is quite a weak one. The vss. are not particularly noteworthy for their content, and the enclosing vss. do not provide the usual frame structure.

VI.19.6: The first hemistich is notable for the superlative etymological figures: double *śáviṣṭham ... śávaḥ* “strongest strength” (or, in fact, triple, since *śūra* ‘hero’ is ultimately related to these words) and triple *ójiṣṭham ójaḥ ... ugrám* “mightiest mighty might.” The triple etym. connection of the first phrase is better conveyed by Ge's “Bring uns, du Starker, die stärkste Stärke” than by the publ. tr. Note also that the adjacent words in b *ójo abhibhūta* “... might, o overpowering one,” though not syntactically connected here, form a bahuvrīhi modifying Indra in the preceding hymn, VI.18.1 *abhíbhūti-ojas-* ‘of overpowering strength’.

On the phrase *dyumnā ... mānuṣāṇām* see comm. ad X.42.6.

VI.19.7–8: I tr. *sūśuvāmsam* in both vss. as ‘swollen with strength’, although the *śávasā* found in 2c is absent, as a portmanteau tr. to capture the full sense of the root. This participle picks up *śáviṣṭham ... śávaḥ* in vs. 6.

VI.19.7: On the long root vowel in *jigīvāmsaḥ*, see Old ZDMG 55.324, where on the basis of the metrical evidence he surmises that, at least in this post-caesura position, the form should be read with short root vowel (**jigī-vams-*), the form found in the younger Vedic texts. See also Arnold (Ved. Met. 143), who considers the short-*i* form required in 3 of the 5 occurrences of the strong stem, and Kü (189 n. 225), who considers it proper except in III.15.4. Kü cites Anttila (1969, Schwebeabl. 61) as explaining the lengthening in the Saṃhitā text as analogy to *ninīvāms-*. However, it is much more likely that it is a morphologically conditioned lengthening, meant to distinguish the *-i*-vowel proper to the root from the *-i*-liaison vowel that has become associated with suffixes/endings. Thus *jigī-vāms-* with long vowel is kept separate from the type *tasth-ivāms-*, as I already argued in my 1988 article on the vocalized laryngeal (224–25), though without factoring in the metrical evidence pointing to this lengthening as late and redactional. (Of course, in *tasthivāms-* the *-i-* would originally have represented the zero-grade of this *-ā* root, but by synchronic RV it has been reanalyzed as part of the suffix. See disc. in my 1988 art.)

VI.19.8: In d the *utá* is oddly positioned, since it appears to be meant to conjoin *jāmīṃr ājāmīn* “kin and non-kin,” there being no other likely candidates. Klein (DGRV I.356–57) calls it a “peculiar passage” and classes it with two other examples of what he

schematizes as *utá* X Y (/ Z ...). The pair *jāmi- ājāmi-* is several times asyndetic (I.111.3, IV.4.5, VI.44.17) as here, so no conjunction is actually necessary, but we can cite nearby VI.25.3 ... *jāmāya utá yé 'jāmayah*, where the *utá* is correctly placed. Perhaps our passage is a blend of the asyndetic figure and the “X and which Y” construction in VI.25.3.

VI.19.10: The medial 1st pl. s-aor. opt. *vaṃsīmāhi* contrasts with the active 1st pl. s-aor. subjunctive *vaṃsāma* in 8c, but the medial optative must have been modeled on the rhyme form *maṃsīmāhi* in the same metrical position in 7d. The “rest” following *vaṃsīmāhi* may call attention to the verb by isolating it metrically.

Besides this echo, note also *nṛvāt*, which replicates *nṛvāt* in 1a, and *vāmām* recalling *vāmāsyā* in 5b, while the gen. *vāsvaḥ* is in slight discord with the differently formed gen. *vāsunaḥ* in 5b.

I tr. *śrómatebhiḥ* as ‘attentions’, that is, the attentive hearing(s) that Indra gives to men’s words. For similar use of *śrómata-* in a somewhat clearer context see VII.40.5.

The referent of the “both kinds of good[s]” in c is not clear, at least from immediate context. In the very similar passage VII.82.4 *īśānā vāsva ubhāyasya*, it seems to refer to goods belonging to war and peace; similarly in the next hymn, VII.83.5 *yuvām hí vāsva ubhāyasya rājataḥ*, where a reference to war and peace -- or perhaps to the goods of enemies and of allies -- is likely. In II.9.5 the referent of *ubhāyam ... vasavyām* is also open-ended, but Re’s suggestion there that it’s livestock and offspring is perhaps the most satisfactory. In our passage the nearest contrastive pair is *jāmīnīr ājāmīn* “kin and non-kin” in 8c, so perhaps “both kinds of good[s]” refers to the goods belonging to these two groups whom we hope vanquish in battle. Note *vṛtrāny ubhāyāni* “both kinds of obstacles” in 13c, which Ge, persuasively, takes as referring to the “kin and non-kin” of 8d. MLW suggests another possibility: “movable and immovable,” which has a fine Indo-European pedigree.

The acc. obj. phrase in d, *rātnam māhi sthūrām bṛhāntam*, contains an apparent gender clash: *rātna-* is neut., as is *māhi*; *sthūrām* can be either neut. or masc., while *bṛhāntam* must be masc. It is tempting to correlate the two genders with the two kinds of goods in pāda c: a “great treasure” (neut.) and “substantial lofty X” (masc.). This might be possible: *sthūrā-* *bṛhānt-* qualifies masc. *rayí-* in IV.21.4 *sthūrásyā rāyō bṛható yá īśe* (and cf. X.156.3 *āgne sthūrām rayīm bhara*), and *bṛhānt-* not infrequently modifies *rayí-* (cf., e.g., VI.6.7). Thus, we could assume an underlying **rayīm* for the last two adjectives, yielding a tr. “grant a great treasure (and) substantial lofty (wealth).” This might be supported by *rāyā ... bṛhatā* in the last pāda of the hymn (13d). Nonetheless, this seems unduly artificial, and I would prefer to assume that at the end of this acc. phrase, encouraged by ambig. *sthūrām, bṛhāntam* has simply taken its accustomed pāda-final place in Triṣṭubh. As reported by Old (ZDMG 55.325 and Noten), Ludwig suggested *substituting* (that is, emending) *rayīm* for *māhi*, a suggestion roundly rejected by Old, who simply says (Noten) that masc. *bṛhāntam* is construed with neut. *rātnam*.

VI.19.12: Note a different kind of gender mismatch in pāda a. Though in the idiom with *√man* “consider oneself X” / “be considered as X,” X is in the same case as the underlying subject (see, e.g., 7c *maṃsīmahi jigīvāmsaḥ* “we could be considered victors”), here it is construed with an adverbial neut. *māhi*. That this is not necessarily a

property of “think oneself great” is shown by I.178.5, VII.98.4 *maható manyamānān* “... those thinking themselves great,” with acc. pl. matching the subject of the participle.

VI.19.13: On *ṛtrāṇy ubhāyāni* “both kinds of obstacles” see comm. ad vs. 10.

VI.20 Indra

On the metrical irregularities in the hymn, see Old ZDMG 55.324 and Noten.

VI.20.1: As noted in the publ. intro., the “ask” in this hymn comes at the beginning, not the end as is more usual. It is also excessively convoluted in syntax and phraseology. (My interpr. of the vs. is in great part guided by Th [Fremdl. 58] and to a certain extent Ge., though as far as I can see Ge simply fails to tr. parts of it.) The actual referent of the definitional rel. cl. that occupies the first hemistich is not encountered until the second word of pāda b (*rayīḥ*), preceded by a discontinuous simile *dyaúr ná ... bhūma* “like heaven the earth,” whose first part has been fronted around the rel. prn. *yāḥ*, and by a verb in tmesis, *abhí ... tasthaú* “surmounts,” whose preverb is stationed after the caesura in pāda a and whose verb form proper opens pāda b. And this is only the beginning!

A first paraphrase of the first hemistich would be “as heaven (surmounts) the earth, the wealth that surmounts ...,” with “wealth” corresponding grammatically and functionally to “heaven.” This first stab makes it immediately clear that we need an acc. obj. in the frame to correspond to *bhūma* in the simile, something that wealth can “surmount.” One acc. is obvious: *jānān* at the end of the hemistich. But what do we do with *aryāḥ* at the end of the first pāda? Old (ZDMG 54.169–70) takes it as an acc. pl., tr. “wie die Himmel über der Erde (sollen) die Schätze über den Geizigen (erhaben sein).” However, there is a reasonably well-attested phrase *rāyo aryāḥ* “the riches of the stranger” (IV.48.1, VI.14.3, VI.47.9, and esp. VI.36.5; cf. also VI.1.5 and comm. on all those passages). In VI.36.5 it is found in exactly this context: *dyaúr ná bhūmābhí rāyo aryāḥ* “Like heaven over the earth, sur(mount) the riches of the stranger,” with *rāyo aryāḥ* an object phrase exactly parallel to *bhūma* in the simile. It therefore seems best here to assume a gapping of acc. pl. *rāyah*, whose presence is suggested by the nom. *rayīḥ*, with *aryāḥ* a gen. as elsewhere. Hence “wealth that surmounts (the wealth/riches) of the stranger ...”

And what does this “wealth of the stranger” consist of? In all cases it seems to refer to manpower, not to material wealth, and our passage makes this clear by further specifying it as *jānān* ‘people(s)’.

As if the poet hadn’t misled us enough already with the intertwining of constituents and gapping of a crucial word, he also plants a false cue. The word *bhūma* is of course the acc. sg. to the neut. *n*-stem *bhūman-*, as shown esp. by the parallel VI.36.5. But in its position directly after the preverb *abhí*, it looks mighty like a verb -- and could almost (but only almost) be the 1st pl. root aor. *bhūma*, though with wrong accent (expect **bhūmá*, a form not found in the RV). The lexeme *abhí√bhū* is close in meaning to the *abhí√sthā* we have here (whose verbal part has been postponed till the 2nd pāda), and given its sandhi form the rel. prn. *yā* (underlying *yāḥ*) could equally be underlying *yé*, which could match the number of the putative 1st pl. verb form (“we who surmount ...”). Of course, as just noted, the accent on *bhūma* is wrong, and we would further expect *abhí* to lose its own accent and univerbate with an immediately following verb in a rel. clause.

But I nonetheless think that the poet meant for his audience to follow this false trail, however briefly.

After this tangled beginning, the second hemistich is completely straightforward: the acc. *tām* picks up the rel. cl. couched in the nom., with the implicit referent “wealth,” modified by three acc. OBJ+VERBAL NOMINAL cmpds, all objects of “give” (*daddhī*). This is the last time in the hymn that Indra is asked to give us anything; the only other appeal to Indra is in 10a, where we pray to “win anew.” Almost all of the rest of the hymn treats previous heroic deeds of Indra, though it should be noted that many of these are presented in the injunctive, and the notoriously slippery usage of the injunctive may leave the possibility of current application open.

VI.20.2: This vs. begins like vs. 1, with a form of ‘heaven’ followed by the simile marker *ná* (1a *dyaúr ná*, 2a *divó ná*). In this case there is nothing in the frame that explicitly corresponds to the gen. *diváh* in the simile, though the dat. *túbhyam* is roughly parallel: like the “lordship of heaven,” lordship was conceded to you (Indra) and is therefore yours.

The standard idiom for ‘concede’ is *ánu √ dā*, not, as here, *ánu √ dhā*. Cf., with phraseology similar to here, VI.25.8 *ánu te dāyī ... satrá te víśvam ...* (sim. II.20.8). But *√ dhā* is also found in this idiom elsewhere, e.g., VI.36.2 *satrá dadhire ánu vīryāya*. Old (ZDMG 55.326, Noten) seems prepared to follow Gr (Tr.) and v. Bradke in emending *dhāyī* to **dāyī*, but this seems unnec. The two roots are formally very parallel and in many contexts their meanings are barely distinguishable; I see no reason why *√ dhā* cannot have acquired this idiomatic meaning with *ánu* in imitation of *ánu √ dā*. In this particular case *ánu √ dhā* may have been used in preference to *ánu √ dā* because of the technical use of *anudéya-* in vs. 11 below. See disc. there.

Note that the ‘lordship, lordly power’ (*asuryà-*) is in the control of the gods and conceded to Indra, another indication that the later Asura/Deva divide is not present in the core RV. See also VI.36.1 below.

VI.20.3: The publ. tr. takes Indra as the subj. of *āvat* in d, with *dartnúm* an action noun “when he aided the splitting ...” But, on the basis of other *-(t)nú-* stems (cf. AiG II.2.696–97 and 741–42), *dartnú-* is more likely verbal/agentive (‘splitting, splitter’) and the subject of *āvat* should then be soma (“the somian honey” *mádhu- sómyá-*). So explicitly Old (ZDMG 55.326, with convincing parallels; Ge appears to follow, though his tr. is more equivocal. I would therefore change the tr. to “when it [=soma] aided the splitter of all the strongholds.”

VI.20.4–5: As Ge (n. 4–5) notes, these two vss. probably belong together as an account of the ever-fragmented Śuṣṇa / Kutsa myth, though the connection of the Pañis (pāda a) to this myth is somewhat uncertain. Old (ZDMG 55.325–27 [=KlSch 785–86]) treats these vss. in detail.

VI.20.4: I read the instr. plurals opening the two hemistichs (*śatañh* 4a, *vadhañh* 4c) “vertically” -- that is, as a single NP distributed over two clauses. This seems to be Ge’s solution too: “Durch hundert (Streiche) ...; durch (deine) Streiche ...”; so also Old ZDMG 55.326. The fact that a form of *√ pad* needs to be read in pāda c, matching

apadran in pāda a supports this interpr. It would, however, be possible to interpr. *śataīḥ* as “by the hundreds,” referring to the felled Paṇis. So Kü (424).

In the publ. tr. I took the beneficiary of Indra’s actions in pāda b to be a single person, “the ten-armed poet” (*dāśoṇaye kavāye*)(so Ge), and since *dāśoṇi-* recurs in 8a apparently qualifying *vetasú-*, I considered this to be a reference to this shadowy Vetasu. But I now think this identification is incorrect or at least misleading. When the word *kaví-* is found in an Indra / Kutsa / Śuṣṇa context it always (in my current view) refers to Uśanā Kāvya, and I believe that to be the case here — strengthened by the fact that the other two occurrences of *arká-sāti-* (I.174.7, VI.26.3) are found with *kaví-* in the Kutsa / Śuṣṇa myth, where the word must surely refer to Uśanā Kāvya. (Old makes the same point, ZDMG 55.326–27.) I therefore now think that “for the poet” means “for Uśanā Kāvya,” and “for the ten-armed” is likely a reference to a different person, identified as Vetasu in vs. 8. (Old considers the additional possibility that *dāśoṇi-* is an epithet of UK, but seems to favor the separation into two individuals.) On the basis of 8a and Ge’s disc. there (n. 8), it further seems likely, or at least possible, that *vetasú-* in 8 refers to Kutsa, and therefore in our 4b the two datives refer to Kutsa and UK. I would therefore now alter the tr. to “for the sake of the ten-armed one [=Kutsa?] and of the poet [=Uśanā Kāvya].”

My tr. of *dāśoṇi-* in this vs. and in 8a reflects the current consensus, endorsed by Mayr (EWA s.v. *oṇí-* “offenbar ‘Arm’”), that *oṇí-* means ‘arm’ (as opposed to Gr’s ‘Schutz’ and ‘Mutterbrust’), but I think that this interpr. might be ripe for revisiting. The passages are not particularly diagnostic -- the most important evidence is the fact that the stem is generally dual -- and it lacks a clear etymology (though it’s sometimes connected with *√av* ‘help’). There is also the question of the cmpd. sandhi: if *dāśoṇi-* consists of *dāśa* + *oṇí-*, it should of course come out as **dāśauní-*. The -o- has been accounted for (see EWA s.v. *oṇí-* [p.c from J. Schindler], Mayr PN s.v. *dāśoṇiya-*) by invoking TS I.2.6.1, where the widely attested mantra *abhí tyám devám savitâram oṇyòḥ kavíkratum* (AV VII.14.1, etc.) instead contains *ūnyòḥ*. The *ū-* initial would indeed yield the proper sandhi result, but given the otherwise overwhelming attestation of *oṇyòḥ* in the mantra, the TS variant does not have much support. Since at present I don’t have a better solution, I stick with ‘ten-armed’, but consider it quite dubious.

That *arká-sāti* means ‘winning of the (sun’s) rays’ is strongly suggested by *sūryasya sātaú* in the next vs. (5d), though, as Old points out (ZDMG 55.327), it could in addition mean ‘winning of the chants’.

I don’t understand pāda d, but I would point out that another “insatiable Śuṣṇa” passage also has a mention of mealtime: IV.16.12 *kútsāya śúṣṇam asúṣaṁ ní barhīḥ, prapítvé áhnaḥ kúyavaṁ sahásrā* “For Kutsa you laid low insatiable Śuṣṇa, who brings bad harvest, with his thousands, before the day’s first meal.” Perhaps the point is that despite his voraciousness, Śuṣṇa is deprived of his meal by Indra’s timely blow. In that case the subj. of *arīrecīt ... prá* here is Indra, who leaves nothing for Śuṣṇa.

VI.20.5: For the unusual position of *sá* and its rukied initial (*urú śá*) see disc. ad VI.2.4.

VI.20.6: Namī is found also in I.53.7, also along with Indra against Namuci, and in X.48.9, where he also has the patronymic *sāpīya-* as here.

VI.20.8: This vs. is made difficult both by our very sketchy knowledge of the personnel and the myth and by the syntax. Both Old (ZDMG 55.328–29 [=KISch 787–88]) and Ge (n. 8) devote considerable space to disc. of it. The vs. seems to pun on PNs in a way discouragingly similar to VII.18, the very obscure account of the Ten Kings battle. The nearby vs. VI.26.4 is of some help in the interpr. of this one, as is X.49.4.

My approach to the vs. partly follows Ge's, but differs in several important ways. Like Ge (who adopted it from Baunack; see his n. 8), I supply a verb of speaking to introduce the second hemistich, which we both take as the direct speech of Indra. (By contrast Old construes *úpa sṛjā* in d as the verb governing the acc. in ab, but given the distribution of the rest of the elements in the vs., esp. the preverb *ā* opening pāda c, this seems unlikely.) But rather than taking the acc. PNs in ab as the addressees of this speech as Ge does, I construe them (loosely) with the hapax bahuvrīhi *svabhīṣṭi-sumnaḥ* 'having/showing the favor of his dominance', with Vetasu [=Kutsa?] and Tuji as the recipient of this favor. The intens. adj. *tūtuji-* 'thrusting', found elsewhere modifying a whirlwind (*bhṛmi-* IV.32.2) and a chariot (X.35.6), punningly points to Tuji, who is found in nearby VI.26.4 in the company of Vetasu and Tugra, as here. (In that vs. there is also redupl., but it is located on the verb: *tvām tūjim ... tūtoḥ* "you strengthened Tuji.")

In that vs. Indra strikes down Tugra for Vetasu (VI.26.4c *tvām tūgraṃ vetasāve sácāhan*). I think the same situation is depicted here in cd, though less violently, with Vetasu(-Kutsa) referred to by the adj. *dyótana-* 'brilliant, flashing' expressing a dat. of benefit. In this connection Baunack's adducing (see Ge's n. 8c) of I.63.3 *kutsāya dyumaté* "for heaven-bright Kutsa," another dat. of benefit in the Śuṣṇa myth, is apposite. Ge (also Gr, Mayr PN) takes *dyótanāya* as a PN, but no such person Dyotana is found elsewhere, and in its other two occurrences (I.123.4, VIII.29.2) the stem is an adj. with the expected etymological meaning.

The next question is *ibham*. This is pretty much universally interpr. as a PN, referring to another enemy of Indra. This is in part based on X.49.4, where Tugra and one Smadibha are made subject to Kutsa (and the Vetasu [pl.] and Tuji are also found). Old, for ex., considers Ibha here simply a shortening of Smadibha, and the context of the word in our pāda certainly supports a pun on the latter name: (*ā tūgraṃ śá*)*śvad ibham* ...; cf. X.49.4 (*tūgraṃ kútsāya smádibham*, with the last syllable of the adverb *śásvad* a close match for the 1st syllable of the PN in X.49.4 (if it is indeed a PN). But *ibha-* is elsewhere in the RV a common noun meaning 'retinue' or 'vassal' (the common denominator being the inferior position vis-à-vis someone in power); cf. also the MIA evidence, such as Pāli *ibbha*. And 'vassal' would be an appropriate word for someone made subject to another -- hence my tr. of the phrase *śásvad ibham* as "perpetual vassal," referring to Tugra. (For a somewhat despairing attempt to fit X.49.4 into this scenario, see comm. ad loc.)

Finally, we must deal with the verbal expressions at the end of the vs., *úpa sṛjā iyádhyai*. The first question is what form *sṛjā* represents out of sandhi. The Pp. reads *sṛja*, that is, a 2nd sg. act. impv., with lengthening of the final vowel in the Saṃhitā text. But of course in that case the normal outcome in sandhi should be coalescence into **sṛjeyádhyai*. After some agonizing, Old accepts the Pp interpr. (though he also flirts with a 2nd sg. subj. *sṛjāḥ*), but Ge (n. 8) opts instead for Baunack's suggestion, that the underlying form is *sṛjai*, i.e., a 1st sg. middle subjunctive (so also Lub, though with !). This is the interpr. I have also adopted. Although the 6th cl. pres. *sṛja-* is predominately active, there are a few middle forms; the pf. is about evenly divided between active and

middle forms in transitive usage (including several 1st pl. *sasṛjmāhe* with *úpa*), and there are two 1st sg. *s*-aor. forms *ásṛkṣi* with *úpa* in trans. usage. Taking the form as a 1st sg. also entails the direct-speech interpr. of Baunack/Ge. (It's worth noting as an aside that Sāy. simply glosses *upa srja* with *upāsrjat*, apparently untroubled by matters of sandhi and grammatical identity; this was followed by Gr [Tr.], though unmentioned in the Wö.)

As Old points out (ZDMG 55.328), the lexeme *úpa √srj* is often used of releasing / dispatching calves to their mother, and this must account for the simile *mātúr ná*. Although this idiom is generally benevolent, it also emphasizes the hierarchical dependency of the young on their mother, and this would be appropriate for the vassal Tugra's subordinate position with regard to Kutsa.

I take the inf. *iyádhyai* to *√i* 'go', or more particularly to the stem *īyate* 'speeds' (*√i* or *√yā*), rather than to *√yā* 'implore, beg' with Lub. It simply completes the action of the main verb "release/depatch them to go ..." The preverb *ā* beginning the 2nd hemistich is more likely to go with this inf. than with *úpa srjai* (pace Gr, also Ge, who thinks [n. 8c] it could go with either one), simply because we'd otherwise expect the order *úpa+ā* (cf. VIII.27.11 *úpa ... ām̐, ásṛkṣi ...*).

After all this, the alterations of the publ. tr. would be minimal:

"Indra showed the favor of his dominance to Vetasu [=Kutsa?] of the ten tricks and ten arms and to the thrusting (Tuji), (saying)

"Tugra as perpetual vassal for brilliant (Vetasu=Kutsa?) shall I dispatch, like (calves) to their mother, to speed (to him)."

VI.20.9: The participial phrase *bíbhṛad vájram* here and in VI.23.1 below may be intended to invoke the name *bharád-vāja-*, the poet of this hymn and indeed of this maṇḍala, by an expression that seems the syntactic equivalent of that type of governing compound — with the prior member belonging to the same root and the 2nd member a phonological variant of the obj. Matching the first member exactly would be problematic, since the nom. sg. of the participle would be *bhāran*. The punning on PNs noted with regard to the immediately preceding vs. may be in evidence here as well.ⁿ

VI.20.10: In b *enā* can simply be adverbial, as Ge and KH (Injunk. 168) take it, but it is also regularly used as demonstrative with forms like *nāmasā* 'homage' (I.171.1, II.23.14, etc.), *sūktēna* 'hymn' (II.6.2), *bráhmanā* (IV.36.7), and in this context, where the sacrifice is mentioned (*yajñāih*), I think it likely that the verbal part of the ritual evidenced by the verb *prá ... stavante* "they start up the praise" is further specified with the near deictic, referring to this current praise hymn.

The syntactic relationship between pādas c and d is ambiguous. With Ge, I take d as the main cl., with c dependent on it. But KH (Injunk. 168) takes them as parallel subordinate clauses dependent on b. Either is possible, because the verb of d, (*d*)*hán*, is initial in the pāda and can owe its accent to that alone.

Note the allit. in (*śāra*)*dīr dārd, dhán dās(īh)*, esp. noticeable because it consists of four syllables in a row, belonging to four separate words.

Old (ZDMG 55.329–30 and Noten) calls *dart* in c into question, arguing that it should be a 2nd ps. and the *-t* is faulty. But there seems no reason not to assume that both *dart* and (*d*)*han* are 3rd ps. verbs; although Indra is referred to in the 2nd ps. in pāda a, shift between the persons is a commonplace in RVic discourse. The sandhi situation here

favors the retention of the *-t*, though the matter is somewhat complex. As is generally known, final clusters are simplified, retaining only the first. The exception is that *-t*, *-ṭ*, and *-k* after *-r-* are retained if they belong to the root (Wh, Gr. §150b Macd. VGS §28a, etc.) -- which the *-t* in *dar-t* does not ($\sqrt{dṛ}$). However, *dar-t* is pāda-final and the next pāda begins in the transmitted text with *dhán* (for *hán*), whose *dh* is the automatic result of the (re-)introduction of occlusion of initial *h-* after a final stop (see, e.g., Wh, Gr. §163). The standard practice is that the *h-* is replaced by the voiced aspirate corresponding to the place of articulation of the final stop -- in this case, a dental. If we assume that this rule was operative before final clusters were simplified, a sequence of 3rd sg. *dard dhán* with apparently pleonastic gemination would favor the non-simplification of the cluster *-rd dh-*. (On cases of gemination and degemination in the text, see my “False Segmentations and Resegmentations in the Rigveda: Gemination and Degemination” [to appear in a forthcoming Fs.].) Pāda c is identical to I.174.2b, and in that passage the case is more difficult because there the context is entirely 2nd ps. As I argued in the comm. to that vs. (q.v.), the final *-t* there may have been introduced from our passage.

VI.20.11: Pāda c contains one of the three instances of the gerundive *anudéya-* in the RV and the only masc. form -- a form called by Ge “ganz unsicher.” This gerundive belongs to the lexeme *ánu* $\sqrt{dā}$ ‘hand over, concede’ discussed above, ad vs. 2. I have discussed one of the fem. forms *anudéyī* in the difficult hymn X.135 at length (“The Earliest Evidence for the Inborn Debts of a Brahmin: A New Interpretation of Ṛgveda X.135.” *Journal asiatique* 302.2 [2014]: 245–57). In that article I established that the idiom *ánu* $\sqrt{dā}$ can be further narrowed in certain contexts to mean ‘forgive/acquit a debt’; and the debt in question can be referred to with the gerund *anudéya-*, *-ī*, as (the debt) ‘to be acquitted’. In X.135.5-6 this debt is actually a reference to the inborn debts of a Brahman, which he must pay off during his lifetime, one of which is the need to provide his ancestors with (grand)sons. As argued in that article (255–56), I think the same sense can be seen in our passage. To cite from the article: “The second half of this verse seems to allude to a complex intergenerational relationship in which Indra intervenes. The god hands over a grandson (*nápāt-*) to his grandfather (*mahé pitré*), a transaction that sounds like a man’s fulfillment of his debt to his ancestors by fathering a son, thereby providing them with a grandson. This grandson is said to be *anudéya-*. I would suggest that the grandson here serves as the concrete manifestation of the debt that is to be acquitted, and the technical term *anudéya-* is therefore applied to him. If I am correct, this is another, though more muted, piece of evidence for the existence of the notion of a man’s inborn debt in the Rig Veda.”

On Navavāstu or Navavāstva, see comm. ad X.49.6

VI.20.12: This is identical to I.174.9; see comm. on that vs., esp. with regard to *pārṣi*.

VI.20.13: Dabhīti is the beneficiary of Indra’s putting Cumuri to sleep in VI.26.6. Cumuri’s companion Dhuni is found with him in VI.18.8, and in our passage he immediately follows vs. 12, which contains two adj. usages of *dhúni-* ‘tumultuous, boisterous’.

The second hemistich portrays Dabhīti assembling or preparing four different requisites of the sacrifice in four different morphosyntactic expressions: 1) a full

participial phrase *sómebhiḥ sunvān* “pressing with the soma juices,” 2) a bahuvrīhi *idhmābhṛtiḥ* lit. ‘having the bringing of the firewood’, 3) an *-ín*-stem possessive *pakthī* ‘having cooked food’ (based on an unattested **pakthá-* ‘cooked food’), and 4) an instr. of accompaniment *arkaīḥ* “along with the chants.” The identity of the third has been called into question by Old (ZDMG 55.330, Noten). Though the sandhi form *pakthy* is analyzed by the Pp. as *pakthī* with the long vowel appropriate to the nom. sg. of an *-ín*-stem, in fact in the cadence it would better be read short (though keep in mind the metrical disturbances throughout the hymn). Old toys with the idea that it has been influenced by the PN *pakthá-* and that it is underlyingly an instr. to the *-tí*-stem *paktí-* ‘cooked food’, hence **paktī* with shortening before the following vowel. This seems unnecessarily complex, and the PN *pakthá-* is neither well attested nor found nearby this passage. Since shortening of *-ī* in hiatus was available for the instr., I see no reason why it shouldn’t have been analogically extended to the nom. of an *-ín*-stem in this case. Moreover, I think the morphosyntactic variety just described was deliberate, and replacing 3) with an instr. like that of 4) would disturb the sequence.

VI.21 Indra

VI.21.1: As with hemistich initial *#śataīḥ ... #vadhaīḥ* in VI.20.4 in the immediately preceding hymn, I take *#imāḥ ... #dhíyaḥ* as a “vertical” NP, “these insights.” Their positioning allows them to get out of the way of the intense etym. figure in b: *hávyaṃ ... havyā havante*. This figure is complicated by the fact that *hávya-* is used in two slightly different senses, controlled by slightly different constructions of the verb *√hū / hvā*. Although the normal object of this verb is a god or other being called upon, very occasionally it can take the call itself as object (see comm. ad IV.23.3), and of course derivatives like *háva(na)-* express the call itself. In our passage *havante* ‘they invoke’ takes the usual type of object, namely Indra here, who is qualified by the gerundive *hávya-* ‘to be invoked’. But the insights (*dhíyaḥ*) themselves are also so qualified; here *havyāḥ* must mean not ‘to be invoked’, but ‘to be called [=spoken]’. In order to keep the vocabulary constant, I have tr. ‘deserving to invoke’, in contrast to ‘deserving to be invoked’ applied to Indra.

The vertical NP just discussed unbalances syntactic constituency, and, unusually, the hemistich boundary cannot be respected.

In d most take *īyate* to *√yā / ī* ‘implore, beg’; so, e.g., Ge “... wird ... erbeten” (likewise Lub, Kulikov, *-ya*-presents 495). I assign it rather to ‘speeds’, though either is possible.

VI.21.2: The nominal rel. cl. *yó vídānaḥ*, interrupting a string of accusatives, is syntactically curious. It seems to represent a sort of izafe, rather than a real embedded relative cl. I have tr. it as if acc. *índram* were the predicate of the participle (“who is known as “Indra”), despite the difference in cases. Ge, in contrast: “der bekannt ist.” My interpr. might be better represented as “I will praise him — Indra, as he is known — whose ...” This interpr. fits well with the doubts expressed about Indra later in the hymn, esp. vs. 4. See also *vídānaḥ* in 12b.

The instr. *gīrbhīḥ* in b might be better construed with the verb *stuṣe* in a: “I will praise him with songs”; it has been displaced to the right to be nearer to *gírvāhasam*.

The second hemistich contains a strikingly mixed construction, with the usual matched pair heaven and earth in two different cases, acc. *dívam*, abl.-gen. *pr̥thivyāḥ*, though construed with the same verb. The two different cases are controlled by two different PREVERB + \sqrt{ric} combinations, one overt, one implied. Overt is *āti* \sqrt{ric} ‘extend beyond, surpass’, which is rather rare but takes the acc., as in VIII.92.14, 22 *ná tvāṃ indrāti ricyate* “nothing surpasses you, Indra” (cf. also X.90.5); hence our ... *dívam āti ... riricé*. The implied construction is the more common *prá* \sqrt{ric} ‘extend beyond’ which takes the abl., as in I.61.9 *asyéd evá prá ririce mahitvām, divás pr̥thivyāḥ pári antárikṣāt* “his greatness projected beyond heaven and earth, beyond the midspace” (note clear abl. *antárikṣāt*) (cf. also I.59.5, 109.6, etc.), hence our ... *pr̥thivyāḥ ... ririce mahitvām*. Examples of this latter constr. are found in this group of Indra hymns (VI.24.3, 30.1), and despite the absence of *prá* here it is not surprising that the abl. construction would creep in.

VI.21.3: On the meaning of *vayúna-*, see comm. ad II.34.4.

As has long been known, the RVic desid. stem *íyakṣa-* belongs to \sqrt{nas} ‘attain’, not (*pace* Gr) \sqrt{yaj} ‘sacrifice’. See, inter alia, EWA s.v. *NÁŚ*¹; Heenen (Desid. 79–82).

The question in the 2nd hemistich seems like a non sequitur, which makes me somewhat sympathetic to Sāy’s reading as a (negative) indefinite: *kadā cid* “they do not ever violate ...” But this reinterpr. is arbitrary, of course, and further, the *kadā* question inaugurates a series of questions in vs. 4, each with a *ka-* form: a *kúha*, b *kám* ... *kāsu*, c *káh*, d *káh* ... *katamáḥ*. It may be that we have to ask about the whereabouts of Indra in vs. 4 because he has ceased to appear to us because we have (or may have) violated his ordinances.

VI.21.4: *-tama-*forms implicitly index a referent among three or more possibilities. The interrog. *katamá-* here echoes *purutáma-* of 1a. I have chosen to render *katamá-* with the heavy tr. ‘which of many’ because in this series of questions the poet is anxiously surveying all the possible sacrifices and sacrificers who may have attracted Indra away from us.

VI.21.5: The *utá* in the middle of pāda c uncomplicatedly conjoins the temporally contrastive *madhyamāsaḥ* “the middle ones, those in between” and *nūtanāsaḥ* “the current ones” (see Klein DGRV I.301, 311), but the one beginning pāda d, in Klein’s words (DGRV I.382) “introduc[es] a new nonparallel clause.” It is not represented in the publ. tr., which should perhaps read “And ... take cognizance of the one who is closest.” The reason for this apparently pleonastic conjunction may be that “the closest one” (singular *avamá-*) is not only a subset of “the current ones” (plural *nūtanāsaḥ*), but the climax of the series of temporally sorted comrades.

VI.21.6: This ultimate insider, “the closest one” of 5d, is immediately picked up by the slightly more distanced “closer ones” (*ávarāsaḥ*) in 6a. Here their comparative closeness is not contrasted with previous generations of Indra’s comrades, as in vs. 5, but with the older, distant deeds of Indra. These closer ones are “asking” (*prchántaḥ*) about Indra. Their asking may refer directly to the questions in vs. 4, but it also implies that, however “close” they are, they do not have direct access to knowledge about Indra.

The limits on our knowledge are explicitly acknowledged in the 2nd hemistich, where we praise Indra only insofar as know him (*yā́d evá vidmá*). This subordinated expression is embedded in the larger clause: *ārcāmasi ... , yā́d evá vidmá tāt tvā mahāntam*, where the obj. of *ārcāmasi* is *tvā*, but the *yā́d ... tāt* diptych is clearly formulaic and frozen. This expression reminds us slightly of the *yó vídānaḥ* of 2b, likewise with *√vid* ‘know’ and likewise technically embedded.

VI.21.7: JPB suggests that the “face of the demon” spreading out against Indra is the hood of the cobra, namely Vṛtra.

The referent of the expression beginning b, *máhi jajñānám* “having been born great,” is entirely ambiguous. It may be, as the publ. tr. takes it, an acc. with *tvā*, referring to Indra. Or it may be, as Gr and Ge take it, a neut. nom. modifying the neut. *s*-stem *pājah*. Technically speaking, of course, *máhi* is neut. and might therefore give weight to the latter possibility. But *máhi* can be adverbial here, evoking the apparently fixed expression *máhi jātám* (I.163.1, III.31.3, cf. I.156.2); cf. also V.60.3 *máhi vṛddháh* ‘grown great’. I now think the ambiguity is meant, and the phrase can apply to either of the antagonists (or rather, in the case of the *rakṣás*-) its visage. The ambiguity is hard to convey in tr.; perhaps “... (each) born great.”

The two verbs in the first hemistich, *abhí ... ví tasthe* and *... abhí ... tiṣṭha*, belong to the same root (*√sthā*), are positioned identically, and differ fairly minimally from each other: tense-aspect stem, voice, person, as well as an extra preverb with the first. Unfortunately the etymological connection can’t be easily captured in tr.: “has stood wide against you” is unidiomatic and opaque.

The 2nd hemistich seems implicitly to convey that our anxieties about our intimacy with Indra were well-founded. In 5ab our forebears were identified as Indra’s “ancient comrades” (*pratnāsaḥ ... sákhāyaḥ*), with later generations apparently grandfathered into this select group (5cd). But here we learn who Indra’s “ancient comrade” really is — his mace: *táva pratnéna yújyena sákhyā vájreṇa*.

VI.21.9: The use of parallel and etymologically related purpose datives *ūtáye* and *ávase*, stationed in the a and b pādas respectively, seems pleonastic. I have tr. one as nominal and one as infinitival, but this distinction rests on nothing in the passage.

VI.21.10: Like 1b, pāda c here contains an extravagant etymological figure based again on *√hvā* ‘call’: *hávam (ā) huvató huvānāḥ*.

The phrasing of d also seems awkwardly pleonastic -- *ná tvā́vāṁ anyáḥ ... tvád asti* “no one like you exists, other than you” -- in comparison with the usual expression, found in nearby VI.30.4 *ná tvā́vāṁ anyó asti* “there exists no one else like you” (cf. VII.32.23).

VI.21.11: In c Ge tr. *āsúḥ* as if it were a present: “die Agni zur Zunge haben und die Wahrheit pflegen.” Although this is contextually tempting, the pf. of *√as* is never presential. Cf. Kü (111): “Es ist stets (zumindest auch) vergangenheits bezogen gebraucht.” At best we could render it “who have (always) had Agni as their tongue ...”; this might in fact be better.

In any case the pf. *āsúh* in c matches *cakrúh* in d, and this latter action appears to be one in the distant past -- even though it's not entirely clear what action it refers to. Interpr. is not helped by the fact that *dāsa-* is a hapax, though it is reasonable, with Ge (n. 11d), to take it as “der mythische Stammvater der Dāsa's oder Dasyu's,” or indeed referentially identical with the well-attested stem *dāsa-* referring to some variety of enemy to the Ārya (see Old, etc.). But what the relationship between Manu and Dasa is in this passage and what the gods were attempting to bring about are both unclear -- an unclarity also facilitated by the ambiguity of *úpara-*, which can mean, inter alia, ‘lower’, ‘closer’, or ‘later’. The publ. tr. “... put Manu very close to Dasa” is opaque; in fact I do not now know what I meant by it. Ge takes *úpara-* as ‘later’ and assumes that the gods made Manu Dasa's successor (Nachfolger). I am now inclined towards Old's solution, however: that the gods put Manu below (the ‘lower’ sense of *úpara-*) in the earthly region “for Dasa,” with the dative of malefit, not benefit: they set Manu to do to Dasa whatever he deserved. MLW comments “Wouldn't this most sense if it meant 'they made Manus superior to Dasa'? Could the original meaning of **upara-* as preserved in Avestan, be kept here? For the sentiment cf. VI.19.13 *śátroḥ-śatror úttara ít syāma*.” this would be a neat solution, though I wonder whether a reading that requires the opposite sense (‘above’) of one of the senses of this stem (‘lower’) would be available.

VI.21.12: *vidānaḥ* in b reprises *yó vidānaḥ* in 2a and thus forms a weak ring.

VI.22 Indra

VI.22.1: To add to the similarities between VI.21 and VI.22 noted in the publ. intro., *havya-* is applied to Indra in the first pāda here, recalling 22.1b *havyam ... havyā havante*; note also *purumāyā-* in b, a descriptor of Indra also in VI.21.2d (as well as nearby VI.18.12).

On *sátvan-* see comm. ad I.173.5.

VI.22.2: The vs. lacks an overt finite verb. With Ge I supply a form of *√arc*, picking up the main clause verb of vs. 1, *abhy ārca* of 1b. The instr. *matíbhiḥ* in our d is parallel to *gṛbhīḥ ... ābhīḥ* of 1b.

The “seven inspired poets” (*saptá víprāsaḥ*) evokes the Saptarṣi, the “seven seers.” I am not certain whether the phrase here refers to the Saptarṣi and, further, whether they are identical to the Navagvas; the numbers suggest not. It is worth noting IV.42.8 *asmākam ātra pitāras tá āsan, saptá řṣayaḥ* “Our forefathers, the Seven Seers, were here,” with *pitāraḥ*, as here, as well as IX.92.2 *řṣayaḥ saptá víprāḥ*, where the Seven Seers are identified as *vípra-s*.

The interpr. of the cmpd *nakṣad-dābhá-* given in the publ tr., ‘who catches up to the cheat’, cannot be correct. That tr. assumed a structure of the verbal governing cmpd type, like *bharád-vāja-*, but the accent is wrong. I therefore now see that a conventional tatpuruṣa interpr., with the 2nd member an agent nominal governing the first, should be the correct interpr.; so Gr ‘den Nahenden vernichtend’, Ge ‘der den Einholenden (?) täuscht’. (Curiously AiG does not seem to comment on this cmpd, despite its somewhat aberrant form) The cmpd thus conforms to the type *hasta-grābhá-* ‘grasping the hand’, at least as to its 2nd member, but the first member appears to be the weak form of the pres.

part. to the pres. *nákṣati* ($\sqrt{nakṣ}$ ‘approach, reach’). I do not know, offhand, of any cmpds formally so constructed, and I am further puzzled by the apparent sense ‘tricking / cheating / outwitting the one who approaches’. Forms of the root $\sqrt{nakṣ}$ generally have benevolent sense, as in the medial *nákṣate* in this very hymn (5d), where the song ‘catches up’ to Indra, or act. *nákṣanti* in this same Indra cycle, VI.34.3, where thoughts and voices approach Indra, strengthening him, so there is no apparent reason for Indra to \sqrt{dabh} someone innocently coming up to him. I would emend the tr. to “him who outwits the one(s) approaching,” but still feel that the first member is concealing something I can’t crack. Some light on the cmpd may be shed by the verb forms *ānaśúh* and *nákṣate* in the following vss. (4b and 5d respectively; see below), and this set of vss. seem to share preoccupations and themes. MLW suggests that *nakṣat* could represent the root $\sqrt{naś}$ ‘disappear, destroy’, with -s- suffix and desid. meaning (“who deceives the one who seeks to destroy him”). This is semantically much more attractive than the suggestions given above, but I am dubious about the morphology. The root $\sqrt{naś}$ does not have a desid. at any period of the language, and in any case we should properly expect reduplicated **ninakṣa-*. Moreover, non-caus. stems to this root have the intrans. sense ‘disappear, perish’. The forms in the immediate vicinity cited above that belong to *naś* / *nakṣ* ‘reach, attain’ would also cause interference.

Note the presence of both \sqrt{dabh} ‘trick, cheat’ and \sqrt{druh} ‘deceive, lie’, with Indra depicted as engaging in the former activity, but possessing speech that is *ádrogha-* ‘undeceptive’. In 8a he attacks the “deceitful people” (*jána- drúhvan-*).

VI.22.3: The lack of accent on the demon. in the phrase *asya rāyāh* is notable. Ge tr. “um solche Reichtum,” clearly taking *asya* as modifying *rāyāh*, and Old (ZDMG 61.828 [=KlSch 259]) defends a similar interpr., saying “der weitere Verlauf schildert dann den Reichtum ausführlicher.” However, unaccented oblique stems of *ayám* are ordinarily pronominal, and that interpr. is readily available here: the *asya* can refer to Indra, who immediately precedes in a different case (*índram*).

On the *yāh* of pāda c as breaking the pattern established earlier in the hymn of reference to Indra, see the publ. intro.

VI.22.4: Although there is no overt mark, I take initial *tán no ví vocaḥ* as a question (contra Ge), matching the overt questions in cd and introducing the indirect question in the *yádi* clause; see also *prchántī* in the next vs. and the questions in the previous hymn, VI.21 3–4, 6).

The poet seems to be harking back to vs. 2 in 4ab and vs. 3 in 4cd. In vs. 2 the ancestral poets praised Indra, but the god is described as *nakṣad-dābhá-* ‘outwitting the one(s) approaching’. Here the poet asks if previous singers obtained (*ānaśúh*) Indra’s favor. Although this pf. belongs to the root $\sqrt{(n)as}$ ‘attain, reach’, which is synchronically separate from $\sqrt{nakṣ}$ ‘approach’, the latter root is a fairly transparent enlargement or development of the former (see EWA s.v. *NAŚ*¹, p. 28; Narten, SigAor. 160, Gotō, 1st Kl., 192), and, of course, some forms of $\sqrt{(n)as}$ have the root syllable *nakṣ* (e.g., desid. *ínakṣati*, though see *íyakṣati* in the previous hymn, VI.21.3). I therefore suggest that *ānaśúh* implicitly responds to *nakṣat-* in 2c. With my new (and, I hope, more accurate) interpr. of *nakṣad-dābhá-* in 2c, I now think that vs. 2 implies that Indra may deviously rebuff the attentions of his praisers and have done so even to the legendary poets of the

past. Here the poet directly asks the question if these previous poets (/singers) actually obtained (*ānaśūḥ*) the favor they sought in approaching (*nakṣat-*) Indra, whose benevolence cannot be taken for granted.

In the 2nd hemistich the questions turn to Indra's portion (*bhāgá-*) and his vital energy (*váyah*) in battle, but also refers to the wealth he may bring. The two cmpds *púruhūta purūvaso* respond to *puruvîrasya ... purukṣóḥ* in 3d.

The voc. *khidvah*, presumably to a *-vant*-stem **khídvant-* (AiG II.2.896, or, less likely, **khídvān-* or **khídvāms-*), belongs to the synchronic root $\sqrt{\text{khid}}$, which, despite its relative rarity, displays a variety of senses centered around aggressive action. Since this stem is a hapax, it's difficult to know which of the senses is reflected here; Gr renders as 'drängend (so also EWA s.v. *KHED*), bedrängend, Ge 'Abzwacker'. The only RVic nominal form to this root is *khédā* (3x), which in its clearest occurrence (VIII.77.3) means 'hammer' or the like. I have evoked this sense here, in the English idiom 'hammer-head', thus forming an unjustified etym. figure in tr. "headstrong hammer-head" -- 'headstrong' representing *dudhra*. Although the standard tr. are safer, the fact that the form is a hapax to a poorly attested root invites a more noticeable tr. than 'pressing'.

I follow W. E. Hale (*Ásura-*, 65) in taking *asura-* in *asurahán-* as referring to human 'lords' who lead forces inimical to us.

VI.22.5: This vs. is beset with difficulties, starting with the syntax, on which see Old. The major problems are that there is no finite verb until *iṣe* in d and that it is unclear what the limits are of the rel. cl. marked by *yásya* in b. If we follow Old's first option, that the rel. cl. occupies pādas a-c, the rel. prn. (towards the end of b) is positioned far too deeply in the clause. His 3rd option envisions a discontinuous rel. cl. partly embedded in and partly following the main cl., with the rel cl. verb being *nákṣate* in d -- a syntactic configuration that is simply impossible. His 2nd option, basically adopted by Ge as well, takes the rel. cl. as limited to *vépī vākvarī yásya nū gīḥ*. This is more acceptable, though the rel. cl. would be definitely embedded, not only in the main clause but within a long acc. NP (*tám ... índram* [REL CL] *tuviṅrābhám ...*). My own solution is similar to this, but limits the rel. cl. to *yásya nū gīḥ*; this not only better accounts for the position of the particle *nū* but also diminishes the effect of the embedding, because brief nominal rel. clauses, roughly equivalent to izafe constructions, seem to be at least marginally acceptable in RVic syntax. See esp. *yó vídānaḥ* in the previous hymn, VI.21.2. Scar's (208) tr. appears to follow the same analysis, with the rel. cl. limited to "[das Lied,] das nun ihm gehört ..."

The root noun cmpd *rabhodā-* is glossed by Scar (208) in the first instance as 'Ungestüm, Gewalt, Kraft gebend, aufnehmend', leaving it undetermined whether Indra bestows or assumes *rābhas-*, a question that Scar discusses in some detail without coming to a definite conclusion. Since, as Scar notes, there are several good exx. of *rābhas-* and related words as objects of medial $\tilde{a}\sqrt{\text{dā}}$ 'take, assume' (e.g., I.145.3) and since the pāda in which the adj. is found seems to depict Indra on a rampage (*tuviṅrābhám tuvikūrmīm* "powerfully grasping, powerfully ranging"), the medial 'assume' value makes the most sense. Although ideally we might want the preverb \tilde{a} represented, root noun cmpds with the structure NOUN-PREV- $\sqrt{\text{ }}$ seem to be rare to non-existent. (Cmpds of the type *tveṣá-sam-dṛś-* in 9b below aren't counterexamples, because, as the accent shows, the root noun

cmpd *saṃdṛś-* has been in turn incorporated into a bahuvrīhi), and in any case the outcome of *rabhas-ā-dā-* would be hard to parse once sandhi rules had applied.

The verb of the main clause must be *iṣe* in d, but what it represents is uncertain. Gr (Nachtr., 1755) assigns it to $\sqrt{iṣ}$ ‘send’, identifying it as a 1st sg.; Old tr. as 3rd sg. ‘er regt sich ... an’, which I assume means that he assigns it to $\sqrt{iṣ}$ ‘send’, though he doesn’t comment on either root affiliation or morphology. Ge suggests a 3rd sg. either to \sqrt{i} (built like *stuṣe*, acdg. to him, though *stuṣe* is overwhelmingly *first* sg.) or to $\sqrt{iṣ}$ (which $\sqrt{iṣ}$ he doesn’t say, though his tr. ‘sucht’ suggests $\sqrt{iṣ}$ ‘seek’). Lub gives *iṣe* as an independent lemma (p. 321), with a question mark, no gloss, and 4 occurrences. As my tr. ‘seeks’ indicates, I think it belongs to $\sqrt{iṣ}$ ‘seek’ and is a 3rd sg. A number of other forms to this root take *gātúm* ‘way’ as obj. (pres. *ichá-* I.80.6, IV.18.10, VI.6.1; pf. *īṣ-* I.112.16, III.1.2). But what is the form? Almost the only way to get a 3rd sg. in -e (outside of archaic forms like *duhé*) is in the perfect, and as we just saw, other forms of the pf. of this root take the same object. I suggest that we do, or did, have a pf. here, whose expected form would be **īṣe*. This putative form with heavy root syllable would in fact work metrically here. See also IV.23.6 and X.20.7, where I suggest the same underlying form for the transmitted form with light root vowel; the suggested long vowel is a significant metrical improvement in both passages. (Lub’s 4th ex. in VIII.46.17 is better taken as part of a cmpd. *āramiṣe*.) There are several ways to explain the short vowel. On the one hand, it can be wrongly extracted from combinations with preverbs like *upeṣé* in I.129.8, whose correct analysis is *upa īṣé*, but could also in principle contain **īṣé*. On the other hand, the dat. *iṣé* to the root noun *iṣ-* ‘refreshment’, found in nearby VI.13.2, 17.14, might have influenced it. MLW suggests that it’s simply an archaic 3rd sg. middle pres., like *duhé* just cited – which would cut the Gordian knot.

Stepping back from the formal difficulties of the vs., we can try to fit its contents into the context of the hymn. The vs. seems to express the same questioning anxiety as vs. 4: do the singers -- and their song -- succeed in reaching Indra and attaining his good opinion, or does he respond to their approach with disdainful tricks? While asking this question, the song seeks her way and approaches what sounds like an intimidatingly formidable Indra, hoping for acceptance and favor. That we have moved from the plural male poets/singers of vss. 2 and 4 to the lone female song (fem. *gīḥ*) makes the mismatch of power all the clearer. The verb *nákṣate* in the final clause brings us back to *nakṣad-dābhá-* in vs. 2.

VI.22.6: Indra’s overwhelming power, viewed with some apprehension in the previous vss., is a positive force when it is exercised for our benefit against external foes, and the hymn now turns to this happier theme.

The publ. tr. assigns the instr. phrase *ayā ... māyāyā* “with this magic power” to Indra, whereas Ge and Old assume that the phrase goes with *vāvṛdhānám* and refers to Vṛtra’s *māyā*; Old is in fact quite scornful of the former interpr. However, see comm. ad nearby VI.18.9, where I argue that Indra is regularly credited with *māyā* in this Indra cycle. See, e.g., 1d in this hymn and 2d in the previous one (VI.21.2), both with *purumāyā-* qualifying Indra. It is also the case that this hymn contains hostile *māyā*; see 9d. I therefore now think that *māyayā* in this vs. has double application. Its tight embedding in the acc. phrase *tyám māyāyā vāvṛdhānám* does suggest that it belongs to Vṛtra, but the initial near-deictic *ayā*, outside that NP, refers, in my opinion, to “this

(*māyā*) right here” -- namely Indra’s. I would therefore amend the tr. to “With this (magic power of yours) right here ... (you shattered) him who had grown strong with his magic power.”

The identification of the vajra with “the mountain that has the speed of thought” goes back to Sāy.

Though the first hemistich lacks a verb, it is easy enough to supply ‘shattered’ from *rujō ví* in the 2nd half-vs.

VI.22.7: The predicated inf. *paritamsayādhyai* has no clear subject, but *vaḥ* must serve in this capacity, referring to the poets, who will perform this action with “their newer insight” (*dhiyā nāvasyā*). The model for this action is the previous poets referred to in 2ab who praised and stimulated Indra, here represented by the adverbial *pratnavāt* ‘in the ancient way, as the ancients did’. The force of *pari-* in the infinitive must be to indicate that poets from all competing groups will try to pull Indra to their side.

Ge renders *animānā-* as ‘ohne Vorbild’ (pattern, model), but there seems to be no support for this tr. The only occurrence of *ní√mā* that I know of in the RV is in the enigmatic creation hymn III.38.7d *ní ... mamire*, where it is paired with *ā ... mamire* (7a), with both verbs referring to the ‘measuring out’ of creation and created things. There is another occurrence of the negated adj. *animānā-* in I.27.11, but nothing in that passage pushes the word to mean anything beyond ‘without measure’.

VI.22.9: The lexeme *ví dayate* is often used positively, of distributing good things to deserving people; cf., e.g., III.2.11 *vásu rātnā dāyamāno ví dāśúṣe* “distributing goods and treasures to the pious man.” However, a few passages are, or can be, negative, esp. III.34.1 *dāyamāno ví sátrūn* “fragmenting his rivals” (probably also IV.7.10). Here the dominant sense must be negative and the wiles must be Vṛtra’s (and perhaps those of other enemies) — though a positive spin is just possible as a second reading: “distributing your magic wiles,” that is, deploying his own *māyā*-s widely. See comm. ad VI.18.9 on Indra’s use of his *māyā*-s in combat.

VI.22.10: The main cl., occupying the first hemistich, has no verb; I supply *dhiṣvá* from 9a, though any verb of providing, giving, bringing would work as well (see Ge’s “bring”).

The phrase *dāsāny āryāṇi vṛtrā* “Dāsa and Ārya obstacles,” with the contrastive pair *dāśa- ārya-* juxtaposed in c, is, surprisingly, a fairly well-attested formula, variously realized. In addition to the phrase here, also

VI.33.3 *dāsā vṛtrāṇi āryā ca*

VI.60.6 *vṛtrāṇi āryā ... dāsāni*

VII.83.1 *dāsā ca vṛtrā ... āryāṇi ca*

X.69.6 *dāsā vṛtrāṇi āryā*

Although the existence of *Ārya* obstacles might seem odd, *dāśa- ārya-* is a species of merism that would seem to encompass all the types of human obstacles we might encounter, both belonging to our larger community and alien.

The further specification *nāhuṣāṇi* in d appears to be an afterthought that focuses our enmity on a defined group within the larger whole; elsewhere the clan ancestor Nahus and derivatives of that word are generally positively viewed members of the community,

including in the two other occurrences in VI (VI.26.7, 46.7). See comm. ad IX.88.2, X.80.6, etc.

VI.23 Indra

For the repetitive lexicon and the unusual amount of linkage between vss., see publ. intro.

VI.23.1: The rendering of *nímiśla-* as ‘intertwined’ may be a bit over the top, but ‘attached to’ or ‘linked to’ is too anodyne; assuming an underlying sense ‘mixed’, the point is that Indra can’t be separated from the substances and words offered to him in the ritual.

The standard NP *suté sóme* is polarized at the boundaries of pāda a, allowing *sóme* to directly adjoin its rhyme form (and ritual partner) *stóme* over the pāda boundary -- a simple but effective use of word order.

On *bíbhrad vájram* see comm. ad VI.20.9.

VI.23.2: The gen. phrase *dákṣasya bibhyúṣaḥ* is troublesome, as it is not clear who or what it refers to or what its syntactic function is. Old interpr. it as a “dativischer Gen.,” though he gives no tr. But Ge seems to take it as a gen. absolute: “während der Entschlossene Furcht hatte.” In either case *dákṣa-* seems to be taken as an adj. qualifying a human and this fearful human is taken to be one on our side, aided either directly (dative gen.) or indirectly (gen. abs.) by fearless Indra. In this passage the single ‘skillful’ (or ‘determined’: Ge’s ‘entschlossen’) person would presumably be the soma-presser (*súṣvi-*) of ab, and this is not impossible. However, although there are a few undoubted exx. of adjectival *dákṣa-* ‘skillful’ (e.g., I.51.2 *dákṣāsa ṛbhávaḥ*), in most clear exx. the stem is a masc. abstract ‘skill, ability’, and in doubtful cases I prefer to seek such a meaning. Here I suggest that the “fearful skill” belongs to Indra’s enemies, the *dásyūn* of d, and depicts their fading confidence in their skill or ability to counter Indra. Under this interpr. it can either be a gen. abs. with Ge (though this construction is rare at any stage and is supposed not to exist before Vedic prose; see Delbrück, AIS 389–90) or is a gen. of quality (although this construction is also marginal) with *dásyūn* “the Dasyus of frightened skill.” The publ. tr. represents an absolute interpr.; the gen. of quality might be a better analysis, but is difficult to render in Engl., as the tr. just given shows (better “of daunted/craven skill,” but this would lose the etymological figure). (Kü’s [336] tr. avoids the problem, but unfortunately only by an unusual grammatical lapse on his part: he explicitly identifies *bibhyúṣaḥ* as acc. pl., which it could be, but tr. the phrase *dákṣasya bibhyúṣaḥ* as a single NP [“für den Geschickten die sich fürchtenden”] apparently failing to remember that *dákṣasya* requires the whole phrase to be gen. sg. He takes this supposed acc. pl. as parallel to *sárdhataḥ*, which he separates from *dásyūn* and takes as another qualifier of those aided by Indra. His full tr. is “Oder wenn du für den Geschickten die sich fürchtenden furchtlos unterwarfst für den Kühnen, Indra, die Dasyus.” The misparsing of *dákṣasya* excludes this tr.)

VI.23.3–4: The alternation of root-accented *-tar-* agent nouns and redupl. agentive *-i-* stems, both with verbal rection, is a distinctive characteristic of these two vss.

VI.23.5: The first pāda contains an example of an embedded relative that is difficult to sidestep: in *āsmāi vayāṃ yād vāvāna tād vivīṣma* the first two words dat. *āsmāi* and nom. *vayāṃ* rightly belong to the main cl. *tād vivīṣma* “we toil at that,” which follows the dependent cl. *yād vāvāna* “what he holds dear.” The two preposed pronouns set the participants and case roles for the vs. (see esp. *īndrāya* opening b and d, as well as the two 1st pl. verbs *vivīṣma* and *stumasi*) -- hence my tr. as a cleft construction -- but the construction still seems unusual.

The opening of c, *suté sóme stumasi*, takes the same elements found in the figure in vs. 1ab and plays on different phonological similarities. Here *sut(é)* and *stu(masi)* are scrambled versions of each other, while *sóme* stands somewhat apart.

VI.23.6: The first hemistich can be interpr. as a rough repair of the problematic 5a: what Indra holds dear (5a) are the formulations that he makes strengthening for himself (6a), and this is what we have toiled for (6b), with *vivīṣmaḥ* in a syntactically more orthodox position than in 5a. (6a also of course is responsive to 5d.)

The phrase opening the 2nd hemistich, *suté sóme sutapāḥ*, echoes 5c, with *sut(apāḥ)* an anagram of *stu(masi)*.

The referent of the acc. pl. neut. adjs. in cd is unspecified; either the pressings or the formulations -- or, better, both -- would work. Both are elsewhere qualified as *śāmtama*:- cf. VIII.33.15 *sávanā santu śāmtamā* and V.73.10 *imā bráhmāṇi vārdhanā ... santu śāmtamā*.

A rare ex. of variant readings, the hapax *rāṇḍya-/rāṇḍrya-* is unclear. Ge refuses to tr. it. The publ. tr. ‘enjoyable’ (which should be marked with ?) rests on Hoffmann’s suggestion (reported in EWA s.v. *rāṇḍya-*), deriving it from $\sqrt{raṇ}$ (or \sqrt{ram}). Certainty of course is impossible, but some such meaning fits the context.

vākṣana- in d serves as a synonymous substitute for *vārdhana-* (5d, 6a).

VI.23.7: Note pleonastic *#urúm ... ulokám#*.

VI.23.8: As in III.41.6 (=VI.45.27) *mandasvā* is not accented despite following *hí*; see comm. ad III.41.6. I have no explanation (nor does Old, despite his ref. to himself). It can be noted that in all three passages the *hí* occurs in 3rd position, after the verb (all three identically *sá mandasvā hí*), but this position is not sufficient to explain the lack of accent, since *hí* elsewhere occurs after its accented verb (e.g., I.2.4 *índavo vām uśánti hí* ; cf., e.g., I.105.18, 131.6, III.14.5, 26.8, VII.3.3, 23.5, 59.5, VIII.21.18, IX.85.2, X.30.12, 34.11). Note esp. I.189.6, IX.49.4, X.68.7, where *hí* is in 3rd position after the verb as here. Since *hí* often appears after initial accented verbs -- for 2nd sg. med. impvs. like *mandasvā* see the numerous exx. of *#yukṣvā hí* (I.10.3, etc.) -- it might be possible to construct a scenario wherein when such an impv. is displaced from initial position by the pronoun *sá*, it loses its accent by some sort of syntactic analogy. But I find this unlikely: RVic poets are quite sensitive to their accent rules.

Pāda c lacks a verb, but the close parallelism of b and c (*prá [...]* *imé*) and the semantic connection of the two nom. pls *yajñāsaḥ* and *hāvāsaḥ* impose *aśnuvantu* from b.

In c the 1st pl. prn. *asmé*, which could be either dat. or loc., doesn’t work very well as either. Ge tr. “von uns,” which makes contextual sense but ill fits either possible case form. The publ. tr. takes it as loc., though the tr. is awkward.

I don't know why the modal temperature has been raised, as it were, by precative *yamyāḥ* in d -- though it is the case that there are no 3rd sg. root aor. impvs. attested to \sqrt{yam} , perhaps because a putative **yamtu* or **yantu* would coincide with the much more common 3rd pl. root pres. impv. to \sqrt{i} 'go'.

VI.23.9: Once again a dependent clause seems to follow fronted portions of the main clause, in this case *tām vaḥ sakhāyaḥ*. (Although *vaḥ sakhāyaḥ* could belong semantically in the dependent clause, their lack of accent requires them to follow along with *tām*, or so it seems to me.) As in 5a the fronted material seems to establish the participants in the rest of hemistich: the god and the worshipers. The acc. *tām* is then doubled by both *īm* and the real referent *īndram* in the main clause of b.

The foregoing assumes that the ellipsis of the verb in pāda a is not to be filled with a verb that could take *tām* as object or goal. I have in fact tried to find such a verb that an audience would supply when confronted with *sām ... sūtēsu*, but I have not been able to come up with a plausible one. The most likely verb to supply is \sqrt{as} , esp. given 5d *yāthāsat*, 9c *āsati*, and 10c *āsad yāthā*. Ge supplies "sich ergötze," presumably a form of \sqrt{mad} or \sqrt{mand} , which would work contextually. But there is no positive evidence for this conjecture (unlike the three subjunctive forms of \sqrt{as} with *yāthā* just cited), and both roots are only marginally construed with *sām*.

VI.23.10: I would slightly change the tr. of the loc. absol. to 'has been pressed' or 'was pressed' to accord better with the immediate past of the hymn-summary verb *astāvi*.

Klein (DGRV I.442–43) interpr. *maghónaḥ* as acc. pl. ("the liberal ones"), which it could be morphologically, but $\sqrt{kṣi}$ 'rule over' always takes the gen. (Gr gives one passage with supposed acc., V.37.4, but it belongs to the etymologically separate root $\sqrt{kṣi}$ 'dwell', and in any case in that passage I do not construe the acc. with that verb.)

The *utá* in c is troubling: it does not seem to conjoin anything and it seems randomly positioned in the pāda. Klein groups it with a small set of passages where he thinks *utá* means '(and) also, as well', and he suggests that it focuses on the immediately preceding word *jaritré* 'singer', who will also receive patronage from Indra, in addition to the soma-presser in 9d. I find this unpersuasive, though I don't have an altogether better solution. One possibility is that we should supply the nom. sg. corresponding to gen. sg. *maghónaḥ* of b, namely **maghāvā*, and *utá* would conjoin this supplied noun with *sūrīḥ*. This would change the tr. to "so that he will be (liberal [/a benefactor]) and a patron to the singer." A slightly different solution, but still with the supplied **maghāvā*, would be to take *utá* as starting a new clause, with *sūrīḥ* qualifying Indra, yielding a tr. "so that he [=the liberal mortal of b] will be (liberal) to the singer, and Indra (will be) a patron and giver of wealth ..." Indra is called a *sūrī-* in this Indra cycle (VI.29.5=37.5) and elsewhere. This second suggestion is probably less disruptive to the syntax than the first one, but I weakly favor the first because *sūrī-* is more often used of human patrons than of gods.

VI.24 Indra

VI.24.1: In the publ. tr. *ślóka-* is rendered as 'noise', but I would now alter that to the sense I usually give that word, 'signal call' (see comm. ad I.51.12) -- namely the noise

that emanates from the sacrifice, often made by the pressing stones, to alert the gods that the sacrifice is underway. Of course, it is possible here that it refers to more general noise (as in the Engl. expression “joyful noise”) associated with the sacrifice.

In the publ. tr. I give full lexical value to the expression *sācā sōmeṣu* as “when the soma juices are in his company.” This is certainly possible, but, as noted in the comm. ad IV.31.5, *sācā* with loc. often lacks lexical value and simply signals an absolute (or absolute-like) construction. Here I might substitute the tr. “when the soma juices (are pressed).”

Ge seems to take *nībhyaḥ* as a beneficial dat. (“für die Männer”), but it is more likely that it is an agent with the gerundive, since such formations do take dat. agents. (See my “Case of Agent ...”) It is possible, however, that I’ve misinterpreted his tr. “... ist er ... für die Männer zu preisen,” and it’s actually the equivalent of an English “for ... to” construction (“for the men to praise”), which would give it agentive value.

VI.24.2: The bahuvrīhi *urvyūtiḥ*, matching 1d *ākṣitotiḥ* at pāda end, is morphologically problematic. It must be read as a quadrisyllable, and, further, the 2nd vowel must be short (*urvī(y)-ūtiḥ*) in the Triṣṭubh cadence. (The Pp. reads *urvī ’ūtiḥ*.) Old simply remarks of it that the expected form **urú-ūtiḥ* “wäre phonetisch unbequem,” which is perfectly true but doesn’t account for the form. There are several different analyses of it in the lit. Wack (AiG II.1.52 [also 274], flg. Johansson 1897) assumes that it represents **urvī+ūti-* with the fem. form of the adj. *urú-* as 1st member compounded with a fem. 2nd member. He does not mention that the form has to be metrically distracted, much less that the distracted vowel must be read short. Of course, the prevocalic outcome of *-ī(<*iH)* would likely be *-ī(y)* as here. But the real problem is that there seem to be no other good Vedic examples of the type of cmpd envisioned, with a derived fem. adj. stem as first member showing gender agreement with the 2nd; the cmpds *uru-kṣitī-* and *urú-gavyūti-* with the stem form of the adj. as 1st member even when cmpded with a fem. *-ti-* stem, provide counterexamples. (Wack could argue that the fem. was used in our case for metrical convenience; but without a grammatical model for this kind of compounding, it seems difficult to imagine a Vedic poet inventing this type even to rescue his cadence.) By contrast Lanman (Noun Inflection, pp. 380–81, esp. 381 B.4c) suggests that the first member represents the older fem. instr. in *-ī*, shortened to *-i*. (Actually he thinks *-ī* is a “contracted” form of *-iā*, but that aspect of his view is not relevant here.) Although there is more precedent for the instr. sg. than for a fem. stem-form as first cmpd. member, at least with archaic personal pronominal stems (type *yuṣmā-datta-* ‘given by you’), the problem here is that there is no functional reason to have an instr.: the cmpd. must mean ‘having broad/wide-ranging help’, not ‘having help with a broad [fem.] X’. Lanman’s solution is found, in a slightly different package, in BR and is reproduced by Gr (though dismissed by Wack). The BR lemma contains the lapidary “*urvyā + ūti*,” expanded a bit by Gr to “*urvī = urvyā, I. f. von urú*.” Although I think the purport of these formulations is the same as Lanman’s, the invocation of *urvyā* allows us to pursue a different path: to take *urvī-* as truncated from the adverbial *urvyā*, orig. of course the long instr. of fem. *urvī-* but only used as an adverb. Although the fem. instr. is still the ultimate source, it would be possible for the poet to perceive *urvī-* in *urvyā* as a base form to which the instr./adverbial ending had been affixed and therefore available for compounding. I would also tentatively put forth yet a different, though related, analysis: that *urvī-*

preserves in altered form the old Caland compound-forming *-i-*. The derived *u*-adj. *urú-* should substitute this *-i-* when compounded, yielding **ur-i-* (of the type *ṛji-* ‘silvery’, Aves. *bəṛəzi-* ‘lofty’). This **ur-i-* of course never appears, but I would suggest that *urví-* may indirectly contain it, grafted onto the adj. stem *urú-*, encouraged by the independent adv. *urviyā*.

The phrase *śáṃso narām* is a reordered variant of *narām (ná) śáṃsa-*, on which see comm. ad II.34.6. Here I interpr. it as I do the similar phrase *śáṃsam āyóḥ* (IV.6.11, V.3.4) “Laud of Āyu,” as referring to the god as a sort of embodiment of the praise he receives. As I point out in the comm. ad IV.6.11, it is rather like referring to someone as “the toast of the town” or perhaps “the talk of the town” -- both of which English expressions are quite peculiar when considered literally.

On *dāti* as a root aor. subj., see comm. ad IV.8.3. Here it would be better rendered ‘he will give’.

VI.24.3: The ‘help’ (*ūtí-*) found in the first two vss. (*ákṣitotih* 1d, *urvyūtih* 2b) recurs here uncompounded. The forms of help “have grown outward” (*vy ūtáyo ruruhuḥ*) in d, an image that expands on *urvyūtih* ‘having broad help’ in 2b.

Despite Old’s detailed disc. of the first hemistich, in which he takes *bṛhán* with *ákṣaḥ* as “the lofty axle,” I am persuaded instead by Ge’s interpr. Citing the nearby passage VI.21.2 ... *āti mahnā ... riricé mahitvám*, where Indra’s greatness (nom. *mahitvám*) projects beyond the two worlds in/with their greatness (instr. *mahnā*), he supplies synonymous nom. *mahimā* here as well, referring to Indra’s greatness, with instr. *mahnā* belonging to the two worlds as in VI.21.2. Although *te* is adjacent to *mahnā*, it has been independently positioned by Wackernagel’s Law and need not limit the following instr. Ge presumably chose to supply *mahimā* rather than the *mahitvám* in VI.21.2 because we need a masc. here, given masc. *bṛhán*, but it also works better because *mahnā* also belongs to this *-mán*-stem.

VI.24.4: The vs. begins and ends with pādas containing triple etymological figures: a: *śácīvatas te puruśāka śákāḥ* and d: *dāmanvanto adāmānaḥ sudāman*. The effect seems clumsily heavy, but it is quite possible that I’m missing something. At least in the 2nd case, *sudāman* is a pun uniting two roots *√dā* ‘bind’ and ‘give’. It is possible that there is a buried pun also in pāda a. The previous vs. compared Indra’s aid to the branches of a tree (*vṛkṣasya ... vayāḥ*); another word for ‘branch’ is *śākhā-*, which is phonologically close to the *śāk-* forms. Perhaps the poet is punning off this unexpressed synonym.

Old is insistent that *srutí-* should be read **sṛtí-* here and in most other instances in the RV (see his comm. ad I.42.3). I don’t understand his reasons and stick with the transmitted reading.

The imagery in pāda b is complex. In its other occurrence (I.56.2=IV.55.6) *saṃcāraṇa-* is used of the converging of rivers into the sea. Here the word *srutáyaḥ* ‘streams’ maintains the flowing imagery (another reason to keep the reading, *pace* Old [see immed. above]; see also 6a), but they are streams of cows, not of water, and this phrase (“converging like streams of cattle”) is a simile, where the comparandum is Indra’s abilities. But in what way do Indra’s abilities flow? On what are they converging? Indra himself? or, more likely, the lucky mortal recipients of his aid?

The simile in the 2nd hemistich, “like cords for calves,” likewise applying to Indra’s abilities, is also opaque. Ge cites the dharmasūtra compd *vatsa-tantī*- (ĀpDS I.31.13, GDS IX.52), but though apposite, it is not helpful. The passages in question simply state that a snātaka should not step over a *vatsa-tantī*. Without knowing more about the details of Vedic animal husbandry, we cannot get too far, but I assume -- based on “binding without bonds” -- that calves were kept under control with very gentle ropes or perhaps by means other than tying. But why should these gentle measures be compared to Indra’s abilities?

VI.24.5: The publ. tr. of this vs. differs in a number of respects from the standard interpr. In particular, in the first hemistich, flg. an interpr. of JPB’s, the two pairs *anyád adyá kárvaram anyád u sváh* “one deed today and another tomorrow” and *ásac ca sāt* “non-existent and existent” are taken as a chiasmic square, with *anyád adyá* matching *sāt* and *anyád u sváh* matching *ásat*. In other words the deed Indra does today is existent, while the one he will do tomorrow is (as yet) non-existent. The standard interpr. takes *ásat ca sāt* as an expression of process: Indra makes each deed (the one today, the one tomorrow) that was as yet non-existent into an existent one (so Ge “... macht Indra das Unwirkliche alsbald wirklich”). This does seem a possible interpr., and I would suggest an alternative tr. “One deed today and another tomorrow -- Indra makes the not (yet) existent (deed) existent.” Klein (DGRV I.170, II.24) takes *ásac ca sāt* as “the bad and the good,” which deviates from the usual sense esp. of the former and breaks the thematic connection with the first pāda: “(Performing) one deed today and another tomorrow, Indra turns hither immediately the bad and the good.”

In the 2nd hemistich the standard interpr. takes Mitra, Varuṇa, and Pūṣan as the individualized seriatim singular subjects of *paryetāsti* (= *paryetā asti*), as in Ge’s “Mitra und Varuṇa und Pūṣan kommen uns dabei dem Wunsche des Nebenbuhlers zuvor.” (Tichy [-tar-stems, 188] follows Ge’s syntactic template, but with an aberrant interpr. of *pári √ i*.) As Ge’s blithe disregard of the sg. verb shows, the triple subject is somewhat awkward given sg. *asti* (though singular verbs with a series of singular subjects are indeed found). But there are several other problematic aspects to this strain of interpr. On the syntactic level, it is surprising to find *asti* in a main clause if its function is simply copular (“M, V, and P is/are *paryetā*”); *asti* in main clauses is almost always existential. On the thematic level, these other gods are intrusive in the hymn -- the focus so far has been entirely on Indra -- and it seems odd suddenly to credit these gods with the power to effect a desirable thing for us, when Indra has been performing the heavy lifting all along. I therefore think that Thieme (Fremdling, 53) is correct in taking Indra as the unexpressed subject of *paryetā asti*, though he doesn’t discuss the passage or, rather disingenuously, even quote the preceding pāda with the other possible subjects. Given these factors, I think that *asti* is implicitly contrastive and emphatic: the other gods are there for us in some sense, but *it’s Indra* who ... As for the sense of *paryetā* and *pári √ i* in general, the literal meaning is ‘go around’, hence ‘encompass’ and hence to contain and control, a sense that works very well here.

VI.24.6: The simile in pāda a makes explicit the flowing water implicit in 4b (see disc. above). But it is not clear what the waters are being compared to. Old suggests Schätze and Segnungen, with various rather vague parallels suggested. I find Ge’s citation of

nearby VI.34.1 more to the point. Pāda b of that vs. reads *vī ca tvád yanti vibhvoḥ manīṣāḥ* “Out from you go inspired thoughts far and wide.” Although Indra is generally viewed as the goal and recipient of poetic thoughts and praises, he is also, as Ge says in his n. 6ab to our passage, “der Aufgangspunkt der Dichtkunst und des Kultus.” Here we can supply as subject and comparandum the ‘inspired thoughts’ (*manīṣāḥ*) of 34.1 or some similar reference to poetic production. The more conventional view of Indra as poetic goal is expressed in the 2nd hemistich, which roughly corresponds to VI.34.1a *sām ca tvé jagmúr gíra indra pūrvīḥ* “Many songs have converged on you, Indra.”

The verb (*vī*) ... *anayanta* is a bit troubling because even the rare medial forms of the overwhelmingly active pres. *náya(ti)* are otherwise transitive. Cf., e.g., V.45.10 *udnā ná nāvam anayanta dhīrāḥ* “Like a boat through the water the wise ones guided (him).” I see no choice but to assume that this form has acquired a nonce intrans. sense because of its middle voice.

VI.24.7: The distribution of the three measures of time vis-à-vis the two verbs *jāranti* and *avakarśáyanti* cannot be determined for certain, nor does it really matter. The pāda boundary favors keeping *māsāḥ* with *śarādah* (“whom neither the autumns nor the months age, nor the days make lean”), but the position of the various *nā*-s might favor bracketing *māsāḥ* with *dyāvah*. This is how Ge tr., and I have followed suit, though I don’t feel strongly one way or the other.

VI.24.8: *stavān* is an intractable form, found also in II.19.5, 20.5. In all three cases it is found in this same, apparently nom. sg., form, referring to Indra, and with the likely value ‘being praised, having/receiving praise’. In all three cases it also occurs at the end of a Triṣṭubh pāda, which suggests that the root syllable should be heavy (**stāvān*) -- though Old (ad II.19.5) does not regard this as a problem. Old discusses the form in great detail ad II.19.5 without reaching a firm conclusion; see also KEWA III.521, with listing of the lit. but again no conclusions. Assuming that the form belongs to *√stu* ‘praise’ (other proposed root affiliations are properly dismissed by Old), there are two main strains of explanation: as a truncation or as a haplology. Several different underlying forms have been suggested for the truncation; the least problematic is Pischel’s suggested pres. mid. part. *stavānāḥ* (1x; versus fairly common *stāvāna-*). But least problematic doesn’t mean *unproblematic*: lopping off inflectional endings isn’t a practice we find elsewhere in the RV, esp. when it leaves an unanalysable form, and we might expect the accent to follow that of the common root-accented participle. The haplology explanation (owing ultimately to Johansson, who was responsible for one of the explanations of *urvyūtiḥ* above, vs. 2) has found more general acceptance (see AiG I. Nachtr. 161, though cf. Mayrhofer’s lack of enthusiasm in KEWA, cited above) -- that it is derived from a *-vant-* stem, nom. sg. **stava-vān*, with haplologic loss of the medial syllable. Old raises several objections to this: first, that the accent is wrong. The accent of *-vant-* stems is overwhelmingly that of the base noun; if the putative stem was formed to *stáva-* ‘praise’, it should have yielded **stá(va)vān*. Old’s 2nd objection has to do with this base form: that *stáva-* is found only once in the RV.

I tentatively advance a different explanation from either of the prevailing ones, that it is formed with a Hoffmann suffix (**-Hon-* / *-Hn-*), to the just mentioned *stáva-* ‘praise’, hence ‘having praise’. This would produce the attested long vowel; moreover,

insofar as we can tell, the Hoffmann suffix attracts the accent. See *somān*- ‘having soma’ (based on root-accented *sóma*-) and discussion ad I.18.1. Of course, the rarity of the base form *stáva*- is a problem here, as it was for the -*vant*-stem explanation just presented, but perhaps because the Hoffmann suffix was not synchronically productive and therefore our *stavān* should be an old form, this rarity is less problematic than for the productive -*vant*-stems. It might also be possible to posit a long-vowel base **stāva*- (cf. fem. *stāvā*- VS XVIII.42), with expected Brugmann’s Law outcome for a standard **o*-grade thematic noun, producing **stāvān*. Though, once the formation of **stāvān* was no longer understood, this vṛddhi would have been eliminated in the transmitted text in favor of the guṇa prevailing in the verbal forms, it would still be reflected in the heavy syllable called for by the cadential pattern. As for the nom. sg. in -*ān* instead of the **-ā* expected for an *n*-stem, I would suggest that the stem was assimilated to a -*vant*-stem.

VI.24.9: In a the instr. *ámatreṇa* can be supplied with the instr. adj.s, extracted from the possessive *amatrín* ‘having an *ámatra*-’.

In b *sutapāvan* reprises *sutapā(h)* in 1b.

vyūṣtau (*/-iṣu*) almost always occurs with dependent *uṣásah* -- “at the early brightening of the dawn” -- and of course is derived from the same root \sqrt{vas} ‘dawn’ as *uṣás*-. Here we find the apparent opposite: *aktór vyūṣtau* “at the early brightening of the night”; despite the anonymity of the genitives, I think the two expressions refer to the same time period, the moment when the deep darkness of night begins to lift. This can be considered as brightening either of the night or of the dawn. On the almost identical expression in V.30.13 and its morphological twist, see comm. ad loc.

VI.25 Indra

As noted in the publ. intro., the hymn has an omphalos shape, with vs. 5 the omphalos, surrounded by matched vss. 4 and 6. Although vss. 3 and 7 do not show similar matchings, there is some repeated phraseology between vss. 1/2 and 8/9: *vṛtrahátye* 1c, 8b; *spṛdhaḥ* (...) *mithatīḥ* 2a, 9ab.

VI.25.1–2: On *avīḥ* (1c) and *áva tāṛīḥ* (2d) as “hortativ,” see Hoffmann Injunk. 264.

VI.25.1: That *avīḥ* of c is also the verb of d is suggested by passages like I.110.9 *vājebhir no vājasātau avidḍhi*, VIII.46.11 *dhíyo vājebhir āvītha* with \sqrt{av} and an instr. of *vāja*- ‘prize’.

VI.25.2: Ge supplies the verb ‘drive’ in c (“Mit diesen (treib) alle Angriffe auseinander”), but I see no reason why it can’t be in the orbit of d. In vs. 1 the two pādas cd share a single verb (*avīḥ* c), as do the first two pādas of this vs. (*vyathayā*). With this pattern established, it seems reasonable to take *áva tāṛīḥ* in d as also governing the accusatives of c. Under this interpr., I take *vīśūcīḥ* as proleptic, rather like 3d *kṛṇuhī párácaḥ* “put them far away.”

VI.25.3: Pāda c lacks a verb to govern the acc. *vithurā śávāṃsī*. On the model of 1cd, 2ab, and 2cd, we might simply deploy the (first) verb of d, *jahí*, across the pāda boundary: “smash their faltering powers” or, with proleptic adj., “smash their powers (to

be) faltering.” However, *vithurā* is derived from the root \sqrt{vyath} ‘falter’, whose causative supplied the verb in 2ab, *vyathayā*. I therefore think there’s a different kind of trick here: the poet expects us to supply the CAUSATIVE feature of the verb in 2b with the lexical feature of that verb contained in the adj. *vithurā* -- hence my tr. “(render) their powers faltering.”

VI.25.4: *tanūrúc-* is, of course, a root noun cmpd., ‘shining with/in their bodies’, but the bahuvrīhi-like tr. works better in context.

kṛṇvaite is clearly meant as a 3rd du. mid. subjunctive to the 5th cl. pres. of $\sqrt{kṛ}$, but it has the wrong grade of the suffix: we expect **kṛnávaite* (cf. 2nd du. mid. *ásnávaithē* [VII.70.4]). It clearly simply anticipates the root pres. 3rd du. mid. *brávaite*, which ends the next hemistich (4d). This imitation comes at a metrical cost: the heavy root syllable *kṛṇv* produces a bad Triṣṭubh cadence. (The grammatically correct form would also, of course, be metrically problematic.) A root aor. subj. **karaite* would fit the meter better, but there’s no warrant for emendation. For a passage in which the poet simply avoids the middle dual subjunctive of $\sqrt{kṛ}$ altogether by substituting a plural, see comm. ad I.178.2.

The locative string in cd is the usual expression of the stakes -- a type of loc. absol. lacking an overt participle. The full expression is *dhāne hité* “when the stake is set” (VI.45.11, 13, etc.). The string here contains a formulaic pair, *toké ... tánaye* “progeny and prosperity” with three other locc., one inserted inside the formula. On the basis of VI.31.1 (q.v.), where a *ca* after *tánaye* better delineates the pairing, I would slightly change the tr. to “when progeny and prosperity [or, offspring and lineage], cattle, water, and fields are at stake.”

The two *vā*-s (4a, 4c), in conjunction with the subjunctives, seem to set out a deliberative choice: “it may be that X ... or it may be that Y.” The two possibilities floated as to how one champion might defeat another set the stage for the next vs. (5), which forecloses any possibility that one of the champions, even a successful one, could take on Indra. The two *vā*-s are slightly off-balance, however, since the first one is located in the main clause (a) to which the first *yád* clause is immediately appended (b), while the second is found in the second *yád* clause, whose main clause seems to be, by default, the original pāda a. This seems to me a minor problem: the point is that the two champions (*śūra-*) in pāda a may defeat each other in single combat (b) *or* in a full-on battle (cd). The first *vā* would be better positioned in pāda b, but it has been shifted to the front of the whole main-cl./dep.-cl. construction -- a sort of super-Wackernagel’s Law position. Klein (DGRV II.194, 201–2) treats the two *vā* occurrences separately, taking the 2nd as conjoining (or disjoining) the parallel *yád* clauses b and c, but the 1st as the equivalent of “the asseverative particle *vaí*.” This seems somewhat perverse to me: two occurrences of the same particle in a single verse, esp. a particle that regularly appears in pairs, invite a unified explanation; moreover, I am very dubious that *vā* is ever used for *vaí*, a particle that is rare in the RV anyway. Even Klein can only identify 6 passages where he thinks *vā* = *vaí* (DGRV II.201), of which he finds syntactic support for only 3. That 6c contains a pair of *vā*-s whose syntactic connection is clearer provides evidence that these two *vā*-s also form a pair.

VI.25.6–8: Each of these vss. contains at least one derivative of *nṛ́-* ‘(superior) man’: 6a *nṛṇṇám*, 6c *nṛvátí*, 7c *nṛtamāsaḥ*, 8d *nṛśáhye*.

VI.25.6: By my analysis this vs. matches 4 in structure and in referents, forming with 4 a ring around the omphalos vs. 5. In the first pāda the unspecified pair (*ubháyoḥ ... ayóḥ* “of both of these”) refers, in my view (as also, apparently, Ge), to the two *krándasī* (lit. ‘war-cries’, viz., opposing forces) of 4d; Indra has mastery over the manly power of both of them, as vs. 5 has already implied. The verb of 6b, *hávante*, doubles *brávaite* in 4d semantically; both refer to verbal appeals to Indra for help in battle. The two forces referred to in an oblique case in pāda a return as subject in pāda d, with yet another 3rd du. med. subjunctive, *vitantasaíte*.

Pace Ge, who gives them different roles, the locc. in c are parallel and match those of 4c, expressing what is at stake in the battle. Although it might seem odd to name a *vṛtrá-* as a stake, I think the point is that the battle may be about confronting an obstacle or about acquiring a rich dwelling place. Klein’s tr. (DGRV II.159) “when they battle each other in the (struggle with the) obstacle or in (the struggle for) great dwelling space rich in heroes” reflects the same view. See Schaeffer (Intens. 126–27) for detailed disc. A similar use of *vṛtréṣu* is found in the next hymn (VI.26.2), where it is implicitly parallel to *góṣu*, an expression for the stakes.

I take the subordinator *yádī* in b as representing *yád* + *ī* (‘when’ + acc. particle) (as described pp. 305–9 in my 2002 article “Rigvedic *sīm* and *īm*”), rather than conditional *yádi* ‘if’. All that needs to be done is to insert a notional word space between *yád* and *ī*. The pāda could use an overt acc. (*ī* ‘him’, as obj. of *hávante*), and ‘if’ does not make sense.

The publ. tr. implicitly reflects a similar analysis of *yádi* in d, but I now think that interpr. is probably incorrect. In favor of it is the parallelism with the matched vs. 4, which contains two parallel *yád* clauses. But several factors, both formal and functional, weigh against it: the final *i* of *yádi* is short and does not occur before a cons. cluster, which elsewhere facilitates the shortening of the particle *ī*. Moreover, an acc. referent is not necessary to the clause, since the verb is a reciprocal middle (though see I.131.3, also with med. *ví√tams*, *ví tvā tatasre* “They have tussled over you,” a passage that also contains a loc. of the stakes). The publ. tr. also renders the subjunctive *vitantasaíte* as an indicative. I now think that the conditional *yádi* and the subjunctive contribute to the same semantic effect. For a full revised tr. see below.

On the assumption that cd forms a single dependent clause (as it does in the publ. tr. and in Ge), the *yádi* is too deep in the clause, following not only the nom. du. adj. *vyācasvantā* that opens pāda d but also the complex loc. phrase that occupies pāda c. This problem could be easily remedied by connecting c with b, rather than with d, leaving *yádi* in standard 2nd position in a clause now consisting only of d. The only obstacle to that reassignment is my interpr. of *maháh*, which in the publ. tr. I take as a sentential adverb and construe with *vitantasaíte* (“... keep tussling mightily”). However, that interpr. is quite fragile, esp. because of the position of *maháh*, and I am happy to abandon it, though I do not have a particularly good alternative suggestion. Schaeffer (Intens. 128) first suggests that it is an adverb, with adjectival aspirations (not her phrase), construed with the following phrase *nṛvāti kṣáye*, in the manner of Old’s (ZDMG 55 [1901]: 270–71) interpr. of *mahó rāyē* “mächtiglich zu Reichtum” → “zu mächtigem Reichtum” -- in this instance “mächtiglich männerreiches Land” → “grosses männerreiches Land.” Alternatively she suggests it could be an acc. pl. with gapped *devān* as a goal or obj. of

vitantasaíte (“sooft die zwei ... (Völkerschaften) die Grossen (Götter) angehen ...”). This second suggestion seems quite implausible, but the first one is possible, in the absence of anything better. In any event, it is essentially the interpr. given by Ge (“um einen grossen männerreichen Wohnsitz”), however he arrived at it. (Judging from his n. 6cd it rests on Sāy.’s high-handed glossing of *maho* with loc. *mahati*.) Klein’s tr. “great dwelling space rich in heroes” (see above) simply follows Ge and also shows a quasi-adj. interpr. of *mahāḥ*.

Putting all this together, I offer the revised translation:

“He is master of the manly power of both of these (armies) when the ritual adepts call on him in the clash,

whether an obstacle or a dwelling place rich in men is at issue — if the two (armies) in their expansion will keep tussling mightily back and forth with one another.”

VI.25.7: As usual, *aryāḥ* has a number of possible interpr. Ge takes it as nom. pl. identical to the *sūrāyaḥ* in d. Old suggests either acc. pl. or abl. sg. without choosing one. Thieme (Fremdling, 73–74) opts for the abl. sg., which he construes (as does Old) with the splv. *nṛtamāsaḥ*: “... als unsere, im Vergleich zum Fremdling sehr heldenhaften Schutzherren ...” But of course an ablative with a superlative would be highly unusual (though Old offers a single parallel and a ref. to Delbrück’s Vgl. Syn.). I also take it as an abl., but suggest construing it with *purāḥ*. I now see that this is also problematic, since it is not clear that *purāḥ* ever takes the abl. Gr gives two exx.: but in IV.7.9 the supposed abl. is a gen. and construed elsewhere; in III.53.23 the form in question (*āśvān*) could be either an abl. sg. or an acc. pl. in sandhi. Nonetheless I hold to this interpr. Although *purāḥ* + ABL is not a robust construction, the related *purā* is regularly found with the abl. Here I would suggest that we have a sort of pun. The lexeme *purāḥ* + √*dhā* ‘set in front, install’ is of course very common, and that phrase is found here, *dadhiré puró naḥ*. Although, as I just said, to express “ahead of / in front of the stranger” we might expect *aryāḥ* [abl.] ... *purā*, there was interference with the VP *dadhiré puró naḥ* “they have set us in front,” and *purāḥ* prevailed.

VI.25.8: The HvN ed. resolves the contraction across pāda boundary of *yajatréndra* as *yajatrā́ndra*. This must be a careless error, since the Pp. has *yajatra índra*, and the stem *yájatra-* has root accent.

VI.25.9: Pāda c = I.177.5c and X.89.17c. Ge (fld. by Klein, DGRV I.458) construes *vástoḥ* with *vidyā́ma* (“Möchten wir Sängers ... den neuen Tag erleben”), but well-attested *vástoḥ* is otherwise a temporal expression ‘at dawn, in the morning’. In both the other passages, the pāda in question is adjoined by a pāda that likewise begins *vidyā́ma* (following in I.177.5, preceding in X.89.17), and the obj. of that *vidyā́ma* can be assumed with the one in the repeated pāda. The d pāda of X.89.17 is almost identical to d here, with the substitution of a different poetic family: *viśvāmītrāḥ* for our *bharádvājāḥ*.

The function and position of *utá* in d are unclear. The publ. tr. implicitly assumes that it loosely connects the 2nd hemistich with the 1st (“And with your help ...”), but locating this clausal conjunction in 2nd position of the 2nd pāda of what it’s conjoining would be an irrational poetic strategy. I now think it likely that it conjoins the temporal expressions *vástoḥ* and *nūnám*, and I would alter the tr. to “With your help ... might we

Bharadvājas know (this), as we sing at dawn and also now” (or “might we know (this) at dawn and also now, as we sing”). The curiosity then is the position of *te*, which can only belong to something in the preceding pāda: either “with your help” (as I take it in the publ. tr.) or “as we sing to you.” I suppose that *utā*’s strong tendency to take 1st position makes it a natural host for enclitics even when it is not so located, but it really seems odd that it would sweep *te* up and away from the elements it should be limiting.

VI.26 Indra

On the various stylistic tics of this hymn, see publ. intro.

VI.26.1–2: As noted in the publ. intro., the 1st two vss. play on the word *vāja*-, presumably as a reference to the Bharadvāja bardic line: 1b, 2b *mahó vājasya*, 2a *vājī* ... *vājineyāḥ*.

VI.26.1: On *vāvr̥ṣāṇāḥ*, see comm. ad VIII.61.7 on *úd vāvr̥ṣasva*.

VI.26.2: The hapax *vājineyāḥ* is somewhat surprising, because the *-eyā*-suffix generally builds metronymics (AiG II.2.505–11), and so it should mean ‘son of a female prize-winner / of a prize-winning mare’ -- a feminine connection that would be particularly surprising if it’s meant as a reference to the Bharadvāja family. Although I don’t have a good explanation, I do think the intrusion of this marked suffix, fairly rare in the RV, should be taken serious, and if *vājineyā*- is derived from the *vājínī*- (found in *vājínī-vant*- and *vājínī-vasu*-) (cf. AiG II.2.507 for this possibility), this provides another support for my contention that *vājínī*- has real fem. reference, and its *-ī*- is not simply an Erweiterung (*pace* Debrunner, AiG II.2.409). See disc. ad I.48.6.

Since pāda c lacks a main verb, it could belong either with ab or with d. Ge takes it with ab, seeming to refer to VI.46.1 as a parallel, and the publ. tr. follows suit. On the basis of VI.25.6c with contrastive locatives of the stake, one of which is *vr̥tré* (see comm. immed. above), I am now inclined to reassign it to d, with *vr̥tréṣu* (c) and *góṣu* (d) the stakes. The revised tr. would be “... secured; to you ... when obstacles (are at stake), to you when cows (are at stake) does the fistfighter look as he fights.”

VI.26.3–6: These vss. are tr. and discussed by Hoffman (*Injunk.*, 183–84).

VI.26.3: As discussed ad VI.20.4, the three occurrences of *arká-sāti*- ‘the winning of the sun’s rays’ (I.174.7, VI.20.4, and here) are all found in conjunction with a poet (*kaví*-) and in connection with the Kutsa / Śuṣṇa myth. These associations point fairly decisively to Uśanā Kāvya as the poet in question.

Pāda b contains one of the few occurrences of *√ vr̥j* ‘twist, wring’ without preverb; another is found nearby at VI.18.8.

Hoffmann (183) reads injunc. *pārā han* for Pp. *pārā ahan*. Given the preponderance of injunctives in these vss. and esp. *han* at the end of 5c, this seems likely. (See also *sácāhan* in the next vs. and 6d.)

VI.26.4: As in 3c, Hoffmann (184) reads *sácā han* in c rather than Pp. *sácā ahan*, which seems perfectly plausible. As for the unequivocal imperfect *āvaḥ* in b, he suggests that

this may not have been the original form, citing the almost identical I.33.14b *prāvo yúdhyaṃtaṃ vṛṣabhāṃ dáśadyum*. If the original reading was **prāvaḥ*, it could contain the injunctive: *prā avaḥ*. However, it is unclear to me how the corruption would have arisen, particularly because in the next vs. (5) the d pāda begins *prāvaḥ*. Moreover the pāda preceding I.33.14b begins with *āvaḥ*, a clear imperfect matching the one here. Hoffmann's other observation -- that this pres. stem has no clear injunctive forms (and only one possible one, *āvaḥ* in I.121.12, which more likely belongs to the *s*-stem noun; see comm. ad loc.) -- seems more apposite. For whatever reason the injunctive to this stem was avoided -- or, perhaps better phrased, *āva-* was treated as the injunctive stem.

On the poorly understood myth in cd, see VI.20.8 and X.49.4 and comm. on both.

I do not entirely understand what *sācā* is doing here; it seems to add little and have no obvious syntactic connection to the rest. As discussed ad IV.31.5, *sācā* with loc. is regularly a pleonastic marker of the loc. abs., but there is no loc. here. Gr cites our passage here as an ex. of *sācā* after a dat. meaning “zu seinen Gunsten,” but I don't understand how this meaning would have developed from ‘together with’. The same sequence (*sācā han*) is found two vss. later (6d) in the same general context: Indra's smiting of an enemy on behalf of a mortal friend, and I.63.3 *tvāṃ śúṣṇam ... kútsāya dyumāte sācā han* shows the same configuration. In all three passages I tr. it ‘in partnership’ as an adverbial. Perhaps *sācā* signals an esp. close relationship between Indra and his mortal beneficiary. The voc. epithet of Indra in 7c, hapax *sadhavīra* ‘you who have our heroes as companions’ in my tr., might support this view, and see also 8ab. I am not entirely persuaded by my own interpr., however.

On *tūtos*, *tūtot* as belonging to a redup. aor., not the perfect (contra Wh Rts, Macd. VGS), see detailed disc. by Kü (220–21); Hoffmann also identifies it as an aor. (183); Gr already took it as a caus. aor., and see also Schaeffer (Intens. 129–30). On *tūtuma* (X.50.5–6) as a possible 1st pl. to this stem, see comm. ad loc.

VI.26.5: For the association of *barhāṇā* and *ukthā-* see VI.44.6 *ukthāsya barhāṇā*.

Pāda b contains one of the few exx. of the “-*si* imperative” that betrays its non-imperative source, since *dārṣi* occurs in a subord. cl., from which imperatives are barred. Here it shows its original subjunctive value in a purpose cl. (so also Hoffmann, 183).

Initial *āva* in c breaks the long pattern of 2nd sg. pronouns beginning the hemistich (vss. 2–5a, resumed vss. 6, 7c, with such forms also beginning even pādas 2d, 4d, 7b). Perhaps it is meant to resonate with 4b #*āvo*, 5d #*prāvo*.

VI.26.6: As I have discussed elsewhere (Sacrificed Wife, 176–84), *śraddhā-* in Vedic is not simply an abstract ‘trust, faith’, but refers specifically to trust in the efficacy of ritual and hospitality, and indeed to the concrete manifestations of this trust through ritual gift-giving. The plural *śraddhābhiḥ* here, paired with *sómaiḥ*, seems to refer to the offerings themselves. For Dabhīti's hospitality as specifically ritual, see nearby VI.20.13 and for the use of *śraddhā-* in a Dabhīti context X.113.9.

On *sācā* see comm. ad vs. 4.

Pāda d contains a fine sequence of alliterative sibilants of all three types: *ṣaśtīm sahasrā śācyā sācā han*.

VI.26.7: Acdg. to JSK (DGRV I.286), this is one of the two passages in which *canā* lacks negative value. (I think there are more, though negative context is the default; see comm. ad X.49.5, etc.)

Ge takes *tvāyā* as the agent with *stāvante*: “dass die Helden ... von dir gelobt werden.” But Indra as the *praiser* of mortals seems off; *tvāyā* is better taken as an instr. of accompaniment, esp. given the larger context of the hymn, in which Indra works for and in conjunction with mortals (see esp. disc. ad vs. 4 with regard to *sācā*). The hapax cmpd *sadhavīra* applied to Indra seems to reflect this situation, though exactly what the word means is unclear (Gr ‘mit den Männern seiend’, Ge ‘Heldengenosse’), and its lack of accent makes it difficult to determine even what type of cmpd it is. (AiG has no disc. of it.) I take it as an underlying bahuvrīhi ‘having heroes together (with oneself)’ vel sim., expressing the mutual relationship between our men and Indra.

Ge takes the instr. phrase *trivārūthena náhuṣā* as referring to Indra: “da du ein dreifacher Nahus bist.” He bases this interpr. on X.49.8 *ahám ... náhuṣo náhuṣtaraḥ* “I [=Indra] am a greater Nahus than Nahus.” But this passage is in an ātmastuti, a genre in which Indra claims to be the best example of everything, and the construction with comparative in fact *precludes* an identification of Indra with Nahus: he is asserting that he has more of what makes Nahus Nahus than Nahus himself does. It is an expression like “more Catholic than the Pope.” (As for X.99.7, which Ge also cites, I have now changed my interpr. from the publ. tr. and will register the change in the comm. in due course.) I consider Nahus here another recipient of the praise being doled out.

I would also take issue with Ge’s bleaching of *trivārūtha-* from ‘having/providing threefold defense’ to simply ‘threefold’. This cmpd. otherwise has its full lexical value, mostly modifying *sārman-* ‘shelter’, and the simplex *vārūtha-* ‘defense’ is robustly attested, so the 2nd cmpd member had not become opaque.

VI.26.8: This final wish to become Indra’s dearest companions neatly sums up the dominant theme of the hymn, esp. the last vss.

VI.27 Indra

VI.27.1–2: These two vss. form a tight pair, whose responsions are detailed below.

VI.27.1: This vs. is structured by the extreme repetition of *kím*, found 5 times in interlocking sets. In the 1st hemistich 3 occur in the phrase *kím (u) asya* LOC. The 1st 2 are initial in the 1st pāda and immediately after the caesura, while the third one, rather than opening the 2nd pāda, gives the impression of syncopation by being placed after pāda-initial *indraḥ*. The third pāda has the sequence in scrambled order: ... LOC *kím (té) asya*, with the tonic prn. *té* incongruously inserted. The last *kím u*, in pāda d, lacks both *asya* and the LOC, but clearly is conjoined with *kím* in pāda c with the rest of the phrase construction truncated.

There are many possible ways to interpr. this construction. The first question is whether *kím* is a question particle or a neut. interrogative prn. (see, e.g., Etter, *Fragesätze*, 75, 124–25), or indeed if some of the occurrences are one, some the other. I am firmly of the opinion that, simply on rhetorical grounds, the number of repetitions favors a referential prn. for all, rather than a particle. Moreover, vs. 2 offers a concrete answer to

the question “what?” — namely *sát* ‘being, what exists’ — in the same number and in the same positions as *kím* in vs. 1. The responsion could hardly be more complete. Another question is whether pāda a should be read independently, as containing two parallel nominal clauses, with the hemistich-final verb only having domain over pāda b, or whether the verb should be read with the whole hemistich. Because of the parallelism of the *kím (u) asya* phrases I opt for the latter solution, as does Ge.

Another curiosity is the fact that *asya* is unaccented in all its occurrences. Unaccented forms of this pronoun should be anaphoric, with a referent preceding in the discourse, but of course in the 1st vs. of the hymn there is no preceding discourse. However, the first two locatives, in pāda a, establish without doubt the identity of the referent -- soma: “in the exhilaration (*máde*) of it” and “in the drinking (*pītaú*) of it” could refer to nothing else in the universe of RVic discourse. See the numerous examples of *máde sómasya* (generally in that order) in Lub, beginning with I.46.12; the loc. of *pītí-* is almost confined to our passage, but the dat. phrase *sómasya pītáye* is almost inescapable (see again Lub). The 2nd set of locatives, *sakhyé* ‘in the fellowship’ and *niśádi* ‘in the installation’ are less clearly typed for soma -- and in fact the latter might sidetrack us to Agni and his ritual installation -- but by that time the soma context has been unequivocally established. The unusual application of *ní√sad* to soma simply shows the frequent secondary fusion of the two principal ritual divinities/substances.

The first hemistich is otherwise unproblematic, but the second one raises some further questions. The first word, *rāṇā*, is taken by the Pp as nom. pl. *rāṇāḥ* in pausa, an interpr. followed by the standard treatments. By this interpr. these “joys” are the subj. of *vividre* in the main cl. Both act. and mid. forms of this pf. are normally transitive, and so the question should be “what did the previous joys find, what the new ones?” See Ge’s “Oder was seine guten Launen bei der (Opfer)sitzung sind, was haben die ... erreicht?” But this does not make a lot of sense to me: in what way are “joys” agents here? Old seems to get out of this semantic problem by taking the verb as a sort of pass./intrans. with gen. *asya* as the experiencer (presumably referring to Indra) and *kím* as a predicate nominative: “oder die Freuden, die bei (seinem, des Soma) Sichniederlassen ..., als was sind diese ihm eignen ... erfahren?” But besides forcing an unnatural sense on the verb, it assumes a different referent for *asya* in c from the referents of the 3 occurrences in ab (as does Ge’s). My own interpr. is based on a different analysis of *rāṇā* — as the instr. sg. of the root noun *rán-*, attested as dat. sg. *rāṇe*, loc. sg. *rán*, and indeed (*pace* Gr) as this same instr. sg. in IX.7.7 (see Old ZDMG 63 [1909]: 289 = KISch 305). (Note that with the elim. of the supposed nom. pl. in our passage, the stem *rāṇa-* is entirely singular, save for a single late loc. pl. *rāṇeṣu* [X.120.5], quite possibly confected to produce a Triṣṭubh cadence from sg. *rāṇe*.)

With *rāṇā* otherwise interpr., the subj. of *vividre* is open. I supply “priests” (or a similar group of mortal devotees of Indra); cf. *nūtanāsaḥ* in similar usage in nearby VI.21.5 and the similarly contrastive expression *pūrvebhir ṛṣibhiḥ ... nūtanair utá* in I.1.2. One problem remains, however. By my interpr. *asya* in c has the same referent as the other 3 exx. in ab, and like them it is construed with a loc., here *niśádi*: the insistent repetitive pattern of the vs. imposes this reading. But *asya* is stationed in the main clause, as marked by the immediately preceding *té*, correlative with *yé* in the nominal relative cl. (cf. the whole pāda *rāṇā vā yé niśádi kím té asya*), though it should precede *kím té*. (Ge’s rendering cited above also has this problem, though he construes *asya* with *rāṇā(h)*, not

niṣādi.) I can only explain this by assuming that acdg. to the pattern established in ab, *kīm* (x) *asya* LOC, *kīm* here has carried the pronoun *asya* along with it into the main cl., even though the constituency is in all cases *asya* LOC.

VI.27.3: In the publ. tr. I followed Ge in rendering *samasya* as ‘whole’ (ganz), not very happily. This unaccented stem is an indefinite (‘some, any’), and, as disc. ad X.29.4, it generally has clear pejorative meaning. Perhaps here *ná ... sama-* means ‘not any’ = ‘none’ and the poet is complaining that Indra has been holding back on them. I would now emend the tr. to “But yet we do not know any of your greatness, nor generosity, o generous one, nor every current benefit (of yours). O Indra, your Indrian strength has not shown itself.” For the somewhat similar passage in X.54.3 see comm. ad loc.; in VIII.21.8 *sama-* is used in a context similar to this one, in which it’s implied that Indra had previously been withholding his bounty.

VI.27.4–5: Hoffmann (Injunk. 163–64) tr. and discusses this pair of vss., with special reference to the change from augmented to injunctive verbs.

VI.27.5: Abhyāvartin Cāyamāna is the subj. of the dānastuti in vs. 8. Although I resist interpr. words with clear morphology as PNs, in this case *cāyamānā-* (so accented and appearing only in this hymn) should be separated from the pres. part. *cāyamāna-* (2x), on which see comm. ad VII.18.8.

As in VI.20.10, this vs. contains a 3rd sg. root aor. *dart* with retained (or restored) final cluster *-rt*, even though such retentions are supposedly only licit if the *-t* belongs to the root. I argued ad VI.20.10 that the sandhi situation there favored the retention of the cluster (before following *dh-* [*< *h-*]). I suggest that our form here has been adopted from that passage, since verse-final position would not favor the retention. Another passage containing *dart* that seems dependent on VI.20.10 is I.174.2b, identical to VI.20.10c, though in I.174.2 *dart* must be a 2nd sg., and so is doubly illicit.

VI.27.6: On the warriors’ slang in this vs. and the curiously literal attempts at interpreting *pātrā bhindānāḥ*, see publ. intro. and Old ad loc., Ge n. 6d. For *śārave pāyamānāḥ* see disc. ad X.27.6.

VI.27.7: The purport of this vs. and the referent of *yāsya* in pāda are disputed. As Ge points out (n. 7), Sāy. thinks ab refers to Indra and his two fallow bays, while Ge thinks *yāsya* refers to Śṛṇjaya found in c and marks the beginning of the dānastuti. I agree with Sāy. that Indra is the referent of *yāsya*, but not that the two cows are really his two horses. As noted in the publ. intro., I instead assume *gāvau* refers to the two rivers found in vss. 5 (Hariyūpīyā) and 6 (Yavyāvatī). A strikingly similar expression refers unequivocally to two rivers in the famous hymn III.33 (Viśvāmitra and the Rivers): III.33.1 *gāveva śubhré mātārā rihāṇé* “licking each other like two mother cows (their calves)” (cf. also III.33.3). The only problem is that though, in this gender-variable stem, du. *gāvau* can be either masc. or fem. (for the latter, see *gāvā* in III.33.1 just cited), one of the du. adjectives in our passage, *aruṣā*, should be masc., since the fem. of this stem is *āruṣī*, which in fact appears with pl. *gó-* in I.92.1-2: *gāvó ’ruṣīḥ, āruṣīr gāḥ*. I can only assume that since the rest of this dual NP (*gāvau ... sūyavasyū ... rērihāṇā*) could be

either masc. or fem., *aruṣā* was just slotted in, esp. because it looks like a possible fem. du. Alternatively, MLW suggests that *aruṣā* could in fact be feminine and an archaism, since the *devī*- inflection of thematic color adjectives is an innovation.

The verb *antār ... cārataḥ* is somewhat difficult to interpr. This lexeme generally refers to a journey between two locations -- often of Agni's journey as messenger between heaven and earth. Here no locations are specified, and, assuming the correctness of my identification of the dual subject as the rivers of vss. 5–6 (not a certain assumption), it is two rivers that must be performing the action. Perhaps the verb is reciprocal, expressing action between the two subjects: “(the two rivers) go back and forth one to the other,” but this would leave *yāsya* without an obvious role in the clause. Instead I take *yāsya* as the beneficiary of the action (that is, as if an honorary dative) and assume the rivers are acting as go-between for Indra, either between his forces and the enemy's or between the two divisions of the Vṛcīvant forces referred to in 5d. The genitive is assuming some of the functions of the dative already in the RV, and of course in later Sanskrit dative genitives are extremely common -- probably indirectly reflecting the loss of the dative in MIA.

VI.28 Cows and Indra

VI.28.1: In pāda a ‘house’ is supplied as obj. of *bhadrām akran* on the basis of 6c *bhadrām grhām kṛṇutha*. Ge simply “haben Glück gebracht,” Whitney (AV IV.21.1) “have done what is excellent,” and this is certainly possible.

VI.28.2: Pāda b contains what may be the only ex. in the RV of nominalized *svá-* to mean ‘own property’. Note that the owner of the *svām* here is not the subject of the verb *muṣāyati*, which is Indra, but rather Indra's client and worshiper. There is therefore no reflexive relationship between *svá-* and anyone in the clause. For similar usage see disc. of *svāpati-* ad X.44.1.

What precise kind of land *ābhinne khilyé* refers to is unclear; see disc. by Old and Ge n. 2d. The general opinion is that *ābhinne* (‘uncut, unsplit’) describes land that hasn't been broken into parcels, but I wonder if it instead means ‘unploughed’ -- that is, unsplit by a plough.

VI.28.3: I do not understand what nuance the vṛddhi of *āmītrá-* adds to *amitra-*. Both seem simply to mean ‘enemy, foe’. MLW suggests that it might be a collective, a possible function for a vṛddhi deriv.

Ge takes *vyáthiḥ* as a “falsch Weg” upon which the enemy will lead the cows, requiring him to supply a complex verb phrase to *√dhṛs*, “wagen ... den falschen Weg (zu führen)” (see also his n. 3b for an even more complex alternative). But *vyáthis-* ‘wandering or meandering course’ fits the normal aimless wandering of cows in pasture, and surely we wish to prevent cattle rustlers (or the like) from taking advantage of the cows' wandering. Cf. Whitney, AV IV.21.3 “shall dare attack their track (?)”; Klein (DGRV I.219) “a hostile one shall not venture upon their way.” For the wandering habits of cows, see 4cd *urugāyám ... ví caranti* “They wander far across wide-ranging (space).”

Given the acc., it seems best, with Ge et al., to take *devān* only with *yájate*, not, as in the publ. tr., also with *dádāti*. I therefore would emend the tr. to “With those (cows)

that he sacrifices to the gods and (that) he gives ...” The expression is compressed: the instr. *yābhiḥ* should of course only be construed with *yájate*, and we should have an acc. **yāḥ* as obj. of *dádāti*. As a parallel to *devān*, Ge supplies a datival “(den Sānger)” with *dádāti* (sim. Klein loc. cit.), but I see no reason to limit the recipient in this way. Cf. the open-ended 2b *úpéd dadāti*, which specifies neither gift nor recipient. The unstinting giver is rewarded.

The tr. of the main cl. is also somewhat misleading. “Is accompanied by” for *sacate* sounds more passive in English than is meant, esp. given the *sahá*. I would now slightly emend to “he keeps company with them ...”

VI.28.4: On *reṇú-kakāṭa-* see EWA s.v. *kakāṭikā-*, *kṛkāṭa-*. Some part of the back of the head/neck is meant. What exact threat the dusty-necked steed poses to the cows isn’t exactly clear. Sāy. explains *árvā* as *yuddhārtham āgato ‘śvaḥ*. I would limit the “intent to fight” more narrowly to a cattle raid, but there is no further evidence to bring to bear. See immed. below.

saṃskṛtatráṃ is also somewhat problematic. It is generally referred to the root $\sqrt{kṛt}$ ‘cut’ (see AiG II.2.170 and, most recently, EWA p. 316 s.v. *KART*¹), but this affiliation is disputed by Whitney (Roots, p. 23) and, most vigorously, by Old, who assigns it to $\sqrt{kṛ}$ for both formal and semantic reasons. The standard rendering is ‘Schlachtbank’ (slaughter or, Whitney [AV, despite Rts], slaughterhouse). Against this interpr., Old makes the reasonable point that in this pre-ahimsā era there’s no reason why a cow-owner wouldn’t have his cows slaughtered when he wanted to. But Old’s own solution is excessively convoluted and requires that the final *-tra-* belong to $\sqrt{trā}$ ‘protect’, which seems dubious. (On *gotrá-* and other possible forms of the thematized root noun *-trā-* in compounds, see Scarlatta [194–95].) To meet Old’s objections, we can interpr. the clause in the context of the preceding clause and of the whole vs. The 2nd half of the vs. expresses a wish for the safety of cows that roam widely, presumably not always under the control and in the sight of a herdsman. The first hemistich mentions several misadventures that could befall these roving cattle. Pāda a refers, if I’m right, to a cattle raid conducted by horsemen -- what in the Old West (or at least the Old West of the imagination) would be called rustlers. It may be that the “dusty neck” of the horse in question indirectly indicates that the horse is not a well-cared-for beast of the Ārya elite, or else that the raid requires hard riding in rough country. The second pāda may indicate that the cattle rustled were taken for meat or, under a different scenario, that the cows wandered into territory controlled by tribals, non-Ārya, or even non-elite Ārya (all without access to horses) who would ambush, kill, and eat them. Both pādas would imply that the cattle are far from the safety of their home and enclosure.

My “place for dressing” reflects the possibility (see above) that *saṃskṛta-* belongs to $\sqrt{kṛ}$ not $\sqrt{kṛt}$, and is a euphemistic expression for slaughter. However, if it does belong to $\sqrt{kṛt}$ “... for slaughter” would be just fine.

The word order in pāda b is somewhat aberrant. The fem. pl. subj. *tā(h)* occurs right after the verb, followed by the preverb *abhí*, which ends the pāda: x x x x x, *úpa yanti tā abhí*. We would ordinarily expect the pronoun *tā(h)* to occur early in the clause (cf. pāda a *#ná tā(h)* [=3a]) and the preverb to precede the rest of the verbal complex. The word order disturbance may have been caused by the need to fit the bulky 4-syllable *saṃskṛtatram* into the pāda, since it won’t fit the Jagatī cadence.

VI.28.5: The publ. tr. follows the usual configuration of equational nominal sentences, with the subject in 2nd position, the predicate nominal 1st. This interpr. is supported by the fact that the verb *achān* is singular, agreeing with *bhāgaḥ* and *índrah*, not with pl. *gāvaḥ* ‘cows’. However, the standard tr. (Ge, Wh) follow the opposite order, e.g., Ge “Diese Kühe sind mir wie Bhaga ...” In which case, we would have to assume that *achān* simply agrees with the nearer referent, even though it is the predicate.

In c the phrase *sá janāsa índrah* must be a deliberate echo of the famous refrain of II.12. It also demonstrates the standard Vedic prose syntactic rule that in an expression of the type “what is X, that is Y,” the demonstrative in the 2nd cl. will agree with Y, not X, in number and gender, even though its real referent is X, or in this case cows. For further disc. see Brereton’s “*Tat tvam asi* in Context.”

VI.28.6: This vs., like 5c, has an echo from the 2nd Maṇḍala: the final pāda *bṛhád vo váya ucyate sabhāsu* “Your vigor is declared loftily in the assemblies” strikingly resembles the Gṛtsamāda Triṣṭubh refrain *bṛhád vadema vidáthe suvîrāḥ* “May we speak loftily at the ritual distribution, in possession of good heroes.” Both begin with adverbial *bṛhát* and contain a verb of speaking -- a passive in our case -- and a loc. of the place where the speech is spoken: *vidáthe* ‘at the ceremony of distribution’, *sabhāsu* ‘in assemblies’, with *sabhā-* probably inhabiting a lower register, as might be appropriate for cows.

Kulikov (-*ya*-pres., 214) denies a passive value for *ucyate* here and tr. “Your energy sounds loudly in the assemblies” for reasons that don’t seem sufficient to me.

VI.28.7: Note that *sūyávasam* echoes (*gāvau* ...) *sūyavasyū* in the preceding hymn (VI.27.7).

On *īśata* see comm. ad I.23.9.

VI.28.8: The usual tr. of this vs. tend towards the euphemistic -- e.g., Ge “Dieses Befruchtungsmittel soll ... sich fruchtbar zeigen”; Kulikov (-*ya*-pres., 153 with nn. 373, 374) “Let this increase increase in these cows.” But \sqrt{prc} means ‘fill, engorge, mingle’, and with *úpa*, the preverb of intimacy, it takes on a distinctly sexual sense. I take it as ‘inseminate’ in this passage, especially because of the bull’s semen in c. See disc. also ad I.40.9. Moreover, the -*ana*-suffix on *upapārcana-* is one that ordinarily signals a transitive sense and often has a close connection to a transitive -*āya*-formation (though not in this case). Unlike the standard tr. I take pāda a as a nominal sentence and *prcyatām* in b as an impersonal. In my interpr. *upapārcana-* is the ‘inseminator’ -- either the bull or the bull’s penis or semen, whose match is found in the hyper-virile Indra in d. My interpr. requires that that the two locc. in the 2nd hemistich (*rétasí*, *vīryè*) have a different usage and appear in different clauses from *góṣu* in b.

VI.29 Indra

VI.29.1: Three of the four pādas begin with a form of *māh-*, incl. the curious acc. sg. masc. *mahām* in d.

sepuḥ is the only perfect form attested to the root \sqrt{sap} in all of Sanskrit. Ge tr. it with present value (“Den Indra ehren die Herren”) without comment, and the publ. tr.

follows suit. Kü (547) argues strenuously -- and plausibly -- against this interpr. on historical grounds and takes it as “kontinuativ”: “Indra haben (seit jeher) die Männer ... geehrt (and ehren ihn jetzt noch).” This interpr. might fit well with the curious double participle in pāda b: *yāntaḥ ... cakānāḥ*. Although both Ge (“voll Verlangen nach der Gunst des Grossen kommen”) and Kü (“indem die [au ihm] gehen, um die Gunst des Grossen [zu erlangen], begierig”) take the two participles as independent and with their full lexical value, Ge suggests (n. 1b) that they could form a periphrastic construction, which is in fact reflected in the publ. tr.’s “as they go on finding pleasure in the great one,” with *yānt-* supplying a continuative sense. The participial periphrasis might be an attempt to signal the continuative value of the perfect in pāda a, which that form cannot do on its own. The nearest thing to such a continuative in English would be “The men have (always) kept honoring Indra ...” or (less clumsily) just “have (always) honored,” and I would now substitute one of these tr.

Ge construes *sumatāye* with *cakānāḥ* (see tr. cited above), but forms of the root $\sqrt{kā}/kan$ regularly take the acc. or loc., never the dative. Note that Kü supplies a verb to govern *sumatāye* and takes *cakānāḥ* absolutely. I suggest rather that *sumatāye* is parallel to *sakhyāya* in pāda a. Since $\sqrt{kā}/kan$ can also occasionally take the gen. (cf. VII.27.1 *śávasaś cakānāḥ* “taking pleasure in your strength”), I take *mahāḥ* with *cakānāḥ*, though a tr. like Kü’s would also be possible: “for the sake of the partnership and benevolence of the great one, taking pleasure/desiring (it/him).”

I do not understand why *ásti* is found in pāda c, since there is no need for an overt copula, and it is difficult to interpret the verb as an existential. It is true, however, that overt copulas are more common in subordinate than in main clauses. Or perhaps *ásti* is part of the effort to express present continuative.

VI.29.3: As in I.37.14 (see comm. ad loc.), *dúvaḥ* here must be a nom. pl., not the usual sg. neut., nor the acc. pl. identified by Gr. On the somewhat aberrant syntax of this construction, see disc. by Kü (386–87). The juxtaposition of du. *pādā* and *dúva(h)* suggests that the latter is also meant to evoke *d'vé*, the neut. du. ‘two’ with ‘feet’.

Ge couches b in the 3rd ps. (see tr. cited below), but since this nominal clause is positioned between two clauses with undoubted 2nd ps. ref. to Indra (pāda a: *te*, d *babhūtha*) and itself contains no overt indications of 3rd ps., there is no reason to switch person and then switch back.

The instr. *śávasā* was omitted in the publ. tr. Although Ge tr. it with *dákṣiṇāvān* (“ist durch seine Macht ein Lohnausteiler”), the close association between *dhṛṣṇú-* and *śávas-* elsewhere in the RV (e.g., I.54.2, 56.4, I.167.9, IV.16.7, VI.66.6; cf. I.54.2 (etc.) *dhṛṣṇúnā śávasā*) suggests a tr. “As the mace-bearer, bold with (your) vast power ...” As was just noted, in the publ. tr. *śávasā* was omitted entirely; the just suggested tr. should be substituted.

Note that pāda b is a lexically variant version of 1c, which contains *vájrahastaḥ* for our *vajrī* and *dātā* for our *dákṣiṇāvān*.

VI.29.4: Whatever the etymological facts -- the root affiliation of the pf. *mimikṣ-* (etc.) is disputed (see, e.g., Kü 385–89, who assigns it to $\sqrt{myakṣ}$, and EWA s.v. *MEKṢ*, esp. 374) -- the two forms of *mimikṣúḥ* in this passage (vss. 2, 3) are synchronically associated with *miśla-* / *miśrá-* here. As noted in the publ. intro., the three vss. form an omphalos

with the theme of attachment, and the superlative *āmiślatama-* ‘most firmly attached / entwined / intermixed’ in pāda a provides the climax -- at least in my view. Not all interpr. see the contextual continuity and therefore do not tr. accordingly. E.g., Ge renders *āmiślatama-* as ‘der anziehendste’ (the most attractive), which captures neither its use in this context nor its probable connection with **meik* ‘mix’ (EWA s.v. *miśrá-*)(though the base verb ‘anziehen’ has a physical dimension closer to the sense I see). I am happy to say that Old’s interpr. is very close to mine, including supplying Indra with the adj.: “Der gepresste Soma soll der am besten (dem Indra) anhaftende [clinging] sein.”

The referent of the loc. *yásmín* in b is unclear. The structure of the half-vs. suggests *sá* of a, namely soma, and this seems to be the standard interpr.: cf. Ge’s “Der gepresste Soma ist der anziehendste, zu dem Kochspeise gekocht wird ...”; also Kulikov (p. 403, p.c. from W. Knobl) “That Soma is pressed as most easily mixing, with which [, when being pressed,] cooked food is being cooked.” I don’t understand either of these tr., esp. the latter, and they do not make ritual sense: food is not cooked in/for/with soma (though grain can be mixed in it). Since, in my interpr., Indra is another, if unexpressed, participant in pāda a, I take *yásmín* as referring to him. This identification is supported in the larger context by *yásmín* in 2a, the beginning of the omphalos, where it refers to Indra’s hand (*yásmín háste* “in which hand”), or as Ge suggests there (n. 2a), “*yásmín* ist Attraktion für *yásya*” (referring to Indra directly). These two occurrences of *yásmín* (2a, 4b) would frame the omphalos ring-compositionally. The suggested reference to Indra gets further support from passages like IV.24.7 *yá índrāya sunávat sómam adyá, pácāt paktīr utá bhṛjījāti dhānāḥ* “Whoever will press soma for Indra today, will cook the cooked foods, and will roast the grains ...”

The two pres. participles in cd, *stuvántaḥ ... śámsantaḥ*, must be predicated, substituting for a main verb.

VI.29.5: Kü (221) suggests that the pf. part. *tútuajāna-* may already be a lexicalized adj. meaning ‘sich bemühend, eilend, eifrig’ and tr. its occurrence in our passage quasi-adverbially, “mit Eifer,” an interpr. fld by Lowe (Participles, 216). But it seems to me to have its full lexical value, deriving from *√tuj* ‘thrust’, in this context, where the preceding pāda describes Indra forcing apart (*bābadhe*) the two world-halves and the following pāda compares him to a herdsman driving together (*samījamānaḥ*) his herds -- both actions requiring some amount of thrusting. In its other occurrences this part. either clearly or arguably has lexical value; cf. e.g. I.61.12 ... *prá bharā tútuajānaḥ ... vájram* ... “bear down the mace, thrusting ...” In general, I see no reason to rob forms of lexical value unless they regularly appear in contexts in which such value would be semantically inappropriate. That a participle does not appear with a full panoply of complements does not mean that it has been semantically bleached beyond recognition -- a view that is at odds with, e.g., Lowe’s approach to the issue.

Ge sharply denies (n. 5d) that *īja-* can belong to *√aj* ‘drive’, but he was of course writing before the full flowering of laryngeal theory. For the derivation see EWA s.v. *Aj*, p. 51.

I tr. hemistich-final *ūtī* with pāda c, but the fact that that pāda has an exact repetition in VI.37.5d throws that interpr. into doubt. Nonetheless, I still think *ūtī* is to be construed with the preceding pāda, skipping over the simile that begins pāda d. It should

really be Indra's help that is in question, not that of the herdsman, an interpr. reinforced by the initial sequence in the 2nd pāda of the next vs., 6b *ūtī́ ánūtī́*, also referring to Indra.

VI.29.6: The double *evā́* (a, c) strongly marks this as an extra-hymnic summary vs.

Mamḍala VI (cont'd)

VI.30 Indra

VI.30.1: As noted in the publ. intro., the first pāda is an oblique ref. to the soma sacrifice that strengthens Indra for the Vṛtra-smashing; cf. III.40.7 *pītvī sómasya vāvṛdhe* also with Indra as subj.

VI.30.2: The use of *bhūt* with the āmreḍita *divé-dive* seems to reinforce the regularly recurring individual nature of the event: it is not that the sun is always lovely, but that it becomes visible anew, every day. This is more or less Hoffmann's view -- he cites and tr. the pāda 4x (pp. 135, 140, 267, 274) -- though he slightly changes his terms of analysis from citation to citation (e.g., 135 expressing the truth of natural laws; 140 iterative).

It is striking that both c and d end with 3rd sg. root aor. injunctives, *bhūt* and *dhāt* respectively. It is all the more striking because they don't seem to have parallel functions. As just noted, *bhūt* expresses a recurrent, hence not time-limited event, but *dhāt* seems to express a particular (cosmogonic) action in the past. Hoffmann characterizes this as "resultative Konstatierung" (214) and tr. (216) "Der Machtvolle (Indra) hat weithin die Wohnsitze verteilt." By not considering the two adjacent pādas together, Hoffmann avoids confronting this functional discrepancy; I have no explanation of it, though see comm. on the next vs.

VI.30.3: The relationship between natural activity in the present and the deeds Indra performed in the past to set that activity in motion is made clear in the 1st hemistich. The rivers continue to do the work (pāda a) -- presumably flowing through their assigned channels -- that Indra started them on by digging those channels in the mythic past (pāda b). The temporal immediacy of the rivers' work is emphasized by the opening phrase in pāda a *adyā cin nū cid* "even today, even now" with doubled emphasizing *cid*, while pāda b portrays Indra's original action with the augmented impf. *āradaḥ*. This offers us a clue as to how to interpret 2cd, with its functional and temporal discrepancy. As is well known and often expressed, Indra put the sun in heaven in the first place; cf., e.g., I.52.8 *ādharmaḥ divy ā sūryam dṛśé* "You fixed the sun fast in heaven to be seen." Since the audience would be well aware of this, they could connect the continued re-appearance of the sun every day in pāda c (*divé-dive* somewhat matching 3a *adyā cin nū cid* functionally) with Indra's original deed, referred to in general terms in the preceding pāda (2b) *yāni dādhāra*. Indra's creation of the sun is also referred to in the final pāda of this hymn, 5d ... *sūryam janāyan*.

In pāda a we can possibly see a secondary pun in *āpaḥ* 'work' -- namely *apāḥ* 'waters' (see 4c, 5a), despite the accent difference.

VI.30.5: Pāda a contains two fem. pl. nouns (one clearly, one likely accusative), *apāḥ* 'waters' and *dūrah* 'doors', and a fem. pl. adj. *vīṣūcīḥ* 'wide, wide asunder, in all/opposite directions' that could modify either or both. It also contains the preverb *vī*, stationed between the two nouns and with a metrical rest right before it that draws attention to this position. It does not, however, contain a verb. There are three syntactic possibilities (at least as I see it): 1) we should supply two different verbs, each forming a possible lexeme

with *ví* and each governing one of the two nouns; we should supply a single verb, 2) which takes a double acc. or 3) which governs both nouns in parallel. (Old and Ge n. 5a lay out slightly different possibilities.) Ge opts for the second: “Du (liessest) die Gewässer durch die Tore nach allen Seiten (laufen),” supplying *asṛjah* from 4d. It is not clear what the doors through which the waters surge would be. I think it is rather the first. With Ge I would supply *asṛjah*, but with only *apáh* as obj. Although $\sqrt{sṛj}$ is relatively rare with *ví*, ‘waters’ is of course regularly the object of other forms of this root, particularly *áva* as in the immediately preceding pāda. Moreover $\sqrt{sṛj}$ is used of the release of liquid in VII.103.7 (“frog” hymn), where heated milk-drinks “attain their own release” (*aśnuvate visargám*). As for the 2nd object, $\sqrt{vṛ}$ ‘unclose, open’ is standard with ‘doors’, and I supply a form of $\sqrt{vṛ}$ here. The point of this hemistich is that Indra opens up and disperses everything closed and enclosed. What the “doors” are in this scenario is still somewhat unclear: it could be, as in Dawn hymns, the doors of darkness and refer to Indra’s flooding the world with light (note the sun and dawn in the last pāda of the vs.), or it could simply refer to Indra’s general opening up of spaces, esp. the Vala cave.

In b the ppl. *ḍṛlhá* is reprised from 3d, but with a nice twist. In vs. 3 Indra makes the spaces firmly fixed, but here he breaks open what *had* been firmly fixed.

VI.31 Indra

VI.31.1: On the semantic connection between the first and second hemistichs, see publ. intro. Particularly note the simple etymological figure in cd #*ví* ... #*ávocanta* ... *vívāca*## in the half-vs. concerning the disunity of the various peoples; here the etymological sense of *carṣaṇí-* as ‘bordered, separate (people)’ also gets fully used. In contrast to the *ví*-s of cd, we might have expected the presence of *sám* in ab to express the unity found there, since this is the standard contrastive pairing. But the theme of unity is expressed in ab by *ékaḥ* and *hástayoḥ*. Indra alone takes them all into his two hands.

The phrase *rayipate rayīnām* is clearly of the familiar “X-lord of X-es” type, though it has some twists. On the one hand, though *rayipate* is a voc. and lacks accent, *rayīnām* has its usual accent even though oblique case forms in voc. phrases regularly lose their accents. On the other, the nom. *ékaḥ* should be construed with the voc. *rayipate*, not independently (that is, the pāda doesn’t mean “You have become the one, o wealth-lord of wealth”). Ge takes the phrase as a predicative voc. The publ. tr. represents the construction as a haplology, because the predicative voc. is next to impossible to render into English -- or German: Hoffmann’s (Injunk. 218) “du (Indra) bist es allein geworden, o Reichtumsherr der Reichtümer” is cautionary in that regard. Ge’s cited parallel IV.17.6cd *satābhavo vásupatir vásūnām, dátre víśvā adhithā indra kṛṣṭīḥ*, which closely resembles the hemistich here, reinforces the constituency of our *rayipate rayīnām*.

In c the standard formula *toká- tánaya-* ‘progeny (and) posterity’ is interspersed with other locatives of the stakes, in the sequence *toké apsú tánaye ca sūrē*, I take the *ca* here as connecting the formulaic pair and have tr. them together, with the others postponed. Cf. VI.25.4, 66.8.

VI.31.2: *cyāvayante* is the only med. form to this stem, against 16 act. transitive ones. Although in my 1983 monograph (p. 126 n. 43) I identify it as intransitive, I now think it is a passive to the transitive act.: “are bought to shaking, caused to shake” rather than a

simple intr. semantically identical to *cyávate* (i.e., just ‘shake’). Fear of Indra is the cause and Indra the unexpressed agent.

VI.31.3: The content of this vs. is somewhat illuminated by the similar account of the Śuṣṇa battle and the theft of the sun’s wheel in IV.16.9–14, esp. vs. 12, as Old and Ge point out.

The tenses and moods of this vs. are ill-assorted; for various views, see Old, Hoffmann (Injunk. 190–91), Klein DGRV II.101–2. The first issue is the impv. *yudhya* ordering Indra to fight a mythological enemy long since defeated. Old reports with apparent, though not full-voiced, approval, Gr’s (Üb) suggestion to read injunc. *yudhyaḥ*, but later points out that the gods are often urged to do a deed that actually happened in the past -- hence the transmitted impv. *yudhya* would be perfectly fine. (And Gr Wö lists the form thus.)

At the beginning of c, *dāśa* is taken by Ge (fld. by Klein; see also Gr Wö) as an impv. to $\sqrt{damś}$ ‘bite’ (in the sense ‘stachle’ [spur on, goad]), with ‘horses’ supplied as obj. Given the discrepancy between the root meaning and the sense suggested here, as well as the absence of an expressed object, it seems best to follow Old (who cites Gr’s Üb. [though curiously Gr in the Wö interprets it as Ge does]) and Hoffmann and take *dāśa* as the numeral, referring to the companions of Śuṣṇa (like the thousands [*sahāsrā*] mentioned in IV.16.12 containing *śúṣṇam aśúṣam ... kūyavam* as here).

A new clause begins in the middle of pāda c, introduced by *ádha* and containing the injunc. *muṣāyaḥ*, which is hard to harmonize with the impv. (*yudhya*) that precedes it. Ge (fld. by Klein) interpr. the injunc. as a functional impv., coordinated with the impv. he sees in *dāśa*; cf. Klein “Goad (thy horses) ... and steal the wheel of the sun.” Whereas Hoffmann takes the injunc. as “generell”: “Da stiehst du die Scheibe der Sonne,” further specified in his discussion with “da ... stiehst du (immer wieder), hast du die Fähigkeit (Eigenschaft) zu stehlen.” Neither the impv. nor the general reading seems satisfactory: although some injunctives function as imperatives, that usage is limited to a few stems, generally the root aorists *dāḥ*, *dhāḥ*, and *bhūḥ*. As for the “general” interpr., although it might make sense to say of someone (even Indra) “you have the capability/propensity to steal,” it is stretching what “general” means to apply it to a single and quite specific event: “you have the capability/propensity to steal the sun’s wheel.” The publ. tr. follows the presential rendering of Hoffman: “you steal” (though without the “general” nuance). I now think this is incorrect and that the injunctive simply expresses the past here. The first part of the vs. vividly evokes the attack on Śuṣṇa by imagining it before our eyes, with the speaker urging Indra to enter the fight. But the narrative then reverts to a recital of the mythical past. I would therefore alter the tr. to “So then you stole the wheel of the sun.”

The last VP in the vs. brings up a different issue. The transmitted Samh. text is *āviverápāṃsi*, analyzed by the Pp. as *āviveḥ rāpāṃsi*, from an assumed underlying **āviver rāpāṃsi* with simplification of the double *r* across word boundary by the well-known sandhi rule. This interpr. is followed by Ge and Klein; cf. Klein “Thou has set aright the damages.” But as in I.69.8 (q.v.) I follow Old (accepted also by Hoffmann) in reading *āviver āpāṃsi*, with *āpas-* ‘labor’. This does not require alteration of the Samh. text.

VI.31.4: The preverb *áva* is positioned somewhat oddly for a preverb in tmesis, though it does follow the caesura and is thus adjacent to a metrical boundary. We might have expected it to migrate to the pāda-initial position. Its displacement may be to allow the pattern of verse-initial forms of the 2nd sg. pronoun to continue: 2a *t^uvád*, 3a *t^uvám*, 4a *t^uvám*.

My all-purpose tr. of the (more or less lexicalized) desid. to *√śak* ‘be able’, namely ‘do one’s best’ (see ad I.112.19), loses the etymological connection here with *śācyā śacīvaḥ* “o able one, with your ability” -- but something like ‘strive to be able’ implies the possibility of Indra’s failure, which does not fit his divine profile.

The voc. *sutakre* is a hapax, analyzed by Gr as belonging to a *su-takri* ‘very fast’, but by the Pp (fld. by the standard modern interp.) as *suta-kre*. As Old points out, *sunvaté suta-* would be the same type of etym. figure as *śācyā śacīvaḥ*. Sāy. glosses *abhiṣutena somena kṛita*, and this in fact remains the standard interpr. For disc. of both sense and morphology (transfer of the root noun to long-vowel *√krī* to a short *i*-final) see esp. Old and Scar (87–88). Both cite as support for the purchase of Indra the very interesting passage IV.24.10 (q.v).

This is the only 5-pāda vs. (Śakvarī) in the whole run of Indra Triṣṭubh hymns (VI.17–41) and seems designed to insert the poet of this maṇḍala into the hymn and associate him with his sometime formulaic partner Divodāsa. See esp. VI.16.5bc *dīvodāsāya sunvaté / bharadvājāya dāsūṣe* also in this maṇḍala. Those two Gāyatrī pādas are almost identical to ours, except for one ritual participle, *gr̥ṇaté*, substituting for another, *dāsūṣe*, in the Bharadvāja pāda -- and for the three additional syllables in each pāda (d *sutakre*, 3 *vāsūni*) to fill out the Triṣṭubh. The addition of this extraneous material to adapt the shorter line to a different metrical form may account for the fact that *vāsūni* seems to have no syntactic or semantic connection to the rest of the vs. Although Ge construes it with *āsīkṣaḥ* (“wobei du ... DAT ... die Schätze zu verschaffen suchtest”) (sim. Gr), *śīkṣa-* does not elsewhere take an acc. (the few supposed passages in Gr are to be interpr. differently) but generally only a dative. See disc. ad I.112.19 etc. The publ. tr. takes *vāsūni* as a loosely attached acc. goal of Indra’s helpful actions: “for goods” or, to make the purpose somewhat clearer, “for (them to obtain) goods.” The poet would have been better off just throwing in another voc., as he did at the end of d. The addition of *vāsūni* here may have been facilitated by the appearance of ... *gr̥ṇaté vāsūni*# twice elsewhere (IV.24.1, IX.69.10), in both of which *vāsūni* is the object of a verb earlier in the pāda.

VI.31.5: Another tricky etymological figure is found in the hapax cmpd *satya-satvan*, both members of which have developed their own lexical senses but both derived from *√as* ‘be’.

For *prapathin* see comm. ad I.166.9.

The stem *carṣanī-* returns as the last word of the hymn, echoing 1d, for which see publ. intro. The ring composition is rather perfunctory.

VI.32 Indra

As noted in the publ. intro., the first vs. is a meta-verse in which the poet refers to his own just-composed praise; the remaining vss. constitute that praise, and all begin with the prn. *sá*, a stylistic repetition that unifies and defines the praise-hymn proper. It is

noteworthy that, although the vocabulary and rhetoric leave no doubt of the identity of the recipient of the praise, the name “Indra” is not mentioned until the last vs. (5b) and the word “god” not at all. In this connection note the unaccented dat. *asmai* ‘for him’ in the first pāda of the hymn. Such unaccented oblique pronominal forms assume a referent already in the discourse, so Indra is present from the beginning despite not being named or even referred to at this point in the hymn, and the dative descriptors that follow in this vs., particularly *vajrīṇe* ‘possessing the mace’ in c, simply reinforce the audience’s recognition.

VI.32.2: The identity of the “two mothers/parents of the poets” (*mātārā ... kavīnām*) has been much discussed; see esp. Old, as well as Ge (n. 2ab) and Schmidt (B+I 151). The two leading candidate pairs are Heaven + Earth (/the two World Halves) and Heaven + Dawn, but only the former seems at all likely to me. Dawn and Heaven are not a stable pairing and therefore would be unlikely to be referred to by the pregnant dual *mātārā*, whereas this dual is regularly used of Heaven and Earth. Cf. esp. IX.75.4 *prarocāyan rōdasī mātārā śuciḥ* [/ IX.85.12 *prārūrucad ...*], where *rōdasī* ‘the two World Halves’ is explicitly present and where the verb is a lexical variant of our *āvāsayat* ‘caused to shine’.

Why they are considered “the parents of poets” is not clear. If it isn’t simply that Heaven and Earth provide *everyone* the conditions for existence and therefore count as universal parents (which seems rather weak), perhaps they become parents of poets when Indra makes them shine with the sun, calling forth the poetic effusions at the dawn sacrifice. The tenuousness of the parental connection has led to suggestions for other ways to construe *kavīnām*. Ge suggests that the clause is a blend of two senses: Heaven and Earth are the referents of the dual, and they are simply named as parents without indication of their offspring, but the poet also wanted to refer to Dawn as the (single) mother of the Aṅgirasas, and so the gen. pl. *kavīnām* belongs only to this putative expression (*mātāram kavīnām*). This seems overly complex, and in addition I know of no evidence that Uṣas was the mother of the Aṅgirasas. Old suggests that *kavīnām* could be construed as genitival agent with *gṛṇānāḥ*, but since that participle is in a different clause, that solution is out. Perhaps the best, if we don’t want to construe it with *mātārā*, is Sāy.’s, to take *kavīnām* as the equivalent of a dative of benefit (*aṅgirasām arthāya*).

The part. *vāvasānāḥ* in c has generally been ascribed to √*vas* ‘want, be eager (for)’: so Gr and Lub, as well as the tr. ‘begierig’ of Ge and Schmidt. However, Kü has argued (478–80) that all forms of the perfect stem *vāvas-* actually belong to √*vās* ‘bellow’, not √*vas* -- though he sneaks some of the semantics of the latter into his glosses ‘brüllen sehnsüchtig’ (etc.). Although I do not want to eliminate the pf. to √*vas* in so absolute a way as Kü, in this passage at least I think the participle embodies a pun and, moreover, the primary sense is ‘bellowing’, not ‘being eager’. The central narrative of the Vala myth has Indra vocalizing in concert with the Aṅgirasas (“the very attentive versifiers”) in order to break open the cave and release the cows. No doubt he was “eager” to accomplish this, but it is the noise-making that is the focus of the myth. In this vs. we get a double view of Indra: he is both hymned (*gṛṇānāḥ* b) presumably by the Aṅgirasas and also sings (/bellows) along with them, with two complementary participles, both modifying Indra and stationed at the end of adjacent pādas. The cooperation of Indra and the Aṅgirasas is emphasized in the next vs.

VI.32.3: On *mitájñu-* see Scar 344; it is used here in a context very similar to *abhijñú* in III.39.5, which also concerns Indra and the Aṅgirasas at the winning of cattle and contains parallel phraseology: *sákhā ha yátra sákhībhiḥ ... abhijñú ... gā anugmán* “When the comrade with his comrades the Navagvas, the warriors, from their crouch followed after the cows.” The ‘knee’ cmpds presumably describe the stance of the warrior-poets in this conflict, at least in these two passages. However, in VII.95.4, a hymn to Sarasvatī, it describes the position of “reverential ones” (*namasyà-*) imploring the goddess in prayer, and though there is a martial portion of VII.82.4, where another example of the stem occurs, the form in question is found in the part of the vs. that describes invocations made in peace time. The final instance of the word, in III.59.3, is too generic to pin down. Thus, it seems that a posture with “fixed knees” may be adopted in various circumstances, including that of prayer.

The second hemistich contains a series of balanced etymological figures: *púrah purohā sákhībhiḥ sakhīyán, ... kavībhiḥ kavīḥ sán*. I am somewhat puzzled by the nom. sg. pres. part. *sán*, which is usually concessive, but which should not have that function here. The use of *sán* is esp. surprising because it breaks the parallelism of the two rhyming post-caesura phrases in cd: ... *sákhībhiḥ sakhīyán, ... kavībhiḥ kavīḥ sán*. We should expect rather **kavīyán*, matching *sakhīyán*, and in fact the stem *kavīyánt-* does exist (IX.94.1 *kavīyán*, also in pāda-final position). Perhaps an exact match would have been considered too sing-songy, and the near-match phonologically of *-īḥ sán* with *-īyán* suggested the figure without insisting on it. Or else the poet wanted to emphasize that Indra is indeed a poet, in addition to his usual roles as victorious warrior and first comrade among comrades. In the latter case, the phrase might be tr. “being himself a poet along with poets.”

VI.32.4: Pāda b is also found at IV.22.3b, where it is a part of an independent nominal clause. However, here it fits well within the larger clause structure, whose main verb is *prá yāhi* at the end of the vs. Cf., e.g., VIII.2.19 *ó sú prá yāhi vājebhiḥ*, with the *vājebhiḥ* of our b. The fact that this pāda is a self-contained repetition aids in the interpr. of the surrounding pādas a and c, both of which contain fem. instr. pls., *nīvyābhiḥ* and *puruvīrābhiḥ* respectively. Although two masc. instr. pls. intervene, *vājebhiḥ* and *súṣmaiḥ*, they can be sequestered in the ready-made pāda b, and the two feminines of a, c can be construed together.

Although Gr interpr. the hapax *nīvyābhiḥ* as belonging to a fem. noun *nīvyā-*, most subsequent interpr. take it as an adj. If both *nīvyābhiḥ* and *puruvīrābhiḥ* are adjectives, we need to determine the underlying referent that they modify. As just noted, the first of these instr. is a hapax, but *puruvīra-* occurs 9x in the RV; in 6 of these occurrences it modifies *rayí-* ‘wealth’ (IV.44.6, VI.6.7, 22.3, 49.15, VIII.71.6, X.167.1), including 3x in VI. Given the marked predominance of this collocation, the most likely referent for *puruvīra-* in our passage is also *rayí-*. Now *rayí-* is ordinarily masc., but there are occasional fem. usages, and although I have tried to whittle down their number (see comm. ad VI.8.5), it cannot be reduced to zero. One occurrence of *puruvīra-* is a clear fem. modifying *rayí-*: X.167.1 *rayīm puruvīrām*. I therefore supply a form of ‘wealth, riches’ here, with fem. gender, as referent for both fem. adjectives. It may be that the feminine was chosen here to signal that these instr. pls. do *not* modify the masc. instr. pls. in b.

This now brings us to the meaning and affiliation of the hapax *nīvyā-*. This is generally and fairly plausibly connected with *nīvī-* ‘loincloth’ or undergarment of some sort, first attested in the AV and found also in the VS and early Vedic prose. The developed meaning of our adj. is supposed to be ‘(something) to be wrapped and carried in a *nīvī-*’. Cf. Ge’s “mit in den Schurz gebundenen (Geschenken?)”; Old more expansively suggests that Indra could knot into his loin cloth a host of strong sons. He compares *nīvibhāryā-* ‘to be carried/worn in the *nīvī-* in AV(Ś) VIII.6.20 (=AVP XVI.81.1), which is certainly suggestive. However, this interpr. encounters a practical difficulty: just how much can be carried in a loincloth? Even Indra, whose garments are presumably more capacious than ours, would probably not be able to fit into his underwear the extravagant amount of gifts we generally ask him for. The images that come to mind — at least to my mind — are of a hobo’s bundle at the end of his stick and of a stork delivering a baby in a cloth sling (presumably a diaper?) hanging from its beak, both of which have limited carrying space. The AV passage containing *nīvibhāryā-* simply confirms this. Found in a hymn “To guard a pregnant woman from demons” (in Whitney’s title), the verse in question concerns possible miscarriage (*áva √pad* lit. ‘fall down’, but a standard idiom for miscarriage) and recommends that the pregnant woman carry/wear two remedies in her *nīvī-*: VIII.6.20bcd *yád dhítām māvā pādī tát / gárbham ta ugráu rakṣatām bheṣajau nīvibhāryā* “What has been deposited [=embryo], let that not ‘fall down’; let the two powerful remedies to be worn/carried in your *nīvī* protect your embryo.” This obviously involves inserting into the garment some sort of prophylactic of modest enough size that it could be reasonably worn on an everyday basis -- not taking off the garment and stuffing it full of goodies.

The publ. tr. maintains the connection with *nīvī-*, or rather with *√vyā* ‘envelop’, which at least some take as the root at issue (see Gr, also [critical] disc. in KEWA s.v. *nīvīh*; the morphology is admitted difficult, and EWA casually suggests a connection to *nī √yu* ‘join’ [perhaps anticipated by Ge’s invocation, n. 4a, of *nīyūt-*], which does not seem a better alternative, as it would require an unprecedented alternate syllabification of the zero-grade of *√yu* to **iv*). The publ. tr. ‘to clothe (him)’ rests on the metaphor of clothing as wealth. Cf. nearby VI.35.1 *kadā stómaṃ vāsayo ‘sya rāyā* “When will you clothe his praise-song with wealth?” However, I now see that I brushed aside problems of both form and function: the root *√vyā* does not distract its initial cluster, but both meter and accent require a reading *nīvíyā-*; if the form is meant to be a gerundive, it should be passive in function, a usage not reflected in the translation; vowel-final preverbs do not lengthen before *√vyā*; *nī* is not found with *√vyā* in the RV. I now suggest that the form belongs to a different root entirely: *√vī* ‘pursue’. This root *is* found with *nī* in the RV, though only in the intensive (see Schaeffer, 190–91), in a usage I tr. ‘bear down on’, though here it could mean something more like ‘track down’ or simply ‘pursue’. Among the many objects that forms of *√vī* take, riches and the like are found (e.g., in this maṇḍala VI.12.6 *vēṣi rāyāḥ*). Moreover, in root-noun cmpds with this root, vowel-final preverbs are lengthened: *pratī-vī-* (3x), *prā-vī-* (1x), and cf. *devā-vī-* (12x) beside *deva-vī-* (1x, though cf. common *devā-vīti-*). (On these lengthenings see Scar 499, 500, 501.) The derivation is not without problems. If the form is a gerundive (as I’d like), the root accent is fine, but we would expect *guṇa* or *vṛddhi*, not zero-grade. Despite this formal problem, I think this root affiliation and formal interpr. solve many of the problems that

other interpr. face, and so I would emend the tr. to “... with (riches) to be tracked down/pursued ...” in place of “... to clothe (him).”

VI.32.5: *sárgēṇa ... takṭáh* is a decomposed variant of *sárga-takta-* (III.33.4, 11)(or, vice versa, the cmpd is compounded from this phrase).

Ge terms this a “dunkler Sagenzug,” but I’m not sure why it can’t just be a snippet of the Vṛtra myth, after the serpent has been killed and Indra has released the pent-up waters, as I say in the publ. intro. Although vss. 2–3 concern the Vala myth, Vala and Vṛtra themes often appear in the same hymns. Ge also considers it difficult to supply the missing verb in b, but given *sárgēṇa* in a and the passively used aor. part. *srjānāḥ* in c, implicitly modifying the waters, the missing verb is most likely a transitive form of $\sqrt{\text{srj}}$, with acc. *apáh* as obj., rather than Ge’s “hat ... (geleitet).” Among the many such passages, see very nearby VI.30.4 *ávāsṛjo apó áchā samudráṁ*, also with Indra as subj. Sim. Sāy.’s *visrjati*.

The root-noun cmpd. *turā-ṣāt* picks up *turāya* in 1b in a nod towards ring composition. I tr. ‘overcoming the precipitous’ rather than my ‘overcoming the powerful’ in the other three passages (III.48.4, V.40.4, X.55.8) in order to capture this echo.

In c the negated root noun cmpd *ánāpāvṛt* can either be adverbial (so Gr and Ge) or modify *ártham* (so Scar 508). I favor the adv. reading (also in its other occurrence in X.89.3): it is surely the waters, not the goal or purpose, that do not turn aside.

VI.33 Indra

VI.33.1: The pāda-final *dāsvān*, to be read with distraction as *dāasvān*, presumably reflecting a laryngeal hiatus, resonates with *sauvaśv(i)yam* and *s(u)vaśvo* in b, despite the different sibilants. The stem *dāsvant-* (8x) must always be read distracted and presumably reflects, as already indicated by Gr, an underlying *s*-stem built to $\sqrt{\text{dā}}$, hence in Ilr. terms **dāh-as-*.

VI.33.2: In c I tr. *ví pañīm̐r asāyaḥ* as “you dispersed the niggards.” I now think this probably is wrong, in that I cannot find a semantic pathway there from *ví√(n)as̥* ‘reach through’, etc. The closest passage to ours that contains this multivalent lexeme is X.29.8 *vy ānaḥ indraḥ pṛtanāḥ svójāḥ* “The very powerful Indra has penetrated the battling hosts,” and I would alter the publ. tr. to “you penetrated through the niggards ...” The only thing that gives me pause is the very similar passage adduced by Ge, VII.19.9 ... *ví pañīm̐r ádāsan̐*, which I tr. “They ... have distanced the niggards through ritual service” (for which see comm. ad loc.).

As the above disc. suggests, I take *asāya-* as belonging to the root $\sqrt{(n)as̥}$, but the morphology is not straightforward. With Whitney’s tentative suggestion (Skt. Gr. §1066b), I assume it belongs with the class of *-āyá*-presents to zero-grade roots that are generally related to 9th class presents (e.g., *gṛbhñāti*, *gṛbhāyá-*) and ultimately reflect (in my opinion, flg. Saussure) *-yá*-deverbatives built to the weak stem of the 9th class pres. (*-nH-yá-*). Unfortunately, of course, $\sqrt{(n)as̥}$ had no final laryngeal and no 9th class pres., though it does have a well-attested 5th class *asnóti*. I must assume secondary spread of the *-āyá*-suffix to this root (see also *nasāya-* X.40.6, also apparently to $\sqrt{\text{nas̥}}$), perhaps facilitated by the nasal-suffixed present. MLW suggests here a clever alternative, that

aśāyah actually represents a haplologized form of the causative of $\sqrt{śi}$ ‘lie’, *śāyāyati*, and with *vī* means ‘you caused the niggards to lie in pieces / scattered about’. Although Wh (Rts) lists this causative as beginning only in the sūtras, it may well appear once in the AV (Ś IV.18.4); see my *-āya*-formations, pp. 134–35. Although MLW’s suggestion is appealing on its own -- and the haplology would not be problematic (see the *-yaya*-haplology posited above in VI.12.4) -- the other forms of the stem *aśāya*- (I.34.7, X.43.6, 92.1) are not easily amenable to a ‘lie’ interpr. but fit ‘reach’ quite well; *aśāyata* in VIII.73.9, usually grouped with these forms, I take to $\sqrt{śā}$ ‘hone, sharpen’ (see comm. ad loc.).

VI.33.3: The Ārya obstacles are presumably peoples akin to us, but fighting against us. On the contrastive pairing *dāsa- ārya*- in this phrase, see comm. ad VI.22.10.

As noted in the publ. intro., Indra’s apparent weapons of “well-placed cloaks” (*súdhitebhir átkaiḥ*) are puzzling. I think this is a reference to Indra’s shape-shifting ability, to wear “different hats” in different situations -- and Ge’s parallels in n. 3c suggest that he is of the same opinion. Old discusses at length and uncharacteristically endorses the suggested emendation of Ludwig/Bergaigne of *átkaiḥ* to *arkaiḥ*, though he does admit it’s hard to explain how the corruption would have arisen. I think this is a fairly insuperable problem, esp. since *súdhita*- is not a particularly likely descriptor of ‘chants’, and is in fact not found with words of that sort.

As also noted in the publ. intro., I suspect that *súdhita*- is a buried play on words. It is stationed between *vāneva* “like the woods, trees” and *átkaiḥ*. In conjunction with the former, it evokes *svádhitī*- ‘hatchet, axe’; cf., for similar context, X.89.7 *jaghāna vṛtrām svádhitir vāneva* “He smote Vṛtra, like an axe the trees.” For another pun involving *svádhitī*-, see V.32.10 where the “Heavenly Hatchet” (*devī svádhitīḥ*) probably plays on *svadhā*- ‘independent power’. See comm. ad loc.

As already pointed out ad VI.4.7, *nṛtama* is not suitable for the cadence of any Vedic meter, and save for this passage and VI.4.7 it avoids this position. It is found several times with *nṛṇām* in the cadence but in the reverse order: IV.25.4 *nṛtamāya nṛṇām*, V.30.12, X.29.2 *nṛtamasya nṛṇām*, where the oblique forms of *nṛtama*- support a good Triṣṭubh cadence. The order may have been flipped here, but why?

VI.33.4: The injunc. *bhūḥ* here has imperatival force, a function of the injunctive generally limited to the root aorists *dāḥ*, *dhāḥ*, and *bhūḥ*.

VI.33.5: I do not see any difference in sense between the imperatival injunc. *bhūḥ* of 4b and the pres. impv. *bhāvā* in 5b.

With Old, who argues this at length, I take the Saṃhitā *mṛṇīkā* as loc. *mṛṇīké*, rather than Pp. *mṛṇīkāḥ*. See also Klein, DGRV I.314. The conjunction *utá*, which connects it with clear loc. *abhīṣṭau*, strongly supports this interpr. (Ge’s interpr. is not clear.)

The opening of the 2nd hemistich, *itthā* PARTICIPLE, matches that of the opening of the last hemistich in the preceding hymn (VI.32.5), and the *divī* opening pāda d resembles *divé-dive* in the same position in VI.32.5.

The final pāda has a bad cadence: *goṣātamaḥ*. As MLW points out, this form should really be **goṣātamaḥ* (splv. to *goṣā*-). Such a reading doesn’t improve the

expected Triṣṭubh cadence, but it would provide a proper Jagatī cadence (and metrical variety at the end of a hymn is not unexpected). The pāda can be read with 12 syllables without difficulty: *diví ś'yāma pārye *goṣātamaḥ*. As for the transmitted short vowel form, it might have been changed to match *nṛtama* in 3d, although, as noted there, the light initial syllable of that form is itself metrically problematic.

VI.34 Indra

VI.34.1: The first hemistich of this vs. (and thus of the hymn) contains a compact summary of the Rigvedic poetic economy, with the god Indra both the focus of the poets' praise songs and the source of inspiration for them. This is expressed in two antithetical pādas, conjoined by double *ca*, with the oppositional preverbs *sám* and *ví* opening the pādas and two 3rd pl. verbs of motion providing the verbal expression: *jagmúḥ* and *yanti*. The first of these is accented, the 2nd not, even though the two pādas are coordinate, as the double *ca*-s show. The accent of *jagmúḥ* can be accounted for by the principle that accents the first of two explicitly contrastive verb forms, though usually such verbs are adjacent or nearly adjacent. Klein's (DGRV I.167) of contrastive double *ca* constructions has several such passages, with the 1st verb accented; e.g., I.123.12 *pārā ca yánti púnar ā ca yanti*. Our passage is unusual only in having more matter between the verbs. Note how very parallel the pādas are: PREV *ca* 2ND-SG-PRN VERB, with the pre-verbal loc. *tvé* and abl. *tvát* carrying their own contrastive weight.

Another ex. of phrasal echoes among the Indra hymns in this cycle: *purā nūnām ca* "previously and now" plays off against *nūnām ... aparāya ca* "now and for the future" in the immediately preceding hymn (VI.33.5). See also possibly VI.35.5.

The Saṃhitā prevocalic form *stutāya* is universally read/interpr. as underlying nom. pl. -aḥ, beginning with the Pp. (also Gr, Ge, Lub, Kü 584), but HvN unaccountably restore -e, which must simply be a lapse.

The dvandva *ukthārkā* (to be distracted to *uktha-arkā*) is most likely a neut. pl., serving as another subject of the verb *pasṛdhre*, not a dual masc., which is harder to fit into the syntax of the clause -- though plural dvandvas are far rarer than dual dvandvas in early Vedic. This is one of the earliest exx. See Whitney Gr. §1255e; Macd VG §265; VGS p. 269; AiG II.1.38, 156. The 2nd member *arkā-* is itself masc. when independent. The cmpd. deviates from dvandva orthodoxy in other ways: it has only one accent, and at least in this metrical context the first member ends in short -a and is probably in stem form (or else show shortening in hiatus).

VI.34.2: The heavy presence of *puru*-PAST PART. cmpds in the first hemistich (*puruhūtāḥ ... purugūrtāḥ ... purupraśastāḥ*) was prepared for by the fem. pl. *pūrvīḥ* in 1a and the (unrelated) *purā* in 1c.

It is difficult to render the gerundive + injunctive phrase *anumādyo bhūt*, "has become one to be cheered on" is excessively fussy.

The instr. *asmābhiḥ* was unaccountably omitted in the publ. tr.: I correct to "... to be cheered on by us."

VI.34.3: To say that praises don't *harm* Indra seems a little odd: who would think that they would?

nákṣanti is one of the few examples where *íd* by itself seems to induce accent on the verb; most of the putative examples (see Gr s.v. *íd*, §5, p. 206) involve pāda-initial verbs that could owe their accent to their position. I am not entirely certain, however, that this passage exemplifies this property of *íd*, since initial *índram* in b could be enjambed over the pāda break, and *nákṣanti* start a new clause. V.32.5 presents an undoubted ex. of *íd* inducing verb accent.

I interpr. *yádi* in c as **yad ī*, i.e., an example of the enclitic acc. *ī* unverbated with a preceding *yád* (see my 2002 “RVic *sīm* and *īm*,” Fs. Cardona). This is a particularly clear ex., because of the parallel *yád* later in the pāda (**yád ī stotāra śatām yát sahasram* “when a hundred praisers, when a thousand”), where an imbalance of subordinators (“if a hundred praisers, when a thousand ...”) would not make sense. Moreover the form is followed by a cons. cluster (*yádi stotārah*), so that the meter would be unaffected by **ī* shortened to *-i*.

VI.34.4–5: The identical openings of these two vss., *ásmā etád*, pick up the last clause of vs. 3, *śám tád asmai*, and invite the two phrases to be interpr. as separate clauses, with *śám* to be supplied from 3d, as both Old and Ge point out.

My interpr. of the rest of ab is generally inspired by Ge.

The form *mimikṣá* is interpr. by the Pp. as *mimikṣáh*, though *mimikṣé* is also possible and is a strong alternative. In the former case, it would be an adj. built to the verbal stem *mimikṣ-*, parallel to adj. *mimikṣú-*; in the latter a 3rd sg. mid. pf. The pf. interpr. is followed by Gr and Kü (386), though Kü (n. 690) does allow the possibility of the thematic adj. as an alternative. AiG (II.2.86) and Lub take it as an adj., and Old and Ge consider both possibilities, but favor the Pp. reading. I too take it as an adj., in part on grounds of syntactic parallelism: 4ab and 5ab are quite parallel. They both begin with the *ásmā etád* clause discussed above; then a ritual feature (soma *sómah* / praise hymn *stotrām*) is announced as in/for Indra (*índre* / *índrāya*), with the verbal notion connecting the offering and the god expressed by an augmented passive aor. (*ny àyāmi* / *avāci*) in the latter part of b. If we have a finite verb *mimikṣé* in the early part of b, it chops the pāda into two clauses and destroys the parallel structure (a point made somewhat differently by Old). Moreover, the simile in 4a *divy ārcéva māsā* (with *diví* parallel to *índre*; see also Old) works better if construed with *ny àyāmi* than with *mimikṣé*, but given the word order it would have to belong to the *mimikṣé* clause if *mimikṣá* stands for that verb.

As for the just-mentioned simile, I am entirely persuaded by the gist of Ge’s suggestion (n. 4ab) that *māsā* should signal an elliptical dual *sūryā-māsā* ‘sun and moon’, the two heavenly bodies set in heaven, as soma is set in Indra. However, he deals rather wispily with the stumbling block to this interpr., namely the accentuation of *māsā*, proper to the instr. sg., instead of the expected dual *māsā*. Judging from his lapidary treatment, he would by preference read (that is, emend to) du. **māsā* directly, with *arcā* also du. Hence his tr. “wie (Sonne und) Mond, die beiden Strahlenden.” But if *māsā* must be maintained, he would interpr. (see n. 4ab) *arcéva* as containing **arcáh*, the nom. sg. to an otherwise unattested them. stem *arcá-* and exhibiting irregular sandhi, and *māsā* as an instr. of accompaniment, rather like the expression in X.138.4 *māséva sūryah*, in which *māséva* presumably conceals the instr. *māsā* construed with nom. sg. *sūryah*: “like the sun with the moon,” that is, “the sun and the moon.” I would very much like to rescue Ge’s interpr. based on an elliptical dual, an interpr. reflected in the publ tr., because I think it

has to be fundamentally correct in context. But it is going to be challenging. I would prefer not to emend *māsā*, and I also do not think that excavating *arcāḥ* irregularly from *arcéva* is the way to go. My flimsy alternative proposal (though followed by Old; see below) is that *arcéva* contains the nom. sg. of a fem. -ā stem *arcā-* (found in the Br., in a different sense) ‘shining/beaming one’ → ‘sun’. Old, flg. Ludwig, in fact also opts for a nom. *arcā* ‘der Glanz’, though he connects this Glanz with the moon: “wie zum Himmel der Glanz vom Monde (gelenkt wird).” For the connection of the sun with forms belonging to √*arc*, see V.79.9, VIII.7.36 *sūro arcīṣā*, and of course it is regularly said that the sun is set/placed *diví* ‘in heaven’ (e.g., XV.85.2 *diví sūryam adadhāt* “when he placed the sun in heaven”; see disc. in my 2010 Fs. Melchert article on the “Placer of the Sun”). I suggest that this stem *arcā-* is found only here because it was mobilized to contrast with -*arkā* ‘hymns’ at the end of 1d. I would now alter the tr. to “the soma has been set firmly in Indra, like the shining one [=the sun] along with the moon in heaven.” Note that an instr. of accompaniment is used with a nom. in lieu of a coordinate expression in the 2nd hemistich: *hāvanāni yajñāḥ* “our invocations along with our sacrifices” = “our invocations and sacrifices.”

Note that under this interpr., the supposed root noun *ārc-* would no longer exist, since this stem rests only on this form in all of Skt., supposedly the instr. *arc-ā*. In fact, the existence of this root noun was already denied by Schindler in his 1972 diss. (s.v.), because of its full grade, and he rehearses the various alternative proposals, including Hoffmann’s (oral) suggestion that *arcā* is the loc. to *arcí-*, a stem that has the merit of existing, though it is hard to fit it semantically into this passage. The actual root noun to √*arc/ṛc* ‘shine/sing’ is of course *ṛc-* ‘verse’, which gives our text its name.

In c the phrase (*abhí*) *sām yád āpah* “when the waters con(verge) (on him)” reminds us of the opening of the hymn, where songs converge on Indra. I do not pretend to understand the construction of cd. Indra is obviously the unexpressed object of *vāṛdhuḥ* (cf. 3b *īndram ... vardháyantīḥ*) and the comparandum for the simile that opens the hemistich, *jānam ná dhánvan* “like a man in the desert,” but the verbless *yád* clause seems rather casually embedded and with the *yád* unusually positioned after two preverbs (unless *abhí* should be taken only with somewhat distant preceding *jānam*).

VI.34.5: The balance and reciprocity between god and worshipers evident earlier in the hymn also characterizes its ending. The last thing said about Indra is that he is our ‘strengthenener’ (*vṛdhāḥ* 5d), just as our offerings, both material and verbal, have strengthened him (*vardháyantīḥ* 3b, *vāṛdhuḥ* 4d).

VI.35 Indra

This hymn is tr. by Schmidt in B+I 152–53.

VI.35.1: Ge takes *bráhma* as an abstract “Hohepriesterschaften,” standing for the personal pl. *brahmāṇaḥ* (n. 1a). I see no reason to take *bráhma* in any sense other than its usual ‘sacred formulation(s)’ (pl. in this instance)(nor does Schmidt, who tr. “Wann werden die Gedichte ihren Sitz auf dem Wagen haben?” [152]). The vs. concerns the exchange of priestly praise for material goods bestowed by the god: the clothing of our praise with Indra’s wealth (c) and the bejeweling of our insights with his prizes (d) are vivid metaphors. The first pāda contains a likewise striking image: the chariots in which our

formulations take up their position are presumably the chariot(s) Indra gives us, which will also be heaped with goods. It is our production of the formulations that brings the chariots. The intent of this image is made clearer by vs. 3b *viśvápsu bráhma kṛṇávaḥ*.

Both *bhuvan* and *dāḥ* are subjunctives, or at least have subjunctive function. Contra Hoffmann (246), I am inclined to take *dāḥ* as a real subjunctive (< **dā-a-s*), though without metrical distraction, not an injunctive, while both of us take *bhuvan* as subj. here.

On *dhíyaḥ karasi vājaratnāḥ* see X.42.7 *kṛdhí dhíyam ... vājaratnām*.

VI.35.2: Both Ge and Schmidt take the first hemistich as depicting a hostile encounter between two sets of men and heroes expressed by the verb *nīlayāse* (Ge: “... dass du Herren mit Herren, Mannen mit Mannen in Kampf verwickeln wirst?”; HPS [153] “... dass du ... handgemein (?) werden lässt?”); Old is less certain but suggests that “kämpfen machen, überwinden” is expected. But the basis of this hapax demon. *nīlayāse*, namely *nīlā-* ‘nest’, invites an interpr. depicting a more intimate and amicable relationship (like the adj. *sānīla-* ‘of the same nest’, referring to brothers and comrades), and the middle voice reinforces that sense. In my 1983 monograph on *-āya*-formations, I follow an interpr. suggested by Insler, that the verb means ‘accept as equals’ (pp. 84–85). Although I think that may be an implication, I now think it can be taken more literally: ‘put in your own nest’. Indra is bringing our fighting men into intimate contact with his own (the Maruts and/or Aṅgirasas [the latter being mentioned in vs. 5]) under his auspices; with these now conjoined forces he can win the contests and the cattle at stake.

The accent of the denom. *nīlayāse* (expect **nīlayāse*) has been retracted because the form is transitive (acc. *nīn ... vīrān*) and has been attracted into the *-āya*-transitive / causative class (see my 1983 monograph).

VI.35.3: This vs. is a reprise of and variation on vs. 1. Like vs. 1, it treats the rewards that accrue to verbal praise, and in fact repeats two of the three types of verbal products found in vs. 1 (*bráhma* 1a/3b, *dhíyaḥ* 1d/3c), with *stómam* (1c) and *hāvanāni* (3d) being the novel terms. *bráhma* and *hāvanāni* are modified by bahuvrīhis that express the material reward they will obtain (‘all goods’ [*viśvápsu*] and ‘cattle as bounty’ [*gómaghā*] respectively). In the c pāda the chariot motif of 1a returns in slightly different form: we “team up” our insights, as Indra does his teams (*niyútaḥ*) -- the teams that, pulling his chariot (cf., e.g., I.135.4 *rátho niyútvān*), will bring Indra and his bounty to the sacrifice, where the “teams” of insights will be exchanged for the goods he brings.

On *viśvápsu*- see comm. ad I.148.1.

VI.35.4: Both *jaritré* and *gómaghā* are repeated from the previous vs. (where they were not in the same clause), though the latter has changed gender: in 3c it is neut. pl., while in 4a the same sandhi form is fem. pl. and represents underlying *gómaghā(h)*. This bahuvrīhi has spawned two parallel descriptors: *ásva-ścandrā(h)* and *vāja-śravasah*, all three modifying fem. pl. *pṛkṣah*.

The tr. ‘lay on’ (that is, provide, often lavishly, often of meals or feasts) is an English idiom that precisely calques *ádhi dhehi*.

I take *iśah ... dhenúm* as a double acc. with $\sqrt{pṛ}$ ‘swell’ -- lit., ‘swell the cow the refreshments’, that is, ‘swell the cow with refreshments’. Ge hesitates (n. 4c), but in the

tr. opts for two acc. in parallel (‘swell the refreshments, (swell) the cow’), as does Schmidt (p. 153).

The root-noun cmpd *surúc-* (9x) is generally a bahuvrīhi meaning ‘having good light, very bright’, as in II.2.4 *tám ... candráṁ iva surúcam* ‘him [=Agni] very bright like gold.’ For just this passage Gr posits a substantivization: f. ‘heller Glanz’. This is unnecessary, as *surúcaḥ* here can be a fem. pl. acc. picking up and modifying f. pl. *śśah* in c (and indeed the glittering *prkśaḥ* in b). It obviously forms an etymological figure with the opt. *rurucyāḥ*.

As for this verb, it should have transitive/causative value (‘make shine / illuminate’), and it therefore functionally overlaps with the redupl. aor. *árūruca-*. This overlap is complicated by the fact that several apparent pf. forms *rurucuḥ* also have this value, in some of which lengthening the redupl. to **rūrucuḥ* would provide a better cadence, though in our passage such a lengthening would produce a worse cadence. For disc. of these ambiguous forms see comm. ad IV.7.1, 16.4. As I say there, because the 3rd sg. pf. *ruoca* and the pf. part. are intransitive, I am inclined to think that the transitive 3rd pl. forms originated in the redupl. aor. but were absorbed by the pf., with shortening of the redupl. vowel.

VI.35.5: As noted in the publ. intro., the first hemistich of this vs. is quite unclear; I am not at all certain my interpr. is correct, but I don’t think it’s appreciably worse than any others, which I will not treat at length. One observation about it, which doesn’t really aid in its interpr., is that it seems to play off the Agastya Triṣṭubh refrain (I.165.15d, etc.) *vidyāmeśāṁ vrjānaṁ jīrādānum* ‘May we find refreshment and a community having lively waters.’ A large proportion of the occurrences of *vrjānaṁ* are found in that refrain. The *jīnva* at the end of our vs. picks up the *jīrā-* of the refrain, and its *śśam* is matched by our *śśah* in 4c.

I’d also point out that the antithetical temporal expressions we noted in the two previous hymns, *nūnām ... aparāya ca* ‘now and for the future’ (VI.33.5) and *purā nūnām ca* ‘previously and now’ (VI.34.1), may be echoed by *nūnām ... anyāthā cid* ‘now and also otherwise.’

But let us now turn to the serious problems of the vs.: 1) there is apparently no verb (or anything else) to govern *tám ... vrjānaṁ*; 2) there is no verb to govern the presumed acc. *dúraḥ* ‘doors’ in the rel. clause; 3) esp. if *grñśé* is taken to be the verb of the rel. cl. and a 2nd sg. passive ‘you are praised’ (as it is by most tr.), since the passive can’t govern an object, and ‘doors’ would be quite an outlandish object anyway.

My interpr. starts with the two things I think we can hold onto:

1) the collocation *ví dúraḥ* inevitably brings to mind the idiom *ví dúraḥ √ vr* ‘open the doors’, used inter alia for the breaking of dawn, which is also often homologized to the opening of the Vala cave (e.g., VII.79.4), an act ascribed to Indra. This is mentioned several times in this Indra cycle (VI.17.6, 18.5, 30.5). Thus the most likely way to interpr. the first part of 5b *sūro yāc chakra ví dúraḥ* is as a rel. cl. referring to this action, supplying the verb *√ vr* (or sim.): “When, o able one, as champion you (open[ed]) wide the doors.” If we thus interpr. the rel. cl., the supposed passive *grñśé* is displaced from its supposed role as verb in that clause (though we could, of course, assume the ‘open’ idiom was participial and *grñśé* could then be the main verb).

2) *gṛṇīṣe* (generally unaccented) is otherwise almost entirely a 1st sg. -*se* form, “I (shall) sing/praise,” so the passive interpr. just mentioned is not attractive in any case. In the last vs. of a hymn such an assertion of a 1st ps. praiser is certainly apposite and expected.

The gist of my interpr. rests on these two observations. I take *gṛṇīṣé* as a 1st sg. and not part of the dependent clause, which expresses the formulaic ‘open the doors’. *gṛṇīṣé*’s object is *vrjānam* at the beginning of the hemistich. The verb *gṛṇīṣé* is accented because it immediately follows a subord. clause. The major problem that I see is that this requires that the *yád* clause be embedded, and I don’t see any way out of that. I would also prefer if Indra were the object of the praise, not (merely) the *vrjānam*. He might indeed be represented by the init. *tām*, which would then not modify *vrjānam*. This would produce an alternative tr. “Him here and now do I sing, as (I do/did) otherwise the community, when ...”

I am not entirely satisfied with this interpr., but I do not have anything better to offer (nor do other interpr.).

The rest of the vs. is much less problematic. The most important thing to note is that the *dhenú-* ‘milk-cow’ must be masc. because of the adj. *śukradúghasya* ‘having bright/clear milk’. This gender not only goes against nature, but also against the phrase in 4c *sudúghām ... dhenúm*, with the fem. adj. *sudúghām*. The gender switch is obviously deliberate, and the likely reason for it was already formulated by Sāy.: that this is a reference to the soma-plant and the soma juice that is milked out of it. (Both Ge and Schmidt take the two genitives separately, which rescues the gender of *dhenóḥ* but ignores the shock value of the gender switch.)

That pāda b has to do with opening the Vala cave is supported by the mention of the Aṅgirasas in d.

Also in d, *bráhmanā* is ring-compositionally related to *bráhma* in 1a.

VI.36 Indra

VI.36.1: Although the stem *viśvá-janya-* is of course a bahuvrīhi and has the basic meaning ‘possessing all peoples’ vel sim., the point here must be that all peoples prepare soma for Indra, hence my ‘stemming from all peoples’ referring to the soma drinks. The reciprocity between the people’s offering of exhilarating drinks and Indra’s apportioning of prizes (c) is clear.

The publ. tr. renders the injunc. *dhāráyathāḥ* as a present; it could also have past value: “when/as you upheld ...”

As it is elsewhere (cf. W. E. Hale, *Ásura- in Early Vedic Religion*, 59–62), *asuryà-* ‘lordship’ is ascribed to Indra, and the fact that he maintains this lordship ‘among the gods’ (*devéṣu*) demonstrates once again that *devá-/ásura-* is not yet an antithetical or hostile pairing in the RV. This same Indra cycle contains a similar expression: VI.20.2 *ánu ... asuryāṃ devébhir dhāyi víśvam*.

VI.36.2: Since verbal forms of *√yaj* are not otherwise found with *ánu* nor does the lexeme *ánu-prá√yaj* occur anywhere else, I take *ánu prá yeje* as a technical reference to the fore- and after-offerings (*prayājá-*, *anuyājá-*, already attested in late RV). The *ánu*

may have been included because of the idiom *ánu* √ *dā* ‘concede’ in the next pāda. On the weak pf. form *yeje* (versus *īje*) see comm. ad I.114.2 and Kü 391–92.

Contra Ge, Klein (DGRV I:224–25), and Scar (115–16), who take *c* with *d*, I construe *b* and *c* together, with the two datives *vīryāya* (*b*) and *syūmagābhē* *dúdhaye* ‘*rvate*’ (*c*) parallel to each other and serving as the indirect object to *dadhire ánu* ‘have conceded’ in *b*. This allows *ca* at the end of *c* to take its usual role conjoining NPs, rather than serving as a clausal conjunction (joining *b* and *cd*) as Klein is forced to take it. In either case the *ca* is unusually positioned, but as a clausal conjunction its position might be more jarring.

This interpr. also allows a better case frame in *d*: *ápi* √ *vrj* *krátum* + LOC is an idiom of subordination; cf. X.48.3 *máyi devāso* ‘*vrjann ápi krátum*’ “To me have the gods bent their will” (sim. X.120.3). But for both Ge and Klein the dative of *c* must take the place of the usual loc.; e.g., Klein “And to (him), the bucking courser grabbing the reins, do they direct their determination in the battle against the obstacle.” In my interpr. I supply a loc. ‘to him’ in *d*, likely gapped because of the presence of the circumstantial loc. ‘at the smashing of *Vṛtra*/obstacles’ (*vrtrahátye*), with the dat. of *c* more naturally construed with the verb in *b*, *ánu* √ *dhā*, which ordinarily takes a dative.

With Gr, Ge, and Klein, I take the root noun cmpd. *syūma-gābh-* in *c* as having the transitive value “pulling at [/grabbing] the reins,” expressing the impatience of the “headstrong charger” that is Indra. Curiously, Scar (115–16) gives it the passive sense “der ... beim Zügel gepackt wird,” indicating that the same headstrong charger has to be reined in. Although this interpr. is in principle possible, in practice it seems unlikely that the poets would dare to consider (much less desire) curbing Indra’s impetuous rush.

VI.36.3: I take fem. pl. *sadhrīcīḥ* as implicitly modifying all the NPs, though attracted to the gender of the adjacent noun, fem. *ūtāyah*. So, it seems, also Ge.

VI.36.5: In *b* Ge takes *rāyah* as subject and supplies the same stem as obj., on which gen. sg. *aryāḥ* is dependent, while apparently supplying a form of the same root √ *sthā* (or √ *as*) with *abhī* as I do: “Wie der Himmel über der Erde, so (sollen) die Reichtümer sich über die (der) hohen Herren (erheben)” (sim. Thieme, Fremd. 59). The publ. tr. is different, in taking *rāyah* as an acc. despite the accent (expect **rāyāḥ*, but the nom. form is sometimes found for the acc.) and supplying Indra as subject of a supplied impv. to *abhī* √ *sthā* (*/as*): “Like heaven over the earth, sur(mount) the riches of the stranger.” However, I now see that Ge must be correct, because the expression here has to be interpr. alongside similar phrasing elsewhere in this Indra cycle: VI.20.1 *dyaúr ná ... abhī bhūma aryás, tastháu rāyīḥ* ..., which I tr. “wealth ... surmounts (the wealth) of the stranger, ... as heaven does the earth.” This passage contains the same two-term simile *dyaúr ná (...)* *bhūma*, the same NP *rāyi- aryāḥ*, and the same preverb *abhī*. However, it is more explicit, in having an overt finite verb *tastháu*, and, most important, in having an undeniable nominative *rāyīḥ*, which must correspond to *dyaúḥ* in the simile. The publ. tr. of our passage should therefore be altered to “Like heaven over the earth, let (our) riches sur(mount) (those) of the stranger.”

Ge takes *cakānāḥ* in *c* as passive: “auf dass du ... bei uns beliebt seiest.” But the pf. *cake*, including its fairly frequent participle *cakānā-*, is always “active” in sense: ‘take pleasure, desire’; cf. Kü 142–43. In the publ. tr. I moved the instr. *śávasā* immediately

preceding the part. to be construed with the 2nd part. *cékitānaḥ*, as a parallel to *vāyasā* (“showing yourself with your strength and your vigor ...”). I am now uncertain about this because of two similar passages: V.3.10 ... *sāhasā cakānāḥ* with an *s*-stem instr. as here and VII.27.1 ... *śāvasā cakānāḥ* with a gen. of the same *s*-stem as here, both immediately preceding *cakānāḥ* as here. Although I still don’t think *śāvasā* should be construed directly with *cakānāḥ* as the source of enjoyment, I now think it probably should remain in the larger participial phrase: “so that you with your strength will keep finding enjoyment in us ...”

VI.37 Indra

VI.37.1: I take *svārvān* as implicitly conjoined with *kīrīḥ*, with the pair displaying the range of mortals who call upon Indra. This is one of Old’s suggestions; alternatively he suggests that it is proleptic, but this seems overly complex — though it seems to underlie Ge’s interpr.: “denn auch die Arme ruft dich erleuchtet.”

VI.37.1–2: On the shift in referent between the *hārayaḥ* in 1b (Indra’s horses) and the one in 2a (soma drops) see publ. intro.

VI.37.2: Accented *asyā* in c presupposes the gen. phrase in d *mādasya somyāsya*, even though the two genitives are construed differently: the one in c as (partitive) gen. with *√pā* ‘drink’, the one in d dependent on *rājā*.

VI.37.2–3: The implicit identification of Indra’s horses with the soma drops is reinforced by the use of the part. *ījyantaḥ* for both (2b, 3c).

VI.37.3: It is not possible to respect the hemistich boundary in tr. without awkwardness.

VI.37.4: Ge (fld. by Klein, DGRV I: 250) takes *vāriṣṭhaḥ* as an ex. of hypallage. standing for **vāriṣṭhām* and characterizing the *dākṣiṇā*. This must be because they take the adj. as meaning ‘broadest’, splv. to *urú-* (though I don’t quite see why the priestly gift could be broad if Indra cannot be). By contrast I follow Gr in consider some forms of the stem *vāriṣṭha-* as ‘choicest, most excellent’, a splv. to *vāra-* ‘choice’, though of course that adj. should not, originally, produce a primary splv. (Note, however, that **vāratama-* would be metrically unfavorable.) AiG II.2.452–53 allows such a splv. in late Vedic, though not for our period, but I see no reason why it can’t be early, encouraged by semantically and phonologically parallel *vāsiṣṭha-* ‘best’ (→ Vasiṣṭha).

Ge and Klein also take the *ca* in 4d as subordinating d to c (cf. Klein “through which ... thou dost avoid straitened circumstances, when ... though dost deal out the gifts of the lord”). I do not understand the need for this. Since pāda c is a rel. cl. beg. with *yáyā*, there is no reason that d cannot still be in the domain of that relative, accounting for the accented verb *dāyase*, and the action of d does not seem logically subordinate to that in c. I therefore take *ca* here as conjoining parallel subordinate clauses.

In fact, d is a better candidate for rel. cl. with *yáyā* than c is: assuming that *yáyā* refers to the *dākṣiṇā* of pāda a, it easily makes sense with d: “with which (priestly gift) you distributed ...,” but rather less sense with c. Why should the *dākṣiṇā* enable Indra to

avoid *ámhas-*? In fact, I wonder if, at least in c, the passage has been adapted from an expression with a different feminine referent. Perhaps a passage like II.34.15a *yáyā radhrám pārāyathāti ámhah* “with which you carry the feeble one across difficult straits” (with both *yáyā* and *ámhah*, polarized as here), where the referent of *yáyā* is *ūtīh* ‘help’ (15c).

The last item on which I disagree with Ge (/Klein) is the function/identity of *sūrīn*. Flg. Ludwig, they take this as standing for the gen. pl. (hence, “the bounties of our patrons”). But there is no need for this, as Old also points out, since the apparent acc. pl. can be syntactically accommodated -- either as a parallel to *maghā* (“apportion bounties [and] patrons”) or, as both Old and I prefer, in a double acc. construction with *dāyase ví*: “apportion bounties (to) patrons.” The point of the latter is that the patrons are the middlemen between the gods and the priest/poets: Indra gives the *sūrī-* riches and they redistribute them to the ritual workers. It would seem odd indeed to have Indra distributing riches that *already* belonged to the patrons, as the genitive would imply.

VI.37.5: As the last pāda of this vs. shows, Indra is the ultimate super-patron.

VI.38 Indra

The publ. intro. states that reference is unclear in the hymn “until the last pāda of vs. 2”; this is somewhat misleading, in that a form of *indra-* is found in the *second* pāda of vs. 2 -- though the identity of the other referent there remains cloudy.

VI.38.1: The unclear reference just noted is found in the first word of the hymn, 3rd sg. aor. *ápāt* ‘he has drunk’, whose subject is not expressed. On the one hand, this is an Indra hymn and Indra is the prototypical drinker of soma (cf., e.g., the opening of nearby VI.40.1 *indra piba*, as well as *ápāh* in the 1st vs. of the next hymn, nearly identical to our verb and with Indra clearly meant as subj.), so we might expect Indra as subject. On the other, the most likely referent of the almost immediately following nominative *citrátamah*, who bears the invocation upward, is Agni, and as the mouth of the gods, he can also be considered to drink (though not usually soma). Parsimony might suggest that the two unidentified subjects in the first hemistich are identical, hence Agni. In the publ. tr. I supply Agni, with ?, but I am not at all certain that the first subject isn’t Indra. Or, more likely, that the poet meant to leave it open.

The subject of cd is also left unspecified; again I assume Agni: if he is embarking upward in ab, then the journey (*yāman*) in c is most likely his, though Ge supplies Indra. The only nominative attribute, *sudānuh*, is no help, as it is used of Agni and Indra about equally. What I take from the uncertainties of reference in this vs. is that the poet wants to keep us guessing.

The pāda-final splv. *citrátamah* produces a bad Triṣṭubh cadence. There is no obvious way to fix it, and the other 5 instances of this stem are found elsewhere in the line, where they work metrically.

VI.38.1–2: As noted in the publ. intro., I think vs. 2 functions as complementary to 1: in the first vs. the *indra-hūti-* is conveyed *up* to Indra (presumably in heaven); in 2 he -- and his ears -- are brought *down here* to the *devá-hūti-* performed at the sacrifice.

VI.38.2: In b *ghóṣāt* is morphologically ambiguous: it can be a subjunctive to the them. pres. *ghóṣa-* (accented because first in its pāda) or the abl. to the them. noun *ghóṣa-* (so Gr). For possible interpr. involving this abl., see Old. By contrast I follow Ge (and Lub) in taking it as a verb form, parallel to *tanyati* later in the pāda. The major problem this interpr. poses is how to construe gen. *índrasya*. Under the abl. interpr. of *ghóṣāt*, the gen. is dependent on that noun, but without that support it must find another role in the following clause (to which it must belong, because *tanyati* is unaccented and cannot start a new clause). With Ge (n. 2b) I take it as loosely construed with *bruvāṇāḥ*, though in a different sense from Ge's "der sich zu Indra Bekennende" -- rather as the topic of the speech.

As for the subject of *ghóṣāt* and *tanyati*, I think it anticipates the *deváhūti-* of c. This of course creates a problem of its own, in that *bruvāṇāḥ* should be fem. if *deváhūti-* is the referent. But given the poet's general evasiveness about referents, I think in b we're dealing with an as-yet-unidentified verbal product, which is then specified as *deváhūti-* (the same *índra-hūti-* of 1b) in c.

VI.38.2–4: After the absence of overt referents in vs. 1, starting with 2b we have a form of *índra-* in every hemistich through vs. 4 (2b *índrasya*, 2d *índram*, 3b *índram*, 3d *índre*, 4a *índram*, 4d *índram*). His name is again absent in the final vs. of the hymn, vs. 5, suggesting that this pattern is deliberate and a species of ring composition, marked by absence not presence. The next hymn (VI.39) also shows this structure, with the three middle verses (2–4) united by the shared initial deictic *ayám* and the first and last (1, 5) standing out against this pattern.

VI.38.3: As usual, the enclitic *vah* 'for you' refers to the priestly colleagues of the poet on whose behalf he acts; as is also usual, the Engl. tr. has to be heavier and more prominent than the recessive 2nd position accentless *vah*.

The second hemistich contains, in my view, a double *ca* construction conjoining two clauses, in which the first verb, *dadhiré*, is accented (and the 2nd, *vardhat*, is not). Klein (DGRV I.176–77) notes that the whole could be interpr. "as a sentential X *ca* Y *ca* construction" (as I do), but favors separating the functions of the two *ca*-s, taking the first *ca* as conjoining the two nouns in the sequence *bráhmā ca gírah*, while he allows (DGRV I.226–27) that the 2nd *ca* is a clausal conjunction. This seems like a desperate makeshift to avoid the (to me, at least) obvious connection between the two *ca*-s— esp. as it requires that in *bráhmā ca gírah* the usual X Y *ca* construction be replaced by the much less usual inversion, Y *ca* X (or in Klein's parlance, X *ca* Y: DGRV I.169ff.). (According to Klein [DGRV I.51 and 169], there are 464 occurrences of X Y *ca* and 45 of X *ca* Y -- a factor of 10.) In my opinion, the accented *dadhiré* is an example of the usual type of contrastive verb accent, and the *ca* ... *ca* construction is a hyped version of "both ... and," viz., "not only ... but also."

In d *ádhi vardhat* is syntactically somewhat problematic. It lacks an overt acc. obj., even though active forms of *várdha-* (and other stems to this root) are overwhelmingly transitive -- a value reinforced by no less than 4 pāda-initial occurrences of transitive active *várdha-* in the very next vs. (4a + b *várdhāt*, 4c *várdha*, 4d *várdhān*), all with Indra as explicit or implied object! It is inconceivable to me that Indra is not meant as the object in 3d as well, despite locative *índre* in this pāda, but I seem to be

alone it that view. Note Ge's intransitive "... möge an Indra stark werden," fld. by Klein (177) "will find strength in Indra." Gotō (1st Klasse, 291) sees the problem, but suggests that "we" are the gapped object: "...macht [uns?] bei Indra stark." In my opinion, the aberrant loc. is conditioned by *ádhi*, which when independent often takes a loc. (see Gr, s.v. *ádhi*, p. 45, nos. 13–17). *ádhi* √ *vṛdh* is found only here, and once in the middle (IX.75.1), in all of Skt. acdg. to MonWms. My "puts strength in Indra" reflects the transitive periphrasis I see in this lexeme. The syntactically clearer forms of act. *várdha-* in the next vs. can be viewed as a type of poetic repair.

VI.38.4: The singular number of both forms of *várdhāt* (a, b) is worthy of a small note. The subject of the first is the conjoined NP *yajñá utá sómaḥ*, with 2 singular nouns. As often, the verb agrees with one of them (presumably the nearer one), rather than being in the dual, as would also be possible. In b the subject is the even more complex NP *bráhma gíra ukthá ca mánma*, of which the two middle terms are clearly plural (fem. and neut. respectively), while the two neut. *-n*-stems that bookend the phrase, *bráhma* and *mánma*, could be either sg. or pl. Flg. Ge (sim. Klein DGRV I.198–99), I take the first as sg. and the last as pl., again assuming that the verb agrees with the nearer term, namely *bráhma*. But it is possible that *bráhma* is actually pl. and that this is an ex. of the famous but fairly rare construction of a sg. verb with a neut. pl. subj. Although there is no way to tell, I'm tempted to alter the tr. to pl.: "... the sacred formulations will strengthen," given the undoubted pl. of the two middle terms and the possible pl. of the last one.

yáman reprises the same word in 1c, though they have somewhat different meanings.

Although nom. pl. *dyávaḥ* ordinarily refers to 'heavens', in this case the context clearly establishes the meaning 'days'.

VI.38.5: The half-verse boundary has to be breeched in tr. to avoid awkwardness.

After the spate of act. transitive forms of √ *vṛdh* in vs. 4 (and 3d), the middle pf. part. *vāvṛdhānám* provides a contrastive intransitive/passive, agreeing with Indra, the object of the transitive forms.

Contra Ge, I take *ásāmi* with *vāvṛdhānám* despite the pāda boundary, on the basis of VI.19.2 *yó vāvṛdhé ásāmi* in this same Indra cycle.

On the *ca* in b, see Klein, DGRV I.54–55.

VI.39 Indra

The whole hymn is tr. and disc. by Schmidt (B+I 149–51).

VI.39.1: As noted in the publ. intro., the NP in the gen. that occupies the first hemistich (and part of pāda c) remains unresolved until the governing verb, *ápāḥ* 'you have drunk', which opens the second hemistich. The referent of this phrase -- namely soma -- also remains unresolved until the very end of pāda b, with the tip-off *mádhvaḥ* 'of the honey'. (Though initial *mandráśya* 'gladdening' might appear to point to soma, in fact it's far more often used of Agni.)

VI.39.2–4: As noted in the publ. intro. (and see comm. ad VI.38.2–4 above), the three middle verses are marked by repeated use of the near deictic in pāda-initial position,

beginning every hemistich but 2cd and coming to a crescendo in vs. 4 with three iterations: *ayám* 2a, *ayám* 3a, *ímám* 3c, *ayám* 4a, b, c. The unidentified referent of all these deictic forms is soma — see Old’s disc. — but soma at least partially identified with Indra, as the opener of the Vala cave. The repeated use of the deitic, pointing to something in the immediate vicinity of the speaker, focuses on soma as the ritual substance on the sacrificial ground.

The three vss. also share an etymological figure type, with transitive (/causative) verb taking a negated object to the same root: 2c *rujád árugṇam*, 3a *dyotayad adyútaḥ*, 4a *rocayad arúcaḥ*. And the presence of the preverb *vī* in pāda-interior in each vs. (2c, 3a, 4b) is another shared feature.

On vss. 3–4 see Hoffmann, Injunk. 142–43.

VI.39.2: The first pāda is truncated, though the frequency of the Vala theme and the stereotyped phraseology associated with it easily allow the missing parts to be supplied. With *páry ádrim usráḥ* we can add the part. *sántam*, as in IV.1.15 *gāḥ ... pári śántam ádrim* “... the rock surrounding the cows” (cf. VI.17.5). As for the verb, \sqrt{ruj} is the (or a) standard root for this mythological action (cf. nearby VI.32.2 *rujád ádrim*), and *ruját* opening pāda c can serve in the first hemistich as well. (Scar [425] unaccountably supplies “ging” instead.)

The second pāda contains an elementary etymological figure, with the root noun cmpd *ṛtayúḥ*- flanked by its component parts: *ṛtá(-dhītibhir) ṛtayúḥ yujānāḥ*. The publ. tr. renders the first cmpd. as “by those of true insight,” implying that *ṛtá-* is adjectival, and the second as “the one whose yoke is truth,” implying that it is a bahuvrīhi. I would alter this tr. to “the one yoked with truth, having been yoked by those whose insights are truth (that is, the priest/poets).”

The third pāda also contains a simple etymological figure: *rujád árugṇam* “he breaks the unbreakable.”

In d Ge, Schmidt (149), and Scar (425) all take *yodhat* as a preterite (e.g., Ge ‘bekämpfte’), but I don’t see how it can be anything but a root aor. subjunctive (so explicitly Macd. VGS, 410). If this analysis is correct, it makes it likely that the injunc. *ruját* in c also falls in the present/future (or perhaps, in Hoffmann’s terms, *zeitlos*) realm. Note that Hoffmann (Injunk. 142–43) so interprets the following two vss. (3–4), which, as we’ve seen, pattern closely with vs. 2. Nonetheless the three scholars just mentioned take all of vs. 2 as preterital, whereas I consider this to be an instance of the reconfiguring of mythological deeds as actions we hope to be repeated in the current time.

Old wants to emend *índraḥ* in d to voc. *índra*, to allow soma to be the subject of *yodhat* as it is of the rest of the vs., and he points to this same voc. *índra* at the end of the next hemistich (3b). However, it is hard to see why the first of two identical forms would be redactionally altered to be *different* from the second, and the shifting conceptual boundary between soma and Indra as agents in this sequence makes the transmitted text unproblematic, as Old also admits.

VI.39.3: The identity of *ayám* as soma is fixed by *índuh* ‘drop’ towards the end of b, but not until fairly late in this sequence. The play of *índu-* and *índra-* so prominent in Maṇḍala IX is found here in their adjacency at the end of the hemistich.

VI.39.4: Whether the referent of the ‘unshining’ (*arúcaḥ*) is the same as that of the ‘unlit’ (*adyútaḥ*) of 3a, namely the nights (*aktūn* 3a), is unclear. Hoffmann suggests so, with ?, and I see nothing against it. Both *adyút-* and *arúc-* are hapaxes in the RV, so we can’t bring to bear other usages of these words.

Ge (explicitly n. 2b) considers *ṛtayúj-* here as having a different sense from the same cmpd. in vs. 2: “mit dem Recht im Bunde” (2b) versus “mit den rechtzeitig geschirrten Rossen” (4c). Even if *ṛtá-* ever had the sense ‘timely, punctual’ (which it does not), it is inconceivable to me that in a hymn of this length, the poet would use the same cmpd. in two very different senses, within two vss. of each other and marking the boundaries of an omphalos. Schmidt (149) also considers this unlikely, though he attributes the contrary view to Lüders, who, as far as I can see, doesn’t hold it or at least explicitly state it; Scar (425) temporizes in his disc., though he tr. the other three instances of *ṛtayúj-* (incl. our vs. 4), all modifying ‘horses’, with the anodyne ‘wohlgeschirrten’, as opposed to our vs. 2, which he renders ‘der Verbündete des R̥ta’ -- in other words, implicitly following Ge’s differentiation. I would alter the publ. tr. from “whose yoke is truth” to “yoked with truth,” as in vs. 2.

VI.39.5: Note that there are some echoes of vs. 1 in this final vs. The singer in the dative *gṛmaté* is found in both vss., immediately after the caesura (1d, 5a); *īṣaḥ* ‘refreshments’ opens the pāda in 1d and 5b; and there is a teasing reflection of pāda-initial *ápā(h)* (1c ‘you have drunk’) in pāda-initial *apá(h)* (5c ‘waters’).

VI.40 Indra

VI.40.1: I take *gaṇé* as referring to the troop of Maruts, as often, not an unidentified set of mortals making up a “(Sänger)schar,” as Ge seems to take it. Assuming that it refers to the Maruts, this provides conceptual ring composition with the final word of the hymn, *marúdbhiḥ*, as noted in the publ. intro.

VI.40.2: In the 2nd hemistich the series of subjects -- the cows, the men, the waters, and the stone -- detail the various elements, both animate and not, that collaborate to produce the soma: the cows as the milk to be mixed in, the men who perform the pressing and the other ritual actions, the waters that both swell the soma stalk and are mixed with the pressed juices, and the stone used to press the stalks.

As Ge notes (n. 2cd) the final *asmai* has two possible readings: it can double *te* in c, “for you ... for that one [=you] to drink,” or it can refer to soma, appearing earlier in the clause in the acc. phrase *tām ... índum* “this drop.” I favor the latter, with dat. *asmai* attracted into the dat. as complement of the dat. infin. *pītáye* (as subj., as in the publ. tr. “for it to be fully drunk,” or as obj. with *te* as subj. “for you to drink it fully”). Because the infinitive phrase *pītáye sām asmai* is separated from the rest of the clause and repeats the preverb/adverb *sām*, I favor the former. The use of the near-deictic *asmai* for soma, even unaccented, recalls the insistent *ayám* for soma in the preceding hymn (vss. 2–4; see comm. ad loc.), and it also forms a little ring in this vs., with init. *ásya* (2a) having the same referent as *asmai* at the end of 2d.

VI.40.3: In sandhi the phrase *sutá indra sóma ā* is completely ambiguous between nom. *sutáh ... sómah* and loc. *suté ... sóme*. The publ. tr. interprets it as the former, while the Pp. reads the latter. Although nothing rides on it, I would now be inclined to follow the Pp., with two parallel loc. absolutes: “with the fire kindled (and) the soma pressed, let your fallow bays ...”

VI.40.4: As noted in the publ. intro., *váyo dhāt* here echoes almost the same phrase in 1d *váyo dhāh* (both also introduced by pāda-init. *āthā*), but with reciprocal switch of subject and beneficiary: Indra creates vitality for the sacrifice in 1d; the sacrifice does the same for Indra in 4d.

VI.40.5: The disjunctive construction marked by two occurrences of *vā* ‘or’ describing the possible places where Indra might be contains three non-parallel terms: an adv. *īdhak*, a loc. NP *své sādane*, and a dep. clause with locative subordinator *yātra ... āsi*. It is also a nice instance of Behaghel’s Law.

A verb of motion has to be supplied in c, but this is amply anticipated by *ā yāhi* in 3d and 4a. Assuming this impv. should be supplied in c, it rhymes with *pāhi* in d.

VI.41 Indra

VI.41.2: I take *vāriṣṭhā* as a likely pun, not only ‘widest’ (hence a throat that can accommodate a lot of soma at one gulp), but also ‘best’; cf. disc. ad VI.37.4.

For *prā √sthā* with soma as expressed or implied obj., cf. I.15.9, VII.92.2, and, with *prāsthitam*, II.36.4, 37.2.

I do not know the exact semantic nuance of *sām √vṛt*, but I think it must mean something more than Ge’s “mitkommen.” I take it here as purposive ‘turn oneself to’, with *gavyūḥ* expressing the purpose, but this may be pushing the idiom.

VI.41.3: Note that the equational sentence ending d, *yās te ānnam*, does not show gender attraction between subj. and pred., as in later Vedic prose, although this phenomenon is found elsewhere in the RV. See, e.g., X.10.4, 11.8 and comm. thereon.

VI.42 Indra

An unsistent play on preverbs structures this hymn. *prāti* appears with 3 different verbs in the 1st 3 vss.: *prāti ... bhara* 1ab, *pratyétana* 2a, *prati bhūṣatha* 3b, while in the last vs. the *prāti ... bhara* of vs. 1 is replaced by the more usual presentation verb *prā bhara* (4b).

VI.42.2: As sometimes elsewhere (I.9.2, VIII.1.17, X.32.8), *enam* doubles *īm* in the phrase *ém* (that is, *ā + īm*) *enam*, a pile-up of two acc. enclitics, whose referent is postponed till the end of the hemistich, *somapātāmam*. On this sequence see my RVic *sīm* and *īm* (2002), 302–3 and n. 18.

There is no obvious reason for the accent on *pratyétana* (Pp. *praty étana*). (Old’s [ZDMG 60: 732] ref. is barely a mention and provides no real explanation.) The assumption about *étana* is that it is a 2nd pl. impv. of the root pres. of *√i*, with unexpected full grade of the root, unexpected verb accent in a main clause, and unexpected root

rather than ending accent (versus *itá*, though of course the full grade would account for the root accent). I think rather that it should be analyzed *ā-itana*, with accented preverb contracted with the unaccented expected zero-grade root syllable of the verb. We would thus have an unaccented verb as expected in this apparent main clause. But this suggestion raises two problems: 1) when two preverbs precede an unaccented verb, they should both be accented (though most the exx. I have identified have verbal material between the 1st and 2nd preverbs), e.g., IV.4.4 *prāty ā tanuṣva*, and we should therefore expect accented **prāty* here as well; 2) *ā* is already present pāda-initially in *ém*. Balanced against these problems is the fact that *ā* is usually the 2nd preverb in a complex (see *prāty-ā √ tan* just cited), and the assumed *ā*(...) *prāti* would be quite unusual (almost no such sequences registered in MonWms). I think we must assume that, more or less simultaneously, *ā* was doubled to serve as clitic host to *īm* in the frozen sequence *ém enam*, besides immediately preceding the verb, and that *étana* was reinterpr. as simply a full-grade accented impv. (cf. unaccented *etana* in V.61.4, on which see comm. ad loc.), not as containing a preverb — which reinterpretation then induced loss of accent on **prāti*. The doubling of *ā* is somewhat like the doubling of preverbs sometimes found in the Gāthās, though there that seems to be a redactional change.

VI.42.3: I take *yádī* as representing *yád ī* with the enclitic acc. *ī*, parallel to *īm* in the last vs. Note that *ī* here is pre-C, while *īm* in 2a is pre-V.

As Ge notes (n. 3cd) there is some uncertainty about the subj. and goal of the verbs here -- Indra or Soma. I take the subject in both cases to be Indra. In c *védā víśvasya* “he knows of it all” echoes 1b *víśvāni vidúṣe* “to the one who knows all things,” an unequivocal ref. to Indra. I think there is a contrast between c and d of a familiar type: Indra *could* go to any soma ritual (“knows of it all”) but comes just to our soma (*tām-tam íd*).

VI.42.4: The āmreḍita pronoun *tām-tam íd* referring to soma in 3d is then contrasted with another pronominal āmreḍita, *asmā-asmā íd*, referring to Indra; the near deictic announces him as having arrived at the ritual ground, to which he was hastening in 3d.

On the surprising last hemistich, see publ. intro.

VI.43 Indra

VI.43.2: As Ge points out, this must be a ref. to the three soma-pressings: the “middle and end” are respectively the Midday Pressing and the Third Pressing; the “sharp-pressed” refers to the freshly pressed soma of the Morning Pressing, which must be especially pungent.

VI.43.4: The HvN ed. unaccountably omits this vs.

VI.44 Indra

VI.44.1–3: In the refrain of pādas cd, the position of *sá* and of the unaccented elements *indra te* strongly suggests that the clause begins in the middle of c -- or rather that *sómaḥ sutáḥ* has been extracausally topicalized. Although in vss. 1–2 this nom. phrase could

belong to the rel. clause of ab, that prospect is foreclosed in vs. 3, because soma is represented in the rel. cl. of 3ab by the instr. *yéna*.

I do not understand why this refrain contains an overt form of the copula *ásti*. Outside of dependent clauses, overt *asti* is generally an existential, but that function is highly unlikely here.

In addition to the refrain that unifies all three vss. of this *ṛca*, the three vss. are structured by rel. clauses in ab with soma as the referent of the rel. prn.

VI.44.3: This vs. subtly undermines the autonomous power of Indra. In the refrain of all three vss. Indra is addressed as *svadhāpate* ‘lord of independent power’, but here in the first hemistich Indra is said to be *like* (*ná*) “one grown strong by (his own) power,” *like* “one overpowering by *his own* forms of help” (*svābhīr ūtibhīh*). In other words the power that appears to be Indra’s own (*svá-*) is really produced for him by soma.

VI.44.4–6: Although this *ṛca* does not have glaring signs of unity, it particularly concerns the songs that strengthen Indra and rouse his aid to us. It also has a subtle morphological ring; see the disc. of the loc. inf. in 3d.

VI.44.4: On *āprahan-* (or, less likely, *āprahana-*), see Old, Scar (689). Scar construes *vaḥ* with this form (“der nicht auf euch einschlägt”) as well as with *gr̥ṇīṣé* (“... will ich für euch preisen”). I take *vaḥ* only with *gr̥ṇīṣé* and supply ‘us’ with the root noun cmpd.; Ge likewise takes *vaḥ* with the verb and supplies “keiner” as obj. of the cmpd. There is no way to choose and no reason to do so, since all three are more or less equivalent: Indra is all powerful but does not threaten the community to which the poet belongs.

VI.44.5: The *íd* in pāda a seems displaced: we would expect *yám íd ...*, though that order would produce a choppy meter. The *íd* in c is better positioned, though we actually might expect it to be limiting *asya*, not the *tám* anticipating *śúsman*. The publ. tr. does not render either *íd*; if I were to do so, the result would be “(It’s) just (him) whom the songs make strong ... just his tempestuous force that the world-halves respect.”

VI.44.6: This vs. is syntactically more complex and ritually more technical than the other two vss. in this *ṛca*.

The most noteworthy form is the loc. inf. *upastr̥ṇīṣáni*, a hapax, not surprisingly. In my opinion it is possible to account for the creation of this form from context, albeit indirectly. The first vs. of this *ṛca* contains the well-attested 1st sg. *gr̥ṇīṣé* (4b), belonging to the tight class of *-sé* 1st sgs. in the ‘praise/sing’ semantic sphere. Beside *gr̥ṇīṣé* there exists a *-śáni* infinitive *gr̥ṇīṣáni* (2x, incl. once in this maṇḍala, VI.15.6). I think our poet built *upastr̥ṇīṣáni* on the model of this *gr̥ṇīṣáni*, as a partial echo of *gr̥ṇīṣé* in 4b, based on the existence of 9th class presents to both of these roots. Because it echoes that 1st sg. I interpr. the predicated inf. with 1st ps. ref. (“it [is mine] to lay ...”). Once again, as in 4, the *vaḥ* refers to the poet’s fellow officiants.

In the ritual the ‘underlayer’ is the layer of butter spread on the ladle underneath the principal offering. Here it is used in a doubly metaphorical sense: the underlayer for Indra could presumably be configured physically as the barhis on which he would sit, but

at another metaphorical remove it could refer to the recitations that provide him with a figurative foundation.

The poet then, by a clever trick, mobilizes this underlayer of words to serve as a metaphor for the multiplication of Indra's forms of help for us. This is accomplished by means of a simile: *vípo ná ... ūtáyah* "forms of help like inspired words," thus implicitly equating the two. These *vípah* 'inspired words' (not, with Ge, 'fingers') are ours, in fact the very *ukthá-* found in pāda a, dependent on *barhāṇā*. The connection between the two is suggested by the phrase *barhāṇā vipāḥ* "by the power of inspired speech" in VIII.63.7 (*vipāḥ* there is gen. sg., as opposed to our nom. pl. *vípah*, as the accent shows). In cd the poet asserts that like our hymns, which rise to Indra, spreading from their position as interconnected (*sakṣītaḥ* 'dwelling together') underlayer, his forms of help will similarly grow up and out. On this vs. see also Scar (97).

VI.44.7–9: On the meter of this ṛca see Old, Proleg. 91 and HvN metrical comm. The fading in and out between Virāj and Triṣṭubh is further complicated by the openings of 3 in 11-syllable lines in 7b, c.

The ṛca concerns soma and contains lexical and thematic respensions.

VI.44.7: The medial pf. part. *papānā-* is one of only 3 forms of the middle pf. in the RV, 2 of which, incl. this one, are used passively. See Kü (309). Note that a deriv. of the other root $\sqrt{pā}$ 'protect', *pāyúḥ*, is found in the 2nd hemistich.

The vs. is notable for a number of hapaxes: *acait*, *staulā-*, and *dhautārī-*, the latter two also marked by vṛddhi.

On *acait* as a nonce *s*-aor. to \sqrt{cit} 'perceive', see Narten (114).

staulā- here is reminiscent of the likewise impenetrable *staunā-* in this same maṇḍala VI.66.5. No remotely credible guesses have been proposed for these forms, or for *dhautārī-*; Ge (n. 7c): "ganz dunkel" and he fails to tr. the NP; Old: "Über *staulābhir dhautārībhiḥ* scheint kein Ergebnis erreichbar"; EWA (II.762 and I.783) also throws up its hands. I am inclined to connect *staulā-* and *staunā-* with similar words but with aspirated initial *sth-*, namely *sthūrā-* 'brawny, sturdy' and *sthūṇā-* 'post' (see comm. ad VI.66.5) respectively, but I cannot explain the phonological discrepancy.

As for *dhautārī-*, Old tentatively suggests that it might belong with one of the roots $\sqrt{dhāv}$ 'run' or 'rinse'. For translational convenience I have assumed the former, but without any conviction. In any case the striking double vṛddhi *-au-* of these paired nominals must be meant to draw attention to the phrase.

VI.44.8: The passive interpr. of the pf. part. *papānā-* in 7b is affirmed by the pass. aor. *apāyī* in 8a.

Similarly, the second pāda clarifies the sense of 7b, where it was said that soma "has perceived what is better for the gods." What is better seems to be the gods' intent, announced here in 8b, to achieve glory. The VP *mānas* $\sqrt{kṛ}$ generally means 'set one's mind on/to'; cf. V.61.7, I.54.9, II.26.2=VIII.19.20 (though V.30.4 and X.117.2 are outliers).

The forms grouped by Gr under a stem *mahás-*, an adj. meaning 'gross', generally have other interpr., either adverbial or belonging to a diff. stem (e.g., gen. sg. to *māh-*). Although a suffix-accented adj. *mahás-* built by accent shift to neut. *máhas-* 'greatness'

would fit the standard pattern (type *yásas*- ‘glory’ → *yaśás*- ‘glorious’), the realization of the pattern in this lexical item seems to have been rare to non-existent. In this passage most (Gr, Ge) do take *maháh* as a neut. adj. to this stem, modifying *nāma* (“acquiring a great name”), but because of the general avoidance of such an adj. I prefer to take *maháh* as the masc. nom. sg. to *mahá-*, a quotation of the name he received.

In keeping with the interpr. of the root \sqrt{ven} as ‘track, trace, seek’, I interpr. its grdv. *venyá-*, when not a PN, as ‘(worthy) to be tracked/sought’.

VI.44.9: This *ṛca*-final vs. reprises and repurposes some of the statements in the opening vs. 7. The skill (*dākṣa-*) that Soma found in 7a we ask him to bestow on us in 9a. Soma, “having won” (*sasavān*) in 7c, is asked to help us in winning (*sātaú ... avidḍhi*) in 9d. Unfortunately nothing in 9 sheds light on the problematic instr. phrase in 7c.

VI.44.10-12: This *ṛca* foresees various disasters and tribulations and asks Indra for his help in combatting them.

VI.44.10: I am not sure of the exact nuance of $\sqrt{bhū}$ + DAT. Gr takes it as meaning ‘angehören, eigen sein’, with a rare dat. here, instead of the gen. usual in this idiom (his no. 13). Ge renders it thus (“dir ... haben wir uns zu eigen gegeben”). Even with the gen., Gr identifies very few passage with this value, and most of these should be otherwise interpr., and I also wonder about an augmented aor. in such a sense. The publ. tr. is by contrast “we have become ready for you,” and I think something like this is the intention (perhaps “we are here for you”). We are awaiting his advent at the ritual and the generosity he will display there, but there is some worry that he will fail to show up, as the 2nd clause of the 1st hemistich shows.

Note that the fairly rare root \sqrt{ven} appears here soon after the appearance of its deriv. *venyá-* in 8d. It is possible that this lexical association led to the grafting of this *ṛca* onto the previous one in this loose collection of short hymns.

VI.44.11: On *niṣṣīdh-* see comm. ad III.51.5.

VI.44.12: The morphological identity and syntactic function of *maghónaḥ* in d are unclear. See esp. Old’s disc. It can be either acc. pl. or gen.-abl. sg. (or an irregular nom. pl., a possibility that Old considers and dismisses). The problem is that in neither case would it form part of a standard construction with the verb $\tilde{a}\sqrt{dabh}$. Ge (n. 12d) thinks of a double acc.: “trick (our) benefactors out of you” -- that is, the non-giving ones might scare Indra off from our sacrifice or get their invitation to him first, thereby depriving our maghavans of Indra’s presence. This certainly conforms to a regular worry that sacrificers express, but the construction is unprecedented. Old opts for the abl. sg. The purport of his interpr. is essentially the same as Ge’s: that the non-givers not trick Indra away from (abl.) the maghavan, which he sees as our human patron. The publ. tr. follows Old, though it might be clearer if it were “... not trick you away from (our) benefactor.” Although this construction is also unprecedented, adding an oblique complement to a transitive construction seems less radical to me than investing it with a second acc. However, I now see another problem with the Old solution: the *ṛca* opens with a voc. *maghavan* addressed to Indra (10a), so it might be odd to have another sg. form of this

stem referring to a human. And I don't see how to construe an abl. *maghónaḥ* referring to Indra in the same construction that contains an acc. *tvā* with the same reference. Nevertheless, I still favor Old's interpr. and simply allow for this shift of reference; such a shift from divine to human is also necessary if the form is taken as plural, with Ge. There is another possibility, raised and dismissed by Old, that *maghónaḥ* is in fact acc. pl., but the two acc. are conjoined: "mögen nicht die Nichtgeber dich betrügen (und) die Spender." This is not outside the realm of possibility.

VI.44.13–15: Another soma *ṛca*.

VI.44.13: The first hemistich contains disharmony of number in a constructio ad sensum: The priest is urged to offer of the pressed (soma-drink)s in the plural (*sutānām*); the reason for this is immediately given in the 2nd part of pāda b, *sá hy āsya rājā* "for he is its king." Unaccented singular *asya* presupposes a referent already in the discourse, with "it" referring to soma, represented in the previous clause as a plural. The singular is then continued in the rest of the *ṛca* (*asyā* 14a, *tām ... sómam* 14cd, *sutām ... sómam* 15a, with sg. *sutām* picking up pl. *sutānām* of 13a).

VI.44.14: As Ge point out (n. 14a), the "many shapes" (*purú várpāṃsi*) that Indra knows could either be his own (given his penchant for shape-shifting) or those of the various demonic enemies he destroys. I assume that the poet meant to leave it ambiguous, though it's worth noting that the one instance of the bahuvrīhi *puru-várpas-* refers to Indra (though in the late hymn X.120.6).

The hapax *-sí* impv. *hoṣi* has no structural support in the RV, the only aor. attested being the pass. aor. *áhāvi*. However, an act. *s*-aor. is reasonably well attested in Vedic prose, beginning with the BYV Samhitās (*ahauṣīt*, etc.); see Narten (Sig.Aor. 288). It is difficult to know whether *yoṣi* is indirect evidence for a *s*-aor. subjunctive to this aor., **hoṣat*, etc., to which *hoṣi* would ultimately belong, or whether it was created as a nonce beside the other *-sí* impvs. in this ritual sphere such as *yákṣi*, *mátsi* and has nothing to do with the aor. forms in prose. I weakly favor the latter explanation.

VI.44.15: The vs. is characterized by three root-accented agent nouns (*pātā* a, *hántā* b, *gántā* c), all pāda-initial, all with acc. obj./goal. Then in d the pattern is switched: a suffix-accented agent noun (*avítā*), interior in its pāda (immed. after caesura) with (objective) gen. complement. All of them are presumably predicates of *astu* in pāda a. I consider this simply an instance of the RVic tendency to shake up established patterns; I doubt that the poet is attempting to draw a distinction between Indra's habitual roles as drinker, smiter, and goer, in contrast to a situational role as helper, as Tichy claims (*Die Nomen agentis auf-tar- im Vedischen*, 298–99; cf. 257 and passim). Among other things, "help" is one of the most frequent things we ask Indra to do for us; it is surely one of his standard, habitual roles. It happens that there is no root-accented **ávitar-*, though *avítár-* is extremely common, and so no such form was available to match the first three *-tar-* stems in this vs. I do not know if the gap is accidental or systemic.

Note that *kārúdhāyas-*, a rare bv., reappears here from 12 -- again, a possible reason for attaching this *ṛca* to the preceding one.

VI.44.16–18: Here the power of soma to rouse Indra to beneficial action is the general subject of the *ṛca*. The three forms belonging to $\sqrt{pā}$ ‘drink’ in the 1st hemistich, *pātram* ‘drinking cup’, *indrapānam* ‘giving drink to Indra’, and *apāyi* ‘has been drunk’, in echoing the first word of the preceding vs. (15a *pātā* ‘drinker’), may have caused this *ṛca* to be grafted onto the last.

VI.44.16: Ge takes *indrasya* as agent of *apāyi* (“Indra hat seinen lieben Göttertrank getrunken”), but finite passives, even verbs of consumption, don’t take genitive agents.

VI.44.17–18: These two vss. contain two exx. of unexpectedly accented 2nd sg. impvs.: 17a *jahí* and 18d *kṛṇuhí*, both internal to the *pāda* and preceded by material belonging to the same clause. Old cites both (in a list of other puzzling passages; ZDMG 60: 736), but provides no real explanation. In both cases it is possible to construct ad hoc justifications. For the *jahí* of 17a, note that 17d also contains an accented form of this same impv. (though with metrically lengthened final) in the sequence *prā mṛṇā jahī ca*, where *jahī* contrasts with the immediately preceding impv. *prā mṛṇā* and has its accent honestly, as it were. It could be that *jahí* in *pāda* a received the accent redactionally or as a poetic imitation of the *jahī* later in the vs. As for *kṛṇuhí* in 18d, it might be taken as contrastive with the (rather distant) imperatively used injunctive *kaḥ* at the end of b to the same root; however, they are not used in the same idiom. It’s also worth noting that *kṛṇuhí* is followed by particles that ordinarily take 2nd position in a clause (*smā no*), and so *kṛṇuhí* by default appears to be in 1st position. And both 17a *jahí* and 18d *kṛṇuhí* are right after the caesura. But none of these explanations seems sufficient -- e.g., post-caesura position does not induce accent on verbs -- and I think we must consider these two exx. as peculiarities of the composer of this *ṛca*.

VI.44.17: The object phrase in the 1st hemistich provides an ex. of number disharmony (of a different type from that in vs. 13). The main objects of Indra’s smiting are “rivals (and) foes,” the pl. phrase *śátrūn ... amitrān*, but they are further specified as “kin and non-kin,” *jāmím ajāmím*, in the singular. The same disharmony is found in IV.4.5 *jāmím ajāmím ... śátrūn*, where the *śátrūn* that closes our *pāda* a substitutes for *amitrān*.

VI.44.18: For the idiom in *sūrīn kṛṇuhí ... ardhám*, cf. II.30.5 *asmān ardhám kṛṇutāt*.

VI.44.19–21: This *ṛca* has a more obvious unifying feature than the last several: the repeated ‘bull’ words, *vṛṣan-* and *vṛṣabhá-*. I count 16 exx. of the two stems in the three vss. The bull(ish) grammatical subjects of the three vss. are different: 19 Indra’s horses, 20 the soma drinks, 21 Indra himself. The *vṛṣan-* stem predominates; *vṛṣabhá-* only appears beginning in the last *pāda* of 20 (though prepared for by instr. pl. *vṛṣabhiḥ* in 20c). I do not see any appreciable difference in their usage; note the coreferential dative *vṛṣṇe ... vṛṣabhāya* in 20d and, even more striking, the use of the two stems in strictly parallel expressions in 21a and b: *vṛṣā ... divó vṛṣabhāḥ pṛthivyāḥ* “the bull of heaven, the bull of earth” and *vṛṣā síndhūnām vṛṣabhá stíyānām* “the bull of the rivers and the bull of the standing waters.” Nonetheless, Ge carefully distinguishes them, with Bull reserved for *vṛṣabhá-* and *vṛṣan-* rendered as Riese / riesig ‘giant’. But I very much doubt if the intent was “you are the giant of heaven, the bull of the earth,” etc.

The concentration on the bull words leaves little room or energy for other poetic flourishes.

VI.44.20: Although they belong to different, and distant, *ṛcas*, the partitive gen. construction here, ... *prá ... sūtānām*, DAT *bharanti* ..., matches that in vs. 13: ... *prá ... sūtānām*, DAT *bhara* ... and occupies the same position in the vs., though in our vs. \sqrt{bhr} also has a direct acc. object *sómam*.

VI.44.21: Given the parallelism of the phrase *vṛṣā síndhūnām vṛṣabhá stíyānām*, it is clear that the gen. pl. *stíyānām* must be in semantic complementarity with *síndhūnām* ‘of the rivers’. Almost the same pair is found in VII.5.2, with a substitution for the first nom.: *netā síndhūnām vṛṣabhá stíyānām*. Gr glosses *stíyā-* ‘Schneefeld, Gletscher’, but, given the relative lack of attention to snow and the like in the RV once the Indo-Aryans had left the high mountains mostly behind, some other type of water contrasting with rivers seems more likely -- with Ge’s “der stehenden Gewässer” a likely alternative (cf. also Lüders, Varuṇa I.144). Re’s “eaux-stagnantes” (EVP XIII.56 and 141), though expressing a similar contrast, is less appealing because of the negative implication of “stagnant waters”: would Indra really want to be their bull? The question then is what the form is derived from; EWA classifies it with the root $\sqrt{styā}$ ‘be stiff’, of limited attestation in Skt. but found also in MIA, which seems reasonable. However, I am tempted to see a primary or secondary association with $\sqrt{sthā}$ ‘stand’, since forms of this root (with the sense ‘stand still’) can be used of waters. Cf., e.g., the famous phrase describing the rushing of the waters freed by Indra in the Vṛtra battle in I.32.10 *átiṣṭhantīnām* “of those (waters) not standing still.” Re (EVP XIII.141) in a lapidary comment -- “fait comme *díya-*” -- seems to hint at a direct derivation (*díya-* to $\sqrt{dā}$, then *stíya-* to $\sqrt{sthā}$) without pursuing it, and Lub (*System*, 104) tentatively suggests that it belongs to an **-i*-enlarged form of $\sqrt{*steh_2}$, viz. **steh_2-i-*, but doesn’t further spell out the details. The trick of course is to keep the laryngeal from aspirating the *t*; if we start with Lub’s root, the zero-grade **steh_2-i-* would presumably metathesize to **stih_2* (as with $\sqrt{pā(y)}$ ‘drink’: *pītā-*), which would yield *stíy-* before a vowel. But I have no commitment to such an analysis. In any case it is impossible to tell whether the form belongs to a short or a long *a/ā* stem, since it only shows up in the gen. pl.

VI.44.22–24: As noted in the publ. intro., repetition also characterizes this *ṛca*: the *ayám* that opens every hemistich, along with two other *pādas* (23b, 24b). In all instances the referent is Soma, whose name, however, does not appear until the opening of the last *pāda*, 24d (though the reliable synonym *indu-* ‘drop’ is found in 22d). The beginning of the first vs., 22a, identifies the subject as a god (*ayám deváh*), and the *ṛca* attributes powerful agency to him, including deeds generally associated with Indra, such as the defeat of the Paṇi (22b), the placing of light in the sun (23b), and the propping apart of the two worlds (24a). It is only the specification of Indra (in an oblique case) as the “yokemate” of “this god” early in the *ṛca* (22b *índreṇa yujā*) that prevents the audience from assuming that *ayám deváh* refers to Indra (who is, after all, the dedicand of the hymn). Nonetheless, the virtual identification of Soma with Indra is clear.

VI.44.22: As just noted, *īnduh* ‘drop’ opening pāda b firmly identifies the subject as Soma, but the common word play between phonologically similar *īndu-* and *īndra-*, found esp. in Maṇḍala IX, underlines the permeable boundary just noted between Indra and Soma in this ṛca.

The brief narrative allusion in pāda c (“stole the weapons of his own father”) sounds like a fractured version of the just-born Indra stealing the soma from Tvaṣṭar, but it is hard to know how to square that tale with this formulation.

VI.44.23: As Ge points out (n. 23cd), in the 2nd hemistich Soma the god is differentiated from soma the drink, with the god finding the distant, hidden drink.

tritēṣu is the only pl. form to this stem in the RV, and it is not at all clear what it is doing here. Ge takes it as the PN Trita, with the pl. referring to Trita and his brothers, among whom Soma (the god) finds soma (the drink). But I know of no such narrative, and Ge does not cite one. I take the form instead as representing the older adj. ‘third’ (see EWA s.v.), the older correspondent of *trītya-* ‘third’ (which, of course, is also old, having Iranian cognates). As is well known, there are three heavens, and I take the “third realms of light” to be the third or highest heaven, here in the pl. because it is conceived of as further subdivided. For soma as resident in the third heaven, see K. Klaus, *Die altindische Kosmologie*, 175 with n. 66. It is possible (but only *possible*) that the vs. implicitly depicts the three heavens, with the dawns in the nearer one, the sun in the middle, and the soma in the third.

The drink is threefold presumably because of the three pressings of the soma sacrifice.

VI.44.24: (*vī*) *śkabhāyat* echoes *astabhāyat* in the first vs. of the ṛca (22b).

I will not speculate on the numerology in *saptāraśmi-* ‘having seven reins’ and *daśayantra-* ‘having ten fastenings’, whose referents may be ritual or cosmological, or (most likely) both.

VI.45 Indra

This hymn contains 5 instances of the phrase “the stake (that is) set,” *hitá- dhána-*: 3 acc. sg. *hitám dhánam* (2c, 12c, 15c), 2 loc. sg. (11b, 13b). All but one of these has the order just given, but one of the loc. exx. (13b) is found in the opposite order, as *dháne hité* as opposed to 11b *hité dháne*, which matches the order of the accusatives. A survey of the other examples of the phrase in the RV turns up one more ex. of the acc. *hitám dhánam* (VIII.80.8), but a number of further loc. exx., almost all of which have the flipped order found in 13b *dháne hité* (I.40.2=VI.61.5, I.116.15, I.132.5, VIII.3.9, IX.53.2) versus *hité dháne* (X.63.14). There is only one ex. of the phrase outside of the acc. sg. and loc. sg., namely *dháneṣu hitéṣu* (VIII.16.5). It thus appears that the acc. and loc. exx. have different underlying orders. Since the word order in this phrase, in both acc. and loc., is, at least to the naked eye, metrically indifferent (always ~ – ~ –), it is hard to see what is driving the variable order, esp. since almost all instantiations of this phrase are pāda-final (except for I.116.15 and 132.5). Within this very limited data set, it would be possible to assume that the variant order signals different syntactic intentions: “the set stake” (acc.) as opposed to the loc. absol. “when the stake (is/was) set,” with secondary predication. Dieter Gunkel (pers. comm.) tells me that he produced a similar

(independent) hypothesis when investigating “swappable bigrams” with Kevin Ryan (some of which results were presented in Vienna, June 24, 2015). However, given the vagaries of RVic word order, it is difficult to know if such a hypothesis would hold up across a large set of data. It would be useful to investigate word order in clear loc. absolutes.

VI.45.3: I have silently suppressed the plurals in *prāṇīṭayaḥ* and *ūtāyaḥ* (guidance and help, rather than guidances and helps). Given that *prāṇīṭayaḥ* reprises *ānayat ... sūnīti* in the 1st vs. of the ṛca, it might be better to translate it as “Great is his leading.”

The three *-ti*-stem abstracts *prāṇīti-*, *prāsasti-*, and *ūtī-* recall *sūnīti-* in 1b.

VI.45.4: As was implied in the publ. tr., there is more cohesion across ṛcas than within them. In this 1st vs. of the 2nd ṛca there are a number of connections to the previous one: the 1st word *sākhāyaḥ* recalls *sākhā* in 1c; in b the impv. *prā ... gāyata* “sing forth” is a variant of the nominal form *prāsasti-* (3b) to the lexeme *prā √ śams* ‘proclaim forth’; in c the nominal clause *sā hī naḥ X* resembles 1c ... *sā naḥ X*; c contains another *-ti*-stem abstract, *prāmati-*, like those in 3 (two of which are cmpd with *prā-*); and the final word of the vs., *mahī*, echoes the 1st word of 3 *mahīḥ*.

VI.45.5: The sequence *ékasya ... dvāyoḥ ... / utēdṛṣe yāthā vayām* “of one, of two and for such as we are” is a nice example of Behagel’s Law. It also shows variant syntax in a conjoined construction, since the third conjoined member is dative (*īdṛṣe*), while the first two are gen. (unless *dvāyoḥ* is loc., which seems unlikely). The result, at least in translation, is almost awkward, but the formal switch in case (and number) has semantic consequences, in my opinion. The sequence first presents itself as a purely numerical one (cf. Klein DGRV I.332–33), and we might expect “of one, of two, and *of however many we are.” But the sg. *īdṛṣe* changes the focus from the quantity of the beneficiaries to their quality (“such as we,” in implicit contrast to people outside our circle of lesser value), and the dative emphasizes the benefactive nature of Indra’s actions. Ge’s “auch für einen solchen, wie wir sind” misses the point, in my view.

VI.45.6: I supply ‘us’ as obj. in both a and b, adapted from 4c and esp. 5c; Ge supplies “Männer” (in b), presumably on the basis of *nṛbhiḥ* in c. Either will work, but ‘us’ seems to provide more continuity.

nāyasi in a connects across ṛcas with *ānayat* in 1a, and *ukthaśamsīnaḥ* in b with *prāsastayaḥ* in 3b. In 3b Indra is said to have many *prāsasti-*, and here the producers of these (*prā*)*śasti-* are identified (as us or, with Ge, men).

VI.45.7: More cross-ṛca connections: *bráhma-vāhas-* 7a/4a, *sákhi-* 7b/1c/4a.

VI.45.8: Ge takes *ūcuḥ* to *√ vac* and supplies *hitāni* with *nī*. “In dessen Händen ... alle Güter, wie man sagt, nieder(gelegt sind),” but Old’s view, that *ūcuḥ* belongs to *√ uc*, which regularly takes the preverb *nī* in the meaning ‘be accustomed to, be at home in’, is preferable. (And in fact Ge admits as much in n. 8a.)

VI.45.9: This vs. contains two parallel direct objects (“strongholds” and “tricks”) in two parallel clauses, which presuppose the same verb. The preverb (*vī*) is given at the beginning of pāda a, the verb (*vṛhā*) itself at the beginning of the 2nd hemistich; they must be assembled to produce the full lexeme.

VI.45.10–11: These vss. form a syntactic pair characterized by simple enjambment. Both vss. begin *tām u tvā*, with the iteration of this phrase in 11a still part of the main clause of vs. 10 (and the object of 10c *āhūmahī*). The rest of the first hemistich of 11 consists of two rel. clauses, whose predicate (the predicate for both clauses), *hāvyaḥ*, is found at the beginning of c. The rest of c is a separate impv. clause. Although the content of these two vss. is banal in the extreme, the syncopated effect produced by having the syntactic units not conform to metrical units gives it a bit of oomph. The vs. pair is unified by the ‘call’ motif: 10c *āhūmahī* ‘we have called upon’, 11c *hāvyaḥ* ‘to be called upon’ / *hāvam* ‘call’. The root *√śru* also provides unity: 10c *śravasyāvaḥ* ‘seeking fame’, 11c *śrudhī* ‘hear’, also, in 12b *śravāyyān* ‘worthy of fame’.

VI.45.10: After the opening *tām u tvā*, the rest of the hemistich consists only of vocc. *satya somapā, īndra vājānām pate*, with only a single accent among them: *īndra* is accented because it’s initial in its pāda, while the gen. pl. *vājānām* is unaccented because it’s part of a voc. phrase. Note that in the HvN ed. *vājānām* bears an impossible, final-syllable accent, a typo that should be deleted.

VI.45.11: It is worth noting that in the temporally contrastive rel. clauses (a: *purā* ‘previously’, b: *nūnām* ‘now’) whose joint predicate is the grdv. *hāvyaḥ* (see above), the one with past reference has an overt copula, pf. *āsitha*, while the one with current reference has the copula gapped.

VI.45.12: The phrase *hitā- dhāna-* is repeated from 11b and also picks up the same phrase in 2c. (See disc. above.) In fact 12c *tvāyā jeṣma hitām dhānam* is a telling variant on 2c *īndro jētā hitām dhānam*. In vs. 2 Indra is described as a/the (habitual) winner of the stake, while by vs. 12 it is we who hope to be the winners with his help. The vocalism of the precative *jeṣma* matches that of the agent noun *jētā* in 2. See further 15c. Note also that 2b contains an instr. *ārvatā* “with a steed” (in that case an unsatisfactory one) like *ārvadbhiḥ* in 12a.

The opening of the vs. is called “stark elliptisch” by Ge, who sees two different possible constructions (n. 12a): “with insights (might we overcome) (the insights of other poets) and with steeds (might we overcome) steeds” or “with insights (as) steeds ...” His tr. seems to reflect the first (though without supplying any further material), while I prefer the second.

VI.45.13: The new tr̥ca opens with yet another example of the ‘stake’ phrase, this time in opposite order (*dhāne hité*). For further on the order in this phrase, see the above intro. comm. to the hymn.

VI.45.14: The subjunctive *āsati* was omitted in tr.: the first line should read “Your help that will have ...”

VI.45.15: The VP \sqrt{ji} *hitám dhánam* returns from 2c and 12c, with two instances of \sqrt{ji} : *jési jiṣṇo hitám dhánam*. Here the subject is Indra as in 2c, not ‘we’ (12c), but he is making use of *our* (*asmākena*) chariot.

VI.45.16: As Old notes (though not in those terms), we seem to have an embedded *main* clause here -- in that *tám u stuhi* forming the second part of pāda a interrupts the rel. cl. that begins the vs. (*yá éka íd*) and continues through the rest of b and c, with the accented verb *jajñé* in c. Since *yá éka íd* is in fact only a single constituent, it might be best to consider it fronted around the brief main cl.

VI.45.18: The precativ perfect *sāsaḥīṣṭhāḥ* is striking.

VI.45.19–20: These two vss. contain superlatives to bahuvrīhi *s*-stems that appear earlier in the simplex: 19c *bráhma-vāhastamanḥ*; 4a *bráhma-vāhase*; 20c *gír-vanastamaḥ*; 13a *gírvanaḥ* (also 28b).

VI.45.21: Ge takes *niyúdbhiḥ* and *vājebhiḥ* as parallel, and therefore the ‘teams’ are among the things with which Indra fulfills our desire. Given the position of *niyúdbhiḥ* in the 1st pāda and its usual usage, I think it rather refers to Indra’s teams, with which he travels ‘here’, and I take *ā* both with *pṛṇa* and with a verb of motion to be supplied. For a similar use, see VI.22.11 *sá no niyúdbhiḥ ... ā gahi ...*, also addressed to Indra in this cycle.

VI.45.22–24: This *ṛca* concerns itself with cows, picking up *gómadbhir gopate* from the end of the preceding *ṛca* (21c). In particular 23b *vājasya gómataḥ* “prize of cows” reprises 21bc *vājebhiḥ ... gómadbhiḥ* and is then echoed by *vrajám gómantam* “enclosure of cows” in 24ab.

VI.45.22: The first pāda contains the common locution in which a poet addresses himself in the sg., but makes a nod to his ritual colleagues in the 2nd pl.: *tád vo gāya*. Lit. this should be “Sing (o poet=me) this, (on behalf of) you all (=priests).” See my “Poetic Self-Reference in the *Rig Veda* and the Persona of Zarathustra” (Fs. Skjaervø, BAI 19 [2005]), where this passage is disc. p. 69. The effort to introduce the 2nd pl. into the English would overbalance the tr., in a way that the slender enclitic *vaḥ* does not.

The simile in c is somewhat unsettling: “Sing what is weal for the able one as if for a cow.” Presumably it’s not the song that would be weal for a/the cow. Sāy.’s explan., reported by Ge (n. 22c), may well be correct: “as (fodder is) for a cow.” Recall also 7c *gām ná dóhase huve* “I call upon (Indra) like a cow for milking,” where the cow simile is filled out. In light of this passage it may be that here what is weal for the cow is not fodder but rather the call to be milked, which would better resemble the song that is weal for Indra: “Sing what is weal for the able one, as (a milking call) is for a cow.”

VI.45.24: There is some difference of opinion on the source of the apparent indefinite *kuvítsa-*, a hapax. Ge (n. 24a) asserts that *sasya* is the gen. corresponding to *sásmin*, enclitic after *kuvíd* (presumably presupposing a notional word space *kuvít sasya*). But the

standard opinion, already registered by Gr (< BR; see also explicitly AiG II.1.327, repeated AiG II.2.924), is that it is derived from the univertation of a syntactic sequence *kuvít sá* (roughly “is it indeed this one?”), which is then secondarily inflected. This seems the more likely explanation, and in fact there is such a sequence attested in IV.51.4 *kuvít sá*. This passage contains a deliberative either/or question “should it be the old course or a new one ...?” *kuvít sá ... sanáyo návo vā yāmaḥ*, a context that favors development into an indefinite of the type “someone or other.” In fact, our passage might be more clearly rendered as “to the cattle enclosure of someone or other.”

VI.45.25–27: There is no obvious unifying feature in this *ṛca*, though Indra is compared to a cow in the first two vss.

VI.45.25: On the intensive pf. *nonuvuḥ* see Schaeffer (45) and Kü (283).

VI.45.27: This vs. is identical to III.41.6, q.v. The lack of accent on *mandasvā* despite the following *hi* is puzzling.

VI.45.28–30: Again no unity in the *ṛca*.

VI.45.28: Although, as just noted, there’s no unity in the *ṛca*, there is some continuity between *ṛcas*. Like the first vs. of the previous *ṛca* (25), this one has polarized nom. *#imāḥ ... gíraḥ#* “these songs” framing the first hemistich, which responds to the acc. *gíraḥ* in the middle of the *ṛca* before that (23c). Moreover, the simile “like cows their calf” (28c) reprises “like mothers their calf” in 25c.

VI.45.29: This vs. is syntactically dependent on 28, with the acc. *purūtāmam* picking up *tvā* in 28a.

The cognate expression *vājebhir vājayatām* “competing for the prize with their prizes” is a bit puzzling. I interpr. it as being a slight play on words, with the instr. *vājebhiḥ* referring to the singers’ songs, expressing the means by which they compete, while the prizes they compete for are material goods and fame. This interpr. is somewhat supported by the next vs., where we hope that our praise-song is the most successful one.

VI.45.30: Notice the very un-Ārya phonology of the name of the patron, Bṛbu with two plain *b*’s. (On Bṛbu as patron see Kuiper, *Aryans*, p. 6.) It is probably not an accident that this vs. contains only one of two reff. to the Gaṅgā in the RV (the other a voc. *gaṅge* in X.75.5), since the Gaṅgā is at the limits of the RVic geographical horizon.

The simile is more lit. “(he is) broad like the Gangetic girth.”

VI.45.31: Pādas ab are identical to VIII.94.3. For my interpr. of the hemistich and esp. of the phrase *aryá ā* see comm. there. Given the un-Ārya phonology of Bṛbu’s name, there may be a particular pleasure in hymning the un-Ārya patron Bṛbu *away from* the *arí-*

VI.46 Indra

This hymn nicely demonstrates the distribution of impv. forms to *√bhū* that I discussed in my 1997 “Syntactic constraints on morphological change: The Vedic

imperatives *bodhi*, *dehi*, and *dhehi*”: *bháva/bhava* is found initial (3d) or final (10d, 11a) in its pāda or clause, while *bodhi* is internal (4c).

VI.46.1–2: Although the presence of *hí*, with its generally causal value, is often a puzzle when it appears in the first pāda of a hymn, this one helps signal the conceptual unity of this opening ṛca, with vs. 1 providing the various circumstances under which we call upon Indra and vs. 2 containing the contents of our latest address to the god -- a call for additional generosity from him.

The poet plays with the 2nd sg. pronoun. Historically -- and usually synchronically in the RV -- the nom. sg. *tvám* is disyllabic (*tʷvám*) and the acc. sg. *tvām* is monosyllabic, with occasional distraction to two syllables in analogy to the nom. But here the 1st vs. has three distracted acc. sg. *tʷvām*, prominently pāda-initial (a, c, d), while the nom. sg. at the beginning of the 2nd vs. is monosyllabic. To match disyllabic *tʷvām*, in 2a the two syllables are filled out by the addition of the pleonastic *sá* (#*sá tvám*), which is syntactically at home as subject marker of the 2nd sg. impv. *kíra* (see my 1992 “Vedic ‘sá figé’: An inherited sentence connective?”). Since *sá* in such contexts is unnecessary, its presence draws attention to the metrical interchange between the nom. and acc. of the pronoun here.

VI.46.2: Ge takes *rathyàm* as an adj. modifying *ásvam* (Wagenross); Gr does as well, assigning the form to the *vṛkī*-inflected stem *rathī-* (so also Lub). Neither of these interpr. is impossible; however, I prefer to take *rathyàm* as belonging to the marginal them. stem *rathyà-* (beside better attested *ráthya-*) and also to take it as a third term in the gifts we want from Indra. There is nothing riding on the choice of interpr., however.

VI.46.3: This vs. shows some continuities with the previous pragātha: the root noun cmpd *satrāhā* (3a) echoes *satrā* in 2d, as *satpate* (3c) does *sátpatim* in 1c. There is also the variant 1st pl. mid. root form to $\sqrt{hū}/hvā$, *hūmahe* (3b), which contrasts with *hāvāmahe* in 1a. I can see no difference in sense here, and I think there are several other factors at work. On the one hand, extremely common *hāvāmahe* (+/- accent) is almost never pāda-internal, whereas the rare-ish *hūmahe* (+/- accent) appears about half the time in that position (but see pāda-final *hūmahe* in 6b) -- so it partly replicates the *bháva/bodhi* distribution discussed above. But perhaps more important is that the poet seems to be playing with metrical variants in a way similar to *sá tvám* discussed above. Pāda b reads *índram tám hūmahe vayám*. There is no good reason for *tám* because *índram* more than sufficiently provides the acc. obj.; moreover, all things being equal, *tám* (and its paradigmatic fellows) generally opens its pāda/clause and in particular does not follow a coreferential noun. The common 1st pl. *hāvāmahe*, already found in 1a, would easily fit in a version of this pāda that lacked the *tám*: **índram hāvāmahe vayám*. I suggest that the poet called attention to his manipulation of the variant verb forms by inserting a pleonastic *tám*, like the pleonastic *sá* in 2a, and inserting it in the “wrong” place, which would draw the attention of his audience even more.

VI.46.4: *vṛṣabhéva* is somewhat problematic: the Pp. analyzes it as *vṛṣabhā íva*, which is phonologically impeccable, but what form would *vṛṣabhā* represent? Old’s solution (flg. Lanman, Noun Inflection 329) that it is an underlying nom. sg. is surely the most likely,

whether we subscribe to Lanman's "crasis after elision [of the *s*]," i.e., *vr̥ṣabhās iva* → *vr̥ṣabha iva* → -e-. The publ. tr., as well as Ge., implicitly follows this route. A long-shot possibility is that the Pp. *vr̥ṣabhā* is the underlying form, and it's an old instr. sg. modifying or doubling *manyúnā*: "with bullish battle-fury" or "with battle-fury as a bull." But *vr̥ṣan-* is the 'bull' stem generally used (quasi-)adjectivally, not *vr̥ṣabhā-*. It might also be possible to see it as a voc. *vr̥ṣabha*: this would easily account for the sandhi, but we would have to assume it got secondarily accented after it was no longer understood as a voc., and this would also introduce the interpretational problem of a voc. in a simile (though unfortunately there are a few such).

On the problematic *ṛcīṣama* see the despairing comm. ad I.61.1.

The three loc. in d specify the 'stakes' (*dhanā-*) referred to by *mahādhané*.

VI.46.5: The voc. phrase in c, *citra vajrahasta*, is repeated from 2a.

The verb *prāṇ* must be read disyllabically. It could therefore technically be a subjunctive (so apparently Gr), and in fact the light first syllable required could reflect the loss of root-final laryngeal before the subjunctive suffixal vowel. Hoffmann insistently calls it an injunc. (215 n. 201, 221), fld. by Lub, and the publ. tr. ("you ... fill") reflects an injunctive interpr. But since this is not a cosmogonic act -- Indra is filling the world halves with "fame" -- a subjunctive interpr. is possible, esp. following the impv.: "bring us fame with which you *will fill* both these world-halves." I consider this a possible, perhaps even desirable alternative.

VI.46.6: The distracted acc. *ṛvām* from 1a, c, d returns here, again as object of "we call," but with *hūmahe* rather than the *hāvāmahe* of vs. 1.

On *pibdanā-* see also comm. ad IX.15.6. The stem is obviously derived from a redupl. form of *√pad*; cf. the hapax med. part. *pībdamāna-* (X.101.11). The orig. sense is likely 'keep stepping, go step-by-step,' vel sim., as an iter. See EWA s.v. *PAD*, with ref. to Strunk and Gotō. A literal gloss could then be 'plod, trudge'. This literal sense is seen, in my view, in the participle in X.101.11 *vāhnir āpībdamānaḥ* 'plodding draught horse', and in IX.15.6 I also take *vāsūni pibdanā* as a somewhat comic reference to cows as "plodding goods." Our passage here is more difficult, as the word is contrasted with *vithurā-* 'wavering'; this opposition accounts for the standard glosses as (Gr) 'feststehend, fest', (AiG II.2.595 'fest' (but .203 'erstarkend'), (Ge) 'dauerhaft', (Re) 'solides' (both latter in IX.15.6), but my 'gain(ing) a foothold' seems to preserve the root etymology and sense, while fitting the context.

VI.46.7–8: This pragātha is stitched together by the *yād (vā)* construction (7a, c, 8a, b).

VI.46.7: The main cl. begins in the middle (or rather towards the end) of pāda c, with *ā bhara*. Since this phrase is only 3 syllables, the audience would not mistake the syntactic break for a pāda break despite the extra length of the c-pāda in Br̥hatī.

satrā reappears once again (cf. 2d, 3a).

VI.46.8: On the verbal rection of *turvāṇe* see Keydana (Inf., 245–47). Note also that the circumstantial loc. *nr̥ṣāhye* "at the conquering of men" and the purpose infinitival phrase

amitrāṇ ... turvāṇe ‘to vanquish our foes’ have the same semantic structure, though different syntax.

VI.46.9–10: The unity of this pragātha is required by the fact that the rel. cl. of 10ab must depend on the imperatival cl. of 9d, with initial *yé* (10a) picking up the last word of 9, *ebhyaḥ* ‘from those’.

VI.46.10: *dhṛṣṇuyā* reprises 2a.

VI.46.11–12: This pragātha shows both internal and external connections. As in the previous pragātha the 2nd vs. is syntactically dependent on the first, with the *yātra* clause of 12ab parallel to the *yád* clause of 11cd and both subordinate to the imperatival clause of 11b. In addition the first and last hemistichs (11ab, 12cd) open identically, with *ádha smā*, which echoes *ádha smā* of the last hemistich of the previous pragātha (10cd).

On the particular connection of vs. 12 with vs. 9 see immed. below.

VI.46.11: The first pāda is a bare variant of 3d: both contain the complex verbal construction *vṛdhé √ bhū* ‘be for strengthening / be there to strengthen’, each with the complement enclitic *naḥ*. The only difference is the placement of the impv.: initial *bhāvā* in 3d, final *bhava* in 11a, differing only in accent and, possibly, in the length of the final vowel: the Pp. resolves the cross-pāda sandhi *bhavéndra* with short *bhava*, like 10d, but a long vowel would be equally possible.

VI.46.12: The publ. tr. contains a grammatical error. It takes *priyā* as modifying fem. pl. *tanvāḥ*, but the sandhi context of *priyā* makes this impossible: it would have to be **priyāḥ*. It must modify *śárma* (as Ge takes it, also Gr), which must then be a neut. plural to the -an-stem. This tr. should be corrected to “... stretch wide their own bodies as dear shelters ...”

Ge takes *tanvāḥ* and *śárma* as implicitly conjoined (“Wo die Tapferen ihre Leiber breit machen (and) die lieben Schilde des Vaters”), but I think it more likely that the champions are stretching their bodies to *serve as* shelters/shields. Under this interpr. the plural of *śárma* makes sense: multiple bodies multiple shields.

Pādas abc strongly echo 9abc, with the c pādas esp. close, both containing the VP *chardír yacha* (in opposite order and non-contiguous in 12c) + conjoined DAT. beneficiary (9c *maghāvadbhyaś ca máhyaṃ ca*; 12c *tanvè táne ca*). However, the first hemistich of 12 varies tellingly from 9ab: in 9 it is Indra who holds out the shelter (*śaraṇám*), which is equated with the *chardíḥ* of c, but in 12 it is the mortal champions (*śūrāsaḥ*) who offer their own bodies as shelter (*śárma*). (Although the two words for ‘shelter’ are different, they are transparently related and share the same descriptors elsewhere.) The bodies of the mortal warriors are theirs to deploy, but also under the protection of Indra, as shown not only by *tanvè* in the next pāda as recipient of Indra’s protection, but also by *tanūpāḥ* ‘protector of bodies’ in 10d, applied to Indra.

The last pādas of vss. 9 and 12 provide the final thread of connection between the two vss., since both contain the impv. *yāváyā* ‘keep away’. In 12d the accent on the verb is anomalous, but I have no trouble assuming that it was adapted from 9d, where the initial position of the verb requires it.

VI.46.13–14: As was noted in the publ. intro., this last pragātha stands somewhat apart from the rest of the hymn, though it does show connections with the beginning of the hymn. The near repetition found between the last two pragāthas (9–10 / 11–12; see disc. above) gave the sense that the hymn was coming to an end. As often, RVic poets seem to enjoy shaking up our structural expectations. The lack of a main clause in the whole of this two-vs. complex is especially striking and ends the hymn on an unsettled and somewhat frenzied note.

VI.46.13: The form *ārvataḥ* ends the first pāda of this vs. and the last of vs. 1, but with different grammatical identities: gen. sg. in 1d, acc. pl. here. This difference may be one indication that this pragātha both responds to the rest of the hymn and distances itself from it.

mahāadhané is repeated from 4c.

VI.46.14: While vs. 13 has a relatively perspicuous structure -- a single transitive *yád* clause whose final pāda is a simile matching the acc. direct object -- vs. 14 is a structural mess. Its first pāda is another simile in the acc. matching the direct object of vs. 13; it is followed by a *yádi* (or **yád ī*, see below) clause (b), which may or may not contain a verb, followed by a rel. cl. (cd) introduced by *yé*, containing another simile referring to the same direct object but now in the nom. By now the original referent is quite distant, and it is not entirely clear which parts belong to the simile, which to the frame.

Pāda b is esp. problematic, mostly because of the ambiguity of the phrase *ānu śvāni*, in which *śvāni* has been identified variously as a noun or as a verb. The preponderance of opinion favors the former: Whitney (§390b, though see Roots, where he lists it, with ?, as an aor.), Gr (though he allows for the other poss.), Ge, Lub. On the other hand, Old, flg. BR, considers it a verb form, a passive aorist. Wackernagel (AiG III.23) is uncertain. The noun-faction is further divided by what stem they assign it to: neut. *-i*-stem (Gr, Lub), root noun in *-an-* (Wh, and presumably Ge, since he tr. it as a loc. “im Getöse”). If it is a noun (‘sound’, vel sim.), a verb needs to be supplied with *ānu*, but this of course would pose no problem. I am always reluctant to oppose Old, and in this particular case there is strong objective evidence that he is correct, namely the close sandhi effect that retroflexes *ṣ* after *ānu*. A collection of all *s*-forms after *ānu* produces remarkably clear-cut results: *ānu* only retroflexes following verb forms, never nominal forms. Although it may seem overkill to list all the examples, the collection may be useful for other purposes:

ānu + VERB: I.167.10 [=182.8, III.39.8] *ānu śyāt*, I.185.4 *ānu śyāma*, V.73.4 *ānu śtāve*, VIII.3.8 *ānu śtuvanti*. There is only one verbal form without retroflexion: IV.4.2 *ānu sprśa*.

ānu + NOMINAL (etc.): I.33.11 [=I.88.6, 176.2, III.51.11, IV.33.6, 52.6, VII.56.13, VIII.88.5] *ānu svadhām*, I.80.1 (etc.) *ānu svarājyam*, I.121.3 *ānu svajām*, I.134.1 *ānu sūnītā*, I.191.15 *ānu samvataḥ*, III.7.6 [=V.59.1, IX.63.6] *ānu svām*, III.33.3 *ānu samcārantī*, III.35.8 *ānu svāḥ*, IV.40.4 *ānu samtāvīvat*, IV.45.6 *ānu svadhāyā*, V.32.10 *ānu svadhāvne*, V.34.1 *ānu svadhāmitā*, VI.25.8 *ānu sāho*, VII.7.2 [X.14.2] *ānu svāḥ*,

VII.31.7 *ánu svadhāvarī*, VIII.4.8 *ánu spighyām*, VIII.6.38 *ánu suvānāsa*, IX.103.5 *ánu svadhāḥ*, X.17.11 *ánu saṃcārantam*, X.17.11 *ánu saptá*, X.56.3 *ánu satyā*, X.103.6 *ánu sám*.

Among the nominals it is striking how many begin with *sv-* as in our case.

I can see only one possible conclusion, that Old must be right, this is a 3rd sg. passive (or rather, intransitive) aor., and we need to supply a subject. Old suggests chariot, which seems reasonable. As he points out, the RV has a bahuvrīhi *svanád-ratha-* lit. ‘having a sounding chariot’ (though prob. used as a PN), and a chariot sounding “following the roar (of the horses)” makes sense. II.4.6 *vāṛ nā pathā ráthyeva svānīt* “like water along a path, like chariot (wheels) he has sounded” provides a parallel not only for the sounding chariot, but also for the rushing, sounding rivers in the simile of pāda a.

A few other loose ends in pāda b: I interpr. *yádi* as **yád ī* “when it,” with shortening of *ī* before the cluster *kl*. A condition ‘if’ doesn’t make sense. As for that cluster, *klóśa-* is the only *-l*-form to *√kruś* ‘cry out’. Is this racetrack slang?

Pāda c compares the steeds circling the race course to birds (of prey) circling over the raw flesh of a dead animal (a striking image). Ge considers the loc. *gávi* to be the correspondent of *āmiśi* in the simile: the cow is the prize over which the horses circle (“die wie die Vögel um das Aas, so um die Kuh(herde) kreisen”). The publ. tr. by contrast takes *gávi* as a piece of horse tack, the reins or something else made of leather, and construes it with *grbhītāḥ*. I now favor Ge’s interpr., which is more striking and which also conforms to the loc. of the stake found several times in this hymn. I would amend the tr. to “who, like birds over raw flesh, keep circling (the race course) over the bovine (prize), being held firm in your two arms ...”

VI.47 Indra

VI.47.1–5: As indicated in the publ. intro., the first 5 vss. of the hymn constitute a praise of soma, shading, towards the end, into simultaneous praise of Indra. It is formally unified: beginning with vs. 2, all but one (2cd) of the hemistichs begins with *ayám*, and vs. 1 contains four exx. of *ayám* as well (2 each in the 1st 2 pādas), though oddly positioned.

VI.47.1: Although this vs. is quite straightforward in general, it has some peculiarities. To begin with, the four nominal clauses with *ayám* in the first hemistich are all in the unusual order X *ayám*, which is reversed (/repaired) in the four subsequent vss. See esp. the opening of 1a *svādúṣ kīlāyám* corrected to the more standard 2a *ayám svādúḥ*. I have no idea what motivated the X *ayám* order.

It is not clear to me whether the four clauses name four different types/preparations of soma or all four refer to a single soma (or, in some way, both: all soma drinks, no matter how prepared, are in essence one).

Note also the particle *kīla*, which is rare in the RV, esp. outside of X: only 5 of the 12 occurrences are not in X, and 2 of them are in this vs.

I am also puzzled by the accent on *asyá* in c. Since the soma is amply referred to earlier in the vs., we would expect unaccented *asya* (cf., e.g., *papivāṃś índro asya* V.29.3, 30.11). I have no explanation, and it seems not to have bothered any other commentator.

VI.47.2: This vs. chains rel. clauses, with the gen. rel. *yásya* in b referring to the soma in a, while nom. *yáh* in cd refers to Indra, who first appears in the rel. cl. of b.

It is difficult (though perhaps not impossible) to construe *ví ... hán* ‘smash apart’ with the acc. *cyautnā* ‘exploits’ in c as well as the more likely object *dehyāḥ* ‘walls’ in d. It is therefore best to follow Ge (also Hoffmann, Injunkt. 168) and supply a form of $\sqrt{kṛ}$ or the like in c.

VI.47.3–5: As noted in the publ. intro. as well as above, the praise of soma modulates towards praise of Indra in this sequence, starting in the 2nd half of vs. 3. The first half of 3 clearly identifies soma as referent with the ppl. *pītāḥ* ‘when drunk’, but the cosmogonic deeds of 3d and of at least the first half of 4 begin to sound Indraic. We are brought abruptly back to soma in 4d (*sómo dādhāra*), but this almost seems like a trick or a feint to keep us from drifting further. And vs. 5 again sounds Indraic, esp. the final *vṛṣabhó marútvān* “the bull accompanied by the Maruts”: *marútvant-* is overwhelmingly an epithet of Indra. For a similar nearby sequence of vss. that oscillates between soma and Indra (and also uses *ayám* as an organizing word) see VI.44.22–24 and comm. ad loc.

VI.47.3: It is not clear what noun to supply with fem. pl. *urvīḥ*, though something like ‘worlds (so Ge), realms’ makes sense. The same *śad urvīḥ* is found in X.14.16 in unclear context, and as a voc. in X.128.5 *dévīḥ śad urvīḥ* ‘you six broad goddesses’, again with uncertain referent – though I now accept the standard view that these are the six cosmic spaces; see comm. ad locc. Elsewhere *urvīḥ* applies to waters or rivers, but liquid doesn’t seem appropriate here. Perhaps in our vs. it’s evoking a pl. of *prthivī* ‘earth’, with a pun on a different word for ‘broad’, *urú-*, *urvī-*. Note that *prthivī-* occurs in the next vs., dependent on *varimán-* ‘expanse’, which is derivationally related to *urú-*.

VI.47.4: The first hemistich has a repetitive structure inside a chiasmic frame. The opening *ayám sá yāḥ* is balanced by *ayám sáḥ* at the end of b; we might perhaps expect **yó ayám sáḥ* in fact. The single verb *ākṛṇot*, inside this frame, does for both objects, which are responsive: morphologically identical and near-rhyming acc. *varimāṇam ... varṣmāṇam*, each with a dependent gen. belonging to a matched semantic pair, *prthivyāḥ ... divāḥ*.

Pāda c is problematic. It lacks a verb, so it is impossible to know for sure what relations are envisioned among the ill-assorted lexical items; the real-world referents of *pīyūṣam* ‘beestings’ and *tisṣṣu pravátsu* “on/in the three slopes” are uncertain; it is not even clear whether it should be grouped with ab or with d. Ge groups it loosely with d, renders *pīyūṣam* as “Seim” and *tisṣṣu pravátsu* as “in die drei Strömen,” and supplies “hat ... geschaffen” as the verb. I am not sure what he’s trying to convey, and *pravát-* does not straightforwardly mean ‘stream’, but ‘slope’ or ‘plunge’. The publ. tr. takes c with ab, supplying *ākṛṇot* from there, but I am now doubtful about this, in part on the basis of IX.109.6 *divó dhartāsi śukráḥ pīyūṣah* “You, the gleaming beestings, are the supporter of heaven,” where soma is identified as *pīyūṣa-* and identified as an upholder (*dhartár-*), reminiscent of our d *sómo dādhāra*. As for *tisṣṣu pravátsu*, I wonder if this is shorthand for “*pravát-* plus two” as expressed in VII.50.4 *praváto niváta udvátaḥ* “(from) the slope, the depth, and the height”—possibly referring to the three worlds, which all appear in this verse: heaven and earth in ab, the midspace in d. Perhaps the idea is that Soma placed or

supports the distillation of himself, his liquid essence, in all three worlds. If this is so, a form of $\sqrt{dhṛ}$ borrowed from d would work better than $\sqrt{kṛ}$ from ab.

I also now realize that the preterital tr. of *dādhāra* in d, matching that of Ge (“hat ... befestigt”), is wrong, since, as Kü points out, the pf. of $\sqrt{dhṛ}$ is always presential.

Putting this all together, I would alter the tr. of cd to “this one (upholds) his ‘beestings’ in the three “slopes” (=worlds); Soma upholds the broad midspace,” with absolutely no certainty about the rendering of c.

VI.47.5: HvN divide the 2nd hemistich as ... *skāmbhanenód# dīyām*, with *úd* the final of pāda a and *dīyām* distracted and pāda-initial. But this is clearly wrong: *úd* is a preverb in tmesis with *astabhñāt* and should open the pāda, and *dīyām* is rarely if ever distracted. Lub’s division is correct.

As noted above, the 2nd hemistich of this vs. sounds esp. Indraic.

VI.47.6: *rayi-sthāna-* is a bahuvrīhi, lit. ‘having your place/standing in wealth’ vel sim., though the publ. tr. is less awk.

VI.47.7: The vs. is built on variant repetition: ab *prá nah ... , prá nah ... prataram* / c *supāró ati-pārayó* / d *sú-nītiḥ ... vāmá-nītiḥ*.

I have no idea why in the identical sequence *prá + nah*, the first has retroflexed *ṇ* and the latter does not. Both *prá*-s are preverbs in tmesis with 2nd sg. impvs. (*paśya* and *naya*). The only differences are 1) the first *prá* sequence is not initial (being preceded by voc. *índra*), 2) in the second sequence the impv. immediately follows *nah*, while in the first some verbal material intervenes, and 3) in the first *nah* functions as a dat. but in the second as an acc. None of these differences should (as far as I can see) trigger different sandhi effects.

VI.47.9: The vs. contains three phonologically similar splvs., stationed at pāda edge: *#váriṣṭhe ... #váhiṣṭhayoḥ ... / ... váṛṣiṣṭhām#*. This is somewhat reminiscent of the phonological/morphological figure in 4ab *varimāṇam ... varṣmāṇam*, esp. since *váriṣṭhe* and *váṛṣiṣṭhām* belong to the same roots as the two forms in 4.

In b the HvN text should read *śatāvann*. This voc. is variously interpr. (see Old for some reff.), but I follow Ge, and implicitly the Pp., in taking it as (metrically) lengthened **śata-van*, to a -*van*-stem, contra Gr’s *śata-ava(n)t-*, with the pres. part. of \sqrt{av} ‘help’. This *śatā-van-* would be a byform of better attested *śatá-vant-*. It needs to belong to a -*van-* rather than a -*vant-* stem because otherwise the expected voc. would be -*vas*. But we find -*vant-* and -*van-* stems side-by-side, notably in *maghāvan(t)-*. Debrunner (AiG II.2, most clearly p. 904, citing this passage) argues that -*vant-* stems are “sachlich” while -*van-* stems are “persönlich,” which would work for *śatávant-* versus our *śatāvan-*, but not, obviously, for *maghāvan(t)-*.

The tr. of d is disputed. Ge takes *rāyaḥ* as nom. pl. (as it generally is) and the subj. of the sg. verb *tārīt*: “nicht sollen die Reichtümer eines hohen Herren die unseren überbieten.” This requires that the sg. verb take a *masc.* pl. subj. While the neut. pl. + sg. verb construction is fairly rare, but attested and inherited, I do not know of masculine pl. equivalents. Old (ZDMG 54: 170) thinks the incongruity of number is the result of the adjustment to the formulaic nature of *rāyo aryāḥ*, tr. “mögen uns nicht die Kargen den

Reichtum überwinden,” with *aryāḥ* nom. pl. of *arí-* -- in other words a *different* masc. pl. subj. with sg. verb. Thieme (Fremdling, 56–57) makes appropriately short work of both of these proposals, but I find his own solution puzzling: “Möge nicht überholen unsere Reichtümer [der] des Fremdlings.” Since he adamantly rejects the masc. pl. + sg. verb interpr., all I can figure is that he’s generating a *singular* **rayīḥ* to serve as subject (represented by his bracketed [der]), but there is no support for this and it seems an artifice of convenience. No doubt mine does, too: like Thieme I take *rāyaḥ* as acc. pl., as it sometimes is (though *rāyāḥ* would be expected), and for sg. subj. I supply *īṣ-* ‘refreshment’ from the previous pāda. I also interpr. the verb *tārīt* not as hostile ‘overcome’ but as a plain verb of motion ‘cross over to’; cf. usages like *ātāriṣma támasaḥ pāram asyá* “we have crossed over to the far shore of this darkness” (I.92.6 = I.183-84.6, VII.73.1). The point is that the refreshment we’ve begged Indra for should not fall into enemy hands.

As discussed esp. ad IV.48.1 and VI.14.3, 20.1, I take the phrase *rāyo aryāḥ* “riches of the stranger” as referring to manpower.

VI.47.10: For the simile in b, see VI.3.5.

VI.47.11: $\sqrt{hvā}$ is the signature word here.

VI.47.11–13: The first pāda of 12 recasts that of 11: with *sutrāmā* matching *trātāram* and *s^uvāvāṁ āvobhiḥ* matching *avitāram*; 13a then repeats *sutrāmā s^uvāvān*. The connections between 12–13 and neighboring vss. in this hymn make it less likely (at least to me) that they are direct evidence of the Sautrāmaṇī ritual here, instead of being pressed into service of that ritual later. See publ. intro.

VI.47.12: In addition to the repetition just described, 12b *sumṛīkó bhavatu* is a variant of 10a *mṛlā*, and *ābhayaṁ kṛṇotu* reminds us of 8ab *ānu neṣi ... ābhayaṁ*.

VI.47.14: The long vowel of *urū* is puzzling. Since it appears in the simile *urū ná rādhaḥ*, it should be neut. sg. *urū*, and acdg. to Gr and AiG III.145 (with reff.) it is, with metrical lengthening. By contrast, Lub identifies it as a nom. pl. Since the frame corresponding to this simile is neut. pl. *sāvanāni purūni*, I also prefer neut. pl.; it may show attraction to the number of the frame: “the many pressings are broad like your bounty.”

As Ge (n. 14d) cleverly points out, the waters, cows, and drops are the three ingredients of soma.

VI.47.15–18: As noted in the publ. intro., this section, which concerns Indra’s fickle attentions to various clients in turn, is marked grammatically by *āmreḍitas* and intensives (i.e., iterative/frequentatives), expressing the constantly shifting nature of the actions and their objects. See the publ. intro. for the continuity of content I see in this section.

VI.47.15: Ge renders d exactly opposite to the publ. tr.: “so macht er den Vorderen zum Hintermann” (fld. by Klein, “āmreḍitas”: “he makes the one at the fore into one who lags behind”). But the simile in c is about walking one step at a time (“putting his two feet down one after the other”), and unless Indra is walking backwards my interpr. must be

correct. It's true that *pūrvam* 'in front' precedes *āparam* 'behind' in the text, but word order is scarcely a reliable guide in the RV, esp. since in nominal sentences we often get PREDICATE SUBJECT order. (Furthermore, there's a sort of iconic ordering of the two adjectives, with *pūrva-* first, which can be independent of the larger sense.)

VI.47.16: In d *viśaḥ ... manuṣyān* do not match in gender. Old suggests that the latter might be gen. pl., and Ge's tr. as such: "die Stämme der Menschen." I see no reason not to take it as the acc. pl. it appears to be, as a parallel obj. to *viśaḥ*, not a modifier.

VI.47.17: The *pūrva-āpara-* binary returns from 15, but here I think it not only refers to those ahead and behind positionally (as there), but also has a temporal sense (not represented in the publ. tr.): his previous allies in pāda a he dumps in favor of newer ones in b.

The hapax *ānānubhūtīḥ* is not entirely clear, but two things must be kept in mind: 1) it's a fem. pl., presumably acc.; 2) its sense must be derived from *ānu √ bhū*, which generally means 'come close to, give way to'. Because of 1), it should modify *śarādaḥ* 'autumns', a fem. cons. stem (so Ge). But Ge's rendering "dass sie an ihm nicht wahrgenommen werden" seems distant in sense from the verbal lexeme; Old's "(alles) Sichnichtanschliessen ..." seems closer. I take the cmpd as a bahuvrīhi meaning 'having no intimacy' and interpr. it as proleptic in an expression of purpose: Indra shakes off the years *so that* they do not come close/attach themselves to him. (Ge's "dass sie ... nicht ..." has the same proleptic purpose interpr.) The point is that one can't get old if one keeps the years at a distance; my "close in" is meant to capture the slangy tone of the passage (see also "double-cross" in b).

VI.47.18: This vs. concerns Indra's shape-shifting propensity, enabled by his *māyā-*. It is a slightly more complex formulation of III.53.8 *rūpām-rūpam maghāvā bobhavīti, māyāḥ kṛṇvānās tanvām pāri svām* "Form after form the bounteous one assumes, wrapping his own body in tricks." Although *prātirūpo babhūva* should lit. mean "he has become one having a form corresponding ...," this seemed awkward.

Ge thinks the form in b is Indra's *true* form, to be recognized behind the various disguises in pāda a; by contrast, I think each form Indra assumes is meant for display and none of them is the "real" one. *prāti √ cakṣ* is the lexeme used for the display of the girl at the svayamvara; see its use with Dawn in I.113.11 and 124.8. Each constituency is shown a different form—hence the āmreḍita *rūpām-rūpam* in a and the thousand horses in d, which presumably take each different form of Indra in a different direction.

VI.47.19: This vs. makes a small ring with vs. 15, both containing *kāḥ* + SUBJUNCTIVE. The fact that this vs. is in a different meter (Bṛhatī, not Triṣṭubh) from the whole hymn that precedes it may also signal the end of a section. As indicated in the publ. intro., I think this vs. is meant as reassurance: in contrast to the endlessly multiplying Indra of vs. 18 (and the fickle Indra of the previous vss.), Tvaṣṭar has now taken control, yoking only a single team (for Indra's journey, in my opinion) and exerting his dominion over forms, thus reining in Indra's excess shape-shifting. Although the word *rūpā-* does not appear in the vs., it can be easily supplied with *bhūri* on the basis of Tvaṣṭar's well-known role as

shaper of forms (cf. Macd., Ved. Myth. 116, and passages like I.188.9, VIII.10.28, X.100.9, 184.1).

The 2nd hemistich poses a rhetorical question about Indra (unnamed): why would Indra stick by the enemy when our sacrifice is so appealing? We are essentially urging him to switch sides again, and since he does so frequently, we have hope of succeeding.

Assuming that *pákṣa* in sandhi represents *pákṣaḥ* (so Pp), it belongs to a neut. *s*-stem found only here in the RV, but attested in AV and elsewhere. This requires us to allow an acc. with $\sqrt{ās}$ ‘sit’, rather than the usual loc. There is no warrant to emend the accent to **pakṣá* and take it as a loc. to the *-á*-stem.

Pāda d constitutes a loc. abs., with the part. *āsīna-* used pregnantly for ‘sitting (a sattra)’. The introductory *utá* is curious, since there is nothing it can conventionally conjoin. Klein (DGRV 45–56) classifies it with the unclassifiable residue of *utá* forms, tr. it ‘especially’. The publ. tr. follows this tack. However, I think we can derive it from the standard uses of *utá* ‘and’. English has an idiom in which ‘and’ is used to add as an afterthought what the speaker considers the clinching, but somewhat off-topic, circumstantial argument -- as in a sequence like “why would he break up with her now-- and with her just graduated?”

VI.47.20: The pres. part. *satī* in b is concessive, while *saté* in the same position in d is not.

VI.47.21: My tr. differs conceptually and syntactically from Ge’s, also, to a lesser degree, from Schmidt’s (B+I 83). Ge thinks the obj. *sadṛśīḥ ... kṛṣṇāḥ ... jāḥ* refers to the nights (“die ... gleichen (Nächte), die schwarzen Kinder”) and that *anyām árdham* “the other side” is the goal to which Indra drove the nights. Acdg. to him, this is a different image of the singer’s “Not” -- the first narrowness, the second unbroken night. I find the supposed change of topic, from the tight place in which we found ourselves in vs. 20, unlikely; instead I consider this vs. a continuation of vs. 20, in which Indra drives away the enemy, as often described as black or dark, that implicitly hemmed us in, a view shared by Schmidt. However, the latter agrees with Ge in taking *anyām árdham* as a goal, “Täglich vertrieb er die gleichen schwarzen Kinder von ihrem Sitz an die andere (Welt-)Hälfte,” whereas I consider it a characterization of the enemy and so in apposition to *sadṛśīḥ ... kṛṣṇāḥ ... jāḥ*, the phrase into which it’s interleaved. The “other half” would be the alternately favored and disfavored sides in vss. 15–18, as well as the “side of the hostile” (*dviṣatāḥ pákṣaḥ*) of 19c.

HvN disassemble the sandhi across cd as *vasnayánta*, but this dual must have a long final; so Pp.

The part. *vasnayántā* is a hapax, but related to *vasná-* ‘price’, *vásnya-* ‘to be sold, up for sale’. It modifies the two enemies of Indra, Varcin and Śambara, of whom we know little beyond Indra’s enmity towards them. The denom. *vasna-yá-* is therefore interpretable in a number of ways. Gr takes it as ‘feilschen’ (haggle), while Ge tr. ‘Lösegeld fordern’ (demand ransom), calling the two enemies Raubritter (robber barons) in his intro. (p. 144). EWA posts both tr., though they do not seem at all equivalent to me. Schmidt returns to Gr’s feilschen. I add yet another possibility -- ‘mercenaries’ -- on the basis of a literal rendering of normal denom. semantics ‘seek X’, hence ‘seek a price’. But given the state of our ignorance about these two foes, no interpr. is secure (though I

very much doubt that the two were ‘haggling’ with Indra when he picked up his vajra). We should note that in the next vs. (22c), we accept “the goods belonging to Śambara” (*śāmbarām vāsu*), which may refer to Śambara’s *vasnā-* in 21, though not in a way that disambiguates it.

Gr takes *udāvraje* as a PN, Ge as a place name. My tr. follows Schmidt’s interpr. (83–84) as a bahuvrīhi ‘dessen Hürde das Wasser ist’, as a description of a mountain surrounded (or semi-surrounded) by a body of water.

VI.47.22: *kóśayī-* is a hapax; its difference, if any, from well-attested *kóśa-*, which also appears in the following vs., in the same number of ‘ten’, can’t be determined.

VI.47.25: The verb *abhy āyaṣṭa* is problematic, at least in my view. It is supposed to be the 3rd sg. mid. root aor. to \sqrt{yaj} ‘sacrifice’. The form is morphologically impeccable, but 1) *abhí-* is not found with \sqrt{yaj} anywhere else in the RV, or indeed in Vedic; 2) for \sqrt{yaj} ‘sacrifice to’ to take an acc. of humans, rather than the standard gods, is skirting blasphemy. In this passage it is said to mean ‘honor’, but it is hard to see how the ubiquitous root \sqrt{yaj} could be so bleached, nor why the addition of the preverb *abhí-* would effect this change. The publ. tr. “has reached towards” reflects a different analysis. I suggest that it actually belongs to the root aor. of $\sqrt{(n)aś}$ ‘reach, attain’, which does appear fairly regularly with *abhí-*. A putative injunc. in this lexeme, **abh(ī)y aṣṭa*, could have produced a segmentation **abhí-yaṣṭa*, and in turn an augmented form *abhí āyaṣṭa* could have been generated to it. The sense of the passage might be similar to the current (annoying) English idiom “reach out to,” meaning “proactively contact in a positive way,” and refer to the Sārñjaya’s transfer of goods to the Bharadvāja poets. However, I recognize that it is generally preferable not to posit such a morphological misunderstanding and reformation, and also that my semantic substitution isn’t altogether compelling. MLW suggests an alternative etymology, connecting it to *yáśas-* ‘glory’, etc. and taking it as a med. root formation meaning ‘made famous, ennobled, glorified’. Both the morphology and the root semantics would work, though I am somewhat skeptical that a middle formation of that sort would have transitive-factitive sense.

VI.47.26–31: These vss. are repeated in the Aśvamedha section of several early Vedic ritual texts, directly after the 1st 14 vss. of the weapon hymn VI.75 (e.g., VS XXIX.52–57, TS IV.6.6).

VI.47.26: Because of the *hí*, I have made *ab* the causal foundation for the beginning of *c*. If we are willing to allow *hí* to be some kind of unspecified emphatic, the clauses can be disjoined, with the first hemistich simply “you should become ...”

As in the matching sequence ... *pratāraṇaḥ suvīraḥ* in I.91.19, ‘lifetime’ could be supplied as the implicit obj. of *pratāraṇaḥ*.

VI.47.27: The awkward ‘strongness’ in English tr. is meant to represent the difference between *ójas-* ‘strength’ in pāda *a*, the standard nominal abstract to this root, and *ojmán-*, found only here in the RV, though attested in subsequent Vedic texts.

Although the ref. to the chariot in vs. 26 is hardly transparent, in *this* vs. it has become a barely solvable riddle. In particular, “the strongness of the waters enclosed by

cows” (*apām ojmānam pári góbbhir āvṛtam*) could not be interpr. without 26a, c: the “strongness of the waters” is presumably the tree (*vānas-pāti-* in 26a, 27b), or rather the wood of the tree -- so called because plants grow only when watered. “Enclosed by cows” recalls 26c “knotted together with cows’ (hide)” (*góbhiḥ sāmṇaddhaḥ*), referring to the leather that binds the wooden parts.

VI.47.28: Why the chariot is all the things it’s implicitly identified with in ab is not entirely clear: it is the mace of Indra presumably because it performs similar assaults, and the face of the Maruts presumably because its front is as glittery and fast-moving as they are. But the Mitra and Varuṇa identifications elude me.

VI.47.31: Ge explains pāda a persuasively as “Raub und Wiederraub der Kühe,” with the ‘yonder ones’ (*amūḥ*) those belonging to the enemy and the ones here (*imāḥ*) our own.

I do not understand why *cāranti* is accented. Ge takes it as implicitly subordinated (“Wenn ... sich sammeln”), which would account for the accent, but there’s no other evidence for subordination. It could be ascribed to the vague principle that the verb is accented in a clause that provides the basis for the next clause, as Old suggests only to question (ZDMG 60: 725 n. 1 = KISch. p. 200).

VI.48 Agni and Maruts

Renou treats this hymn in EVP XV (142–46).

VI.48.1: I take the two pādas of the first hemistich as entirely parallel, with an instr. āmreḍita followed by a dat. of benefit/purpose. Others (Ge, Re, Klein [āmreḍitas]) instead interpr. *dākṣase* as a infinitive or quasi-infinitive.

The 2nd hemistich has disharmony of number between the expressed subject, pl. *vayām*, and the 1st sg. verb *śamsiṣam*, a rare but not unheard-of phenomenon. Here we can link it to the āmreḍitas that dominate the vs., esp. the doubled preverb *prá-pra*, in tmesis from the finite *śamsiṣam*. Perhaps this serves as a sort of individuating feature: “I after I ...,” that is, “we.” This cannot be conveyed in Engl., though I admit that the publ. tr. “we — that is, I —” is itself barely English.

VI.48.2: The first hemistich of this vs. is problematic. First, the acc. phrase *ūrjó nāpātam* referring to Agni should be (and indeed must be) the obj. of *dāśema* ‘we would ritually serve’, but this DIR.OBJ + VERB sequence is interrupted by a parenthetical nominal clause apparently referring to Agni in the nominative (*sá ... ayām*). Further, the make-up of the complex *hināyām* is much discussed. As it happens, I devoted a brief article to just this expression (“RV *sá hināyām* (VI.48.2) with a Return Visit to *nāyām* and *nānā*,” Fs. H. H. Hock, 2013). There I suggest that the proper segmentation is **hí nā ayām*, with the particle *hí*, which has lost its accent in the confusion, the nom. sg. *nā* to *nár-* ‘man’, a form otherwise not found independently until the Amarakośa, extracted from the old āmreḍita *nā-nā* ‘man after man’, used adverbially to mean ‘every man for himself, on his own’, plus the near deictic *ayām*. Alternative views are discussed in the art. cit.

VI.48.3: The second hemistich has two alliterative etymological figures: c *śocīṣā śósucac chuce* and d *sudūtībhīḥ sū dīdihi*. The second is esp. nice, with *su-* ‘good’ as the first cmpd. member echoed by *sū* the independent particle.

VI.48.4: Pāda a juxtaposes two 2nd sg. forms of √*yaj*, the indic. pres. *yājasi* and the -si-impv. *yākṣi*, in separate clauses. This juxtaposition presumably accounts for the accent on *yājasi*.

In d the obj. must be *vājā*, extracted from *vājotā*. Grammatically this should be a dual, but a dual is semantically unlikely (Old “Dual *vājā* ist gewiss nicht anzunehmen”). Best to take it as a pseudo-/nonce neut. pl. For the phrase cf. (as Ge does) I.48.11 *vājām hī vāmṣva*; on this basis it is likely that *vājā* is obj. of both *rāṣva* and *vāmṣva*, although the position of *utā* associates it esp. with *rāṣva*.

VI.48.5: Because of the context, which contains other landscape features, I now think *ādrayaḥ* here might be better tr. ‘mountains’, at least as an alternative.

On *pīprati* as ‘carry to term’, a specialization of ‘carry to the far shore’, see comm. ad I.156.3, also in a birth context. Most take it as belonging to ‘fill’ (Gr, Re), while Ge tr. ‘nähren’ and considers it a blend of the two roots √*pṛ* (n. 5ab). Rather than assigning it to ‘fill’, I prefer to think that it participates in a word play with *papraú* ‘has filled’ in the next vs. (6a).

VI.48.9: Although *ūtyā* could be taken with the impv., the instr. of *ūtī-* has a robust relationship with *citrā-* elsewhere (e.g. I.172.1, II.17.8, IV.23.2, VI.10.5, VI.26.5).

vidā in the Saṃhitā text can represent either a lengthened form of the impv. *vida* or a subj. *vidāḥ* (so Pp., also Gr, Lub). Both Ge and Re tr. as an impv. (as do I), which fits the imperatival tone of the hymn better than a subjunctive.; see esp. parallel *codaya* in b. Although neither Gr nor Lub gives other imperatives to this stem, most of the forms analyzed as *vidāḥ* are better taken as imperatives like this one (e.g., I.36.14, 71.7, VIII.61.7).

The particle *tú*, which ordinarily takes standard 2nd position, is out of place here. The same sequence, *tucé tú naḥ*, is also found in VIII.27.14, where it is also out of place. I have no explanation.

VI.48.10: *pārṣi ... partībhīḥ* “deliver to the further shore with deliverers” both continues the ‘ford’ motif of the last vs. and picks up the same verb in 5b, where it has more restricted semantics.

Pādas b and c contain two different forms of √*yu* ‘keep away’: the negated adj. *āprayutvan-* lit. ‘not distant / absent, not inattentive’ and the impv. *yuyodhi*.

Note the chiasmic figure *hélāṃsi daívyā ... [á]devāni hvārāṃsi ca*. The inner terms, *daívyā ... ádevāni*, are of course etymologically related, but, though both neut. pl. *a*-stems, have different endings; the outer terms, *hélāṃsi ... hvārāṃsi* are paired only by their initial *h-* and their neut. pl. *s*-stem ending *-āṃsi*. The *ca* is of course misplaced: we would expect **ádevāni ca hvārāṃsi*. Klein (DGRV I.53) says that *ádevāni hvārāṃsi* “is treated as an indivisible unit, and *ca* is therefore displaced to third position,” but this is a description, not an explanation. I would suggest that the poet didn’t want to interrupt his

pretty chiasmus. (The placement of *ca* also enables an iambic finish to the pāda, whereas the expected order would not, but I doubt if this is the major reason.)

VI.48.11–13: On these three vss., see publ. intro.

VI.48.11: On *návyasā vácaḥ* # see comm. ad VIII.39.2, I.26.2.

VI.48.12: The publ. tr. renders *dhúkṣata* as if it were a subjunctive (“will milk out”; sim. Ge) to an *s*-aor., but the form must be an injunctive to a *sa*-aor., given the augmented forms *ádhuḥṣata*, etc., and the sec. ending *-ta*. Of course, the injunc. could be used modally, but a presential “who milks out” might be better.

VI.48.13: With Ge I take *dhukṣata*, identical save for the accent to *dhúkṣata* in 12b, as a 2nd pl. act. impv., not a 3rd sg. mid. injunc. In a n. (13a) Ge allows the possibility of the latter analysis, which would produce the paradox that a cow is milking a cow. Re opts for this latter analysis -- the cow milking herself. Although I am always quick to see paradox in the RV, in this case I think the poet is playing with morphology instead, while bringing the final vs. of this 3-vs. sequence back to the 2nd pl. impvs. of vs. 11.

Note the direct object in balanced coordination, NOUN *ca* ADJ / NOUN *ca* ADJ, with both *ca*-s properly positioned (unlike 10cd above) and with each bahuvrīhi epithet having the shape *viśvá-CoCasam*.

VI.48.14–19: On these Pūṣan vss., see publ. intro.

VI.48.14: Despite the change in topic, *srprá-bhojasam* (a) responds to *viśvá-bhojasam*, which ends the previous vs. (13c).

The enclitic *vaḥ* in Wackernagel’s position in pāda a must wait for the verb *stuṣe* towards the end of d to find its syntactic niche. It refers, as usual, to the fellow priests on whose behalf the poet will praise the god. Ge’s “Diesen euren (Gott)” (sim. Re), attempting to find a function for it within the first pāda, is unnecessary.

This vs. contains four gods to whom Pūṣan is compared and four adjectives. It is therefore not surprising that both Ge and Re distribute one adjective per god. My tr. differs: it honors the pāda boundary between c and d, which sequesters the two-adjective sequence *mandráṃ srprábhojasam* in the pāda with Aryaman, leaving Viṣṇu shorn of any epithet. This decision wasn’t made only on the basis of the pāda boundary (which would be weak evidence), but also because *srprá-bhojas-* ‘providing lush nourishment’ is an adjective more appropriate to the hospitable Aryaman than to Viṣṇu. See Thieme, *Fremdling* 105, 143; M+A 83. By contrast, Viṣṇu and Pūṣan are often mentioned next to each other, almost as if interchangeable (e.g. VI.17.11, VIII.54.5, with the pāda-opening *pūṣā viṣṇuḥ*) and without descriptors.

The final infinitival *ādiśe* can be taken in a number of ways: Ge (fld. by Scar 221–22) rather whimsically as “um (ihm) einen Wink zu geben,” while Re instead gives “pour attirer-son-attention.” I do not think it can be separated from the two forms of *ā√diś* (including vs.-final *ādiśe* as here) in the nearby Pūṣan hymn VI.56.1. In that vs. I take the lexeme as meaning ‘designate (X as Y=epithet)’, and I think something similar is meant

here: by giving Pūṣan attributes and identifying him with various gods I've uniquely identified him.

VI.48.15: This vs. not only continues the identification of Pūṣan with other gods -- here the Maruts, characterized by three different descriptors -- but is syntactically dependent on the previous vs. and its verb *stuṣe*. It also contains the first mention of Pūṣan himself (pāda b), at the end of the series of identifications.

The three adjectives, *tveṣām*, *tuviṣvāṇi*, and *anarvāṇam*, must qualify both the *śārdhah* 'troop' of the Maruts, a neut. acc. *s*-stem, in the simile, and *pūṣāṇam*, a masc. acc. *-n*-stem, in the frame. They seem to split the difference with regard to gender: *tveṣām* is of course ambiguous as to gender, but *tuviṣvāṇi* is neut. and *anarvāṇam* masc. The latter is adjacent to masc. *pūṣāṇam* and separated by the pāda boundary from the neut. phrase, so it is not surprising that it would adopt a masc. form. Moreover, a proper neut. acc. to this stem would be **anarvā*, which almost fatally obscures the 2nd member of the bahuvrīhi. The same substitution of masc. acc. *anarvāṇam* for expected neut. **anarvā* is found with the very same neut. acc. referent *śārdho mārutam* in I.37.1; cf. comm. there. The expected neut. NA presumably underlies the them. adj. *anarvā*-; see comm. ad I.185.3. Ge's and Re's strategy of taking *anarvāṇam* as only modifying Pūṣan (e.g., Ge "den unerreichten Pūṣan, der ...") is thus both unnecessary and probably wrong, given its application (not in a simile) to the Marut troop in I.37.1.

VI.48.16: The little nominal clause *aghā aryó ārātayaḥ* with its unremarkable sentiment ("evil are the hostilities of the stranger") may have been a popular saying, as it's found in the same form nearby in VI.59.8, an Indra-Agni hymn. It is not clear to me why Pūṣan would care or why the speaker seems to impart it as a secret.

VI.48.17: This vs. seems to continue the poet's direct speech to Pūṣan, and if it is meant to be a secret, it will remain so: as noted in the publ. intro. the vs. is close to unintelligible. My interpr. differs markedly from those of others (or rather, from that of others: Re and Klein [DGRV I.289] basically follow Ge; Old, however, differs from them in cd, suggesting several other alternatives, none of which he stands behind).

The first pāda is deceptively straightforward, at least syntactically. It is a prohibition against uprooting a particular kind of tree. The tree name, however, is a hapax, with un-Ārya phonology (*kākambīra*- with plain *b*), and why this tree should be left in the ground is unsaid. As for the word, it's possible that it's a partial scrambling of Pūṣan's epithet *karambhāḍ*- 'gruel-eater' (VI.56.1), but even if so, it doesn't get us anywhere.

The next pāda shows some word-order disturbances that cause me to interpret it differently from the standard and in fact to make a small emendation to the text. The text as transmitted reads *āsastīr ví hí nīnaśaḥ*, with, apparently, a preverb in tmesis in 2nd position (*vi*) and the particle *hí* in 3rd position. Both of these would be quite unusual, though it must be admitted that in this kind of informal speech we might expect deviations from normal order. The *hí* also suggests that the pāda offers the causal grounds for either the preceding clause or the following one. Ge and Re choose the former option, but I don't see how pāda a follows from pāda b as rendered by them, at least given our ignorance of the significance of the Kākambīra tree. To address the word-order problems

I suggest that instead of *ví hí* we read **vihí*, the 2nd sg. impv. to $\sqrt{vī}$ ‘pursue’. (An asterisk should be inserted in the publ. tr. before ‘pursue’.) Although this impv. is more often *vīhí* with long root vowel (as in nearby VI.50.2), there are several exx. with short root vowel (e.g., III.21.5, where the short vowel is metrically favored and perhaps guaranteed).

Given the obscurity of this vs., it would not be surprising if the puzzled redactors split the syllables and endowed *ví* with an accent as if it were a preverb. If my reading is accepted, we have either a sort of serial verb construction: “come on (and) destroy,” or simply a chronological series: “pursue and destroy.” The latter is reflected in the publ. tr. By my interpr. the redupl. aor. *nīnaśaḥ* is accented because it starts a new clause. Unfortunately I cannot explain why we have a redupl. aor. injunc. rather than a caus. impv. (**nāśāya*) following the first impv.

My interpr. of the 2nd hemistich diverges from the standard even more, taking Klein’s tr. (DGRV I.289) to stand also for Ge’s and Re’s: “And may the sun not (shine) for even a day for the one who grasps the neck of the bird.” We all agree that *mótá* stands for *mā + utá*, with *utá* conjoining the two prohibitive particles in a and c. Beyond this, anyone confronting this hemistich must deal with several textual problems: 1) the meter of c is disturbed; in fact Old calls it “hoffnungslos”; 2) it is difficult to decide what underlies the transmitted sequence *áha evā*, the Pp. takes *áha* as *áhar*, but, needless to say, this sandhi would be unusual; 3) *evā* with long final is almost always pāda- or clause-initial, as opposed to generally 2nd-position *evá* (see Lub s.vv.). In fact, in Minkowski’s detailed treatment of the two forms (JAOS 115.3 [1995]: 388–400) this particular passage is “the only one possible counterexample” (p. 391) to this rule of placement. (With Old, Minkowski floats the possibility that two syllables are missing after *áha*, producing an 8-syll. pāda, with *evā caná* then pāda-initial in a 12-syll. one. Since it is impossible to know what those missing 2 syllables might have been and since, all things being equal, we’d prefer a Satobṛhatī vs. [see publ. intro.], which would have 12 8, not 8 12, as its 2nd half, I will deal with the text we have.) In addition to these formal problems, there are a few crucial lexical ambiguities: 1) *sūrah* can be nom. sg. of the thematic stem *sūra-* or gen./abl. sg. of the athem. stem *svār-*; 2) as noted above, the underlying form of *áha* is unclear: does it belong somehow to the ‘day’ word (*áhar*, *áhan-*) or is it the asserverative particle *áha*? 3) *vēh*, which should be read as a disyllable, can be a case forms of the ‘bird’ word (*ví-*), either nom. or gen./abl. sg., or a verb form to $\sqrt{vī}$ ‘pursue’. The standard interpr. presented above chooses the first of each of those lexical alternatives; in all instances I choose the 2nd.

The standard tr., with ‘sun’ as subject, supplies ‘shine’ as the verb; no justification is given by anyone who so interprets it (as far as I’ve been able to find). My interpr. attempts to find some clues in context. There are a few; whether they are false trails or not I cannot be certain. The first is the verb of pāda a, which is presented as parallel to pāda c by the *mā ... móta* construction. The verb is *úd √ vṛh* ‘tear up’. Various forms of $\sqrt{vṛh}$ are found in the often puzzling “wheel of the sun” myth, describing the ripping off of this wheel. Cf. I.130.9 *sūraś cakráṃ prá vṛhat ...*; I.174.5 *prá sūraś cakráṃ vṛhatād abhīke* [=IV.16.2]; V.29.10 *prānyác cakráṃ avṛhaḥ sūryasya*. In two of these three passages the gen. sg. of ‘sun’ is *sūrah*. Although this is slender evidence, it is, at least, evidence (as opposed to the random fantasy of the standard tr.), and I therefore borrow the verb $\sqrt{vṛh}$ from pāda a and supply ‘wheel’ as its obj., with a dependent gen. *sūrah*. This is supported by a nearby passage in a Pūṣan hymn, VI.56.3 *utádāḥ paruṣé gávi, sūraś*

cakráṃ hiranyāyam / ny aīrayad rathītamaḥ “And yonder golden wheel of the Sun he set down in the ‘gray cow’ -- he the best charioteer.” (This is the same hymn that contains the form *ādiśe* disc. above ad vs. 14.) It is not at all clear what story that passage is telling, but we *can* see that Pūṣan, who is our addressee here, changes the placement of a detached “wheel of the sun,” with the sun-genitive *sūrah* as here. The detachment might result from tearing the wheel off the chariot of the sun. This chain of reasoning accounts for my tr. of the first part of pāda c: “And certainly don’t (tear off the wheel) of the sun.” I am taking *āha* as the particle, not a form of ‘day’ (though ‘day’ could be worked into that tr.). Of course this interpr. does not solve the sandhi problem: we should expect *āhaivā*. But if a new clause begins with *evā*, as I think it does, the unusual sandhi break would be more understandable.

Starting a new clause solves the problem of non-initial *evā* noted above. But what is the content of the clause? Like the standard tr., I take *ādādhate* as a dat. sg. pres. act. participle, with *grīvāḥ* ‘necks’ as object. However, I do not think this refers to the neck(s) of a/the bird. Instead, as noted above, I take *véḥ* as a verb form to $\sqrt{v\bar{r}}$, given my emendation in pāda b to **vihí*, *véḥ* to the same root would follow naturally (or as naturally as we’re going to get in this vs.). Given its disyllabic reading, I take it as standing for **váyas*, the 2nd sg. subjunctive to the root present. I’m assuming that Pūṣan wants to give chase to (or at least follow) whoever does whatever he’s doing to the necks, and if he (Pūṣan) tears off the wheel of the sun, he won’t be able to. As for *grīvāḥ* $\sqrt{dhā}$, I conjecture that this describes one action in the harnessing of horses to the chariot. Note $\sqrt{dhā}$ in VII.34.4 *ā dhūrṣú asmai dādhātāśvān* “Put the horses to the chariot poles for him,” and recall that the horse Dadhikrā is “bound at the neck” (*grīvāyām baddhāḥ*) in IV.40.4. But the “place necks” phrase is open to multiple possibilities, none of which imposes itself.

There are a couple of grammatical loose ends in this extremely loosely constructed interpr.: 1) dative complements are rare to $\sqrt{v\bar{r}}$, 2) *véḥ* is accented, though there’s no obvious trigger for the accent. It may be that it borrowed the accent from my putative **vihí*, or that the implied causal dependency of the *evā* clause (thus my “for thus never ...”) induced it. Or that the redactors had no idea what this meant (a mental confusion we share) and took it as a form of ‘bird’.

To lay out my reasoning in detail is, I realize, not necessarily to convince -- but at least there *is* reasoning every step of the way. I challenge other interpr. to provide the same!

VI.48.18: Ge and Re take the comparison to be between the partnership and the leather bag (e.g., Ge “Deine ... Freundschaft soll sein wie der ... Schlauch”), but the partnership is in the nom. (*sakhyām*) and the bag is in the gen. (*dṛteḥ*), as is Pūṣan (*te*). Given the deep uncertainty of this part of the hymn, grammar is all we have to hold onto, and grammar tells us that it is Pūṣan who is compared to the bag. For the partnership with Pūṣan, see I.138.4fg.

VI.48.21: Ge and Re take the rel. cl. of ab as unconnected with the rest of the vs. But surely the *yāsya* refers to Indra, as is made clear by the ‘Vṛtra-smashing’ references in de.

The adj. *vṛtrahām*, twice modifying neut. *śāvah* (d, e), is attributed to a hapax thematic stem *vṛtra-há-* by Gr (see also Re’s comm.), beside the very well-attested root

noun cmpd. *vr̥tra-hán-*. Although this analysis must be synchronically correct, I wonder if the form here has not been re-marked from the expected neut. to the root noun, which should probably be **vr̥tra-há-* – though see AiG III.239, acdg. to which *-há* can also serve for the neut. (see comm. ac X.170.3). However, MLW suggests that the neut. could have been simply the sten form **vr̥trahán*, which could be misheard as *vr̥trahám*. See also disc. of *satrā-hám* ad V.35.4 and also of *anarvám* ad I.185.3. The re-marking must already have happened and the thematic stem extracted before the composition of this passage, since the *-am* ending makes position in the cadence.

VI.48.22: The first half of this vs. is straightforward: both Heaven and Earth were born only once. The same “only once” (*sakṛt*) appears in pāda c as well, but with the mention of Pr̥ṣṇi things get complicated, esp. when pāda d is taken into account. The hemistich reads *pṛṣṇyā dugdhām sakṛt páyas, tād anyó nānu jāyate*. Pāda c is unproblematically “only once was the milk of Pr̥ṣṇi milked.” Ge takes the milk here to be, symbolically, the Maruts; the point of the pāda is that Pr̥ṣṇi “ward nur einmal Mutter.” (In this I think he is correct.) His d is “Nach dem wird kein anderer geboren” (sim. Re “(nul) autre ne naît à la suite de (tout) cela”), both with an indefinite reading of *anyáḥ* as ‘(no) other’; the publ. tr. also has an indefinite reading, but limited to the Maruts -- that is, the Maruts were born all at once and no other Maruts followed: “Another (of the Maruts) is not born after this.” But all of these interpr., however easily they go down, should be wrong. As I have demonstrated at length (“Vedic *anyá-* ‘another, the other’: syntactic disambiguation,” Fs. Beekes, 1997, pp. 11–18), indefinite and definite readings of *anyá-* are distinguished positionally: 2nd position *anyá-*, as here, is definite. (For a clear ex. see in the next hymn VI.49.3b with an *anyá-* ... *anyá-* “the one ... the other” construction.) Our pāda d should mean “the other is not born after this.” This passage needs to be considered in conjunction with VI.66.1 *márteṣv anyád doháse pīpāya, sakṛc chukráṁ dudhe pṛṣṇir ūdhaḥ*, whose 2nd pāda is very close to our pāda c. VI.66.1 has an implicit *anyá-* ... *anyá-* construction: the *anyád* in the 1st pāda refers to Pr̥ṣṇi’s udder and is contrasted with the *ūdhaḥ* in the 2nd pāda, which invites a reading with a second **anyád*. The publ. tr. renders this “while the one stays swollen to give milk to mortals, only once did Pr̥ṣṇi milk the gleaming (milk/semen) from (the other) udder.”

VI.66.1 is only limited help, however. Although its 2nd pāda is, as just noted, semantically and formulaically very comparable to our first, and its first pāda contains a form of *anyá-* as our 2nd one does, there are several important discrepancies: the *anyá-* in VI.66.1 is neut. and therefore pairs easily with the *ūdhaḥ* of the following pāda, but our passage contains a masc. *anyáḥ* which cannot be directly referred to the (neut.) milked *páyasḥ* of the preceding passage nor to Pr̥ṣṇi’s (neut.) udder, which must be lurking in the passage too. Moreover, though the *sakṛt* pādas of our vs. (abc) refer to a discrete event *in the past*, the verb of d, the *anyá-* pāda, is present (*ānu jāyate*).

I can see two ways of handling this problematic pāda, an easy one and a hard one. In the easy one I ignore my own rule about *anyá-* placement and take *anyáḥ* as indefinite, with a tr. similar to Ge/Re: “no other is born following this” / “another is not born following this.” The publ. tr. “Another (of the Maruts) is not born after this” was adapted from von Bradke (Fs. Roth 118) and was an attempt to limit the scope of indefinite ‘other’ to “other Maruts” and therefore wring a semi-definite sense out of it. But that’s a cop-out: it’s still indefinite, and the more general rendering of Ge/Re may be more

satisfactory if we are going the indefinite route.

Although this is the easier alternative, I am not at all sure it's the wrong one -- though I'm reluctant to toss out the *anyá-* rule without a struggle. The harder way makes reference to yet another desperate *Pr̥ṣni* udder passage, this one II.34.2: *rudró yád vo marutaḥ ..., vṛṣājani pr̥ṣnyāḥ śukrá ūdhani* "when Rudra was begotten for you as the blazing bullish (semen = rain?) in the udder of *Pr̥ṣni*, o Maruts." For the difficulties of this passage and my interpr. of it, see comm. ad loc. The passage refers, in my view, to the birth (or a birth) of the Maruts' father Rudra, which "birth" then led to the birth of the Maruts. Acdg. to this passage, Rudra took shape ("was born") as "bullish semen" in *Pr̥ṣni*'s udder. As I say in my comm. ad loc., "It is this semen that combines with *Pr̥ṣni* to produce the Maruts; it can also, in naturalistic terms, be the rain in the thunderclouds that are *Pr̥ṣni*'s udder. This gender mingling and loss of distinction between the Maruts' bull-father (=Rudra) and their mother *Pr̥ṣni* in the udder are also found, in somewhat different fashion, in IV.3.10d *vṛṣā śukráṃ duduhe pr̥ṣnir ūdhaḥ* 'the bull as *Pr̥ṣni* milked gleaming (milk/semen) from his (/her) udder' and in VI.66.1d *sakṛc chukráṃ duduhe pr̥ṣnir ūdhaḥ* 'only once did *Pr̥ṣni* milk the gleaming (milk/semen) from the udder.'"

I now think it possible (though only that) that the masc. *anyá-* of our passage refers to Rudra (and/or his semen); in that case the referent is definite (as my rule requires), and the *pāda* means "The other [=Rudra] is not born after this," in other words, the normal order of nature prevails: the father/semen was born in *Pr̥ṣni*'s udder before the sons, the Maruts, who resulted from the mingling of those essences and who were "milked out" of that udder -- a bit of an anticlimax, to be sure: we wouldn't in fact expect Rudra's birth to follow his sons'. I am not sure that this is the correct way to interpret the passage, but it does conform to the known syntactic rules and also has suggestive connections with other troubling passages involving the same features: Rudra, his semen, *Pr̥ṣni*, her udder, her milk, and the Maruts.

VI.49 All Gods

The verb 'quicken, enliven' (*√jin*ν) appears at widely scattered intervals in this hymn (6b *jinvatam*, 11c *jinvathā*, 14d *jinvatu*), but enough to count as a leitmotif.

VI.49.1: Although non-formulaic groupings of gods are frequently encountered in All God hymns, the trio *vāruṇo mitró agnīḥ* is perhaps a little strange, since we expect this trio's third member to be instead Aryaman. And indeed that sequence is quite common: there is a much-repeated dimeter *pāda* *vāruṇo mitró aryamā* (I.26.4, etc.; see repetitions listed in Lub), and the same sequence is regularly found at the end of a Jagatī *pāda* (I.40.5, V.46.5, VII.66.11, 12, etc.). I wonder if *agnīḥ* is some sort of makeshift substitute for *aryamā* in a Triṣtubh cadence where *aryamā* wouldn't fit (cf. the same sequence in the acc. in the next hymn, VI.50.1, and it is found elsewhere in both nom. and acc., incl. the repeated *pāda* VI.51.10). After all, Agni is compatible with pretty much any Vedic god and could be slotted in when the more specialized divinity was metrically inconvenient.

VI.49.2: The fuller expression in X.3.7 *diváspr̥thivyór aratír yuvatyóḥ* "the spoked wheel of Heaven and Earth, the youthful ones" makes the identity of "the two youthful ones" clear.

Ge and Re take *yájadhyai* as a predicated infinitive with unexpressed subject “I” (without comment), with Agni the obj.: “... Agni ... will ich verehren”; “je veux lui sacrifier.” I instead supply “(I invoke)” (parallel to *stuṣé* ‘I will praise’ in 1a) to govern *agním*, who is then the subject of the inf. Although this involves supplying material, elsewhere in Agni contexts this infinitive is generally used of him, as subject, in his priestly role. Cf., e.g., III.1.1 ... *mā ... váhniṃ cakartha vidáthe yájadhyai* “you have made me your draught-horse, to offer the sacrifice at the ritual distribution.” And in this hymn see VI.49.9 *hótā yakṣat ... agnīḥ* “the Hotar Agni will sacrifice,” with Agni as agent-subject of the active verb.

VI.49.3: My tr. of *sūro anyā* “the other is the sun’s” follows Old, who adopted it from Ludwig. Ge (/Re) supply an instr. *raśmībhiḥ* ‘with the rays’, parallel to *stṛbhiḥ*, on which *sūrah* depends. This seems unnec. Re’s claim that the accent on *pīpīśé* “déconseille l’interprétation de *sūrah* donnée par Old.” does not convince: although by the Old reading *pīpīśé* is not part of both *anyā* clauses as it would be with the additional instr., it occurs at the boundary of two explicitly contrastive clauses, which would, I think, be sufficient to induce accent.

VI.49.5: Note the tricky word positioning, with pāda-final *yāḥ* picking up pāda-init. *sá*, in a nominal rel. cl. continued in the next pāda. It may be that in a structurally simple hymn like this the poet seeks to vary the ways he introduces the listed divinities and their attributes and to jazz up the syntax.

VI.49.6: If my comment immed. above is correct, this vs. is a fine example of it. To begin with the surface, the first hemistich has a dual voc. (*párjanya-vātā*) and a dual impv. (*jinvatam*). So far all is well. But the 2nd hemistich has a plural voc. (*sátyaśrutāḥ kavayaḥ*), whose referents are not identified, and a singular voc. (*jágata sthātā*), whose referent is not identified, flanking a rel. prn. in the gen. and an instr. pl. (*yásya gīrbhīḥ*), with the rest of the vs., following the singular voc., containing an apparent main cl. verb in the 2nd pl. (*ā kṛṇudhvam* [so Pp.]). The simplest thing to do is to disjoin the two half-verses, keeping the dual and plural parts separate. But that leaves us with an incomplete rel. cl. that has nothing to do. The problems are discussed at length by Old, though he does not come to a firm determination.

Both Ge and Re take the first hemistich as independent, as do Old and Scar (556). By contrast, I consider it the main cl. on which cd is dependent. Since my interpr. of ab resembles theirs almost to the end, however, we are in happy agreement so far. For the connection of Parjanya and Vāta with the *pūrīṣāni ... āpyāni* “watery outpourings,” cf. X.65.9 *parjánýāvātā vṛṣabhā purīṣínā*. The only question is whether *prthivyaḥ* in our passage depends on *vṛṣabhā* or the watery outpourings: its accent (as opposed to unaccented voc. *vṛṣabhā*) speaks (weakly: see Old comm.) for the latter, the pāda break for the former, and the consensus is for the former. I’m not at all sure it matters.

In my interpr. of ab as the main cl. to cd, I supply a beneficial dat. “for him,” referring to the human poet, to serve as main cl. referent for the rel. *yásya* in c. As just noted, the standard interpr. take ab as an independent cl., and therefore must account for the rel. prn. *yásya* in a different way. Before tackling that, let us first determine who the vocc. in cd refer to.

The pl. voc. phrase *sátyaśrutaḥ kavayaḥ* beginning pāda c: by almost universal agreement, beg. with Sāy., this refers to the Maruts, on the basis of the pāda-spanning voc. phrase *sátyaśrutaḥ kávyayā yúvānaḥ* used of the Maruts in V.57.8, the only other occurrences of *satya-śrut-*. (It is worth remarking here that, though in both V.57.8 and here the pāda opens with the first two vocc., in V.57.8 *kávyayā* is accented, whereas here it is not. I have no explan.) The identification with the Maruts seems reasonable, though of course nothing about the phrase uniquely identifies the Maruts. However, note that in vs. 11 below they are addressed as *yuvānaḥ kavayaḥ*, with two of the terms found in V.57.8.

As for *jágata sthātar* in d, most tr. leave the referent unidentified (e.g., Ge n. 6cd “Wer der *jágataḥ sthātar* sein soll, ist nicht deutlich.”). Since the agent noun *sthātar-* in the sg. is otherwise used only of Indra, he seems a likely referent, esp. because he is also regularly associated with the Maruts. The added wrinkle is that there must be a pun here as well: the stem *sthātár-* (so accented) ‘the still’, always in the form *sthātúḥ*, is the regular formulaic partner of *jágat-* ‘the moving’; cf., e.g., in the next hymn, VI.50.7 *vísvasya sthātúr jágataḥ*. The poet’s urge to make this play on words may have contributed both to the contorted syntax and the unclarity of reference we’re trying to untangle.

The two referents of the vocative phrases, the Maruts and (if I’m right) Indra, are the joint 2nd pl. subjects of the verb in d. On this, I think, we are all agreed. But all standard interpr. follow the Pp. in taking *ā kṛnudhvam* as an unaccented, and therefore main clause, verb. (See, explicitly, Old “... ist offenbar Imperativ und hat Hauptsatzakzent.”) Under this interpr., something else has to be done with the *yásya gīrbhīḥ* of c. Most people supply material like mad: Ge adds a “towards him” in his main cl. and “you take pleasure” as verb in the rel. cl.: “machet alles was lebt, (dem) geneigt, an dessen Loblied (ihr Freude habt)” -- in other words, he manufactures most of the relative cl.; Scar similar, though he gives a wide choice of ways to fill out the rel. cl., thus demonstrating exactly how untethered this interpr. is: “durch dessen Lieder{ihr das könnt/ihr so heiss/ihr gepriesen werdet} (?)” Re, by contrast, eliminates the rel. cl. by folding it into a voc.: “(toi) par les paroles de qui (les chose se réalisent)” -- though it still requires extensive material to fill it out, again based on nothing.

My solution is to take *ā kṛnudhvam* as the verb of the rel. cl.: the Saṃhitā text of course reads *ākṛnudhvam*; it is only the Pp. that inserts a notional word space after *ā*. If we instead interpr. the sequence as an augmented imperfect, with accent on the augment, that is, *ā + ākṛnudhvam* (which does not require emendation), we do not have to fill out the rel. cl., because it already has an accented verb and that verb has an object: “you made the moving world your own.” This expression, *ā √kṛ* (middle) + INSTR. has close parallels, one containing *gīrbhīḥ* as here: cf. I.77.2 *tám ū námobhír ā kṛnudhvam* / X.6.5 *agním gīrbhír námobhír ā kṛnudhvam*. In both those passages I tr. “attract here with reverence (and hymns).” The difference in interpr. may be ascribed to the fact that in our passage here, the gods are subj. and the hymns come from the human poet, whereas in the two passages just cited mortals are also the subj. However, I may want to rethink both of those passages, to “make him [/Agni] your own.” Since in both passages Agni is the object, he does not have to be attracted here, since as the ritual fire he already *is* here.

Thus, by my interpr. all of cd is a rel. cl., dependent on a “for him” or the like to be supplied in the main cl. of ab. Note that both Ge. (“dem”) and Scar. (“für ihn”) must

supply the same beneficial dative, but they do so with the supposed main cl. verb *ā kṛṇudhvam* in d. Although my interpr. produces an awk English tr., it accounts for the Sanskrit considerably better than the alternatives. What it means for the gods to “make the moving world their own” I’m not sure -- but perhaps the usual RVic notion that human praises strengthen the gods for their heroic deeds and, perhaps in this case, that these praises bring the gods and their human worshipers (part of the “moving world”) into a closer relationship.

VI.49.7: After the syntactic pyrotechnics of the previous vs., this one comes as a relief. Because of the subjunctive *yamsat* ending the vs., I assume a modal value also for *dhāt* ending the first hemistich, as do Ge and Re.

VI.49.8: With most (Gr, Ge, Re), the publ. tr. takes the hapax *pāripātī-* as ultimately derived from $\sqrt{pā}$ ‘protect’, not *pāti-* ‘lord’. However, this analysis has grave formal problems not solved by Re’s cavalier “hapax tiré de *pā-* ... mais influencé, pour la forme, par *pāti-*”: it would be quite difficult to get a short-vowel root syllable *pa-* from $\sqrt{pā}$ by any normal derivational process. I now think that it *is* a cmpd. of *-pāti-*, even though Wackernagel’s ‘ringsum Herr’ (AiG II.1.260) reflecting this analysis is not terribly satisfactory. My change of heart was occasioned by considering the first verse in the first hymn of the Pūṣan cycle that begins soon after this hymn, VI.53.1, whose first pāda ends *pathas pate* “o lord of the path.” I would now tr. our passage, “the complete lord of every path.” It might be worth noting that VI.53.1 also enlists Pūṣan’s help with our *dhī-* ‘visionary thought’, as here.

Most take *vacasyā* as instr. sg. to the *-ā* stem *vacasyā-* ‘eloquence’, requiring a verb to be supplied (e.g., Ge “(preise ich)”). I instead interpr. it as 1st sg. act. to the denom. *vacasya-* (not otherwise found accented). There are two problems with my analysis: 1) the other two forms of the verb *vacasya-* are medial; 2) *vacasyā* is accented, though supposedly a main-cl. verb. The first is not too difficult: verbs of proclaiming/praising can be labile with regard to voice. The second is more problematic and might require me to follow the standard view, tr. “(I praise, vel sim.) with my eloquence.” But see disc. of *vardháyā* in 10b, where I suggest that our *vacasyā* here is indeed a verb and has borrowed its verbal accent from *vardháyā*.

The phrase *kāmena kṛtāh* is used of Pūṣan also in nearby VI.58.3–4.

VI.49.10: The form *vardháyā* can be either 2nd sg. impv. (Gr, Ge) or 1st sg. subjunctive (Re). I opt for the latter, partly because there seem to be no other unambiguous impvs. addressed to priests/mortals in this hymn; the priestly/poetic function is represented by 1st sg. (e.g., *stuṣé* 1a) and 1st pl. (e.g., *huvema* pāda d this vs.) verbs. It is also accented despite pāda-medial position, presumably because it lies in the center of a balanced construction: *rudrām dívā ... rudrām aktau* “Rudra by day ... Rudra by night.” Given this accented, non-initial, 1st sg. subj., I wonder if *vacasyā* in 8a is in fact also a verb (as in my first analysis, represented in the publ. tr.) and has borrowed its accent from *vardháyā*.

Despite Ge’ and Re’s comments, considering ‘separately’ (‘allein’, ‘à part’) for *īdhak* only to reject it, this must be the correct tr. In his n. 10d Ge cites II.33.4, where we hope not to anger Rudra by invoking him with an invocation shared with another god or gods. See comm. ad loc. The fact that Rudra’s sons are addressed in the next vs. (11), as

well as namelessly in 6cd (see above), might make the need for a separate invocation of Rudra all the more acute.

VI.49.11: The interpr. of *varasyā-* as somehow a deriv. of *vāra-* ‘wish’, found, e.g., in Gr, Ge, and AiG II.2.244, is contextually understandable: Ge’s “Kommet ... zum Bittgesuch des Sängers” makes more immediate sense than my “come hither in response to the singer’s longing for space,” with “in response to” smuggled in to make the sentence somewhat more parsable. But there is no *vāras-* to $\sqrt{v\bar{r}}$ ‘wish, choose’, whereas *vāras-* means ‘wide space’, something that RVic poets often express a desire for. Re hesitates (his word), but opts for ‘desire for space’ and adduces the quite apposite I.181.9 *varivasyā gṛṇānāḥ* “singing (to you) with a desire for space,” comparable to our *gṛṇatō varasyā*.

The causal relationship between c and ab, suggested by *hí(c)*, is not straightforward. But in its only other occurrence (IV.51.3), *acitrā-* refers to a *place*, one without brightness, therefore by implication sterile and lifeless. Thus the desire for (positive) space expressed in b is contrasted with (negative) space that the Maruts can, nonetheless, bring to life.

I don’t understand the point of d.

VI.49.12: This vs. contains two exx. of case disharmony between simile and frame, one each in ab and cd.

Though Gr takes *ájā* as a 2nd sg. impv., both Ge and Re interpr. it as a 1st sg. subjunctive, as do I. This would bring the count to three in this hymn, by my interpr. (8a, 10b, 12b).

This verb takes a straightforward acc. obj. *yūthā* ‘herds’ in the simile, as well as an adverbial acc. goal *ástam* ‘home’. But in the frame it lacks an overt obj.: I supply ‘praise’, Ge ‘Lied’, Re ‘mon hymne’. And the goal is the personal dative of the divinity (*vīrāya*, etc.).

The mismatch between simile and frame is greater in cd, and once again the simile is the more straightforwardly expressed. The poet exploits the syntactic ambiguity of intrans./trans. *-āya-* formations, in the form here of the redupl. aor. *pīspṛsati* $\sqrt{spṛs}$ ‘touch’, meaning both ‘make X [acc.] touch Y [acc./loc.]’ and, notionally passive, ‘make Y [acc.] touched by X [instr.]’. The simile uses the latter construction: “cause the firmament (acc. *nākam* = Y) to be touched by stars (instr. *stíbhīḥ* = X). In the frame the X is the “inspired words” (*vīpaḥ*, acc. pl.) and the Y is the body (*tanvì*, in the loc., an alternative case to the acc. in this construction). Both words and body are limited by genitives, referring to the poet (*vacanāsyā* ‘of the speaker’) and the god (*śrutāsyā* ‘of the famed one’). For further disc. of the passage and of the phenomenon in general see my “Case Disharmony.”

Our poet further muddies the waters by reversing the more common relationship between forms of \sqrt{vip} and \sqrt{vac} . The stem *vacanā-* ‘speaking, speaker’, referring to a person, is attested only 3x in the RV, whereas *vācas-* ‘speech’ is ubiquitous; the root noun *vīp-* ‘inspired (word[s])’ is not uncommon, but is far outnumbered by the stem *vīpra-* ‘inspired poet’. So we might have expected the phrase **vīprasya vācaḥ* “the speech of the inspired poet” (cf., though not with a gen., VIII.61.9 *vīpraḥ ... vācaḥ*), not *vacanāsyā vīpaḥ* “the inspired words of the speaker.”

VI.49.13: Another syntactic trick, though far less complex than in the last vs. The first half-vs., describing Viṣṇu's cosmogonic deed, is couched in the 3rd ps., with the pf. *vimamé* 'he measured out', but in the 2nd half, expressing our present-day desire to live under Viṣṇu's protection, the god is in the more intimate 2nd ps., in the phrase *tásya te*, lit. 'of this you,' where *tásya* provides the syntactic pivot to 2nd sg. enclitic *te*. On such doublings see my "sa figé."

For "hard-pressed Manu" (*mánave bādhitāya*), see the same phrase in VII.91.1, where, as here, a god (or gods) perform(s) a cosmogonic deed that allows the sacrifice to be instituted.

VI.49.15: The publ. tr. should read "the herdsman of great truth," since *gopām* modifies *rayīm*.

With Old I read *cakrāmāma*, a pf. subj., not *ca krāmāma*, pace Klein (DGRV I.188, 190). This reading is accepted by Kü (147 and n. 146).

I take *kṣáyam ... yéna ... abhí cakrāmāma* as an explicit "X and (which) Y" construction on grounds of content: I do not think our "peaceful dwelling" (*kṣáyam*) is the means by which we will trample and destroy our enemies. Instead I think we have the usual RVic implicit contrast between war and peace (*yoga-kṣemá-* in one rendition), with 'peace' expressed by a noun and war by an elaborate rel. cl.

VI.50 All Gods

VI.50.1: The hymn begins with the 1st ps. mid. *huvé* 'I invoke/call upon', like the last hymn, which began (VI.49.1) *stuśé* 'I will praise'.

On the ill-assorted trio Varuṇa, Mitra, Agni, see comm. ad VI.49.1. Here the phrase is in the acc., but likewise in a Triṣṭubh cadence. The expected Aryaman is added in the next pāda.

VI.50.2: It's not clear to me which gods Sūrya is supposed to pursue. The last descriptor, *agnijihvāḥ* 'having Agni as tongue' suggests it is, in fact, all the gods, since they all receive the oblation through him.

Note the juxtaposition of *ṛtá-* and *satyá-*; a similar of more elaborate ex. is found in the next hymn, VI.51.10 *ṛtādhītayo vakmarājasatyāḥ*.

VI.50.3: There is a surprising lack of agreement about the construction of this vs. Both Ge and Re take ab as a separate clause, which requires them to supply a verb for it ("ihr ... besitzt"; "qui avez"). In cd they also both construe *mahāḥ* in the *yathā* cl., but this is impossible, since it precedes the main verb *karathaḥ*. (I take *mahāḥ* adverbially, as often and in 6d below [by my account].) See Old for a rather fussy disc. of various possibilities in cd. I do not see the problem with my interpr., which has *karathaḥ* in c govern the accusatives in ab, with a *yāthā* purpose cl. taking up most of cd (starting with *vārivaḥ* right before the subord. conj.) This cl. lacks an overt verb, but an existential subjunctive *ásat* 'there will be' is easy to supply. (All interpr. must do something like this, unless they emend to accented **káarathaḥ*.) Ge (n. 3cd) worries about the tautology of ... *no, asmé* ..., which he avoids by construing *naḥ* with *mahāḥ* ... *vārivaḥ* and *asmé* with the NP of d

(“Machet, dass uns grosse Freibahn werde (und) unserem Wohnsitz Befreiung von allem Übel”)(sim. Re), but I find the pronominal doubling far less troublesome than extracting a piece of the subord. clause and fronting it around the main verb, as the Ge/Re interpr. requires. However, it would be possible to construe the two pronouns separately but within the confines of the *yáthā* clause: “so that there will be for us a flawless wide realm for our peaceful dwelling” or, perhaps better, “... for us to dwell peacefully.” For a similar doubling, see X.99.8 and comm. ad loc.

Since the shelter and wide realm we wish for are physical in nature, on the basis of my reinterp. of *anehās-* (comm. ad X.61.12) I would now substitute “flawless” for the more morally focused “faultless.” See also the “flawless path” in the next hymn, VI.51.16.

VI.50.5: Both Ge and Re take b as an indep. cl., while I interpr. it as a dependent clause parallel to pāda a, likewise hanging off *yéṣu*. Either is grammatically possible, since the verb of b *síṣakti* is pāda-initial and could owe its accent to that position. And in fact there’s little actual difference in content between the two interpr., because both Ge and Re sneak the Maruts into the pāda anyway.

The more crucial question in b is the meaning of the hapax *abhyardhayájvan-*. Most take it as expressing a hostile, oppositional, or at least separated relationship, e.g., Ge “Gegenverehrer,” AiG II.1.67 “gesondert opfern,” Re “(dieu) recevant un sacrifice distinct.” Certainly by the time of the BYV Saṃhitās, *abhyardhá-* (or *-ás*; see below) is used to mean ‘apart from, separated from’; cf., e.g., MS II.5.4 (52: 14) ... *yó rājanyò ‘bhyardhó viśás carati* “a Rājanya who goes about apart from his clan” (/ Amano “... der Rājanya, der von seinem Volk abseits wandeln”). (For Amano’s interpr. of the form as an adv. in *-ah* and her detailed discussion of its use in this textual stratum, see her n. 2500 [that number is not a typo!].) However, in the RV *árdha-* (and *ardhá-*) refers rather to a ‘half’ or a ‘side’. In X.26.5, a passage adduced by Ge, Pūṣan is described as *prátyardhir yajñānām*, which even Ge tr. as “der bei den Opfern (mit den Göttern) halbpact macht” and Sāy. glosses *ardhabhak* ‘half-sharer’. The point, I think, is that Pūṣan is almost always in partnership with other gods, indeed often in dvandvas like *indrā-pūṣán-* (cf. nearby VI.57.1), *somā-pūṣán-*, and the only sacrifices he is likely to receive will be shared with (an)other more prominent god or gods. In a way, this characterization of Pūṣan is the exact opposite of Rudra in the previous hymn (VI.49.10), where it is emphasized that Rudra receives a separate invocation, apart from the other gods. For Pūṣan’s relationship to the Maruts, see nearby VI.48, where the Pūṣan vss. (14–19) are sandwiched between Marut vss. (11–13, 20–21) and Pūṣan is compared to the Marut troop (VI.48.15).

Compared to later texts, the gerund is comparatively rare in the RV; the *-tvā* gerund is found only 21x. The configuration of pāda c shows that the gerund phrase (*śrutvā hávam marutaḥ*) must constitute a separate syntactic unit here, since the subord. conj. *yád* occurs only after the whole phrase, and it is followed by 2nd-position part. (*d*)ha.

VI.50.6: The publ. tr. omits the *íd*. I might emend it to “Just he will hear the call.”

In cd I take *ca* as “inverse” *ca* (X *ca* ... Y, rather than normal X ... Y *ca*) connecting the two very similar participial phrases ... *úpa ca stāvānaḥ*, ... *úpa mahó*

gr̥nānāḥ# “being praised and being hymned.” Klein (DGRV I.122–23, 125, 173) by contrast takes it as conjoining the verbs of the two clauses, *śrávat* and *rāsat* in the configuration #*śrávat* ... *úpa ca stāvāno, rāsat* ...), but placed after the preverb of the verbal lexeme in the 2nd clause (that is, by his interpr. *úpa* ... *rāsat*). Since *úpa* never appears otherwise with $\sqrt{rā}$ but is quite common with \sqrt{stu} , this interpr. seems unlikely.

As noted above (ad 3c), I take *mahāḥ* as the adverbially used -s-stem, against the standard view that it is a masc. acc. pl. (to the stem *māh-*) modifying *vājān*. The standard view is not impossible, but given the paired *úpa* ... PART construction, word order favors taking *mahāḥ* as part of the 2nd participle phrase.

VI.50.8–10: These three vss. contain a series of perfect optatives, *jagamyāt* (8b), *vavṛtyāt* (9b), *jagmyātam* (10a), but they do not show any peculiarities of register or usage. The connection among the vss. is also signaled by *utá*, which opens the second two. Klein (DGRV I.424) notes the co-occurrence of the “optative series” (he does not mention that they are belong to the pf.) and the *utá*s.

VI.50.8: With Ge and Re, I take the simile *uśáso ná prátīkam* as a nominative phrase, matching the subject Savitar. Since the dakṣiṇās are distributed at dawn and Dawn is therefore associated with munificence, her face (= her light) can be characterized as a discloser of valuables. However, it would also be grammatically possible to take it as acc., with Savitar disclosing valuables as if disclosing the face of Dawn, though I think this less likely.

VI.50.9: “within (the sphere of)” is an attempt to render the loc. *rātaú*, since “Might I always be in your giving” is hard to parse. Klein’s (DGRV I.422) “Might I be ever (present) at thy giving” is more elegant. I might emend the publ. tr. to “Might I always be (there) at your giving.”

VI.50.10: This vs. poses several syntactic problems. In ab the position of *aṅgá* speaks against taking the full hemistich as a single cl. (so, more or less, Klein DGRV I.422). Since *aṅgá* otherwise invariably takes 2nd position, it should not be found this deep in the clause; moreover the immediately preceding personal prn. *yuvám*, also encourages an interpr. as a new cl. Both Ge and Re do divide the sequence into two clauses, but both include *dhībhīḥ* in the 2nd clause -- which essentially defeats the purpose of the clause division, since *aṅgá* is still in the wrong position, just not as wrong as if the whole thing were one clause. Their solution is understandable because it could allow them to avoid taking *vīprā* as a predicated vocative. So Re “car vous êtes (donneurs) de pensées-poétiques, ô inspirés!” with *vīprā* as real voc. Ge’s interpr. seems to combine the worst of both worlds — including *dhībhīḥ* in the 2nd cl. despite the position of *aṅgá* and taking *vīprā* as a predicated voc. (see his n. 10b): “gerade ihr seid redebegabt mit (guten) Gedanken.” My interpr. limits the 2nd cl. to *yuvám aṅgá vīprā*, which imposes a predicated voc. but honors the position of the particle.

The second hemistich is even more problematic. The standard tr. interpret the sequence as a *clausal* simile / frame construction, with different verbs in the simile and the frame, (*a*)*mumuktam* (simile) ... *tūrvatam* (frame), and *ná* marking the first *clause* as a simile. Cf., e.g., Klein (DGRV I.422–23) “As ye freed Atri from great darkness, (so)

cause (us) to pass out of difficulty ...” (my emphasis). But such constructions *do not exist* in the RV among the hundreds and hundreds of examples of similes in that text: similes are only nominal, and if a verb is implicitly part of it, it is held constant between simile and frame. See my detailed disc. in “Case Disharmony.” The only possible examples that approach such a clausal construction are those providing a model and the action to be based upon it, but the very few such exx. we have involve *yáthā ... evā* “just as ..., even so ...” — as in a childbirth spell: V.78.7 (cf. also 8) *yáthā vātaḥ puṣkarīṇīm, samīṅáyati sarvātaḥ / evā te gārbha ejatu* “As the wind sways a lotus-pond in every direction, so let your unborn child stir.” These conditions are not met here, and I think it a methodologically dangerous practice to posit an entirely unprecedented construction on the basis of a single ambiguous passage.

The way to a solution begins with the first verb, which is realized as *amumuktam* in the Pp. The only evidence for the augment is the avagraha in the printed Saṃhitā text(s): *’mumuktam*; the sandhi conditions do not require the augment. In fact Gr lists the form as unaugmented, and Old gets it right (in my view) the first time: “wie den Atri von der grossen Finsternis, (so) löset (mich ...).” But he then, unfortunately, has second thoughts, and although he recognizes that “*ná* nicht Satzvergleichungspartikel ist,” he decides that *ná* can sometimes overstep its boundaries and function like a clausal simile marker (not his term). The single ex. he cites (VII.58.3), however, does not show what he claims it shows, at least in my opinion, and it is also not like our passage, in that even by his interpr. the two clauses would have the same verb (in diff. mood and voice: *ví tirāti, ... prá ... tireta*). Whether Ge, Re, and/or Klein were influenced by Old’s arguments or not, they all follow the clausal interpr., which I hope I have shown is unacceptable.

My own interpr. is identical to Old’s first pass, with impv. *mumuktam* and a supplied ‘me’ as obj., parallel to *átrim* in the simile. As for the second verb, I follow Gotō (1st Kl., 163 n. 258) in taking *tūrvataṃ narā* as a parenthetical clause. This allows the abl. phrase at the end of d, *duritād abhīke* “from difficulty at close quarters,” to be construed with *mumuktam*, parallel to the abl. *mahás támasaḥ* “from great darkness” in the simile. However, if the parenthetical interpr. seems too awkward, it might be possible to take d as a single, separate cl.: “be victorious from difficulty at close quarters,” though *tūrv* seems not to take an abl. elsewhere.

VI.50.11: The only problems in this vs. are found in pāda d: the accented verb *mṛlātā* and the immediately following *ca*: the verb because there is no obvious reason for its accent, the *ca* because it’s not clear what it conjoins. To begin with the second, Klein (DGRV I.82), flg. Ge, takes *ca* as conjoining the impv. *mṛlātā* with the pres. part. *daśasyántaḥ* beginning c, assuming an implicit imperatival expression *daśasyántaḥ *sta* “seid gefällig und erbarmet euch” / “(be) favoring and have mercy.” Re, by contrast, seems to assume that the *ca* conjoins the last in the series of nom. pl., *divyāḥ pāṛthivaso, gójātā ápyāḥ*, judging by his “... et (vous enfin) nés des eaux,” though this would require an unprecedented displacement of *ca* to the right, with the verb inserted between the last nominal term and the *ca*. Between these two ad hoc solutions, the first seems distinctly better than the 2nd. To register it, I should perhaps emend the tr. to “(Be ones) showing favor ... and be merciful,” despite the clunkiness.

The verbal accent is -- or may be -- less of a problem. If we do assume that the *daśasyántaḥ* stands for an imperatival clause, then *mṛlātā* would begin a new clause.

Although neither Ge nor Klein mentions the accent on the verb, it would be an argument in favor of their analysis. However, if we take the participle simply as the participle it appears to be, then it modifies the implicit subject of *mṛṛátā* and the verb should not be accented. There could be another way to get the accent in that case, though it seems artificial (or rather, even more artificial than the other suggestion). The sequence of four nom. pl. noted above is divided across two pādas, as shown by the comma in the quoted sequence. Only the first two have to be nominatives rather than vocatives: *divyāḥ* because of its non-initial accent, *pārthivāsaḥ* because it is accented in the middle of a pāda. The following two, the first two words of d, *could* be vocatives, accented because they are initial in the pāda. They would then match the undoubted voc. *devāḥ* at the end of the same pāda. If *gójātā āpyāḥ* are vocatives, then the immediately following word *mṛṛátā* would need to be accented after these extra-sentential elements. However, this analysis requires the unappealing step of assuming an unsignaled change of case from nominative to vocative in the middle of an apparently unitary sequence.

After all this syntactic fuss, we may overlook the interesting question, who are the “cow-born” gods (who appear elsewhere, in similar sequence [VII.35.14, cf. also X.53.5]). Quite possibly the Maruts, an offhand suggestion of Re’s. Remember their cow-mother Pr̥ṣni.

VI.50.13: On the phrase *tvāṣṭā devébhir jānibhiḥ*, which, with Re, I consider to be the equivalent of “with the wives of the gods, with the divine wives,” see comm. ad II.36.5.

VI.50.15: On the phrase *māma tāsya* as a probable play on the PN Mamatā, see comm. ad VI.10.2.

The phrase *vāsavo ādhṛṣṭāḥ* returns from 4b, where it refers to the Maruts (unless, with Ge and Re we take *vāsavaḥ* there, and here, as referring to a separate group, the Vasus). There it was immediately preceded by *hūtāsaḥ* ‘invoked’, here by *hutāsaḥ* ‘offered to’, an understated but clever variation. In this context, the final totalizing vs. of the hymn, the “unassailable good ones” should probably refer to all the gods, in a gender-inclusive pairing with the *gnāḥ* ‘(divine) ladies’ -- an unusual bow to the female side.

VI.51 All Gods

For the structure of this hymn (or, rather, composite of two hymns), see publ. intro.

VI.51.1: The full realization of the dual dvandva *mitrā-vāruṇā-* as two independent dual genitives separated by a pāda-break and several words -- *mitráyoḥ ... vāruṇayoḥ* -- is a fine demonstration of the reality of this type of compd. in the Sprachgefühl.

I do not understand the pāda-final *ā(m̐)*. Generally in this position *ā* follows an abl., reinforcing the meaning “von ... her” (see Gr. col. 169), or a loc. But *mitráyoḥ* is of course not an abl., and, though it could grammatically be a loc., by sense it can only be a gen. It seems pleonastic -- perhaps added to allow a Triṣṭubh cadence.

VI.51.2: *vidátha-* is here not ‘ceremony of division, rite’, but rather ‘division’ itself, referring to the divisions of the gods. Ge aptly adduces VI.52.15 in the next hymn, where the gods are born in 3 different localities.

Pāda b is a 12-syllable Triṣṭubh, which can be fixed by reading **devāñ* for *devānām* -- an archaic (or truncated) gen. pl. likely found in other passages containing *jánman-* (I.71.3, VI.11.3, X.64.14). The restoration of **devāñ* is supported by Lanman (Noun Infl. 354, Arnold 101, 307, Old, etc.). On this form see disc. esp. ad X.64.14. The full phrase, *devāñāṇ jánma* is found in this same hymn, VI.51.12, where it is metrically impeccable; the change of **devāñ* to *devānām* in our vs. can be ascribed to the influence of the phrase in 12.

Old strenuously objects to taking *sanutár ā ca* as a conjoined phrase of directional elements (flg. BR), and Re agrees with him. I do not see the problem; *ā* is of course generally a preverb and less commonly an adposition, but in these usages it is clearly directional/locational, and conjoining it with another such element seems well within RVic syntactic bounds, even if the other word is more clearly adverbial. Moreover, neither Old nor Re gives any indication of what to do with *ca* if it's not conjoining the two. I therefore follow Ge (flg. BR) and Klein (DGRV I.63). (The case of Re is a bit complex: he expresses his objections to the BR view in the notes to the Viśvedevāḥ hymns in EVP IV, but in the tr. of those same hymns in EVP V he tr. as a conjoined phrase “au loin et au près.” Either he forgot or he changed his mind.)

VI.51.3: The opening of this vs., *stuṣé*, is identical to the beginning of VI.49 and very similar to the beginning of VI.50 (*huvé*), both of which vss. (VI.49.1, VI.50.1) contain the divine list discussed in the next paragraph.

We have already had occasion to note (comm. ad VI.49.1, 50.1) the unexpected trio Varuṇa, Mitra, Agni, in which Agni substitutes for expected Aryaman. Here we have a different third member: Aditi, Mitra, Varuṇa (*áditim mītrām váruṇam*), opening rather than closing the pāda. Of course, as their mother, Aditi has a closer connection to Mitra and Varuṇa than Agni does, but in fact she is rarely found in their immediate company: only in the voc. phrase II.27.14 *ádite mītra váruṇotá* also pāda-init. and in a larger list of gods in V.46.3. In our passage the missing Aryaman is added at the beginning of the next pāda (3c), just as he was added in the pāda (c) immediately following the list in VI.50.1b. Note that in VI.50.1 *áditim* precedes the trio in the first pāda of the vs. (VI.50.1a).

In pāda a I take *maháḥ* as an acc. pl., contra the standard tr. (Ge, Re, Scar 291) “herdmen of great truth.” Either is of course grammatically and semantically possible, but I was influenced by the undoubted acc. pl. *maháḥ* also referring to the gods in the next vs. (4b) as well as 9d.

The *vah* in pāda a is ambig. With the standard tr. (Ge, Re, Scar 291), I take it as referring to the gods in the 2nd ps. On the other hand, references to the gods have so far been in the 3rd ps. and will remain so in the next vs.; 2nd ps. address only appears in vs. 5. So it would be equally possible to take *vah* as an instance of the common practice of a poet addressing his priestly comrades, “I will praise, for you/on your behalf, the great herdsmen of truth ...” Nothing much hangs on the difference, nor is there any way to determine which is correct.

Note that *ádabdha-dhītīn* ‘having undeceivable inspired thoughts’ at the end of c echoes *áditim* beginning b, despite the differences in lexicon and even segmentation. It also is responsive with *rtá-dhītayah* ‘having truth as inspired thoughts’ in 10d, and the two form part of the ring around the omphalos vss. 6–7. While *ádabdha-* is taken up by *ádabdhān* in 4a.

For *sadhanyāḥ* I now favor the scenario sketched by Scar (291) as an alternative to the analysis as belonging to a root noun cmpd. *sadha-nī-*. See comm. ad IV.1.9. As noted there, Scar begins with a *sa-dhāna-* ‘common wealth’ to which a **sadhanī-* ‘sharer in common wealth’ → ‘companion’ could be formed. He then suggests that because of a perceived connection with $\sqrt{nī}$, the stem was reinterpreted and reformed as *sadhanī-*. Although this requires more machinery than simply taking it as a root noun cmpd. to $\sqrt{nī}$ in the first place, the semantics of that supposed cmpd. are somewhat troublesome; moreover the stem *sadhanitvá-* can be more easily derived by this route. MLW alternatively suggests that the stem is a *vrkī* deriv. to *sadhāna-*. This would account for the morphology more easily than what was just sketched; however, it would have to be masc. *vrkī* form. Not impossible of course (cf. *rathī-*), but one more required assumption.

VI.51.4: I follow Ge (as well as Th Fremdling, Oberlies I.344, etc.) in rendering *suvasanā-* as ‘good dwelling’, against some potentially good arguments to the contrary. The stem is attested only once elsewhere, IX.97.50 in the phrase *vāstrā suvasanāni*, where it clearly refers to good garments (\sqrt{vas} ‘wear, clothe’), and the base of our cmpd, *vāsana-* (a hapax), likewise only means clothing. Citing these words, as well as *vastra-dā-* ‘giving garments’ (V.42.8; like our phrase *suvasanāsyā dātīn*), Re holds firm to “donateurs de bonne vêtue” (so also Gr). But *sātpatīn* ‘lords of settlements’ in the preceding pāda supports a ‘dwelling’ interpr., and it would be easy to form such a deriv. to the well-attested root \sqrt{vas} ‘dwell’. (Note that the derivatives that would support the ‘clothing’ sense are found in that sense only once apiece, so do not seem well established enough to block such a formation.)

Ge construes *divāḥ* with *nīn* and take *kṣāyataḥ* absolutely: “die mächtigen Herrn des Himmels.” As in vs. 2, Re seems to have changed his mind (a phenomenon I know well; witness this comm.) between the comm. fascicle (EVP IV) and the tr. fascicle (EVP V): in the former he comments of *kṣāyataḥ* “emploi absolu,” but in the latter tr. “seigneurs résidants du ciel,” with *divāḥ* dependent on the participle. He evidently assigns the participle to ‘dwell’, though the participle of the root pres. to that root is only *kṣiyānt-*, while *kṣāyant-* belongs to *kṣāya-* ‘rule over’. (Curiously he correctly interpr. the finite *kṣāyatha* in 7c as “vous réglez.”) Ge (etc.) must base their interpr. on the existence of the phrase *divó nārah / nīn*, but though this collocation is attested elsewhere (e.g., V.54.10, VI.2.3, VI.2.11=14.6), it is not a particularly common expression, and $\sqrt{kṣi}$ ‘rule over’ regularly takes a genitive, incl. in 7c *viśvasya hí kṣāyatha* “for you rule over all,” a phrase Re in fact cites in his comm.

VI.51.5: This vs. consists primarily of a string of vocatives, plus a couple of 2nd pl. impvs., so in one way it is quite straightforward. However, the accentual behavior of the vs., and particularly the vocc., is peculiar. The first pāda consists only of vocatives: two double names (Father Heaven, Mother Earth) and a single adjective (by word order belonging to the latter, but it is a root noun cmpd and its voc. is indifferent to gender). Each word in the pāda is accented (with voc. accent): *dyaùṣ pítāḥ pṛthivi mātār ādhruk*. The first three words of the next pāda are likewise vocatives: a name plus epithet and a different (pl.) name. Only the first of these is accented: *āgne bhrātār vasavaḥ*. The next word is an impv. *mṛlātā*, and it is accented after the extrasentential voc. phrase (cf. comm. ad VI.50.11, where this was floated as a possibility to explain an unusually accented verb

[the same verb in fact], though rejected). The third pāda also begins with three vocatives, one a two-word phrase, one an individual name, with only the first accented: *viśva ādityā adite*. I am completely puzzled as to why the first pāda differs from the next two. Old is also puzzled: “Behandlung der Vokativakzente befremdet, aber wir haben kein Recht zu rühren.”

The content of the vs. is otherwise banal. As Re points out, *viśva ādityāh* is a stand-in for *viśve devāh*.

VI.51.6: Pāda d must remain in the domain of *hī* in c, as shown by the accent on *babhūvá*, as is recognized by the standard tr.

The repetition of *yūyám* at the beginning of d is, I think, due not only to rhetoric but to the desire to make the ps./no. of *babhūvá* perfectly clear. The 2nd pl. act. pf. is surely the least well attested form of the act. perfect system (save for 1st du.), and it also has a highly under-characterized ending (-a), which has the misfortune to be identical to the ending of the best attested form in the pf. system, the 3rd sg., as well as the less well attested 1st sg. (For the relative strengths of attestation, a glance at Macdonell’s Vedic Grammar §485 will suffice.) In most pf. paradigms it would be distinguished from those forms by ablaut grade (e.g., 1st sg. *cakāra*, 3rd sg. *cakāra*, 2nd pl. *cakrá*), but here, because the pf. of *√bhū* doesn’t ablaut, only the accent separates it from 3rd (and 1st) sg. *babhūva*. This may be another reason that it was kept syntactically in the realm of *hī*, to require it to have an accent. It’s worth noting that this is the only 2nd pl. pf. to *√bhū* in the RV.

dákṣa- is ordinarily a noun, ‘skill’, but in the publ. tr. I was persuaded by the standard tr. to render it as an adj. ‘skillful’ with *vācas-*. This phrase also occurs in VIII.86.1 and, with a different derivative of *√vac*, in X.113.9 *dákṣebhir vacanébhiḥ*. In the latter I tr. as an adj. “with skillful words,” but in the former as two independent nouns “of skill and of speech.” I am uncertain which is correct. Re is quite stern: “*dákṣa-* est nécessairement adjectif ici et en plusieurs passages ...: inutile de chercher à éviter ici l’emploi, avec Gr., emploi qui est le seul substantif en skt cl.” The Classical Skt. usage is suggestive, but I am wary of the absolutist language of “nécessairement” and “inutile”: very few things in RVic interpr. are absolutely necessary. I would therefore allow an alt. tr. here: “you have become (the charioteers) of (our) skill and speech.” That vs. 9 contains a cmpd. containing the noun, *pūtá-dakṣa-* ‘of refined skill’, though modifying the gods, might support a ‘skill’ interpr. here, esp. as the ‘charioteer’ motif is found there as well.

VI.51.7: On apparently anomalous *mā ... bhujema* see comm. ad IV.3.13.

Re points out the rarity of the cmpd. *viśvádeva-* in the pl. referring to the All Gods (though to his X.125.1 should be added VII.35.11). At least in our passage the full voc. *viśve devāh* would produce a bad cadence.

VI.51.8: In this deliberately repetitive vs. (6 occurrences of *nāmas-*), it is difficult to render the repeated verbs *ā vivase* (a, d) in the same way. As the desid. to *√van*, *vivāsa-*, esp. with *ā*, means lit. ‘seek to win here’, hence ‘attract’, which is fine in pāda a. But with the object “committed offense” (*kṛtām énaḥ*) the sense is harder to manipulate. I take it as ‘win back’, hence ‘redeem’; Ge ‘abbitten’ (beg pardon, apologize), with no attempt to connect this tr. to the literal meaning or to the other occurrence of the verb in the passage;

Re makes good use of his usual parentheses: “je l’attire (pour le détruire),” which evades the problem.

VI.51.9: This vs. recalls the *nāmas-* vs. (8), with its two occurrences of *ā vivase*, one of which is construed with instr. *nāmasā*. Here we have the verb form *ā name*, which imitates *ā vivase* in preverb and med. 1st sg. form, but with the verbal root from which *nāmas-* is derived, *√nam* ‘bow, bend’. It also is construed with an instr. of the *s*-stem, *nāmobhiḥ*.

VI.51.10: Judging from the repeated *té* and the *u* that follows the 2nd one (strikingly in the middle of a pāda), we should be dealing with two parallel clauses, one nominal, one verbal. The accent on *nāyanti* shows that the 2nd clause is in the domain of the *hí* in pāda a. Ge renders as two clauses, but does not seem to keep the 2nd in the *hí* domain; Re ignores the *té u* and tr. as a single clause. There does not appear to be a main clause in the vs., unless we want to construe cd as a nominal main cl. (“they are of good rule ...”).

sukṣatrā- reprises the same word in 4c, and as noted ad vs. 3, *ṛtā-dhīti-* matches *ādabdhā-dhīti* in 3c. The two are part of the supportive ring around the omphalos vss. 6–7.

Once again we meet the trio Varuṇa, Mitra, Agni (see comm. on vs. 3, and previous vss. noted there), but Aryaman is nowhere in the vicinity and Aditi only in a rather random list in the next vs. (11).

Consonant with the focus on truth in this hymn, pāda d is framed by the words *ṛtā-* and *satyā-*, the former as first member of a cmpd, the latter as last member. As was just noted, *ṛtā-dhīti-* is a well-formed bahuvrīhi with a parallel already in the hymn. But *vakma-rāja-satya-* is distinctly peculiar. For one thing, it has three members, which is unusual for the RV. But more striking is the final member *satya-*, whose relation to the prior (complex) member *vakma-rāja(n)-* is unclear. (Curiously, AiG doesn’t touch this cmpd.) Its only possible parallel is the even stranger *ṛtā-jāta-satya-*, with both *ṛtā-* and *satyā-*, in IV.51.7 (see comm. ad loc.). Gr glosses “dem Lenker der Gebete treu oder willfährig.” Ge treats as two separate words “die beredten Könige, die wahrhaften,” without commenting on this disjunction (or does he think it’s a dvandva?), though he cites Sāy. as interpr. “wahrhaftig gegen die Herren der Rede d.h. die Sänger,” which is also reflected in Gr.’s gloss. Old’s “in Wahrheit Könige der Rede” and Re’s “qui sont vraiment les rois de la parole (sacrale)” are in essential agreement, and the publ. tr. follows them -- though I feel as though we’re all missing something.

VI.51.11: The publ. tr. seems to suggest an etymological relationship between “earthly realm” and “Earth,” but in fact they are lexically distinct: *kṣāma* and *pṛthivī*, though adjacent.

The list of strengtheners in ab is oddly assorted, but up till the last term they are all divinities or (*pṛthivī*) capable of being so configured; I therefore don’t understand the presence of the “five peoples” (*pāñca jánāḥ*), who are humans. Ge’s ref. to X.53.4 is no help (at least to me); see now comm. ad loc.

Both Ge and Re take the injunc. *vardhan* as modal “may they / let them strengthen.” Certainly the impv. *bhāvantu* in the 2nd hemistich would support this interpr., but in general modal readings of injunctives are rather rare.

The 2nd hemistich contains 5 cmpds with *su-* as first member, all but the last bahuvrīhis, as Re points out. The odd-man-out is *sugopāḥ* ‘good herdmen’. All 5 have accent on the 2nd member.

VI.51.12: As disc. in the publ. intro., this is the final vs. of the first hymn in this composite group and as such summarizes the just-concluded hymn and asks for divine favor, naming the poet, or rather his family.

The grammatical identity and the use of *nāmśi* is uncertain. Gr labels it as an aor. (also Wh Rts), 1st sg. middle, and this interpr. is reflected in Ge’s and Re’s tr. -- though both add a modal feature (“möchte ich ...,” “je voudrais ...”) that would again be somewhat unusual for an injunctive. Lub also groups it with the root aor. and calls it an injunc. but with ? (By contrast Hoffmann won’t commit to an analysis [219].) In one sense a finite aor. is the most likely interpr., but if so, we must explain the accent on what appears to be a non-initial main-clause verb. The hemistich would also switch from 1st ps. in this pāda to 3rd ps. in the rest of the vs. (*bhāradvājaḥ ... yāti ...*), and though RVic discourse is certainly capable of that, it’s one more anomaly. The publ. tr. follows Old’s preference for Ludwig’s interpr. of the form as an infinitive. In either case (finite form or infin.) it is, as Old says, “auffallend gebildet.” I take it as a loc. inf. with a purpose function, though I realize that this is ad hoc.

In the context of later śrauta ritual, the application of *hotā* and *yājamānaḥ* to the same individual would be strange. But the ritual roles so distinct in middle Vedic śrauta texts are by no means clearly parceled out in the RV, and in particular *yājamāna-* does not usually identify a particular ritual role but acts as an attributive participle, as I think it does here.

VI.15.13–15: As noted in the publ. intro., I consider the remaining vss. to belong to a different hymn (or hymns?), appended to the unified, well-structured hymn found in vss. 1–12. Vss. 13–15 are unified by their meter, including an unusual variant of Uṣṇih with the configuration 8 8 / 8 4; see disc. ad vs. 13. Whether vs. 16, in Anuṣṭubh, belongs to this set or was independently appended I don’t know, but it certainly has a “final” feel to it.

VI.51.13: This first vs. of the extra material has various lexical ties to the first hymn: *vr̥jinām*: 2c *vr̥jinā*; *satpate*: 4a *sātpatīr*; *ripūr*: 7d *ripūḥ*, which might help explain why it (and the following two vss.) were attached here.

Ge attaches *daviṣṭhām asya satpate* to ab and begins a new cl. with *kṛdhī*: “Schaffe gute Fahrt.” I assume that one of his motivations is the accent on *kṛdhī*, which appears to be in the middle of a pāda. And he may feel that making “easy passage” (*sugām*) for a criminal would be contrary to expectation. However, he seems to ignore the *asya* -- at least I find nothing in his tr. that corresponds to it. The accentual problem can be easily resolved: the three vss. 13–15 seem to have an 8 8 / 8 4 structure, rather than 8 8 / 12. On this analysis of the meter, *kṛdhī* starts a new pāda and should be accented. In vs. 14 *vīko hī śāḥ* is a new clause and nicely fits a separate pāda, and in vs. 15 *gopā amā* is also syntactically separate.

Vs. 15 also supports my interpr. in another way: *kārtā naḥ ... sugām* “make good passage for us” is syntactically parallel to my interpr. of 13 ... *asya ... kṛdhī sugām*

“make good passage for him,” with *naḥ* corresponding to *asya*. As for making good passage for a criminal, the point is to get him as far away as fast as possible, and good passage will accomplish this faster than bad.

(Re’s interpr. is overly complex; though he does find space for the *asya*, he does not deal with the accented verb. I won’t treat it further here.)

VI.51.14: The unusual position of *hí*, normally a 2nd position element, is due to immediately following *kam*. For whatever reason (and I don’t know it), *hí kam* is a phrasal unit, whether it occurs in expected 2nd position (I.98.1, II.28.8, VIII.11.10) or not (VIII.44.24, IX.49.4, X.100.5). II.37.5 may provide a transition between the two, since the *hí kam* sequence is not pāda-initial there, but it is in 2nd position in its clause.

The standard treatments (Gr, Ge, Re) take *vāvaśúḥ* to $\sqrt{vaś}$ ‘wish for’, but Kü (477–80) has argued persuasively that morphological factors favor instead a connection with $\sqrt{vāś}$ ‘bellow’ -- though he allows for a secondary contamination from the former root for a sense “sehnsüchtig brüllen.” I am in complete agreement. The most salient feature of the pressing stones is their noise, and so bellowing for Soma’s companionship like the bovines that are the usual subjects of $\sqrt{vāś}$ makes perfect sense.

See comm. ad vs. 13 for the four-syllable pāda consisting of the nominal sentence *vīko hí śāḥ*. As I argued in my 2009 “Function of Animals in the RV” (Paris animal vol., 206–9, esp. 208), the wolf is a cross-category in RVic classification, and this statement is a quasi-legal declaration that a particular human evil-doer is an outlaw -- with parallels in other early Indo-European traditions.

VI.51.15: In the second hemistich *ādhvan* ‘on the road’ and *amā* ‘at home’ are contrastive, as Re points out. The brief tag *gopā amā* must be a separate clause: both Ge and Re supply an imperatival “be,” as do I. Again clausal division supports the metrical division suggested ad vs. 13.

VI.51.16: One possible arg. for taking vs. 16 with the three that precede, despite their metrical difference, is that *s^uvastigām* in b is reminiscent of *sugām* in 13d and could form a little ring. But I’m not at all certain this is sufficient.

On the basis of my reeval. of *anehās*- (see comm. ad X.61.12) I would now substitute the tr. “on the flawless path,” since our desire is for a physically perfect path, not a morally blameless one. See also comm. ad VI.50.12.

VI.52 All Gods

For the structure of the hymn, see publ. intro.

VI.52.1: The instr. of ab, in two semantic sets -- Heaven and Earth, sacrifice and ritual labors -- apparently are the entities that the speaker swears by.

The vs., at least its 2nd hemistich, has a slangy feel -- with the unusual phonology of the root \sqrt{ubj} ‘crush’ and the lexeme *ní√hā* ‘be bent double’ (in my rendering; see comm. ad VII.104.10), found elsewhere only in a curse in the Anhangslied VII.104.10.

The agent noun *yastár*- seems like a potential candidate for the role of technical term for ‘Sacrificer’, which was rejected in favor of *yájamāna*-.

VI.52.1–2: It is unfortunately impossible to capture in Engl. the play between *ānu* √ *man* ‘concede’ (1a) and *āti* √ *man* ‘d disdain’ (2a), with the further echo of *āti* in *atīyājā-* (1d).

VI.52.2: *nīnitsāt* is an unusual formation: a subjunctive to a desiderative. It may lend immediacy to the action, which is to be taken against a formulation that is *being performed* (note the pres. part. *kriyāmānam*).

Old, Ge, and Re all take *vr̥jināni* as a nominalized adjective (“seine Falschheiten,” etc.), modified by or identified with *tāpūṃsi* (e.g., Ge “dem mögen seine Falschheiten zu Feuerflammen werden”), rather than simply as an adjective. It would be possible to tr. it adjectivally (“for him let there be twisting, scorching [flames]”). In the publ. tr. I chose to render *vr̥jināni* both ways, as a nominalized adj. (‘twisted [ways]’) and as an adj. ‘twisting’ characterizing the flames. In this way the punishment fits the crime. Note that *vr̥jinā-* was used twice in the preceding hymn, VI.51.2, 13.

VI.52.3: Ge (and to a lesser extent Re) takes the repeated *kīm aṅgá* as “why?” But this seems more insulting to Soma than seems wise if we are urging him to strike our enemies. I take it rather as marking a series of solemn rhetorical question setting out the reasons why Soma should come to our aid.

VI.52.4: Although this vs. begins a new ṛca, it continues the series of pres. participles that bring a vivid immediacy to the poet’s bids for help: *kriyāmānam* (2b) ‘being performed’, *nidyāmānam* (3c) ‘being scorned’, and here *jāyamānāḥ* (4a) ‘being born’, *pīnvamānāḥ* (4b) ‘swelling’. The *dhruvāsaḥ* ‘steadfast’ in c brings all this ongoing action to a halt, and *devāhūtau* breaks the series entirely -- until the next vss.

VI.52.5: Another pres. part. *uccārantam* ‘rising’.

Ge and Re interpr. *devān* as a truncated gen. pl., which would be esp. unusual in pāda-initial position (pāda-final being at least arguably more plausible, since truncation and the adjustment of cadences in different meters are possible factors). Old seems to take this interpr. as tantamount to a moral lapse (“... scheint mir Verlassen des geraden Weges”). He takes it as the acc. pl. it appears to be, but construes it with *āgamiṣṭhaḥ* (“der den Göttern am besten mit Hilfe beispringt”). Although this is syntactically possible, it is semantically unlikely: Indra, who by the evidence of the repeated and expanded phrase in 6a is clearly the subject, is most welcome to come to *us*; I doubt if we care whether the gods hope for his arrival or not. My own solution is somewhat dodgy: I take *óhānaḥ* as a pass. part. ‘being lauded as’ with the venerable formulaic phrase *vásupatir vásūnām* “goods-lord of goods” as the title given by the laud (so far so good), with *devān* a loosely relational acc., almost an acc. of extent: “(lauded) over/across the (other) gods.” (Ge’s and Re’s interpr. of *vásupatir vásūnām* and *óhānaḥ* vary, and I will not detail them here.)

VI.52.6: The part. *pīnvamānā* is repeated from 4b, with a small twist of phraseology: Sarasvatī swelling *with* the rivers, rather than the rivers swelling as in 4b.

The syntactic status of the various gods in bcd is unclear. Are they all separate subjects of *āgamiṣṭhaḥ* (so Re)? Or should we supply other verbs? Ge supplies “sei” with cd, but keeps b with a, implicitly making Sarasvatī another subj. of *āgamiṣṭhaḥ*. Or is this

just the beginning of an All God list, with no predicates required -- or feeding into the next *ṛca* inviting the All Gods to come here?

VI.52.7–12: These two *ṛcas* (7–9, 10–12) are in Gāyatrī, and the first *ṛca* esp. is an elementary production, with almost no tricks (though see vs. 9). One wonders whether great swaths of RV-period poetry were similarly lackluster and therefore not generally preserved.

VI.52.9: This vs. consists of two 3rd pl. impv. clauses, ab and c. The 2nd is entirely straightforward, and the first is until the end, where we find a hemistich-final rel. prn. *yé*, clearly coreferential with the subj. of the impv. but difficult to construe: *úpa naḥ sūnávo gírah, śṛṇvāntu amṛtasya yé*. The only grammatical way to interpr. this is as a tag nominal rel. cl. *amṛtasya yé* “who (are) of the immortal one.” But this leaves the main-cl. subj. *sūnávaḥ* underdefined: it is not any set of sons that we invite to hear our hymns, but only the sons of the immortal one. But tag rel. clauses generally give additional, not necessary, information about their referents in the main clause, and so such an interpr. would leave the sentence oddly unbalanced. We cannot take the whole hemistich as a rel. cl. (“which sons of the immortal ...”), not only because the rel. prn. would be too deep in its clause, following both subject and VP, but also because impvs. do not occur in subordinate clauses in the RV. I think we’re dealing with a poet who knew about tag rel. clauses and wanted to try his hand at one, but didn’t know how they work. As Ge points out (n. 9ab), the substance of the cl. is identical to X.13.1 *śṛṇvāntu víśve amṛtasya putráḥ*. Given these considerations, I have not attempted to render the *yé* -- passing in silence over a journeyman’s lapse.

VI.52.10: The first hemistich here does assay a little figure: *ṛtā- ṛtú-* across the *pāda* boundary.

The use of *yújya-* in c is not entirely clear to me. I take it to mean that the offering, the milk (*páyaḥ*), is ritually associated with the calls (*hávana-*) the gods are hearing. Cf. VI.3.8. Ge and Re think that the association is between the substance and the gods.

VI.52.11: This vs. is essentially parallel to vs. 10: various gods are to enjoy both verbal and material offerings, with the verb stem *juṣá-* ‘enjoy’ held constant. Vs. 10 has an impv. *juṣántām*, but our vs. an injunc. *juṣanta*. The latter may be a substitute for the impv. in a metrical situation that favors a light final syl.

VI.52.13–15: I consider these three vss. as a *ṛca*. They are thematically unified, by their focus on the gods in general and (esp. vss. 13 and 15) by their classification of the gods into groups based on their location and type. On the supposed Jagatī meter of vs. 14, which would not match its *ṛca* partners, see ad loc.

VI.52.13: The disjunctive pairing *yé agnijihvá utá vā yájatrāḥ* is puzzling if we take the *utá vā* seriously. Klein’s tr. (DGRV II.168–69) can stand for the standard tr.: “which ones have Agni as their tongue or are worthy of worship.” Klein considers this an example of “opposed but nonantonymous terms” giving a “subcategorization of heavenly ones.” But

when so rendered there seems to be no distinction between the two groups: the general run of gods who are worthy of the sacrifice also receive those oblations through Agni -- there's no reason for a *vā*. I am therefore inclined to pay attention to the *-tra* instrument suffix on *yājatrāḥ*: 'the instruments or means of sacrifice'. Such an interpr. divides the set into those who require Agni as intermediary and those who directly effect the sacrifice. Exactly who the latter might be, I'm not certain -- perhaps only Soma. If I am correct, *yājatra-* is used differently from *yajñīya-* in the next vs. But see vs. 17 where *yājatra-* does not seem to have the instrument sense.

VI.52.14: This vs. is metrically problematic. The Anukr. (also HvN) identifies it as a Jagatī, but the vs. instead seems mostly to be aiming to be a Triṣṭubh, like the surrounding (and thematically related) vss. 13 and 15. To begin at the end, d is simply a standard Triṣṭubh pāda (though with uncommon break): 11 syllables with a fine cadence. The intermediate pādas b and c have 12 syllables (possibly 13 in c), but a Triṣṭubh cadence, which seems more diagnostic than the syllable count. Old (ad loc. and ad I.53.10) favors an "überzählig" interpr. for both, in other words as Triṣṭubhs with an extra syl.; see his disc. in Prol. 67. Only pāda a is an unproblematic Jagatī, and even here, as Old points out (though he does not favor this analysis), it might be possible to read the final word *yajñīyāḥ* as a disyllable, which would again produce a perfect Triṣṭubh.

VI.52.16: Agni and Parjanya seem an odd couple, and this dual dvandva is found only here. But recall that the two appear together earlier in the hymn, in vs. 6 (with Indra and Sarasvatī), and in fact Parjanya is oddly well represented in this set of All God hymns; cf. the dual dvandva *parjanya-vātā* in VI.49.6, 50.12. In our vs. the two are given a division of labor, conveyed by the "the one ... the other" construction of c (*īlām anyó janáyad gárbham anyāḥ*), but curiously which god is responsible for which begetting is unclear enough to have produced entirely opposite interpretations. In his n. 16c Ge, who does not commit himself in his tr., cites Sāy. at length, who thinks that Parjanya produces the *īlā-*, while Agni produces the *gárbha-*. Re the exact opposite: "Que l'un [Agni] engendre l'oblation-liquide, l'autre [Parjanya] le germe." Although I think Re is more likely correct, the analysis is by no means certain. Note, on the one hand, nearby VI.50.12 *parjanya-vātā pipyatām íṣam naḥ* "Let Parjanya and Vāta swell refreshments for us," which supports Sāy.'s interpr. On the other, Parjanya is more regularly associated with *rétas-* 'semen', and one passage in one of the three hymns dedicated to him, V.83.1, is esp. telling: *réto dadhāti óṣadhīṣu gárbham* "He deposits his semen as embryo in the plants," with the *gárbha-* found here. The ambiguity is probably meant.

As Ge points out, the two products are reconciled in the last pāda, where both gods are urged jointly to give us "refreshments accompanied by offspring" (*prajāvatīr íṣaḥ*), with *prajā-* standing in for *gárbha-* and *íṣ-* for *īlā-* from pāda c.

VI.52.17: A typical final vs. summarizing the ritual. For *yajatrāḥ* see comm. ad vs. 13.

VI.53 Pūṣan

Although, as noted in the publ. intro., this hymn is remarkably bloodthirsty, there is also a minor theme focusing on poetry and poetic formulation. The word *dhī-* 'poetic vision' is found in the first and last vss., shaping a faint ring, as well as in vs. 4. And

Pūṣan is called *kaví-* in vs. 5, and his awl is the ‘impeller of the *bráhman-*’ (*brahma-códanī-*) in vs. 8.

VI.53.2: This is the only possible passage in the RV in which *grhápati-* ‘houselord’ may refer to a human (as also noted by Oberlies, I.355 n. 99); in all other cases its referent is Agni. (See my forthcoming “The Term *grhastha* and the (Pre)history of the Householder.”) The presence of *nárya-* ‘stemming from men’ and *vīrá-* ‘hero’ may support a human reading for *grhápati-*; in both cases we seem to be aiming for valuable goods given to us by human patrons, and “a houselord of value” (*vāmám grhápatim*) would be a third such instance. However, since both *ní-* and *vīrá-* can also refer to gods in the RV, the human element is by no means assured, and the otherwise exclusive use of *grhápati-* for a god in the RV is telling. If the word does refer to a human, this may be another indication of the popular character and lower linguistic register of the Pūṣan hymns, as *grhápati-* does refer to humans in the AV.

DL suggests to me that, though the dominant sense of *vāmá-* here must be ‘valuable’, there might be a pun on *vāmá-* (or *vāma-*; see EWA s.v.) ‘left’, immediately following *práyata-dakṣiṇam*. The 2nd member of that bahuvrīhi is of course *dákṣiṇā-* ‘priestly gift’, but the adj. stem *dákṣiṇa-* means ‘right (/south)’. Although *vāmá-/vāma-* ‘left’ is not attested until the ŚB, it could well have been current in ordinary speech before that, as its presence in MIA (e.g., Pāli *vāma-*) suggests. Perhaps another sign of the more demotic lexicon of this hymn.

VI.53.3: For some reason Ge always refuses to tr. the standing epithet of Pūṣan, *āghṛṇi-*, though he fearlessly takes on far more challenging lexical items. The word must belong to the inherited root \sqrt{ghr} ‘be hot, burn’, etc., found only in nominal forms in Skt.; see EWA s.vv. *ghṛṇá-*, *gharmá-*. Why Pūṣan is glowing, fiery, I don’t know; perhaps it would be best to adopt Re’s ‘ardent’.

ví mrada is the only verbal form to this root in the RV, and such forms are quite rare in Vedic (*ví mradate* MS, *mradaya-* TS). (For detailed disc. see Gotō 247–48.) The root is otherwise found in the RV only in the cmpd. *ūrṇa-mradas-* ‘soft as wool, lit. having the softness of wool’ in the funeral hymn X.18.10. I wonder if *mrada* belongs to the technical terminology of fabric construction and therefore would fit in with Pūṣan’s connection to homely, practical activities, as in the words for ‘awl’ (or whatever *āṛā-* is) and the like in this hymn. However, the TS, MS passages don’t support this speculation.

VI.53.3–4: Note *ví mrada* (3c), *ví mṛdhaḥ* (4b).

VI.53.5–6: On *āṛā-* see EWA s.v. It is difficult to determine exactly what tool it was, but it seems to have had a sharp point, at least later means ‘awl’, and means ‘awl’ in cognate languages. In any case it is the sort of utilitarian implement that we would not expect to find in the hands of, say, Indra, but that is appropriate to the more down-to-earth handyman Pūṣan. The word is found in Vedic only in this hymn (vss. 5, 6, 8). Re’s ‘lance’ seems entirely too elevated; Ge’s ‘Stachel’ is a better fit.

VI.53.7–8: These vss. contains the delightful phrase *ā rikha kikirā kṛṇu*, whose playful sonic effects I endeavored to capture in my anachronistic tr. The word *kikirā* is of course a hapax (though cf. YV *kikkīṭā*), and I doubt if a lexical meaning is to be sought for it.

I do wonder whether the original phrase read **kuru* for **kṛṇu*. The former is, of course, a late form, belonging to the irregular paradigm *karōti*, *kurutē* that will replace the well-behaved 5th cl. *kṛṇōti* after the RV. The impv. *kuru* is found in only two passages in the late RV, but in a colloquial hymn like this it would be at home, and the phonological patterning would be improved: *ā rikha kikirā *kuru*, with CV syllables containing repeated high vowels and a consonantal *r* in each word, in addition to the *k*'s. This **kuru* would have been replaced redactionally by the *kṛṇu* standard in RVic discourse on the basis of *kṛṇuhi* in 10c. Vs. 10 displays a more formal level of discourse and imitates the final hymn-summary vss. found through the RV, and the standard RVic form of the pres. of \sqrt{kr} is in order there.

VI.53.10: As just noted, this vs. leaves the rough-and-tumble and provides a solemn and conventional end to the hymn. For a similar sequence of X-*sā*-cmpds in a hymn-final vs., see, e.g., IX.2.10, whose pāda b is identical to pāda b here, save for the case (nom. vs. acc.). It also, as noted before, ring-compositionally echoes vs. 1 *dhīyé* with *dhīyam*. The *dhī-* that we launched in vs. 1 will now (we pray) be crowned with goods.

The first hemistich nicely begins and ends with *utā*, though the two have different functions—the first as interstanzaic conjunction (Klein DGRV I.401) and the other conjoining the acc. obj. nouns in series (ibid. 351–52).

VI.54 Pūṣan

A remarkably unproblematic hymn on the whole.

VI.54.7: The sequence *mākiḥ ... mākīm ... mākim*, each followed by an injunctive in prohibitive sense, is remarkable, in that all three can be read (and are read by me, seemingly also Ge: “keines ... keines ... keines ...”) as expressing the same (negated) subject of the verbs -- but only *-kiḥ* has a nominative “look.” It would be possible, with Gr, to take *mākīm* as ‘nimmer, nicht’, as against *mākis* ‘niemand, keiner’, but the sing-song parallelism of the passage invites the two forms to be interpr. identically. (A Gr-inspired interpr. should yield “let none disappear; let it never be harmed ..., etc.”) Re claims that *mākis* is personal (“puisse aucun(e)”) while *mākim* is impersonal (“puisse rien” or “... jamais”) -- the latter (“jamais”) is of course Gr’s position, the former (“rien”) seems hard to maintain in this passage, where surely the subjects of the verbs are all the same, namely the cow that is our concern in this part of the hymn. I think we must reckon with a morphological extension even greater than that found in the free-standing particles *sīm* and *īm*. Those two stand for all numbers and genders, but always have accusative function. (See my 2002 Fs. Cardona “RVic *sīm* and *īm*.”) Here, perhaps by way of the adverbial-type readings favored by Gr and Re (see VIII.45.23), *-kīm* has lost all distinctive case function and can be used as a nominative. See a similar use of *nākīm* in VIII.78.4.

On Hoffmann’s analysis of *neśat* as a redupl. aor. to $\sqrt{naś}$, see comm. ad IV.1.17.

VI.54.8: On *īrya-* see comm. ad V.58.4.

In c I take *rāyāḥ* as a morphological pun, both gen. sg. with *īśānam* and acc. pl. with *īmahe*. See a more complex example in the next hymn VI.55.2, as well as VIII.26.22, 46.6, 53.1 for the identical pāda with identical interpr.

VI.54.10: The first two pādas are marked by alliteration: *pāri pūṣā parāstād, dhāstam dadhātu dākṣiṇam*. The sandhi-induced *dh* of *dhāstam* (for underlying *hāstam*) is esp. nice.

VI.55 Pūṣan

As noted in the publ. intro., the hymn is structured by an ever-shifting lexical chain. The links are as follows: vs. 1 *rathīḥ* -- 2 *rathītāmam* / 2 *rāyāḥ sākḥāyam* -- 3 *rāyāḥ ... sākḥā* / 3 *ajāsva* -- 4 *ajāśvam* / 4 *svāsura* ... *jārāḥ* -- 5 *svāsura jārāḥ*. For the last vs. which lacks a precise repetition, note *bhrātā* in 5 phonologically echoed by *bībhṛataḥ* ending 6, although they are of course lexically unrelated. We might also note that the verb in 1b, *sacāvahai* ‘let us two accompany each other’, is echoed by the ‘companion’ word *sākhi-* in vss. 2, 3, and 5, and *ajā-* ‘goat’, found in the cmpd. *ajāśva-* ‘having goats as horses’ of vss. 3–4, reappears in 6 without the horses.

VI.55.1: The tonic 1st dual nominative prn. *vām* ‘we two’ is a hapax -- the only occurrence of this distinct nominative in all of Sanskrit, replaced post-RV by *āvām*. See AiG III.465–66. It opens its clause, but because it follows the vs.-initial impv. *ēhi*, it appears to be in 2nd position. Is it an accident that this is where the extremely well-attested enclitic dual 2nd ps. *vām* is ordinarily found?

VI.55.2: As noted ad VI.54.8 above, this vs. contains a more complex variant of *īśānam rāyā īmahe* in VI.54.8c. There I interpr. *rāyāḥ* as both a gen. sg. with *īśānam* and an acc. pl. with *īmahe*. In our vs. here, *īśānam* is found in pāda b with an undoubted gen. phrase *rādhaso mahāḥ*, while in pāda c *rāyó sākḥāyam īmahe* we again find a *rāyāḥ* that is both gen. sg. (with *sākḥāyam*) and acc. pl. (again with *īmahe*). This complex seems like a partial “repair” of 54.8, since it makes clear that *īśānam* takes the gen., which in turn suggests that *rāyāḥ* in 54.8 may have that reading too.

VI.55.3: The āmreḍita *dhīvato-dhīvataḥ* ‘of every visionary’ recalls the focus on *dhī-* in the nearby hymn (VI.53.1, 4, 10).

VI.55.4–5: As noted in the publ. intro., these allusions to incest seem remarkably matter-of-fact. The vss. seem to focus more on the kinship relations — sister, mother, brother, comrade — than any potential violation of them.

VI.55.5: Ge interpr. *abravam* to mean “I have spoken *of*” (“(Von Pūṣan) ... habe ich gesprochen”), but the fact that we immediately urge him to hear us suggests that we have spoken *to* him. In the next hymn VI.56.4 ... *tvā ... brāvāma* also clearly means “we speak/say to you.”

VI.55.6: This vs. presents several problems, both located in pāda b: the hapax *niṣṛmbhāḥ* and the highly unusual position of the accented 3rd ps. pl. prn. *té*.

To tackle the first issue first, I am generally persuaded by Berger's 1966 explan. of the Skt. *śrambh* forms as hypersanskritizations of MIA *vissaddha*, etc., in his view itself a cross of Skt. *viśvasta-* and *śraddhā*. See EWA s.v. *ŚRAMBH* and esp. KEWA s.v. *śrámbhate*. My 'trusty' reflects this possible connection with *śraddhā-* 'trust'.

The position of *té* is highly unusual; this pronominal stem overwhelmingly takes init. (or modified init.) position in its clause. When it does not, it is usually adjacent to the verb or has some other obvious reason for its placement. Here it seems dropped in randomly. I therefore propose to read **tejana-śríyam*, with *téjana-* 'sharp point' found once elsewhere in the RV and also thereafter. The only alteration of the Saṃhitā text this requires is dropping the accent on *té*. Here *téjana-* would refer to the goad or awl that Pūṣan wields (see, e.g. VI.53.5–6, 9). In the publ. tr. I made use of Narten's understanding of *-śrī-* in such cmpds as meaning "vollkommendmachen": see her KISch. 352 n. 19 for the transmitted reading of this cmpd *jana-śrī-* rendered as 'die Menschen ... vollkommenmachend' -- though I took **tejana-* as instr.: 'who brings (all) to readiness *with his sharp (goad)'. But I now prefer a different value for *-śrī-* 'splendid with his sharp (goad)' vel sim., more in keeping with my interpr. of other *-śrī-* cmpds like *ghṛta-śrī-* 'splendid with ghee'. On the multiple semantic possibilities of *-śrī-* cmpds see Scar (544–54); on this cmpd in particular, Scar (551): my interpr. is basically his choice B (though of course with *jana-* rather than *tejana-* as 1st member).

VI.56 Pūṣan

VI.56.1: As noted in the publ. tr., there is difference of opinion about the purport of pāda *c nā téna devā ādīśe*. Ge thinks it's a positive expression (n. 1c): Pūṣan likes porridge so much that he'll come without being asked twice. Re thinks it's more ambiguous: for him the idiom *ā√dis* means 'target' (viser), incl. by evil speech or the like, hence 'menace' -- here, targeting Pūṣan with the epithet means that he doesn't have to be targeted "réellement." (Klein's [DGRV I.420] I just don't understand: "by that one is the heavenly one not to be so designated." Does he think that in using that nickname the human is being too familiar with the god?) I find Re's interpr. simply puzzling, but, though Ge's is more persuasive, I think the point is rather that the epithet is a unique designation that picks out Pūṣan once and for all. The usage of *ā√dis* in nearby VI.48.14 is similar; see disc. there. See also VI.57.2 below. MLW adds arguments supporting my interpr.: "In Vedic prose *ā√dis* is used to refer to the specification of which god gets which offering and I think this may be an old old meaning of this verb with parallels in Umbrian."

VI.56.2–3: There is general consensus (Ge, Re, Klein loc. cit.) that Indra is the subject of both of these vss., with Pūṣan appearing only as the instr. companion in 2b. By contrast, I consider Pūṣan the "best charioteer" (*rathītamaḥ* in 2a and 3c), because in the immediately preceding hymn *rathī-* (VI.55.1c), *rathītama-* (VI.55.2a) are unequivocally used of Pūṣan. My interpr. requires that the subject change from 2a to 2bc, where Indra is indeed the subject, but see the *anyāḥ ... anyāḥ* construction in the next hymn (VI.57.2, cf. 3) where the two gods each appear contrastively in the nominative. This interpr. also has the advantage that Pūṣan doesn't disappear in the middle of his own hymn.

VI.56.2: Pāda c is essentially identical to VI.57.3 in the next hymn, but there Indra's two fallow bay horses are Indra's companions when he smashes obstacles.

VI.56.3: As noted in the publ. intro., the content of this vs. is quite baffling, though the syntax and, for the most part, the lexicon are not. Ge (n. 3) pronounces it a “dunkler Sagenzug,” and I can only agree. I have argued that it is connected with the even more baffling VI.48.17 (see comm. there) and that these two passages associate Pūṣan with the “tearing off the Sun's wheel” myth that remains tantalizingly out of our reach. But this must remain speculation.

The *paruṣé gāvī* tr., “in ‘the gray cow’,” is of course masc., so should perhaps be “gray bull,” though I meant cow=bovine. The phrase is reminiscent of V.27.5 *paruṣāḥ ... ukṣānaḥ* “gray bulls/oxen,” but that phrase is in a dānastuti and does not help us with the metaphor here. For another possible – if extremely tenuous – connection see comm. ad X.5.5. If, as I suggest in the publ. intro., the image is of sunrise through a gray cloudbank, it may be related to another obscure passage, X.55.5, where something gray (*palitā-*, not *paruṣā-* as here) swallows the moon.

VI.56.4: Since Pūṣan is the god who sends the cows home and watches over paths and journeys in general, it is entirely appropriate that he should “make [various objects] reach their goal” (*sādhaya*), including our thought. Cf. in the first Pūṣan hymn of this cycle, VI.53.4 *sādhantām ... no dhíyaḥ* “Let our poetic visions reach their goal.”

VI.56.6: The publ. tr. implies that both ‘well-being’ (acc. *svastīm*) and ‘wholeness’ (dat. *sarvātātaye*) are the complements of *īmahe* ‘we beg’, and in fact I think that is the intent of the passage, however loose the syntax. But it might be possible to construe the dat. with ‘well-being’: “we beg you for well-being to completeness,” i.e., for well-being in its entirety.

VI.57 Pūṣan and Indra

VI.57.2: Note the use of ‘porridge’ as an identifying attribute of Pūṣan; this supports my contention above (ad VI.56.1) that ‘porridge-eater’ is a descriptor that uniquely identifies Pūṣan.

VI.57.3: See VI.56.2 above.

VI.57.4: The root noun *rít-* to *√ri* ‘flow’ is a hapax.

VI.57.5: Though apparently straightforward, this vs. is rather oddly constructed, esp. pāda b. The conjoined NP *pūṣnāḥ ... índrasya ca* “of Pūṣan and Indra” is separated by some distance, though perfectly comprehensible. It is the material that separates it, pāda b *vr̥kṣásya prá vayāṁ iva*, that seems awkward. Particularly odd is the mid-pāda position of *prá*, which is far from its verb (if it has a verb; see below) and breaks up a simile with which it seems unconnected: *vr̥kṣásya ... vayāṁ iva* “like the branch of a tree.” In the simile itself *iva* is wrongly placed (expect **vr̥kṣasya-iva vayāṁ*). It is also doubtful that *prá* is in tmesis from the verb (*ā*) *rabhāmahe*, since *prá* never otherwise occurs with

√*rabh*, which is very common with *ā*. I have no explanation for either the position or the function of *prā*. As for the wrong placement of *iva*, putting it after the 2nd term of the simile is not altogether rare and is therefore less puzzling. Note the similar placement of the simile marker in the much more elaborate simile involving a tree branch in X.134.6 *pūrvēna ...padā, ajó vayām yáthā* “as a goat [grasps] a branch with its forefoot.”

All of this may have something to do with the poet’s attempt to set up the play *vayām* (a), *vayām* (b), though that play would have been more effective if *vayām* were pāda-final, not followed by *iva*.

VI.57.6: The lexeme *úd√yu* is found only here in the RV. Ge tr. “lassen ... die Zügel schiessen,” approx. “give free rein to” (sim. Re). Since *ní√yu*, with *ní* the oppositional preverb to *úd*, can mean ‘rein in’ (see disc. ad X.93.9), this makes sense – hence my ‘ease up on’.

VI.58 Pūṣan

As noted in the publ. intro., the style and in part the register of this, the only trimeter hymn in the Pūṣan cycle, is more elevated than the rest. Still, characteristic lexical items -- *ajāśva*- ‘having goats for horses’, *āṣṭra*- ‘goad -- are found.

VI.58.1: It is quite unclear what this vs. is conveying, and my interpr. differs radically from the standard. Flg. Sāy., both Ge and Re supply *rūpām* as the referent for the *anyád ... anyád* construction and further assume that these are two forms of Pūṣan, namely, in Ge’s words (n. 1ab), “die solare und die gewöhnliche Form des Pūṣan.” I find this unlikely for two reasons: 1) I know of no evidence for two forms of Pūṣan, and none is supplied by those who interpr. it thus; 2) there is a perfectly good neut. referent available for the *anyád ... anyád* construction, namely the two day-halves (*āhanī*) in b, whose descriptor *viśurūpe* ‘of dissimilar form’ seems meant to specify the disjunctive choices given in pāda a. (For a similar disjunctive description of the day-halves, with *anyá- ... anyá-*, see nearby VI.49.3.) Moreover, those who take pāda a as referring to Pūṣan’s two forms are forced to take *viśurūpe āhanī* in the simile, as a not very convincing acc. of extent of time (Ge: “du bist wie der Himmel während der verschiedenen Tageshälften”) or the like (Re’s rendering [“tu es comme le ciel aux deux portions-du-jour”]) leaves the syntactic status of the dual expression quite vague). Further, this interpr. pushes the simile-marking *iva* almost to the end of a pāda supposedly consisting entirely of a simile. Although, as just noted (ad VI.57.5), simile markers are sometimes positioned later than expected, this would be quite late indeed.

So by my interpr. the two oppositional day-halves belong, in some sense, to Pūṣan. Why I’m not sure, nor do I know why he is “like heaven.” In conjunction with his mission to the sun in vs. 3 and the ships he uses to travel there, I might speculate that this has to do with Pūṣan’s role as psychopomp for the dead, described in the funeral hymn X.17.3–6, esp. vs. 6 *prāpathe pathām ajaniṣṭa pūṣā, prāpathe divāḥ prāpathe pṛthivyāḥ / ubhé abhī priyātame sadhāsthe, ā ca parā ca carati prajānān* “On the forward path of paths was Pūṣan born, on the forward path of heaven, on the forward path of earth. / He wanders back and forth to both the dearest seats, foreknowing.” Perhaps his wanderings back and forth to heaven approximate the regular alternation of day and night, and that pair is therefore “his” in some sense. (Such an interpr. gets us close to his two “forms,”

an interpr. I have just rejected -- I still think that is wrong, however.) As for why he is like heaven, this must rest on the *hí* clause of pāda c, his giving aid to all *māyā*. What does this mean? Is his mission to take the dead from earth to heaven conceptualized as a *transformation* of the dead, which might be achieved by *māyā*? A last, smaller but nonetheless nagging, question is why, with day characterized as ‘gleaming’ (*śukrām*), is night said to be ‘belonging to the sacrifice, worthy of the sacrifice’ (*yajatām*)? Most Vedic sacrifices take place during the day, save for the Atirātra. Perhaps rites for the dead were associated more with night. MLW adds that this is true “certainly in Roman rituals like the Lemuria and Feralia.”

All of this speculation is tissue-thin, and I do not set much store by it. However, at least it confronts questions that the other interpr. have not raised.

VI.58.2: Most of the contents of this vs. conform to the characteristics of Pūṣan elsewhere in this cycle, even *dhiyaṃjinvā-* ‘quickenning poetic vision’ (see esp. VI.53), but “fitted into all creation” (*bhūvane víśve arpitaḥ*) and “surveying the creatures” (*saṃcākṣāṇo bhūvanā*) attribute to him a more cosmic role than usual. His speeding (*īyate*) may be a reference to his travels between earth and heaven referred to above, ad vs. 1.

víśve is one of two loc. sg. to this stem with the noun ending *-e* (the other being IV.16.9), but the pronomina *víśvasmin* is also only found twice, both times in X.

VI.58.3: Pūṣan’s ships (*nāvah*) are, to my knowledge, not encountered elsewhere. But, as noted above vs. 1, I would tentatively connect them and the mission of the Sun (*dūtyām sūryasya*) with his role as psychopomp of the dead. One question is whether there are two sets of ships -- those in the sea and those in the midspace -- or one, with the midspace being configured here as the sea (Ge’s Luftmeer). I subscribe to the latter view.

VI.58.4: Pūṣan’s “good lineage (*subándhuḥ*) from Heaven and from Earth” directly recalls X.71.6 cited above ad vs. 1 *prápathe pathám ajaniṣṭa pūṣā, prápathe diváh prápathe pṛthivyāḥ* “On the forward path of paths was Pūṣan born, on the forward path of heaven, on the forward path of earth.”

On the Sūryā story, see, inter alia, my 2001 “The Rigvedic svayaṃvara? Formulaic evidence” (Fs. Asko Parpola) and 2003 “Vedic vrā: Evidence for the svayaṃvara in the Rig Veda?” (Fs. H.-P. Schmidt). It is very telling that Pūṣan is given to Sūryā here (*yām devāso ádadhuḥ sūryāyai*) rather than the reverse: the ordinary description of marriage, at least later, is *kanyā-dāna-* ‘the gift of a maiden’, but here she receives rather than being given, presumably a nod to her active role in the Svayaṃvara. Note the much more conventional depiction of Sūryā’s wedding (to a different bridegroom) in the wedding hymn, X.85.9 *sūryāṃ yát pátye ... savitādadāt* “when Savitar gave Sūryā to her husband.”

VI.59 Indra and Agni

On the structure of this hymn and the relationship between the two gods, see publ. intro.

VI.59.1: As noted in the publ. intro., the clichéd intro. “I shall proclaim (*prá √ vac*) the manly deeds ...” associated esp. with Indra hymns (esp. I.32) is here directed to both

gods. The “real” subjunctive *vocā* is found only here in the RV, in contrast to the more common injunctive / functional subjunctive *vocam*.

The enclitic *vām* is unusually stationed pāda-final, but in fact it occupies 2nd position in its small clause, the loc. absol. *sutēṣu vām* “on (the soma-drinks) having been pressed for you two.” Ge takes *vām* with following *vīryā* (“euren Heldentaten”), but the pāda break that separates them makes that less likely. Re ignores the *vām* in his tr. and attaches the loc. absol. to the rel. cl., which is syntactically unlikely. Pāda-final *vām* is in fact a tic of this hymn; see 2a, 4a, and 5a besides our 1a. Perhaps it echoes the 2nd syllable of *yuvām* ‘you two’, found at pāda end in 1d, 2c.

The contents of the 2nd hemistich is quite dramatic. The standard view going back to Sāy. (see Ge’s n. 1c) is that the slain Fathers are the Asuras and that this event is also reflected in the enigmatic X.124. However, see my 2016 treatment of X.124, “The Divine Revolution of Ṛgveda X.124: A New Interpretation. Beyond Asuras and Devas” (Ged. Staal), which rejects the view that that hymn concerns the Deva/Asura conflict. Here in our passage, certainly the easiest interpretation is that the rivals of the gods are the Asuras, but keep in mind that the Deva/Asura conflict so prominent in the Brāhmaṇas and later does not really surface until very late RV. Moreover, even in the old interpr. of X.124 neither Indra nor Agni appears to have been an Asura. I do not know what to make of our passage, but I doubt that the old interpr. holds.

VI.59.2: The pāda-final *vām* here is also in syntactic 2nd position (as it is in 1a), since *bāl itthā* is an extra-clausal exclamation, and the clause proper begins with *mahimā*.

For *mahimān-* with \sqrt{pan} , see nearby VI.75.6, as well as VIII.101.11, X.75.9, etc.

I am puzzled by the pāda-final *ā*. Gr (col. 171) classifies it as emphatic after numbers or grades, to show that the number or grade has been reached, but the phrases he lists there are quite heterogenous.

VI.59.3: On pleonastic *sācā* see comm. ad IV.31.5. Ordinarily such a *sācā* marks a locative abs., but in this instance *sutē* is to be construed with *okivāmsā*. The pāda-final phrase *sutē sācām* may be there to provide a rhyme-form variant to *sutēṣu vām*# (1a, 4a), which really are loc. abs.

VI.59.4: In the 2nd hemistich the form *bhasáthaḥ* is problematic and its identity disputed. With *-thaḥ* it looks like a 2nd du. act. verb, as is to be expected in a hymn dedicated to dual divinities, esp. directly after a voc. du. *devā*. However, this should be a main-cl. verb, and it therefore should not be accented. And even if it should be accented, it has the wrong accent: we have two other forms to an apparent them. stem, both with root accent: 3rd sg. *bhásat* (subjunctive to root aor., acdg. to Gotō 82) VI.3.4 and identical (by most lights) VI.14.1 (I consider that form a nom. sg. part. *bhásan*). In response to these problems, Ge (inter alia, going back to Aufrecht [see Old] and cautiously endorsed in EWA s.v. *BHAS*) interpr. it as a noun *bhasátha-* ‘the noise of the mouth when eating’ (Ge, das Geräusch des Mundes bes. beim Essen). But although this solves the accent problems, it creates greater difficulty elsewhere: not only would that stem be a hapax, but Ge’s attempt to fit it into the rest of the clause produces something close to nonsense, whereas a du. verb works well in the clausal syntax. Old and Re wisely opt for the verb (maybe also Gotō 82), the latter without remarking on the accentual problem and the

former without suggesting a solution. I also accept it as a verb ‘snap at’ and also lack a solution to the accent. It cannot be attributed to *caná*, which doesn’t induce verbal accent. Its complement is *vádataḥ*, which I take as gen. sg., the correlative of *yáḥ* in the rel. cl. of ab -- with gen. as an alternative to acc. in verbs of consumption (biting counts). As Old points out, it could also be acc. pl., but that would lose the connection with the rel. cl. (Re supplies an acc. obj. on which the gen. depends: “vous ne mordez nullement (les richesses de cet homme) qui dit ...,” which seems unnec. and unmotivated.)

VI.59.5: As noted in the publ. intro., here the poet dissociates the two gods and in the 2nd hemistich focuses only on Agni. I think the dissociation begins in the 1st hemistich, with ... *asyá vām ... cīketati* (in my tr.) “...shall perceive *this one* of you two,” with *asyá* referring to one of the gods only. Ge and Re by contrast interpr. *asyá* as referring to an unidentified thing (a wonder or the like) belonging to both.

On cd as referring to Agni and his flames, see the very similar phrase in an Agni hymn X.79.7 *viśūco áśvān yuyuje*. Gonda (Ved. Lit. 133) may be right that this refers to Agni using the same vehicle to carry the oblations to heaven and to bring the gods to the sacrifice. Re interpr. the hemistich as referring to both Agni and Indra, at the cost of a lot of machinery liberally sprinkled with parens.

viśūcaḥ would be better rendered as ‘facing in opposite/different directions’.

VI.59.6: The fem. footless (*apadvátī*) and footless (*padvátībhyah*) are most likely Dawn and her cows, either the rays of light that are the Dawn cows or the real cows that go to pasture at dawn. Cf., with Ge, I.152.3. She appears here presumably to mark the dawn worship where the ritual fire is kindled and Indra appears.

Both Ge and Re divide the 2nd hemistich between Agni (c) and Sūrya (d). I am in full agreement that c belongs to Agni, describing the spread of his flames and crackling of the new fire. But I do not follow their assignment of d to Sūrya. Since the hymn is dedicated to Indra and Agni, we would expect the paired god to be Indra, not Sūrya, who has no place in the hymn. And it easily applies to Indra, as long as we interpr. *padā* as an instr. sg. of ‘foot’. Cf. with the same phrase, incl. the same verb, I.51.6 ... *arbudām ní kramīḥ padā* “With your foot you [=Indra] trampled down Arbuda” and, with a diff. root but the same preverb, also of Indra, VIII.64.2 *padā pañīm̐r arādhāso, ní bādhasva* “With your foot stamp down the ungenerous niggards.” Ge and Re take *padā* as neut. pl. to *padá*- ‘foot-step’, construed with *trīṃśát* as a measure of the distance that Sūrya has crossed. I don’t know why they feel the need to introduce Sūrya here -- I suppose because of Uṣas in ab.

With Ge I take *cārat* as a finite verb, an injunctive, accented because it’s implicitly contrastive with the next clause.

VI.59.8: With Ge (cf. also Oberlies, RdV I.457) I supply ‘him’ as obj. of *yuyutám* in d, referring to the *ari*- of b. Re supplies a pl. obj., referring to the *dvēṣāṃsi* of b. This is not impossible, but it makes more sense to deprive the stranger of sunlight than his hatreds.

VI.60 Indra and Agni

VI.60.1: The vocab. of this vs. shows a slight tendency towards morphological

elaboration: in addition to the straightforward *sāhastamā sāhasā*, there is *sāhurī* to the same root but with the rare suffix *-urī*; the deriv. *vasavyā-* for ‘goods’, rather than standard *vāsu* (as in the preceding hymn VI.59.9). This latter word returns at the end of the hymn.

The 3rd sg. *śnáthat* that opens the hymn is somewhat puzzling morphologically. The root √ *śnath* has a poorly attested verbal system, save for the *-āya*-transitive and associated redupl. aor.; besides *śnáthat* it consists only of two exx. of the athem. impv. *śnathihi*, and a couple of *-iṣ*-aor. forms. Narten (258–59) argues convincingly that *śnathihi* should belong to a root aor. (rather than a root pres., as it is generally classed), which could serve as the base for the formation of the *-iṣ*-aor. Our form *śnáthat* could formally easily be a subjunctive to this root aor., but the problem is that a subjunctive works quite badly in context, esp., since it is explicitly conjoined (by *utā*) with the following pres. indic. *sanoti*. It could alternatively be the injunctive to a them. stem, though in that case it would be the only representative of that stem. Narten discusses *śnáthat* in n. 810, where she rather says that though it’s used in a general sense, nothing stands in the way of its being a subj. to the root aor. I find this somewhat disingenuous, as subjunctives aren’t generally (/ever?) used in such a sense. She also allows the possibility that it could be injunctive to a thematic stem. (see also Klein DGRV I.366, who allows either). Much as I dislike multiplying entities, I’m inclined to go for the thematic injunctive for functional reasons. Unfortunately a root aor. injunc. **śnathīt* would have been easy to build, so the thematization cannot be the result of avoiding a problematic form.

VI.60.2: Assuming that *uśāsah ... ūlḥāḥ* is a single NP, the question is what happened to the dawns. Ge, fld. by Re, thinks that the dawns were taken away, that is, abducted (entführten, enlevées). If, as Ge suggests (n. 2), this concerns the Vala myth, the dawns qua cows can be conceptualized as taken / stolen by the Paṇis. (Oberlies [RdV I.180] goes further, seeing this as part of a myth about bridestealing, ultimately involving the Ásvins, though he admits [n. 150] that our vs. does not tell us who abducted the Dawn(s) or where she was taken.) HPS (B+I 180 n. 33,) indignantly rejects the abduction interpr. and suggests rather that, on the basis of VI.64.3, 5, the dawns are drawn (*ūlḥāḥ*) by bulls. Although this is possible, and the cited passage is quite nearby, it doesn’t make a lot of sense for Indra and Agni to “do battle” for the dawns if the dawns are moving on their own steam, whereas if they were abducted, they need help.

In d Agni must be the immediate subj. of the clause, given the adjacency of the voc. and the 2nd sg. verb (*agne yuvase*) -- but, as Re points out, *niyútvān* is more an epithet of Indra than of Agni -- and, as he doesn’t point out, even more an epithet of Vāyu in conjunction with Indra. I therefore wonder if this has not been adapted from an Indra-Vāyu context, with a different set of dual divinities. The d pāda is also very close to an Indra passage fairly nearby: VI.47.14 *apó gā vajrin yuvase sám índūn*, with Indra as the subj. of *yuvase*: “You join together the waters, the cows, and the drops, you possessor of the mace.” The substitution of Agni and the attribution to him of Indra’s qualities and actions is in conformity with the tendency noted in the publ. intro. of favoring the Indraic in this supposedly shared hymn.

VI.60.4: I do not have a view on how (or whether) to fix the meter of pāda a; see Old.

It is thinkable, but by no means necessary, that instead of reading quadrisyllabic *indrā-agnī* (as in vss. 5, 7, 14), we could read trisyllabic *indrāgnī* (as in 8, 9, 15) with a haplogologized enclitic *naḥ*: *indrāgnī ná *no mardhataḥ*.

VI.60.4–5: Note the phonological (and partly etymological) figure *mardh(ataḥ)* (4c), *mīdh(aḥ)* (5a), *mṛl(ātaḥ)* (5c).

VI.60.6: On the formula *vṛtrāni āryā ... dāsāni* see comm. ad VI.22.10.

Note the curious position of *āpa* in tmesis, embedded in the obj. NP: *ható vísṣvā āpa dvīṣaḥ*.

VI.60.8: I follow Ge in construing *dāsūṣe* with *sānti* (“which are for the pious”) rather than with *puruspīhaḥ* (Re “pour l’adulateur les très enviés”) because *puruspīh-* doesn’t seem to appear with a dat. elsewhere. See the almost identical IV.47.4.

VI.60.8–9: 8c and 9a differ minimally from each other, and it is difficult to see an aspectual (or other) distinction between root aor. impv. *ā gatam* and pres. impv. *ā gachatam* -- though of course there may be a nuance we cannot catch. Note also 14b *ūpa gachatam* and 15c *ā gatam*.

VI.60.10: The root *√svañj* is ordinarily middle; it has only two active forms, this one (*pariṣvājat*) and the plupf. *paryāśasvajat* in I.182.7. The latter can be explained as an *āduhat*-type remarking of the middle pf. *śasvaje* (see comm. ad loc.), but this active remarking of the them. pres. *-ṣvājate* is harder to explain. Gotō (1st Kl., 338–39) notes the prevailing middle voice and this anomalous act., but makes no attempt to account for it.

VI.60.11: The syntactic affiliation of the final pāda of this vs., consisting of a dat. *dyumnāya* and an acc. phrase *sutārā apāḥ*, is unclear. Old suggests taking the acc. as a second obj. of *āvīvāsatī*, or rather suggests supplying the same verb as main clause verb “(he also wins) waters ...” But since the structure of ab, in which the mortal seeks Indra’s favor, invites a demonstration of that favor in the main cl., I therefore borrow *kṛṇoti* (deaccented) from 10c, with Indra as subj. This is also Re’s solution and apparently Ge’s. For *√kṛ* in similar expressions, see VII.97.8 *kārad brāhmaṇe sutārā sugādhā* “He [=Bṛhaspati/Indra] will make good fords, easy to cross, for the sacred formulation” and IV.19.6 *sutaraṇām akṛṇor indra sīndhūn* “You made the rivers easy to cross, Indra.”

VI.60.12: On the double sense of *pipṛtam* see Ge and Re.

VI.60.13–15: On the connection of these vss. to the hymn, see publ. intro. For the ring composition between the 1st ṛca and this one, note the verbal respension *vasavyā-* (1, 14), *rādhas-* (3, 13), *vājayāntā* (1) and *vājasya sātāye* (14).

VI.60.13: On the insistent *ubhā* see publ. intro.

I have taken *āhuvādhyai* (and *mādayādhyai*) as predicated infinitives with the subj. *ubhā*, as does Re. However, *vām* in pāda a makes some difficulties for this interpr., and

Ge takes that pāda (but not b) as having an implicit 1st ps. subj.: “euch beide ... will ich herrufen” (a) versus “beiden sollen sich ... erfreuen” for *mādayādhyai* (b). I think the two clauses should be parallel and therefore take *vām* as a dependent gen. on *ubhā* (“both of you two”), although it must be admitted that *ubhā-* generally agrees with its referent in case.

VI.61 Sarasvatī

On the structure of this hymn and its similarity to the immediately preceding one, see publ. intro.

VI.61.1–3: The hymn begins with the near-deictic nom. sg. *iyām*, establishing the feminine subject immediately and emphatically (“this she here”). Since the just-given tr. is at best graceless and, more to the point, not English, I have opted to focus on the gender rather than the deixis. The next vs. also begins with *iyām* and the final vs. of the tṛca with the voc. *sārasvatī*.

VI.61.1: Although, as just noted, the hymn establishes the feminine referent from the very beginning, she is also credited, from the beginning, with powers and deeds that seem distinctly unfeminine, esp. pāda c.

Sarasvatī’s gift to the pious Vadhryaśva is universally, and I think correctly, interpr. as a son named Divodāsa, and this gift is further interpr. as reflecting the requital of the “debt to the ancestors” found in the doctrine, attested somewhat later (1st clearly articulated in TS), of the three debts that a Brahmin owes on his birth (to gods, ancestors, and ṛṣis). The requital of this debt is, in the standard view, expressed by the root-noun cmpd *ṛṇacyút-* in our passage. I think this is more or less correct, but not in a straightforward way. Both Ge and Re twist the sense of \sqrt{cyu} to get it to express the requital of the debt directly: “der der Schuld (an die Manen) tilgte [paid off]” (sim. Kü 153); “qui ébranle la dette (aux mânes).” But \sqrt{cyu} means ‘set in motion, agitate, shake’, and the best we could do to get the idiom we want is to push its meaning to ‘shake off’, hence ‘get rid of’, the debt. But ‘shake off’ is not a sense of \sqrt{cyu} at least in my experience. An unmanipulated sense of the cmpd should be ‘shake/agitate the *ṛṇa*’, and that is how I interpr. it -- ‘shake the debtor’ -- with a masc. *ṛṇá-* ‘debtor’; the only other non-neut. form of this stem is also in VI (VI.12.5), where it likewise means ‘debtor’, not ‘debt’. In other words I assume that Divodāsa inflicts rough punishment on a debtor; this helps explain why he is characterized as *rabhasá-* ‘violent, wild’, which does not make much sense if he’s just a baby who serves as his father’s payment to the ancestors.

However, I also think the sense seen by Ge and Re -- Divodāsa as requital for the debt his father owes to the ancestors -- is also indirectly signaled here. The standard lexeme for this technical term is *ṛṇám $\sqrt{cí}$* ; a root-noun cmpd formed to this lexeme would be *ṛṇa-cí-t-*, which in fact is attested once, at II.23.17. Our cmpd *ṛṇa-cyú-t-* is phonologically similar to it, and an acc. sg. **ṛṇacítam* would produce a terrible cadence (4 lights), whereas *ṛṇacyútam* is well adapted to a Jagatī cadence (though the immediately preceding syllable should be heavy, not light: (*rabha*)*sám ṛṇacyútam*. What I am suggesting is that *ṛṇacyútam* is the correct reading and it means what it looks like it should mean, without the manipulation of Ge and Re. But that it also phonologically evokes **ṛṇa-cítam*, which gives a second, resonant meaning to the passage. This

suggestion is similar to, but ultimately quite distinct from, Gotō's (133 n. 166) that *ṛṇa-cyūt-* is a transitive active version of *ṛṇa-cīt-*, generated from a Zwangslage (predicament, dilemma) in order to express the sense 'entgegennehmen lassen' barred from the other compd, which in his view means 'die Busse entgegennehmen'. Scar also discusses *ṛṇa-cyūt-* at some length (126–27), offering several possibilities, but not very usefully.

As for the notion of a man's inborn debts in the RV, I think it is alluded to in our text, but quite rarely. The clearest ex. is in the late hymn X.135 (see my "The Earliest Evidence for the Inborn Debts of a Brahmin: A New Interpretation of Ṛgveda X.135." *Journal asiatique* 302.2 [2014]: 245–57), but there is another more glancing reference to it in Maṇḍala VI in VI.20.11, also discussed in the art. cit. In that article I argue that the original system, as seen in the RV, involves only *two* debts: a son for the ancestors and sacrifice for the gods; Brahmacarya for the ṛṣis is a later addition after the institution of studentship had developed.

On the root affiliation of *cakhāda* see EWA s.v. *KHED* and Kü (152–53), with lit. The pf., which appears only here in the RV, takes a double acc. On this pāda see Old. and the parallel I.93.4, with √ *muṣ* 'steal': *yád ámuṣṇītam avasám paṇím gāḥ*.

VI.61.2: Once again, the attributes and actions ascribed to Sarasvatī are decidedly unfeminine, starting with the almost comically off-kilter comparison of her to a root-grubbing boar. The identification of the *bisakhā-* as a boar is owing to Hoffmann (MSS 8: 5 = Aufs. 387). The point of comparison between the river and the boar must be their noise: *śúṣmebhiḥ* 'with her snortings', though the root-grubbing is presumably part of it, as the river in spate noisily pulls off pieces of the banks. For *śúṣma-* as the characteristic noise of Sindhu, another river, see X.75.3.

Note *ávase* in c, which echoes *avasám* in 1c and is in turn echoed by *á (vi)vās(ema)* in d.

VI.61.3: The phonologically marked (plain *b*) name *bṛṣaya-* is found elsewhere only in I.93.4, where his offspring (there called *śéṣaḥ* 'remainder') are destroyed as they are here. That is also the vs. that contains the parallel passage cited above ad vs. 1. Although I.93 is a hymn to Agni and Soma and there are no clear connections between the hymns otherwise, at the very least we can probably assume that Bṛṣa was a *paṇí-*. I do not understand why *vísva-* modifies this PN: "every Bṛṣaya" meaning Bṛṣaya and his ilk? his kin? (MLW adds "In Latin a name can be used in the plural to mean 'people like X' Multi Mani Ariciae 'There are many manius types at Aricia' This is no doubt a universal.") Or does this imply that the word is not a PN, but a meaningful descriptor of a foe?

Acdg. to Klein (DGRV I.434–35), the 2nd hemistich begins with an ex. of inverse *utá*, conjoining the clauses of c and d though positioned at the beginning of c. Although this is probably the default explan., I am drawn to Re's more content-rich suggestion that *utá* sets up the contrast between the very different actions of c and d—though under that analysis we might expect a contrastively accented verb in c (**ávindah*), and, moreover, he gives no parallel passages in which *utá* has such a function.

The hapless 'them' (*ebhyaḥ*) in d must be the 'god-scorers' (*deva-níd-*) of a, as is the general consensus.

VI.61.4–6: This *ṛca* is almost empty of content, in part because so much of each Gāyatrī — not a capacious meter in the first place — is occupied by repeated material: the last 6 of the 8 syllables of the 1st pāda of each vs. contain the nom. (4) or voc. (5, 6) of the NP *devī śārasvatī*, and the b pādas of 4 and 6 contain responsive material: *vāṇebhiḥ vājīnīvati* (4) and x x *vāṇeṣu vājini*. Otherwise, as a helper (*avitrī*) she is twice asked to help (4c *avatu*, 6b *āvā*). In the publ. tr. these two impvs. are rendered in two different ways: “Let ... help” and “aid” respectively. I would now change the 2nd to “help” as well to mark their essential identity (save for ps.). [Note that the HvN restoration of *avitrī āvatu* in 4c is wrong: correct their *avitrī* to *avitrī*.]

VI.61.5–6: This, the middle vs. of the *ṛca*, consists only of a rel. cl., which I consider preposed to vs. 6, though without a resumptive pronoun correlative with *yāh*. I supply one (‘him’) as obj. of *āvā* in 6b. Both Ge and Re instead supply ‘us’ as the obj. of that verb, leaving the rel. cl. in 5 without any syntactic tether. The middle vs. of the next *ṛca* (8) also consists just of a rel. cl.

VI.61.7–9: Unlike the preceding *ṛca*, this one dispenses with repetition and therefore has more room for meat, comparatively speaking.

VI.61.7: The vs.-initial *utā* seems to introduce the *ṛca*, as does the identically placed *utā* in vs. 10.

VI.61.8: Like vs. 5, this middle vs. of the *ṛca* contains only a rel. cl., which I consider to hang off vs. 7, though it could also attach to the flg. vs. 9. Both 7 and 9 have an overt possible correlative for *yāsyāh* in 8a: 7a *syā ... śārasvatī*, 9a *sā*.

VI.61.9: The various tr. (Ge, Re, Klein [DGRV I.402]) supply a verb in pāda a, reserving *ātan* (c) for bc. I do not see why. Both Ge (n. 9a) and Re do allow for the possibility that *ātan* has domain over the whole vs., but both identify that possible constr. as a zeugma. Again, I don’t see why -- while it is true that hatreds and rivers are different kinds of entities, mingling of the mental and the physical is standard practice in the RV.

Because of its position within the NP *vīśvā āti dvīṣaḥ*, *āti* is probably not a preverb in tmesis, but rather an adposition. This view is supported by the fact that there are no other exx. of *āti* √*tan* in the RV (as Re points out) or elsewhere, at least acdg. to Mon-Wms.

The position of *anyāḥ* identifies the sisters as a defined and limited group, and of course, as the next vs. states (10b *saptāsvasā*), Śārasvatī has precisely seven sister rivers.

VI.61.10: On *ṛca*-introducing *utā* see ad 7 above.

We might expect the splv. *priyātamā* in this construction.

I don’t exactly know how to interpr. the VP *stomyā bhūt*, with injunc. aor. of √*bhū* (or indic. aor? the Saṃhitā sequence *stomyābhūt* could contain augmented *abhūt*) and the pseudo-gerundive *stomya-*. The same construction is found in vs. 12 *havyā bhūt* (or *havyā *abhūt*). In vs. 12 Hoffmann (140) takes it as iterative, presumably because of the āmṛḍita *vāṇe-vāṇe*: “ist bei jedem Preiskampf anzurufen.” But √*bhū* is a change-of-state verb and the aorist should (in a well-behaved language) be punctual. In both vss. the

standing characteristics of Saravatī are being described, so she should not have “*become* one worthy to be praised/invoked,” because the just-mentioned characteristics are not new. We might speculate that, because there’s no injunctive of \sqrt{as} , in order to express a non-temporally marked copula (as opposed to a nominal sentence with suppressed copula) you have to turn to $\sqrt{bhū}$ and the aorist injunctive. But this seems like a long shot. Ge and Re take it as modal: “... sei ... preisenswert”; “soit apte à (recevoir) ... la louange” (though Re remarks “*bhūt* au sens d’*abhūt*,” without recognizing that the *Samhitā* text could in fact contain *abhūt*). Note that vs. 13 (which is not part of this *ṛca*) contains a predicated pseudo-gerundive in the same semantic sphere, *upastútyā* ‘to be praised’, *without* aux.

VI.61.11: In b *urú rájaḥ* ‘broad realm’ is identical with *antárikṣam* ‘midspace’. Perhaps supplying two terms for one place is designed to give the impression of the usual three-termed whole, earth, midspace, heaven — here: earth, midspace x2. The river’s physical position presumably precludes claiming that she has filled heaven as well (though Lū would presumably favor that).

VI.61.12: But heaven as part of her domain is apparently smuggled in, without naming it, in *triṣadhástḥā* ‘having three seats’ opening this vs.

The vs. in general is characterized by fairly straightforward numerology: in addition to the three seats, the seven parts are presumably her sister rivers and “five peoples” is the familiar expression for the totality of the Ārya. The 1st vs. of the *ṛca* inaugurated the numerology with *saptásvasā* ‘having seven sisters’.

On *havyā bhūt* see comm. ad vs. 10.

VI.61.13: The sequence *mahínāsu* is perfectly ambiguous. It can be a fem. loc. pl. of the poorly attested them. stem *mahína-*, as I take it in the publ. tr. and as Old is inclined to do. Or, with Pp., Ge, and Re, it can be disjoined into *mahínā āsu*, nom. sg. fem. to the same rare them. stem and loc. pl. fem. to the near-deictic pronoun, unaccented because the referent is in the discourse. (Gr actually lists both *mahínā* and *mahínāsu* for this passage.) The difference in meaning is minimal: my “... who by her greatness shines ... among the great (rivers)” versus “the great one who by her greatness shines ... among the (rivers).” I now find that I am more disposed to go with the Pp. analysis, for reasons of wordplay, not meaning. The instr. *mahimnā* in this passage is one of only three exx. of this form in the RV, with the restored *-mn-* cluster to the stem *mahimán-* -- against well-attested instr. *mahinā* with the (old) cluster reduction of *-mn-* to *-n-*. If we accept the Pp. interpr., the adjacent words *mahimnā mahínā* would implicitly play on both forms of the instr., with the nom. sg. *mahínā* differing from the standard instr. *mahinā* only by accent. If we instead take *mahínāsu* as a loc., that play is lost or at least considerably diluted.

The construction of b, esp. of *anyāḥ*, rests on that of 9ab.

On *upastútyā* see comm. ad vs. 10.

VI.61.14: In b the standard tr. (Ge, Re; cf. also Hoffmann 48) take *páyasā* with the 2nd cl.: “do not come up short with your milk.” However, *mā* is almost always clause-initial, whereas this interpr. requires it to come in 2nd position, with the enclitic *naḥ* even further into the clause. Moreover, no other forms of \sqrt{dagh} are construed with an instr. Instead I

take *āpa spharīḥ* as intransitive ‘spring away’, with *pāyasā* a species of instr. of accompaniment or, perhaps, an instr. of separation.

VI.62 Aśvins

The first part of the hymn is marked by repeated dual prns. opening the vs. or hemistich: 1c *yā*, 2a, 3a, 4a, 5a *tā*, 5c *yā*, 6a *tā*. This pattern more or less coincides with the division of the hymn discussed in the publ. intro. After the beg. of vs. 6 the pattern is broken and does not reappear.

VI.62.1: The usual ambiguity of *jāra-* ‘awake’ or ‘sing’, with the usual possible double application in a context like this, though *jāramāṇasya* in 4a speaks for ‘sing’.

In c *usrā* is taken as du. by Gr., flg. the Pp. However, it more likely represents *usrāḥ* in sandhi, a gen. sg. fem. See extensive disc. by Old ad II.39.2, as well as his brief acknowledgement of this underlying form in his comm. on this vs.; Ge’s tr. reflects this interpr. Inter alia, 3 (V.3.8, 45.8, VIII.46.21) of the 5 occurrences of *vyūṣi* are preceded by a fem. gen. sg. *asyā(h)*, referring to Dawn, and the 4th (besides this one) has a voc. of Dawn *uṣo vyūṣi* (VII.81.2). On fem. gen. sg. *usrāḥ* see comm. ad VI.3.6

In his n. 1d Ge hesitates about the root affiliation of the desid. *yūyūṣataḥ* (*√yu* ‘join’ or *√yu* ‘separate’) and the function of *pāri* (preverb or adposition). Although his tr. reflects a root affiliation to ‘join’ (“... zu umspannen suchen”), he offers an alternative tr. in the n. reflecting ‘separate’ (“... fortzurücken suchen”), an interpr. followed by Heenen (Desid. 209). Such an interpr. would be conceptually possible: in the dim light of dawn and the morning mists, the Aśvins allow the boundaries of earth to be seen by “separating” them. However, I consider *√yu* ‘join’ more likely, in the sense, with *pāri*, of ‘encompass’, referring to the usual round-the-world journey of the Aśvins. The constr. seems a conflation or crossing of the usual *sadyāḥ* [H+E] *pāri √ilyā* [/VERB OF MOTION] expression “encircle heaven and earth in a single day,” as in I.115.3, 128.3, III.58.8, IV.45.7, etc., with the prior act of harnessing (*√yu*) the horses. For passages that incl. *ántān* (as here), see V.47.4, X.108.5: e.g., V.47.4 *divás caranti pāri sadyó ántān* “They circle around the ends of heaven in a single day.”

VI.62.2: This vs. presents both number and person disagreement, the first more acute than the second. As noted above, the vs. begins with the dual NA prn. *tā*, surely referring to the Aśvins, and this 1st pāda ends with an apparent dual part. *cakramāṇā* presumably modifying the prn. But the next pāda contains a plural verb *rurucuḥ* (*rurucū* in sandhi), which cannot take the dual as subject -- nor as object. (Because of its sandhi position *cakramāṇā* could instead reflect underlying pl. -*āḥ*, but the initial *tā* seems almost designed to anchor the participle as dual as well.) Curiously both Ge and Kü (431) tr. the dual NP as subj. of the pl. verb without comment -- either because of a rare grammatical lapse on their parts or because they view it (without comment) as an example of improper agreement. (It is certainly true that a dual **rurucatuḥ* would be metrically disastrous, so lax haplology would be thinkable.)

I believe that we must take the number and the number disharmony seriously, and I therefore take pādas a and b as separate clauses. The first lacks a finite verb. We can either consider the participle as predicated (“they two [are] striding ...”) or, my preference, as pendant to 1cd, with dual its subj. As noted in the publ. intro., there is

another likely enjambment between vss. 2 and 3. The next question is the identity of the pl. subj. of d. There is one pl. form in pāda a: instr. pl. *śúcibhiḥ*. Ge and Kü take this as referring to the *rājōbhiḥ* ‘spaces’ in b, but Re suggests that it anticipates the horses (*āśvaiḥ*) in 3bc. If we accept Re’s identification of the ‘gleaming ones’ as horses, this provides a possible pl. subj. for *rurucuḥ*. As gleaming ones themselves, they could “shine the radiant beam of the chariot” through the spaces. This may make them sound a little like Rudolph the Red-Nosed Reindeer, but at least it avoids a grammatical solecism.

The ps. disagreement is, by contrast, very mild and standard RVic practice: the dual subj. returns in 2cd but as 2nd ps. rather than 3rd, as we learn by the verb *yāthaḥ* late in pāda d.

Note c *purū vārāṃsi*, a rhyme form to *urū vārāṃsi* ending 1d.

VI.62.3: This vs. presents a different type of grammatical disharmony, though it again concerns how to construe the first pāda. Once again it begins with du. *tā*, but in this case that prn. *can* be the subj. of the 2nd dual pf. *ūhathuḥ*. (Though by my rules,= I would prefer not to have a 3rd ps. prn serving as subj. to a non-imperative verb [see my “sa figé”], I do have to reckon with a fairly clear ex. in 6ab.) The problems lie in 1) *vartīḥ* ‘circuit’ and 2) *yād*. To begin with the 2nd, if *yād* is functioning as a subordinating conjunction and ab is a single clause, *ūhathuḥ* in b should be accented. (It is not clear to me what Ge does with the *yād*; he seems just to ignore it.) Now *yād* is badly positioned for a clausal subordinator, and it is possible that rather than being a subordinating conjunction it’s functioning as a sort of izafe in the phrase *tyād vartīr yād āradhram* “the circuit that is unslackening,” connecting the adj. *āradhram* to *vartīḥ*. I would be inclined to that interpr. if it weren’t for the problem of *vartīḥ* itself. This noun is always the complement of the verb $\sqrt{yā}$ in the phrase “drive the/a/your circuit,” incl. in this same hymn, 10ab ... *vartīḥ* ... *yātam*, and in the next one, with phraseology similar to ours, VI.63.2 *pāri ha tyād vartīr yāthaḥ* ... It would be very difficult to make it the obj. of *ūhathuḥ*, which already has an obj. of its own in any case. But the preceding pāda, 2d, has a form of $\sqrt{yā}$, and I suggest that we simply supply it in 3a as well, which is again pendant on the preceding vs. By this interpr., subordinating *yād* is still badly positioned, but it could have been displaced by the insistently fronted *tā* in this section of the hymn. I take *āradhram* as a neut. adv., but it could also modify *vartīḥ* (“unslackening circuit”) without benefit of an izafe. In fact I now would accept the izafe interpr., which eliminates the badly positioned subordinating *yād*. I would still supply a form of $\sqrt{yā}$ as the verb of pāda a, but not in a subordinate clause. This in fact allows me to supply a form of the impv., which the *tā* invites (see above). I would now close vs. 2 with a full stop, and tr. 3a “Drive this circuit which is unslackening.”

The lexeme *pāri* $\sqrt{śi}$ means lit. ‘lie around’ and is used, e.g., of Vṛtra surrounding the flood in IV.19.2, etc. Assuming that *śayādhyai*, *pāri* here belongs to the same lexeme, it must have a developed sense: to surround and thus circumscribe, keep within bounds. Why a “pious mortal” would be pursuing a course that needs such control is not clear to me. I suppose it could just mean that, since the Aśvins circle around the earth (1cd), that circle marks the boundaries of where humans can wander.

Note the echo effect of *vartīḥ* (a) / *vyāthiḥ* (d).

VI.62.4: As noted ad vs 1., *jāramāṇa*- here seems to belong to ‘sing’, not ‘awaken’, and

therefore may limit the form in 1b as well. Based on 1b *huve járamāṇaḥ* “singing, I call upon” and 5b *ā vivāse* “I seek to attract,” I have supplied a 1st ps. referent for the genitives here.

The bahuvrīhi *yuyujānā-saptī* ‘having a harnessed team, having a team that has been harnessed’ is unusual in having a middle pf. part. as its first member. (See AiG II.1.43.) The publ. tr. “having harnessed their team,” though it follows both Gr and Ge, is misleading: I do not think it is a *bharād-vāja-*, *codayān-matī* type governing compd. I would therefore emend to “having a harnessed team,” with the occasional pass. value of the med. pf. to \sqrt{yuj} ; see Kü (407). However, things may be somewhat more complex. There are four occurrences of this med. part., one nearby in VI.59.5, three in the same metrical position as here (immed. after an opening of 5). All of them are transitive. It is possible that a free phrase like **yuyujānā saptī* “the two having yoked their teams” became unverbated and reinterpreted, with adjustment of accent and the like. But I do not insist on this.

In d *pratnāḥ* ‘age-old’ qualifying the priest contrasts with *návyas-* ‘newer’ in a, qualifying the singer, as well as *yúvānā* ‘two youths’ in d referring to the Ásvins. The first pair recurs in the next vs., 5b. See comm. there. The “age-old Hotar” is of course Agni.

VI.62.5: The stems *návyas-* ‘newer’ and *pratnā-* ‘age-old’, found at opposite ends of the preceding vs. (a and d), are juxtaposed here in the phrase *pratnā návyasā*, in case the duller members of the audience had missed the contrastive terminology in 4. But this phrase is doing two other things as well: du. *pratnā* refers to the Ásvins, who were, in 4d, identified as *yúvānā* ‘youths’; and *návyasā* modifies *vácasā*, “with a newer speech,” repairing the slightly off phrase in 4a, where it was the singer, not his song, who was newer.

The pf. *babhūvātuḥ* should not have been rendered as a straight pres. in the publ. tr. I would change to “who have become.” It also forms a slight figure with *śámbhaviṣṭhā*, which precedes it immediately before the pāda break.

VI.62.6: As noted ad vs. 3, I would prefer not to have the 3rd ps. prn. *tā* serving as a subject of an indicative 2nd ps. verb (pf. *ūhathuḥ*), but the repetitive *tā* pattern may have imposed it here.

The adj. *areṇú-* ‘dustless’ (8x) twice qualifies ‘paths’ (I.35.11, 163.6); the latter of these passages is in the instr. pl. as here. This suggests that *yójanebhiḥ* ‘treks’ is used here as a near synonym for ‘paths’.

Ge takes *bhujántā* to \sqrt{bhuj} ‘benefit, enjoy → utilize’ (benutzen), but better, with Gr, Re, Lub, to \sqrt{bhuj} ‘bend’. In any case this participle is clearly meant to echo the name Bhujyu.

VI.62.7: The narrative précis in pāda c belongs with the equally bare-bones accounts in I.117.16, 116.20, X.39.13, and esp. I.119.6. Because this seems to refer to one of the Ásvins’ previous deeds, I have tr. the supposed injunctive *yātām* (so Pp) as a preterite. Note in fact that nothing forbids extracting an augmented form *ayātām* from the sequence *rathyāyātām*; see the clear *ayātām* in I.116.20 depicting the same myth.

Although *śayú-* has been reinterpr. as meaning ‘orphan’ in some of its occurrences (see comm. ad IV.18.12), given the favoring of PNs in Ásvin hymns and the lack of an

‘orphan’ context here, I retain the PN.

In d I take *īti* as a summarizing device, indicating that the three exploits sketched in abc are examples of the Aśvins’ *sumatī-*. With Ge I see no choice but to supply a verb like ‘you showed’ to govern the acc. *sumatīm*.

As is clear to all, *cyāvānā* is at the least a play on the name Cyavāna (same accent), another client of the Aśvins.

VI.62.8: The grammatical identity of *bhūmā* (Pp. *bhūma*) is disputed. Ge considers it to belong to a (hapax) adj. stem **bhūman-* derived from *bhūmán-* ‘abundance’, used adverbially (“reichlich”). This does not seem to have much to recommend it. More appealing is to make it somehow related to a word for ‘earth’. Re tries an instr. of *bhūman-* ‘earth’, but not with much conviction. Old rehearses -- mostly to firmly reject -- other possibilities, incl. the one that I favor: that it is the loc. of *bhūmī-*. He objects that we should expect (and do indeed get) *bhūmyām* to this fem. stem, but at this period I don’t think this would be necessary for a fem. short-*i*-stem. His other object is more cogent, that to a short-*i*-stem we would expect *bhūmau* pāda-final. I don’t have a clinching arg. against this, but would point out that there is some variation in these patterns. And this pāda seems to be playing with the heaven / earth distinction by other means: we first have the two world halves (*rodasī*), followed by (*pra-*)*dīvaḥ* ... *bhūmā*, which distantly evokes *dyāvā-bhūmī*. The off-balance pairing is matched by the off-balance pairing of gods and mortals discussed immediately below.

The conjoined NP *devānām utá martyatrā* “of gods and among mortals” shows the familiar god / mortal opposition, but what Klein (DGRV I.311–12) calls “a peculiar absence of morphological parallelism.” It is tempting to make it mean “the anger of the gods towards mortals,” but I think *utá* is there precisely to block that reading, *pace* Scar (429) “Den Groll der Götter ... der auch auf die Sterblichen gerichtet ...ist.”

VI.62.9: As noted in the publ. intro., the syntax of this vs. is unregulated. However, the sense is quite clear. The first hemistich consists of a rel. clause, whose rel. prn. and finite verb are both in the 3rd sg.: *yáḥ ... cīketat* “who will keep watch”; it also contains another verbal form, *vidádhat*, which I take, with Ge and Old, as a pres. part. nom. sg. m. to the redupl. pres. of *√dhā*, but which could be, as Old points out, a short-vowel subjunctive (so, “... will regulate ... and will keep watch”). (Nothing rides on the choice.) But this happy singular environment is interrupted by a dual nom./acc. (which must be nom. in this case) *rājānau* “two kings,” which is further specified by the two nom. singulars *mitró vāruṇaḥ*. The sense is clearly “which one (of) the two kings, M (or) V ...,” but this is not what it says: “which one, the two kings, Mitra, Varuṇa, will keep watch,” leaving the audience to choose what subject, in what number, it prefers.

I take *rājasah* as the gen. obj. of *cīketat* (so also Old), in the usual syntactic pattern of verbs of perception, which can take acc. or gen. complements. By contrast, Ge has it dependent on *rājānau*, but, as Re points out, the two are rather distant, and further I know of no other passages in which *rājas-* is construed with *rājan-*, although that expression would be appealingly alliterative -- though it is true that M+V are called *dhartārā rājasah* “upholders of the space” in V.69.4.

The second hemistich has no direct syntactic connection to the first, though again it is quite clear what is meant. It contains a 2nd sg. impv. *asya* ‘hurl’, which must be

addressed to the referent of the rel. prn. in ab -- that is, either Mitra or Varuṇa. Although it is common to change person reference even within RVic vss., it is somewhat unusual to do so in this kind of syntagm.

In d Re calls the phrase *dróghāya cid vácase* a bahuvrīhi “défait,” for **drogha-vacas-* [he gives no accent], like *drogha-vāc-*. Judging from his tr. “auf den gar verlogenen Anuiden,” Ge seems to agree. But this seems unnec.; the dative targets of the missile in c and d are both *s*-stem abstracts, *rākṣas-* ‘demonic power’ and *vácas-* ‘speech’ respectively. I see no reason to try to manipulate the target in d to be personal. Scar (469) interpr. as I do.

VI.62.10: I supply ‘to prosper’ with *tánayāya* on the basis of nearby VI.49.5 (=I.183.3) ... *iṣayádhyai, vartír yāthás tánayāya tmāne ca*, with very similar phraseology.

I take pāda c with ab, rather than with d, as is the norm (Ge, Kü [509]), in order to capture the opposition between *ántara-* ‘nearer’ and *sánutya-* ‘distant’. Cf., e.g., VI.5.4, which has both *ántara-* and *sánutya-* as well as *vanuṣyá-*. By my interpr. the Áśvins are urged to come near to us, “because of the distant dereliction of a(nother) mortal” -- that is, because some other mortal, far away, hasn’t done his ritual duty, they should come to us, who will. I suppose I could construct a way to take c with d: some mortal’s dereliction of duty would cause the Áśvins to chop off some heads. But I find it easier to account for c as presented. The last, independent pāda just takes part in the general bloodthirstiness of the last few vss.

Against Ge, who takes it to \sqrt{vrj} , I assign *vavṛktam* to $\sqrt{vraśc}$ ‘hew’, along with Whit (Rts), Gr, Re, and Kü, inter alia. Cf. the clinching parallel in X.87.16 *téṣām sīṛṣāṇi ... āpi vṛśca*.

VI.62.11: As noted in the publ. intro., the last phrase of the hymn, *gr̥naté citrarātī* “you two providing bright gifts for the singer” exactly repeats the end of vs. 5, which marked a transition in the earlier part of the hymn.

VI.63 Áśvins

The hymn contains many metrical irregularities and a marked tendency towards 10-syl. lines. See Old for details and disc.

VI.63.2: The abl. (or, in principle, gen.) *riṣáḥ* is a bit hard to construe. Whenever this form occurs elsewhere (and it’s not rare), it is with a form of either $\sqrt{pā}$ or $\sqrt{rakṣ}$: “protect from harm.” Ge supplies ‘protect’ here as well: “(zum Schutz) gegen Schaden.” However, in the absence of a lexical ‘protect’ and in the presence of a verb of motion (*yāthah*), I take it as an ablative of place-from-which.

VI.63.3: There is no expressed subj. to *ákāri* and the abl./gen. *ándhasaḥ* has nothing to depend on. Ge takes it as a partitive gen. (n. 3a) but simply tr. as an indef. subject (“Trank ist euch bereitet”), while Re takes it as belonging to an elliptical construction and suggests supplying either *sutám* or *pāntam*. I prefer to assume that the subject of *ákāri* has been gapped, and *ándhasaḥ* is an abl. of source.

In this context I take *vārīman* ‘in/on the expanse’ as referring to the ritual ground on which the barhis has been strewn, rather than simply Ge’s “in voller Breite.” See *vāriman*

in 11.

vavande is of course ambig. as to person, but given the 1st ps. in 2a and no intermediate 3rd ps. officiant, it is most likely 1st (so also Ge).

In real-world terms the phrase “the stones have anointed you” is, of course, distinctly peculiar. But in the foreshortened universe of RVic discourse, this simply abbreviates the sequence “the stones pressed out the soma liquid, which was prepared for you to drink, and your drinking of it was as if it were anointing you (and perhaps did, by running down your chin).”

VI.63.4: The ‘gift’ (*rātī-*) in b is the ladle containing the ghee. Re points to passages (III.19.2, IV.6.3) where the ladle is described as *rātīn-* ‘possessing/providing gifts’.

In d Ge takes *āyukta* as passive, with the Hotar as subj. and *nāsatyā* as the obj. of a loc. inf. *hāvīman*: “der eingespant is, die Ns zu laden.” The pass. interpr. is explicitly rejected by both Old and Re, in favor of a rendering like mine. Although Ge’s interpr. is appealing in certain ways, there are several things against it: 1) the well-attested mid. root aor. of *√yuj* is almost always transitive (pass. *āyukta* in V.17.3, I.48.7) -- there is after all a distinct passive aor. *āyojī*, *āyujran* to express this function; 2) I know of no instances (nor does Old) in which loc. *hāvīman(i)* functions as an infin. and takes an object.

VI.63.6: I assume that “the flourishing of Sūryā” is simply an elaborate way of saying Sūryā. (MLW comments simply “Cf. Gk. βίη Ἡρακλείη.”) Ge (n. 6b; fld. by Re) suggests that it is meant to convey that the beauty of Sūryā increases the beauty of the Aśvins but I don’t see this. I take the dat. *śubhé* in the same way as *śriyé* (5a and commonly elsewhere, e.g., in the next hymn VI.64.1), *vāpuṣe* (6c), as vaguely attached datives of purpose/result.

The latter (*vāpuṣe*) Ge takes adverbially (“erstaunlich”), and he construes *vām* simply as a poss. gen. (“Eure Vogel(rosse)”). I think there is more content here and take *ānu* with *vām* (“after/following you”), separated because *vām* is taking Wackernagel’s position. The beautiful chariot of the beautiful Aśvins carrying the beautiful Sūryā must have been an amazing sight, and the birds in their wonder follow it. As their relative geographical positions indicate (birds after chariot), I think these birds are not, or not only, the Vogelrosse pulling the Aśvins chariot, but also the birds in the world who see the marvel and rise up to accompany it. The songs of the birds in a choir (*vāñī*) reach the Aśvins to make them well-praised (*súṣṭutā*). As this indicates, I take *súṣṭutā* as dual (so also Gr, Ge), a proleptic adj. describing the state of the Aśvins after the birdsongs reach them. However, as Ge points out (n. 6d), *súṣṭutā* could also be a nom. sg. fem. modifying *vāñī* ‘choir, music’, and the adj. is in fact strategically placed between the nom. sg. fem. and the duals. Although a “well-praised choir” doesn’t make a lot of sense in this context, Ge cites VIII.100.11 ... *vāḱ ... súṣṭutā* -- though it’s worth pointing out that in that passage the reference is to the goddess Speech, while in our passage, as noted, I take the *vāñī* as referring to the “choir” of birdsong.

VI.63.7: As noted in the publ. intro., the chariot journey in this vs. echoes the mythological one in vs. 6 but updated to a wish for the present day.

Ge divides the 2nd hemistich into two separate clauses, by pāda. In this interpr. the nouns in d are in the nom. pl. and follow the Aśvins’ chariot that was launched in c

(“viele Labsale ... folgen ihm”). The publ. tr. takes the two pādas as a single cl., with the nouns in d in the acc. pl. and the chariot following them. Neither of these conjures up an entirely comfortable picture if *ānu* is strictly ‘following’ – either all the good stuff got left behind and has been sent after the chariot, or it’s all zipping along ahead. But my accusative alternative could be taken to mean that the refreshments et al. are already at the ritual ground. This would be supported by ab, esp. b. But it is contra-indicated by VI.62.4 in the immediately preceding Aśvin hymn, where *prkṣam* and *iṣam* are two of the things the Aśvins are bringing. However, if *iṣidh-* is a variant of *niṣṣidh-* ‘tribute’ (see below), the first of these alternatives is the more likely.

The hapax *iṣidh-* is of uncertain formation and meaning, though it obviously falls into the category of desirable things at the ritual. There are (at least) two competing etymologies. One has it as the doublet of *niṣṣidh-* ‘tribute’ (for lit. see EWA I.198; favored by Re); the other (see EWA I.200) as a deformation of a putative **iṣudh-*, like the likewise hapax *prkṣúdh-* (I.141.4), serving as the base of the denom. *iṣudhyá-* and cognate to Aves. *iṣud-*. The *ud(h)-* in these forms is explained by Humbach as the zero-grade of the PIE root $\sqrt{*}uedh$ ‘lead’, no longer found in Indo-Aryan as a verbal root. (I suggest an alternative etym. of *iṣudhyá-* ad I.128.6 and more fully in my forthcoming article “Vedic *iṣudhyá-* and Old Avestan *iṣud-*, *iṣūdiia-*: The Aim of Praise.”) Narten (YH 159-63) accepts Humbach’s etym. and further explains our *iṣidh-* as altered from **iṣúdh-* by folk etymology with \sqrt{idh} ‘kindle, burn’ (162 n. 104) in passages in which the word is connected with Agni, since kindling wood is Agni’s source of strength. This last seems quite weak to me: ‘burn’ contributes no obvious semantics to the noun at least in its only occurrence here -- which has nothing to do with Agni -- and the *iṣudhyá-* forms, though not numerous, ought to provide some anchor against such a deformation. For this reason I tentatively follow the first interpr., though only because nothing better seems to be currently on offer. If *iṣidh-* is somehow a doublet of *niṣṣidh-*, which occurs several times with *pūrvīh* (III.51.5, VI.44.11) as here, then the reference would be to the tributes that the Aśvins received from the mortal worshippers. I would now alter the tr. to “... after the refreshments, fortifying powers, and the many tributes.”

VI.63.8: The hapax *ásakrām* is another proleptic adj. (see 6d). This fem. sg. can apply equally to the two fem. sgs. *dhenúm* and *iṣám*.

The *ānu* that has not yielded completely satisfactory sense in 6c and 7d here is entirely at home: the various ritual offerings to the Aśvins, both verbal (*stútaḥ* ... *suṣtutíḥ*) and physical (*rásāḥ*, the soma juices), accrue to them *following* the gift they bestow on the sacrificers.

VI.63.9: Although in the publ. tr. I accept Ge’s interpr. of *pakvā* as ‘cooked (food)’ (so also Gr, Hoffmann [231], Klein [DGRV I.97], Scar [587]), in this mass of valuable livestock I now find it unlikely that the poet would memorialize for posterity the gift of a few ready-prepared meals. It is more likely to be a technical term in animal husbandry -- perhaps ‘mature(d)’ (< ‘ripened’), qualifying horses or cattle of a particular age. Although it is neut. pl. and therefore can’t qualify the animals directly, I suggest that parallel to sg. *śatám* in the conjoined phrase *sumīlḥé śatám peruké ca pakvā*, we may supply **śatā(ni) *gāvām pakvā* “mature hundreds of cows” for “*hundreds of mature cows.” A similar constr. seems to be suggested by Gr (Nachtr. to *śatā-*), where he

proposes that *pakvā* be construed with *śatām* as an ex. of his 10) “der Singular neben einem in gleichem Casus stehenden Substantiv des Plurals.” Although this particular interpr. seems precluded by the *ca* in the passage, I do think the neut. *pakvā* qualifies a (gapped) neut. numeral. I would now alter the tr. to “and (hundreds) of mature (cows) at (the hands of) Peruka.”

Hoffmann (230–31) interprets the two clauses in the 2nd hemistich as modal, with injunc. *dāt* rendered as ‘soll ... schenken’ and the sandhi form *abhiṣāca* interpr. as an inf. **abhiṣāce* with the sense “soll ... folge.” This is all in service of his somewhat bizarre insistence that the injunctive aorist doesn’t express immediate past tense (aktuelle Vergangenheit), which is, in his view, the province of the *augmented* aorist. At least in my view, Hoffmann’s restricted and often non-linguistically grounded model of the injunctive has led him to deny the obvious intent of the *dānastuti* here: the gift generally needs to have been given to be praised! As for the supposed infinitive **abhiṣāce* (which, it must be admitted, he does not insist on), there are no other such forms, whereas the nom. pl. is attested elsewhere. We must simply accept that it takes verbal rection, here the acc. pl. *ṛṣvān*; see Scar (587–88).

On *smāddiṣṭi*- see comm. ad III.45.5.

VI.63.10: As in the immediately preceding vs. Hoffmann (230–31) interprets the two forms of *dāt* as modal, “soll ... spenden.” The same objections apply.

The voc. *nāsatyā* was omitted in the publ. tr.

The voc. *vīra* is stubbornly sg., though the reference must be to the du. *Ásvins*. Perhaps, as MLW suggests, simply a shortened du. voc.

VI.63.11: I take loc. *váriman* in the same way as its variant in 3a, as referring to the ritual ground. Ge here: “in weitem Masse,” seemingly referring to the patrons.

VI.64 Dawn

VI.64.1: *supátha*- and *sugá*- recur in 4a, conjoined by *utá*.

Note the phonological reciprocity between *vísṣvā* and *vásṣvī* in the same metrical position in c and d respectively. The latter is, of course, simply the fem. to *vásu*- ‘good, goods’, and here it must make at least partial reference to the goods Dawn disburses, she being here the *Dakṣiṇā*, priestly gift, personified. This could have been better conveyed in the publ. tr. by ‘goodly’ rather than just ‘good’. I think there may also be a buried grammatical pun, for, if there existed such a stem, the *-in*-stem possessive to *vásu*- should be **vasvín*- ‘possessing goods’, with nom. sg. **vasvī*, differing from our form only by accent.

It would be possible to construe *pāda* with *abhūt* and a pred. nom.: “she has become the goodly priestly gift ...” But it is common in Dawn hymns to announce the arrival of Dawn in the first verse, and an annunciatory “she has appeared” (< “come into being”) is more in harmony with the usual practice of Dawn hymns. This is the tack of the standard tr. (Ge, Re; see also Gonda [Ved. Lit. 218]).

VI.64.3: As Ge points out (n. 3cd), the acc. *śátrūn* must be read as the obj. of both similes and acc. *tāmaḥ* ‘darkness’ as the obj. of both frames, though the former only appears in c

and the latter in d. The two similes compare Dawn not only to a male figure, but to a skillful, highly trained male warrior: archer and chariot-driver.

In c the simile marker *iva* occurs after the 2nd term, not the 1st (might expect **sūra ivāstā śātrūn*). Perhaps *sūra- āstar-* is perceived as a unity, “champion archer”; cf. I.70.11 *āsteva sūrah*, IV.36.6 *sūro āstā*, I.8.4 *sūrebhir āstrbhiḥ*, and, with lexical substitution, II.42.2 *vīro āstā*. There is also the fact that in similes with three terms matching two different cases, there’s some fluctuation in the position of the simile marker.

VI.64.4: For *sugā- supātha-* see vs. 1.

Ge suggests that *avāté* “(even) when it is windless” describes a wonder, that Dawn crosses the water even without wind in her sails. I am not sure what evidence we have for sails, in addition to oars, in ancient Indian boats, but I have not systematically inquired into this. However, the “windless” circumstances might simply make reference to the previous pāda: the waters are also *sugā-* ‘easy to travel’ when there is no wind and therefore no turbulence. The word *avāté* also plays off the descriptor of Dawn in the next vs. (5a), *āvātā* ‘unsurpassable, unvanquished’; Old in fact suggests that we might read **āvāte*, voc. of the latter stem, though a word play is much more satisfying poetically, and he does not dismiss the ‘windless’ interpr. out of hand.

VI.64.5: The beginning of the first pāda, *sā ā* [so Pp., Samhitā *sā*] *vaha yā*, replicates almost exactly the beginning of 4c, *sā na ā vaha*. The close similarity of the two openings supports the disjoining of *sā* in 5a into *sā ā*, which is also required by the meter.

As noted above, nom. sg. fem. *āvātā* ‘unvanquished, unsurpassable’ plays on the loc. *avāté* ‘windless’ in 4b. The neg. stem *āvāta-* is generally paired with the positive pres. part. *vanván*, in the phrase *vanvānn āvātaḥ* “winning but unwon” (5x, incl. VI.16.20, 18.1 in this maṇḍala). But here and in nearby VI.67.8 it is found in the fem. and outside of the contrastive pair. In neither of these passages is the application of the adjective clear. I have therefore, somewhat reluctantly, adopted a version of Re’s attenuated ‘insurpassable’ (which, however, he seems to reject in his n.).

Both Ge and Re take cd as a unified rel. cl. (e.g., “die du als Göttin ... erschienen bist”), but this is impossible, because *bhūh* is unaccented. I instead attach c to ab, and take d as an independent imperatival clause. I now see that it would be possible to take cd together, with the nominal rel. cl. *yā ha devī* acting as an izafe; as noted elsewhere (passim) such izafe-like rel. phrases can be embedded. This would produce a tr. “You, who are a goddess, o daughter of heaven, become worthy to be seen ...,” with no appreciable difference in meaning.

VI.64.6: This vs. is identical to I.124.12.

Pāda b may contain another izafe-like embedded rel. construction, like the possible one in 5c: *nāraś ca yé pitubhājah* “and the men who are partakers of food.” The question turns on where to construe hemistich-final *vyūṣtau*. It could belong to the rel. cl. “... partake of food at the first flush,” in which case there would be no embedding. But it seems as if this temporal designation should apply to both actions: the flying up of the birds and the eating of the men, not just the latter. Moreover *te* in 2nd pos. of the hemistich is most easily construed with *vyūṣtau* at the end, in which case the nominal rel. must be embedded.

This hemistich also seems syntactically unbalanced. If we assume that we have an “X and which Y” construction, conjoining birds and men (so Klein, DGRV I.56), they should be the joint subject of *úd ... apaptan* ‘have flown up’, an action appropriate to the first group but not the second. Surely the real intent is that at the moment of dawn the birds fly up and the men eat, so what is intended to be conjoined are the two verbal notions, with one a finite verb and the other the 2nd member of a root noun cmpd. (on which see Scar 352).

VI.65 Dawn

VI.65.1: As Re points out, the expected expression is *duhitā divāḥ* “daughter of heaven,” but it has been elaborated here by the cmpd *divojāḥ* ‘born of heaven’, with the gen. as 1st member. The standard phrase returns in the last vs.

This vs. piles on the words for night and darkness: *rāmyāsu ... tāmasāś cid aktūn* “amid the nights ... even across the nocturnal shades of darkness.”

VI.65.2: The same emphasis on the dark night is found here in *tāma ūrmyāyāḥ* (with acc. *tāmaḥ* as head noun, against the dep. gen. *tāmasaḥ* in the previous vs. (1d). With *ūrmyā-* here the poet introduces yet another ‘night’ word.

VI.65.3–4: There is lexical chaining between 3d and 4a with the identical phrase *vidhaté rātnam* in the same metrical position.

VI.65.4–5: For the repeated opening *idā* (4a, 4b, 4c, 5a) see publ. intro. The two outer exx. are both *idā hī*; the two inner ones are followed by phonologically similar them. datives: 4b *idā vīrāya* / 4c *idā vīprāya*.

VI.65.6: The voc. *divo duhitar* repairs, or “de-elaborates,” the phrase in 1a; see ad loc.

VI.66 Maruts

On the difficulties and with an overview of the Maruts’ birth story in vss. 1–5, see publ. intro. The hymn was treated at length by P. von Bradke, “Von der Marut wunderbarer Geburt, RV 6, 66” in Fs. von Roth (1893), 117–25, whose disc. is in great part incorporated into Old’s notes.

VI.66.1: This vs. is conceptually, lexically, and syntactically similar to VI.48.22; see extensive disc. ad loc., with ref. to other passages alluding to this mythological event.

For *nāma pātya* “own a name,” cf. II.37.2 *dadīr yó nāma pātyate* “who owns the name ‘giver’,” adduced by Re.

The 2nd hemistich consists of a truncated *anyā-* ... *anyā-* construction, with the 2nd *anyā-* gapped. This implicitly contrastive structure must account for the accent on *pīpāya* in the first clause.

Contra the standard interpr. (Old, Ge, Re), I take *śukrām* and *ūdhaḥ* separately, as the double acc. obj. of √ *duh*, rather than having the former an adj. modifying ‘udder’, also in other relevant passages that contain the same two words (II.34.2, IV.3.10).

VI.66.2: For a more complex comparison of the Maruts to fire(s), see vs. 10.

In c, where the gen. pl. *eṣām* seems to preclude the Maruts as referent of the nom. pl. *areṇávo hiranyāyāsaḥ*, Sāy. supplies *rāthāḥ*, and this might be possible or at least harmless, although the positive evidence for it is slim. The 2nd adj. *hiranyāya-* is used not infrequently of chariots or their parts (wheels, wheel-rims), but also of a wide range of other things, including gods and those include the Maruts (V.87.5); ‘dustless’ has a more limited range of application. In nearby VI.62.6 it qualifies *yójanebhiḥ*, rendered there as ‘treks’ and, as I argue ad loc., a near synonym for ‘paths’, which are twice described as ‘dustless’ (I.35.11, 163.6). This is as close as we’ll get to chariots: in its 8 occurrences it is never used of chariots or parts thereof. It is, however, used of the Maruts in I.168.4. Because chariots are intrusive in our passage and interrupt the otherwise constant reference to the Maruts in the nom. pl. (ab and, in my opinion, d) and because the combination of adjectives doesn’t point to chariots -- or any referent *but* the Maruts, who are described by both adjectives elsewhere -- I now think the nom. plurals in c refer to the Maruts. What then to do with *eṣām*? I propose construing it with the instrumentals in d. The pāda boundary intervenes, but this is hardly fatal. I would now emend the tr. to “dustless and golden, they came into being all at once with their (*eṣām*) manly and male powers.”

However, *pace* Ge and Re, even if we were to keep ‘chariots’ as the referent in c, I do not think these same chariots could be the subj. of d. Rather, by that interpr., c is parenthetic and the Maruts return as subj. in d, which again treats the topic of their simultaneous birth. Ge’s parallels (see n. 2cd) contravene his tr. (“ihre staublosen goldigen (Wagen) sind zugleich mit ihren Manneskräften und Stärken entstanden”) because the parallel passages with *sākām* √*jan* (etc.) all concern the birth of the Maruts—certainly not their chariots!

Pāda-init. *sākām* plays off identically position *sakṛt* in 1d.

VI.66.3: There is much disagreement about this vs.; my interpr. is closest to Old. In my opinion (and in Old’s too, though he doesn’t use the term ‘gender-bending’), this once again, as in vs. 1, refers to the gender-bending androgyny of Pr̥ṣni who fulfills both maternal and paternal roles in the birth of the Maruts, though Rudra is identified as their father in pāda a.

The masc. pl. rel. pronouns *yé* (a) and *yān* (b) have no direct correlative in either c or d. But both the gen. sg. *mahāḥ* in c (see below) and *subhvé* in d (see below) pick up the masc. pl. conceptually. For a similar -- and clearer -- example see vs. 9, with ab referring to the Marut troop in the sg., and cd picking up that reference with pl. rel. prn. *yé* (c) and a pl. abl. noun (d).

In b, despite the lack of an identifying gendered pronoun or adj., the subject and the referent of *dādṛviḥ* must be Pr̥ṣni, as is generally agreed.

In c Old discusses the possible interpr. of *mahāḥ* at some length. Much depends on the analysis of *vidé*. Ge takes it as transitive (“denn die Mutter kennt ihre Grossen”), with *mahāḥ* acc. pl.; Re as well, though with a diff. interpr. of *mahāḥ*. But *vidé* is overwhelmingly pass.-intrans.; only VII.40.5, cited by Ge (n. 3c) seems to require a transitive interpr. I take *vidé* in its usual passive sense and interpr. *mahāḥ* as a gen. sg. dependent on *mātā*; the sg. referent is the collectivity of the Maruts in their flock.

Note the allit. in c: *mātā mahó mahī* and the etymological relationship between the

last two terms. Note also the unusual pāda-final position of *sā́*, which may result both from being displaced by the alliterative sequence (though why not 1st position?) and from the desire for the striking repetitive *sā́, sā́* over the pāda and clause boundary. This repetition is enhanced by the matching vowels before and after: (*mah*)ī *sā́, sā́* ī(*t*). This is only one of two rukied *sā́*s in the RV (the other = X.64.15 #*ví sā́*), even though *sā́* occurs elsewhere in ruki environment (even pāda-finally, as in VIII.27.18 ... *nú sā́*). I do not understand the reason for the ruki: there does not seem to be particularly close syntactic nexus between *mahī* and *sā́* here.

Pāda d fully expresses the gender paradox, at least by my interpr. (and Old's). As noted in the publ. intro., *gārbham* √*dhā* 'place the embryo' is the defining idiom of the male role in pregnancy, and here it is difficult (but not impossible!) to avoid taking its subject to be the female Pṛṣṇi. In fact, both Ge and Re (tr.) do wriggle out of it, by making *sét* [= *sā́ id*] *pṛṣṇih* a nominal sentence (Re's "elle (s'appelle) Pṛṣṇi" has a particularly peculiar charm) and supplying Rudra as the subj. of the idiom. But there is no support for this in the passage, and only insistence on expected gender roles can impose the interpr. Indeed the init. *sā́ id* draws attention to the paradox: "it was *just her* -- Pṛṣṇi -- who implanted the embryo. (Interestingly, while Re follows the Ge tack in his tr., in his comm. he embraces the paradox: "c'est Pṛṣṇi qui (en fait : *id*) a mis le germe ..." Since the tr. and the comm. are found in the same fascicle of EVP -- X, pp. 40 and 98–99 respectively -- his about-face is head-spinningly rapid. It should also be admitted that Ge [in n. 3d] also allows the possibility of a single clause and a feminine subject.)

This leaves *subhvè*. In the Rudra-as-emplanter scenario, this dat. refers to Pṛṣṇi (see Ge n. 3d and Re [tr.] "en (l'épouse) feconde," also Scar 369), but part of the reason for Re's change of heart was that he did not believe that *subhvè* could be fem. (see his comm.). In the Pṛṣṇi-as-emplanter scenario *subhvè* would refer to Rudra (so Gr, Old, Re [comm.]). I think neither solution is correct. The compd. *subhū-* in the pl. is used a number of times of the Maruts (5.41.13, 55.3, 59.3, 87.3), including once in a birth context: V.55.3 *sākāṃ jātāḥ subhvàḥ* "born all at once, good in essence." As with *mahāḥ* in pāda c I interpr. the singular here as referring to the collectivity of the Maruts.

VI.66.4: Another difficult vs., esp. the end of pāda a: *āyā nú*, which has provoked much disc. (see esp. Old). I consider it a śleṣa. Central to my approach is the assumption that there's a clause break before these two words in either reading. On the one hand, I have adopted von Bradke's clever idea (op. cit., 121), that *āyā nú* is direct speech, with *āyā* the 1st sg. pres. subjunctive to √*i* 'go' followed by the temporal particle *nú* in expected clause-2nd position. This is the collective announcement of the Maruts, "who do not retreat from their birth": "I will go now." They are eager to exit the womb (or udder). We might of course expect a plural verb, but Marut reference always vacillates between pl. and collective sg. (see in fact the immediately preceding vs. 3), and this exact expression echoes that of Indra in the narrative of his unnatural birth in IV.18.2 *nāhām āto nír āyā* "I will not go from here," a narrative that might well have been familiar to all.

The other reading of *āyā* is the more generally accepted one, though I think other interpr. have missed a crucial detail. It is generally taken as the instr. sg. fem. of the *ayām* prn. (back to Max Müller; see Ge n. 4a). But this form is ordinarily accented on the final, *ayā́*. Initial accent on the oblique forms of this pronominal stem is restricted to emphatic usage in pāda-initial position (cf. the variant usage of, e.g., *āsya*, *asyá*, and *asya*). Those

like Ge and Re who take it as this instr. but construe it with the rest of pāda a must wave away the accent (or ignore it, as Re does). For such interpr. cf. “Die nicht vor der Geburt *auf diese Art* zurückscheuen ...”; “... devant un naissance *de la sorte*” (my italics). However, init. accent is perfectly at home if we assume a clause break before *áyā*, an assumption supported by the position of *nū*, which overwhelmingly takes 2nd or modified 2nd position. I think it emphatically announces the way the birth *really* happened -- and given the unnaturalness of the birth (being “milked out” of their mother), emphasis is certainly called for.

Either of these interpr. seems to require that the *yād* in c actually have domain over b as well (though there might be a way out of that if one were sufficiently ingenious), but given the syntactic tangle the vs. is already in and the looseness of the relativization elsewhere in this hymn) (see a similar problem in the next vs., 5b, this does not seem to me too much of a problem.

In b it is not clear to me what flaws the Maruts needed to purify; Ge (n. 4b) suggests it’s the unnatural pregnancy and birth, and he may well be right.

Gr (and Lub) assign *ukṣāmānāḥ* to *√ukṣ* ‘sprinkle’, but ‘grow’ seems more likely (so also Ge, Re).

Our problematic expression may have spawned the two *ānu* forms (in c and d) from *áyā nū*. The first is in the familiar expression *ānu jóṣam* (II.21.3, etc.) “according to / at pleasure”; the latter I construe with *tanvām* (cf. I.147.4 *ānu mṛkṣīṣṭa tanvām*, with similar discontinuity). Neither *√vakṣ* / *ukṣ* nor *√mṛc* otherwise *ānu*.

VI.66.5: This last vs. of the birth saga does not let up on obscurity, and my interpr. differs in part from those of others, though there is general agreement on the point of the vs.; see, e.g., Ge (n. 5): that the Maruts got no milk from their mother, but undeterred, they quickly became the Maruts we know, with their shared name and their tumultuous behavior. It is striking that the vs. also identifies the Maruts with Pṛṣni verbally. Not only is the same construction used for their names (1b, 5b; see next para.), but within the vs. both Pṛṣni (a) and the Maruts (c) are called *ayās*- ‘irrepressible’ (with this adj. regularly used of the Maruts elsewhere), and *sudānu*- ‘of good drops/gifts’, a standing epithet of the Maruts, is applied to Pṛṣni in d (see Ge’s n. 5d)

The vs. is also linked ring compositionally with vs. 1. In 1b it is asserted that the two udders referred to in 1c and d — the latter being Pṛṣni’s udder, which will produce the Maruts as milk — “own the same name ‘milker’” (*samānām nāma dhenú pátyamānam*), while in 5b the Maruts after birth assume their (shared) name “Marut”: *ā nāma dhṛṣṇú mārutaṃ dádhanāḥ* -- note, inter alia, the echo of *dhenú* in *dhṛṣṇú*. Note also 1c / 5a LOC *dohāse*: in 1c the other (=non-Pṛṣni) udder constantly gives milk (*dohāse*) to mortals (*márteṣu*), while here in 5a Pṛṣni does not give milk (*ná ... dohāse*) to the Maruts (*yéṣu*) even right after birth -- even though she milked them out of that very udder.

The vs. also has repeated phonological play with *ayā* (a), *ayāso* (c), (*āv*)a *yāsad* (d), picking up the problematic *áyā* of 4a.

In addition to its other problems, the vs. is metrically troubled, with a bad cadence in a and 9 syllables in c.

Both Ge and Old (and also von Bradke) take *makṣū* with the b pāda, which requires the rel. cl. of pāda a to be embedded, but I think it goes rather with its own pāda, indicating that even right after their birth Pṛṣni deprived them of milk (sim. Re). I then

take the *yé* of *c* to have domain over *b* as well -- the same aberrant relative placement as suggested for 4bc.

The hapax *stauná-* is, as Re says, “ininterprétable” (which does not stop him from trying). Ge suggests reading **astaunāḥ* (with abhinihita sandhi after *yé* in the *Saṃhitā* text), deriving it from \sqrt{stu} and tr. ‘ohne Lob(?)’. Although this has the merit of connecting it to a known root and without phonological disturbance, I find Re’s tr. “sans être inertes” (without comm. on the etym., but perhaps based on von Bradke’s “Sie stehen nicht still”) more appealing in context, since it would provide a satisfying contrast with *ayāsaḥ*: in Re’s tr., “eux qui, sans être inertes, (sont bien au contraire) inlassables.” I am also struck by the echo pointed out by von Bradke, with our *staunā* matched by *(ta)sthau ná* in the next vs., 6d. As often, contextual poetics may have led to the choice of an enigmatic word. My own extremely speculative interpr. (“like posts”) is that it is related to *sthūṇā-* ‘pillar’, which is well anchored in Iranian (YAves. *stūna-*, *stunā-*, OP *stūnā-*, as well as Middle and Mod. Iranian) and found also widely in MIA and NIA (Pā, Pkt *thūṇā*, etc.). This suggestion requires the perhaps counter-intuitive assumption that the aspiration in *sthūṇā* is secondary, perhaps based on the MIA form (where initial **st* would of course develop into *th*); the unmotivated retroflex *ṇ* in the Vedic form might give some support to that hypothesis. And secondary (if it *is* secondary) association with $\sqrt{sthā}$ ‘stand’ would also encourage an aspirated initial. Another wrinkle is that it may have trisyllabic scansion (so Gr), but that is further than I can go. For a similarly impenetrable form in this maṇḍala with the same phonological profile, see *staulā* in VI.44.7 and comm. ad loc.

The last problem in the vs. (or at least the last one I will tackle) is in d: does *nū cid* here mean ‘even now’ or ‘never’. Ge, Re, and von Bradke opt for the latter; Scar (405) gives a choice of both. Although these two choices seem starkly oppositional, they may amount to the same thing with the subjunctive *áva yāsat*: even now she is trying to appease them, and she never will be able to.

VI.66.6: With some relief we can pass on from the clotted vss. containing the Maruts’ birth story to the considerably more straightforward terrain of their adult exploits. This vs. is, however, linked to the preceding one: *ugrāḥ* in 6a picks up the last word of 5, *ugrān*. It is also barely possible that *suméke* ‘well-fixed’ to \sqrt{mi} ‘fix, implant’ resonates with *staunāḥ* in 5c, *if* that means ‘post’.

As indicated in the publ. tr., the vs. is also structured by the pun on du. *ródasī* ‘(two) world halves’ and nom. sg. *rodasī*, the PN of the Maruts’ consort, differing only by accent.

As noted by Old and Re, the simile marker *ná* is wrongly positioned, before the simile itself: *ná rókaḥ* rather than expected **róko ná*. Re suggests it is to avoid vs.-final *ná*. But see the disc. above of 5c, with the ref. to von Bradke’s happy observation that *(ta)sthau ná* here matches the hapax *staunā(h)* in that pāda, which can easily account for the wrong placement here: the order was adjusted to facilitate the inter-vs. echo. My tr. also reflects my interpr. of *svásociḥ* at the end of previous pāda as part of the postponed simile (*svásociḥ*, ... *ná rókaḥ*## “like a self-blazing light”). Although *svásociḥ* can of course modify *rodasī*, to which it is adjacent, taking it with the simile would not only put *ná* in expected, if distant, second position, but also produces a more effective simile in

my opinion: “like a light” seems pretty lame, as if Rodasī was a glorified headlight, but “like a self-blazing light” has more oomph.

VI.66.7: Both Ge and Re take *pathyā* as the obj. of *sāadhan* (e.g., “... die rechten Wege nehmend”), but since the former is regularly used, with or without *ānu*, to express extent of space and since the latter can be used absolutely, I prefer my rendering.

VI.66.8: In c, on the basis of VI.31.1 I would adjust the tr. to reflect the formulaic pair *tokā- tānaya-* to “progeny and posterity, the waters, and the sun”; see also VI.25.4.

Flg. Ge, Re, and Klein (DGRV II.123, 194), the publ. tr. takes *pārye ... dyōḥ* as referring to a particular, decisive time or hour of the day (Klein “in the last (hour) of the day”), but I now think it more likely that the phrase is simply a metrically driven variant of *divī(...)* *pārīye / pārīye diviḥ* “on the decisive day,” a locution found quite commonly in the VIth Maṇḍala (VI.17.14, 23.2, 33.5, 40.5; also *pārīye āhan* VI.26.1). In pāda-final position that expression is only appropriate to Jagatī/dimeter cadences. Re makes a similar suggestion in his comm, despite his tr. “à l’heure-décisive du jour.” I would therefore slightly emend the publ. tr. to “on the decisive day”; sense supports this change: the act described in this pāda is more likely to be localized to a particularly important day, not a particularly important part of the day.

On the tendency of *ādha* to occur adjacent to locatives, see Klein DGRV II.95.

VI.66.9: For the switch between singular reference to the Marut collectivity in ab and plural reference to the same group in cd, see disc. ad 3cd.

A particularly insistent etym. figure in c: *sāhāmsi sāhasā sāhante*. The metrical irreg. of the pāda, with a likely rest at 5 (so HvN), after *sāhāmsi*, may draw attention to it.

On the address to Agni in d, see comm. ad 10.

VI.66.10: The comparison of the Maruts to fires in 2a (*yé agnāyo ná sóśucann idhānāḥ* “those who kept blazing up like fires being kindled”) returns here in the first hemistich with more contorted imagery. In the similes of both a and b the Maruts are compared not directly to fire, but to something that is a metaphor for fire: “the dart of the ceremony” (a) and the more familiar “tongues of fire” (b). The somewhat unexpected invocation of Agni in the last pāda of the preceding vs. (9d) prepares the way for these similes.

In d I have followed Ge and Re in selecting the final word, *ādhr̥ṣtāḥ* ‘unassailable’, as the predicate. But given that the first 5 vss. of the hymn concern the Maruts’ birth and that the 1st half of this vs. compares them to fire, I wonder if the predicate is rather *bhr̥ṣṭajjanmānaḥ* ‘of flashing birth’, as von Bradke takes it: “..... leuchtend ist die Geburt der unwiderstehlichen Marut.” The striking phonology (...j ...jj) of the cmpd certainly draws attention to it.

VI.66.11: Note the fairly common *bhr̥ṣṭad-ṛṣti-* in a immediately following the identically formed hapax *bhr̥ṣṭaj-janman-* in 10d.

The final pāda has attracted more concerned comment than I think it deserves; see esp. the great fuss Old makes about it. The issue is what to do with the simile containing two nominatives *girāyo nāpāḥ* (= *nā āpāḥ*), lit. “like mountains, waters.” The consensus seems to be that the two noms. convey a single image, with a more complex structure

underlying it: namely the waters (of) the mountains, mountain water, Bergwasser. I don't see why this is necessary; instead I think the thoughts are being compared both with mountains and with waters, which are both *ugrá-* in different ways. (Old allows this possibility.)

Note that the adjectives qualifying the inspired thoughts, *śúci-* and *ugrá-*, were used of the Maruts earlier in the hymn, in 4c and 5c, 6a respectively.

VI.67 Mitra and Varuṇa

VI.67.1: The hymn does not start promisingly, with a bad, and unfixable, cadence in pāda a (*jyēṣṭhatamā*). Pāda c also ends with a superlative (*yāmiṣṭhā*), which makes a fine cadence. Perhaps this morphological parallelism invited the deployment of the double splv. *jyēṣṭhatamā* in this unfavorable position.

Both Ge and Re predicate the infin. *vāṛdhādhyai* to a supplied 1st pl. (e.g., “M+V ... wollen wir erbauen ...”), but there is no reason why the dual dvandva *mitrāvāruṇā* can't be a nom., with a passive reading of the infin., as I take it. In Re's case the supposed 1st ps. subj. leads him to take *vaḥ* as obj. (“vous les plus puissants ...”), though of course it is plural and does not match the referents in number and, compounding the grammatical lapses, to tr. *mitrāvāruṇā* as voc. (“ô Varuṇa-Mitra”). This was not Re's finest hour. Ge manages to shift *vaḥ* off into an oblique role (“für euch,” presumably referring to the human beneficiaries of the 1st ps. poet-ritualists' activities), but absent a 1st ps. subj., *vaḥ* can be attached directly to the poets' songs used for strengthening, as in the publ. tr.

In c the grammatical identity of *raśmā* (in sandhi with the simile particle *raśméva*) is unclear. It is generally taken, I think correctly, to the *-n*-stem *raśmán-*, otherwise found only in cmpds. Gr calls it an instr., and Wackernagel concurs (AiG III.268), as does Re (clearer in the comm. [EVP VII] than in the weaselly tr. “comme (avec) une rêne” [EVP V]). But *-mā* instr. to *-man*-stems are rare; AiG cites only the likewise hapax *drāghmā* in X.70.4. We might rather expect **raś(a)nā* or the like (cf. *mahinā* to *mahimán-*), and in fact such a posited form might yield the well-attested *-ā*-stem *raśanā-* ‘halter’ as a decasuative from the instr. (though the Iranian forms showing this same internal vowel [see EWA s.v.] might give us pause). Ge by contrast takes it as a nom. sg., which is grammatically impeccable as long as the stem is masc. (Since its other two occurrences are in bahuvrīhis, it is impossible to be sure, but suffix-accented *-mán*-stems are in fact generally masc.; cf. AiG II.2.754.) Either nom. or instr. would work fine in the passage; in the former case the comparison would be to Mitra and Varuṇa as controllers; in the latter to the arms with which they perform the controlling (*bāhúbhiḥ svaīḥ*). In neither case would *raśmā* match the frame in number. I have followed Ge in taking it as a nom., though I would like it to be dual, like *apāsā* in 3c, but this is morphologically impossible.

The verb form *yamātuḥ* is generally assigned to the pf. stem (Gr, Wh Rts, Kü), though Lub lists it with the root aor., labelling it a nonce. Kü (399) derives this non-redupl. pf. by analogy to “nur scheinbar reduplikationslosem *takṣathur* : *takṣur*” to the 3rd pl. injunc. root aor. *yamur*. Since there is no real semantic connection between the two roots \sqrt{yam} and $\sqrt{takṣ}$, and the supposed model *takṣathur* is found only once in the RV, in Maṇḍala X (as opposed to the well-established redupl. pf. *tatākṣa*, etc.), this seems an unlikely channel. A more likely one is found in the immediate context: the pāda ends ...

yamátur yámiṣṭhā, with the dual splv. “best controllers” serving as subj. to the etymologically identical verb. In these circumstances substituting the root syllable *yam* found in the splv. for the weak form *yem* found in the proper dual pf. *yemáthur* (2x; cf. also 3rd du. *yematur*) would not be surprising.

VI.67.2: The first hemistich displays a sort of contrastive ritual synesthesia. In the first pāda an inspired thought (*manīṣā*) is ‘spread forth’ (*prá stṛṇīte*), an action not literally applicable to a verbal product but suitable to the barhis or ritual grass found in b, which is *not* the obj. of this verb. What is going on in b is not clear until we reach the next vs. The b pāda of 2 contains a set of apparently unconnected notions without a unifying verb: *úpa priyā námasā barhír ácha* “up to, the two dear ones (or, with a dear one), with homage, to the ritual grass,” but the corresponding pāda in 3 pulls together this disarray: *úpa priyā námasā hūyámānā*. The missing verbal action is ‘call’, and now the two dear ones, the instrumental homage, and the barhis all make sense. I therefore (with Ge, but not Re) supply a form of ‘call’ in 2b. And ‘call’ is more appropriate to the inspired thought of pāda a than the spreading that occurred there. In the publ. tr. I supply a participial form modifying the inspired thought and having active semantics, with *priyā* as acc. obj. (“calling [you] two dear ones”). I now see that it might be desirable to supply the exact form found in the next vs., the dual pass. *hūyámānā*, tr. “... you two, the dear ones being called ...” However, there is a grammatical obstacle, in that *vām* in 2a must be a gen./dat. enclitic, not an acc., and therefore there is no available acc. in the structural frame of the hemistich that a passive participle could modify. This might be finessed by taking b as a sort of loosely connected new start. However, I prefer to stay with the publ. tr., both for the syntactic reasons just mentioned, and because it makes the connection between the inspired thought and the call to the gods more direct.

The nominal rel. cl. *yád vām varūthyām* is another ex. of an izafe-like construction. Here, since nothing follows it but a voc., it does not appear embedded, as many such phrases do, but it adds to the dossier of these constructions, on which see my forthcoming “Stray Remarks on Nominal Relative Clauses in Vedic and Old Iranian.”

VI.67.3: For the connection of the first hemistich, and esp. b, with 2ab, esp. 2b, see comm. on the preceding vs. Here, since Mitra and Varuṇa are subjects, the pass. participle *hūyámānā* is in the nom.

The 2nd hemistich is extremely problematic. Among other things, the rel. prn. *yaú* in c calls for an accented verb, but the only finite verb in the hemistich is unaccented *yatathaḥ* in d; the hapax *apnastháḥ* in c is of unclear meaning and has an uncertain grammatical identity; the following simile *apáseva* has been variously interpr.; *śrudhīyatáḥ* is a hapax denominative part.; and even if all these questions are solved, what does it all add up to?

Before addressing any of these questions directly, note several plays on the syllable *yā* in the early part of the hymn: 1) PREV + dual rel. pronoun in the initial sequences *sám yā* (1c), *sám yāv* (our 3c) (as well as *prá yā* [4c] and, with slight transformation, *pári yád* [5c]); 2) dual verbs *yamátuḥ* (1c), *yantám* (2c), *ā yātam* (3a), *yatathaḥ* (3d). These observations set the stage for a way to reason through the problems of this hemistich.

Let us begin with the problem of the lack of accented verb in what must be a rel. cl. introduced by *sám yaú*. Assuming that d, with its unaccented verb, is the main cl. corresponding to the rel. cl. of c, which has no overt verb, there is a non-arbitrary way to generate one: in 1c the same opening sequence *sám yā* (differing only in the form of the dual rel. prn., attributable to the variation in the following initial) does have an accented verb, pf. *yamátuḥ*, reinforced by the immediately flg. splv. *yámiṣṭhā*, with the verb of 2c, *yantám*, also belonging to the root \sqrt{yam} . Our opening *sám yaú* cries out for (or at least whispers for) a similar form of \sqrt{yam} , and so I have supplied it. Note that the obj. of *sám ... yamátuḥ* in 1cd is *jánān* as here. (Ge [n. 3cd] supplies *náyathah*, on the basis of V.65.6 *yuvám mitremám jánam, yátathah sám ca nayathah*, also a M+V passage; this is a reasonable idea based on a good parallel, and in some ways amounts to the same thing: he tr. “die die Menschen zusammen(halten)” -- but I prefer mine because it is generated within the hymn’s context. Old appears to supply a form of \sqrt{yat} matching the one in the main cl. of d, as does Re.)

On the question of *apáseva* there is now a reasonable consensus (Old, Ge, Re, and me, but see Gr and Old for alternative views) that this represents a dual NA *apásā* referring to M+V as subjects. They are therefore controlling the peoples (*jánān*) as workers (or, perhaps better, work-overseers) do. But we must now confront the hapax *apnastháḥ*. This is likely a cmpd of *ápnas-* ‘property, riches’ and a form of $\sqrt{sthā}$. But what form? Gr, Debrunner (AiG II.2.37), and EWA (s.v. *ápnas-*) assign it to a them. stem *apnasthá-*, which would require it to be a nom. sg., which ill accords with the assumed dual subj. If it is nom. sg., then *apásā* would be pushed into the acc. slot, where there is no syntactic place for it, or else, with an unenthusiastic suggestion of Old’s, it would be an instr. sg. to the neut. *s*-stem, for **ápasā*. Better to take it, by Old’s preferred interpr., as belonging to a root-noun cmpd *apnas-sthá-*. Under this interpr. it would be an acc. pl. This seems the least objectionable from a contextual point of view; even though acc. pl. to root nouns in *-ā* aren’t certainly attested (see the not very helpful treatments of Lanman [Noun Inflec. 451 and passim], Macdonell VG 253), both *-as* and *-ās* seem to be possibilities. The 1st members of cmpds in *-sthā-* generally have a locative relationship to their 2nd member, so ‘standing/staying in *ápnas-*’ is the likely meaning. As for its function in the clause, I take it as qualifying *jánān* (so also Old, though with alternatives), while Ge and Re take it as part of the simile (e.g., “... die die Menschen zusammen(halten) wie Werkmeister die Lohnarbeiter”), and Scar, flg. Neisser, takes it as the designation of a group of people distinct from the general *jánān* but still in the frame. In the absence of other attestations of the cmpd or underlying phrase, this cannot be decisively determined. For a detailed disc. of the word and the passage, see Scar 645–46.

The denom. *śrudhīyā-* is, by most accounts (see Old, Re), but not by Ge’s (see n. 3d), built to the 2nd sg. impv. *śrudhí* ‘listen!’. It is an acc. pl. part. The question is what sense it is conveying. Gr glosses ‘gehorsam sein’, but since *even (cid)* this group of people is put in its place by M+V with their greatness (*mahitvā*), it is unlikely that they were already obedient. Old (see also Re) suggests that it is people who address M+V with this impv., perhaps indicating that they stand in a close or privileged relationship with those gods. I think rather that it may refer to people powerful enough to command obedience from other men through such peremptory commands. They would then be similar in stature to the *apnastháḥ*: two sets of people used to getting their own way (rich and demanding), who have to submit to M+V.

VI.67.4: The birth of M+V from Aditi. This vs. is also beset with difficulties. The major structural one is determining the interrelationships of the three subordinate clauses, in abc, marked by *yā*, *yád*, and *yā* respectively, and their joint relationship (or not) to the main clause in d. Once again, there are numerous competing views; I will not rehearse them all. In my view, the three subordinate clauses are not all parallel and semi-independent, but rather the two introduced by the dual rel. prn. *yā* (a, c) are parallel and jointly dependent on the middle cl. introduced by *yád* (b). In tr. I have flipped the order of a and b in hopes of making the sense a bit more parsable. I further think that the two forms of *yā* ‘which two’ have as antecedent in b the sg. *gárbham*: “the embryo which was those two” or “the two as embryo.” M+V formed one of the pairs that Aditi gave birth to serially and in that sense were a single *gárbham*.

Let us then concentrate first on pāda a. Here, as in 1ab, there is an infin. in *-dhyai* predicated of a god’s name, *áditiḥ*: “When Aditi (was) to bear.” The puzzle in the vs. is *ṛtā*, and numerous analyses have been proposed: nom. sg. fem. to normally neut. *ṛtā*- ‘truth (etc.)’; short instr. sg. to the same stem; dual to the same stem; a 3rd sg. denom. verb to the same stem (emending to **ṛtāyád* from *ṛtā yád*), or, the solution I favor, as a short loc. sg. to *ṛtū*- ‘season’ (so Ge, though see his n. 4b), even though *-u*-stems supposedly have only *-aul/-avi* locc. (but see Lanman p. 411: “if there is any certain instance of a L in *-ā*, it must be regarded as due to false analogy.” I see no problem with analogy, false or otherwise).

The two *yā* clauses are nominal. The first (a) presents no problems. In the 2nd (c) most tr. supply a verb with *prā*, e.g., Ge “die sich gross hervortun” (sim. Re). However, I take *jāyamānā* as a predicated pres. part. and *māhi* as an intensifier of *mahāntā*.

In d the sense of the verb *ní dīdhaḥ* is unclear, and the lexeme *ní√dhr̥* is not common. Gr glosses this passage as ‘machen’ with double acc.; Ge tr. ‘hatte ... getragen’, Re ‘avait placé en secret’. In the three other passages containing *ní(ā)√dhr̥* that I know of (IV.2.12, VI.17.6, *ní-ā* VIII.17.13), the idiom means something like ‘fix’ or ‘secure’, but here I think it applies to the process of birth: ‘bear down’. Although I know of no other such exx., this kind of technical birth context doesn’t come up very often in the RV. The birth process interpr. fits well with the predicated pres. part. of c: “who *were being* born” as well as with the indication in b that Aditi had reached her precise time for giving birth.

VI.67.5: This vs. is refreshingly straightforward, even though the main cl. of d seems something of an irrelevancy after the grand statements in abc.

VI.67.6: The vs. is knit together with phonological and etymological figures. Each pāda contains a form of *div/dyū*: a *dyūn*, b *dyoḥ*, c *-devo*, d *dyām*. Note also the phonological similarity of the two du. verbs *dhārāyethe* (a), *dṛm̐hēthe* (b), with the latter reprised etymologically by *dṛl̐hó* in c. Pādas b and d also rhyme.

Unlike the standard tr. I take b as part of the *hí* cl. beginning in a, with cd as the main cl. Since the verb of b, *dṛm̐hēthe*, is initial, it can owe its accent either to its position (as most interpr. it) or to belonging to a subord. cl., as I do. Nonetheless, there is little riding on this choice, though I would support mine by pointing out that the fact that M+V made the back of heaven firm (b) could serve as a reason why the sun is also firmly fixed

(c).

Contra Klein (explicitly, DGRV I.379–80) and Ge/Re (implicitly), I do not think that *utá*, positioned in the middle of c, conjoins b and c, but instead begins a new cl., which continues through d.

With Ge (and, judging from his tr., Re), I divide *dhāsínāyóḥ* into *dhāsínā ayóḥ*, with the gen.-loc. du. of *ayám*, not *āyóḥ*, gen.-abl. sg. of *āyú-* with the Pp.

VI.67.7: Ge follows Sāy. in interpr. this vs. as referring to rain and river waters. Although this would accord better with the enigmatic gush (*dhāsí-*) of 6d, it doesn't fit the vocabulary or apparent sense of this enigmatic vs. The best clue we have is pāda a, where "to fill the belly" (*jaṭhāram pṛṇādhyai*) belongs to a phrase for drinking soma to satiation (cf. nearby VI.69.7 and V.34.2, X.104.2, as well as other locutions involving soma and the belly). (Both Old and Re also take the pāda as referring to soma.) Once the poet has established the soma context with this reasonably clear phraseology, he can (and does) treat the subject in a more obscure fashion.

In b and c I take the feminine plurals *sābhṛtayaḥ* 'of the same rearing / pedigree' and *yuvatāyò 'vātāḥ* 'unsurpassable maidens' as referring to the fingers (of the priests) that press the soma. Such locutions, referring to the shared kinship of the fingers (because they belong to the same hand), are frequent in the IXth Maṇḍala and the forms are always feminine. I am tolerably certain of the second identification, since the action ascribed to them in pāda d, distributing their "milk," would be a reasonable way (given the tropes of soma preparation) to characterize the work of the pressing fingers. I am less certain about the identification in b, because "fill the seat" (*sádma ... pṛṇánti*) is not as easy to connect with soma preparation. "Seat" could refer, inter alia, to the ritual ground or the cosmos -- both are attested -- but neither is generally flooded with soma. *sābhṛti-* is a hapax, so it does not help identify the referent. So the sense of pāda b remains in doubt for me.

Note another ex. of a *-dhyai* infinitive, though this time not as the predicated substitute for a main verb.

VI.67.8: Pāda a lacks a verb; on its structure and on the grammatical interpr. of *sumedhā(h)*, see esp. Old. Since it is likely that *sumedhā(h)* is a nom. sg., referring to Agni, this slots the du. *tā* into the acc., and we need a verb to link the two. Though Old's 'lead' is possible, I follow Ge/(Re) in supplying 'call', since this connects this ritual vs. with those in the earlier parts of the hymn (2ab, 3ab; see publ. intro. and comm. ad locc.). As is generally recognized, the referent of the nom. is Agni; III.57.5, adduced by Old, makes this quite clear: *yā te jihvā madhumatī sumedhā, āgne ...*

The word *aratí-* 'spoked wheel' in b is another word regularly applied to Agni. This pāda also contains, by most interpr., two words associated with truth, *satyá-*, modifying *aratí-*, and *ṛtá-*, but these interpr. are hard-pressed to come up with a convincing interpr. of the loc. *ṛté*. By contrast, I interpr. it as I do the similarly structured II.29.4 *mā vo ráthah ... ṛté bhūt*, where, with Re, I take *ṛté* as the postposition 'without', construed with a pronominal enclitic in 2nd position: "Let (our) chariot not come to be without you." See comm. ad loc. In the passage here I assume that the absence of M+V at the ritual ground induces Agni to call them with his tongue (=crackling). This interpr. also fits with the rivalry vss. to follow (9–11): if M+V are not here, where are they? Probably at the sacrifice of a competitor. In the comm. to II.29.4 I consider an alternative interpr. with *ṛté*

the loc. of *ṛtá-* ‘truth’. If I were to do so here, the passage could mean “when the spoked wheel (of the sacrifice) [=Agni] has come into existence / has been realized for you at/in the truth [=the sacrifice or place of sacrifice?].” I still prefer the publ. solution.

On (vi) *cayīṣṭam* see Hoffmann, Aufs. II.367.

VI.67.9–11: As noted in the publ. intro., these vss. seem to concern themselves with rival sacrificers.

VI.67.9: The first half of this vs. is fairly straightforward; the problems arise in the 2nd hemistich, primarily because of *ápīyah* in d. The first hemistich describes the behavior of the contentious and impious rivals, while the 2nd defines such people as outside the normal categories of beings. Pāda c asserts clearly that those who don’t attend upon the sacrifice are neither gods nor men, and in d they are compared instead to *ápīyah* ... *putrāḥ*, which is universally tr. as “like the sons of the watery female” (e.g., Ge “wie die Söhne der Wasserfrau”). Not only does this make no obvious (or unobvious) sense, but the morphology is essentially impossible: it is very difficult to get *ápīyah* to be either the gen. sg. of a fem. *-ī*-stem or the nom. pl. m. of an adj. See the rather despairing assessments of Ge (n. 9d), Debrunner (AiG II.2.401), and esp. Scar (592 n. 841). Desperate situations require desperate measures, and I therefore part company with the consensus interpr. of *ápīyah* and suggest an entirely different derivation -- as a negated root noun cmpd to the set form of the ‘swell’ root $\sqrt{pī}$. We should expect a root-accented **a-pī-*, with nom. pl. **apīyah*, but I would suggest that this unclear hapax would have been attracted to the reasonably well-attested ‘watery’ stem *ápīya-* and the accent retracted. As for meaning, I suggest that ‘not swelling/swollen’ means ‘not growing / thriving’, and in reference to children to stunted or underdeveloped ones, afflicted by what is now called “failure to thrive” in pediatric medicine. Note that the anīṭ form of the ‘swell’ root makes a negated root-noun cmpd *apīt-* in VII.82.3 *āpinvatam apītaḥ* “you two made the unswollen (waters) swell.”

The publ. tr. does not represent the rel. prn. *yé* in c but treats all of cd as the main cl. corresponding to the subord. clauses of ab. I do not know an easy way to do this, but might suggest an alternative tr. of cd as “those not attending on the sacrifice who are neither gods ... nor mortals are like children ...”

VI.67.10: Ge and Re take the first hemistich here as a continuation of the description of bad ritual behavior, with cd introducing our contrastively correct practice. I think rather that the whole of 10 describes this good behavior. One advantage of this interpr. is that it allows *ād* opening c to have its normal sense ‘after that’, which Klein (DGRV II.135–36) must explicitly deny it. By my interpr. the first pāda sets the ritual scene, with the various priestly speakers “distributing” the types of ritual speech, as is standard in Vedic ritual. Some of these speakers recite the Nivids, the formal invocations. After this “we” take over by speaking *ukthá-*.

On *kīstá-* ‘praiser’ see comm. ad I.127.7. I see no evidence for Re’s ‘mauvais-prêtres’ beyond his contextual assumptions.

The interpr. of ab as referring to bad practice turns on the part. *manānāḥ*, which most take as meaning ‘(falsely) considering X as Y’ (e.g., Ge “was sie für Einladungssprüche halten”), but no evidence is presented that this should be the meaning

of this root aor. part., the only occurrence of the participial stem. Most other forms of this medial root aor. (mostly attested in the subjunctive) have a positive sense: ‘bring to mind’, ‘conceive’, ‘ponder’, etc. The publ. tr. has ‘pay heed to’, but any of the other suggested tr. just given would work as well, while ‘(falsely) consider’ has no support in this stem.

Pāda d is syntactically problematic. The last two words (*yatatho mahitvā*) are identical to the ending of 3d and appear to sketch a ring and a return to the focus on M+V’s ability to put human beings in order. Because of this salient repetition, I am reluctant to ascribe an entire different sense to this phrase in this vs. than in 3, as both Ge and Re do, with both also unacceptably stretching the meaning of the verb form. In order to take d as a single cl., they must also treat *nākiḥ* as a simple neg. rather than in its usual meaning ‘no one’, since the verb *yatathaḥ* is 2nd du. and cannot take ‘no one’ as subject. In order to avoid this problem, I create problems of my own. I take *nākiḥ* as a radically truncated sentence “No one ...” This is based on the observation that one of the most common contexts in which *nākis* appears is as subj. of *minat* (etc.) ‘violate(s)’ (cf., e.g., I.69.7, IV.30.23, VI.30.2, etc.). I therefore suggest that *nākiḥ* here is an implicit response to the description of the behavior of bad rivals in 9b *priyā dhāma yuvādhītā minānti* “they violate the dear ordinances ordained by you”. Here in *our* ritual “no one” performs such violation. With *nākis* out of the way, the rest of the pāda can be harmonized with the use of *yatatho mahitvā* in 3d. There M+V ‘set in place’ various peoples (*jānān*). Here I would re-supply *jānān* and take *devébhiḥ* as an instr. of accompaniment: M+V set in place the peoples along with the gods. I would prefer not to have to impose such a radical analysis on this pāda, but I find other analyses even more unsatisfactory.

VI.67.11: On *avóḥ* see AiG III.535, Lub 121.

The first hemistich lacks a verb, but something like ‘we seek’ is a reasonable bet, to govern *áskṛdhoyu* ‘not stunted’, which elsewhere modifies ‘wealth’ (VI.22.3) and ‘treasure-conferral’ (VII.53.3), hence my ‘giving’.

Ge produces an elaborate interpr. of cd as a portrayal of battle: ‘cows’ = bow string, ‘straight-flying one’ = arrow (followed by Watkins, Dragon 171). Although such tropes would be at home in other parts of the RV, I see no martial context in this hymn that would encourage such a reading. Better to interpr. the hemistich within a ritual context, since this has been prominent in the hymn. The cows can, as so often, be the milk meant to be mixed with the soma; the ‘straight-flying one’ (*rjipyá-*, on which see comm. ad IV.27.4) can be the soma, or, as in IV.27.4, the falcon that carried the soma, and the bull in d is also the soma. Re follows Ge’s battle interpr., though (in his comm.) he also sees it overlaid with soma imagery.

VI.68 Indra and Varuṇa

Pace Old, I do not think this consists of two (much less three) hymns, with 1–8 forming one, 9–11, or 9, 10–11, one or two more. As indicated in the publ. intro., the last three vss. focus on the ritual here-and-now, but this topic-switch from praise and request to ritual exhortation is easily accommodated within the same hymn. That 9–10 are in Jagatī in contrast to the Triṣṭubh in the rest of the hymn is not sufficient to signal a hymn break, esp. since 9–10 doesn’t match either of Old’s suggested groupings.

VI.68.1: The opening of this hymn has some features in common with the opening of the last one (VI.67.1), and of course both hymns are dedicated to dual divinities, with Varuṇa shared. The 1st hemistich of each ends with a *-dhyai* infinitive; the 1st pāda has a 2nd ps. enclitic in 2nd position (*vaḥ*, *vām* respectively), and the 2nd hemistich begins PREV *yá-* (*yā*, *yāḥ* respectively). However the hymns unfold very differently.

Ge takes *sajóṣā(h)* at the end of pāda a as an “erstarrter Kasus oder Hypallage” (n. 1a) referring to I+V. But grammatically it should modify *yajñāḥ*, and there is no semantic obstacle to taking it thus. Re agrees, and further remarks that, since *sajóṣas-* regularly takes an instr., it is tempting to construe it with *śruṣṭī* — a temptation he resists and I have succumbed to.

I take the gen./abl. *vr̥ktābarhiṣaḥ* as the oblique subject of the inf. *yājadhyaī*, rather than predicating that inf. to cognate *yajñāḥ* — though the latter construction (reflected in Ge and Re, insofar as I can untangle their clotted syntax) is not impossible: “This sacrifice of the one who has twisted the ritual grass, raised up, is to be sacrificed to you ...”

Judging from the fuller expression of X.50.3, which contains both *iśé* and a form of *sumná-*, the point here is that Indra and Varuṇa will *receive* refreshment at the sacrifice and will *dispense* their favor to the performer thereof.

VI.68.2: Although the vs. is addressed to both gods, Indraic qualities predominate: *śáviṣṭha-* almost always qualifies Indra, who is regularly called a *śūra-*; *maghávan-* is of course a standing epithet of his, and the splv. *mámhiṣṭha-* frequently modifies him; both *tuviśúṣma-* (3x) and *sárvasena-* (3x) are otherwise only used of Indra; and *vr̥tratúr-* encapsulates Indra’s signature deed. Only *ṛténā* falls in Varuṇa’s domain.

I do not understand the position of *tā hí*, though 1) *hí* sometimes takes immediate pre-verbal position even deep in the clause, and 2) the heavy NP *śūrāṇām śáviṣṭhā* (with the first word having quadrisyllabic scansion) would not fit metrically in a putative pāda #*tā hí śūrāṇām śáviṣṭhā bhūtā*.

VI.68.3: This is the only vs. in the hymn that clearly disjoins the two gods and describes each by his own qualities (though see comm. ad 8–9) -- though as Re points out, the description of Varuṇa in d is somewhat obscure. I take it to refer to Varuṇa’s ritual activity, as against Indra’s warrior exploits.

Although *śúṣma-* (2c) and *śūśá-* (3a) are not etymologically related, their phonological similarity associates them, and they are positioned identically in these two vss. See also the *śūrāṇām śáviṣṭhā* figure in 2b and *śávasā* in 3c: there is an abundance of *śulū / śav* forms.

On the constr. of *cakānā* see Kü (142–43 and n. 132), who rejects Ge’s passive interpr.

VI.68.4: As noted in the publ. intro., it is quite rare to present the collectivity of gods as subdivided into female and male divinities. I’m not sure why this context has evoked it.

As Re notes in passing, the 1st hemistich contains two forms of *nṛ-* ‘man’ in different usage. The first (*náraḥ*) is contrasted with *gnāḥ*, as male to female, and identifies these *náraḥ* as gods; the 2nd (*narām*) appears to refer to the mortal poets as superior men and agents of the praise of the gods. For this putative gen. agent, compare the similar

constr. with the same ppl. at I.122.10 *narām gūrtáśravaḥ* “whose fame is sung by men” (and cf. also I.180.8 *narām ... práśastah*).

In 2 of its 4 occurrences *svágūrta-* modifies rivers and can reasonably be rendered ‘self-praised’ because rivers generate their own noise (gurgling), which can be conceptually configured as praise. But in our passage it seems unlikely that the gods are praising themselves (*pace* Ge). In IV.19.10 the adj. modifies *ápāmsi*, Indra’s ‘labors’, and there I tr. “welcomed for themselves’, since labors don’t have the capacity to praise themselves. I suggest the word in this passage has a similar sense, even though, as animate beings, gods *could* praise themselves. But I think the point is that, though the All Gods are going to take second place after I+V in pāda c, the poet acknowledges that they deserve some praise of their own. *-gūrta-* picks up etymologically related *gr̥ṇīhi* ‘sing!’ in 3a, with *gr̥ṇānā* (8a), *gr̥ṇántah* (8c) continuing the lexical chain.

Pāda d contains a reverse Vāyav Indraś ca construction, *dyaús ca pṛthivi*. The introduction and invocation of Heaven and Earth seems a little odd in a hymn celebrating Indra and Varuṇa, and the sense of the pāda is somewhat unclear. See Old’s disc. The pāda seems to indicate that Heaven and Earth stand out from the other All Gods just as much as Indra and Varuṇa do, an elevation of gods other than the addressees of the hymn that deviates from standard RVic practice. The structure of the hemistich, with instr. *mahitvā* ending c and expressing the quality by which I+V are preeminent, invites us to take pāda-final *urvī* as a similar instr. of an abstract ‘width, breadth’, rather than the usual fem. du. NA. This would yield “you stand out from them by your greatness, o Indra and Varuṇa, (as) do you two, o Heaven and Earth, by your breadth.” Although such an abstract *urvī-* does not otherwise exist, I am still tempted to assume that this was the intent of the passage: giving a well-known measure of superiority (the width of H+E) as a standard by which to judge that of I+V.

VI.68.5: Several minor sound plays in the vs.: *dāśati* (b) / *dāśvān* (c); *iṣā śa dviṣās*.

VI.68.6: The publ. tr. failed to render *devā*; insert “O gods” at the beg. of the vs.

VI.68.7: It is difficult to render the comparative of *sutrātarā-* without awkwardness, and so I have not attempted to do so.

Note the etymological and phonological figure *tiráte táturiḥ*. The cadence is bad, and it would be better to read **tatūriḥ*. Of the 5 occurrences of this stem, this reading would be preferable also in IV.39.2 and probably VI.24.2, but dispreferred in I.145.3 and VI.22.2. The 4 occurrences of the similarly formed *pápurī-* are always metrically better with a light root syllable.

VI.68.8: Ge (n. 8c) claims that this pāda applies only to Indra, but this is not entirely evident to me. It is true that VI.33.5c, adduced by Ge, is almost identical (*itthā gr̥ṇānto mahínasya śárman*) and refers to Indra, and it is also true that *śárdhas-* ‘force’ regularly refers to the Marut troop, Indra’s regular associates, and could (but need not) here. However, the context still does not seem to me sufficiently diagnostic.

VI.68.9–11: On the annunciatory forms of *ayám* in these three vss., see publ. intro.

VI.68.9: Ge also (n. 8c) claims (fld. by Re) that this vs. is entirely Varuṇa's. This is more plausible: he is mentioned by name in b, and *māhivrataḥ* 'having great commandments' in c makes it likely that the clause in cd has Varuṇa as subject —though note that *māhivrata-* is used of Varuṇa only here, with two occurrences each of Agni and Soma, and moreover *dhṛtavratā* is addressed to both gods in the next vs. (10b). Nonetheless, *samrāj-* in pāda a is used frequently of Indra as well as of Varuṇa, so the 1st hemistich may (and probably does) contain an exhortation to the poet to chant both to Indra (as sovereign king) and Varuṇa. The publ. tr. could make this clearer if 'and' replaced the comma: "to the lofty sovereign king (and) to the god Varuṇa"

VI.68.11: The 2nd pāda has a rather insistent but elementary phonetic/etymological figure: *vṛṣṇaḥ ... vṛṣanā vṛṣethām*, and the last word of the vs. *mādayethām* resonates with the long adj. qualifying soma in the 1st pāda, *mādhumattamasya*.

VI.69 Indra and Viṣṇu

Re's treatment is in EVP XV.43–46. He claims that the "thème indraiique" dominates, though I find the hymn's phraseology so bland that it's difficult to assign qualities and deeds to one or the other, and in fact the most salient action in the hymn, the wide-striding of vs. 5, is Viṣṇu's characteristic deed. See further in the publ. intro.

The hymn is (in my view) repetitive and pedestrian, with only a few striking images and phraseological tricks. This strikes me as an indication that the poet was "phoning it in" -- the composition of the hymn does not seem to have commanded his full attention. The question might then arise why the hymn was preserved in the Saṃhitā. This might be partially due to the rarity of Indra-Viṣṇu hymns (only the first three vss. of I.155 and the middle three vss. of VII.99 -- so this is the only hymn entirely dedicated to both) and in fact of Viṣṇu hymns in general. As Viṣṇu, a fairly recessive god in the RV, began to come to prominence in the post-RVic period, the assemblers of the RV collection may have gathered what scraps they could and exercised less critical judgment than usual in order to create a place in the text for this newly important deity. The O'Henry-type ending, sprung by the final vs. (8), might also account for its preservation.

VI.69.1: Acdg. to Re, *kárman-* is esp. associated with Indra, *ís-* with Viṣṇu, but I see no clear evidence of this.

pārā- 'far shore' and *pārāya-* 'cause to cross [to the far shore]' are of course etymologically related, and here they express allied notions: just as we cause Indra and Viṣṇu to reach the 'far shore' of their labor, so do they cause us to cross something unspecified, but quite possibly the reference is to completing the ritual.

VI.69.2: It is striking -- and perhaps a little insulting -- to refer to the gods Indra and Viṣṇu as soma-holding tubs, though of course once they have drunk the soma, that is what, in effect, they are. This image recurs in 6d.

The two heavy pres. passive participles *śasyāmānāḥ* and *gīyāmānāsaḥ* seem meant to convey that the sacrifice is currently ongoing, hence my "as they are being ..."

In d *arkaiḥ* is taken by Ge and Re as referring to the chants of the sacrifice, and in the context of recitation and singing this sense is clearly the principal one. Both Ge and Re interpr. the instr. as meaning "in the form of," and I have followed them in the publ.

tr. -- though an instr. of accompaniment “along with chants” would also be possible. I further think the word is a pun, with the secondary sense “along with the rays (of the sun)” as often (e.g., VI.4.6). This would be a temporal designation of dawn, when the sacrifice is taking place. That the next vs. contains a similar pun (in my view) supports such an interpr. here.

VI.69.3: *dráviṇo dádhanā* in b is essentially the same VP as *dráviṇam ... dhattam* in 1c. I do not know why the *s*-stem *drávinas-* was substituted for the thematic *dráviṇa-*, esp. as the acc. of the latter, *dráviṇam*, would fit the meter just as well. The first VP, *dráviṇam dhattam*, reappears in 6c.

There are other echoes of previous vss.: 3cd *sám vām ... sám* repeats 1a, and *matínām* in c both repeats the same word in the same metrical position in 2a and anticipates it in 4c.

The 2nd half of this vs. is structured like that of vs. 2, esp. pāda d, where both 2d and 3d have the form PREV *stómāsaḥ* PRES.PASS.PART. INSTR.(‘song’)-*aiḥ*. The instr. could, as in the previous vs., express accompaniment.

As in 2, I see a pun here: because of the etym. figure *añjantv aktúbhiḥ* “let them anoint with ointments,” the principal sense of *aktú-* must be ‘ointment’, here metaphorical for the “ointments of thoughts.” But instr. *aktúbhiḥ* often means ‘through the nights’, as in the phrase *dyúbhir aktúbhiḥ* “through the days and the nights” (e.g., I.112.25), and I see this temporal sense here as well.

VI.69.4: As just noted, *matínām* occurs here for the 3rd time, while *juṣéthām* is repeated from 1c.

VI.69.5: As noted in the publ. intro., both gods are credited with wide striding (b), although this is normally only Viṣṇu’s act. The cosmogonic opening out of the spaces in the more vaguely phrased 2nd hemistich can be applied to Indra, however.

VI.69.6: The image of the gods as soma-holding tubs returns here in d, but this time it is mediated through the image of them as the sea (*samudráḥ*) and therefore couched in the singular.

The d pāda is a repetition of 4d, save for the substitution of *hávam* for *gírah*. Such verbatim repetition of a full pāda within a hymn is very rare (save for refrains) and relatively rare even between two hymn -- again, in my view, an indication that the poet was not feeling particularly inspired.

VI.69.7: In ab Ge honors the pāda break and construes *sómasya* with *jaṭhāram pṛṇethām*. But we might expect an instr. *sómena* in that case (as in V.34.2), and the enjambment envisioned here is very mild. See a parallel in X.104.2, where the gen. also is better construed with a preceding form of $\sqrt{pā}$.

VI.69.8: On the surprise ending here and the splitting up of what was throughout the rest of the hymn an indissoluble pair, see publ. intro. The first pāda keeps the two as a pair, with dual verbs *jigyathuḥ* and *jayethe* asserting that both won and both did not lose the contest. The audience would first take this as meaning they did not lose to their (joint)

opponent. But in b we have the first splitting of the pair into two (implied) singulars (*ná ... katarás canáinoḥ* “neither one of these two”), which could raise the possibility that they were contending with each other -- but paradoxically neither one lost. Their mutual contention is then made explicit in pāda c, with, inter alia, a reverse Vāyav Indraś ca construction (*indraś ca viṣṇo*) serving as the subj. of a dual verb (*āpasṛdhethām*), which in the middle voice refers to *mutual* conflict, and the final pāda explains (or implies) how in such a situation neither one lost: the 1000 (cows) were split into three parts, and as later Vedic texts indicate, Indra got two-thirds and Viṣṇu one-third. It may be that the reversal of the Vāyav Indraś ca construction, which puts *indraḥ* in first position, also signals his relative, but not complete, dominance in this story.

VI.70 Heaven and Earth

Re ÉVP.121ff.

VI.70.1–2: As noted in the publ. intro., the focus here is on the various liquids associated with Heaven and Earth and their sheer moisture. Vs. 1 has ghee, honey, milk (by implication, in the compd. *madhu-dúghe*), and semen; in vs. 2 they are said never to dry up (*ásaścantī*) and possess streams, milk, ghee, and semen. The compd. *madhu-dúgha-* ‘milking out honey’ in 1b is reprised by the VP *ghṛtām duhāte* in 2b (with a diff. obj.). Another responsion is *bhúvanānām* ‘creatures’ (1a) and (*asyá*) *bhúvanasya* ‘(this) creation’ in 2c.

VI.70.1: On the construction *bhúvanānām abhiśríyā*, see comm. ad X.66.8.

pr̥thivī here (and in the same phrase in 4c) is of course a blindingly obvious pun: though used as an adj. here (‘broad’) it is of course (almost) identical to the standard word for ‘earth’, found in the dual dvandva *dyāvā-pr̥thivī* in the next pāda (also 4a, 5a). By an accident of grammar, the nom./acc. dual fem. (in *pr̥thivī*, here modifying the dual dvandva) and the nom. singular. fem. *pr̥thivī* ‘earth’ have the same ending *-ī*. This grammatical pun is only actualized fully in the final vs. of the hymn, where we get the conjoined singular NP *dyaús ca pr̥thivī ca*.

VI.70.3: On the double etym. figure *prá prajābhir jāyate*, see comm. ad VIII.27.16.

With Re I take *dhármaṇas pári* with a full lexical sense of each element, rather than, with Ge, as a weakened adverbial “pflichtgemäß” (dutifully). Heaven and Earth provide the physical foundation (*dhárman-*) starting from which the pious man can found his family line, just as Heaven and Earth themselves took their places (apart) according to the *dhárman-* of Varuṇa in 1c. This pāda is found twice elsewhere: VIII.27.16 and X.63.13. In both those cases, I tr. the abl. phrase “from his foundation” (that is, the foundation of the subj. of *jāyate*) rather than “from your [=H+E]’s foundation.” The possessor is of course not explicit in any of the passages. I am inclined to leave the publ. translations standing, despite their disagreement over the suppressed genitive, but it should be noted that in any of the three a different choice could have been made.

The abundant references to real liquids in vss. 1–2 find their metaphorical expression in the creatures ‘poured out’ (*siktā*) from Heaven and Earth (d). This ppl. picks up the imperative *rétaḥ siñcatam* “pour the semen” addressed to H+E in 2d. However, I take the implicit subj. of *siktā* to be *bhúvanā* ‘creatures’ vel sim. (see 1a), not,

with Gr, *rētāṃsi* ‘semens’. *prajāḥ* ‘progeny, offspring’ from the previous pāda would also be possible; it would only require altering the Pp reading *siktā* to fem. pl. *siktāḥ*, but no alteration to the Saṃhitā text.

My “poured out from you” of course tacitly misrepresents the case of dual *yuvóḥ*, which must be gen.-loc., not abl. But it’s worth noting that the 2nd du abl. *yuvát* is attested only once in the RV, and I take *yuvóḥ* as an ex. of the all-purpose genitive: poured out from you and hence yours.

The explicitly contrastive *vīsurūpāṇi sāvratā* reminds us of the phrase in the Yama/Yamī hymn X.10.2, *sālakṣmā ... vīsurūpā*, describing Yamī compared to Yama: “having the same marks, but dissimilar form.”

VI.70.4–5: These two vss., concerning ghee and honey respectively, have similarly structured 1st halves: a case form of the substance opens the vs. (4a *ghṛtēna*, 5a *mádhu*), while the 2nd pāda consists of three 3 cmpds in the dual with the substance as 1st member. The 2nd members do not repeat (*ghṛta-śrīyā ghṛta-pīcā ghṛtā-vīdhā*, *madhu-ścūtā madhu-dúghe mádhu-vrate*), but only the last two are not root noun cmpds.

VI.70.4: The ghee vs., with four instances in the 1st hemistich, echoing in the first word of the hymn *ghṛtávatī*. There is also some recycling and remixing of vocab.: 1a *abhiśrīyā*: 4ab *abhī-vṛte ghṛta-śrīyā*, as well as outright repetition: 1b / 4c *urvī prthivī*.

Although I have rethought a number of *śrī-* cmpds with ritual items as first members (see comm. ad III.26.5), including *ghṛta-śrī-* in other passages (see I.128.4), in this context the intransitive sense seems better.

The third pāda contains a ritual pun, “set in front at the choosing of the Hotar priest” (*hotṛvūrye puróhite*): *purohité* here modifies H+E, but ordinarily it is the Hotar priest himself who is “set in front.”

VI.70.5: In b *madhudúghe* reprises the same word in the same metrical position in 1b.

What ‘having honeyed commandments’ refers to is not clear to me; it is a hapax and picks up similarly pāda-final *śúci-vrate* ‘of pure commandments’ (2b) and *sāvratā* ‘having the same commandments’ (3d).

I configure cd slightly differently from the standard, which takes *yajñám dráviṇam ca* as what H+E establish for the gods and the misc. acc. in d as what they do for us. My interpr. is informed by two passages in the immediately preceding hymn: VI.69.1 *juṣéthām yajñám dráviṇam ca dhattam* “enjoy the sacrifice and confer wealth” and VI.69.6 *dráviṇam dhattam asmé* “confer wealth on us.” In both passages *dráviṇam* is implicitly or explicitly meant for us, while in the 1st *yajñám* is meant for the gods to enjoy. This matches the use of *dráviṇa-* elsewhere: it’s what mortals want and gods confer on them. I therefore construe *dráviṇam* as the first member of the complex NP to be taken with *asmé* in d (*dráviṇam ca ... máhi śrávo vājam ... suvīryam*. Ge (n. 5c) recognizes the problem but chooses to go with the pāda division. My interpr. has the further advantage of not having to take *devátā* as an honorary dative, but rather with the instr. value that it should have.

VI.70.6: On the grammatical pun that accounts for the disjoining of the dual dvandva *dyāvā-prthivī*, see comm. ad vs. 1. This disjoining is somewhat reminiscent of the same

move in the previous hymn, where the dvandva *īndrā-viṣṇū* appears in every vs. except the last, where not only are the two gods separated (*īndraś ca viṣṇo*), but contend with each other. There is no contention here, but the grammatical shift is the same.

VI.71 Savitar

Re EVP XV.26ff. On the division into two hymns, see publ. intro., as well as Old and Ge (both minimally).

VI.71.1: I take the locative expression *rājaso vídharmaṇi* as expressing a verbal notion “in/at his spreading apart ...,” rather than as marking a location like Ge (“im Zwischenreich des Raumes”). In this I am in general agreement with Re, who calls it a “semi-infinitif,” a typical Re evasion, though I am sympathetic to it here.

VI.71.2: The *-mani* form *vídharmaṇi* ending 1d prepares the way for a 2nd such expression, *savitúḥ sávimaṇi*, though with a subjective, not objective gen. The parallelism might be better expressed in tr. by “at the best impelling of ...” This locative (semi-)infinitive is then explicitly conjoined with a datival one: *vásunaś ca dāvāne* “for the giving of goods.” On the lack of parallelism see Klein DGRV I.94.

Somewhere between the 1st vs. and the last pāda of vs. 2 Savitar’s reference changes from 3rd (clear in the 3rd ps. verbs of which he is subj. in 1b, c *ayamsta* and *pruṣṇute*) to 2nd (clear in 2nd sg. *ási* in 2d). This verb makes it clear that the reference in the whole rel. cl. of cd must be 2nd ps., but in the main cl. of ab *devásya ... savitúḥ* could be either 3rd or 2nd -- a typical modulation tactic in the RV.

In both hemistichs the construction of the (semi-)predicated (semi-)infinitives is abrupt. In each case there’s a form of the verb ‘to be’ (*syāma* b, *ási* d) with loc. (and in b dat.) infinitivals. For ease of parsing I have supplied “(there)” and “(busy)” respectively.

VI.71.3: On *īśata* see comm. ad I.23.9.

VI.71.4: On the almost identical first pādas of the 1st and 2nd hymns of this composite, see publ. intro. In addition to the exact repetitions of the a-pādas, note that both 1 and 4 have a verbal expression from the *sū* root that gives Savitar his name: 1b *sāvanāya* and 4d *suvati*. This vs. also recycles and remixes some of the vocab. from the final vs. of the preceding hymn, 3: 3c *híraṇya-jihvaḥ* gets redistributed into 4b *híraṇya-pāṇiḥ* and 4c *mandrá-jihvaḥ*, and a further X-body part bahuvrīhi, *áyo-hanuḥ*, is added.

VI.71.5: This vs. continues variations on vs. 1. Like 4a it begins *úd u* (or in this case *ū*). The VP in 1ab *híraṇyáyā, bāhū ayamsta* is almost entirely matched by 5ab *áyān ... bāhū, híraṇyáyā* with exactly reverse order and act. verb rather than middle.

The publ. tr. follows the attractive suggestion of Re concerning *ābhvam* ‘formless’, that it refers to the wind. That the wind tends to drop at evening provides some support for this interpr. I would further suggest that the *cīd* in the phrase *kác cīd ābhvam* is doing double duty: expressing both ‘(what)ever’ and ‘even’.

VI.71.6: On the injunc. *sāvīṭh* in imperatival function see KH, Injunc. 264. He ascribes this usage to the fact that 2nd sg. act. imperatives to *is*-aorists are quite rare.

In c I accept the emendation of *kṣáyasya* to **kṣáyasi*, which goes back to Aufrecht (see Old, Ge, Re, all of whom accept it; against this tide is Scar 353–54, though he doesn’t even note the general view). Inter alia, it provides an accented verb for the *hr̥* in pāda c; *syāma* in d is unaccented and should therefore not be construed with the previous pāda.

VI.72 Indra and Soma

Re’s brief comments are found in EVP XVI.108–9. His assessment -- “banal” -- is spot on. For the structure of the hymn, see publ. intro.

VI.72.1: The pleonastic *máhi ... mahitvám* “great greatness” may be in service of phonological play: *máhi tád vām* is echoed in abbreviated form by immediately following *mahitvám*.

The (near?) synonyms *sūryam* and *svàr* are found as the obj. of the same verb *vividáthuḥ* in c. I have followed Lü (191) in tr. the first as ‘sun’ and the 2nd as ‘sunlight’ (“Sonne ... Sonnenlicht”), which is almost the same as Ge’s “Sonne ... Himmelslicht,” but preserves the lexical similarity better. Re prefers ‘ciel’. The verb is accented because it stands between its two predicates and thus implicitly serves two clauses.

VI.72.2: Here the verb in a, *vāsáyathaḥ*, is accented because it follows the extrasentential voc. *índrāsomā* and therefore effectively begins the vs.

The first hemistich describes dawn and the sunrise in the pres. tense as repeated daily events. The 2nd hemistich by contrast recounts the original separation of Heaven and Earth. The 2nd verb in this hemistich, the augmented impf. *ápratham* (d), clearly locates the action in the past. The previous verb, *skambháthuḥ* (c), is formally anomalous. It is generally identified as a non-reduplicated pf. (so explicitly Gr; listed with the pf. by Whitney [Roots], Macdonell [VGS]; by implication Re) because of its clear 3rd du. pf. ending. But in addition to its lack of redupl., its full-gr. root syllable is unexpected. Kü treats the form in some detail (574), both functionally and formally. Since in the end he decides it is not built to the pf. stem, he begins by trying to deny that it has past value, despite the following augmented impf., suggesting rather that it can have “generell-zeitlos” sense. This (in his view) opens the door to taking it as an injunctive, probably to a root aorist. It then owes its pf.-type ending to analogic spread from the equally non-reduplicated 3rd pl. *skambhur* (X.65.4), whose ending could belong to the pf. or, possibly, to an aorist. Since the conceptual structure of the vs., with the actions of ab contrasting with those of cd, imposes (in my view) a preterital sense on *skambháthuḥ*, I am not persuaded by Kü’s general/timeless interpr. But, on the other hand, I don’t need to be: Kü is still under the sway of the Hoffmannian interpr. of the injunctive, but this straitjacket of a linguistically implausible verbal “category” should not limit our readings of this maximally unmarked form-type, and there is, in my view, abundant evidence for injunctives used as straight preterites. I am therefore willing to accept that *skambháthuḥ* (and *skambhuḥ*) somehow reflect an aorist, which the root otherwise lacks, and a root aorist might be expected beside the nasal pres. *skabhnāti*, as Kü points out. He provides what seems to me an overly complex analogic explanation for the full-grade root syllable, which can simply result from a formal match with the immediately following cognate instr. *skámbhanena*. (It might be noted that a putative **skabháthuḥ* with zero-grade root

syllable would produce a slightly better break.) What I don't understand -- and Kü doesn't mention -- is why the verb is accented. It is right in the middle of its clause, preceded by a tonic preverb and a tonic object, so the explanations for the accents of *vividáthuḥ* (1c) and *vāsáyathaḥ* (2a) are not applicable. Perhaps it acquired its accent redactionally because the reasons for the accents of those two verbs were no longer clear.

VI.72.3: I do not understand why the Vṛtra-smashing is couched in the pres. tense, *hatháh*. The injunc. 2nd du. *hatám* would fit the same metrical slot, and its corresponding impf. *ahatam* was in fact used in 1d. The rest of the vs. is preterital, with augmented imperfects *amanyata* (b), *airayatam* (c) and pf. *paprathuḥ* (d). One might argue that the accented injunc. could easily be mistaken for the masc. acc. sg. ppl. as a modifier of *áhim* ... *vṛtrám*, but *hatám* as 2nd du. impv. is fairly common elsewhere (though, it seems, not with an acc. sg. obj. that could facilitate the misidentification). Another possibility is that this is an attempt to convey relative tense in the absence of a functional pluperfect: if Heaven's giving consent (2nd half of b; *ánu* ... *amanyata*) logically precedes the smashing itself — not a foregone conclusion: Heaven may have cheered them on while they performed the smashing — then the present *hatháh* would express the action that followed the one conveyed by the impf. *amanyata*. But I consider this unlikely.

Well-attested *samudrá-* is otherwise masc.; with Lü (192 and n. 1) I take neut. pl. *samudrāṇi* in d as an adj. and supply *árṇāṃsi* from c.

VI.72.4: Ge (see also Gr) takes *āmāsu* as modifying *vakṣāṇāsu* ("in die rohen Bäuche"), which is certainly possible grammatically. However, in other instantiation of this paradox it is the cows that are raw. (See an ex. below.) Hence the publ. tr., with first the cows (a), then the udders of the cows (b) as the depository of the cooked milk.

Ge follows Gr in taking the fem. of *jāgat-* (here loc. pl. *jāgatīṣu*) as simply designating a female creature ("in ... weiblichen Tieren"), but esp. in this context, in which the milk is held firm despite not being tied, the fact that the cows are in motion seems relevant. Cf. another phrasing of the same image in III.30.14 *āmā pakvām caratī bībhratī gauḥ* "Herself raw, the cow roams about carrying the cooked (milk)," where *caratī* seems to correspond semantically to *jāgatīṣu* here.

The publ. tr. might be slightly altered to reflect the unaccented *āsu* in c: "within them, the dappled moving (cows)."

VI.72.5: Ge, flg. Sāy, supplies *rayīm* in ab, quite persuasively because the same phrase *apatyasācam śrútyam* explicitly modifying *rayīm* is found in I.117.23, II.30.11. Re suggests rather *śúṣmam* on the basis of c, but this does not enter into the same formulaic nexus and seems a less likely gift in any case.

VI.73 Bṛhaspati

Re EVP XV.66–67.

VI.73.1: Pāda c is somewhat troubled, since neither of the first two words, *dvibārhajmā prāgharmasād*, is clear. Let us work from the end. The rt. noun cmpd. *prāgharma-sād-* is not otherwise attested, but *gharma-sād-* 'sitting by the gharma drink/pot' is found in adjacent vss. in X.15.9–10, also characterizing *pítár-*. It is not clear what the prefixed *prā-*

would add semantically (see Old, Ge n. 1c, Scar 564) nor why it should have a long vowel (if it belongs to *prā*). I therefore favor a different segmentation of the sequence, one roundly rejected by Old even as he mentioned it -- namely, to take the *prā* as the final of the preceding word, hence (in the first instance, but see below) **dvibárhajmā-prā(h)*, as the root noun to $\sqrt{prā}$ ‘fill’. This requires a change in the Saṃhitā text: accenting the *prā(h)* and (possibly, but see below) de-accenting *dvibárha-*, hence **dvibarhajmā-prā(h)*. This root noun is common in such cmpds; see, e.g., *antarikṣa-prā-* ‘filling the midspace’, *rodasī-prā-* ‘filling the two world-halves’, with similar cosmic locales. Rather than seeing in *dvibárhajmā-* a form of *ājman-* ‘course, drive’ with Ge, Re, Scar 255 (e.g., Ge ‘der eine doppelte Bahn(?) hat’) (Schmidt B+I 214 refuses to tr.), I segment it rather as *-jmā-*, with the *-jm-* ‘earth’ element belonging to the archaic and multiformed *kṣām-* ‘earth’ word (see also Re, who, though drawn to the possibility in his comm., rejects it in tr.). The supposed prior member *dvibárha-* obviously strongly resembles the reasonably (14x) well-attested *s*-stem bahuvrīhi *dvibárhas-*. But we should expect **dvibarho-jmā-* or the like and must therefore posit either a thematic byform **-barha-* or a secondary redactional adjustment. (Wackernagel’s solution, flg. Bartholomae [AiG I.339, cf. II.1.65, 125], that *dvibárha-jmā-* was simplified from **dvibárhaj-jmā-*, with *-aj-* the sandhi form of *-ad-*, which in turn is a sandhi form of *-as-* before a voiced sound, seems to me without merit, though clever.)

In any case, the unclarity of the structure of the cmpd. and the uncertainty of the lexical affiliation of *-jmā-* or *-ajmā-* in the posited **dvibarhajmā-prā-* could have led to redactional reanalysis, with segmentation of **prā-*, which was then attached to what follows. However, one problem with my analysis is that it assumes a three-, or indeed four-, member cmpd. **dvibarha-jmā-prā-*; these are rare in the RV and might be expected to be rarer when archaic elements are involved. I therefore have a further suggestion, which also addresses another problem with the analysis. Consider VI.19.1, where Indra is described as *carṣaṇīprā utā dvibárhā(h)* ‘filling the domains and doubly lofty.’ If we re-segment and readjust the beginning of our sequence here, to a two-word phrase **dvibárhā *jmā-prā(h)*, **dvibárhā* can keep its accent, we are saved from positing the thematic byform (since **dvibárhā* would be nom. sg. m. to the *s*-stem), and we avoid a multi-member cmpd. True, we have to lengthen the final of *dvibárha*, but it is already metrically heavy (before the cluster *-jm-*). This would yield a description of Bṛhaspati ‘doubly lofty, filling the earth’ that is similar to that of Indra in VI.19.1. It also fits the thematics of the hymn; note Bṛhaspati’s bellowing to the two world-halves in d and, especially, his making wide space (*ulokām ... cakāra*) in the next vs.

VI.73.3: I do not understand why *hánti* in d is accented. Nor does Old (“Akzent ... befremdet”). Both Ge and Re evade the problem by reading *pāda-init. bṛhaspátīḥ* with the previous *pāda* as subj. of a nominal sentence, leaving *hánti* to begin a new cl. The publ. tr. does the same. Despite adopting the Ge/Re strategem in my tr., I consider this solution artificial but have nothing better to offer.

VI.74 Soma and Rudra

Re EVP IX.74 and 128.

VI.74.1: In my view, *iṣtī-* in b is meant to express both ‘desire’ and ‘sacrifice’ (from $\sqrt{iṣ}$

and *√yaj* respectively), encapsulating the reciprocity inherent in the compact between gods and men. Ge is sympathetic to ‘sacrifice’ (n. 1b) but points to the accent: ‘sacrifice’ is ordinarily accented *íṣṭi-*. But secondary senses (that is, puns) often ignore accentual differences, and furthermore, as JL has persuasively argued, the older accent of *-tí-* abstracts was suffixal, and selective accent retraction can be observed in the course of the Vedic period, so we might assume an older **íṣṭi-* ‘sacrifice’.

VI.74.3: The nominal rel. cl. *yád ... ásti* is in some sense pleonastic: the two ppl. *baddhám* and *kṛtám* could simply modify the neut. *énaḥ* directly. But the structure seems designed to sketch a two-level structure: the outrage committed (by us) *that is* bound to us. Note that abl. *asmát* should be construed with the main cl. (“unhitch, release ... from us”: *áva syatam muñcátam ... asmát*), and so the rel. cl. is technically speaking embedded. But this seems to be one of the fairly common examples of semi-embedded izafe-type relative clauses.

VI.74.4: As often, a pattern imposed earlier in the hymn is partly altered at the end. In this case the vs.-initial voc. *sómārudrau* of 1–3 is postponed till the beginning of the 2nd pāda.

The simplicity and banality of this hymn (and perhaps an eye to the finish line) seem to have led both Ge and Re into uncharacteristic (and independent) lapses: Ge tr. ab in the 3rd ps., despite the clear voc. *sómārudrau* and clear 2nd du. impv. *mṛṣatam*; Re twists (at considerable verbal expense and with a characteristic parenthesis) the du. *sumanasyāmānā* ending the vs. as an acc. pl. modifying *naḥ*: “protégez nous (en sorte que nous ayons) l’esprit bien disposé.”

VI.75 Weapons

Re EVP XVI (1976): 109–11 provides notes; it is tr. in the earlier Hymnes spéculatifs (1956) but without philological notes.

It is possible that this hymn was tacked onto the maṇḍala because of *tigmāyudhau tigmāhetī* “possessing sharp weapons and sharp missiles” at the end of the preceding hymn (VI.74.3), though this is not a necessary hypothesis. The first 14 vss. are repeated in a number of places in the early Vedic ritual texts as part of the Aśvamedha (e.g., VS XXIX.38–51, TS IV.6.6).

VI.75.1: The first word of the hymn, *jīmūtasya*, signals that we are out of the core RVic lexical domain: this word for ‘thunder-cloud’ is found only here in the RV, though it is fairly amply attested elsewhere in early Vedic, and it has no obvious synchronic or diachronic etymology.

The construction of the riddle seems a bit weak to me, since the solution, given in d, *várman-*, is anticipated by its derivative *varmín-* in b.

VI.75.2: This vs. displays the proper RVic distribution of the suppletive stem of ‘bow’, whose nom./acc. sg. is supplied by *dhānuṣ-* and the rest of its paradigm (and cmpding forms) by *dhānvan-*. On this suppletion see AiG III.318 and esp. the detailed disc. of Hoffmann (Aufs. I.330 = Spr. 20 [1974] 18), as well as EWA s.v. *dhānuṣ-*. Here the instr. sg. *dhānvanā* opens pādas a, b, and d (and see loc. *dhānvan* in the next vs. 3c), while

nom./acc. sg. *dhānuḥ* holds the same position in c. Gr identifies a single occurrence of *dhānva* as nom./acc. sg. (V.7.7), which would thus violate the suppletive pattern, but this is otherwise universally and rightly assigned to the homonymous stem *dhānvan-* ‘wasteland’. The form *dhānva* (or quite possibly *dhānvā*) in II.33.10 is identified by Gr as a pl., which would fit the suppletive paradigm. It is generally, however, taken as a sg., which would not. However, see comm. ad II.33.10, where I now suggest restoring Gr’s pl. interpr., contra the standard sg. renderings incl. that of the publ. tr. The RV suppletive pattern is soon broken: already in the AV *dhānus-* begins to acquire oblique forms.

Technically speaking, *dhānuḥ* could be an acc., modified by *apakāmām* (if this stem can be adjectival; see below), which could be tr. “he makes the bow of his rival lose its desire,” but this requires supplying a generic animate subject for *kṛṇoti*. The stem *apakāmā-*, again a hapax in the RV but found elsewhere in early Vedic, is generally taken as a noun (Ge’s ‘Unlust’ being the best rendering), but I think it possible that it’s a nominalized bahuvrīhi ‘having desire gone/away’; there are not enough stems of this structure to anchor the grammatical value to accentual behavior, in my opinion. In any case, lacking the useful German ‘Unlust’, I have tr. as if we had a lexeme **āpa √ kṛ* ‘make (go) away’, with *kāma-* as obj. Cf. *āpa-ā √ kṛ* in passages like nearby VI.59.8 *āpa dvēṣāṃsy ā kṛtam* “make hatreds stay far away” (≅ III.16.5). (Gr identifies one instance of an *āpa √ kṛ*, in VIII.18.7, but the verb and preverb there belong to separate constituents; see comm. ad loc.)

VI.75.3: In d *sāmane*, lit. ‘togethering’ vel sim., has a double sense, referring to the ‘gathering’ of battle as well as to a festive gathering, with the latter appropriate to the female similes in the vs.

Exactly what sound is expressed by the verb *śīṅkte* is unclear (beyond possibly “shink”). Not only is this verb barely attested, but it is hard to conceive of a sound that both a maiden and a stretched bowstring would make. One of the practical questions is whether this 2nd hemistich still depicts the bowstring pulled back to the archer’s ear and held there or if it has moved on to the release of the bowstring as it propels the arrow; pāda d might suggest the latter. Numerous possibilities have been tried. The publ. tr.’s ‘jangles’ was meant to evoke the later kāvya trope of a woman dancer with jingling anklets, but I recognize that it is a less good fit with the bowstring -- though it might work if the string has just been loosed. The only other occurrence of the verb in early Vedic (not in a repetition of this vs.) is in the riddle hymn, I.164.29, where it *may* refer to the sound that the gharma pot makes as the milk is being heated in it. The publ. tr. (JPB) renders it ‘hums’ there (so also Doniger), Whitney in the equivalent AVŚ passage (IX.10.7) ‘twang’; the latter is an unlikely noise for a pot, but so, I think, is humming. (And certainly jangling or twanging seems out.) In our passage Ge tr. “quieckt” (squeak, squeal) and Re (Hymnes spéc.) “vibre”; in the TS equivalent (IV.6.6c) Keith “twangeth”; in the VS equivalent (XXIX.40) Griffith “whispers” (so also Maurer for the RV). Acdg. to the internet, all bows make some sort of a twanging sound when the string is released, but the better tuned a bow is, the quieter: well-tuned bows can be almost silent. Since twanging seems excluded for a maiden and since none of the other suggestions is particularly compelling, I will stick with ‘jangle’, though not with much confidence.

The standard tr. take *pārāyantī* in a fairly generic sense (e.g., Ge’s “die ... durchhilft”), but its literal meaning ‘cause to cross / reach the far shore’ works just as

well, if not better, if we supply ‘arrow’ as obj.: the bowstring celebrated here causes the arrows to cross the space from the bow to the battle.

VI.75.4: The pun on *sāmana*- implicit in 3d is made explicit in 4a; the single word is held constant, but in two different senses, between the simile and the frame.

Maurer (308) considers the simile in b “a bit irregular, since, strictly speaking, it is not the bow-ends that hold the arrow, but the bowstring.” But if the bow is held on a horizontal axis, with the bow ends horizontally aligned, the part of the bow between the ends dips down like a lap, and it is the lowest part where the tip of the arrow is placed. Again according to the internet, the bow should be parallel to the ground when positioning the arrow on it (an action called “nocking”); this would be the position envisioned above.

The 2nd hemistich depicts the positions of the ends of the bow while the arrow is shot: first (c) the two ends of the bow approach each other as the bowstring is pulled back, decreasing the vertical space between the ends -- although as far as I can tell from YouTube, the ends never actually meet. This movement is described as *saṃvidāné* ‘finding each other’. The lexeme *sām* √ *vid* often has the more abstract sense ‘make an agreement’, and I think this may also be operative in the passage, though I’m not quite sure how: perhaps their agreement or compact is to “pierce the rivals” (*āpa śātrūn vidhyatām*), as the rest of the pāda urges. Most tr. only recognize this latter sense in our passage (e.g., Re, Hymnes spéc., “d’un commun accord”), missing the physical sense applicable to the manipulation of the bow. In d the bowstring is released, propelling the arrow, and the two ends “spring apart” (*visphurāntī*) and resume their position at rest. The contrastive preverb pair *sām* / *ví* calls attention to these contrastive actions. None of the tr. I consulted (Ge, Re, Doniger, Maurer, as well as Keith for TS and Griffith for VS) seems to have recognized that a two-step process is being described. There is one possible problem with my interpr., namely that forms of the root √ *sphṛ* often take an object, and there is an acc. *amītrān* here that it could govern. However, there are a number of forms to the root that lack objects, incl. the other occurrences of the participle (VII.89.2) and nearby aor. *āpa spharīḥ* (VI.61.14). And I prefer to take *amītrān* either as a further specification of the obj. of *āpa ... vidhyatām* in c or as a poorly marked acc. of goal.

VI.75.5: The expression *bahúr asya putráḥ* in the singular is somewhat surprising next to the fem. pl. *bahvīnām*, but Re’s suggestion that it is a “bahuvrīhi défait” can be adopted, whatever we may think the grammatical process is. I have adopted Griffith’s “with many a son” (both RV and VS tr.; see also Maurer), which is surprisingly apt. As is generally recognized, the masc. and fem. referents are both arrows: in addition to the standard fem. *īṣu-*, forming part of the ‘quiver’ cmpd itself (*īśudhī-* in c), there are masc. ‘arrow’ words, incl. *bāṇá-*, found in vs. 17 below, and *śalyá-*.

Another onomatopoetic word: *cīscā*, which is a hapax (though cf. *cīscīśākāram*, with √ *kṛ* as here, not attested till the sūtras; see Hoffmann Aufs. 39). Since it expresses the sound of the quiver, “clatter” (pub. tr.), “rattle” (Doniger, Maurer), “clang and clash” (Griffith, RV and VS) all seem within reasonable range; Keith’s “whiz” much less so. Again the sound may in fact just be “chishcha.”

VI.75.6: Both hemistichs of this vs. express the same paradox, that an entity *behind* can lead something in front of it. In ab the good charioteer (*suṣārathīḥ*) “leads forward” (*nayati ... purāḥ*) the horses that are physically in front of him; in cd the reins, which stretch in front of the charioteer from his hands, follow his mind, which is physically behind them (*mānaḥ paścād ānu*).

VI.75.7: The middle of *kṛṇvate* is nicely appropriate.

The publ. tr. follows Re in taking *vājāyantaḥ* as belonging to the denom. stem ‘seek the prize’, despite the accent (expect **vājāyāntaḥ*), since we would otherwise expect the part. to have an object. See also Old, ZDMG 55.294 (=KlSch 753).

In its other RVic occurrence (X.163.4) *prāpada-* means ‘front of the foot’, but here I find it hard to assume that the horses are daintily trampling the soldiers with their tippy-toes and so tr. “with their forefeet.” However, since technically it seems that horses do walk/run on their toes, perhaps that’s what the poet intended. Moreover, IH points out that it would be the front of the horses’ hooves that would first make impact on the soldiers’ fallen bodies.

The sense of *ānapavyayantaḥ* is disputed, or rather most tr. water down what I think its sense must be. It’s a negated part. to *āpa* √ *vyā* ‘strip off, divest’ of garments, to √ *vyā* ‘envelop, wrap’. See VII.81.1 *āpo māhi vyayati ... tāmaḥ* “She [Dawn] unwraps the great darkness.” But most tr. attenuate this in some way that loses the sense of the root entirely, e.g., Ge “ohne sich zu entziehen” (withdraw oneself), Griffith “never flinching,” Keith “unflinchingly,” Doniger “without veering away,” Maurer “unrelenting”; Re (EVP) assigns it to a different root: *āpa-veti* ‘cesser’ (whose participle should be *-*vyant-*; he doesn’t deal with the morphology), though in Hymnes spéc. he tr. “sans même s’écarter (de leur voie).” I think we should take the form seriously and I suggest that it means that the horses’ trampling is so powerful that it can kill a man even while he is still in armor (hence my “without divesting”). That the form is underlyingly transitive (as I have just claimed) is disputed on principle by Lowe (*Participles in Rigvedic Sanskrit*, 277), where he argues that negated participles are (“almost always”) intransitive and tr. this ex. as “without withdrawing.” I would dispute the principle and therefore his interpr. of this passage.

VI.75.8: I follow Ge in accepting the view of the comm. to VS XXIX.45 that *hāvīḥ* is a shortening of *havīrdhāna-* ‘oblation-deposit’, with the √ *dhā* supplied by the definition found in the next pāda, containing *nīhitam* ‘deposited’. However, see Old in particular for other ways to interpr. *hāvīḥ*.

The standard tr. take *ūpa ... sadema* as transitive with the chariot as object: e.g., Ge “setzen,” Re (Hymnes spéc.) “installer,” Doniger “place,” Oberlies (II.223) “setzen.” But *ūpa* √ *sad* is a standard locution for ‘reverently approach, do honor to’, and that surely is the sense here (so Griffith, Maurer “hono(u)r”).

VI.75.9: On *kṛchre-śrīt-* see most recently Scar (543–44). Re’s (EVP) objection to Ge’s tr. (“die Zuflucht in der Note”) and his over-complex substitute can, I think, reasonably be dismissed.

Most tr. take *citrā-senāḥ* as containing the ‘army’ word (e.g., Ge “eine wunderbare Heerschar bildend”), and this is certainly possible. I interpr. it rather as ‘weapon’ because

of the proximity of *īṣu-* ‘arrow’ in the adjoining cmpd *īṣubalāḥ* ‘arrow-strong’.

VI.75.10: This is the last vs. of the first part of the hymn (see publ. intro.), at least by content, though the next vs. is also in trimeter meter, and it has a typically eclectic group of addressees and divine name-checks.

Pāda b could be simply a nominal sentence: “H+E (are) kindly to us,” but the hortatory cast of the 2nd hemistich makes this unlikely.

I would now substitute “flawless” for “blameless” in b; see comm. ad X.61.12.

Pūṣan probably makes his appearance here because he watches over roads and journeys.

The 2nd singular impv. *rākṣā* beginning d has no obvious subject. The voc. immediately preceding it, at the end of c, is pl. *ṛtāvṛdhaḥ*, as are the other vocc. in pāda a. The only available sg. is *pūṣā* in c, but he is subj. of a 3rd ps. impv. The pāda is identical to nearby VI.71.3d, where the sg. Savitar is the addressee, and it was presumably adapted from there, as Re (EVP) notes. As the last pāda of the apparent hymn-ending vs., it is not surprising that it has an external source and is only loosely attached.

VI.75.11: The “eagle” is of course the feathers that provide the fletching at the back end of the arrow. The “tooth” of the arrow is presumably its tip -- the arrowhead -- so called because it “bites” its target. The arrowhead is quite unlikely to have been made from a deer’s tooth, however -- their teeth being short and flat and unsuitable for piercing. But acdg to the internet, deer antlers were/are used for primitive arrowheads. The cows in pāda b are of course leather sinews, and again the internet tells us that sinew was/is frequently used to attach the arrowhead to the shaft (with some how-to advice, which generally involves chewing on the leather first).

Pāda b recalls 5d, though the material objects in questions are different, the quiver in 5, the arrow in 11: pāda-final *prāsūtā* matches *prāsūtaḥ* in 5d in the same metrical position, and both contain the past part. of *√nah* ‘tie’ earlier in the pāda, also in the same metrical position, 5d x x *nīnaddhaḥ*, 11b x x *sāmṇaddhā*

The verb of pāda d is literally “run together and apart” (*sām ca ví ca drāvanti*), but “clash and separate” seemed to me to have a better ring.

VI.75.12: *śárma yachatu* at the end of d responds to *śárma yaṃsan* ending the previous vs., though the vss. are in different meters.

VI.75.13: The first hemistich is strongly alliterative: *jañghanti ... jaghánān ... jighnate* and plays on two different redupl. verb forms to *√han*: the intensive and the regular redupl. pres. Although I generally agree with Schaefer that “intensives” are really frequentatives most of the time, in this particular passage the presence of the med. redupl. pres. *jighnate*, which almost always has pl. objects (as here) and therefore fills the frequentative slot, pushes the intens. stem *jañghan-* towards a true intensive value.

práçetas- ‘discerning’ may seem an odd descriptor for horses, but the point is well captured by Doniger’s “who sense what is ahead” (perhaps an expansion on Re’s [Hymnes spéc.] ‘prévoyant’). The horses are presumably too smart to go into battle unless they’re forced by the whip.

VI.75.14: This is the last of the vss. repeated in the Aśvamedha sections of the YV.

pári is the signature word of this vs.: *páry eti* (a), *paribāḍhamānaḥ* (b), *pári pātu* (d).

On the cmpd *hasta-ghná-* see Old and Lü (ZDMG 96: 39), the latter summarized by Re (EVP).

There are numerous diff. interpr. of *vayúnāni* here. I assume that it refers to the different possible trajectories of the bowstring when it is released.

The last pāda may emphasize the masculinity of the handguard and the archer because the bowstring, from which the handguard protects the archer, is feminine.

VI.75.15: The antelope head and metal mouth of the arrow are not entirely clear. I assume that this refers to a deer-antler arrowhead (as in 11a) with a further metal tip attached to it. The internet assures me that such things have been discovered, if rarely, in archaeological contexts. Ge (n. 15b) suggests either this or that the *múkham* is the ring that connects the shaft and the arrowhead. But as far as I can tell, in my exploration of the odd internet world of makers of primitive arrowheads, there would not be a separate metal ring or socket used to attach a bone/antler arrowhead to the shaft; when there's a metal attachment, the whole arrowhead is metal.

In a hymn so attuned to the grammatical gender, and therefore of the metaphorical gender, of the key words, there is a special frisson in describing the feminine arrow (*īsu-*) -- here in the dat. *īsvai*, whose *-v-ai* stem+ending shows the specifically feminine inflection of short *-u*-stems -- with a cmpd that ends with *-retas-* 'semen'. The accent of the cmpd *parjanya-retas-* shows that it must be a bahuvrīhi 'having (or in this case, in my opinion, receiving) the semen of Thunder/Parjanya'; hence tr. like Re (Hymnes spéc) "semence de Parjanya," Doniger "to this seed of Parjanya" are misleading and grammatically wrong. As to what this refers to in practical terms, Re may well be correct that the shaft of the arrow is made of reed, which grows in the rains and is associated with the thunderstorm.

VI.75.16: *amīṣām* is of course the gen. pl. of the far deictic prn. *asaú* and could be more literally tr. as "do not leave a single one of those yonder standing," but this seemed a bit heavy.

VI.75.17: The beloved RVic contrast of *sám* and *ví* is on display here with *sampátanti* (a) and *visíkhāḥ* (b).

Strictly speaking, *iva* comes too late in the simile *kumārā visíkhā iva*, since the 'lads' must definitely belong to the simile, not the frame. This late placement is not unusual, however.

Because of the multivalence of *ví* the bahuvrīhi *visíkhā-* can have two different senses and has been interpr. with both. If in this cmpd *ví* means 'without', as often, the whole cmpd means 'without/lacking hair' -- so Gr "ohne Kopfhaare"; he is followed by Re (Hymnes spéc.) "aux crêtes dénouées" and Maurer "tuftless." By contrast, if *ví* means 'out, apart', as often, the cmpd means 'with hair apart', that is, perhaps, sticking out every which way. Ge renders it "mit aufgelöstem Haarbusch," and he is followed by Doniger "with untrimmed locks of hair" and me; Old implicitly assumes the same meaning. If the first meaning is correct, these could in fact be some kind of projectile that lacks fletching. (Acadg. to the internet, it is possible to shoot unfletched arrows, though

not generally recommended.) Or perhaps the arrows lost their fletching in the intensity of the shooting. Nonetheless, this seems the less likely sense. If it means “with hair out/apart” (my “unruly hair”), it can refer either to the arrows themselves, coming in from every angle: if each arrow is compared to a strand of hair, the visual effect would be of “bedhead” hair, matted and sticking out in all directions. Or it can refer to the fletching; when innumerable arrows rain down, their feathers would again produce a chaotic visual effect.

The predicate *śárma* √*yam* returns from vss. 11–12, and 17d is identical to 12d.

VI.75.18: Note the near-rhyming forms *mármāṇi* .. *vármaṇā*, echoed in c by *vārīyo várūṇaḥ*.

VI.75.19: I take the phrase *svó áraṇo yás ca níṣtyaḥ* as a three-member sequence indicating progressive distance from the speaker. I’m assuming that in this context an *áraṇa-* is someone who inhabits the same general territory, but belongs to a different group, while the *níṣtya-* are from beyond the territory. Re’s tr. (Hymnes spéc.) is in agreement: “Celui, proche ou lointain ou même étranger.” Others seem to take the 2nd two terms as (near-)synonyms; so explicitly Klein (DGRV I.108–9).

Commentary VII

[VII.1–17 JPB]

VII.18 Indra (Battle of the Ten Kings)

I have little or nothing to contribute to the interpr. of this famous hymn, esp. of its historical or quasi-historical aspects. The hymn has been extensively treated by a number of scholars both fairly recently, esp. H.-P. Schmidt (*Indica* 17 [1980], 41–47) and M. Witzel (in *The Indo-Aryans in Ancient South Asia* [1995], esp. 333–37), and in the past, and I will therefore limit my comments. See the publ. intro. for structural and contextual disc. I am certain that many puns, wordplays, and snide asides are completely unrecoverable today and respectfully suggest that we put our energies into interpreting parts of the RV where we have a chance of success.

VII.18.1: Pāda c contains two parallel nominal clauses. Both should be in the causal domain of the *hí*, but it is located only in the 2nd of the two. We might have expected **t'vé hí gāvah sudúghās tvé áśvāh*, which would have been just as good metrically.

On the pun in d see publ. intro. and comm. ad vs. 4.

VII.18.2: As I interpr. it, the first hemistich presents us with a causal *hí* clause followed by an imperatival non-sequitur. What is immediately striking is that it is emphasized that Indra is dwelling in peace and domestic harmony -- not always the first picture of Indra we conjure up -- in a hymn that is about to become very very martial. In the imperatival clause of b, he is also identified as a wise *kaví*, again not a militant role for Indra. Perhaps the connection between the causal *hí* clause and the imperatival ones that follow is that Indra has the leisure to pay due attention to our hymns and reward our poetic offerings (which, as a *kaví*, he has the connoisseurship to appreciate) with aid and material goods.

The interpr. just given assumes that *áva* opening b and *piśā* opening c are both imperatives. Both of these identifications have been questioned. Some (e.g., Lub) take *áva* as the preverb (Gr by implication, since he does not list it under *√av*), but both Ge and Old (the latter after some hesitation) interpr. it as an impv. to *√av* 'help'. As for *piśā*, Gr takes it as the instr. of a root noun, but most subsequent interpr. as the impv. to an otherwise unattested them. aor. to *√piś* 'adorn, ornament' (see, e.g., Old, Ge, Schindler [Rt. Noun], Lub). Our form could well be a thematic substitute for a form of the root aor., found once in the part. *piśānā-*, since the expected root aor. impv. should be the quite opaque **pīdhí*.

As indicated ad I.71.10, I do not have an independent view about the morphology of *vidúṣ*, which occurs in the same phrase in both passages (*abhí vidúṣ kavíḥ sán*). I do think that it is a nom. sg. (with Old), not a haplogized acc. pl. as Ge takes it (see his n. 10b ad I.71.10). (Debrunner [AiG II.2.471] seems weakly to assign it to a *-u*-stem [but possibly to *-uṣ-* instead] and interpr. as a nom. sg., while Wackernagel [AiG III.300, which publication of course long predates II.2] accepts Ge's acc. pl.) To me the form looks as if it is a truncated form of the weak form of the pf. part. *vidvāms-*, though it could of course belong to a *u*-stem *vidú-* instead -- but whether it is archaic or innovative I wouldn't venture to say.

However, it is tempting to compare it with OAvs. *vīduš* (Y. 28.4, 45.8), which Insler (124–25 ad Y. 28.4) interprets as the nom./acc. sg. of the pf. part. used adverbially, while Humbach (1991: II.22) takes it as a nom. sg. meaning ‘witness’ without pronouncing further on the morphological analysis beyond that it’s “etymologically related” to the pf. part., and Kellens-Pirart (1990: 306) instead suggest it is cognate with Vedic *vidhū-*. Insler says explicitly that “Rigvedic *vidús* (2x) requires a different explanation,” without specifying what it is. Kü for his part (39) suggests that both Vedic *vidúš* and the Avestan forms (including others like OA *vāunus*) aren’t directly connected to the pf. part. but are redupl. *u*-stem adj. like *jigyú-*. However, at least a secondary association with the perfect is needed for *vīduš*/ *vidúš* to account for the *de*-reduplication they would exhibit, which matches the pf. stem.

It is also curious that in neither passage is the pres. part. *sán* concessive, though that is the usual function of the nom. forms of this participle. However, here the *sán* is by my interpr. in tmesis with *abhí*, which opens the repeated phrase, in the sense ‘be preeminent’ (so also Ge), even though participles in tmesis are rare – or perhaps less rare than is generally thought.

The apparent close sandhi with following *kavīḥ* that *vidúš* exhibits seems to me not to support the haplology explanation, though the sandhi issue is complex. Mark Hale (in “Preliminaries to the Study of the Relationship between Syntax and Sandhi in Rigvedic Sanskrit” [MSS 51, 1990], as well as the unpubl. *Wackernagel’s Law: Phonology and Syntax in the Rigveda* [1995], 33–36) insightfully discusses the general problem of irregular sandhi of *-s* before *k-*. The great majority of the examples occur before forms of $\sqrt{kṛ}$, and Hale plausibly accounts for this phenomenon by pointing out that *kṛ* has an *s*-mobile doublet $\sqrt{skṛ}$ and that the unusual *-s* sandhi outcomes can result from the doubled *-s s-* that would be underlying. The single example of such a result before the PN *kāṇva-* can also be so explained, since we have a synchronic doublet *-skaṇva*. However, Hale’s invocation of the *s*-mobile explanation for the exx. before *kaví-* is not supported by internal evidence for a **skaví-* or by solid evidence of *s*-mobile cognates outside of Indic, and I therefore think the *kaví-* examples require a different explanation -- though I don’t know what that is. We should first note that they form a more limited set than Hale’s presentation (1995: 36 n. 28) makes clear. The two *vidúš kavīḥ* passages are identical, and *paśuṣ kavīḥ* occurs in our same hymn (8d) and is most likely responsive to the earlier example; *vásuṣ kavīḥ* (I.79.5) is nearby *vidúš kavīḥ* in I.71.10 (though admittedly not attributed to the same poet) and could be based upon it. *brahmaṇas kave* (VI.16.30) is in a voc. phrase where close sandhi effects are at home; cf. the very similar *brahmaṇas pate* (I.18.3). Of Hale’s collection, this leaves V.59.4 *kás kāvya* [*sic*, not Hale’s *kāvyaḥ*] and *ṛtás kavīḥ* (VIII.60.5). The latter is problematic for a different reason: it contains one of only two exx. of a masc. *ṛtá-*; the other is in the same phrase (IX.62.30) but with standard sandhi *ṛtáḥ kavīḥ*. In fact most occurrences of *kaví-* (*kāvya-*, etc.) preceded by *-s* do show the standard visarga (e.g., among the many, I.76.5 *kavībhiḥ kavīḥ*). I don’t know what to make of all this. I am inclined to think that the irregular sandhi originated in the morphologically problematic phrases *vidúš kavīḥ* and *ṛtás kavīḥ* and is a dark reflection of their troubled morphology. It then had a very limited spread. But since I don’t understand what the morphology is or how this could affect the sandhi, this is not much of a theory! In any case, the poet of this hymn seems to showcase this sandhi anomaly, by not only including the two *-uṣ ka-* examples (2b, 8d), but also

adding the correct *āsús canéd* (9b) and close sandhi *rāradhuṣ te* (18a); cf. also *susupuh śāt* (14b).

The cows and horses attributed to Indra in 1c reappear here in c as his ornamental gifts to us.

VII.18.4: The desid. part. *dúdukṣan* is mildly notable because 1) it does not exhibit reverse-Grassmann (**dúdhukṣan*) unlike the *s*-aor. *ádhuṣat* (also, however, *adukṣat*); 2) it is a real part., not the *u*-adj. often substituting for the part. in the desid. (**dudukṣú-*).

Because of the overt switch to the 1st ps. in c, I take the pf. *sasṛje* in b as 1st ps. (flg. JPB p.c.), with *vásiṣṭhaḥ* doubling the underlying subject. The pf. form is of course ambig. between 1st and 3rd.

As noted in the publ. intro., this vs. exhibits a kind of ring comp. via an anagrammatic pun: 1c *vásu ... vániṣṭhaḥ* “best gainer of goods” is compressed into the name of the poet *vásiṣṭhaḥ* (*vás[u]... [ván]iṣṭhaḥ*). This brings the first section of the hymn to a close; the battle scene erupts abruptly in the next vs.

VII.18.5: My tr. of the 2nd hemistich follows Old’s, contra Ge.

VII.18.6: The first hemistich contains two ironic reversals, based on what are presumably personal names or plays on them. In the first pāda *yákṣu-*, perhaps a pun on Yadu, can be rendered as ‘sacrificer’ (so Schmidt, from whom I adapted the tr.), and he himself becomes the sacrifice, or a part of it: *puroḷāḥ* ‘offering cake’.

The presumed underlying form of this nom. sg., *puroḷās* (also found in III.28.2), is unexpected: to the stem *puroḷās-* we might rather find **puroḷāt*. See Scar (221) with lit. It is worth pointing out in this case, as well as with equally unexpected *sadhamās* in the next vs., that the final of both forms matches that of *sudās*, our hero the king Sudās, and so there may have been some adjustment in that direction, esp. in a hymn given to phonological manipulation. Unfortunately this doesn’t explain the occurrence in III.28.2.

In b the name of the ill-fated enemy *mātsyāsaḥ* is also the common noun ‘fish’, and this word should be read in both the simile and the frame. Following Old (and Ge, who adopted Old’s suggestion), I take *āpīva* as containing not only the particle *āpī* ‘also’ but also a putative loc. sg. to *āp-* ‘water’. Although there are vanishingly few singular forms to this stem in the RV, they do exist (also in Avestan). The loc. should also be accented **apí*, but in puns accentual fluidity is common. The “fish” pun cries out for the “water” interpr., though Schmidt seems to reject it. He then introduces a pun that isn’t supported by the text, rendering *rāyé ... níśitāḥ* as “hooked on wealth (like fishes on bait).” Though this is appealingly cute, it is hard to push *ní√śā* ‘whet (down)’ to ‘hook’, and dat. *rāyé* is also hard to fit into that idiom. Moreover, (*nī*) *√śā* is a sort of signature verb in this hymn; cf. 2d, 11c, 24d, and in particular the positive 2d *śíśṭhi rāyé asmān* “whet us for wealth” appears to be the polarized counterpart of our negative *rāyé ... níśitāḥ*. I wish I could find a clever expression to capture the image, but so far I have been unable to.

There is a diversity of opinion on what is happening in d as expressed by the verb *atarat*. Ge thinks that friend is helping friend, though this requires *√tṛ* to mean ‘help’, not a usage I’m aware of; Old that the enemy ranks were divided into two parts, both fleeing but one faster than, and therefore overtaking (*√tṛ*), the other. This seems also to be

Schmidt's view, though his "crossed (overcame)" shows a non-idiomatic usage of English 'overcame' (meaning 'overtook'?). The Old/Schmidt view seems possible, but I interpr. it in the light of VIII.1.4, where I take *tartūryante* to refer to the crisscrossing movements of people in opposite sides of a conflict. I suggest that here *sákhā sákhāyam* refers to former comrades who are now fighting on opposite sides and crossing each other's path in the battle line: the shifting alliances of the participants in the Ten Kings battle are notorious and much discussed (see esp. Witzel's treatment cited above).

VII.18.7: Ge (fld. by Gotō, 1st Kl., 222) takes *bhananta* as reflexive ("... nannten sich") with *śívāsaḥ* as pred. nom., but the responsive pairing of act. 3rd pl. pres. *bhananti* and mid. 3rd pl. injunc. *bhananta* in adjacent vss. in the same metrical position in IV.18.6–7 (see comm. ad loc.) marks *bhananta* as a text-book case of *-anta* replacement, as disc. in my 1979 article. Flg. Schmidt, I take cd as the direct speech implied by *bhananta*. Old also rejects the Ge interpr.

The /s/ of the names *bhalānās-* and *ālīna-* and the unmotivated retroflex *-ṣ-* in *viṣāṇīn-* suggest peoples outside of the Ārya mainstream, although of course they could also show the kinds of deliberate phonological deformation found elsewhere in the hymn. It's possible that *bhalānās-* reflects a form of $\sqrt{bhṛ}$, hence my 'raiders'. It is not clear whether *śívāsaḥ* should be interpr. as the usual adj. ('kindly') or as the name of another group of fighters. The publ. tr. reflects the former (flg. Schmidt), but I am now inclined to consider the latter more likely, primarily because it's not phonologically outlandish. In this case I'd tr. "The Pakthas and the Bhalānases spoke out, and the Alinas and the Viṣāṇins -- (all) 'kindly' --" This would be a sarcastic aside about the martial forces ranged against us.

If we accept the Schmidt/Witzel distribution of the allegiances of the various named forces, those named in ab are complaining about the defection of the *sadhamād-* who led them to the battle but has now gone over to the Tr̥tsu (/Sudās) side and has turned to attack the *nṛ̥n* ('superior men'), by which they mean themselves. The *sadhamād-* is most likely Indra, and so losing him as an ally would be a serious blow.

On the unexpected form *sadhamās*, if the nom. sg. to *sadhamād-*, see Scar (381) with lit. I think it unlikely that it's an acc. pl., a possibility Old considers by assigning it to a diff. root. As noted above (vs. 6) with regard to *puroḷās*, the rhyme with king Sudās may have played a part.

Ge's interpr. of the syntax of cd is impossible: it contains an embedded *main* clause! His rel. cl. consists of *ā yó 'nayat ... yudhā nṛ̥n* "... der seine Mannen unter Kampf heranzuführte" -- the beginning of c and the end of d. While his main clause is the end of c and the beginning of d, ... *sadhamā āryasya, gavyā tr̥tsubhyo ajagan ...* "Der Mahlgenossen des Ariers ... ist aus Verlangen nach Kühen den Tr̥tsu's (zu Hilfe) gekommen." My tr. follows Old's, which is slightly adjusted by Schmidt.

VII.18.8: Both this vs. and the following one concern the Paruṣṇī river, known from elsewhere in the RV and later. In the 2nd pāda the VP *vī jagrbhre páruṣṇīm*, lit. "they grasped apart the P.," is generally taken to mean 'divert' the course of the river (so already Gr, also Ge; Schmidt slightly differently 'divided'). The lexeme \sqrt{grabh} occurs only once in the RV, but this seems a reasonable interpr. -- though I'm not exactly sure how this feat of engineering would have been accomplished. Perhaps so many bodies

accumulated in the river that it either had to flow around them (hence Schmidt's 'divided') or switch its course altogether. The use of the middle *jagrbhre* might support the former interpr.: they themselves [i.e., their own bodies] parted the river. One is reminded of Iliad 21.205ff., where Achilles drives his enemies towards the Scamander river, which berates and then fights with Achilles for filling the river with corpses.

In the preceding pāda *āditi-* is also sometimes taken to be a river (Ge n. 8a, Schmidt), but this seems much less likely to me. Aditi is, of course, a well-known goddess, and her miscarriage is also a well-known mythological incident, in the narrative of the sequence of her twin births ending with one miscarriage and one live baby -- found already in the RV (see the clear passage X.72.8). It therefore seems wiser not to make her capriciously into a landscape feature, but to start with the mythological facts that might match the VP *āditiṃ srevaśāntaḥ* "making Aditi abort." Now, as is often related in middle Vedic texts, when the eighth embryo of Aditi aborts, it becomes first the discarded Mārtāṇḍa ('stemming from a dead egg'), but is then fixed up and becomes Vivasvant, a name for the sun (see my Hyenas, pp. 204-8; this identification is already implicit in the RV, *pace* Hoffmann). I wonder if "causing Aditi to abort" refers to her aborted son, the sun, and in this case, by metaphor, to an eclipse of the sun -- or at least something that could pass for one. If the dust of a pitched battle got thick enough it could rise to blot out the sun's rays temporarily. Rising dust is often elsewhere a sign of intense fighting in the RV, and flights of arrows so thick that they obscure the sun are a feature of battles in the epics (e.g., MBh IV.53.26, 31). This loss of light could render the combatants *acetās-* (b), lit. 'without perception' in b.

The *durādhyāḥ* 'ill-intentioned ones' are probably the same faction as those referred to, probably sarcastically, as 'kindly' (*śivāśaḥ* in the previous vs., 7b).

Apparently alone of all tr. and comm., I do not have an opinion about who the personnel are in cd. See the various suggestions, esp. those of Schmidt and Witzel.

As for *cāyamāna-*, I assign it the intrans./pass. sense 'being perceived as, appearing as', rather than, e.g., Schmidt's "receiving due respect." Gotō's interpr. (1st Kl. 137) is closer to mine, but he considers it reflexive: "sich als ... betrachtend, sich für ... haltend." He does not tr. this passage (or the other participial form in X.94.14). Whoever the subject is -- Schmidt and Witzel think it's Vasiṣṭha, the purohita of Turvaśa, but I remain agnostic -- in my view this kavi has been felled, at least temporarily, and therefore gives the impression of being a *paśú-*, in this case a sacrificial, or already sacrificed, animal. Note the main verb *aśayat* (√śi 'lie'), which is the signature verb describing the slain Vṛtra in I.32. Note *paśúṣ kavīḥ*, which shows the same sandhi before *kavīḥ* as *vidúṣ kavīḥ* in 2b; see disc. there.

VII.18.9: With Ge (etc.), I take *ná* in pāda a as a simile marker, not a negative; the simile and frame participate in a pun on (-) *ārtha-*. What they reached was a *nī-ārtha-* 'failed goal' (see, e.g., VI.27.6, X.107.8), which is *like*, but tragically *not*, their real goal.

In b note *āśúś* (*canéd*), which echoes *paśúṣ* (*kavīḥ*) in the previous vs. (8d) also pāda-initial. Here the sandhi is of course standard.

The adj. *sutúka-* occurs 7x in the RV; acdg. to EWA (s.v.) its meaning and etymology are unknown, though it is generally translated in the 'quick, swift' realm (like so many other unclear RVic adj.), e.g., Gr "rasch dahin eilend," Ge (this passage) "spornstreichs fliehend." On the basis of X.42.5, where it appears parallel to *sváṣṭra-*

‘easily goaded’, I suggest that it means ‘easily thrust/thrusting’ and is ultimately derived from \sqrt{tuj} ‘thrust’. Under this analysis, of course, the voiceless *-k-* is a problem. Easiest would be to extract it from the unattested nom. sg. of the reasonably well-attested root noun *túj-*, which should be **túk*, supported by pre-C forms like **tugbhís*, **tukṣú*. This is essentially a variant of Re’s (EVP XII.108) suggestion that it belongs to a root \sqrt{tuc} , a doublet of \sqrt{tuj} , but it avoids the awkwardness of positing this extra root to explain one stem. In fact, Re suggests in passing that it could start from an athematic nom. sg. **sutuk* (he gives no accent), but he prefers the \sqrt{tuc} hypothesis.

In view of the disorderly rout of these forces described in the next vs., presumably due to the collapse of their alliance, I now wonder if *amítrān* refers not to their non-alliance with us (as in the publ. tr.), but to the lack or loss of unity among themselves.

In d Ge takes *mānuṣe* as a place name (“in Mānuṣa”), on the basis of JB III.244, which identifies it as the place of the Ten Kings battle. But, as Ge admits (n. 9d), the JB rendering could easily result from a misunderstanding of our passage. Old suggests (not very enthusiastically) that it refers to (all) the enemies “in der Menschenwelt.” Schmidt’s interpr. is somewhat puzzling, putting it in an (unexpressed) simile contrasting the “castrates” of *vádhi-vāc-* to a (presumably virile) man expressed by *mānuṣa-*: “who were talking like castrates in the world of a man.” I think rather that it refers to Manu’s race or people: all other loc. singulars of this stem modify *jāne* (save for I.12.8.7, where it qualifies the semantically close *vṛjāne*). I take the expression as concessive “(though) in Manu’s (race)”: the point is that the opponents belong to the larger Ārya community though they are fighting against us. They therefore in principle share the same sacrificial practices, including ritual speech, but their ritual speech is ineffective (or so we hope), like that of a castrate. The extensive ritual references in the account of the battle only work under these conditions.

The cmpd. *vádhi-vāc-* ‘possessing gelded/castrated speech’ provides another parallel to the famous Indra-Vṛtra hymn I.32, whose vs. 7 likens Vṛtra to a *vádhi-* wishing to become a bull.

VII.18.10: The vs. begins *īyúr gāvo ná*, very similar to the opening of the preceding vs. 9 *īyúr árthaṃ ná*. The simile of the cows without a cowherd (*gāvo ná ... āgopāḥ*) presumably depicts the disordered flight of the troops that have lost their leader.

I have now considerably changed my interpr. of the 2nd pāda. In the publ. tr. I take *citāsaḥ* as belonging to \sqrt{ci} ‘perceive’, meaning ‘perceived as, seeming’, rather than to \sqrt{ci} ‘gather’, the usual interpr. I now think the standard root assignment is correct, but that it means not ‘assembled, gathered’ (so Ge, Schmidt) but ‘piled up’. In other words, the panic-stricken troops, running pell-mell without an overall leader, hit an obstacle and pile up on top of each other in a heap of bodies.

The object they run into (*abhi*) is the opposing side, which is acting as allied forces under a properly concluded agreement: *yathākṛtām ... mitrām*. The standard view of this phrase is that it describes the situation of the subjects, the fleeing fighters, construed with *citāsaḥ* and therefore referring to an accidental or on-the-spot alliance; so Ge “zu zufällig geschlossener Freundschaft geschart,” Schmidt “... assembled for an alliance made on the spur of the moment.” But as Old points out, *mitrām* \sqrt{kr} is the standard phrase for concluding an alliance in the normal fashion, not for one made under pressure or by chance. It therefore better describes the well-organized forces the subjects

are confronting, and as I said in the comm. to the preceding vs., the adj. *amītrān* there may well describe the lack of alliance among these fighters going to defeat, here contrasted with our side, which is acting in concert under a functioning alliance. I would therefore alter the publ. tr. to “They went ... piled up against an alliance properly concluded [=their enemies].”

In c the pl. *pṛśnigāvaḥ* may well be the name of a clan, as Old suggests; the PN interpr. is followed also by Ge and Schmidt as well as the publ. tr. But it of course has a straightforward bahuvrīhi interpr. (‘having dappled cows’) and, more to the point, echoes the cow simile of the first hemistich, with *-gāvaḥ* in the same metrical position as *gāvaḥ* in a. That the first member *pṛśni-* is immediately repeated in the cmpd *pṛśni-nipreṣitāsaḥ* calls further attention to the cmpd analysis. As for the 2nd cmpd., I am drawn to Ge’s suggestion (n. 10) that *pṛśni-* is a pun on the river name Paruṣṇī.

In d *rānti-* is problematic. In its other occurrence, IX.102.5, it clearly means ‘joys’. But that makes no sense here. Ge refuses to tr.; Old tentatively suggests that the word has developed into a “sakral-poetisch” term for cow, presumably starting from ‘joy’. Schmidt tr. “supply lines” (< ‘refreshment’ < ‘enjoyment’), but this seems a semantic chain too tenuous, esp. since the logistics and support for the battle do not otherwise figure in this hymn (unless in 15cd). I take it as ‘battler’, assuming that it shows the same semantic bifurcation as *rāṇa-*, both ‘joy’ and ‘battle’.

The phrase *śruṣṭīm cakruḥ* opening d, “they followed orders,” forms a ring with the same phrase in 6c. This is, at first, puzzling, since vss. 6-10 do not appear to form a discrete section. However, on 2nd glance we can note that these five vss. mark out the most intense and name-heavy portion of the battle. Starting with the next vs. Indra takes over the fighting, and the hymn turns to the celebration of Indra and his victorious feats; vs. 5, preceding this section, also attributes the whole victory to Indra. The god is absent from 6–10, with the combatants on their own and engaged in pitched battle.

VII.18.11: The king who is the subj. of ab may be Sudās (so Ge, flg. Sāy.) or Indra, who appears by name in d, or Sudās identified with Indra. Given the ring-compositional structure discussed ad vs. 10, I favor either Indra or Sudās=Indra.

The relationship between the simile of c and the first hemistich is intricate and partly unclear. The first hemistich portrays the destruction by a king of a large force belonging to an otherwise unknown pair (the Vaikarṇas), using the anīṭ root *nī√stṛ* (root aor. *ny āstah*) ‘strew down’ found also in other hostile encounters (e.g., II.11.20). Pāda c by contrast sketches a *ritual* incident in a simile, but the simile is slightly “off” for several reasons. For one thing, the predicate phrase *sādman ... barhīḥ* “the ritual grass on the seat” suggests that the verb to govern it should also be ‘strew down’, though in its set form (cf., e.g., VII.43.2 *stṛṇītā barhīḥ*). The actual verb of the simile, *nī śīśāti* ‘whets down’, is far less appropriate to its object, and we must assume a metaphorical use of this verb in the simile -- a piling of figurative language on figurative language, made all the more peculiar by the fact that the verb of b would be better suited to the simile of c and vice versa. (Recall also that [*nī*] *√śā* is the signature verb of this hymn; see comm. ad vs. 6.) It is almost as if the simile had been turned inside out or the two clauses had swapped out verbs. Also disturbing the simile is the fact that the subject of the clause, which, as agent of a verb governing ritual grass, should be a priest or ritual functionary, is identified as *dasmā-* ‘wondrous, wonder-worker’, an adj. otherwise only applied to gods,

esp. Indra (e.g., in nearby VII.22.8). So it too seems more at home in the main clause of ab than in the simile of c, an association made stronger by the fact that *dasmá-* several times occurs with *rājan-* in a simile (IX.82.1 *rājeva dasmáh*, X.43.2 *rājeva dasma*) and *rājā* is the subject of ab. The interconnections become even more tangled when we consider the 2nd of those just-cited similes: X.43.2 *rājeva dasma ní śadó 'dhi barhīṣi* “Like a king, wondrous one [=Indra], sit down upon the ritual grass,” which contains the grass and the root \sqrt{sad} ‘sit’, but there realized as a verb rather than as the loc. nominal *sádman*.

VII.18.12: The “famous old” Kavaṣa, with his non-Indo-Aryan name, reminds us of Kavaṣa Ailūṣa, named by the Anukramaṇī as the poet of X.30–34. See comm. ad loc.

Old suggests that we read *ānuṃ*, not *ānu*, in b -- thus a PN, not a preverb -- given the co-occurrence of the PNs *ānu-* and *druhyú-* elsewhere, incl. 14a, I.108.8, etc., as well as the vṛddhi deriv. *ānava-* in the next vs. (13c). I have adopted this suggestion; note that it does not affect the meter, as the next word (*druhyúm*) begins with a cluster.

The relationship between the two hemistichs is loose and unclear. On the basis of vs. 11, esp. 11d, and the epithet *vájrabāhuḥ* in 12b, we are entitled to assume that the 1st hemistich has Indra as subject and is couched in the 3rd ps. But the 2nd hemistich refers twice to ‘you’ (d *tvāyántaḥ ... tvā*), manifestly referring also to Indra, and the verb in the first hemistich, *ní vṛṇak* is ambig. between 2nd and 3rd -- a typical modulation point. I would keep the publ. tr. (“he wrenched down”), but with the awareness that the transition to 2nd ps. reference may already be underway.

The 2nd hemistich has Indra’s followers as subj., with d containing a rel. cl. with nom. pl. *yé*. How to construe it is the question. Although there is no overt (or indeed covert) representation of this plural group in the first hemistich, Ge takes the whole of cd as an improper relative, tr. “während deine Anhänger, Freundschaft für Freundschaft erwählend, dir zujubelten.” This not only reinterprets *yé* as a general subordinator rather than a rel. prn., but it also has this subordinator placed very deeply in its supposed clause. I prefer to take pāda c as containing a predicated root aor. part. *vṛṇānāḥ* [“(They were) choosing your partnership ... (those) who ...”], which allows the rel. cl. of d to have a more standard configuration, referring to the pl. subj. of the nominal clause of c.

VII.18.13: With nom. *índraḥ* this vs. seems to return to 3rd ps. reference—though it’s worth noting that both verbs of which *índraḥ* is subject are ambig. between 2nd and 3rd ps. (*dardaḥ* b, *bhāḥ* c), and so an appositive 2nd ps. reading “(you,) Indra, ...” is barely possible.

The adv. *sadyáḥ* ‘in an instant, all at once’ seems to clash semantically with its verb *dardaḥ*, given the usual function of the “intensive” as a frequentative. It would probably be better here to render *sadyáḥ* with Ge as ‘in a single day’, indicating that Indra could destroy multiple fortifications in a limited time span.

The 1st pl. *jēṣma* is generally interpr. these days as a precativ: see esp. Hoffmann (Injunk. 254), Narten (Sig.Aor. 119–20), and Ge’s tr. “Möchten wir ... besiegen.” Certainly the other two occurrences of this form in the RV (VI.45.12, X.156.1) have clear modal value. But in this context, in a long narrative set in the past, though carried in part by injunctive forms like *dardaḥ* and *bhāḥ* in this vs., a modal would be jarring and would interrupt the narrative by suddenly expressing a hope for the future. I therefore follow, for

this form here, the older interpr. of *jeṣma* (see reff, in Hoffmann and Narten) as an irregular injunc. (for expected **jaiṣma*; cf. *ajaiṣma* VIII.47.18=X.164.5).

VII.18.14: Pāda b is notable for its alliteration, making full use of all three sibilants: *ṣaṣṭīḥ śatā suṣupuh ṣaṭ saḥāsrā*. The sums are tautological, as Old points out: sixty hundred and six thousand amounting to the same number. Both ‘sixty’ (*ṣaṣṭīḥ*) and ‘six’ (*ṣaṭ*) reappear in the next pāda. The standard interpr. is that these sixty-six in c are just an addition to the six thousand enumerated in the previous pāda. However, Old suggests that they constitute the opposite side, the ‘heroes’ (*vīrāsaḥ*) ‘seeking favor’ (*duvoyū*), who are fighting against those enumerated in pāda b. This interpr. has the merit of not requiring those two words to be used ironically (on the latter, see Ge’s n. 14c), and it also makes the victory that much more impressive, that this small number, with Indra on their side, could defeat many multiples of themselves. The same point is made more forcefully in vs. 17. The same balance between the good guys and the bad guys, as it were, is found in the next vs., 15, where the Tṛtsus of ab are Indra’s allies, but their opposite numbers are found in cd.

VII.18.15: As just noted, the vs. is divided into two, with the Tṛtsus of Indra’s party in full flood in ab (on the attack, one presumes) and their enemies abandoning their possessions under the pressure of this attack. These enemies are identified as *durmitrāsaḥ*; as with *amitra-* of 9c, this descriptor seems meant to signal the fraying or loss of the alliances that bound them and perhaps also to identify these alliances as badly formed in the first place. The other example of this form as a full adj. is nearby in VII.28.4; *durmitrā-* in X.105.11 is used as a PN in a quite possibly independent play on the PN *sumitrā-*.

The first hemistich is straightforward; the second has its puzzles, starting with the form *prakalavid* (or, theoretically possible, -*vín*) in c. See, first, Old, who rejects several previous suggestions and hesitantly follows what is found in Gr, as does Ge (as do I): a root-noun cmpd. with *√vid* ‘know’, a 1st member related to *kalā-* ‘small part’ (VIII.37.17), used adverbially (Gr ‘die kleinsten Theile berechnend’ → ‘kleinlich’). Scar (486) discusses in somewhat more detail but reaches the same hesitant conclusions. The universal uncertainty has much to do with the difficulty of fitting this sense into context. I take the cmpd as implicitly contrasted with *vīśvāni* in d. By my interpr., the enemy forces measure their supplies precisely and parsimoniously, “knowing every little piece” (Old “mit Kunde jedes kleinsten Teils”) -- hence my idiomatic “with a miser’s eye.” But when confronted by the Tṛtsus’ attack, they profligately abandon everything and flee.

Kü (608) interpr. *mímānāḥ* as reflexive/intrans. ‘die kleinlich sich messen’, though with ?, but, despite the middle voice, the other forms to this stem are consistently transitive.

VII.18.16: Pāda c is notable for the alliterative and etymological figure *manyúm manyumyò mimāya*, with the middle term *manyu-mī-* containing the noun to its left (*manyú-*) and the root noun of the verb to its right (*√mī*). Though *mimāya* phonologically echoes *mímānā(h)* at the end of 15c, they of course belong to different roots.

Pāda d contains a rare and curious idiom PATH *√bhaj*; cf. VII.39.1 *bhejāte ... pánthām*, possibly IX.102.2 *ābhakta ... padām*, which I take (with Ge) to mean “set out

on the road,” similar to, though with a different idiomatic verb, Engl. “hit the road.” The expression is complicated here by the question of how to construe *pathó vartaním*. Is *patháh* acc. pl. and direct object of *bhejé*, with *vartaním* the obj. of *pátyamāṇaḥ*? Such is the interpr. of Ge and Kü (334, 368) -- Ge with an idiomatic interpr. of *bhejé patháh*, Kü with a more literal one. However, I think it more likely that *patháh* is a gen. sg. dependent on *vartaním* on the basis of IV.45.3 *ā vartaním mádhunā jinvathas patháh* “You quicken the course of the path with honey.”

VII.18.17: If my interpr. of 14c is correct in taking the small number (66) as the allies of Indra facing off a much larger force, this vs. continues the same theme, first as a straightforward statement (a), then with two different metaphors (b, c): Indra easily prevailed despite the relative insufficiency of his tools.

In b, if the standard interpr. of *pétva-* as ‘castrated ram, wether’ is correct (see, e.g., EWA s.v.), the pairing of target and instrument is esp. striking: a fierce but female wild animal, the lioness, and a castrated but (originally) male domestic one, a wether, with opposition of both animal-type (wild/domestic) and gender, with the latter complicated by the emasculation of the male representative.

The same thematic and syntactic template prevails in c, but neither the target nor the tool is clearly identified. *veṣṭ-* (in the instr. *veṣyā*) is a hapax; the standard tr. ‘needle’ derives from Sāy., but in fact this doesn’t make much sense. *srakti-* has better representation: it’s found in the compd. *náva-srakti-* ‘9-srakti-ed’ (also VS *cátuaḥ-srakti*) and has an Aves. cognate *sraxti-*, *ṣraxti-* ‘edge, side’. EWA connects it with *srká-* ‘fang’. To figure out what must be going on, we need to turn to the verb, *áva ... (a)vṛścat*. The lexeme *áva √ vṛśc* ‘hew down’ is found only once elsewhere, in I.51.7, where it is used figuratively. But *ní √ vṛśc*, with the semantically similar preverb *ní*, twice appears with a concrete image: hewing down trees with an axe. See esp. I.130.4fg *táṣṭeva vṛkṣám vaníno ní vṛścasi, paraśvéva ní vṛścasi* “like a carpenter a tree from the wooden one [=forest], you cut down (the serpent) -- as if with an ax you cut (him) down” (sim. VI.8.5). The acc. pl. *sraktīḥ* in our passage matches the role of the trees in the passages just cited. I suggest that as ‘edge’ it refers to the edges of a tree trunk or to something that is, as it were, pure ‘edge’ -- a pole. As the instr., *veṣyā* should correspond to the axe. A needle doesn’t work, but perhaps a pin -- a small, sharp-pointed object that would ordinarily not have much success in felling tall poles. I agree with Old that the expression is probably proverbial.

The ending of d, *bhójanā sudāse*, is identical to the end of the last vs., 15d, preceded by *vísṣvāni* (15d) and *vísṣvā* (16d) respectively. The *bhójanā* that the enemies abandoned in 15 are here given to Sudās by Indra.

VII.18.18: I follow Ge in taking this vs. as direct speech.

Although Ge’s tr. of *rándhi-* in b as “schwache Stelle” is appealing, I preferred to register the etymological figure between the verb of pāda a, *rāradhuḥ*, and this noun.

Note the close sandhi *rāradhuṣ ṭe*, which reminds us of *vidúṣ kavīḥ* (2a) and *paśúṣ kavīḥ* (8d), as well as correct *āsús canéd* (9b).

The rel. prn. *yáḥ* is too deep in its clause, following both direct objects of *kṛṇóti*: *mártān ... stuvatáḥ* and *énaḥ*. I have no explan. for this violation.

VII.18.19: This is the last vs. with direct reference to the battle. The following two (20–21) provide general praise of Indra’s aid and generosity, leading up to the 4-vs. *dānastuti*.

Ge (n. 19d) insightfully suggests that pāda d is an ironic reflection on the horses that died in the encounter.

VII.18.20: Ge takes *pūrvāḥ ... nūtnāḥ* as qualifying *sumatāyaḥ ... rāyaḥ*: “Deine Gnaden und deine Reichtümer, die frühere und die neuesten, sind nicht vollständig aufzuzählen, so wenig wie die Morgenröten.” I prefer to take them with *uśásaḥ*, for several reasons. First, the word order, with *uśásaḥ* nestled between the two temporal adjectives, favors this interpr. Also my interpr. allows the *ná ... ná ... ná* sequence to be entirely negative, rather than requiring the last to be a simile marker. Moreover, the contrast between former and current dawn(s) is a standard trope in the RV, with *pūrva-* qualifying dawn in a number of passages. And finally morphology is against it: Ge would need to explain why a fem. nom. pl. *pūrvāḥ*, rather than the masc. *pūrve*, was used to modify a mixed feminine (*sumatāyaḥ*) and masculine (*rāyaḥ*) NP; ordinarily the default would be masc., esp. in this case where the masc. is closer to the adjectives. (He could of course invoke the supposed occasional use of *rayí-*, *rāy-* as feminine, but these exx. are vanishingly rare, if they exist at all.) I take the whole dawn phrase as an acc. of extent of time. It would be possible to assign the temporal adjectives to *uśásaḥ* but interpr. that phrase as a simile in the nom., as Scar (167) does: “Nicht sind deine Gnaden, nicht deine Gaben zu überschauen, genausowenig wie die vergangenen und jetzigen Morgenröten.” I still prefer mine, since Scar’s interpr. again requires the third *ná* to be a simile marker, even though it does avoid the problems raised by taking the temporal adjectives with the NP in pāda a.

In c *dévaka-* is a lovely ex. of the use of the *-ka-* suffix both in a pejorative sense and as signal of a lower register. Edgerton’s (*-ka-*suffix, 43) tr. is rather nice: “the wretched little fellow who thought himself a godling.”

The form *mānyamānā-* is of course peculiar, though its source is clear: it is a *vṛddhi* deriv. of the middle part. *mānyamāna-* ‘think oneself to be ...’ Although Ge takes it separately from *dévaka-* as two distinct pejorative epithets (“...den Götzen, den Dünkling”), I find it hard not to think that the participial usage is not still present and that *dévaka-* is the de facto predicate nominative. The *vṛddhi* is perhaps used to turn the typical subject of this participle into a category characterized by blind arrogance (“the type of blowhard who would think himself ...”) -- well captured by Edgerton’s tr.

The verb in d, *bhet* (*√bhid*), recalls the enemy Bheda targeted by Indra in vss. 18–19.

VII.18.21: The sense of the first pāda is disputed, primarily because it is unclear how to construe the abl. *grhāt*. Old discusses at length without a definite decision; Ge has his own idiosyncratic view: that in this context, with the abl. *grhāt*, *prá √mad* means ‘to go on a pilgrimage’ (“die ... von Hause fortgepilgert waren”), a bizarre interpr. (rejected by Old), which he connects to *abhí ... pramandúḥ* in VII.33.1, where his pilgrimage interpr. seems equally odd. The phraseology here needs to be considered in the context of similar expressions, not only VII.33.1, but also VIII.61.9 *sá prá mamandat tvāyā* and vs. 12d in this hymn *tvāyānto yé ámadann ánu tvā* (and consider the immediately preceding pāda 12c *vṛṇānā átra sakhyāya sakhyām*, which resonates with our c *ná te ... sakhyām*

mṛṣanta). Because of their proximity in the same hymn, I think vs. 12 needs to be weighted more heavily than the other passages, despite the difference in preverb (*ānu* there versus *prá* here). That vs. states that the men devoted to Indra cheered him on -- in other words, Indra was the recipient of an overt expression of their devotion -- and in turn they acquired a partnership with him. I now think that *prá ... ámamaduḥ* in this vs. should also be transitive, with Indra as the object. Perhaps by haplology **tvā tvāyā*. I would therefore alter the publ. tr. to "... who exhilarated (you) in devotion to you," with a different type of overt expression of devotion, here the soma. Pāda c then indicates that by doing so they did not neglect the responsibilities of their side of the partnership and (d) happy days ensue as a result. Interpreting *prá ... ámamaduḥ* here as transitive also has the merit of matching the use of *abhí ... pramandúḥ* in VII.33.1, where there is an overt object *mā*. The similar expression in VIII.61.9 is more equivocal; see disc. there.

This reappraisal of the verbal complex does not, however, solve the ablative problem. My proposed solution, already found in the publ. tr., is quite simple: the individuals named in pāda b (who include Vasiṣṭha) are relatives, "from the (same) house" -- a use of 'house' similar to that in expressions like "the House of Atreus." Under this interpr., there is no physical movement out of or location away from an actual dwelling. As this is the only abl. form of *grhá-* in the RV, it is difficult to know if such an idiomatic usage is possible, but given that the verb in its clause is not a verb of motion and cannot be made one without damage to its normal semantics, this seems like a reasonable alternative.

bhojá- 'provider, benefactor' is used of Indra elsewhere on a number of occasions (e.g., VI.23.9), but it is also used explicitly of a human *sūri-* 'patron' in VIII.70.13, as well as being repeated densely in X.107.8–11, the hymn devoted to the dakṣiṇā and the *bhoja*-s who give it. So I suggest in our vs. that its application to Indra in c is an attempt to transfer the epithet to the *sūri*-s in d.

VII.18.22: The first two pādas begin the enumeration of the Paijavana's *dāna*- mentioned in c -- an enumeration continued in 23.

The simile in d, *hóteva sādma páry emi*, is one of the few clear references to the animal sacrifice in the RV, with this depicting the Paryagnikaraṇa; cf. IX.97.1, where the animals are explicit.

VII.18.23: On *smáddiṣṭi-*, see comm. ad III.45.5.

In ab I supply *vahanti* on the basis of d, with Ge.

VII.18.24: The *śrávas-* in pāda a echoes the one in 23d.

Ge, flg. Sāy., takes ab as separate clauses, supplying "(sich ausbreitet)" as the verb in pāda a. This is unnecessary: the hemistich can be a single clause, with the accent on *vibabhāṣā* in b conditioned by the rel. *yásya* in a. (Ge considers this possibility in n. 24ab.) Kü (333) also follows the single clause interpr.

Note the lengthened 3rd sg. pf. ending in *babhāṣā*, guaranteed (and required) by the cadence. On lengthening of the pf. endings see the brief remarks by Kü (42), though without any indication of the relative frequency; it is my impression that lengthening of the 1st/3rd sg. -a is quite rare in the RV, but I haven't made a count.

The fame being distributed is presumably that of Sudās, though covertly assimilated to Indra's; note the explicit comparison of the praise he receives to Indra's in the simile in c. The āmreḍita "every head" (*śīrṣṇé-śīrṣṇe*) must refer to every person, or rather every person eligible for fame (excluding women and non-elite males), in Sudās's entourage: they all get a piece of the fame-pie that he acquired by himself. The geographical extravagance of "every head between the two wide world halves" -- that is, every eligible person on earth -- is presumably part of a totalizing claim about the outcome of the Ten Kings' Battle, that the whole world was brought under Sudās's sway.

The loud sound of rivers in flood is the point of the comparison in c. One of the words for 'river', *nadī*, is folk etymologically (and probably etymologically; see EWA s.v.) connected with \sqrt{nad} 'roar', as in the explicit etymological statement in AV III.13.1 *yád adáh samprayatīr áhāv ánadatā haté | tásmād ā nadyò nāma stha* Wh "Since formerly (? *adás*) going forth together, ye resounded (*nad*) when the dragon was slain, therefore ye are streams (*nadī*) by name."

The signature verb *ní√śā* 'whet down' that we have met a number of times before (see comm. ad vs. 6) now implicitly takes Sudās as its subject, as a sort of climactic usage.

The PN *yudhyāmadhí* is obviously a speaking name, with some form of \sqrt{yudh} 'fight' embedded in it. See Old for various possibilities for its formation. It is tempting to see as its base a 1st pl. middle **yúdhya mahi* "let's fight," with the older expected 1st pl. ending **-madhi* before de-occlusion.

VII.19 Indra

VII.19.1: Rhetorically interesting to begin a hymn with a syntactically non-independent verse. This verse consists only of relative clauses (*pace* Ge; see below), which find their main clause referent in the first word of the 2nd verse (and indeed subsequent verses), namely *tvám*. Although 'you' clearly is the referent, the first relative clause of vs. 1 has a 3rd ps. verb (*cyāváyati*), though the second one switches to the 2nd person (*prayantāsi*). It might be possible to attribute the 3rd ps. in ab to attraction to the simile, but such a switch would be very rare.

The simile marker *ná* in pāda a is wrongly placed, after the 2nd member of a three-word simile, not the first (*tigmásṛṅgo vṛṣabhó ná bhīmáḥ*). Ordinarily, given such a structure, the first word would be interpreted as the common term and therefore not a part of the simile proper ("sharp-horned like a fearsome bull"), but Indra doesn't have horns, which should certainly belong to the bull. The wrong position may result from the fact that X *ná bhīmá-*, where X = an animal, appears to be a formulaic structure, esp. *mṛgá- ná bhīmá-* (I.154.2, 190.3, II.33.11, etc.; also *simhá- ná bhīmá-* IV.16.14, IX.97.28 and others). This smaller fixed phrase would then be fitted into a simile containing another term.

Ge takes pāda d as a main clause, following the Pp., which analyses *prayantāsi* as containing unaccented *asi*. But this requires him to invent a verb for the relative clause of c ("raubst") for which there is no support – and no need. Already Old suggested accenting *ási* contrary to the Pp.

Old (see also Tichy) also notes the nice example of case disharmony, where both gen. *gáyasya* and acc. *védaḥ* are objects of the agent noun *prayantā*. As has often been

noted, suffix-accented *-tar*-stems generally have genitive complements, as opposed to root-accented ones, which generally take accusatives. But enough exceptions exist to allow *prayantā* to take both. That *gáyasya* is parallel to *védaḥ* and not to *ádāśuṣaḥ* is shown by passages like IX.23.3 ... *ádāśuṣo gáyam* and VIII.81.7 *ádāśūṣtarasya védaḥ*. It is possible, but not necessary, that *prayantāsi* is a periphrastic future.

I have no explanation for the comparative *súṣvítara-* ‘better soma-presser’, beyond the occasional use of the comparative for emphasis or intensification, without comparandum.

VII.19.2: Pāda b is repeated in IV.38.7, there of Dadhikrā the racehorse. (This repetition is not noted in Bl RR.) Re at IV.38.7 and Ge here (but not there) take *súśrūṣamānaḥ* as meaning something like “putting oneself at the disposal (of someone else, here Kutsa).” I assume that they are thinking of the enlarged root $\sqrt{\text{śruṣ}}$ ‘be obedient’, but the two meanings seem quite distinct to me – I can’t see Indra being obedient to any man – and formally our participle is a well-formed desiderative to $\sqrt{\text{śru}}$. In both places I take it as meaning “desiring to be heard/famed”; here Indra also helps out Kutsa, but at least part of his aim is to ensure his own fame. In IV.38.7 there is no subsidiary beneficiary, and so the focus on the subject and his fame is ever clearer. Heenen is similarly puzzled by Ge (238 n. 263) but tr. “(toi qui) en personne as la volonté d’écouter au combat,” attributing an active sense to the middle participle.

The word *dāsam* beginning c plays off both *(á)dāśuṣo* in 1c and *sudāsam* in 3b.

VII.19.3: Trasadasyu and the Pūrus also appear in IV.38 (vss. 1, 3), which contains the pāda in common with our 2b.

In the publ. tr. the cmpd *vītá-havya-* is rendered ‘whose oblation is worthy pursuing’, but this “potential” meaning is strictly suited rather to *vītí-hotra-* (on which see II.38.1). I would now emend to “whose oblation is pursued”.

VII.19.4: This verse puts into analytic (that is, syntactically independent) form some expressions met as compounds in the previous verse. Most obvious is *(bhūrīṇi) vṛtrā ... haṃsi*, which realizes *vṛtrahátyeṣu* in 3d. (Notice that both refer to plural events, handling their grammatical plurality in different ways.) A real *dāsyu-* is destroyed in 4cd, plucked from the name Trasadasyu in 3c. In a slightly different relationship, *devāvītau* ‘in pursuit of the gods’ here contains a form of the root $\sqrt{\text{vī}}$ ‘pursue’ found as 1st compound member in *vītahavyam* ‘whose oblation is worth pursuing’ in 3a. And within this verse *nṛbhiḥ* doubles the first member of the next word, *nṛmano*.

VII.19.5: This verse presents some interlocking syntactic and lexical problems. Unlike Ge, I take pādas b and c together. Splitting them requires him to supply a verb for b (“brachst”) again lacking support or necessity. Presumably again he is following the Pp, which analyzes *śatatamāviveṣīḥ* as containing unaccented *aviveṣīḥ*. I prefer to accent it and thus allow it to be the verb of the *yád* clause beginning in b.

In either case *śatatamā* is a problem. Everyone wants it to be the 100th thing (probably *pūr-* ‘fortification’) that Indra destroys (after the 99 in b). Gr suggests reading *śatatamām*, which would provide the desired feminine accusative (agreeing with *pūr-*), but among other things would damage the meter (since, s.v. *viṣ*, he is still reading an

augmented *aviveṣṭh*). Ge suggests that it [what is unspecified, presumably the sandhi agglomeration] is to be dissolved (“aufzulösen”) into masc. *śatatamām*, and the 100th thing that Indra destroys is Śambara himself. He makes no mention of meter, though this dissolution would cause the same metrical problem. Old suggests supplying neut. pl. *cyautnāni* (without translating), but I don’t see how an ordinal “hundredth” can qualify all hundred items in the plural. There is a much simpler solution: to take *śatatamā* as a feminine instrumental with the old ending *-ā*. Although Old claims (in arguing against Gr) that the fem. stem should be *śatatamī-*, this is simply wrong. See AiG II.2 §457, which establishes *-ā* as the rule and *-ī* as the rare exception. Cf. for *-tama*-stems *purutāmā-* of Uṣas and *mātītāmā-*, and for ordinals the well-attested feminine *prathamā-*. Or, if Ge is correct that the reference is to Śambara himself, *śatatamā* can be a masculine instr. sg. In either case the text can stand as it is, with no metrical or sandhi problems, and the syntax can be rescued.

Ge takes *nivēśane* in c as ‘at evening’. The word generally means ‘causing to settle down’ (the usual association of *-ana*-nominals with the transitive-causative *āya*-formations) or, as a noun, ‘settling down’, and is sometimes associated with Savitar’s bringing the world to rest in the evening (IV.53.6, I.35.1, VI.71.2), an association that must have led to Ge’s tr. But the word never otherwise means ‘evening’. I read it with its full lexical value, but with a sinister edge. “Bringing them to rest” is a euphemism like *āsvāpayah* ‘you put to sleep’ in 4d. Old mentions the “going to rest” possibility, but opts instead for “in the dwelling place (of the enemy).” Again, there seems to me no reason for this attenuation of the meaning.

The root *√viṣ* means ‘work, work over’, or here ‘work to the end’, again used in a slightly euphemistic sense. Note the phonetic echo between *nivēśane* and *(a)viveṣṭr*.

The d pāda is a perfect chiasmus, even to the positioning of a conjunction between verb and object: *āhañ ca vṛtrām nāmucim utāhan*. The mixture of *ca* and *utā* is curious. Klein (DGRV I.186–87) is not sure how to analyze it; he suggests either that it’s a “both ... and” type of construction, with each conjunction appearing 2nd in its phrase (or so I interpr. his lapidary disc.), or that “*ca* is a sentential conjunction adjoining d to the rest of the stanza, and *utā* conjoins the clauses of d.” I prefer the former.

VII.19.6: *sānā* is generally taken (Gr, Ge) as a neut. pl. adj. ‘old’ agreeing with *bhójanāni*, and this is certainly possible. I find the sentiment somewhat odd, however: to announce to Indra that the delights he has given to his client are “old” seems slighting. I prefer to interpret the word as the 2nd sg. act. impv. to *√san* ‘win’; exactly this form occurs several times in initial position elsewhere. What gives me pause, however, is I.178.4, which contains very parallel phraseology, *sānā tã te indra nāvya āguḥ*, and where I do interpret *sānā* as ‘old’. The difference there is that the poet contrasts the old deeds of Indra with the new ones (*nāvya*) that have come and so avoids insulting the god. In any case, either the ‘old’ or the ‘win’ interpretation is possible here, though I have a preference for the latter.

The oblation of Sudās’s that was worth pursuing (*vītāhavyam*) in vs. 3 has now been given by him (*rātāhavyāya*) here, tracking the progress of the sacrifice to the point of mutual benefit of man and god.

The phrase *dāśúṣe sudāse* “for the pious Sudās” displays syllabic metathesis, *dā-śū / su-dā*, with neutralizing play on all three sibilants. The poet seems to like this

collocation: see comment above on vs. 2 for connections across three verses and below on VII.20.2.

VII.19.7: My construction of the first hemistich differs from Ge's, both with regard to the syntactic role of *te* and the sense of *pářiṣṭau* and leads to a very different interpretation of the meaning. The latter word, literally 'encirclement', is generally taken as always negative, a tight spot or constriction (Ge's "in dieser Klemme"), but I find this interpretation hard to reconcile with the hic-et-nunc deictic *asyām*, since the poet has given no indication that he is currently in distress. (Ge's note suggests that this is a memory of the situation in VII.18, the Ten Kings battle, but this seems to me an ill-supported attempt to account for the deictic.) I therefore think the *pářiṣṭi-* here is positive – Indra's encirclement (that is, protection) of us now – and *te* is to be construed with *pářiṣṭau*: "in this enclosure (that is, protection) of yours." Weak support for this may be provided by the first pāda of the next verse, 8a, where ... *te ... abhíṣṭau*# matches ... *te ... pářiṣṭau*# here, with rhyming forms and identical morphology – and a parallel positive sense: "in your charge." There is also a parallel in the next hymn, in roughly the same part of the hymn, with *te asyām* as here and a string of locatives: VII.20.8 ... *te asyām sumataú ... várūthe ... nípītau* "in this benevolence of yours, in your defense, in your protection for men." In our passage Ge (followed by Scar 207) instead takes *te* as the subject of the infinitive *parādaí*, in order to make this work he has recast the sentence from one with 1st person subject (*mā ... bhūma* "may we not be...") to one with 2nd ps. subject: "Nicht sollst du uns ... dem Bösen preisgeben." Scar's tr. maintains the syntactic structure of the original, but otherwise follows Ge's interpretation. Better is Keydana's (*Infinitive im Rgveda* 156, 203) interpretation of *parādaí* as a passive infinitive, as I take it – though he still takes *te* as the ultimate agent of the handing over. Again, I don't see that the poet has expressed any fear that Indra will betray them; rather, he hopes that the protection Indra provides them will keep any such ill-fortune from befalling them, a hope that is repeated in the next pāda.

The poet's penchant for case disharmony (see 1cd above) recurs in pāda d, where I read *priyāsaḥ* both with gen. *táva* and with loc. *sūriṣu*.

VII.19.9: I take pāda c with ab, since all three have 3rd ps. subjects referring to Indra's worshipers and clients, with pāda c a rel. cl. beginning with *yé*. Ge, by contrast, connects c with d, although d now refers to the same people in the 1st ps. (*asmān vṛṇīṣva* "choose us"). He does not, however, take *asmān* as coreferential with the *yé* of c, but rather apparently interprets the relationship between the clauses as a kind of improper relativization: "for the same alliance (*yújyāya tásmāi*) as (those) who (*yé*)..." This has the advantage of providing some reason for the final *tásmāi*, which I find hard to account for, though I find his way of linking the clauses too tricky. Scar takes the first pāda as a temporal subordinate clause ("As soon as they are in your charge, the men..."). This is worth considering, although I am dubious about the subordinating quality of *sadyás cid*. In the end, although I am not entirely certain of my own way of putting together the various elements in this verse, I have not been convinced by those of other tr. either.

Note the poet's playful variation on 8a ... *te maghavann abhíṣṭau* with ... *té maghavann abhíṣṭau*, where the simple addition of an accent turns the 2nd ps. sg. into a 3rd ps. pl.

nāraḥ śamsanti recalls the epithet *nārāśāmsa*, and then participates in an interweaving of two words for ritual speech: *śamsanti ukthaśāsa ukthā*.

The lexeme *ví√dās* occurs only here, as far as I know. Like the idiom *ā√yaj* ‘attract by sacrifice’, it combines a directional preverb with a root of ritual activity, producing a portmanteau “(send) away by performing ritual service’. So Old ‘hinweghuldigen’, which he paraphrases as “honor the god such that the Pāṇis become distant.”

On the syntagm *yújyāya √vṛ* see comm. ad IX.88.1.

VII.19.10: We might have expected an unaccented gen. pl. **narām* in the voc. phrase with *nṛtama*, but don’t get it. There are no unaccented occurrences of this genitive. It would be possible instead to read *narām* with *etē stómāḥ* (“these praises of men”), but *nṛtama*- + gen. pl. of *nṛ-* is a fixed phrase, though usually with *nṛṇām* (I.77.4, III.51.4, IV.25.4, etc.). I am now inclined to read *narām* with both *stómā(ḥ)* and *nṛtama*. It is positioned between them, adjacent to both. The publ. tr. could be modified to “These praises of men are for you, o most manly of men.” The first gen. is subjective. Note the co-occurrence of *narām*, the older gen. pl. to *nṛ-*, and the newer one *nṛṇām* in this verse.

Ge takes b as an independent nominal clause, while I consider it a sort of definitional relative clause manqué, that is, lacking the relative pronoun *yé* which would find its referent in the initial *tēsām* of c.

Although d looks to contain a simple conjoined NP, each of whose members consists of two members, *sákhā súraḥ* and *avitā nṛṇām*, each with a *ca* between the two members (so Ge, JSK I.195), I prefer to take *súraḥ* as the principal predication of Indra, with the other two terms, *sákhā* and *avitā nṛṇām*, secondarily predicated of Indra as *súra*-. Although this introduces a minor complication in word order, the fact that *súra*- is overwhelmingly a noun and is used independently of Indra in the very next pāda (11a) persuades me that this analysis is correct, especially since both “comrade” and “helper of men” are terms that explicitly encode Indra’s relationship to men, while “champion” is of a different order. The distribution of *ca*’s makes no problems for this analysis.

VII.19.11: The finals of pādas a and c echo each other: ... *ūtī* # ... *úpa stīn* #

I think it quite likely that *mimiḥy* out of sandhi should be accented (*mimihī*) contra the Pp., given the balanced clausal-type constructions before and after (*úpa no vājān ... úpa stīn*), a possibility Old raises but considers uncertain.

VII.20 Indra

This hymn shows some stylistic tics, esp. a penchant for oddly placed particles (vss. 2, 4, 5) and for final enclitics (1d, 7d, 8b, 9a, 9d, as well as the refrain 10d).

VII.20.1: A grammatical figure in the pāda-initial reduplicated *i*-stems, b *cákriḥ*, c *jágmiḥ*, both functioning as verbs (*cákriḥ* takes acc. direct object *āpaḥ*; *jágmiḥ* an acc. goal *nṛśadanam*). For this type see Grestenberger 2013 (JAOS 133).

āpo nāryaḥ is reminiscent of *āpāmsi ... nāryāni* in the next hymn (VII.21.4), though there the words form a phrase and here they are in two different cases and numbers.

VII.20.2: Continuing the focus on nominal forms with verbal rection, the poet picks up the pāda-initial agent noun *trātā* of 1d and deploys three more pāda-initial nominative *tar*-stems in 2a, c, d: *hāntā*, *kārtā*, and *dātā*, each with an acc. object (*vr̥trām*, *ulokām*, and *vāsu* respectively). Although pāda b lacks a subject *tar*-stem, it does have one as object: *jaritāram*. The stem that began it all, *trātā* in 1d, contrasts with those in vs. 2 by being suffix-accented, and it should therefore, according to general practice, have a genitive complement. I suggest that it's not an accident that its object is the enclitic *naḥ*, which could be accusative (and thus parallel with the objects in vs. 2) or genitive (and thus conform to the usual rule). Recall this poet's tricky case syntax with the *tar*-stem *prayantā* in VII.19.1.

The occurrence of parallel datives *sudāse* (c) and *dāsūṣe* (d) recall their collocation in VII.19.6; see comments there.

The phrase *āha vai* (*āha vā* in sandhi) interrupting the VP is very peculiar. It is easier to account for the *vai* than the *āha*: the particle *vai*, rather rare in the RV though very common in Vedic prose, is often found directly before the particle *u*. In this hymn it occurs twice (also 4d), in both cases before *u*, though not the particle *u*. Here before *ulokām*, which by most accounts is a haplology of **urú* [**ulú*] *lokām*, and in 4d before the perfect *uvoca*. I have no explanation for *āha*, whose function is also opaque to me in general. Although *āha* often takes Wackernagel (or modified Wackernagel) position, it is more flexibly positioned than most RVic particles, so showing up in the middle of the pāda as here is not as anomalous as it might be. My exclamatory tr. is meant to signal the interruptive quality of the phrase, but makes no claims as to its semantic accuracy. I suspect that the poet is indulging in phonological play (one faint possibility: *āha vā u* mimics the opening of the next pāda, *dātā vāsu*) or morphological or lexical manipulation, but it's too deep for me.

VII.20.3: *khaja-* lacks an etymology (see EWA s.v. *khaja-kīt-*), but embedded in an epithet of Indra in martial contexts like this, 'tumult' serves as well as anything else.

The particle *īm* here lacks its usual accusative function (see Jamison 2002) and does not take its usual Wackernagel position; it therefore reminds us a bit of the similarly irrational *āha vai* of the preceding verse. However, *īm* does serve to forestall a hiatus between *janúṣā* and *āṣalḥaḥ* and its position immediately after the former can be taken to signal that *janúṣā āṣalḥaḥ* are to be construed together. For another example of *janúṣem* see the next hymn (VII.21.1).

Pāda c is very similar to X.29.8 *vy ānaḍ indraḥ pṛtanāḥ svóḍā(h)*, though the verbs, despite their surface similarity (*āse* [*āsa* in sandhi], *ānaḥ*), belong to different roots: *√as* and (*n*)*aś* respectively. Bloomfield (RReps) is adamant that the passages must mean the same thing: *vy āse* 'threw himself through' → 'pervaded', exactly parallel to *vy ānaḥ* 'pervaded'. But although the two passages are obviously in conversation with each other – and I also agree with Bloomfield that *pṛtanā-* should have the same sense in both (though not, per Bl, 'battle'), this does not mean, in my view, that they have to be identical – the sly play on the verbal roots shows that. I take *ví√as* here as in V.55.6 *vísṽ it spṛdho maruto vy āsyatha* "O Maruts, you disperse all rival contenders."

Note the sibilant play beginning with *samādvā* and continuing through the end of the hemistich.

VII.20.4: Again the poet plays with case disharmony, construing both inst. *ándhasā* and loc. *mádeṣu* with *uvoca*.

Note again the apparently functionless *vaí* and see disc. above ad vs. 2.

VII.20.5: Once again a particle is positioned oddly: *ádha* in the middle of the relative clause (versus properly positioned *ádhā* in 3d). Klein (II.130) suggests the *ádha* here “is either a subclausal conjunction [but conjoining what? sj] or weakly conjoins the second distich with the first,” but neither explanation accounts for the mid-pāda position.

VII.20.6: On *bhreṣate* as an *s*-aor. subj. to $\sqrt{bhrī}$, see KH (Fs. Schubring = Aufs. 29–34, Narten Sig. Aor. 184). The only other verb form attested to this root is *bhrīṇānti* in II.28.7. Note the phonetic echo *bhreṣate ... reṣat*.

The final pāda has two linked uncertainties: the identity of the verb and the case form of *rāyá*. Though the Pp. reads dat. *rāyé*, gen.-abl. *rāyāḥ* is equally possible. The choice depends in great part on the analysis of the verb *kṣáyāt*: whether it belongs to $\sqrt{kṣi}$ ‘dwell’ or $\sqrt{kṣi}$ ‘rule’. If the former, it would be a subjunctive; if the latter, an injunctive. The immediate context favors a subjunctive (*dádhate* in the rel. clause attached to this main clause, plus *bhreṣate* [on this form as an *s*-aor. subj. to $\sqrt{bhrī}$, see EWA s.v. *bhrī*, with ref. to Hoffmann], *reṣat* probably, and *āvívāsāt* in ab), but this does not necessarily decide for an affiliation to ‘dwell’, because there are no overt subjunctives to the Class I present of ‘rule over’ (no **kṣáyāt*) and the injunctive might function modally here. Parallel passages cut both ways. On the one hand, ‘rule’ regularly takes the gen. of ‘wealth’: cf. I.51.14 (of Indra) *rāyāḥ kṣayati*, VII.93.2 *kṣáyantau rāyāḥ* (Indra and Agni), X.106.7 *kṣayad rayīṇām* (though in an otherwise incomprehensible verse); on the other, a form of ‘dwell’ appears in a parallel passage with the material from the end of the pāda: VI.3.1 ... *sá kṣesad ṛtapā ṛtejāḥ*. Old, having considered both possibilities, opts (slightly) for the latter; Ge’s tr. also assumes an affiliation with ‘dwell’ and a dat. *rāyé*: “der wird im Frieden lassen, um zu Reichtum (zu gelangen).” The publ. tr. instead chooses ‘rule over’ and gen. *rāyāḥ*, though I recognize that both possibilities were probably in the poet’s mind. One slender support for my choice may be the parallel phrase in 9d ... *vásva ā śakaḥ*... “you hold power over goods,” with gen. *vásvaḥ* reprising the gen. *rāyāḥ* that opens 9c.

VII.20.7: By my interpr. (and Ge’s) *śíkṣan* is a predicated pres. participle, parallel to the subjunctive *áyat* in the 2nd clause; it seems to have adopted the modal sense of this parallel finite verb.

Note the play between the two initial words of pādas a and b: *yád* and *áyad* (*áyaj* in sandhi), where the second is actually a subjunctive to the root present of \sqrt{i} ‘go’.

The question in c is not overtly marked, but I follow both Old and Ge in taking it as such.

VII.20.8: *ághnataḥ* is a gen. sg. negated act. pres. part. modifying *te* ‘of you’ in the preceding pāda; the heavy modal tr. is a concession to English.

VII.20.9: *stāmú-* is a hapax and there is no agreed upon etymology or interpretation. Gr takes it as belonging to \sqrt{stan} ‘thunder’ and meaning something like ‘sighing’ (with no

explanation of the semantic distance), and he is followed implicitly by Oberlies (II.210). KEWA also registers this idea, but in EWA it seems to have been abandoned, without anything to replace it. Ge, on the other hand, connects it to the root $\sqrt{stā}$ ‘steal’, a suggestion I find very appealing. However, his further interpretation does not seem compelling: “und verstohlen hat (der Sänger) geklagt.” The structure of the hemistich, with two clauses joined by *utá*, each with a verb of noisemaking, whose subject in the first clause is an animal, suggests that an animal should be the subject of the second as well. I therefore suggest that *stāmú-* means ‘thieving’ and it is a well-known characteristic of some animal or other. I suggest ‘monkey’: monkeys are of course well known for thievery and Vṛṣākapi, Indra’s monkey pal in X.86, steals “the goodies of the Arya” (X.86.1). Monkeys are also known for their sharp cries. The presence of *vṛṣā* (recalling Vṛṣākapi) in pāda a may support this idea, but of course all of this is very tentative, and in particular I have no explanation for why configuring his praise as a screeching monkey would please Indra (unless, again, to remind him of his friend Vṛṣākapi). An alternative animal possibility is the magpie, which has a reputation at least in the West as a thief (cf. Rossini’s opera “The Thieving Magpie” [La gazza ladra]), although the internet tells me that this reputation is undeserved. There are species of magpies in northern India and they do make sharp cries.

While it is impossible to be certain about the meaning and etymology of the hapax, as often with hapaxes and other rare words it is possible to suggest reasons why it appears in just this passage. Its position in its pāda is identical to that of *stómo* in the preceding pāda, and it echoes that word phonologically. In fact, the phonological play is quite subtle: underlyingly *stoma* = *s t a u m a*, and *stāmu* = *s t a a m u*, with the vowels around the *m* simply reversed.

The old idea that *stāmú-* is cognate to Grk. *στωμυλός* ‘talkative, loquacious’ was revived with considerable discussion by Ch. de Lamberterie (*Les adjectifs grecs en -υς*, 1990: 704–14 [esp. 704–5]) and recently considered anew and more or less dismissed as impossible to demonstrate by Brent Vine (“Greek *στωμυλός* ‘chatty’,” *Indo-European Linguistics* 7 [2019]). Although the coincidence of form and possible semantics is suggestive, I think it unlikely that an entirely isolated *stāmú-* (no root, no related nominal forms) would have been preserved in this sense from hoary antiquity, and although it might have inhabited a lower register and therefore generally not surface in “high” Vedic, I know of no possible MIA correspondents. Furthermore, the anagrammatic word play noted above makes it more likely that the word is semi-artificial, though based on attested material -- hence my favoring of the $\sqrt{stā}$ ‘steal’ connection.

The return of the singer (*jaritár-*) in the last two verses of this hymn (9c, 10c) forms a faint ring with his appearance in 2b.

VII.21 Indra

VII.21.1: Some recycling and recombination from the last hymn: *janúṣem uvoca* combines *janúṣem* (20.3b) and *uvoca* (20.4d), each in its metrical position, and *ándhaso mádeṣu* echoes *ándhasā mádeṣu* of 20.4d.

devám appears to be one of the few adjectival forms of the stem, modifying neut. *ándhaḥ*. Although I would like to reduce the number of these supposed adjectival forms to zero, it is difficult to see what else to do with it here.
